"what would my poor mother say, if she saw me here?—I that have been brought up in comfort from my childhood, that was never wet with a shower of rain but I had to get my clothes changed, now standing shivering under the low-built fore-castle of a steam-boat, drenched to the skin, with no one to say a kind word to me, or to care for me, though I should suffer the fate of him who has just been lost!"

I was roused from such meditations by the cry of the anchor watch, that the vessel was dragging. "Come, come! start her, passengers, and every soul on board!" cried the master, as he dashed in among the passengers, many of whom were lying shivering on the deck, wet with every succeeding sea that struck the vessel. "Come, young man," said he, addressing me, "lend a hand to the windlass here, and get the anchors stowed, and I think we'll venture in, as the wind has chopped round more in our favour. Steady, man! keep your sea legs about ye," continued he, as the vessel gave a wild lee lurch, and upset me in the lee-scutters. He assisted in lifting me up, when I tried to walk as well as I could; and the wind having abated a little, we reached the Brunswick Dock, at Liverpool, about midnight.

When I left home all the money I had amounted to only eight shillings sterling. The steerage fare to Liverpool was 7s. 6d., so that I had only sixpence to "come and go upon." This sixpence I had speedily spent, in treating to a dram the fellow who had gained my goodwill, by calling me, "sailor." During the first day of my passage, I was sick, and felt no inconvenience from the want of money. But on recovering, I became very hungry, and on applying to the steward for something to eat, he told me he could give me nothing but a basin of tea, and some cheese and bread, which would cost 1s. 3d. I hesitated long whether or not I should break upon my fare. I took out a half-a-crown, and turning it over, looked at it anxiously.

At last hunger prevailed. I went aft, and, putting down my beautiful half-crown, demanded the tea and bread from the steward. It was handed to me, and, having got my change, I walked forward and sat down by the funnel to my repast. No epicurean over the most magnificent banquet could possibly enjoy himself more than I did over this simple refreshment. When I had nearly finished, I observed a group viewing my proceedings with, as I thought, a kind of envious look. This group consisted of a middle-aged man, his wife, as I took her to be, and two children, one about five years of age, the other at the breast. They were seated on the wet deck, and the woman and children especially appeared extremely wan and squalid. They were suffering, as I supposed, from hunger, and there was a sullen grief on the face of the woman, that could not be dispelled by the attentions of her husband, who had got an old tarpauling, and was trying to shelter her and the children from the wind and sea spray. I thought in my heart, that they were surely worse off than even I had been, and how comfortable a basin of tea would make them, as it had done me. My fare was broken at any rate; so I went to the steward with the remainder of the half-crown, and bade him give me the same which I had got before. This I gave to the man, telling him to divide it with his family, and putting a piece of bread into the eldest child's hand, I sat down on my former seat and enjoyed the consumption of this refreshment with, I am sure still higher relish than I had done that of the former one.

The man, upon whom I bestowed the small kindness, was an Irishman, and most profuse in his gratitude. "Ah! sure," said he, "I cannot repay you wid thanks for all this; thanks is but wind, and Taddy O'Hara has a soul above it. But what are you going to do!—a young gentleman like you! thravelling in such a condition? Sure, if it ain't enough to break any Irishman's heart to see you so wet and cowl'd, and never another dhry rag to put on; and why, my boy, can't you buy some; sure, you might get a very good jacket cheap now, and it would be dhry?" I assured him that I was not a gentleman, and that so far from being able to buy clothes, I would be under the necessity of selling some of those which I had, to make out my fare. He said nothing, but looked at me in evident surprise, and with a cast of the eye that indi-

cated a suspicion of the truth of what I had told him. However, after having repeated the same story, his features relaxed from the incredulous expression they before wore; and, stretching out his hand to me, he gave it a hearty shake, saying, "By J—, it's myself that is glad of it, for now there's a pair of us! But what do you intend to do at Liverpool?" I told him, to enter a board a man-of-war, as to be a sailor was the utmost of my ambition. He expressed much surprise at this, and, at the same time, proffered his assistance to me when we should come to Liverpool. He told me he was going to seek his father, who he heard was in a good way there; and, if I liked, he said, to go with him, he would use me kindly till I got a ship. I accepted his offers of kindness, without intending to give him an opportunity of fulfilling them; for I had pricked out a course for myself, before I slipped my cable, and intended to keep by it, as far as I could.

When we landed at Liverpool, it was dark and rainy. I paid the captain all the money I had, leaving my chest in his hands as a pledge for the balance of my fare. The Irishman left his wife and children in the boat as pledges,—and took me with him, whether I would or not, away on a voyage of discovery for his father, whom he acknowledged to have scarcely ever seen. He had a letter in his pocket, and, as he could not read, he put it into my hand, to "thry" and decipher the direction. With much difficulty I made out the following words: *Jon o'Harrow, Banistre Strit, 43, Vokshol Road, Liverpool*. It was raining in torrents when we left the boat, but after we had wandered about for some time, it subsided into what the southerners call a *Sootch mist*, which served conveniently to keep us in a moist state, and to secure us from the danger of a sudden transition from wet to dry. Drenched to the skin, we traversed a great part of Liverpool without a farthing in our pockets to authorize us to enter a house of public entertainment, although, with open doors, several of them, late as it was, seemed to invite the wet and weary stranger to a comfortable bed. After inquiring and wandering in vain through many an intricate lane and street, I became excessively fatigued, and, notwithstanding the remonstrances of my companion, resolved to go no farther. I sat down on some steps that sheltered me from the rain, while he, with all the volubility peculiar to his countrymen, endeavoured to rouse me. His words had no effect upon me. I leant my head upon my hands, and indulged my desolate feelings by a sullen silence. When he found he could not move me, he went away, but soon returned with the information, that he had prevailed upon the mistress of an 'illegant' house in an adjoining lane to give us a seat by the fire till the morning. The mention of a good fire revived me, and I arose to follow him, but found myself so stiff with wet and cold, that he was obliged to assist me to the spot, where we would find shelter *gratis*, which was a material consideration with both of us, in our present circumstances.

The outward appearance of the lodging to which he took me destroyed all the hopes of comfort which his enthusiastic encomiums of it on the way had excited, but to which it was no more entitled than a mud built cabin of his own country. It was a sunk flat in a narrow dirty street, and the steps down to it were so straight and perpendicular, that whoever descended, must have done so at the hazard of their limbs. The door was far below the level of the pavement, and studded with big nails, like the doors of some of the old prison houses. I was so little pleased with the appearance of the place, that I half determined not to go in, when the door opened, and a young woman, good looking, but with a pair of eyes all swollen and black, told us, in the Lancashire dialect, to come in out of the rain. The view I had of this woman did not much encourage me, but the sight of a fire, which shed a cheerful blaze through the apartment, tempted me forward, and being warned by my companion, by a shove on the back with his big hard hand, to move in first, I entered into what, without the fire, was little better than a common dungeon.

The first objects that caught my attention in this wretched hovel were two men sitting by the side of the fire-place, but in such a manner that the large chimney-piece, which shot out from the side of the house, obscured them from examination, by

the deep shade it cast along the wall. They rose when we entered, and, bidding us be seated, handed us a noggin of rum. I took one glass, and my companion took another; but from what I observed a little after this, I resolved to take no more, so that when I was offered it again, I declined so firmly that they gave up insisting.

Everything that occurred during the two or three hours we sat in this place tended to confirm me in my first suspicions regarding it. The woman began to rate one of the men, who, with a ferocious countenance heightened considerably by a new-made scar across his cheek, seemed, by his conversation, to be her husband, or rather perhaps her fancy man. He retorted, and I was afraid it would have come to blows. Having put a young child that she had upon her knee in the bed, she picked up a bundle of clothes from the floor, and pulling out from it a roll of Indian silk handkerchiefs, threw them at the man calling him a d—d rapparee, and telling him to take them to Bet Warn that he had been with all the former night. The roll fell at my companion's feet, who, lifting it up, swore "them were the prettiest handkerchiefs ever he seed." The man, who had been steadfastly looking at the fire, started up and cast a ferocious look at Nan, as he called her; then taking the web from O'Hara, he laid it on the floor, and began to unroll it. The web might consist of about thirty handkerchiefs, and they seemed to be very massy and rich. He took a knife, and, cutting one, gave it to me, and then gave another to my companion, saying, that he wove them, and that trade was so good just now that he could easily afford to give one or two to a friend. Then addressing himself to the other man, who had not spoken a word all this time, said, "I say, George, don't you think this here young man (meaning me) ain't very like Bill Hodgets?" "I dare say he may," returned George, "I should like to see them together." "Maybe as he comes from Scotland, he may be an acquaintance of yours?" continued the first speaker. I summoned up all the courage I was master of, and said, with a significant look, that "I could not boast of knowing either them or any of their acquaintances!" They seemed to take the hint, and dropped all further discourse, both in a short time falling asleep. The woman, after replacing the roll of handkerchiefs among the bundle of clothes, lay down on the bed as she was, and very soon fell asleep also.

The dreadful names of Burke and Hare were not then known; but I was sufficiently uneasy in this place notwithstanding; for I had been strictly brought up at home, and the scene before me was new and frightful. I found myself, however, getting very drowsy, in consequence of sitting before the fire, and of having had little or no sleep the two or three preceding nights; and as I felt I must either sleep or go away, I touched O'Hara, who was dozing, and pointed to the door. He understood me, and I, rising gently, left the handkerchief that the fellow had given me on the chair, and made my way to the door, followed on tiptoe by my faithful friend of a day's acquaintance. There was a large bolt over the door, which we removed with difficulty, but without wakening the sleepers. On ascending the steps to get to the pavement, we found a new obstruction in the shape of a grating let over the place, to keep passengers from falling down. I tried to lift it, but my strength was unequal to the task required. With the assistance, however, of O'Hara, it was raised. I got on the pavement first, and made my way down the lane, followed by the Irishman, who told me he heard some of them spaking as he let down the grate.

It was now early in the morning, and after some inquiry, we were so fortunate as to find O'Hara's father's house, where we were very kindly received. The family made us eat a hearty breakfast, and then sent us to bed, while they dried our clothes, and despatched some one for my companion's wife and children, who had been left in the boat. Having slept till 11 a.m. we rose, and the good people were astonished when I told them my intention of being a sailor. I inquired about the character of the house we had been in, and after describing it, the good wife told me she knew little or nothing about the folks, but that they were looked upon by the neighbours as suspicious persons, who had no honest way of earning a livelihood.

EXTRAORDINARY NARRATIVE.

The accounts of travellers and voyagers in olden times, were often thought to contain exaggerated relations; but the increased means we possess of obtaining information regarding every part of the globe, have proved the passage of Lord Byron's to be correct, namely, that "Truth is stranger than fiction."

Daniel Defoe's Robinson Crusoe, is a beautiful piece of fiction, founded upon the adventures of a Scotchman named Alexander Selkirk. He, however, was left upon a luxuriant and fertile island; but the heroes of the present story were doomed to struggle for life, surrounded with snow, and a soil bound in frost during the greater part of the year; and that, too, in the total absence of the glorious and vivifying sun. The boatswain, who was pilot of the vessel, is the narrator.

"We left Archangel, in a vessel which was manned with fourteen hands, besides the captain; we were bound to the north, for the purpose of whale-fishing; the usual course is to keep on the western coast of Spitzbergen, but as I had once before sailed on the eastern side of the island, I was induced to influence the captain to try it on this voyage. Continuing our course, we one day suddenly found ourselves everywhere surrounded by ice. Thinking it probable that we were locked in, and might not again clear ourselves before the winter set in, I recollected that, some time before, a party from Mesen, had once wintered in Spitzbergen, where they left a hut standing, the frame of which had been shipped for the purpose. Calling a council, it was unanimously agreed, that a party should be despatched for its discovery, that we might be provided for the worst; and at least have a place of shelter in case we should be compelled to winter in this severe latitude. With this object in view, and seeing the hazard of standing out to sea with shoals of ice about us, we got within two miles of the shore. Myself and three seamen then started over the ice in search of the hut; fortunately, as we knew we must stay till the next morning, we took with us a stove, a little meal in a bag, one musket, a powder horn, containing twelve charges of powder, some lead, a piece of touchwood, a box full of tobacco, an axe, one knife, a small kettle, and every man his pipe. The labour of clambering over the ice, and the caution necessary for our preservation in such a perilous undertaking, prevented our further loading ourselves, and being thus equipped, we reached the desolate island; we found the hut about a quarter of a mile from the sea. Here we made a fire in the clay stove, which, according to the Russian fashion, was without a chimney, serving the double purpose of cooking and heating the room; also for sitting, or to be near the fire. The hut was divided by a partition, forming an outer and an inner room: we passed the night as well as the circumstances would permit us, and early the following morning, hastened to the sea shore, to communicate our good success to our companions, and assist in landing the provisions and other necessities. Our surprise and anguish may easily be conceived, when we beheld nothing but an open sea, free from ice, and no ship in view. A terrible storm during the night had effected this change; whether the violence of the ice had crushed the ship, or she had foundered at sea, were then useless conjectures, and were matters of speculation—she was never afterwards seen by us, or heard of by any of our countrymen.

"In this wretched situation, our first care was to turn our thoughts towards our only place of shelter—the hut; our next, how we should obtain food. Fortunately the island abounded with rein-deer; we, therefore, shot one of these the first day, and made a meal from it in a raw state. We employed ourselves the remainder of the day in filling up the chinks about the hut, with moss; the building, otherwise, was in a sound state; as wood in cold climates keeps entire for many years. The next day we were cast down beyond all hope; we had consumed our last piece of fuel, and two of our party, who had been out to procure more, returned with the sad account that the island was entirely denuded of wood. We all now gave ourselves up as lost; it was impossible to exist in that country without a constant fire in the hut. We were all four in melancholy contemplation over our unhappy fate, when I thought I saw, as I

stood at the door of the hut, something thrown on shore; anxious to avail ourselves of any chance to preserve life, we went down to the edge of the water, and there, to our surprise and delight, found several pieces of a wreck which had come ashore during the night. These we lost no time in collecting together, and were soon satisfied that we had a sufficient stock for the first winter. After this, entire trees came ashore, but from what country we could not tell, though I knew that all northern voyagers, in their writings, mention the wood seen floating at sea in these regions.

"Our twelve charges of powder procured us as many rein-deer; but it was now exhausted, and we knew not what we should do for food, when the present stock should be consumed. Amongst the wood was the root of a fir, bent like a bow; this gave us the hint, and we set to work with our knife to fashion it to our purpose; but when all was done, we had nothing to string it with, and it was abandoned in despair. Our attention was now turned to another trouble; as the cold increased, we had observed several white bears about, and latterly they had shewn themselves more frequently, so much so that it was hazardous to go out of the hut; one having been so daring as to come into the first part of it, and but for the inner door, would, uninvited, have made one of our party. We were now literally in a state of siege by these ferocious animals; for, although they did not herd and attack us in a body, we could not venture from the door, without the dread of meeting one, and, unarmed as we were, being devoured. It has been well remarked, that necessity has been the mother of all arts. We were in a barren country, surrounded with a ferocious enemy, having no arms but a hatchet, a knife, and a gun without ammunition; we were in want of food, but dare not step out of our hut, for fear of becoming food ourselves to the white polar bear. In this extremity, one of our party said, if we had a hammer, there was iron enough about the pieces of wreck to make spear heads; it had happened the day before, that I had got out a large hook from a plank; this was weighty, and thick at the head part, where also there was a hole, which we enlarged, by making it red hot, and then forcing a spike we had, through it with the hatchet: repeating this several times, we at length mounted it on a wooden handle, and thus became possessed of a hammer. All the iron was now collected together, a good fire was made, and a large stone was procured for an anvil; there were four smiths to one hammer, but those who could not use it, found other branches of work to perform: one fanned the fire with a dried fox-skin; another, with two pieces of stick, took the iron from the fire, while the third was busy in securing it when on the anvil, for the fourth to avail himself of an efficient stroke with the hammer. After considerable labour, and several burns on the hands, we formed two lance heads, which we polished upon a stone, and then bound them fast with strips of rein-deer skin, upon stocks of wood, cut out with great labour from the ship's timber which had been washed ashore. Hunger hastened the performance of the work, and when completed we lost no time in seeking the enemy; for the bear, and not the rein-deer, was now to be our food, until catching or killing the latter could be devised.

"A white north polar bear is by no means a contemptible foe, but there was no alternative; as I was looked up to, as a kind of captain of the party, being the boatswain of the crew, I armed myself with one pike, or spear, and giving another to him I thought the best man, the other two being furnished with the hatchet, and the musket to use as a club, we sallied forth. Now, however, when we were anxious to meet with a foe, we could no where find one; after a little time we spread ourselves, with a view of making as wide a search as possible along the coast, for anything that might have come ashore; for hope, however hopeless, still clings to the distressed. I was just thinking, as I had seen a bear about the hut the night before, that he could not be far off, when I caught sight of one making towards me from behind a point of land where it is probable he had been waiting for my nearer approach. I was at this moment full two hundred yards from my fellow lancer; I therefore ran towards him, to hail him, and have his assistance; the bear gave me but very little time to run,

for he was soon close at my heels; it was, however, fortunate I did so, as it in some measure brought us nearer together, for mutual defence. Turning round upon the bear as he was rising upon his hind legs to seize me, I made a thrust as near to his heart as I could; at this moment his head lowered, and the point of the spear entered his eye; the monster drew back for a moment's pause, which he filled up with a hideous growl. Still anxious for the assistance of my companion, who was making towards me with all possible haste, I again started towards him; I had not, however, got many yards before Bruin was after me: again I had to turn in my defence; the bear, in his second charge, caught the point directly on his head, and by the impetuosity of his attack, overthrew me, spear and all, upon the ground, where I was entirely at his mercy—such as a bear ever shows when he has the advantage, namely, to squeeze his adversary to death.

"It was now, that I reaped the advantage of running: at this juncture, when my destruction must have been inevitable, the spear of my companion was passed through the bear; it did not, however, kill him, for he turned round upon his assailant with increased ferocity, and would, in all probability, have mastered him, however fatal in the end his own wound might have been.

It was now my turn; I was unhurt, and soon again upon my feet; the bear was, advantageously for me, just rising on his hind feet to attack more closely my companion, when I passed my spear through his heart, and he fell dead before us.

"We feasted heartily upon his carcase, and found the flesh very good; in fact, we enjoyed it quite as much as that of the rein-deer. From the nerves of this animal, which we found we could easily separate into fine threads, we made a string for our bow, and were again enabled to take the field against the rein-deer, of which, during the whole of our stay on the island, we killed two hundred and fifty, besides a vast number of blue and white foxes.

"We never, after this affair of the bear, voluntarily ventured against that formidable animal; he is possessed of uncommon strength, and defends himself with extraordinary obstinacy; we killed, in the whole, ten bears, but the nine were in self-defence. Although we did not find all the bears equally courageous—for some of them would make off, being alarmed at our cries, while we were preparing to receive them—yet they gave us unceasing and unspeakable inquietude. We never could venture to leave the hut without our arms, nor could we, with any safety, go a distance but in company, from a continual fear of being devoured by these animals.

"There was one other cause of almost continual uneasiness: we had brought but a small bit of touchwood, in the first instance, from the ship, and we knew not how to procure a light, if we should suffer the one we had, by any accident, to go out. I had heard of the Indian method of rubbing a soft and a hard piece of wood together, and of their making holes in a board, and then rapidly turning a stick, cut to fit the holes in it, till they produced fire; but I never could accomplish it, which I

attributed to not having the proper sort of wood. To obviate, therefore, such a calamity, as that of being left from August to April, a period of full six months, in total darkness, to say nothing of the want of the warmth from a fire, we constructed a lamp of clay, which we dried in the sun, and afterwards baked it by the fire, lining the inside with pieces of our shirt, dipped in the meal we had brought from the ship, and of which we never ate; this we did to prevent the oil oozing through, as the first we made did not answer; we had the precaution to make two lamps, when we did succeed, in case of an accident. The fat of the rein-deer supplied us with a good substitute for oil, and at first a piece of twisted rag for a wick; but when the ship's planks came on shore, we found caulking between them, and very soon burned improved wicks.

"In summer, the rocks afforded us abundance of water from numerous springs, and in winter our little kettle, by the fire, melted snow or ice, and also served us to drink out of, as well as to fetch it in. We had now no fear of wanting the flesh of the rein-deer—but man, is never satisfied; we had hitherto eaten our food raw, and drank the blood of the animals when killed, but now we thought of cooking our food:

all our attempts to do so effectually, however, failed, and when it was partially done, as we had neither salt or bread, we did not relish it. At one time we thought of cooking outside the hut, but the want of wood, and the fear of the white bears, induced us to abandon this project. After about the third summer, being still discontented with the sameness of our diet (raw venison and water,) we hit upon the expedient of hanging a stack of meat up to the rafters of the hut, the upper part of which was almost always full of smoke, like all the Russian cabins

[THE BOATSWAIN ENCOUNTERING A BEAR]

having no chimneys, only a window for the smoke to escape from, when there is more in the place than the inhabitants find agreeable. We relished this as people did at home cured ham, or tongue. When the summer came again we suspended a good stock of flesh outside the top of the hut, far away from the reach of our determined foe, the white bear: here it remained the whole season, exposed to the wind and the sun, upon wooden pegs, which we cut for the purpose; it dried, we found, exceedingly well, and served us in lieu, of bread, relishing our half-cooked meat the same as though we had condiment.

"Our clothes we made out of the skins of the animals we killed, cutting them as we desired, when spread on the ground, with the knife; we made an awl out of a nail, and used the nerves of the bear, finely split, for thread: we had a summer and a winter dress; in the former season we were clad in light undressed skins, in the latter we were dressed like the Sam-oiedes, and Laplanders, with long pelisses of the untanned skins of the rein-deer and foxes. The white bear, much as he annoyed us and kept us on the alert, furnished us with a warm bed in the winter. Still, as we were separated from all hope of ever seeing any other human beings, melancholy

thoughts crept in amongst us; I had a fond wife and three children to aggravate my distress in the hours of reflection, the other three men were single, but they were no less miserable. One, for a long time, had been declining in health, and was every day getting worse; his complaint was a very inveterate attack of the scurvy. The loneliness of our mode of life engendered thoughts which vented themselves in words, speculating which of us would be the longest liver, and who should live to see the others covered under the snow or earth, then to starve for want of attendance when sickness overtook him, and, at last, remain uninterred, or become food for the bears. I often wonder how we could live in such a condition and state of hopelessness; but I am convinced man is much more capable of enduring hardships, than the world will very readily believe; the principal thing to guard against is, never to despair. A desponding mind cannot overcome slight or imaginary troubles: how then shall it meet real and weighty difficulties? I often, when I saw my companions drooping, blew up the dying sparks of hope, by affecting to believe I descried a sail at sea; and when lying in our hut, during the long winters of six months, I frequently spoke of vessels that I thought might by chance take the course we had, and bring us a deliverance. And thus we lingered on, between hope and fear, until one of our party died.

"It is said, that drinking the warm blood of the rein-deer is a remedy and preventive against the scurvy. It is worthy of notice, in this particular instance, that three of our party, when they hunted down the rein-deer, or the fox, always made it a practice to drink the warm blood of the animal; but the man who died (Feodor Weregine) had an unconquerable aversion to the blood from his first landing, and he was very indolent and unwilling to use much exercise; on the contrary, my other shipmates in misfortune, became the most swift of foot of any men I ever saw, or ever heard of; I verily believe one of them could run down the fleetest Russian horse; together, they frequently have, by making the rein-deer take numerous turns, run it down, and slayed it afterwards. I was the oldest of the party, being fifty-three when I left the island; though I took my share in all the labours and exploits, and in excellent health the whole time, I never acquired such speed as my companions. The man that died was the youngest of us all; for upwards of twelve months he was bedridden, without having strength enough to raise himself up, or power of moving his hand to his mouth. We fed him the whole of this time, in the same manner as a new-born child is fed, from a wooden spoon we made for him out of a piece of ship-plank. He died at the end of our sixth year's residence on the island, and as it was still winter, we buried him as deep under the snow as we could without spades, to prevent the wild animals from disturbing the corpse.

"One day, about four months after the departure of our mate, in solitude, we were walking by the sea side, and as it was the 15th of August, when the sun was every hour expected to take his leave of us for another long winter, we were not in very high spirits. 'I am sorry,' said one, 'that Weregine is gone, for though he did give a great deal of trouble while he was sick, he found us employment, and that's better than being idle throughout these dismal winters; I am almost inclined to fall sick myself, and get rid of this wearisome life. Ah, boatswain! here's another summer gone; this ship of yours will never arrive.' 'Won't it by G—d,' I exclaimed, as I involuntarily leaped for joy, 'run, run! to the rock, hoist up a skin,' taking off my own coat of skins, and hanging it up on the point of my spear. It needed no persuasion of mine to spur my companions on to exertion; they saw the vessel nearing the shore, and bounded from place to place to erect signals, with the rapidity of swallows on the wing. As the vessel was still too far distant for us to observe whether we were seen, we at length, all three, forgetful of the bears, assembled on the highest headland, with only one spear, and that fixed in the ground, with a skin suspended from the point. Here we held out our arms, hallooed, and made every possible demonstration of our desire to be noticed. Oh! how much I then longed for a charge of powder, that we might have fired a gun as a signal of our distress.

"At length, to our inexpressible joy, we saw a boat lowered, and then make for the shore. It appeared the ship's crew had seen us from the first, and taking us for natives, would have passed on, but thinking, from our manner, we wanted to trade, they came on shore. She was a Russian whaler, like the one we had come out in. Nothing could exceed the astonishment of the men in the boat when we related our story. The captain, immediately he was informed of our situation, came to visit our hut, and the various things we had about us, all made with a single knife. (I speak of household utensils.) Having convinced himself of the truth of our story, and recovered himself from his first impulse of finding countrymen of his own in such a place, preparation was made, forthwith, for getting our things on board; we shipped fifty pods or two thousand pounds weight of rein-deer fat, upwards of two hundred and forty rein-deer skins, several hundred fox-skins, and ten bear-skins, with the whole of our clothes and tools, to keep as curiosities, and exhibit to our friends. We had a prosperous voyage to Archangel, but here I was destined to undergo a fresh calamity—

"Domestic happiness, thou only bliss
Of paradise that has surviv'd the fall!
Though few now taste thee unimpaired and pure,
Or, tasting, long enjoy thee."

"It happened that my wife, who had long since given me up for dead, (it being six years and upwards of three months since we parted,) frequently came down to the bridge, to look at the vessels as they came into the river; perhaps she had still a latent hope that she might one day see me. Be this as it may, she was on the bridge as our ship passed, and as I was on the deck, anxiously looking round for old associations of memory, she saw me, and in the act of surprise, stretching out her arms, she fell over the parapet into the water. I heard the splash, and the cry of 'A woman! a woman fallen from the bridge.' Boats were immediately on the spot, but she did not again rise. As our ship's boat was astern, I jumped in, with three others, to render assistance. Still, as she did not rise, a proposal was made to commence a drag for her; aware that this would occupy some time, and that, if her life was to be saved, not a moment should be lost, and being myself a good swimmer, although I was unconscious for whom I was exerting myself, I took off my jacket, and dived down upon the spot pointed out to me as the one where she had fallen into the water. My first attempt was successful; I brought her up. But, oh, God! who shall describe my feeling, my distress and anguish of soul, when I saw my wife lying in the boat, to all appearance, dead! The blood was running from the temple, for it seems her head had struck the bridge in her fall—and she was altogether lifeless. Here was an object for a fond husband, after so long an absence, to look on! Perhaps my long solitude and sufferings, had made me a different man, and feel unlike others; certain it is, that upon this occasion, never did man feel as I did. To add to my distress and anguish, I was soon informed by a spectator, of her having actually fallen from the bridge in the moment of ecstasy and transport at seeing me, even while she was stretching out her arms to welcome me home. What was the cold of the Arctic regions? what the dread of the white bear? what the horrors of starvation? I would cheerfully have returned to them all, for the recovery of my wife. In a moment of frenzy, I cursed my destinies, and was about to throw myself into the water from whence I had brought up my wife, when the recollection of my children flashed across my mind—this saved me. We reached the shore; my wife was put to bed, and the doctor attended; she was bled, and hopes held out that she might recover. But why need I dwell upon the hackneyed particulars of scenes which can only be felt—the state of my mind in a new world—the alternate hopes and fears—the changes, the symptoms of her case, one day held out of her recovery, and the next of her dissolution.—She did recover; and I, who had been lost to the world, and even many times given myself over as food for the white bear, was again in possession of an affectionate wife, and surrounded

by my children, who would never have known their father, if that wife had not survived to point him out to them.

"What an inconsistent being is man! When I am no more, perhaps this narrative will be forgotten, or read without interest. When our story was known, and we were alive, all the world rushed to obtain a sight of us, and hear us talk of our adventures. Our hammer, our pikes, our spoon and wooden forks, the box we had cut out of a solid piece of wood to contain them; together with the worn-out knife, were all articles of purchase at a price scarcely credible to a sober mind; but my wife would not part with any. We were carried from place to place as nondescripts, for exhibition; the novelty, however, soon wore off, and even royalty, which at first caressed, neglected to do anything for us. We still however, had our health and strength, and as a few pieces of money had occasionally been put into our hands while we were show folks, and as our previous habits had taught us temperance, we had preserved them. This enabled us to purchase a boat, and as we were unwilling, after the scenes we had gone through together, to separate, we all three entered into partnership, and embarked in the fishing trade; in which avocation, with the assistance of my sons, this narrative leaves us. Adieu! reader, and may you never know the loss of civilised society, and the comforts it brings, as we have, during our sojourn upon the island of Spitzbergen."

A COLLEGE YARN.

The sign of a true-hearted sailor,
Is to give and to take a good joke.

Old Song.

"TWAS on a charming summer's morning, as I was walking on the delightful terrace fronting Greenwich Hospital, viewing with admiration the grandeur of the majestic Thames before me, which was most picturesquely studded with vessels of all classes, proudly bearing up with their wealthy cargoes to the great metropolis, that my attention was attracted by the conversation of some of those remnants of bravery, the pensioners, seated on the benches near me. They were engaged in fighting their battles over again, with all the enthusiasm of young heroes, and seemed rejoicing in the remembrance of those actions in which they had, severally, either lost an arm, a leg, or an eye; or, in some way or other, could boast a noble scar, won in defending their native shores. Others were amusing themselves by relating some of the most wonderful anecdotes of their lives, and of their feats by land as well as by sea. I listened with delight to their tales, and was particularly amused by one, which, although many years must have elapsed since it occurred, was given with all the force and animation of a first relation. The hero was a fine old specimen of Britain's Sons of Thunder; he seemed to have buffeted the storms of life threescore years at least, out of which, as I afterwards learned, seven-and-thirty had been actively devoted to the service of his country, and had nobly braved the battle and the breeze. He was seated among some half score of his messmates, who were anxiously waiting the commencement of his story. "Come, come, Jack," says one, "spin us that yarn about his honour, the civil magistrate, and the snob." "Aye, aye," says another, "that's the one for me, for it shows his honour knew well how to behave to a British sailor." "Well, well," replied the veteran, "if 'twill amuse you, d'ye see, why I doesn't care, altho' you've heard it as many times as there are trees in the park." My curiosity was a little excited by this, and drawing myself nearer towards them, I took out my pocket book, and, under the feigned appearance of sketching the scene before me, sketched the following, which is nearly *verbatim* with the original:—

"You must all of you, my lads, recollect the Northumberland; well, I sailed in her for six years, until she was paid off, and I had a good bit of prize money and wages due to me, which, when I got, I resolved to make a voyage to dear old Ireland, the God bless it, and steer my course for Kilmacthomas, in the county of Waterford, on a visit to my poor parents, who I'd

not seen for some fifteen years. Well, for the first time in my life, I touched at *Port Roguery*—that London. Well, I had just been to see Nelson's monument, and was bearing away to get myself shipped on board a stage coach, for Bristol, when, thinks I, I'll sport a pair of new pumps. Well, I spies an old man standing at the corner of a street, and hails him, to point out a shop to get 'em—he took me under his convoy, and we bore up for a shoemaker's. Well, in we went. 'Ho! ho!' says I, 'I wants a pair of prime long quarters and buckles fit for an admiral.' I was served in a crack, and out I hauls a bundle of notes, for I'd a pretty sample, and bids the cobbler take for 'em. He picks out a *Two*, but not having change, handed it over to the old man to go and get it. Well, he made sail you know, but some how or t'other, he was not able to keep his reckoning so as to make the port again; and the lubber of a snob, thinking I had never doubled Cape Horn, asked me to unship the shoes again. 'Avast there,' cried I, 'I've not been to sea all my life for nothing, and am not to be taken aback in that kind of way,' and swore he should hand me over my change; on which he swore he would send for an officer. That made me contented, for I thought, d'ye see he meant one of his Majesty's, and I should be sure of being righted. Well, up comes the officer, but he'd no uniform, and when I asked him if he belonged to his Majesty's service, he laughed at me, and told me he would introduce me to a *civil* magistrate that would do me justice, and we all set sail for his worship's.

"When we arrived, the lubber spun a long yarn about my not paying him for the shoes, and asked his honour to make me; but Lord bless you, his *civil* honour told him plain he couldn't, and asked me what I'd got to say, when I hauls over a power of lingo, just by way of explanation, like to what I've told you.

"Well," says his honour, says he, 'I think you unfortunately got into bad company.'—'I don't know what you call it,' says I, 'but I knows that that land crab wants to bamboozle me out of the note he gave to the old man.' 'Please your worship,' says the snob, the old man called him his son, he did not deny it, and I supposed I was right in giving him the note to change.'—'If he did call me his son,' says I, 'I didn't know it, and if he is my father it is without my knowledge, and if I am his son, all I can say is that I've got a damned rogue of a father.' 'Well, my man,' said his worship, 'I wish you had some friend to take care of the rest of your money for you.' 'Why as to that, your honour,' says I, 'I can do that myself, but who would have supposed that the first *civil* man I met with in London should be a rogue—you wont think I mean any allusions, your honour.' 'No, no,' replied his *civility*, 'but I would recommend you to pay the shoemaker, and then pursue your journey to Bristol.' 'To Bristol, your honour,' says I, 'why I am bound beyond that, and for twenty years I have been trying to come at the wish of my heart, that is to see my parents once more, and with some cash in my pocket. I would have gone before, but I could not assist them. I ran away from them twenty years ago, and I suppose they think I have gone to *Davy's Locker*; but if ever I reach Kilmacthomas, in the county of Waterford, I will make their old hearts leap with joy, and prove that Jack has still a soul to be saved. But I do not think I ought to pay for the shoes again, as the lubber himself gave the note to the old rogue.' 'Do not mistake me,' said his worship, 'I did not order you to pay for the shoes, I only recommended it to you; in fact I have no power to make such an order.'

"The officer was right," cried I, 'when he said you were a *civil* magistrate, and there is no advice you can give me that I will not follow.'

"I can say no more," replied his worship, 'follow the course you have intimated with prudence, and I am sure you will do right, but you must not stop on the road.' 'Your honour may depend I will not,' said I, 'and if I could go all the way by sea I would, for I should never be out of my latitude then; but these damned stages bring up so often, they make seven bells thirty times a-day. However, I shall never forget what your honour has said, and if ever I hear any one speak of a *civil* magistrate, I will be sure to tell them that they will find one in London. But what am I to do with the lubber, your

honour?" "I have already told you what I recommended," said his worship, "and must leave it to yourself." Upon this I hauled out another note, gave it to the lubberly snob, desiring him to hand over the change to a poor half-starved looking fellow who stood near, and, wishing his *civility* good day, with a promise that I would call on him again if ever I came that way, I once more set sail on my journey to Kilmacthomas."

Here the College bell summoning them to mess, cut short the conversation, and I retired much amused with the story, and much more pleased with the worthy old subject of it.

PARTICULARS OF THE LOSS OF THE COLUMBIA STEAMER.

The Margaret, a spare steam-vessel belonging to the Boston and Halifax Royal Mail Steam Packet Company, arrived at Liverpool on Sunday night, at half-past nine o'clock, under the command of Captain Shannon (late of the Columbia), bringing the mails and the greater part of the passengers of the Columbia steamer, which was unfortunately wrecked on the rocks at Seal Island, in a dense fog on Sunday the 2nd of July, 1844. We learn that at the time of the Columbia's departure for Boston, the wind was from the southward with moderate breezes and thick weather. At eight p.m. of that day the fog became dense with a calm sea, and so continued. The ship proceeded on her voyage without any material occurrence until the 2nd, when she suddenly struck on a rock or ledge at a quarter past one p.m. At the time when she struck she was proceeding at the rate of about ten knots an hour; the sea was perfectly calm and the fog very thick. There was the usual watch on deck and look-out in all parts of her. There was not the slightest appearance or intimation of danger one moment before she struck. She ran upon the ledge and settled down to about midships. The captain and crew, when she first struck, considered she had run down a fishing-boat in the Bay of Fundy; no one had any idea that she was near land, or liable to any danger from rocks or ledges. After she had grounded, it was ascertained that she was ahead of the pilot's reckoning, owing to the extraordinary in draft of the currents and tides into the Bay of Fundy. The fishermen who boarded the ship on her taking the ground, all spoke with astonishment of the very extraordinary in draft then prevailing, and all who knew the navigation declared that for some few days previously it had been greater than for any time for many years. Immediately the ship struck, signal guns were fired, which after some time were answered from the shore, and at about four o'clock p.m., a boat boarded them from the Seal Island. It was then ascertained that the rock, or ledge, on which the ship had struck was called the "Devil's Limb," and was situate about a mile and a quarter from the shore, and nearly the same distance from the light-house. The distance was about 150 miles from Halifax, and it was about high water when she first struck. Instantly on the vessel striking the chain cables were hauled aft, the coals thrown overboard, the anchors let go from the bows, and every exertion was made to lighten the ship. An anchor was carried out, in order, if possible, to get her off, but all was in vain. She was firmly fixed on the ledge about midships, and from soundings it was ascertained that at this time there was upwards of twenty-seven feet of water at her stern.

At about four p.m., the passengers were, with their baggage, landed on the Seal Island. For some time after the ship struck she was found not to make more water than could be easily got rid of by two pumps, but on the day following a gale sprung up, with a heavy sea, which caused her to back upon the rock, and bilged her, and the water then flowed into and out of her with the tide. On the 3rd instant the packet brig Acadian, on her passage from Boston to Halifax, spoke the wreck, and information was forwarded on by her to the agent of the company at Halifax, who instantly despatched the Margaret to convey the passengers and mails. On Tuesday morning, the 6th, the Margaret arrived at the wreck, the agent of the company being on board, and imme-

diately took all on board, with the exception of some of the officers, the pilot, and crew of the Columbia, who were left with the wreck for the purpose of saving any of the materials. When the captain left her she was lying bilged on the rock, a complete wreck, and without the most remote prospect of her being moved.

The Margaret left Halifax on the 9th instant, at half-past five, and made the voyage in thirteen days, stopping at the Cove of Cork one day for a further supply of coals. She brought upwards of sixty passengers.

Besides the thickness of the fog, the disaster of the Columbia is ascribed also to the extraordinary current which was running when she struck. Such a strong current of the Bay of Fundy, distinguished as it is for the rushing of its tides, was unknown for the space of forty years previously; and two or three other vessels were lying stranded by it in sight of the Columbia. It is no wonder, then, if an error occurred in the dead-reckoning of her distance.

A meeting of the passengers was held at Seal Island on the 6th instant, when a resolution was passed, appointing a committee of five to draw up a letter to Captain Shannon, expressing their high opinion of his conduct.

CASABIANCA.

[Young Casabianca, a boy about thirteen years old, son to the admiral of the Orient, remained at his post (in the battle of the Nile), after the ship had taken fire, and all guns had been abandoned; and perished in the explosion of the vessel when the flame had reached the powder.]

THE boy stood on the burning deck

Whence all but he had fled;

The flame that lit the battle's wreck,

Shone round him o'er the dead.

Yet beautiful and bright he stood,

As born to rule the storm;

A creature of heroic blood,

A proud, though child-like form.

The flames roll'd on—he would not go

Without his father's word;

That father, faint in death below,

His voice no longer heard.

He call'd aloud:—"Say, father, say,

If yet my task is done?"

He knew not that the chieftain lay

Unconscious of his son.

"Speak, father!" once again he cried,

"If I may yet be gone!"

And,—"but the booming shots replied,

And fast the flames roll'd on.

Upon his brow he felt their breath,

And in his waving hair,

And looked from that lone post of death,

In still, but brave despair.

And shouted but once more aloud,

"My father! must I stay?"

While o'er him fast, through sail and shroud,

The wreathing fires made way.

There came a burst of thunder sound—

The boy—oh! where was he?

Ask of the winds, that far around

With fragments strewed the sea!

They wrapt the ship in splendour wild,

They caught the flag on high,

And stream'd above the gallant child,

Like banners in the sky.

With mast, and helm, and pennon fair,

That well had borne their part—

But the noblest thing which perished there,

Was that young faithful heart!

EXPLOSION OF H. M. S. AMPHION.

THE frigate *Amphion*, commanded by Captain Israel Pellew, after having cruised for some time in the north seas, had at length received an order to join the squadron of frigates commanded by Sir Edward Pellew, the captain's brother. She was on her passage, when a hard gale occasioning some injury to her foremast, she was obliged to put back into Plymouth to repair, she being then off that place. She accordingly came into the sound, anchored there on September 19th, and the next morning went up into the harbour, where she lay close alongside of a sheer hulk, taking in her bowsprit, with the *Yarmouth*, an old receiving ship, close to her, and both within a few yards of the dock-yard jetty.

At about half-past four in the afternoon of the 22nd, a violent shock, as of an earthquake, was felt at Stonehouse, and extended as far as the Royal Hospital, and town of Plymouth, shaking the windows in the houses. The sky towards the dock appeared red like the effect of a fire; for nearly a quarter of an hour after, the cause of this appearance could not be ascertained, though the streets were crowded with people running different ways in the utmost consternation.

When the alarm and confusion had somewhat subsided, it began to be known that the shock had been caused by the explosion of the *Amphion*. Several bodies and mangled remains were picked up by the boats in *Hamoaze*; and their alacrity on this occasion was particularly remarked and highly commended. The few of the crew who remained alive were conveyed, in a shockingly mangled state, to the Royal Hospital.

EXPLOSION OF H. M. S. AMPHION, CAPTAIN ISRAEL PELLEW, SEPTEMBER 22, 1796.

As the frigate was originally manned from Plymouth, the friends and relations of the unfortunate ship's company mostly resided in the neighbourhood. It is dreadful to relate the scene that took place—arms, legs, and lifeless trunks, mangled and disfigured by gunpowder, were collected and deposited at the hospital, where they were taken in sacks to be owned. Bodies still living, some with the loss of limbs, others having expired as they were being conveyed thither; men, women, and children, whose sons, husbands, and fathers, were among the unhappy number, flocking round the gates and entreating admittance. During the first evening, though numerous reports were constantly being circulated, nothing correctly could be ascertained concerning the cause of this terrible event; and the few survivors who, by the following day, had regained the use of their senses, were not able to give the least information.

No. 35.

One man, who was brought alive to the Royal Hospital, died before night, and another before the following morning; but the boatswain and one of the sailors appeared likely, with great care to do well. Three or four men, who were at work at the tops, were blown up with them, and falling again into the water, were picked up very little hurt; and these, with the two before mentioned, and one of the sailor's wives, were supposed to be the only survivors, besides the captain and two of the lieutenants.

The following particulars were, however, collected from the examination of several persons, before Sir Richard King, the port-admiral, and what information could be procured from those who saw the explosion from the dock.

The first person who was known to have observed anything of the explosion, was a young midshipman in the *Cambridge*

guard-ship, which was lying at a short distance from the Amphion when she blew up; who, having a great desire to observe everything relating to a profession in which he had just embarked, was looking at the frigate through a glass, as she lay alongside of the sheer-hulk, taking in her bowsprit; when suddenly he observed the Amphion to rise altogether from the surface of the water, until he could nearly see her keel; the explosion instantly succeeded, when the masts seemed to be forced up into the air, and the hull instantly went down. All this passed in the space of about two minutes.

The man who stood at the dock-yard stairs said, that the first he heard of, it was a kind of hissing noise, which was instantly followed by the explosion, and he then saw the masts blown up into the air. At first it was very currently reported, that several windows in the dock were broken by the explosion,

and that much mischief was done in the dock-yard by the Amphion's guns going off when she exploded; but though the shock was felt as far off as Plymouth, and even at Stonehouse, enough to shake the windows; yet it is a wonderful and miraculous fact, that, surrounded as she was with ships, close alongside of the jetty, and lashed to another vessel, the Amphion herself was the only thing that suffered by the dreadful accident. It is melancholy to reflect, that owing to their intention of putting to sea the next day, there were nearly one hundred men, women, and children, over and above her complement on board, who were taking leave of their friends, besides the company that were at two dinners which were given in the ship, one of them by the captain.

Captain Israel Pellew, and Captain William Swaffield, of his Majesty's ship Overysse, who was at dinner with him and the

first lieutenant, were drinking their wine after dinner, when the first explosion threw them off their seats, and struck them against the curlings of the upper deck, so as to stun them. Captain Pellew, however, had sufficient presence of mind to run to the cabin windows, and seeing the two hawsers, one slack in the bit and the other taut, threw himself with an amazing leap—which he afterwards declared nothing but the sense of his danger could have enabled him to take—upon the hawser which was taut, and by that means saved himself from the general destruction, though his face had been badly cut by the curlings when he was thrown from his seat. The first-lieutenant saved himself in the same manner, by jumping out of the window, and being also a remarkably good swimmer; but Captain Swaffield being, it was supposed, more stunned, did not escape. His body was found on the 22nd of October, one month after

the accident, with his skull fractured, and appearing to have been crushed between the sides of two vessels.

The sentinel at the cabin-door happened to be looking at his watch, at the time of the accident: how he escaped no one could tell, not even himself. He was, however, brought on shore, and but very little hurt. The first thing he felt was his watch being dashed out of his hands, but from that time he was insensible to anything that happened to him. The boatswain was standing on the cat-head; the bowsprit had been stepped for three hours, the gammoning and everything on, and he was directing the men in rigging out the jib-boom, when suddenly he felt himself driven upwards, and fell into the sea. He then perceived that he was entangled in the rigging, and had some trouble to get clear, when he was taken up by a boat belonging to one of the men-of-war, who found that his arm was broken.

One of the surviving seamen declared to an officer of rank, that he was preserved in the following astonishing manner:—He was below at the time the *Amphion* blew up, and went to the bottom of the ship; when, recollecting that he had a knife in his pocket, he took it out, and cut his way through the companion of the gun-room, which was already shattered by the explosion; then, letting himself up to the surface of the water, he swam ashore unhurt. The knife he showed to the officer, and declared that he had been full five minutes under water.

A singular but frightful accident occurred to one of the sailors' wives, who had a young child in her arms; the fright of the shock made her take such fast hold of it, that, though the upper part of her body alone remained, the child was found alive, locked fast in her arms.

Mr. Spry, an auctioneer, who had long lived in great respectability at Dock, had gone on board, in company with his son and godson, to visit a friend, and were all lost.

About half an hour before the frigate blew up, one of her lieutenants, with Lieutenant Campbell of the marines, and some of the men, got into the boat at the dock-yard stairs, and went off to the ship. Lieutenant Campbell had had some business to transact at the marine barracks in the morning, and continuing there some time, was engaged by the officers to stay to dinner, and spend the evening with them; but some persons, who had in the interval come from the *Amphion*, informed Lieutenant Campbell that there were some letters on board for him, and as there were some which he was extremely anxious to receive, he left the barracks about half an hour before dinner to fetch them, intending to return immediately; but while he was on board, the fatal explosion took place. He was a young man, universally respected and lamented by the corps, as well as by all who had the pleasure of his acquaintance. One of the lieutenants who lost his life was the only support of an aged mother and a sister, who, by his death, were left without either friend or relation to comfort and protect them; and it was truly melancholy to witness the number of people who were afterwards daily seen at Dock, in deep mourning for their lost relatives.

Captain Pellew was taken up by the boats, and carried to the house of Commissioner Fanshawe, in the dockyard; but he was so very weak with the exertions he had made, and so shocked with the distressing cause of them, that at first he appeared scarcely to know where he was, or to be sensible of his situation; but in the course of a day or two he was a little recovered, and was then removed to the house of a friend, Dr. Hawker of Plymouth.

Sir Richard King had given a public dinner in honour of the coronation. Captain Charles Rowley, of the *Unité* frigate, calling in the morning, was engaged to stay, and excused himself from dining on board the *Amphion*, as he had previously intended. Captain Darby, of the *Bellerophon*, was also to have dined with Captain Pellew, and had come round in his boat from Cawsand-bay; but having to transact some business with Sir Richard King, concerning his ship, it detained him at Stonehouse half an hour longer than he expected. He had just gone down to the beach, and was stepping into the boat to proceed up Hamoaze, when he heard the fatal explosion. Captain Swaffield was to have sailed the next day, so that the difference of twenty-four hours would have saved the life of that much-lamented and truly valuable officer. His brother, Mr. J. Swaffield, of the pay-office, had also been asked to the same dinner, and had set off with him from Stonehouse; but before he had reached Dock a person came after him upon business, which obliged him to return, and thus saved him from sharing his brother's untimely fate.

Many conjectures were formed as to the cause of this catastrophe. Some conceived it to be owing to neglect, and that the men were employed in drawing the guns, and, contrary to rule, had not extinguished all the fires, though the dinners were over. This, however, the first lieutenant declared to be impossible, as they could not be drawing the guns, the key of the magazine, to his certain knowledge, was hanging in his cabin at the time. Some of the men likewise declared, that the guns were drawn in the Sound, before they came up to Hamoaze: It was

also insinuated, that it was done intentionally, as several of the bodies were afterwards found without clothes, as if they had prepared to jump overboard before the ship had time to blow up; but as no mutiny had ever appeared in the ship, it appears very unlikely that such a desperate plot should have been formed, without any of those who survived having the least knowledge of it. It is, besides, a well-known fact, that in almost every case of shipwreck where there is a chance of plunder, there are wretches so far destitute of the common feelings of humanity, as to hover round the scene of horror, in hopes to benefit themselves by stripping the bodies of the dead, and seizing whatever they can lay their hands on.

It was the fore magazine which took fire: had it been the after-one, the damage which ensued must have been considerably greater. The moment the explosion was heard, Sir Richard King rose from dinner, and went in his boat on board the hulk, where the sight he beheld was dreadful. The deck was covered with blood, and numbers of mangled limbs and entrails, blackened with gunpowder, while the shreds of the *Amphion's* rigging were hanging about her, and pieces of the shattered timbers strewed all round. Some people who were at dinner in the Yarmouth, though at a very short distance, declared that the report they heard did not appear to be louder than the firing of a cannon on board the *Cambridge*, which they imagined it to be; and they did not even rise from dinner, till the confusion upon deck led them to think that some accident had happened.

The following day, at low water, about a foot and a half of one of the masts appeared above water; and for several days after, the dock-yard men were employed in collecting the shattered masts and yards, and in dragging up what they could procure from the wreck. On the 29th, part of the fore-chains was hauled up, shattered and splintered, with all the bolts forced out, and also the head and cutwater.

On October 3rd, an attempt was made to raise the *Amphion*, between the two frigates, the *Castor* and *Iphigenia*, which were accordingly moored on each side of her; but nothing could be got up, with the exception of a few pieces of the ship, one or two of the guns, some of the men's chests, and part of the cabin furniture. Some bodies floated out from between decks, and among the rest a midshipman's. These, and all that could be found, were towed round by boats through Stonehouse-bridge up to the Royal Hospital stairs, to be interred in the burying-ground. For many weeks the sight was truly dreadful, the change of tide washing out the putrid bodies which were towed round by the boats when they could scarcely hold together.

As late as November 30, bodies continued to be found: when the *Amphion* having been dragged round to another part of the dock-yard jetty, to be broken up, the body of a woman was washed out from between decks. A sack was also dragged up, containing gunpowder, covered over at the top with biscuit; and this in some measure confirmed an idea which had previously gained ground, that the gunner had been stealing powder to sell, and had concealed what he could get out by degrees in the above manner; and that, thinking himself safe on a day when every one was entertaining his friends, he had carelessly been among the gunpowder, without taking the necessary precautions. As he was said to have been seen at Dock in the morning, very much in liquor, it seems probable that this might have been the cause of a calamity as sudden as it was dreadful.

ENGLISH RESOLUTION.

At nearly the conclusion of the last American war, a remarkable instance of British valour and determined courage was displayed by the master, and in fact sole owner, of a ship called the "*Charles Henry*," of about two hundred and fifty tons burthen, bound from Demerara to London, with a very valuable cargo of rum, sugar, &c., who, after a desperate and bloody action of an hour, contrived to beat off an American privateer, although superior to them in weight of metal and complement of men. The following facts are recorded by a passenger, who was present during the action:—It is scarcely

necessary to state, it was the custom at that time, in consequence of the many privateers cruising in the Western ocean, to capture the British West Indianmen, for them to wait convoy; but in this instance, not having completed the taking in our cargo previous to the sailing of the convoy, we should have been compelled, had we waited for the next, to lay by one or two months; our captain therefore resolved to run all hazards rather than delay his voyage: and knowing the qualities of his ship as to sailing, he was confident no larger vessel could come up with him, and he was determined if any small craft attacked him, he would act on the defensive, and protect his ship and cargo at the risk of his life. Upon this determination he put to sea with a fair wind, and had scarcely left Demerara three days, and, going merrily over the domains of old Neptune with his top gallant-sails set, and all snug below and aloft, when the mate, who happened to be in the foretop, descried a sail, apparently with every inch of canvass flying. The mate descended; he was rather a gaunt being, and had formerly served in the Royal Sovereign, under Lord Collingwood, at Trafalgar, therefore was a hardy veteran, and what a British seaman is in every sense of the word. Our worthy skipper placed confidence in this man, and seeing him approach at a quicker pace than usual, and his eyes glistening with apparent pleasure, demanded the reason of his haste. This question did not want repeating; but taking the captain by the cuff of his coat, dragged him aft, with this salutation,—"Run work I expect—for d'y'e see 'tween you and me, by the look of that fellow's canvass," pointing over the larboard quarter of the ship, "I guess she's a Yankee." The captain now applied the glass to his eye, and found what the mate had stated to be quite correct; he immediately called all the men aft, and told them he would double their pay for the whole time they had served in the ship, if they would defend her, for he had strong suspicion that the strange sail, which now could be perceived plainly, was an enemy; and in case of the death of any man, he would pay that which was his due to his friends, and he would provide in some way or other for those that had wives. This was sufficient—they, one and all, declared they would fight her if there was any chance, or at all events give her a broadside for the honour of old England.

The captain, wishing to avoid fighting her if possible, ordered the studding sails to be set; but finding this of no avail, as she gained considerably upon us, ordered them to be taken in, the courses to be clewed up, the main and fore-sail to be backed, the deck to be cleared from all lumber, the tompons to be taken out of the guns, and the men distributed in the best possible manner, with orders not to fire unless they could make sure of the shot telling.

By this time the suspicious vessel was not half a league distant, and, by her tall and raking masts, and symmetry of hull, kept us no longer in suspense; she was what seamen call a Baltimore clipper—one of your regular cutwaters.

The mate knowing her intentions, and seemingly pleased at the idea of having another brush, as he termed it, was

coolly and deliberately stripping all his clothes from his person, with the exception of his trousers, which example was immediately followed by all the men. Their appearance at this time was truly warlike, each having a cutlass in his hand, a brace of pistols at his side, and all ready and willing for the fray.

It was now about three p.m., and the American close on our weather bow; up went our ensign, which she soon perceived, and answered it by a gun to leeward, at the same time hoisting English colours. The captain now thought her to be an English sloop of war, but the mate was quite alive to her movements, and desired the captain to be on the look out, as she would be alongside and take him before he could fire a gun. By this time she was within hail, and a rough and desperate-looking vagabond appeared on the bow, and demanded the ship's name, from whence, and destination; the captain immediately answered, that it was only by compulsion that he should be made to answer where she was from, and, if he wished to know her name, it was only to launch his boat, and he could get the desired information from her stern.

Her intentions were now clear to us all: she had a long eighteen-pounder amidships on a swivel, and eight twenty-four-pounders, and a crew of about sixty of the most desperate looking villains that eyes ever beheld.

Our force was only eighteen-pounders, and a crew consisting of only thirty men and boys. Our captain perceiving it was their intention of clapping their vessel alongside, hailed them in a resolute manner, that if they did not keep their ship off he would throw his fire into her.

This had no effect on the American: they still kept near, and it became high time to clap a stopper on them.

Our broadside was brought to bear upon her—bang she had it; and the smoke, in some degree clearing away, we found we had carried away her mizen-top, which was hanging over her side.

The American now opened her swivel upon us, and so true did she fire it, that not a shot missed us; which obliged us to open again sooner than we wished, fearing that our shot would too soon be expended. We were now within about twenty yards of the American's stern, and the mate ordered the helm to be put a-starboard, and the after-sails to be brailed up and shivered; and as our ship fell off, we gave her another broadside double shotted. Scarcely a shot appeared to miss, so truly had the guns been pointed.

The instant we had fired we braced up our after-yards, put the helm a-port, and stood for her again; this manoeuvre we practised with such success, that the American could only get the swivel to open upon us, which certainly did great execution to our rigging, and four of our daring band lay dead upon the deck.

The American's fore, main, and maintop sails, were now hanging in ribands, and the affray became more desperate. She had closed with us, and part of her crew, headed by a daring looking fellow, attempted to board us; they were three times repulsed by our gallant crew with great slaughter, and

again had made their appearance on the bows of our ship, while their bowsprit was locked in our main rigging; which happened rather unfortunately, as it tended to assist them materially in their operations, and our whole force was directed to this quarter to repulse them. Our guns were all deserted for this purpose, and the American's guns were playing upon us with dreadful execution.

The Americans had now gained a footing upon our deck: the combat became awful, and our mate, with his cutlass, was dealing destruction to all who opposed his arm, although wounded in his sword-wrist, which tended to make him the more desperate.

At this moment a seaman cut our rigging so as to clear the American, which, when done, she swung and fell off, leaving five of her men on our decks, who were immediately shot.

The action again commenced broadside and broadside with redoubled fury, dealing slaughter on both ships. Our shot now became entirely expended, and all chance of escape appeared hopeless, when one of our men recollected we had some bags of nails, returned goods; these were immediately served to the guns, and with which we so raked the American, and created so much havoc among her crew, that only a single gun was fired by them, and that at long intervals.

Even this at length was silenced, and they no longer able, or unwilling, to carry on the engagement, by the help of what little sail they could set, sheered off, leaving us only our main and mizen-mast standing.

Thus ended a most desperate and bloody engagement, leaving ten of our brave fellows dead, and many wounded; but the loss on the American side must have been dreadful; fifteen were found dead on our decks, and the mate might have numbered five which he slew with his own arm. To account for the loss of our rigging, it was noticed the Americans had her guns much elevated, doubtless for that purpose. Such cool intrepidity and deliberation, exhibited on the part of our captain and men, was surprising, considering the force they had to contend with: fully proving, that nothing can withstand the bravery of British seamen when properly commanded.

THE RED FLAG AT THE FORE.

BY THE OLD SAILOR.

NEVER shall I forget my emotions on first ascending the side of the ship in which I commenced my career as a sailor. It was just about the time when Nelson and the Nile was the universal theme of conversation; our theatres echoed to the shout of "Rule Britannia," and the senate-house rang with plaudits for the achievements of naval valour. But, ah, how few who rejoiced in the triumphs of victory, gave one thought to the hardships, privations, and oppressions, under which the gallant seaman laboured! Boy-like, I thought it was a jovial life; and when standing on the deck, with the British ensign floating on the peak, and the bull-dogs peeping from the port-holes, I felt, "ay, every inch a hero." Besides, there was my handsome uniform, with bright gilt buttons, bearing the impress of the anchor, and my dirk, just long enough to spit a partridge, swinging like a cook's skewer by my side, and a leathern belt, with two fierce lions' heads in front, and, that summit of a schoolboy's ambition, the cocked hat and gold rosettes. What child of twelve years could resist the temptation? So I e'en kissed my poor mother—who used to compare the rattling of the rain, as it ran down the spout into the water-butt, to the roaring of the waves; and for whom gilded buttons and cocked-up hats had no charms—shook my father by the hand, as he gave me the bill for my outfit, to make me (by calculating the expense) more careful of my clothes—threw my arms round the neck of my weeping sister, whilst she shyly thrust something in my waistcoat pocket, which I afterwards found was all her own private little store of cash—and away I started, with glory in my eye, to leave "home, sweet home," far behind me.

The ship which I was going to join was a fine dashing frigate,

commanded by a friend of my father's friend, to whom I received the most handsome recommendations. I say friend of my father's friend, for such he was represented to me; but the fact is, my worthy dad was a freeman of no contemptible borough, besides holding a considerable influence over a certain number of independent voters; and one of the candidates, whilst canvassing for the general election, had declared that "I was cut out for a sailor;" that "he had interest at the Admiralty," and made no doubt that, by diligence and attention, I should soon carry the "red flag at the fore." I thought so too; but what the "red flag at the fore" meant, I was just as ignorant as I was of cuckoo-clock making. Nevertheless, it sounded well: the candidate became an M.P., and I was sent on board, a stranger among strangers, and about as much patronised as a widow's pig upon a village green.

I had never seen a ship—I had never seen the sea; and when the wide ocean burst upon my view, rolling its mighty billows majestic grandeur, I began to think that they were not the most pleasant things in life to play with, particularly for such a little fellow as myself; but when the stupendous bulwarks appeared, as they lay at anchor in the bay, with their shining sides reflected in the waves, and their bright ensigns flashing in the sun, fear gave way to admiration, and I began to sing—

"I'm a jolly roving tar,

Fearing neither wound nor scar,

And many a tightish breeze then have I seen."

But, bless your heart! I had seen nothing then; nevertheless I thought of the "red flag at the fore;" and as the boat lightly skimmed the surface of the dark blue waters, a feeling of honest pride swelled in my little breast—henceforward, I was to be devoted to my king and country.

The first lieutenant received me very graciously. The wonders which everywhere presented themselves, almost overwhelmed me with astonishment and delight. But, alas! this was not of long duration; for a youngster, about my own age, accompanied me to the cockpit, where I was to take up my abode. The dark cavern which formed the mess-berth, where a ray of day-light never entered, seemed rather horrible to my imagination, and the motley group of all ages, from ten to twenty-five, that filled it, did not inspire me with much confidence.

At the door stood a stout negro, scarcely visible, except by his white teeth, and his rolling eyes, which strongly reminded me of Robinson Crusoe's monster in the cave, and a little sprig of a midshipman was venting imprecations on him for not having the dinner ready. Surrounding a table inside the berth, which was illumined by two *deaf* candles, that appeared as if they had never reached their proper growth, sat eight or ten small officers, employed in various ways. One was playing a difficult piece of music on the flute, with the notes placed before him, propped up by a quart bottle. A companion, to annoy and ridicule him, had put his pocket-comb between two pieces of paper, and applying it to his mouth, produced a sound more execrable than the bagpipes, yet still endeavouring to imitate the tune. Two youths in the farthest corner had quarrelled, and were settling their dispute in a boxing match. Another seemed totally abstracted from the scene, and leaning his elbows on the table, was contemplating the miniature of a fair-haired girl, whose mild blue eyes beamed with love and constancy. On the opposite side of the table, two youngsters, with a treatise on seamanship before them, were arguing, in no very gentle terms, on their proficiency in naval tactics. At the head of the table, an old master's mate was exercising his authority in preserving peace; but as he was engaged at the same time in mixing a good stiff glass of grog, his orders were either disregarded or laughed at. But there was one pale-faced lad, with a countenance full of intellectual expression, whom I shall never forget. He sat by himself, with a small writing-desk before him, and on it lay a letter, the writer of which, not satisfied with filling up each page with black ink, had crossed the lines with red, and this letter he was endeavouring to answer. The noise had disturbed him, for sheet after

sheet had been torn up, and lay in a pile by his side. He looked at the combatants, and a gentle murmur escaped him; he turned to the musicians, and a smile lighted up his features: he cast his eyes towards the youth, whose thoughts were with the polar-star of his affections, and a shade of melancholy sat upon his brow. At this moment he caught sight of me as I stood at the door, undetermined whether to advance or recede, and his hand was instantly extended. He closed his desk, remarking that "his sister must wait another day," and—but why need I recount every particular—from that hour we were friends.

Ay, how often, when the pale moon at midnight had thrown her silver beams upon the bosom of the waves, or when the star-gemmed canopy of heaven has glistened with its myriads of glories, have we two stood together, holding sweet converse on the past, and picturing bright scenes of future fame! Yes, hand in hand we have stood, like brothers, talking of those sweet spots, endeared by every tie of fond regard, where first we revelled in our infancy. Yet, oh, God!—the vision is even now before me—when I beheld that pale-faced youth struggling in the agonies of death—those features, full of mild benevolence, still more dead in their hue, and hideous in convulsive writhings—the hand dyed that I had so often pressed with real unabated friendship, in the life-stream from his heart, as he worked his fingers in the deep wound that dismissed his noble spirit. It was in action, when rage and vengeance lashed the passions into fury. Yes, there he fell, and the ocean was his grave!

But, to return to my introduction. Almost at the same moment that I entered the berth, the quarter-master came down, and inquired if Mr. Moriarty was below. A fine handsome young man, about two-and-twenty, immediately answered in the affirmative. "Here's a letter for you, sir," said the quarter-master, "with the admiralty seal on the back, and a direction full of sheep-shanks and long splices in the front."

"Eh, eh, Johnson," replied the young officer; "the old story, I suppose. The door of promotion is shut, and, by and by, I dare say, they'll send me word that the key's lost. But let us see, you old sea dragon, and don't stand turning and turning it over there, like a Lapland witch at her incantations."

The veteran was examining the letter with rather an inquisitive eye; for his other eye was on an equally inquisitorial visit to a full bottle of rum, that stood on the table; and he hesitated to give up his charge to the young officer, who I now perceived had his right arm in a sling, in consequence, as I afterwards learned, of a wound received in the battle of Aboukir.

"Cantations, or no cantations, sir," replied the old quarter-master, "this here letter weighs heavy; and I have been close hauled for these two days past; and its dry work, sir, that tack and half tack."

"Well, well, Johnson," rejoined the midshipman; "you want a glass of grog, and you shall have it; so steward, give him one, d'ye hear? And now hand over the scrawl."

"Ay, ay, sir," said Johnson, "and if I ain't freighted with a pair of white lapelles—put some more rum in, you black angel!—then call old Johnson a lubber, that's all." Moriarty laughed; but it was evident that he took the letter with some degree of tremor, especially as one of the youngsters jocosely addressed him as *Lieutenant Moriarty*.

"Hold your prating, simpleton!" said he; "you won't find commissions so plentiful when you come to my age, unless you happen to be a stray slip of nobility, or have strong parliamentary interest to back you."

The old quarter-master had been wrangling with the black steward for another drop, and then, holding up his grog, exclaimed, "Your health, Lieutenant Moriarty! and I hope I shall live to see you carry the 'red flag at the fore.'"

"With all my heart, Johnson," replied Moriarty, his eyes sparkling with pleasure, for the letter was now unfolded; and see, here is the first step up the ratlines, sure enough; whether I shall ever reach the mast-head or not, is another thing."

It was an order from the Admiralty to go on shore, and re-

ceive his commission; and every one crowded round him full of congratulations.

I cannot say but I felt a little jealous about the "red flag at the fore;" for I considered that as my exclusive right, though utterly ignorant of what it meant. But I was soon enlightened on the subject; for being naturally communicative, I mention my expectation of getting the "red flag at the fore" during dinner, and several of the little midshipmen nearly choked themselves with laughing at me. I then learned, that the "red flag at the fore" was the distinction of the vice-admiral of the red; a station that not more than one officer in five thousand ever attained, and even then only through very distinguished merit, or peculiar good fortune. Nevertheless, I was nothing daunted, and the "red flag at the fore" urged me on.

We sailed a few days afterwards with a convoy for Bombay and China, but destined to cruise ourselves in the neighbourhood of the Cape of Good Hope. We had not quitted port more than a week when we encountered a very severe gale. It was the first time I had beheld the sea in such commotion, and the spectacle was awfully grand. The noble ship was borne like a weed upon the ocean at the mercy of the tempest, which howled through the rigging so as to deaden the shouts of the seamen, while furling the heavy sails upon the yards. Billow after billow beat over us; and as the rolling waves dashed up their frothy crests to heaven, roaring in the wildness of their fury, I could not help thinking how different the noise was from the comparison of my poor mother, when she heard the rain patter into the water-butt. The convoy, too, heavy laden Indiamen, and transports with troops, were scattered in every direction: but now and then we could distinguish one or two, as they appeared for a moment on the summit of the foaming surge, like dim specks on the verge of the horizon.

Night came, and brought its frowning horrors; a pitchy darkness, which seemed almost palpable to the touch, hung with a funereal gloom above, whilst the wild waves, lashed by the raging tempest into sparkling foam, served but to render the blackness of the heavens more dense and horrible. At the commencement of the gale, the wind was dead against us, and the ship was hove-to under a close-reefed maintop-sail; but towards night the wind veered in our favour, and we flew through the liquid element with astonishing rapidity. The shifting of the gale had produced a still wilder commotion in the waves, which seemed to be struggling for the mastery. Wave after wave came raging after us, and threatening to engulf the frigate; but like a bird upon the wing, the gallant vessel lifted to the swell, and rushed down the steep abyss, tracking her path with brilliancy and light.

I cannot say but the spectacle rather terrified me, and I more than once wished the "red flag at the fore" at the—"Stop!" says the reader, "and do not conclude the sentence."

But really, gentle reader, I must—for I was merely going to say that I wished the "red flag at the fore" at the mast-head, and myself snug in my own little bed-room, with my poor mother to tie my night-cap, and to tuck me in.

Ossian, or Byron, I forget which, says: "Once more upon the waters, yet once more, and the waves bound beneath me as a steed that knows his rider;" but I found a vast difference between mounting the speckled waves and riding my own pretty little pie-bald pony.

Morning at length appeared; the wind had again changed, and the ship was once more hove-to. But if the gale of the preceding night had been furious, it now came with redoubled violence, and the stately vessel which had so lately steered her course in majesty and pride, lay writhing and groaning between the billows, like the soul of the mighty struggling with the last pangs of mortality.

Orders were given to furl the foresail, and about sixty of the best seamen sprang aloft to execute the command. Already had they extended themselves upon the yard, and were gathering up the folds of the heavy canvass, when a tremendous sea came, like an Alpine mountain, rushing towards us. As the poor wretch, when the fierce eye of some famished beast of prey is glaring on him, stands fixed and immovable,

so did the poor seamen suspend their labours, when they saw the waters of destruction approaching. No human voice could warn them of their danger, no hand could be outstretched to save. There seemed to be a momentary stillness in the storm, and a shuddering instinct crept through every spirit—a horrible dread of they knew not what.

Still onward rolled the wave—it struck the vessel on the bows, and threw its portentous burden on the deck. A crash, mingled with a wild, tumultuous yell, ensued, and when the spray had cleared, it was found that the foremast had been swept away, and upwards of fifty brave fellows were buried in the waves. Some still remained entangled in the rigging, but man after man washed away, till only one was left. We could see him—we could not speak to him—but only that Power who holds the tempest in his hand, could rescue him from death. There he struggled, black despair in every feature, as his strong limbs writhed round the shattered mast, and with convulsive agony he buffeted the waves. O, what avail was human strength in such an hour of peril! His hold relaxed—it became weaker, and slowly he settled in his watery grave.

I need not describe the effects which such a scene produced upon the mind of a boy not thirteen years of age; and even at this moment, so strong are first impressions, the crash, the yell, and the agonised contortions of that drowning man, are present to my mind in all their horrors.

The wreck was cleared, the storm abated. A jurymast was erected, and once more the stately frigate held her way upon the glassy surface of the azure wave. The first duty was to collect the convoy, and heavy forebodings of their fate were whispered among the crew. One by one, however, they gathered round us, showing manifest indications of the recent storm.

There is something peculiarly interesting to a seaman in the assembling of ships after a gale of wind. It occasions a sensation that a landsman cannot feel, unless it is that sort of melancholy satisfaction when friends meet who have surmounted adversity together, but with the apprehension of a similar calamity still before them. Several of the convoy were yet undiscovered, and as the evening was closing in, the heavy report of a distant gun came booming along the waters. Another and another followed in rapid succession, and the frigate's course was directed towards the spot whence the sounds proceeded.

The sun went down in glory—its radiance tinged the bosom of the liquid element, but it never rose again on those whose signals of distress we heard. They must have seen his last beams arching the heavens with their golden brightness, and light and hope must have expired to them for ever.

The wind opposed our progress, and the swell still rolled against us, though it was now only the heaving of the sea, without its breaking violence. Still we approached nearer to the object of our search, as the noise of the guns was more distinct, and the flashes were plainly visible. At length, about midnight, by the help of glasses, a dismayed vessel was distinguished rolling like a log upon the waters. Every nerve was strained, every effort was made to intimate that assistance was at hand, and the boats were prepared to give succour, or to snatch from destruction. The sight was eagerly bent towards the spot where the clear horizon was broken by the dark object of our good intentions. Suddenly the curve appeared connected—in vain the eye sought the vessel in distress, for nothing obstructed the union of sky and ocean, and "She's gone! she's gone!" was simultaneously exclaimed by officers and men.

Yes, she was gone, and the gallant ship, that had endured the fury of the tempest, sunk when its wrath was spent. But that tempest had, doubtless, shaken her stout frame, and rent her joints asunder. Yet it was hard to perish almost within the grasp of safety.

Hopes were still entertained that some, if not all, had escaped in the boats. Our own were hoisted out, and having neared the supposed spot, were immediately despatched. The morning dawned in magnificence and splendour, the sun rose in glorious majesty, but his earliest beams glanced on a

scattered wreck, that told a tale of death. The boats were actively employed in passing to and fro, but no appearance of a human being could be discerned. The launch was discovered bottom upwards, and another boat broken nearly in two. The truth was soon disclosed, for the name *ATLAS* on the stern of the launch informed us that nearly two hundred victims had perished in the deep. How the catastrophe had happened could only be matter of conjecture.

One of our boats fell in with some spars, which were lashed together, so as to form a kind of floating raft, and, on turning them over, a scene presented itself that filled every soul with anguish. A young female, apparently about twenty-two, with an infant fastened round her body, had been secured to the timber—perhaps the last sad office of a tender husband, who, in the affectionate solicitude of his heart, had vainly hoped to rescue them from death. They were taken on board the frigate, sewed up in a hammock, and again consigned to that element, at once their destruction and their grave.

One other ship was still missing; what became of her I never heard; but after waiting a proper time, we pursued our way to the island of St. Jago, the place of rendezvous.

A succession of fine weather soon deadened the remembrance of the past, and by the time of our reaching the Cape De Verde, the "red flag at the fore" had once more gained the ascendancy. The novelties which presented themselves at Port Praya, the oranges, the cocoa nuts, and, above all, the monkeys sporting in their native cunning, unrestrained, among the green foliage, were delightful; whilst the waters in the bay were so clear and transparent, that the fish could be distinctly seen at the depth of from thirty to forty feet swimming above the silver sand that covered the bottom.

Having refitted, and watered, the anchor was once more weighed, and we again directed our course to the place of destination. At the latitude appointed we parted from our convoy, and then were left alone. Days, weeks, passed on, and no sail ever appeared in sight to change the dull monotony. It was still the same unvaried scene of sky and ocean, and not unfrequently severe and boisterous weather. At the end of five weeks, we were gratified by the sight of a sail steering towards us, and in a few hours had retaken a fine *Indiaman*, prize to a French frigate. No time was lost in securing her, but the irreparable devastation among our crew, rendered it necessary to proceed with our recapture to *Madras*; and thither we hastened.

We remained three years in the East Indies, without anything material occurring, and then the cry was—"Huzza for old England!" But it would be an endless task were I to enumerate all my adventures, perilous and humorous, and sometimes a combination of both, in my endeavours to attain to the "red flag at the fore." Before my six years had expired, I had been in seven different engagements, received three wounds (one of them severe), been once shipwrecked, and once taken prisoner, but escaped. Storms I had weathered many; had visited the coast of Africa, South America, and New South Wales; but still I endured every thing for the sake of the "red flag at the fore."

At the expiration of six years, I passed my examination as lieutenant, and received my certificate of qualification, which, after waiting a modest time, I forwarded with a memorial to my patron, who had been elevated to the House of Peers. His answer was, that "things were materially changed since I first went to sea; the same individuals were not now in office, and he much questioned whether he could obtain my promotion; indeed, he hinted that it would be better for me to quit the service and apply myself to some other profession." I cannot describe my disappointment and vexation. Through the representations of this man, I had given up the sweets of childhood, to endure the severest hardships and privations. I had toiled unflinchingly in my duty; I had fought the battles of my country, and could show my honourable scars, and thus to have the "red flag at the fore" torn down by the hand I expected to raise me!—my pride and every feeling of my heart revolted against it; I was determined to persevere.

Other six years passed away, in which I was a partaker in some of the most brilliant achievements of the war, when

I was honoured with a lieutenant's commission. But even then it was not gained by any desperate act of valour, or by those feats which are dear and precious to every British sailor's heart; but simply by obtaining (through the present of a handsome Cachemire shawl) the interest of a fine lady highly esteemed by the first lord of the admiralty. However, I got the white lapelles, and that was, as Moriarty observed, "the first step up the ratlines" towards the "red flag at the fore."

After this, things went on tolerably ill, among some sharp fighting, and many hard knocks. My poor mother slept her cable for the blessed haven of eternal rest. My sister got married to a pirate, who plundered my father's property, and then cast her adrift upon the world. The old gentleman's grey hairs were brought with sorrow to the grave; my sister's coffin was soon placed upon his breast, and I was left desolate.

Still the "red flag at the fore," like a will-o'-the-wisp, lured me on. I conducted one of the fire ships at Lord Cochrane's attack upon the French fleet in Basque Roads; had the command of a gun-boat at the storming of St. Sebastian; and was with the army at the sortie from Bayonne, in which I got a crack upon the head—not big enough to jump in, to be sure, but it set my brains spinning for a month. I commanded a fast-sailing schooner, charged with despatches for Lord Wellington, when he was expected to occupy Bordeaux, and entered the Garonne in the dead of the night, lighted on my way by the flames of a French eighty gun ship, which had been set on fire to prevent her falling into the hands of the English; and having anchored in a secure position, left my vessel in a four-oared boat, passed the batteries undiscovered, and executed my orders, as the brave marshal stood in the great square, with white flags and beauty greeting his arrival.

Peace came: Bonaparte was elbowed off to Elba; and the "red flag at the fore" was as far off as ever. My vessel was paid off, and after many years activity, I entered upon a life of indolence. But, as Dr. Watts wisely observes in one of those hymns which I was compelled to learn at school, when a child—

"Satan finds some mischief still,
For idle hands to do;"

so I 'en got married. The fair lady (she is now peeping over my shoulder) attracted my attention at church, by the broad and bright red ribbons that graced the front of her bonnet. They reminded me of the "red flag at the fore," and an inglorious sigh escaped me. Now, everybody knows that a sigh is the beginning of love. Well, to make short of it, I got married; but no sooner had Napoleon returned from Elba than I was again at my duty. I was sent by Sir Pulteney Malcolm, then naval commander-in-chief at Ostend, with a party of seamen to man the great guns in the army under Lord Wellington, on the plains of Waterloo, and the "red flag at the fore" once more opened to my view. It was on the very morning of the decisive battle, that, between Brussels and Bruges, I met the first detachment of prisoners coming down, and was ordered to take charge of them to Ostend. There were about two thousand officers and men, most of them wounded, and without a single application or dressing to the mangled parts; yet their devotion to Napoleon was unabated; and with their stiffened limbs, sore with laceration, and their bodies gashed and scored with sabre cuts, they still shouted "Vive l'Empereur."

The battle of Waterloo ended the war; Bonaparte was despatched to St. Helena, and all prospects of promotion are over. My noble patron has accomplished the number of his days, and no "red flag at the fore" will ever fall to my lot, unless, indeed, I include a certain Bardolphian tinge to the most prominent feature of my face, which has been "red at the fore" for some years past; but except the half-pay of a lieutenant, a small remnant of prize-money, and a wife and seven children, I am as poor as a churchwarden's charity-box.

LOSS OF H. M. S. PHENIX.

MY DEAR MADAM,—I am now going to give you an account of our last cruise in the *Phoenix*; and must premise that should any one see it besides yourself, they must put this construction on it—"That it was originally intended for the eyes of a mother, and a mother only," as upon that supposition my feelings may perhaps be tolerated. You will also meet with a number of sea terms, which, if you don't understand, why I cannot help you, as I am unable to give a sea description in any other words.

To begin then :—On the 2nd of August, 1780; we weighed, and sailed from Port Royal, bound for Pensacola: having two store ships under convoy, which we were to see safe in; and then cruise off the Havannah, and in the Gulf of Mexico for six weeks. In a few days we made the two sandy islands, that look as if they had just risen out of the sea, or fallen from the sky; inhabited, nevertheless, by upwards of three hundred English, who get their bread by catching turtle and parrots, and raising vegetables; which they exchange with ships that pass, for clothing and a few of the luxuries of life, as rum, &c. About the 12th, we arrived at Pensacola, without anything remarkable happening, except our getting a vast quantity of fish, sharks, dolphins, and bonetos. On the 13th sailed singly, and, on the 14th had a very heavy gale of wind at north, right off the land; so that we soon left that sweet place, Pensacola, a distance astern. We then looked into the Havannah, saw a number of ships there, and knowing that some of them were bound round the bay, we cruised in their track: a fortnight, however, passed, and not a single ship hove in sight to cheer our spirits. We then took a turn or two round the gulf, but not near enough to be seen from the shore. Vera Cruz we expected would have made us happy, but the same luck still continued; day following day, and no sail. The dollar bag began to grow a little bulky, for every one had lost two or three times, and no one had won: this was a small gambling party entered into by Sir Hyde and ourselves; every one put a dollar into a bag, and fixed on a day when we should see a sail; but no two persons were to name the same day, and whoever guessed right first had the bag. We were now tired of our situation, and glad the cruise was almost out, for we found the navigation very dangerous, owing to unaccountable currents; so shaped our course for Cape Antonio: the next day the men at the mast-head, at about one o'clock in the afternoon, called out, "A sail upon the weather-bow!—Ha, ha! Mr. Spaniard, I think we have you at last. Turn all hands! make sail! all hands give chase!" There was hardly any occasion for that, for the sound of a sail being in sight, flew like wildfire through the ship, and every sail was set in an instant, almost before the orders were given. A lieutenant at the mast-head with a spy-glass—"What is she?" "A large ship studding athwart right before the wind; p-o-r-t; keep her away; set the studding-sails ready!" Up comes the little doctor, rubbing his hands "Ha, ha! I have won the bag." "The devil take you and the bag; look, what's a-head will fill all our bags." Mast-head again, "Two more sail on the larboard beam." "Archer, go up and see what you can make of them." "Upon deck there; I see a whole fleet, upwards of twenty sail coming right before the wind. Confound the luck of it, this is some convoy or other, but we must try if we can't pick some of them out. Haul down the studding-sails. Luff, bring her to the wind. Let us see what we can make of them." About five we got pretty near them, and found them to be twenty-six sail of Spanish merchantmen under convoy of three line-of-battle ships, one of which chased us; but when she found we were playing with her (for the old *Phoenix* had heels), she left chase, and joined the convoy; which they drew up into a lump, and placed themselves at the outside of, but we still kept smelling about till after dark. Oh, for the Hector, the Albion, and a frigate, and we should take the whole fleet and convoy, worth some millions. About eight o'clock, perceived three sail at some distance from the fleet; dashed in between them and gave chase, and was happy to find they

steered from the fleet,—about twelve came up with a large ship of twenty-six guns. “Archer! every man to his quarters; run the lower deck’s guns out; and light the ship up; show this fellow our force; it may prevent his firing into us, and killing a man or two.”—No sooner said than done. “Ho, the ship ahoy! lower all your sails, and bring to instantly, or I’ll sink you.” Clatter, clatter, went the blocks, and away flew all their sails in proper confusion. “What ship is this?” “The Polly.” “Whence come you?” “From Jamaica.” “Where are you bound?” “To New York.” “What ship is that?” “The Phoenix!” Huzza three times by their whole ship’s company. An old grum fellow of a sailor standing close by me—“Oh, d—n your three cheers, we took you to be something else.” Upon examination we found it to be as he reported, and that they had fallen in with the Spanish fleet that

morning, and were chased the whole day, and that nothing saved them but our stepping in between; for the Spaniards took us for three consorts, and they, for a Spanish frigate, till we hailed them; the other vessels in company were likewise bound to New York. Thus was I, from being worth thousands in idea, reduced to the old 4s. 6d. a day again; for the little doctor made the most prize-money of us all that day, by winning the bag, which contained between thirty and forty dollars; but this is nothing to what we sailors sometimes undergo.

After parting company, we steered S.S.E. to go round Antonio, and so to Jamaica (our cruise being out), with our fingers in our mouths, and all as green as you please. It happened to be my middle watch, and about three o’clock, when a man upon the fore-castle bawls out, “Breakers a-head, and land

LOSS OF HIS MAJESTY'S SHIP PHOENIX.

upon the lee-bow;” I looked out, and ’twas so, sure enough. “Ready about! put the helm down!—Helm-a-lee!”—Sir Hyde hearing me put the ship about, jumped upon deck, “Archer, what’s the matter? you are putting the ship about without my orders.” “Sir, ’tis time to go about, the ship is almost ashore, there’s the land.”—“Good God! so it is—Will the ship stay?” “Yes, sir, I believe she will, if we don’t make any confusion—she’s all aback—forward now.”—“Well,” says he, “work the ship, I will not speak a single word.” The ship stay’d very well. “Then heave the lead! see what water we have.” “Three fathom.”—“Keep the ship away! W.N.W.” “By the mark three.”—“This won’t do, Archer.” “No, sir, we had better haul more to the northward; we came S.S.E., and had better steer N.N.W.” “Steady, and a quarter three.” “This may do, we deepen a little.” “By the deep four.”

“Very well, my lad, heave quick.” “Five fathom!” “That’s a fine fellow; another cast nimbly.” “Quarter less eight.” “That will do, come we shall get clear by and bye.” “Mark under water five.” “What’s that?” “Only five fathom, sir.” “Turn all hands up, bring the ship to an anchor.” “All hands bring the ship to an anchor, boy!” “Are the anchors clear?” “In a moment, sir.” “All clear.” “What water have you in the chains, now?” “Eight half nine.” “Keep fast the anchors till I call to you.” “Aye, aye, sir, all fast?” “I have no ground with this line.” “How many fathom have you out? pass along the deep sea line.” “Aye, aye, sir.” “Come are you all ready?” “All ready, sir.” “Heave away, watch! watch! bear away, veer away; no ground, sir, within a hundred fathom.” “That’s clever! come, Madame Phoenix, there is another squeak in you yet—all down

but the watch—secure the anchors again—heave the main top-sail to the mast; luff, and bring her to the wind.” and he says:

“You see, madam, I told you, you should have a little sea-jargon; if you can understand half of what has already been said, I wonder at it, though it is nothing to what is to come yet, when the old hurricane begins. As soon as the ship was a little to rights, and all quiet again, Sir Hyde came to me, and taking my hand in the most friendly manner—“Archer (and tears almost starting from his eyes), we ought all to be much obliged to you for the safety of the ship, and, may be, ourselves and lives. I am particularly so, nothing but that instantaneous presence of mind and calmness, saved her; another ship’s length, and we were fast ashore; had you been the least diffident, or had made the least confusion, so as the ship would have hauled in her stays, she must have been inevitably lost.” “Sir, you are very good, but I have done nothing that I suppose any body else would not have done in the same situation. I did not turn all the hands up, knowing the watch were well able to work the ship; besides, had it spread immediately about the ship, that she was almost ashore, it might have created a confusion that was better avoided.” “Well,” says he, “’tis well indeed.” At daylight we found that the current had set us between the Colladera’s rocks and Cape Antonio, and that we could not have got out any other way than what we did; there was a chance, but Providence is the best pilot. We had sunset that day twenty leagues to the S.E. of our reckoning, by the current.

After getting clear of this scrape we thought ourselves well off, and made sail for Jamaica, but misfortune seemed to follow misfortune. The next night, my watch upon deck too, we were taken with a squall, like an hurricane while it lasted; for though I thought I saw it coming, and was prepared for it; yet, when it took the ship, it roared and laid her down so, that I thought she would never get up again. However, by keeping her away, and elewing up everything, she righted. The remainder of the night we had very heavy squalls, and in the morning found the main-mast sprung half way through: one hundred and twenty leagues to the leeward of Jamaica, the hurricane months coming on, and the head of the mainmast almost off, and at short allowance; well, we must make the best of it. The main-mast was well fished, but we were obliged to be very tender of carrying sail. Nothing remarkable happened afterwards for ten days, when we chased a Yankee man-of-war for six hours, but could not get near enough to her before it was dark, to keep sight of her; so that we lost her for want of being able to carry any sail on the mainmast. In about twelve days more we made the Island of Jamaica, having weathered all the squalls, and put into Montego bay for water; so that we had a strong party for kicking up a dust on shore, having found three men-of-war lying there. Dancing, &c. &c., till two o’clock every morning; little thinking what was to happen in four days’ time; for out of the four men-of-war that were there, not one of them was in being at that time, and not a soul of them alive but what was left of our crew; and many of the houses where we had been so merry were so completely destroyed, that hardly a vestige remained to mark where they stood. Thy works are wonderful, O God! praised be thy holy name!

September the 30th, weighed; bound for Port Royal, round the eastward of the island: the Barbadoes and Victor had sailed the day before, and the Scarboro’ was to sail the next. Moderate weather until October 2nd. Spoke to the Barbadoes off Port Antonio in the evening—at eleven at night it began to snuffle, with a monstrous heavy appearance from the eastward.—close reefed the top-sails. Sir Hyde sent for me—“What sort of weather have we, Archer?” “It blows a little, and has a very ugly look: if we were in any other country but this, I should say we were going to have a gale of wind.” “Aye it looks so very often here, when there is no wind at all; however, don’t hoist the top-sails till it clears a little, there is no trusting any country.” At twelve I was relieved; the weather had the same grum look: however they made sail upon her, but we had a very dirty night. At eight in the morning I came up again, found it blowing hard from the E.N.E., with close reefed top-sails upon the ship, heavy squalls at times.

Sir Hyde came upon deck: “Well Archer, what do you think of it?” “Oh, sir, its only a touch of the times, we shall have an observation at twelve o’clock, the clouds are beginning to break, it will clear up at noon, or else—blow very hard afterwards.” “I wish it would clear up, but I doubt it much: I was once in a hurricane in the East Indies; and the beginning of it had much the same appearance as this. So take in the top-sails; we have plenty of sea room.” At twelve the gale increasing still, we wore ship to keep as near mid-channel, between Jamaica and Cuba, as possible; at one the gale increasing still; at two, harder yet: it still blows harder! reefed the courses, and furied them; brought to under a foul mizen-stay-sail, head to the northward. In the evening, no sign of weather taking off, but every appearance of increasing, prepared for a proper gale of wind; secured all the sails with spare gaskets; good rolling tackles upon the yards, spanned the booms; saw the boats all made fast; new lashed the guns; doubled breech’d the lower deckers; saw that the carpenters had the tarpaulins and battens all ready for hatchways; got the top-gallant-mast down upon the deck; jib-boom and sprit-sail-yard fore and aft; in fact, everything we could think of to make a snug ship.

The poor devils of birds now began to find the uproar in the elements, for numbers came on board of us, both of sea and land kinds; some I took notice of, which happening to be to leeward, turned to windward like a ship, tack and tack; for they could not fly against it, and when they have come over the ship, dash themselves down on the deck, and never attempt to stir till picked up; and when let go again, would not leave the ship, but endeavour to hide themselves from the wind. At eight o’clock, a hurricane! the sea roaring, but the wind still steady to a point; did not ship a spoonful of water. However, got the hatchways all secured, expecting what would be the consequence should the wind shift: placed the carpenters by the mainmast with broad axes, knowing from experience that at the moment you may want to cut it away to save the ship, an axe may not be found. Went to supper; bread, cheese and port. The purser frightened out of his wits about his bread bags; the two marine officers as white as sheets, not understanding the ship’s working so much, and the noise of the lower-deck guns—which by this time made a pretty screeching, to people not used to it, it seemed as if the whole ship’s side was going at each roll. Wooden, our carpenter, was all this time smoking his pipe and laughing at the doctor; the second lieutenant upon deck, the third in his hammock. At ten o’clock I thought to get a little sleep; came to look into my cot; it was full of water, for every seam, by the straining of the ship, had begun to leak; stretched myself therefore upon deck between two chests, and left orders to be called should the least thing happen. At twelve, a midshipman came to me: “Mr. Archer, we are just going to wear ship, sir.” “Oh, very well, I’ll be up directly; what sort of weather have you got?” “It blows a hurricane.” Went upon deck, found Sir Hyde there! “It blows d—d hard, Archer.” “It does indeed, sir. I don’t know that I ever remember its blowing so hard before, but the ship makes a very good weather of it upon this tack, as she bows the sea; but we must wear her, as the wind has shifted to the S.E. and we are drawing right upon Cuba; so do you go forward and have some hands stand by; loose the leeward-arm of the foresail, and when she is right before the wind, whip the clue garnet close up and roll the sail up.” “Sir, there is no canvass can stand against this a moment; if we attempt to loose him, he’ll fly into ribands in a moment, and we may loose three or four of our people; she’ll wear by manning the fore shrouds.” “No, I don’t think she will.” “I’ll answer for it, sir; I have seen it tried several times on the coast of America with success.” “Well, try it; if she does not wear, we can only loose the fore-sail afterwards.” This was a great condescension from such a man as Sir Hyde. However, by sending about two hundred people into the fore-rigging, after a hard struggle she wore; found she did not make so good weather on this tack as the other, for as the sea began to run across, she had not time to rise from one sea before another lashed against her. Began to think we should lose our masts, as the ship lay very much along, by the pres-

sure of the wind constantly upon the yards and masts alone; for the poor mizen-staysail had gone in shreds long before, and the sails began to fly from the yards through the gaskets into coach whips. My God! to think that the wind could have such force.

Sir Hyde now sent to see what the matter between decks, as there was a good deal of noise. As soon as I went below, one of the marine officers calls out, "Good God! Mr. Archer, we are sinking; the water is up to the bottom of my cot." "Poh, poh, as long as it is not over your mouth, you are well off; what the devil do you make this noise for?" I found there was some water between decks, but nothing to be alarmed at; scuttle the deck, and let it run into the well; found she made a great deal of water through the sides and decks; turned the watch below to the pumps, though only two feet of water in the well; but expected to be kept constantly at work now, as the ship laboured much, with hardly a part of her above water, but the quarter-deck, and that but seldom. "Come, pump away, my boys; carpenters, get the weather chain pump rigged." "All ready, sir." "Then man it, and keep both pumps going." At two o'clock the chain-pump was choked: set the carpenters at work to clear it; the two head pumps at work upon deck; the ship gained upon us while our chain-pumps were idle; in a quarter of an hour they were at work again, and we began to gain upon her. While I was standing at the pumps, cheering the people, the carpenter's mate came running to me with a face as long as my arm—"Oh, sir, the ship has sprung a leak in the gunner's room." "Go then and tell the carpenter to come to me, but don't speak a word to any one else. Mr. Goodinoh, I am told there is a leak in the gunner's room; go and see what is the matter, but don't alarm anybody, and come and make your report privately to me." A little after this he returned: "Sir, there's nothing there, 'tis only the water washing up between the timbers, that this booby has taken for a leak." "Oh, very well, go upon deck, and see if you can keep any of the water from washing down below." "Sir, I have had four people constantly keeping the hatchways secure, but there is such a weight of water upon deck, that nobody can bear it when the ship rolls." Shortly afterwards the gunner came to me; "Mr. Archer, I should be glad if you would step this way into the magazine for a moment." I thought; somed—d thing was the matter, and ran directly: "Well, what's the matter here?" "The ground tier of powder is spoiled; and I want to show you that it is not out of carelessness in me in stowing it, for no powder in the world could be better stowed. Now, sir, what am I to do? if you don't speak to Sir Hyde he will be angry with me." I could not but smile, to see how easy he took the danger of the ship, and said to him, "Let us shake off this gale of wind first, and talk of the damaged powder afterwards." At four we had gained upon the ship a little, and I went upon deck, it being my watch. The second lieutenant relieved me at the pumps. Who can attempt to describe the appearance of things upon deck? If I was to write for ever, I could not give you an idea of it—a total darkness all above—the sea on fire—running, as it were, in Alps, or Peaks of Teneriffe; mountains are too common an idea: the wind roaring louder than thunder (absolutely no flight of imagination); the whole made more terrible, if possible, by a very uncommon kind of blue lightning. The poor ship very much pressed, yet doing what she could; shaking her sides, and groaning at every stroke. Sir Hyde upon deck lashed to windward! I soon lashed myself alongside of him, and told him the situation of things below; the ship not making more water than might be expected with such weather; that "I was only afraid of a gun breaking loose." "I am not in the least afraid of that: I have commanded her for six years, and have had many a gale of wind in her; so that her iron work is pretty well tried, which always gives way first—hold fast, that was an ugly sea; we must lower the lower yards, I believe, Archer; the ship is much pressed." "If we attempt it, sir, we shall lose them, for a man aloft can do nothing; besides, their being down ease the ship very little; the mainmast is a sprung mast; I wish it was overboard without carrying anything else along with it; but that can soon be done, the gale cannot last for ever, 'twill soon be daylight now." Found by the master's watch it was

five o'clock, though but a little after four by ours; glad it was so near daylight, and looked for it with much anxiety. Cuba, thou art much in our way! another ugly sea: sent a midshipman to bring news from the pumps; the ship was gaining on them very much, for they had broke one of their chains, but 'twas almost mended again. News from the pump again, she still gains! a heavy lee! Back water from leeward half way up the quarter-deck, filled one of the cutters upon the booms and tore her all to pieces; the ship lying almost upon her beam-ends, and not attempting to right again. Word from below that the ship still gained on them, as they could not stand to the pumps, she lay so much along. Said to Sir Hyde, "This is no time, sir, to think of saving the masts, shall we cut the mainmast away?" "Aye, as fast as you can." I accordingly went into the weather chains with a pole-axe to cut away the lanyards; the boatswain went to leeward, and the carpenters stood by the mast: we were all ready, when a very violent sea broke right on board of us, carried everything upon deck away; filled the ship full of water: the main and mizen-masts went; the ship righted, but was in the last struggle of sinking under us. As soon as we could shake our heads above water, Sir Hyde exclaimed: "We are gone at last, Archer! foundered at sea!" "Yes, sir, farewell, and the Lord have mercy on us!" I then turned about to look forward at the ship, and thought she was struggling to get rid of some of the water; but all in vain: she was almost full below. God Almighty! I thank thee that now I am leaving this world, which I have always considered as only a passage to a better, I die with a full hope of thy mercies, through the merits of Jesus Christ thy Son, our Saviour. I then felt sorry that I could swim, as by that means I might be a quarter of an hour longer dying than a man who could not, as it is impossible to divest ourselves of a wish to preserve life. At the end of these reflections, I thought I felt the ship thump, and grinding our feet: 'twas so! "Sir, the ship is ashore." "What do you say?" "The ship is ashore, and we may save ourselves yet." By this time the quarter-deck was full of men that had come up from below, and the "Lord have mercy on us," flying about from all quarters. The ship made everybody sensible now that she was ashore, for every stroke threatened a total dissolution of her whole frame; found she was stern ashore, and the bow broke the sea a good deal, though it was washing clean over at every stroke. Sir Hyde: "Keep to the quarter-deck, my lads, when she goes to pieces, 'tis your best chance." A providential circumstance got the fore-mast cut away, that she might not pay round broadside; lost five men cutting away the foremast, by the breaking of a sea on board, just as the mast went; that was nothing; every one expected it would be his own fate next: looked for day-break with the greatest impatience: at last it came, but what a scene did it show us: the ship upon a bed of rocks, mountains of them on one side, and cordeliers of water on the other; our poor ship grinding, and crying out at every stroke between them, going away by piece-meal; however, to show the unaccountable workings of Providence, that often what appears to be the greatest evil, proves to be the greatest good—that unmerciful sea lifted, and beat us up so high among the rocks, that at last the ship scarcely moved. She was a very strong ship, and did not go to pieces at the first thumping, though her decks tumbled in. We found afterwards that she had beat over a ledge of rocks, almost a quarter of a mile without us; where, if she had struck, every soul of us must have perished. I now began to think of getting on shore; so stripped off my coat and shoes for a swim, and looked for a line to carry the end with me. I luckily could not find one, which gave time for reflection. This won't do for me, to be the first man out of the ship, and first lieutenant; we may get to England again, and people may think I paid a great deal of attention to myself, and did not care for any body else. No, that won't do; instead of being first, I'll see every man, sick and well, out of her before me.

I now thought there was not a probability of the ship's going soon to pieces, therefore had not a thought of instant death; took a look round with a sort of philosophic eye, to see how the same situation affected my companions; and was not surprised to find the most swaggering, swearing bullies in fine weather, were now the most pitiful wretches on earth, when

death appeared before them: several people that could swim, went overboard to try for the shore; nine of them were drowned before our eyes. However, two got safe; by which means, with a line, we got a hawser on shore and made fast to the rocks, upon which many went, and arrived safe. There were some sick and wounded on board, who could not go this way; so we got a spare topsail-yard from the chains, and got one end ashore, and the other into the cabin-window, so that most of the sick got ashore this way. As I had determined, so I was the last man out of the ship, which was about ten o'clock. The gale now began to break. Sir Hyde came to me, and taking me by the hand, was so affected as to be hardly able to speak. "Archer! I am happy beyond expression to see you on shore! but look at our poor Phoenix!" I turned about, but could not say a single word, being too full: my mind had been too actively employed before, but everything now rushed upon me at once, so that I should not contain myself; and I indulged for a full quarter of an hour. By twelve it was pretty moderate: got some sails on shore, and made tents; found great quantities of fish drove up by the sea in holes amongst the rocks: knocked up a fire, and had a most comfortable dinner. In the afternoon we made a stage from the cabin-windows to the rocks, and got out some provisions and water, lest the ship should go to pieces, and then we must all perish with hunger and thirst, for we were upon a desolate part of the coast, and under a rocky mountain, which could not supply us with a single drop of water.

Slept comfortably this night; and next day, the idea of death vanishing by degrees, the prospect of being prisoners, perhaps during the war at the Havannah, and walking three hundred miles to it through the woods, was unpleasant; however, to save life for the present, employed this day in getting more provisions and water on shore, which was not an easy matter, on account of decks, guns, and rubbish, that lay over them, and ten feet of water besides. In the evening I proposed to Sir Hyde, to repair the remains of the only boat left; and that I would venture to Jamaica myself; and if I got safe, would bring vessels to take them all off—a proposal worth thinking of. It was next day agreed to, so got the cutter on shore and set the carpenters to work on her; in two days she was ready, and at four o'clock in the afternoon, I embarked with four volunteers, and a fortnight's provisions: hoisted English colours as we put off from the shore, and received three cheers from the lads left behind, which we returned, and set sail with a light heart, having not the least doubt, that with God's assistance, we should soon come back and bring them all off. Had a very squally night, and a very leaky boat; so as to keep two buckets constantly bailing. Steered her myself the whole night by the stars, and in the morning saw the Island of Jamaica, distant about twelve leagues. At eight in the morning arrived in Montego Bay.

I must now begin to leave off, particularly as I have but half-an-hour to conclude, else my pretty little short letter will lose its passage, which I should not like after being ten days at different times writing it, beating up with the convoy to the northward, which is a reason that this epistle will never read well; for I never sat down with a proper disposition to go on with it; but as I knew something of the kind would please you, I was resolved to finish it: yet it will not bear an overhaul; so don't expose your son's nonsense. But to proceed: I instantly sent off an express to the admiral; another to the Porcupine man-of-war; and went myself to Martha Bay to get vessels; for all their vessels here, as well as many of their houses, were gone to Moco. Got three small vessels, and set out back again to Cuba, where I arrived the fourth day after leaving them. I thought the ship's crew would have devoured me on my landing: they whisked me upon their shoulders presently, and carried me to the tent where Sir Hyde was. I must omit many little anecdotes that happened on shore for want of time, but I shall have a number of stories to tell when I get alongside of you; and the next time I visit you, I shall not be in such a hurry to quit you as I was the last, for then I hope my nest will have been pretty well feathered; but my tale is forgot. I found the Porcupine had arrived that day, and the lads had built a boat almost ready for launching, that would

hold fifty men, which was intended for another trial, in case I should have foundered. Next day embarked all our people that were left, amounting to two hundred and fifty; for some had died of the wounds they got coming on shore; others by drinking rum; and others had straggled into the country. All our vessels were so full of people, that we could not take away the few clothes that were saved from the wreck; that was a trifle, since our lives and liberties were saved. To make short of my story, we all arrived safe at Montego Bay, and shortly after at Port Royal, in the Janus, which was sent on purpose for us, and were all honourably acquitted for the loss of the ship. I was made admiral's aide-de-camp, and a little after sent down to St. Janus, captain of the Resource, to bring what were left of the poor devils to Blue-fields on the Musquito shore; and then to Jamaica, where they arrived after three months' absence, and without a prize, though I looked out hard, off Porto Bello and Carthagena. Found in my absence that I had been appointed captain of the Tobago; where I remain his Majesty's most true and faithful servant, and my dear mother's most dutiful son.

—ARCHER.

THE GHOST.

The carpenter of the ship, old Hawkington, fell sick one day, and, after a short illness died. He was a man very much respected on board, and every one was sorry for him. As the ship was ordered into port, where we expected to arrive in a few days, the captain allowed him to be kept, so that he might be buried on shore; and a sentry was placed, as usual, over the cabin-door in the cockpit. The old gentleman had been dead three or four days, I do not rightly remember which; but, as contrary winds had kept us out longer than we expected, it was decided that he should be committed to the deep on the following day. It so happened that I was sentry over the dead body, the night before it was to have been buried.

—My lantern was hanging to a beam, through the discoloured horn of which, a purser's dip was throwing a very poor light, and I stopped to endeavour to improve it by snuffing, or lighting a new candle as might be necessary. While I was thus employed, not having finished my job, the door of the dead man's cabin was thrown back with a loud bang, which could only have been effected by a very powerful hand, and I distinctly heard a gruff, hoarse voice, roar out, "Give us a light, sentry!" The horrid voice and noise so startled me, that I clutched hold of the lantern—when the nail on which it was hung gave way—the lantern fell from my grasp, the light was extinguished, and with two long strides and a spring I reached the upper step of the cockpit ladder.

—At length the noises, and some rather heavy footsteps approached the foot of the ladder whereon I had been standing for some considerable time, without moving hand or foot. It now appeared to me only prudent to move on, and I accordingly walked a little forward on the lower deck. I had sufficient courage to look behind me, and I distinctly saw—it's quite true, I assure you—I distinctly saw, as plain as I see you now—"I believes you," said Tim, in whose countenance the most painful interest was manifest—"the ghost!" continued the serjeant, "that is, the tall, gaunt figure of the carpenter, (he was near seven feet high, I'm sure), rising slowly up out of the cockpit, and then he walked forward after me. So I walked faster, and so did Mr. Hawkington's ghost; I went up the fore ladder, and the ghost followed me: so I walked aft, and it seemed I doubled upon the apparition for I saw it go up the ladder on to the fore-castle."—"And did the men on the fore-castle see it too?"—"Oh yes," answered the serjeant. "The weather was warm, and the watch on deck were lying about the fore-castle, and gangways, some asleep, and some looking at the moon, that was shining as bright as could be. The ghost appeared to take no notice of any of them, but took the walk the old gentleman, Mr. Hawkington, was accustomed to take when alive, and still kept his hands behind him, and his chin upon his breast, like as if he was in deep

thought. So presently one of the men makes him out, and he roused his nearest watchmate, and pointed out the ghost to him, saying, 'I say, Tom, I'm blest if there ain't the old carpenter! here he comes—I shall be off,' and he got up and walked aft. The whisper went the rounds rapidly, and in a few minutes the fore-castle was as clear as if it had been raining, or the men had heard the pipe, 'wash decks,' and the carpenter's ghost had it all to himself. 'Did any body speak to it?' asked Tim again.—'You shall hear presently,' said the serjeant.—'What do you all want here?' said the officer of the watch to the men, as they crowded aft to the quarter-deck. No one seemed inclined to answer this question at first; but on the question being repeated, accompanied with an order for them to go forward again, the captain of the fore-castle, a sturdy old tar, who used to say 'he would sooner face the devil himself at any time than his ghost,' muttered something about the carpenter's ghost.—'What! What's that you say?' asked the lieutenant.—'The carpenter's ghost! the carpenter's ghost!' reiterated half-a-dozen voices at once.—'What about the carpenter's ghost, you blockheads,' replied the lieutenant; 'be off forward, and don't be stopping up the gangway in this manner.' 'He's walking the fore-castle!' exclaimed the men, still keeping their station, notwithstanding the orders of the officer of the watch. 'Nonsense, men, nonsense!' said the officer; 'Mr. Hawkington's dead; I am astonished at you.' 'He is walking the fore-castle now, sir,' again urged one of the half-dozen of voices. 'He has got on the very same hat as I covered for him,' rejoined another. 'And the same old monkey-jacket,' added a third. 'With the end of the chalk-line hanging out of his pocket,' continued a fourth. 'Only go forward and see,' exclaimed a fifth. 'Parcel of fools!' said the lieutenant enraged; 'make a lane there, and let me go forward.' A lane was speedily made, and the lieutenant went on very boldly until he got to the bow of the barge, and there, sure enough, as the men had said, he saw the apparition taking his ease, walking backwards and forwards. The lieutenant's courage then began to fail him.—'I don't wonder at that,' said Tim. 'And he did not think it prudent to go any nearer,' continued the serjeant. 'I thought how it would turn out,' said Tim again. 'So he stood still at the bow of the boat,' resumed the serjeant, 'and after a great effort, he managed to call out, M-i-s-t-e-r H-a-w-k-i-n-g-t-o-n, i-s-i-s-i-s-i-s-tha-tha-tha-tyo-you?' 'Sir,' replied the apparition, raising his head. 'The devil he did!' exclaimed Tim. 'Yes,' continued the serjeant, 'and he touched his hat, and advanced towards the lieutenant. 'Tha-that will d-do, M-i-s-t-e-r Hawk-Hawk-Hawking-ton,' ejaculated the perfectly satisfied lieutenant, retreating a few steps as the ghost advanced, as though unwilling to lessen the distance between them; and he walked very briskly aft to the quarter-deck, and went into the captain's cabin, to report the remarkable circumstance to the captain. 'The carpenter is on the fore-castle, sir,' said the lieutenant to the captain. The captain, just awakened out of a sound sleep, did not appear to hear what was said. 'Well, sir,' responded the captain, rubbing his eyes, and waiting further particulars. 'Mr. Hawkington, sir, is walking the deck, sir,' said the lieutenant again. 'Oh, is that all, sir?' said the captain, turning himself in his cot, and resuming his slumbers, 'then, sir, let him walk, and be d-d.' 'It appears,' continued the serjeant, 'that the old carpenter had been all the time in a trance; the doctor only considered him dead—' 'Pshaw!' exclaimed the mortified Old Tim, who evidently had not made up his mind to such a conclusion; 'and so it was no ghost after all?' 'No, no,' replied the serjeant appeasingly. 'He came to his senses in time to prevent being drowned. It seems he was quite un-mindful of the time which had passed away, and waking and hearing two bells strike, he thought it was the morning watch, and time for him to turn out, and so he roused out, called for a light as usual, fumbled about and found his clothes, and, giving a curse or two to me for putting out the light, bundled on deck as was his custom.'

AN ATTACK DEFEATED.—DESTRUCTION OF H.M.S. TARTAR.

"FORECASTLE, there! Mr. McIntosh, come aft," gruffly sung out Captain Pangdon, of H.M.S. Tartar, hailing my station about eight o'clock one evening, in the month of April, when the frigate was gently slipping through the water off the coast of Devon, with a light breeze from the westward, which just inflated our royals and top-gallant stunsails, but left the lower and heavier canvass flapping against the groaning masts at every heave.

"I say, Bill," I overheard one of the waiters remark, as I passed the weather gangway, "arn't the second lieutenant goin' to catch it now? The captain limps more nor ever he did." A pretty infallible sign that he was suffering from his corns, at which time a fellow's commission would not have been worth the parchment it was written on, had Pangdon caught him tripping ever so lightly at his duty.

In answer to the "Sir!" which promptly issued from me as I reached the quarter-deck, and mechanically took off my hat, he condescended to elevate his thumb in the direction of the fore-peak of the battered oilskin three-cornered covering on his head, and growl out, "my cabin;" which being interpreted, meant that I should descend, and there wait his pleasure.

"Now, sir," said the skipper on entering, "though I know you to be as slovenly in keeping watch as any young man that ever escaped a court-martial for neglect of duty, I believe you're well enough in a boat; and the ship can spare your services," he added by way of qualification, "and not find out her loss till you come back again. At one bell (half-past eight o'clock) you'll man and arm the double-banked twelve-oared cutter; take a compass, some rum, biscuit, and a mate to bring the boat back if you get killed, and keep her quietly dogging about this part of the coast pretty close in shore. In about a couple of hours or so, you'll see a fire balloon."

"A what! did you say, sir?" I inquired humbly, concluding I had misunderstood him, from the mumbling manner in which he spoke.

"A what! did I say, sir?" mimicked Pangdon, angrily, scowling at me from beneath his shaggy eye-brows; "a fire balloon," he repeated audibly enough—"a thing sent up in the air with a light tacked on to its tail, for the man in the moon to cook his victuals by. Ask a midshipman," continued the old Turk, in a tone of the most contemptuous wrath, at what he had mistaken for my ignorance, "and he'll tell you what it is, you damn ——" but, fortunately, remembering he was not talking to a "midshipman," he screwed up his mouth, and succeeded in restraining what was coming, despite the soreness of his feet, and the luxury it would have afforded him to indulge in what we used to call in the gun-room, a "good swear." I very soon found out what I was wanted for. Information had been received, that the Hyacinth, a small smuggling lugger, was expected to cross, and either run, or sink and anchor her cargo about dark; but the breeze being too light for a large craft to have any chance of success in chasing such a sneaking clipper, it was resolved that the frigate should bring up in Torbay for the night, as if nothing was suspected (the Tartar was a Channel cruiser), but leave her boat behind, with, what was deemed in the cabin, sufficient force to carry the "prize," as it was somewhat prematurely called.

On asking for further orders, after the supposed capture had taken place, I was told to "keep the lugger safe, the Tartars sober, and let him see us by daylight in the bay." But the cutter's crew had been away all the preceding night, assisting a ship on shore, and I took the liberty of asking for fresh hands.

"Pass the word for volunteers, and pick your men," was Pangdon's brief reply; and, at the appointed hour, the boat shoved off with muffled oars, leaving the frigate to pursue her course. The breeze, as I have said before, was light, but a troubled swell was rapidly getting up, which, to my mind, portended that it would blow harder before we had less wind; and ere we had parted from the ship an hour, the rain began to fall in torrents, and the lightning flashed around, while heavy peals of thunder were continually rolling right over our heads.

"Here's a nice night for a fire-balloon to go up in, sir," remarked Sims, the mate, addressing me.

"Very," I answered, drily; and, by the time I was drenched through to the skin, I began to wish myself on board again; for, independent of having been engaged on service all the preceding night, I was now on a most unpleasing duty—one where hard blows, little honour, and less profit, would, most likely, be my portion if I succeeded (for, from the character of her skipper, it was barely probable that either crew or cargo would ever fall into the hands of government with the craft), to say nothing of what was in store for me if I failed. In vain I strained my eyes for the balloon, and in vain I puzzled my brains, till I became more stupid than usual, to discover why a common sky-rocket would not have answered every purpose just as well. Although invisible, it was clearly a mistake, but one which, as events turned out, made no difference either to poor Pangdon or myself.

The information about the lugger was correct enough, whoever gave it; for suddenly, while paddling silently about, Sims heard the words "Let go!" which were instantly followed by the sound of a splash on the surface, as the very fellow we were on the look-out for, brought up in at least four-fathom water.

"That's him! give way, men—softly and together, now—give way." The lugger lay to leeward of us, and, unfortunately, a surly growl from a beast of a dog warned the smugglers there was danger in the wind; else we should have boarded them in the smoke while they were humbugging about their sails, and, very likely, carried the Hyacinth without losing a single man. Presently we ran right stern on, to what I imagined his anchor-buoy, and the noise of that produced the hail of, "Boat, ahoy!—Is that you, Ben?"

"Ay, mate, all right!" I answered; for it was impossible that he could see any more than ourselves; and, though it was discovered where we were, I saw no reason for letting him know what we were.

"How are ye to-night?" was the next tender inquiry.

"Hearty, thank ye!—How's yourself?"

"Middlin'!—How goes on Meg and the young un?"—but, as the devil would have it, just as I had coined a reply about "Meg and her young un," which, I flattered myself, might be delivered without danger, a vivid flash of lightning betrayed all, and revealed to the eyes of the astonished defaulter of the revenue, not his friend "Ben," but a man-of-war's cutter, on his larboard bow, pulling slap for him, and barely distant above a couple of boats' lengths.

"Confound my buttons!" was his pious ejaculation, "my heart misgived me; it warn't Ben. Show a light here! In with the larboard spring a bit, (the lugger was windrobe), and let the Long Tom teach 'em manners." And the lesson we received was a severe one, and not likely to be forgotten in a hurry; for the dazzling burst of flame from the mouth of the long eighteen upon their decks, was followed by a splitting crash, and a bubbling rushing sound of water, as the shattered cutter sunk beneath our feet, amid the gurgling groans and smothered shrieks of the drowning wounded, and bitter execrations of the hardened villains composing the motley crew on board the Hyacinth.

"Strike out for the shore, and follow in my wake, lads those that can!" was all that I ever said on the occasion. A long swim before us, and *saurez qui peut* was the order of the night.

God knows how many escaped being hit; more, I believe, than reached the beach alive. Indeed, it was "touch and go" with me, for I had a splinter sticking in my left shoulder, and anything of that kind is far from improving a man's capabilities of swimming; but, at last, thank Heaven! I landed safely, barring a few bruises; and, on mustering the boat's crew to ascertain how many had been "expended" out of thirteen hands, besides myself, four only, including Sims, answered to their names. Collecting the dripping and exhausted stragglers round me, I told them to "put their best foot foremost, keep together, and make for the light," we could see burning about a mile-and-a-half inland.

One poor fellow dropped in less than twenty minutes, and after several vain attempts to carry him ourselves, or find immediate help, we were forced to abandon him to his fate—

and the primest seaman in the ship died like a dog, in a ditch by the road-side; for, when assistance came, it came too late, and he had breathed his last.

"Speak, what are ye—smugglers or thieves?" was the salutation we were greeted with from an elderly gentleman, who, on hearing our peal at his garden-bell, put his head out of one of the windows of the house from whence the "beacon shone."

"Neither," was my reply, in answer to his question; "but the surviving officers and boat's crew of a cutter, belonging to H. M. S. Tartar, that—"

"Eh! what, my good fellow? surviving officers and crew of H. M. S. Tartar?" I explained, and requested shelter for the men; when down went the sash, and we could plainly hear him singing out for "Merton, Merton!" but the servant, I suppose, was fast asleep, for "Merton's" master bustled out himself, in spite of both wind and rain, and, unbarring the gate at the drive, welcomed us in with the genuine spirit of English hospitality.

Never, never shall I forget the figures that we out. The men, who were not blessed with much clothing at any time, had still less now; and Sims literally having thrown off everything in the water, presented an appearance more allied to a Chinaman in the woods, than a civilised man in a village; while the only outward evidence of my being an officer, consisted in my belt and scabbard (my sword having gone to the bottom); for, expecting a struggle with the smugglers hand to hand, I had, luckily, "dowed" both jacket and waistcoat before the boat went down. Shoes I had none; and my wounded and muddy feet, dissatisfied with their present situation, were on the look-out for another, discontentedly protruding themselves through what remained of a pair of stockings, which had once been white, while the breast of my shirt was discoloured by sea-water mixed with blood.

After gladly accepting what was freely offered in the shape of assistance for myself and party, I left Sims in charge of the men, and started across for Torbay, to report the misfortunes of the night, and tell a "lame tale of services unperformed." I arrived about an hour before daylight, but no Tartar was to be found; and when I boarded a sloop of war, the commanding-officer told me she had never come in there at all since their anchor had been down, which was full nine hours, at the least. I borrowed some dunnages, and indulged myself with a "shake-down" upon the deck, in the surgeon's cabin; and, when I roused up, about two bells, (nine o'clock,) in the forenoon, I found it blowing a hard gale from the northward, the wind having shifted from the westward since the middle watch, during the whole of which it had been blowing a good double-reefed-top-sail breeze.

Days rolled on; the storm was followed by a calm, the calm again by a breeze. The sloop went out, and several craft came in, but brought no tidings of the frigate. People began to get fidgety about her.

"Could she have been taken by the French?" one day inquired a lady, at a dinner-party, where Sims and I were dining.

"Not if Pangdon fought her, ma'am, I promise," was Lord R.'s blunt testimony to the courage of her captain.

"Had she gone down?" A "tenny" had weathered it; and the Tartar was one of the finest sea-boats, and, in heavy weather, bore her ports up longer than almost any other vessel in the service.

Three weeks elapsed, and some very clever fellow, in the *Torbay Express*, confidently stated upon the most unquestionable authority, that the board intended stopping our subsistence-money, drafting the two men amongst the fleet, and doing I know not what with the officers; when, one evening, while dressing for a subscription ball, I was summoned to repair in person on board the Pandora, then bearing the flag (blue at the fore) of Vice-Admiral Sir William Heavy-stern.

"Ahem! Mr. M'Intosh," said the veteran, as I entered his cabin, glancing at my attire; "I am sorry to interrupt your gaiety, but this is no time for trifling. You'll take this,"—putting a sealed packet into my hands—"to the Admiralty,

and leave your address with the porter. That's all—you may go."

The cutter took me ashore again, a post-chaise was waiting, and, in the course of ten minutes, I was whirling along the road to London, as fast as four horses' legs would carry me. My curiosity was pretty well excited, as may be supposed; yet so well had I learned to do as I was told, and ask no questions, that it was not till within at least twelve hours after the fate of the frigate had been blazoned over half the southern coast of England, that I had the slightest idea of what the contents of the despatches which I bore consisted.

A hundred-and-eighty-gallon butt had been picked up at sea, containing the ship's journals, and some other papers of consequence to her officers, but of no importance to the enemy; and in the last sea-log was the following hurried entry, scrawled in Pangdon's own hand-writing, and dated from the capstan.

"8. 30. p.m. In consequence of intelligence received"—Here followed something about the cutter having been despatched in charge of "Mr. M'Intosh, second lieutenant." And at 9. do., while under easy canvass, rounding Berry Head, observed a ship's light on the horizon, S.S.W. Hauled up S., and made sail in chase, breeze freshening, W.S.W. 1. 30. a.m. Coming on to blow, sea getting up; in first reef of main-topsail, and first reefs of fore and mizen ditto." At "2. Tacked, N.W. Hard squalls and rains; lightning," followed in the MS. by the mark signifying "all round." Then, in half-an-hour, was "tacked," again; and, lastly, came—"At 3. a.m., while in the act of sounding with the deep-sea lead, the foremast was struck by lightning, killing Mr. Wakes, third lieutenant, and seven men, besides setting the ship on fire forward. Bore up right before the wind, but the spring-stay having caught, the fire communicated aft to the mainmast-head. Cut away lanyards of lower rigging (fore and main), when both masts went by the wedges. Ship being still on fire forward, to prevent the flames driving aft (her head coming up), cut away the mizenmast, and got tarpaulins on the spritsail-yard. 3. 30. All efforts to extinguish the fire having failed, cut the boom-lashings, and breaking down the star-board-waist bulwarks, launched the long-boat, which was swamped alongside by a heavy sea. Remaining quarter-boat found stove by the falling of the mizen-mast. 4th less 10'. Private instructions, &c. having been destroyed, these are headed up and hove overboard. Eddystone light bearing N. by E., fire raging. Officers and men doing their duty to the last. All hope gone, and may God help us!"

"R. PANGDON."

So much for the poor old barkey; but the individual fate of her gallant crew—left only the horrible choice, between the alternatives of being burned or drowned—remained, and still remains, a dark and dreadful mystery. Sims and I had to stand a court, and, after that was over, I again returned to London, to seek employment once more afloat.

NAVAL ANECDOTE.

A CIRCUMSTANCE of a singular nature occurred during the action between the *Virginie* and *Guelderland*. It was observed from the Dutch frigate that the *Virginie* was prepared to board her whenever an opportunity offered for that purpose, and a part of the crew were consequently ready to repel the attempt. The purser of the Dutchman, a brave fellow, stood on the gangway, sword in hand, animating the men to resistance, and with his arm raised, in expectation of the effort. While in this attitude, a cannon-ball from the *Virginie* took his arm off within a few inches of the shoulder; the dismembered limb fell into the hold unheeded, and the poor fellow was put under the care of the surgeon. In two days afterwards, when the hold was examined and clearing out, the arm was found, with the sword so firmly grasped in the hand, that no common force could disengage it; and it therefore became necessary to cut off the fingers, to separate the sword and hand. It was, however, previously shown to a number of persons, in order that so extraordinary a fact should be confirmed by strong and indisputable testimony. The gallant

purser was afterwards taken on board the *Trent* flag-ship, and though at first despaired of, skill and attention changed his condition to convalescence, and he speedily recovered.

ESCAPES FROM A DANISH PRISON.

CAPTAIN FREEMAN, of the ship *Moxton*, of Hull, having been captured by Danish gun-boats, in 1807, had been confined in the prison of Helsterburgh, in North Jutland, with about twenty other masters of vessels, five of whom, namely, John Davidson of Sunderland, John Kidd of Arbroath, David Raft and Daniel Stewart of Dundee, John Millar of Kirkcaldy, and himself, effected their escape on June 20th, 1808, in the evening, by rolling themselves down the bank of the field in which they were permitted to walk, and thus eluding the vigilance of their guards. After two nights' travelling towards the westward, and hiding themselves in the corn by day, they reached the sea-shore near Bovenbergen, where they found a boat about thirty feet long by seven feet broad; they immediately put to sea in this boat, the whole of their stores consisting of about a gallon of water, and the small quantity of bread they had brought away in their pockets; they had neither compass nor sails, but they managed to supply the deficiency by six spare shirts, which they took to pieces, and sewed them together with the yarn of their stockings. Being so poorly supplied, it was necessary to be very economical of their provisions, which they did by limiting every man to an allowance of half a penny loaf of bread a day, and half a tea-cupful of water night and morning. On the second day they were fortunate enough to find a haddock floating on the sea, which they divided among them. They were compelled to steer along at no great distance from the shore, as the weather was at times very foggy, and they intended, if possible, to make for Heligoland.

On the evening of the 26th, they ran within a small island, and two of them landed on the continent, to endeavour to replenish their exhausted stores of food and water, and for that purpose started to a house about a mile distant from the shore; but had not gone far, when they were chased back by two French dragoons, and were glad to regain their boat, and put off from the inhospitable shore. They made for the island, and lay-to near it during the night, but in a most pitiable state, as they had not tasted water for sixteen hours, and their throats were so affected by intolerable thirst, that they could not swallow a morsel of bread; but fortunately it began to rain, when they contrived, by the help of their shirts and sail, to collect about a gallon of dirty water, which proved a seasonable relief, and prevented them from delivering themselves up to the enemy, which otherwise they must have been compelled to do, to save themselves from perishing by starvation.

On the afternoon of the 27th, after suffering severely from the cold and rain, the weather having proved so unfavourable, and their stock of provisions being nearly exhausted, they made Newark Island, and ran past it, to within about half-a-mile of the shore, where they laid to with the intention of landing in the evening, to endeavour, if possible, to procure a fresh supply of water, of which they stood so much in need; but the fatigues and privations they had undergone, had so exhausted them, that they all fell asleep, and were awakened by a Cuxhaven fisherman, who had waded to them from the shore; and having heard their case, advised them by all means to put off again immediately, as otherwise they were in imminent danger of being made prisoners by the French, and recommended their landing at Newark Island, as there were no troops there. They accordingly landed near a single house, where they replenished their bottles with water, but they could not prevail upon the inhabitants to supply them with a morsel of bread.

On the morning of the 28th, about one o'clock, they put off again from the island, and proceeded on their voyage, and about seven o'clock the same evening they got on board a vessel which was lying on the banks to the eastward of the Elbe, and loading shells for Hamburg. On board this vessel there were only two men, who supplied them with water, about two pounds of bread, and a small compass. They left this vessel at about two o'clock the next morning, and about seven o'clock on the morning of the 30th, to their inexpressible joy, they

came in sight of Heligoland; and after rowing the whole day against a heavy N.W. sea, and a smart breeze of wind, they succeeded in gaining the shore, about eight o'clock in the evening, and were cordially received on the beach by several hundreds of the inhabitants, who heartily congratulated them on their providential deliverance.

Governor Hamilton, and the rest of the officers and council, treated them with uncommon kindness, and showed them every possible attention, supplying them with everything which their exhausted state rendered necessary, and which contributed to their speedy restoration to health and strength.

On July 4th, Captain Freeman and Captain Davidson left Heligoland in a Papenburgh vessel, and in a short time arrived safely off Yarmouth; the others remained till about the 10th, when they departed in some vessels belonging to Leith, where they subsequently arrived, with heartfelt gratitude to that Providence which had so singularly delivered them from captivity, and safely conducted them to their homes.

A GALLEY YARN OF A SAILOR AT CHAPEL.

WHY, you knows as how we had one Lieftenant Barebones in the Lee Impetus, a reglar, strait-laced, sallow-looking feller: we used to say he looked as if he had been cooked and stewed up again. Moss being absent on leave, Barebones did the duty of first lieutenant: so when the liberty-men were all mustered into the launch one Sunday afternoon, Tom Levett, the boat-swain's mate, axed to go too, but Barebones said as how the number was complete. "I only axes," says Tom, "because I wants to go to the Methodist meeting this evening." "Very praiseworthy, indeed," says Barebones; "Mister Levett, you may go; but mind you remember not to forget to come off again." "O Lord, your honour, you may trust me anywhere." "So I would," says Barebones, "except in a grog-shop." "Lord bless your honour," says Tom, "does your honour go for to think I've any hidea of such a thing." "No, no, Mr. Levett," says Barebones, "I've too good an opinion of you." So with this, Tom jumps into the launch; and when he had got ashore, unluckily he had to pass a public-house called the Half Moon and Fiddle. "Well," says Tom, "whether or no, I can't say, but I must just stop here for a minute." Well, ye see, after taking a stiff nor-wester, with an old shipmate who was there by haxident, Tom was obliged to stand treat. As soon as the second glass was done, Tom says, "Now, my hearties, I must make sail, and come to an anchor at the meeting; but I shan't be there over long, seeing I shall only drop it under foot, and lay at a short stay-peak." Well, by this time, d'ye see, Tom had been staying so long at the public-house, that the sarment was just beginning. "Well, I'm in good time, at any rate," says Tom, "cause I know that Barebones will ax me the text, as a proof as how I have been to the meeting." "Well," says Tom, "after the parson had read his commission, as it might be, he reads his text, from some chapter and varse" which Tom didn't recollect; but the words he did, which, you know, is much betterer, and part of these was, "When it is calm there is but little wind." Well, d'ye see, having said this once, presently he says it again.

"Why, how's this?" thinks Tom, "there's devil a seaman at all amongst this ere crew. Please your honour," says Tom, hailing the parson, "I've been at sea, man and boy, these forty years, therefore your honour must believe I knows summat about it; and therefore I just ax leave to set your honour right in this little bit of seamanship, because I say as how, your honour, that when it's calm, there's no wind at all! It's what we calls a H Irish hurricane."

"Turn him out!" says the parson's chief mate. "You be d—d," says Tom; "I won't go! you must be but a lubberly son of a seacock to talk of such a thing, after my taking the trouble to set your skipper there right in his course." As Tom said this, he looked up by chance into the gallery, and who should he spy there but Bill Bobstay, our captain of the fore-castle. "I say, Bill," cries Tom, "if you'll stick by me, I'm blowed if we won't wollop the chief mate and all the crew, and then we'll go over to the Half Moon and Fiddle, and have a couple of glasses of nor-nor-west."

"Stick to you, Tom!" says Bill, "that I wool;" and down he comes over the thwarts of the gallery, and sliding down the pillar hand over hand, was soon alongside Tom.

"Now let's see," says Tom, "where's the ten that dare shove us out? and as for you, you beggar, Mr. Chief-mate, if I come athwart your hawse, I'll soon cut your cables."

Well, d'ye see, Fitz, this looked most precious as if they were to have it all their own way; when presently, of a sudden, six or eight fellers, with short staffs painted with the king's harms, who called themselves constables, laid 'em aboard right astern, saying, "We rest you in the king's name." My eyes! at the name of the king, Tom and Bill were both dumb-founded; it clapped a stopper on their jaw-bags in a crack, making their tongues absent without leave, as 'twere.

"In the king's name!" says Tom, as soon as he could speak. "Well, he's the only man I'd haul my colours down to, for he's a sailor's friend, God bless him! and if so be as how you'll prove yourselves horcifers, we'll strike: if not, clear for haction, for we'll soon board you on the bow, and draw a little claret from your figure-head, my boy." However, 'twas all right, sure enough: so the end of it was, Tom and Bill were boxed up all night, like two birds in a cage; and, next morning, they were brought on board, and wiped down with four dozen a-piece; so that you may safely swear, they han't been able to abide the sight of a parson ever since.

LEAVE OF ABSENCE.

ONE morning, when his late Majesty's ship Hesperus lay at the Cape, a seaman, named Wolfe, applied to Lieutenant Strangeways for leave to go on shore. "No, Wolfe," said Strangeways, "I cannot allow you to go on shore. You know the last time you got leave, you came on board drunk; and such conduct cannot be permitted." "I promise you, sir," said Wolfe, "I won't get drunk." "What do you want to do on shore?" inquired Strangeways. "I want to fight!" "To fight!" repeated Strangeways; "a pretty errand, truly! And with whom, pray, do you mean to fight?" "With black Sambo, the prize-fighter, sir. He challenged me to a match before I joined the ship; and he has been taunting me ever since, insinuating that I am afraid to stand to my bargain. This is the morning on which we were to meet, sir; and, if I do not attend, they will call me coward." "It was extremely foolish in you to enter into any such engagement, sir," replied Strangeways; "but what you say is true: if you do not attend, those Cape Town bullies may impute it to cowardice. You promise me you won't get drunk?" "I promise, sir!" "Then you may go." Wolfe, accordingly, went on shore! and after an absence of about an hour-and-half, he returned without having tasted a drop of liquor. As soon as he got on deck, he went to Strangeways, and reported himself. "I am come on board, sir, sober!" "Well," replied Strangeways, "I am glad you have kept your word. Did you fight the match?" "I did, sir." "Was it a long one?" "Fifty minutes, sir, by the watch." "Who conquered?" "I did, sir." "Did you punish your opponent severely?" "Why, sir, I beat him, and that's just saying enough." "Right! You may retire, sir." "I hope, sir, you will have no objections to let me go ashore again?" said Wolfe, still lingering in the neighbourhood of the lieutenant. "What at present?" "Yes, sir." "Why, what do you want to do ashore now?" "Get drunk, sir!" replied Wolfe, with the gravest possible expression of countenance, while Strangeways burst into an immoderate fit of laughter. "May I go, sir?" continued Wolfe, when he thought the lieutenant had had sufficient to indulge his merriment. "It is contrary to all rule, sir," said Strangeways, scarcely able to articulate for laughter; "but, since you have kept your promise so faithfully, I will permit you for this once to go." "Thank you, sir," said Wolfe, with the same immovable gravity of countenance; and, in a few minutes, he was seen pulling off in one of the Malay boats that attended the ship with fruit. He kept his word as faithfully on this as on the former occasion; and, towards evening, he was carried on board in a state of the "most blissful oblivion."

LOSS OF THE ST. LAWRENCE

THE St. Lawrence, a brig bound to New York, sailed from the basin of Quebec on the 17th of November, 1780, with several British officers on board. One of these was Ensign Prenties, of the 84th regiment, being charged with despatches to Sir Henry Clinton. Another vessel was in company, a schooner, having a duplicate of the despatches for New York.

On the 26th of the month, the St. Lawrence and her consort reached the Brandy Pot Islands, about forty leagues below Quebec, where they were obliged to cast anchor. The weather was very cold, and the St. Lawrence so leaky as to require a pump to be constantly kept going. As soon

as they could proceed on their voyage they set sail again, and soon made the Island of Anticosti, near the mouth of the St. Lawrence. The wind again set in contrary, and they were obliged to beat on and off between the island and the shore for four days. The leaks in the vessel increased, and they were forced to keep two pumps at work day and night. The ship was now more northerly than she had been before, and the ice began to form so fast around her, that they were obliged to clear it away lest it should accumulate, and be frozen together. The seamen were not expert, and altogether not equal to do the work of the vessel at such a crisis. The master was constantly intoxicated in his cabin, and yet every moment the benefit of a community of experience was more necessary.

The wind being to the westward on the 28th, they

LOSS OF THE ST. LAWRENCE, 1780.

sailed down the gulf with two feet water on board. The wind increased until it blew a gale. On the 1st of December, the crew, overcome with fatigue and the severity of the cold, refused to work any longer at the pumps. The leak was gaining upon them. The water was now four feet in the hold, and the sailors declared they were indifferent to their fate, as they preferred going to the bottom to the incessant fatigue, when it could not be of the slightest avail to save them. Their labour from the time they set sail, had been excessive, and matters had reached such a pitch, that they could hardly hope, by any chance, to save the vessel, even if a hope remained of their own lives. By earnest entreaty, and giving them a pint of wine each man, they were with difficulty persuaded to exert themselves, saying that whether the ship filled or not was of no consequence to them. Though the delay had

been short at the pumps, the water had increased a foot in a quarter of an hour. The sailors, encouraged by the wine, in two hours reduced the water to three feet. The captain still remained in his cabin. The gale increased, and the ice formed so thickly on the vessel's side as to hinder her progress through the water. Additional labour was required to clear it away, which the company on board were ill able to execute, and the leak gained upon them.

The vessel which had set sail at the same time with the St. Lawrence was in as bad a state as that ship, having struck on a rock at the Island of Coudres, from the carelessness of the pilot. Heavy snow fell, and it was with the utmost difficulty the ships could keep in sight of each other. A gun was fired every half hour, lest they should part company. At length no answer came from the schooner. She had gone

down with every person on board. The gale increased, the sea ran high, and it was impossible to see twenty yards ahead of the vessel from the falling of the snow. The water had risen to five feet in the hold, owing to the fatigue of the crew. The mate judged that the ship was not far from the Magdalen Islands, which lie in the middle of the gulf of St. Lawrence. These are mostly a cluster of rocks. Many of the rocks are under water, and very dangerous to navigation. They are always avoided in foggy weather, though when it is fine seamen like to make them. The opinion of the mate was well founded; about two hours after, a rocky island, one of the number called the Deadman, lying furthest of the group to the westward, was seen close under the lee of the ship, and it was with great difficulty that the point of it was weathered. The vessel was now hardly safe, for there were numerous

islands and rocks near; the snow was falling thick, yet they had the good fortune, notwithstanding, to escape them all.

Their anxiety while passing, and their joy when they had shot by them, were both very great. The crew, overcome with cold and fatigue, took fresh heart from having escaped such imminent dangers, and believing Providence was favourable to them, they continued to exert themselves. Wine was also served out to them occasionally, which was of great service. The gale still continued, the sea running very high, so that they were apprehensive of the stern being beaten in. This happened on the 5th of January, when the sea struck the quarter, stove in the dead lights, filled the cabin, and washed the master out of bed, where he had skulked ever since the commencement of the storm. It was now discovered that the shock was of a most serious nature, for the stern post had

been started by the violence of the sea, and the leaks increased. It was in vain they attempted to stop them with beef cut into small pieces, the water poured in faster than it had even done before. The crew, finding their labour ineffectual, abandoned the ship to its fate in despair, and would pump no longer. An attempt was, indeed, made by them once afterwards to use the pumps, and endeavour to keep the water under; but it was found they were choked up with ice and frozen so much, that they were quite useless. The vessel in a little time filled with water, but did not sink, though all on board expected her every moment to go to the bottom. In fact she did sink much deeper in the sea than before. They now recollected she was laden with lumber, which immediately accounted for the circumstance of her keeping afloat. Hope of preservation now sprung up afresh

in the bosom of the crew. If they could make the island of St. John, or some other near it, all might yet be well. They steered directly before the wind to prevent oversetting, though there was difficulty in doing this, because the sea washed clean over the decks. It was necessary, if possible, to preserve the boat, as its loss would be, in such circumstances, a terrible misfortune. The cabin was on the deck, and being clear of water, afforded a tolerable shelter. The man at the helm was made fast with a rope, to prevent his being carried overboard. In this way they drove before the wind for some time, the violence of the gale still unabated.

The supposition of the captain was that the ship could be no great distance from the land; he supposed they must be near the Island of St. John, between the Magdalen Islands and the Gut of Canso. They were, therefore, in hopes of being able to

run the ship on shore, on some sandy part of the island, and thus save their lives. This hope was destroyed by the captain's statement, that the north-east side of the island, where they then must be, was one continued reef of rocks, and that there was but one harbour, which was on the opposite side to the spot where the vessel then drove. Not a long while after the waves were shorter than before, and broke higher, a sign of approaching the land. Gulls, too, were seen, and other birds flying about; a sure evidence that these conjectures were not ill-founded. It was now concluded they were running right upon the formidable rocks of St. John.

The ship was under a close reefed fore-topsail, yet she had great way through the water. They did not venture to unfurl more canvass, and, indeed, had they done so, their sails would have been rent in the storm. The fore-topsail was new, and stood the wind entire. The captain wished to keep the ship off the land, and to bring her to for that purpose; but the mate and Mr. Prenties opposed the measure, fearing she would over-set in the attempt, and showed that, if she answered the helm, she must ultimately go on shore, because she could, in her existing state, make no way to windward. The captain attempted to brace about the fore-yard, but it was found impracticable, the ropes and blocks were all firmly frozen.

In the interim the colour of the water had changed, and the vessel was every moment expected to strike. There was small hope of any of the lives of those on board being saved, and all prepared for the worst. Mr. Prenties fastened his despatches and letters round his waist. His servant took a hundred and fifty guineas, which his master told him he might have if he pleased, and which he fortunately secured about his person. The atmosphere became clearer about one o'clock in the day, and the land was descried at three leagues' distance. Much pleasure was at first afforded at the sight, from their taking it for St. John, where they hoped to be hospitably received. They quickly found, however, that they were mistaken. The sketches they had on board showed not the least similarity to the coast before them; no similar mountains and precipices being discoverable. As the ship made towards the shore, every heart beat quick, and then palpitated with fear, as the sea was observed breaking high in foam upon the rocks, a scene appalling to the stoutest heart. There was a reef between the ship and the sandy beach, on which they expected the vessel must have struck, and their doom be sealed in a moment. Contrary to expectation, she went on through the boiling and raging breakers, shipping heavy seas, which her great strength alone enabled her to bear. She surmounted the reef without touching, and the first great danger seemed past. They had now a pause of a moment to cast their eyes towards the shore. The land seemed rocky and high, but at the distance of about a mile they descried a fine sandy beach with a bold shore. The sea, too, they found ran less high than without the reef they had so providentially crossed. As the ship approached the land they found the water still deep, so that they were within fifty or sixty yards of it before the ship struck. All expected, at the moment of her striking, that she must go to pieces, she ground with such violence. At the first blow the mainmast started from the step; at the second, the foremast. Neither, however, fell over, because the hold being packed close with deals, the masts had still no room below to play. The rudder was unshipped at the moment with great violence, so that one of the sailors was nearly killed by it. The sea broke over all, while every wave lifted the ship four or five feet nearer the shore. The stern was soon beaten in, and those who had before been sheltered in the cabin were now compelled to hang by the shrouds on deck, to prevent being washed overboard. There they remained, the sea carrying the ship so high upon the beach at last, that the deck might be securely walked upon. The keel of the vessel, it was now ascertained, was broken, and she was every moment expected to go to pieces. This, however, did not happen. It was probable that the boards were frozen in the hold, and thus a solid mass was opposed to the action of the waves, capable for some time of a successful resistance.

The boat was now got out of the leeward side of the ship which had broached to, and thus afforded a shelter for the purpose. The ice being previously cleared out of her, some liquor

was distributed to those who were sober, and Mr. Prenties asked if any were willing to embark, and attempt to reach the shore. The sea running so high, few were inclined to venture. The mate, two sailors, a passenger, and a boy, were all who would join in making the experiment. The foam of the surf broke over them every moment, and every drop of water froze as it fell, so that their clothes were one sheet of ice. The boat being got into the water, and an axe and saw thrown in also, three others leaped in. The boy trying to spring down fell into the sea, and was dragged out with difficulty, owing to the benumbed state of their fingers. The chill given to the poor youth he could never recover. The two sailors next leaped in: and then all in the ship seemed ready to follow the example. It was necessary to push off, therefore, as quick as possible, lest too many should rush in and sink them. The ship was only about forty yards from the shore, but before the boat was halfway there, a wave overtook and nearly swamped it; while the next drove it high and dry on the sand. For a few moments joy was in every heart, at being once more upon the firm land, and the future dreary prospect was forgotten. Their condition on a cold, snow-covered coast did not occur to them, and that they might be reserved for a destiny more horrible.

Night was near at hand, and those who had reached the shore felt themselves getting stiff with cold. The gale was as high as ever, and they were obliged to wade up to their waists in snow to the shelter of a thick wood, situated about two hundred and fifty yards from the beach, which afforded them some little relief from the piercing wind. A fire was necessary, but they found their tinder was so wet, that they had no resource but to pass the weary hours of the long and freezing night in exercise. Mr. Prenties, who had been used to cold climates, from his own experience, recommended them to move about. For the first half-hour they attended to this advice; but the poor youth who had fallen into the sea found himself so overcome with the cold, that he laid down. In half an hour, the desire to sleep was felt by them all, but resisted by Mr. Prenties and the mate, from a conviction of the fatal consequences attending it. The boy was soon found quite cold, but not dead. He desired his father, at New York, might be written to, and informed of his fate; and in ten minutes was dead, having expired apparently without pain.

The knowledge of the poor lad's death did not deter the servant of Mr. Prenties and the two sailors from lying down to sleep also, in the teeth of the most urgent remonstrances and exhortations. Finding they could not be kept on their legs, Mr. Prenties and the mate employed themselves during the night in beating them constantly with branches of trees. This saved their lives, besides giving himself and the mate something to do; the only two who were governed by reason in that trying moment. At last the weary hours of the painful night dragged themselves out, and day dawned. Mr. Prenties made the men pull down their stockings, as they observed they had no feeling in their legs, and they were observed to be frozen halfway up. They were immediately rubbed with snow, but it was impossible to bring back the circulation.

On going to the beach, they found that the ship still held together, though the storm continued. The object to be achieved first was to get the people on shore before she went to pieces, because the safety of one was that of all. There was only a very short distance at low water between the ship and the shore. Waiting until it was low water, they fastened a rope to the jib-boom, and easily swung themselves to the shore, one by one, dropping upon it as the waves retired. The carpenter was still left on board; he had drunk too hard the night before.

The captain brought ashore materials for obtaining a light; wood was gathered, and a fire kindled as quickly as possible, by which they were all enabled to warm their benumbed limbs. This was a luxury, however, which was followed by very painful consequences to those whose limbs were frozen. On being brought to the fire, and the frost-bitten members exposed to its action, the most torturing pains were endured from the thawing of the hardened flesh. The suffering was beyond expression great.

A passenger in the vessel was unaccounted for upon numbering the survivors of the ship's company; it was now recol-

lected he had fallen asleep in the ship, and been frozen to death. His name was Green. One man, the carpenter, already mentioned, still remained on board; they could make no effort to save him that day; but determined to make the attempt on the following one. The luxury of a fire was great, but the want of shelter was still terribly felt; and hunger began to assail them in addition to their former miseries.

The next morning, all who possessed strength sufficient repaired to the beach to try whether there was any means of delivering the carpenter from his perilous situation. They could still hear his voice in the vessel, but the sea ran as high as ever, and the boat could not swim if launched. They were obliged to wait until the tide was out, and then they with difficulty persuaded him to leave the ship in the way the others had done.

For two days more, the 7th and 8th, the wind blew as hard and piercing as ever, and the vessel broke up, by the violence of the sea, from the stern as far as the mainmast. Some provisions were now washed on shore; they consisted of salt-beef and fresh meat which had been hung over the stern, together with a quantity of onions. It was now the fourth day that these miserable men had endured hunger, under a temperature below the freezing point. That they were thus enabled to satisfy their appetites, and strengthen themselves for what the future might have in store for them, they considered as most providential; and when their meal was concluded, and they had made what to them was a most delicious repast, they collected all they could find scattered along the beach for their future wants. Their number was now seventeen, and out of all, the mate and Mr. Prenties alone were capable of exerting themselves actively. It was necessary to provide some kind of shelter, and a quantity of deals having floated ashore from the wreck, two hundred and fifty were carried into the wood, a sort of tent was built, about twenty feet long by ten wide, and completed the same night by ten o'clock. They next examined into the state of their provisions, and found to their great joy that they possessed between two and three hundred pounds of salt beef and a considerable supply of onions. Still it was resolved to keep themselves upon short allowance. A quarter of a pound of beef and four onions were all that could be afforded daily to each man.

The gale abated on the 11th of December, and then they were able to launch their boat and get upon the wreck. It cost a day's labour to open the hatches, having only one axe, and the cables being frozen over them into a mass of ice. The following day, by cutting up the deck, they got out two casks of onions and a barrel of beef, containing about a hundred and twenty pounds weight. They also found what they imagined to be three barrels of apples, shipped by a Jew of Quebec, but which proved, unfortunately, to be balsam of Canada. They got out a quarter of a cask of potatoes a bottle of oil, an axe, a large iron pot, two campkettles, and twelve pounds of candles. These they stowed away in their hut. They now added four onions to their daily allowance. They next cut away as much of the sails as they could from the bowsprit, for the purpose of covering their hut, by which means it was made tolerably warm. The wounds of the men, caused by the frost, now began to mortify; and the toes and fingers of many to rot off. Their torments soon became almost beyond human endurance. The carpenter, who came last on shore, died delirious, on the 14th, having lost the greater part of his feet. They covered his body with snow and the branches of trees, for the ground was become impenetrably hard from the frost. In three days more, the second mate died, who likewise became delirious some time before he expired. Death caused now little concern to men who thought it a happiness to be beyond further suffering; and there were fewer to consume their scanty stock of provisions; a thing which was by no means of light moment in an atmosphere where hunger was greater, and the means of gratifying it less, than in any other situation. Vermin very soon began to proceed from the wounds of the sick, which infected the healthy. Several came off with the loss of a toe or a finger or two. Mr. Prenties alone escaped without being frost-bitten. Another seaman died on the 20th.

They were now fifteen; but the allowance of provisions was not increased.

The mate and Mr. Prenties, upon a fine day, set out and walked up a river, on the ice, for ten or twelve miles. They there fell in with a wigwam, or Indian hut. They observed tracks of deer and other animals, but had no fire-arms to kill them. They found the skin of a moose-deer hanging across a pole, and trees which were cut on each side with an axe, but they could not find any human beings. Mr. Prenties cut a directing-pole, and carved a hand in birch-bark, thinking, if any saw it, they might find them out.

They had now been twenty days in this forlorn situation, and their provisions began to get reduced so much as to occasion a suspicion that all was not fair in the consumption. Foul play was apprehended, and it was discovered, by keeping watch, that the captain and two sailors had consumed no less than seventy pounds of beef, besides onions. The mate and Mr. Prenties were obliged afterwards to keep watch, one or other remaining in the hut, to prevent these depredators from plundering the common stock.

They had given up all hopes of aid from any quarter, and having but six weeks' provisions left, Mr. Prenties proposed taking the boat, to search for inhabitants, or for some kind of relief, even from the Indian population of the country. The proposal was agreed to, but the difficulty was to put the boat in such a state of repair as would allow her to float, for every seam was open from her strains on the beach. Dry oakum they possessed, but no pitch. At length it occurred to them, that the Canada balsam might be serviceable. They boiled it down in an iron kettle, and, suffering it to cool, made it answer.

It was new-year's day when the boat, in a tolerable floating condition, was got into the water. Six persons embarked: Mr. Prenties and servant, the captain and mate, and two sailors. None of the rest were able to join in the expedition. Their shoes being nearly worn out, Mr. Prenties set to work to make Indian shoes of canvass; his needle was the handle of a pewter spoon, and the canvass unravelled, supplied the thread. Twelve pair were thus fabricated; two pair for each person. They now divided their provisions, which were calculated at a quarter of a pound a-day, for six weeks, those in the boat and those left behind sharing alike. The wind was adverse until the 4th of January, and even then the quantity of ice on the coast rendered the expedition exceedingly perilous. It was equally hazardous to stay, with the certainty of starving. They, therefore, taking leave of their companions, embarked upon as uncertain a course as ever was undertaken upon the ocean. When about eight miles distant, the wind blew off shore. By great toil they at last got into a bay, and hauled up their boat as high as they could on the strand. They then cut wood to make a sort of wigwam to shelter them. Near this place they saw, from a high point of land, a Newfoundland fishing-boat, half covered with sand. This made them proceed further, and they spied, to their great joy, some houses at a distance. On reaching them, they were only old abandoned storehouses, built for curing fish. Some casks, which lay near, they searched in vain for provisions. They got a quart of cranberries, which they ate.

The wind now blew from the north-west with great violence for two days. The sea was frozen up for leagues, and seemed to preclude all hope of their proceeding. By land they could not travel for want of snow shoes, as the snow lay in great depth. Two days more they waited, when, on the 9th of January, the wind blew off the land, and the sea was perfectly clear. The force of the wind, however, prevented their proceeding until the 11th. They launched their boat with difficulty, for their reduced strength and want of nourishment. They made a tolerable course, until they saw a very high point before them, which they estimated at a distance of seven leagues. The coast appeared one continued precipice, so that it appeared not possible to effect a landing, until they reached the extreme point of the Cape. The passage seemed dangerous, and the least change of wind must have driven them upon the rocks. Danger was, how-

ever, no stranger to these unfortunate men. They kept two oars going, and two of the hands were constantly employed in baling. They reached the head-land about eleven o'clock at night, but could find no place to land, and were obliged to keep along the shore until two o'clock in the morning, when the wind increased, and having a stormy beach in view, they thought it prudent to land. They got out their provisions, but could not haul up the boat from the steepness of the shore, and they were compelled to leave it to the mercy of the ocean.

On the 13th, the wind blowing from the sea, the boat was driven up twenty yards higher on the shore, than where she had been left, and several holes forced in her bottom. They had little covering, and no firing, except from a few pieces of timber which floated ashore, so that they were nearly frozen. The weather continued the same for eight days, attended with a prodigious fall of snow, which added to their previous miseries. The snow had fallen to the depth of three feet previously to the 21st, on which day they were able to cook their provisions. This they had effected but once before since they landed. Their not doing this was a great loss to them, as the broth in which the meat was boiled, afforded them a most important part of their warmth and nutriment. They were still able, weak as they were, to turn their boat partly over, to see the extent of the injury she had sustained. They found the balsam quite rubbed off, and holes in the bottom. They were in hopes the ice would go away from the coast, as it had done before, and that, if they could but repair the boat, they might soon fall in with inhabitants. They had no balsam, but they had a small quantity of dry oakum, which could be of no service by itself. Finding that to make the boat seaworthy was beyond their power, they thought the ice might bear them a little way along the coast, until they could get into the woods. Mr. Prenties and the mate tried the experiment, and had not gone far before they fell in with the mouth of a river, and a fine sandy beach. Now, though it was practicable, and they could get into the woods, they were ignorant of the right direction, and the snow was six feet deep, and could not be crossed without snow-shoes. They finally resolved the next day to take their provisions on their backs, and coast along the ice, which seemed likely to remain.

On the morning of the 24th, the wind having changed in the night, the ice was driven out to sea, and they were still exposed on a cold dreary beach, surrounded by insurmountable precipices. At length they thought of filling the holes in the boat with oakum, and throwing water upon it sufficient to freeze. The scheme succeeded. As long as the weather continued to freeze the boat would be dry. It was the 27th when all was ready, and they once more left the shore on their forlorn voyage. In the evening of that day they computed they had rowed about twelve miles. Greatly fatigued, they landed on a small sandy beach, and made a fire. On the day following they had made six miles, when the wind rising, forced them to put on shore. The snow in the woods would not bear their weight. The 1st of February they were obliged to make their boat sea-worthy as before, and again set sail, but the cold and floating ice prevented their making more than five miles all day. One of them was continually employed in breaking the ice with a pole. In proceeding their boat made so much water, they were forced to keep baling incessantly. After sailing sixteen miles they saw a very high point of land, which they judged to be six leagues off, and soon after an island which they imagined must be that of St. Paul, near Cape Breton, while the high land they thought was the cape itself. The great height of the latter made them compute the distance erroneously, and it was dark when they reached it, but could find no landing-place. They were therefore obliged to take to their oars all night. About five in the morning, while it was yet dark, they found themselves off a sandy beach of very considerable length. A heavy sea rolled in, and landing was hazardous, but they effected it in safety, and got into the woods once more, where they kindled a fire, Mr. Prenties having secured the tinder-box in his bosom to keep it dry. They were so fatigued they could scarcely keep awake for a few minutes, when before the fire. They were obliged to watch in turn, for had all fallen asleep together, it would have been their last.

They were now all satisfied that they had doubled the north cape of Cape Breton.

It happened that they had not been able to secure their boat so effectually as to prevent the sea from beating it high on the beach, and filling it with sand; while a part of the crew were employed in clearing it out, the rest travelled along the beach in search of something which might be eaten. A quantity of oyster-shells were observed, but no oysters were found near the shore, nor anything which would alleviate their sufferings, except about two quarts of hips or wild rose-buds, which they discovered under the snow. These, ill-adapted as they were for the sustenance of man, were still eagerly devoured. They served to allay the keen sense of hunger, if they imparted no nourishment. They now pushed off their boat once more, but the ice soon forced them to land on another part of the same beach. In landing, Mr. Prenties unfortunately dropped the tinder-box into the water, which prevented their kindling a fire, and they began to suffer proportionably from the cold. They therefore thought it best to embark again, and return to the place from whence they had started, in the hope of finding their fire was not yet extinguished. They could not accomplish their task without great difficulty, from the necessity of breaking the ice the whole way, it having frozen with great rapidity. The delay made them the more anxious to reach the fire-place, and they now considered themselves fortunate they had not been able to go farther from it. They had the good fortune to find the embers still alive. Had this not been the case, they must have perished in the course of the night, from the severity of the cold.

It was on the 8th of February, before the ice suffered them to embark again, and in the evening they landed at a spot where they were sheltered from the wind and sea by a large rock, better than they had been before. On the 9th, they had sailed about eight miles, when the swell of the sea forced them to land, and in getting to the shore, two of their oars were washed overboard by the surf. The next day they put to sea again, having their oars double manned, and made about six miles.

This was a hard day's work for men so reduced in strength. They were scarcely able to walk fifty yards without halting to recover themselves. They were obliged to remain stationary the whole of the 11th, but thought themselves fortunate in finding more rose-buds, which they considered a great delicacy. They were so unfortunate as never to find the dead body of any animal. They saw some otters on the ice, but were never able to catch any of them. They also saw some beavers' houses, but could not succeed in taking any of their inhabitants? On the 12th, they again set sail. On the 13th, the weather became more mild, and they had rain, which melting the ice, forced them to pull the boat to the land before nightfall came on. They searched everywhere under the snow for their wretched fare of rose-hips, in vain, and they were so driven by hunger, that they were compelled to sacrifice the candles, which they had reserved for stopping the leaks of their boat, to the calls of hunger; this sufficed for a partial relief, but the future still filled them with dismay. For two days they made few miles only, going on shore and searching for rose-hips in vain. Their dreadful situation now came upon them in full force, and the fear of perishing with hunger in all its terrors stared them in the face, and drove them almost to desperation. In the midst of their apprehension of death by famine, when it might be supposed extreme bodily suffering would overcome every idea but that of prolonging existence, Mr. Prenties confessed that the approach of death was not so terrible to his mind, as the reflection that his friends would never know his wretched fate. So strong was this feeling, that he could not help cutting his name in the bark of the largest trees. His weakness, and the fear of injuring his knife, the only instrument of the kind among the party, forbade his carving more of their story, but he confessed he had written the tale of their wreck, in French and English, on the walls of the old storehouses they discovered soon after they left the place of shipwreck.

On the 17th, they again doled out a portion of their candles for food, and the next day reached a fine sandy beach,

and a level country. There they resolved to put on shore and die, unless some unforeseen aid appeared. They were so weak, they were obliged to leave their boat to the mercy of the sea. They felt they could not survive much longer. They cleared away the snow at the entrance of a wood, and cutting some branches of pine to lie upon, and others to shelter themselves, they made a fire. They were fortunate enough to find a pint of hips, which they boiled with two tallow candles, and made what they thought a comfortable meal. The next day they got nothing to eat, and fearing that their strength must soon entirely quit them, they cut and piled up as much wood as they were able, that they might supply their fire to the last moment. They had preserved their axe, a saw, and the sail of the boat, which they used for a covering. The boat had been beaten up high and dry, so that, had they been inclined, they could not again have put to sea. All the 19th they employed without success in search of hips, and they had only two candles left. On the 20th, they were so weak, that none of them were able to manage the axe to cut wood, and they were obliged to creep about and pick up the rotten branches that lay upon the ground. At length they could only maintain a fire which barely kept them from freezing. The weather was as cold as it had been in December. They now thought of the sea-weed on the beach, as a resource against hunger, for they could find no more hips. They collected some, and boiling it a few hours in their keel, found it very little tenderer than when raw. They next boiled one of their two remaining candles in the liquor, and by taking it and eating a quantity of the weed, they found themselves somewhat easier. Not long after this they were seized with vomiting, which lasted four hours, when they became easy, but completely exhausted. On the 22nd they took more kelp-weed and their last candle. The effects that followed were the same as before, only less violent. A severe frost then set in, and they ineffectually tried to launch their boat, but their united strength could not move it. The candles were all consumed, and they were forced to boil the kelp without tallow, which they still ate with a relish. They found that this food made them swell to an alarming degree, after living upon it for three days. They were all swollen to such a degree, that on pressure their fingers would sink a couple of inches deep into the skin. Their strength was more reduced, still hunger forced them to keep to the same diet. At length two or three days more having elapsed, they found they had nearly lost their sight, and so much was their strength now diminished, that they could with difficulty keep in their fire, from the rotten branches of trees.

There seemed at such a moment no alternative but the making one of their number a sacrifice by lot, to keep his companions alive; and it at length appears to have been agreed secretly, that as the captain was so very much reduced as to be clearly the first who must sink under his sufferings of all the party, and as the loss of the ship was mainly owing to his misconduct; and further as he had deceived all on board by pretending his passage was for New York, when in reality it was for the West Indies, for these reasons it was urged that he should be the first victim.

They kept this a profound secret from the miserable man. A few days more, and the sacrifice must have been offered up, when fortunately, on the 28th of February, as they were all stretched round their miserable fire, they heard the sound of voices in the wood, and two Indians were soon discovered with guns in their hands approaching the spot. The sight of them gave some of the unfortunate sufferers spirits to get on their feet, and move towards them with eagerness. The Indians were much surprised at the sight of human beings in so frightful a state. The clothes of the party were nearly burned off, and their bodies partly bare; their limbs swollen of a prodigious size; their eyes almost invisible, being sunk beneath the distended skin; and their hair and beards not touched since they left the wreck. Some wept, and some laughed for joy at seeing the Indians, who did not seem inclined to be very familiar, until Mr. Prenties shook one of them by the hand, and the shake

was returned very heartily in the Indian manner. These kind creatures showed, by signs, that they pitied the unhappy men. They went to the fire with them, and all sat down together around it. At the desire of one who could speak a little French, Mr. Prenties told them whence they had come, and what they had suffered. The Indian appeared much affected at the recital. He was then asked if he could give them any food, and he told them he could. Seeing there was very little fire, he started up and took the axe, but observing its bad state, he threw it down again, and with his tomahawk, cut a quantity of wood, flung it on the fire, and taking up his gun, went off with his companion, not speaking a word.

Three hours had elapsed before the Indians returned. They came in a bark canoe by sea, and landing on the beach, took out some smoked venison and a bladder of sea-oil. They then boiled the venison in snow-water, but would only give each man a very small quantity, together with a little oil. As soon as the repast was over, they desired three to embark with them, being all the canoe could carry, and they proceeded towards their home, which was five miles off, and a mile inland in the middle of the woods. On the beach three other Indians received them, with twelve or thirteen women and children, who were waiting their arrival. The two Indians returned for the three who were left behind, and those on the beach conducted the first party which landed to their habitations. On reaching them, they treated the sufferers with the greatest humanity. In a little time the Indians returned with the other three men who had been left behind.

Mr. Prenties and his companions, being now safe, began to think of the men left at the wreck. It was to be feared that they had, before now, perished of hunger. On describing where the place was to the Indians, they replied they knew it very well, but that it was a hundred miles off, through difficult paths, and over rivers and mountains. They said, if they undertook the journey, they must have some compensation. Mr. Prenties told them he had some money, which he now recollected his servant had preserved.

An agreement was then made that the Indians should receive twenty-five guineas at setting out, and the same sum on their return. On being paid down half the money three of them set off on the next day. They returned with three men from the wreck after a fortnight's absence; they were the only survivors of eight left in the hut, and were in a most wretched state of emaciation. Five were alive on the arrival of the Indians, but one ate so much food at once that he died in dreadful agonies a few hours afterwards, and another accidentally shot himself with the gun of one of the Indians. Thus, out of nineteen originally on board the ship, nine only survived.

Mr. Prenties agreed to give the Indians forty-five pounds to conduct him to Halifax, and find provisions at every inhabited place on the road. Mr. Prenties, servant, Mr. Winshaw, a passenger, and two Indians, set out together for Halifax. The remainder of the party were to be conducted to Spanish River, about fifty miles distant. Mr. Prenties quitted the Indian wigwams on the 2nd of April, and, after a tedious and harassing journey, reached Halifax on the 8th of May, the Indians faithfully performing their engagement, and receiving their stipulated pay. After being detained for a passage two months at Halifax, Mr. Prenties at length reached New York, and delivered his despatches to Sir Henry Clinton. The rest of the crew and passengers were safely conducted by the Indians to Spanish River, and soon afterwards reached Halifax.

Admiral Duncan's address to the officers of his fleet, when they came on board his ship for his final instructions, previous to the memorable engagement with Admiral De Winter, was couched in the following laconic and humorous manner:—"Gentlemen of my Fleet, you see a very severe winter fast approaching; and I have only to advise you to keep up a good fire."

LOSS OF THE BANGALORE.

THE Bangalore, commanded by Captain Lynch, sailed from the island of Amboyna, on the 3rd April, 1802; bound to Bally Town, in the island of Lomboek, and from thence to Batavia, with a fair wind and moderate weather. At eight o'clock on the night of the 12th they were then, by observation taken that day at noon, in lat. 7 deg. 38 min. south, and long. 120 deg. 45 min. east, when unfortunately, the ship struck on an unknown coral bank, which, when daylight appeared, they found to extend about three miles in length from north to south, and about two miles in breadth, the western part being dry at low water, with a number of rocks upon it which bore the appearance of prows under sail. Their first endeavour was to get out the boats immediately; the small and best bower-anchors were also carried astern, and the stream on the bow to prevent the ship from forging more upon the rocks; and every exertion was used by the crew, as also by the passengers, but all to no effect, the steepness of the bank being so much against her going off; indeed, so abrupt and great was it, that with a cable of a hundred and twenty fathoms out astern, it was only a long peak.

The ship continued striking very hard, notwithstanding which she held out without making water until near midnight, when she suddenly heeled off to the larboard side, and the water was very soon up to between decks. They had previously thrown overboard a great quantity of lumber, and some of the ballast, with a view to lighten the vessel and give her a better chance of getting off, but all was to no purpose; and pumping and baling ceased to be of any use, as when the ship heeled off she was completely bilged on the larboard side.

Having now lost all hopes of saving the ship, the crew were employed in getting out all the spars with which they intended to construct a raft; and, fortunately for them, a high swell that was running at the time when the ship struck, was now much gone down, and the sea considerably smoother, which greatly facilitated their means of escape; or otherwise in all probability the greater part of them must have perished. Captain Lynch, with his officers and passengers, stayed by the wreck until the following day at half-past three in the afternoon, when the raft being completely finished, sixty of the crew, including servants and sepoys, under the command of the second officer, got upon it. Captain Lynch went into the pinnace, the chief officer into the jolly-boat, and three Dutch officers with their families, who were passengers for Batavia, together with the gunner, one sea-cunny, eight Lascars, and two sepoys, embarked in the long-boat; and that being the largest conveyance, and consequently having the most room, they had with them provisions and water for the whole crew. Thus arranged, Captain Lynch ordered the long-boat to tow the raft, and the other two boats to tow the long-boat; all making for the nearest island, which was one that lay off Mangeray.

The whole of the 13th and following day passed without their being able to reach the island, as the winds were mostly off the land, and a strong current running to the northward. On the night of the 14th, the wind at the time blowing fresh, the long-boat sprung a leak, which obliged her to cast off the raft, and wait for daylight. In the morning, Captain Lynch with the two small boats, being a long way from the long-boat, made sail and stood towards her, when, to his great astonishment and mortification, he observed the long-boat to make sail and stand away to the eastward from the two small boats, when she soon run out of sight. Captain Lynch was ever since completely at a loss to account for the conduct of the gunner, who had charge of the long-boat; and though there were various conjectures made by different persons, he never had any reason to suspect him of dishonesty.

Being left in this miserable situation, Captain Lynch could not go to the assistance of the raft, as he had neither provisions nor water, and the people on the raft were in the same situation; but as the second-mate, Mr. Romney, had charge of the raft, and as the current was then setting to the northward, Captain Lynch confidently hoped that, with the sail set and running before the wind, it would soon be able to reach Seleyer, or one of the islands near, where they would meet with prows

to conduct them to Macassar or Malacca. Captain Lynch then took the jolly-boat, in which were Mr. Nashbar, the chief officer, and Mr. Joseph Ferrao, a passenger, with eight of the crew in tow; himself with Mr. Anthony Lakersteen, a passenger, and nine more of the crew being in the pinnace; in all, twenty-one persons. Their great object was to regain the island, that being the nearest land, but their endeavours were ineffectual, during the whole of the 16th; and the wind, then blowing fresh from the southward, they made sail and stood away to the E.S.E., and soon reached Mangeray.

About midnight they landed in search of fresh water, but could not find any, they therefore contented themselves with pulling and sailing along the shore, and at four in the morning landed and found some water, which was a great relief to all of them, as they had but a small quantity of biscuit, one of which was served every day to each person; and this was all the subsistence they had until the 20th, and all the time employed in pulling and sailing along the coast of Mangeray, landing at times for an hour or two in places where they saw no inhabitants, in order to give the people rest, and the tamarind tree growing wild, and in great plenty, the fruit of it greatly contributed to their support.

On the 20th of April, still standing along the coast of Mangeray, they saw a Macassar prow on shore, and stood for her. At four p.m., Captain Lynch, from his knowledge of the nature and dispositions of the people on the coast, did not think it prudent to discover their distress to the people in the prow; he therefore ordered the chief officer to approach first and inquire the name of the place, and also to find out what force the prow had. The small boat returned in a quarter of an hour, bringing the intelligence that there were only ten or twelve men on board the prow, and those unarmed.

Captain Lynch then with the other boat approached, and informed the nacodah of the prow of their having been cast away, and in the utmost distress for want of water and provisions. The nacodah pointed out a small river, where he said fresh water was to be had; to which Captain Lynch proceeded without delay, and got a sufficient quantity to last for three or four days. Whilst getting the water, the nacodah informed Captain Lynch that the inhabitants of Mangeray were an inoffensive people; and that those of an island in the offing, about three leagues distant, were pirates, and not to be trusted: the truth of which, Captain Lynch had much reason to doubt; and soon after seeing a prow pulling from the island towards them, he thought it most prudent not to put any trust or confidence in either of the reports, but to make the best of their way off. At sun-set of the same day, Captain Lynch, to his great surprise, saw that the prow they had spoken to, had got under weigh, and was fast coming up with them, from which Captain Lynch concluded, that she was chasing them, to take advantage of their distressed situation, and to plunder them of some clothes and trifling articles that they had in the boats.

The nacodah of this prow had refused a hundred dollars, which Captain Lynch had promised him, if he would carry them to Bally Town, on the Island of Lomboek; the rajah of which place was a good friend to the English, and to whom Captain Lynch had a letter from the governor of Amboyna, with various presents sent out by the Court of Directors for him; all of which were lost in the ship: but as Captain Lynch had saved the letter, he felt satisfied, that if he, his crew, and passengers, were so lucky as to reach that town, they would be well treated, and from thence be able to procure a conveyance to some Dutch settlement on the Island of Java, or to Malacca, the Bally Town people being great traders to the westward. The prow continued astern, but kept sailing and pulling until four o'clock of the ensuing morning, when, with a great deal of labour and exertion, the boats pulled out of sight of her.

The 21st and 22nd, still pulling and sailing along the Mangeray shore, they stopped at an island, where one of the Lascars gathered a kind of bean, which was unknown to any of the other people; but the Lascar said he was well acquainted with it; that there was plenty of the same kind in England, where he had seen them. All hands, therefore, partook of this bean; some eating it raw, and others boiled. They stayed at this place about two hours, and collected a good sea-stock of this

new discovery; but scarcely had they re-embarked, and began to work at the oars, than all hands, except four or five, were taken violently ill with a griping and vomiting, as if they had taken a strong emetic. This misfortune could not be remedied, as Captain Lynch had not medicines of any kind in the boats, nor any description of food likely to relieve the sufferers, whose situation became so distressing, that very little progress was made in the course of this day.

On the 23rd, they continued advancing very slowly along the coast of Mangeray, the people dropping down through hunger and fatigue, when they happily got sight of a fine cultivated bay, and a beautiful town, in the Malay taste. Captain Lynch flattered himself he should procure some provisions, as this was the tenth day that they had not tasted a grain of rice, and the fourth since their allowance of one biscuit a man for the

twenty-four hours was over, being all expended. The boats approached the shore by degrees, with a white flag in each, which is a token of friendship used on all occasions by the Malays. A canoe put off from the beach, and coming to the boats, asked them where they came from. Captain Lynch thought it prudent not to tell the destitute state they were in, and therefore said the boats belonged to two English ships that were in the offing, and that they were in search of a watering-place, and of provisions; that if the rajah would be kind enough to assist the English, they would be the rajah's friends. The people in the canoe desired the boats to come to an anchor some distance from the shore, and that they would bring the rajah's answer immediately.

The canoe returned in a quarter of an hour with the rajah's compliments, that he would be happy to see the ships come to

LOSS OF THE BANGALORE, CAPTAIN LYNCH, APRIL 12, 1802.

his port, and that there was plenty of provision and a good river for them to water. At this time two or three canoes, with three or four men in each, brought a couple of small bags of rice and some Indian corn, with cocoa-nuts and jagry, which were immediately purchased. The people in the canoes seeing a couple of trunks in the boats, and a bag or two of clothes, were very particular in their inquiries what they contained, and were told "clothes." Captain Lynch then despatching the canoes, both boats made sail, which the rajah observing, and having been informed by the canoe's people that the boats had property in them, he came down to the beach, walking towards the west point of the bay, about five or six miles distant, with a train of about fifty men attending him, the rajah and five or six others being on horseback. One or two canoes followed the boats with

plantains and Indian corn, which were also purchased, and the canoes were despatched. The sea-breeze blowing fresh, it was with difficulty the boats rowed out to the westernmost point of the bay. The rajah, after he came to this point, despatched another small canoe with his compliments, and that he would be glad to speak to the officer in the boat; but Captain Lynch suspecting treachery, thanked him for his civility, and said, as it was late in the evening, he was in great haste to pull to the ship; but the rajah would see the ships in the morning. The rajah not being satisfied with this answer, sent a second message to the same purport; to which Captain Lynch excused himself in the same way as before. At this time a fast-sailing prow appeared coming from the town to the place where the rajah was; and Captain Lynch perceiving they were manning

this prow with a great number of people, and preparing to make more sail, and the boats' crews being greatly relieved from their hunger by the supply of the provisions they had obtained, they soon rowed the boats out of sight of the rajah, and escaped his treachery.

During the night of the 23rd they pulled a long way, and at sun-rise reached a fine sandy bay, where they found a small rivulet, and here they cooked their rice. All hands eat heartily, and took a couple of hours' rest: from thence they set out quite fresh and in the night of the 24th they crossed the straits of Mangeray, and at daylight of the 25th arrived at the island of Comodo, where they dressed and eat another meal. At ten in the morning they crossed the straits of Sappy, and towards noon came up with Gonong Appy, or the Burning Island, with a fine breeze at S.E. In the afternoon the tide changing, and being against the wind, caused a very high breaking sea, and both boats were in extreme danger of foundering. At this time a prow from the offing crossed ahead of the boats, and after standing some way in shore, wore round, stood after the boats, and came up very fast. Captain Lynch being certain that this was a pirate, consulted the best mode of resistance. Out of a dozen muskets they had in the boats, only three were fit for service, the others being rendered totally useless by salt water. Captain Lynch kept the boats before the wind, standing between Gonong Appy and the island Sumbawa, with a very high sea, which put them in imminent danger of broaching-to or filling. The prow that stood after them, now came up very near; and they observed that they had four or five brass swivels, which the Malays on board kept slueing about, aiming them at the boats. Captain Lynch waited until the prow was within fifty yards, when he hauled upon a wind, with an intention to board the prow if they attempted to fire, and hailed to know what they meant; upon which, they inquired where the boats came from, and where their ships were. Captain Lynch answered, their ships were in the offing, and the boats were in search of an anchoring-place, recommending the prow not to come too near, as most probably they would find their mistake. The prow thereupon hauled her wind, and stood in shore; but in less than two hours they again stood after the boats. It still blowing fresh, Captain Lynch kept the boats to windward against a head sea, and by that means again escaped falling into the hands of these barbarians.

The 26th was employed in pulling and sailing along the island Sumbawa, landing once in the twenty-four hours, where they saw no inhabitants, to cook rice. The 27th, still pulling along the Sumbawa shore, they saw several inhabited places, and some large towns, but which were totally deserted: they also saw buffaloes, bullocks, and horses, in abundance, all appearing to be tame, but would not venture to kill any, for fear the pirates might be still hovering about the place. In the afternoon, a prow hove in sight, but seemed to be afraid of the boats, and soon after ran in shore, and the crew landed. Captain Lynch pulled by the prow, and towards evening touched at about two miles distance from where the prow lay, at a small river. The boats' crews here collected some tamarinds, and got two or three days' water, having only rice remaining for one meal more; and at sun-set all hands returned to the boats to take some rest. About seven in the evening, Captain Lynch saw something very black close to the boats, shoving with poles. The people immediately got their little grappel up, and prepared their oars, when the very prow that had avoided them in daylight, now came to attempt to cut them off in the dark. Upon discovering the boats going off, she hailed, and made use of the following words:—"Come, brothers, come, let us speak like good people; we are all good men here." Captain Lynch answered, that they could have nothing to do to speak about at night, when they avoided them in the day. The boats then took to their oars, were soon out of sight, and thus they escaped the fourth time.

On the 28th, they were approaching towards the western extremity of Sumbawa, and passed the town of that name, where they saw a number of prows, but none came near. In the course of the night they crossed the straits of Allas, met with strong ripplings, and a heavy sea, all of which they passed safely, but without any rest. In the morning they arrived on the east side of the island Lombeck, every one

in the boats feeling comfort in the thought of being so near Bally Town, where they expected their toils and dangers would cease: at this time they had neither rice nor water; and being near Rocky Point, in the straits of Allas, the tide being against them, they went on shore to seek for water, and got some, but very bad. A small canoe coming up, they bought a couple of small bags of rice, one of which they cooked, and got a comfortable meal, with some chilies and tamarinds.

The 29th, at ten in the morning, they left Rocky Point, and were pulling towards Bally Town, then about twenty-five miles distant, when the above-mentioned canoe left them; and, as they supposed, must have informed a piratical prow, that lay a couple of miles farther ahead, but in shore, of the situation of the boats; for, after rounding Rocky Point, they saw a small prow coming right before the wind, and steering for the boats; and as soon as she came near, they lowered their sail down, took to their paddles, and quickly came abreast. The boats, however, continued pulling, not taking any notice of the prow, in which they saw five men, who appeared to be well dressed, and all of them had creases by their sides; they were very inquisitive in asking what ships' boats they were, and where the ships were. Captain Lynch answered, as he had the others, that the ships were in the offing, and that the boats were going to Bally Town, to get stock for them. The nacodah in the prow endeavoured to persuade Captain Lynch, that the rajah's town of Lombeck was a very dangerous place for the boats to go to: and the people there were very bad; that they would kill all hands, and it would be better to come alongside his prow, where he had rice, and everything that the boat might want: in the mean time recommending them not to pull out to the offing, but to come in shore. To all this no attention was paid; and when they saw the boats persisted in keeping off shore, and deeming the force they had in the prow too weak in number to attack the boats, they pulled away as fast as they could, so that they might get in time to attempt to capture the boats with their large prow, before they could get to windward.

Captain Lynch kept cheering the people to pull to windward, but to little effect. The large prow was now under weigh, close hauled, and standing after the boats, and was coming up very fast, although the boats had their sails up, and pulling at the same time with all their strength, to escape being butchered or made slaves of by these ferocious people. No hopes remained of escaping, as the prow was now within musket-shot; and in less than a quarter of an hour, she was abreast, and to windward, bearing down upon the boats, apparently with an intention to run them down; the Malays all standing up with their lances in their hands, ready to heave, and desiring the boats to lower their sails down: upon which Captain Lynch stood up, with his musket and a pistol, and pointed them at the chief man of the prow, who was standing alone; all the people in the boats, at the same time rising, some with cutlasses, and others with lances in their hands. This determined conduct threw the Malays into such confusion, that every one in the prow, even the man at the helm, fell down: and hid themselves, crying out, that they were good people, and come to save them. Captain Lynch answered, how could they call themselves good people, when they showed themselves so much the contrary? Their dread of the muskets appeared so great, that the prow was very near upsetting in the confusion.

A small canoe was then despatched on shore by the pirate, for the purpose, as Captain Lynch supposed, of getting a reinforcement; and probably some of her crew had been left on shore, as the pirate had not more than ten or twelve men on board, and their complement generally exceeds thirty. The boats continued working to windward, as well as the prow; but the boats had greatly the advantage, by tacking, when the prow was wearing: and by the time the prow received a supply of men from the shore, the boats were well to windward, and the pirate gave up all hopes of attacking. The boats stood in shore, and came to anchor at sunset, being about ten miles distant from Bally Town. Captain Lynch kept close in shore, the wind and tide being against him. Crowds of people came towards the boats, inviting the people

of them to come on shore, and saying the rajah of Bally Town was there. However, Captain Lynch told them it was night, that he could not think of coming on shore till the morning, and then he would see the rajah, and deliver a letter which he had from the governor of Amboyna. The people on shore still kept calling out, and encouraging them with kind words; but Captain Lynch suspecting some treachery, or that some evil might yet befall them before they could reach Bally Town, the last prow that had chased them being only five or six miles distant, the people of which, must well know that the wind and tide were against the boats, and how easy it would be for them to come in small canoes, while the boats lay at anchor, and endeavour to surprise and cut them off; he therefore represented to the passengers and the boats' crews, that in his opinion, the best thing that could be done, would be to try to get clear of the straits in the course of the night, the wind and tide being favourable for that purpose, and to make the best of their way for Java, as that was a country where they would meet with relief and assistance. To this all hands readily agreed, except an European Portuguese sea-cunny, who seemed to be greatly alarmed with the apprehension of being starved to death, as they had only rice and water for one meal. Captain Lynch thereupon offered to land this man, if he chose it. He, however, preferred staying on board, to share his fate with the rest, rather than run the risk of being sold as a slave. By twelve at night the boats were clear of the straits of Allas, and stood along the north side of the island of Lombok the whole of the 30th; where seeing a small river, and no appearance of inhabitants, they landed, and dressed all the rice that was left, and got a supply of water sufficient for three days.

On the 1st of May, while standing along the Lombok shore, they, at daylight, saw a small bay, with a few houses, and pulling in shore, they inquired of the inhabitants if they had any rice for sale. Fortunately they seemed to be very friendly: they invited the boats to come on shore, and said they would sell the people rice. However, Captain Lynch did not choose to put too much confidence in their professions of kindness, and therefore made his people rest on their oars, sending a couple of men only to bargain and purchase provisions. Here they were so fortunate as to obtain eleven small bags of rice; some salt, and a little tobacco was also purchased; all which were a very great acquisition; and having got plenty of water in the boats, they hoped they should have no more occasion to land, as, by so doing, they always exposed themselves to the treachery of the natives. They had a small place prepared in the boats to cook, and, by comparison with what had preceded, enjoyed a luxurious meal. In the evening they crossed the straits of Lombok, and experienced very heavy ripplings, which caused a great and breaking sea. Both boats underwent the same risk and distress as they had encountered in the other straits; but, happily, on the morning of the 2nd, they reached the island of Bally, and once more got into smooth water.

On the 2nd of May, they continued pulling and sailing along the island of Bally, where they saw many towns, and the land appeared to be well cultivated, with cattle of various descriptions. On the morning of the 3rd, a large prow that lay in the roads of a large town which they passed, sent a canoe to invite the boats on shore, which was declined immediately: after which, a large prow set sail and chased the boats, pulling and sailing for the whole of this day; but night coming on, they fortunately escaped, and had the good luck to get across the straits of Bally during the night; and in the morning they were up with Cape Sandana, on the island of Java, when all fear from pirates being over, the boats' crew pulled cheerily along the Java shore.

On the 4th of May they passed Pamanoekean, a small settlement of the Dutch, and Pasockie, a large Javanese town, where they saw several prows, but none of them came near the boats.

The following day they continued making the best of their way towards Passeerwang.

On the 6th of May, all the water in the boats being expended, they were obliged to touch at a place called Kalie,

about five leagues to the eastward of Passeerwang; and sent some people on shore to fetch water and provisions, and to inform the chief man of the town, that they were two English boats, going to the Dutch fort of Passeerwang. The people soon returned with water, and some broiled fish and Indian corn, all which proved very acceptable, and which Captain Lynch divided amongst all hands. Whilst waiting here, the boats grounded on a long flat that runs a good way out, and Captain Lynch being anxious to reach Passeerwang, as they would there meet with Europeans, from whom they might expect every kind of relief, he employed the people this day, being the 25th of their sufferings in the boats, in shoving them over the flat, during which one of the Lascars went off, and concealed himself on shore. The Javahese were immediately alarmed, conceiving that this man might be a spy: they, therefore, immediately collected in a body, and between four and five hundred men ran into the water to attack the boats, and to take the crews of them prisoners. As Captain Lynch well knew that resistance would not be the means of remedying their distress, he went himself from the boats to meet this mob, who were armed with all sorts of weapons, Captain Lynch holding in his hand the governor of Batavia's letter. They, however, seized him and all the people in the two boats, and forcibly carried them on shore. Captain Lynch had previously and strongly recommended that no sort of resistance might be made by the crews and passengers against the natives; and had a single musket or a pistol been discharged, in all probability not one of the people would have escaped from the rage of this savage mob.

Upon Captain Lynch and his people being thus landed, they were conducted to the house of the principal man, where every attention was paid them, and they were abundantly supplied with all sorts of provisions and beds; and a strong guard was put over the boats, that nothing might be lost or taken away. A despatch was also sent by the chief, by land, to the governor of Passeerwang, informing him of all that had passed; which information having reached the said governor, and he further learning that the boats and people had belonged to the Bangalore that had been cast away, he sent his son-in-law and a doctor, with a carriage, to escort the gentlemen by land, and a couple of prows were sent to bring the boats by sea to Passeerwang. The two Dutch gentlemen made very particular inquiries of Captain Lynch, how the head man of the place they were at had behaved, and whether there was any cause of complaint.

About six in the morning of the 8th of May, the Dutch gentlemen accompanied Captain Lynch and his passengers to the carriage, and then each of them mounted on horse-back, riding before the carriage, until they reached a sugar-manufactory belonging to the governor, where an excellent breakfast was provided; after which they again got into the carriage, and travelled through a very fine country, having a good road and beautifully-cultivated lands on both sides of it. At noon of the same day, they arrived at Passeerwang, where they were received by the governor, and all the gentlemen of the settlement, with the utmost kindness and attention; all expressing their concern for the great sufferings they had undergone, and the losses they had sustained. Rooms were ordered to be got ready in the government-house, each having one to himself; and every possible civility was shown by the governor and his family. The boats' crews, on their arrival, were also amply supplied with provisions of all kinds, and a house allotted for them. Letters were immediately despatched to Batavia and Sourabaya, giving an account of the loss of the ship, and requesting the governor of Sourabaya to send conveyances, by land, for Captain Lynch and his passengers, as they were anxious to get away as fast as possible.

On the 9th of May, the governor of Passeerwang received a letter from Sourabaya, requesting that he would despatch his carriage half-way, and the governor of Sourabaya would send his, the other half, to convey the shipwrecked people in; and that he, the governor of Sourabaya, would be very happy to see them, and to render all the assistance that lay in his power.

During the three days that Captain Lynch, and one of his officers, Mr. Farrao and Mr. Lakersteen, passengers, stayed at this place, words cannot express what obligations they were under to this good man and his family: their clothes were washed for nothing, abundance of victuals provided for the boats' crews, and a prow was also procured to carry the crews and the boats to Sourabaya, without any charge whatsoever. The different rajabs or timengons, paid them visits, and entertainments were made in consequence; and all places worthy of notice, gardens, walks, &c. were shown by the governor in person.

On the 10th of May, at six in the morning, every thing having been provided the night before, Captain Lynch, his officers, and passengers, took their grateful leave of this most worthy governor and his family. All the gentlemen of the garrison, attended at their leaving the place; and they were conducted by two sea captains of the Dutch company, named De Groot and Bodwyn, to Sourabaya, a distance of fifty-six miles, travelling in carriages, and changing their horses in every town they came to, at which all sorts of victuals were prepared by the natives to entertain the English, as they passed.

At a quarter before twelve o'clock on the 10th of May, they arrived at Sourabaya, where the same attention was paid them; lodgings were provided, and victuals for the boats' crews, free of all expense, every day. The gentlemen were invited to the governor's table, and a passage procured for them to Samarang, in a ketch belonging to Mr. de Vris.

On the 17th, the ketch arrived at Samarang, where Captain Lynch and his companions were carried to Governor Inglehard. Lodgings were provided for all, and every necessary article, as well as an ample sea-stock put on board, to last them to Batavia. Here they stayed two days; and on the 18th of May, in the evening, taking leave of Governor Inglehard, they embarked for Batavia.

MARY DOUGLAS: * OR, THE PIRATE'S ATTACK.

THE "Seabird" was under weigh. As I went on deck she was lying with her canvass spread to court the salutations of the rising breeze. At that moment, our sails hung listlessly against the masts, and the exhalations that curled upon the waters rose perpendicularly to the upper regions of the air. Soon, however, they began to flutter and chafe with the rigging, as if impatient at the tardy movements of the wind, till, as it came murmuring from the Jersey shore; mist, and ripples, and ships were moving swiftly towards a point, which, in the dimness of the hour, seemed the opening into another world. We soon reached it, and the perilous scene of our future labours opened before us. I turned to look for the lighthouse. It had disappeared; and the vessels in whose company we had sailed were scattered, like a frightened flock, towards every corner of the haven. The breeze freshened; we were shaping our solitary course for Turks Island. At length the beams of the setting sun, lighted on nothing but our own little vessel and the blue waters that rolled around us.

"And now," thought I, "I am in the world alone—upon the wide, wide sea."

"We have every prospect of a favourable passage," said a voice near me; and for the first time since I embarked, I recollected that I was not the only passenger on board. The speaker was a venerable gentleman of some three-score years, with silver locks, and a countenance expressive of amiable feelings, though careworn and melancholy. On his arm leaned a small and extremely graceful female figure, to whom his remark had been addressed, and both were gazing in the direction where the waters were still flashing with the living splendours of the sun-set.

"Beautiful!" at length, exclaimed the lady, without seem-

ing to heed what the other had said. "How lovely is this scene, my dear father! And see, what a beautiful cloud! It seems as if it were one of the enchanted isles of fairyland."

Who has not felt the magic of a voice? I had not seen the speaker, and yet her tones came over me like pleasant music.

"You are the child of imagination, my dear Mary," said her father, affectionately passing his arm round her waist; "would to Heaven you were less so!"

"But," said she, in a mournful tone, "I do not always indulge in gay fancies."

"True, my dear; your feelings change their hues as often and as suddenly as the clouds of heaven. See, yonder! your enchanted island has already lost its golden mantle, and now lies brooding on the breast of the sea, a dusky and threatening bank of fog. Thus suddenly do you pass from the brightest dreams of happiness to the darkest forebodings. I repeat, would to Heaven, you were less the child of imagination! You had been happier."

The father, in alluding to her constitutional weakness, had probably awakened distressing recollections; for she hung her head and withdrew from his arm, and when I approached to get a view of her face, her eyes were filled with tears. She turned away quickly on seeing a stranger. But that view was enough. I have spoken of the magic of a voice but, what is it to the human face?

"You seem interested with the singular deportment of my daughter," said the old gentleman, as she retired.

I started, I believe, in some confusion.

"She has just risen from a bed of sickness," he continued, with a melancholy accent; "and I am fearful will never be herself again."

"If I were to judge of her malady from her appearance," said I, "I should say that the mind has had more to do than bodily infirmities with the ruin that has been wrought in that lovely countenance."

"You are right, sir," replied he, with a sigh; "her illness was occasioned by mental anguish, the cause of which is buried deep in both our hearts. Suffice it to say, that the victim of intemperance seldom falls alone; and that when a youth of high promise immolates himself on the altar of the disgusting fiend, tears and broken hearts attend the sacrifice."

The old man spoke with a mournful energy, and I pitied him.

"Is there no hope of the reformation of such an one?" I inquired.

"In this case, none. It is more than six months since William Ashton fled from society, and went to sea as a common mariner. The presence, the devoted affection, the tears of my child could not reclaim him—what on earth can?"

"What indeed!" repeated I. "And this voyage is undertaken for the recovery of her health? You will excuse my inquisitiveness," I immediately added, "I have lived long enough in your country to acquire her characteristic mode of questioning."

"I hold it every man's duty, as well as interest," said he, "whose lot it is to travel on the great deep, far from his home and kindred, to relate so much of his own history as shall entitle him to the sympathy and confidence of the companions of his voyage. I am a Scotchman, and my name is Douglas."

"My name," said I, "is Brae, and I am a freshman in—College; you have my whole history."

The shadows of night had settled over the solitary waste before we parted for the night. Many leagues of sea had been ploughed in that short period, as the ship, yielding to the impulse of the powerful breeze, dashed on her way over the billows. Three days of this propitious wind brought us off the Hatteras; and though at the distance of three hundred miles from land, we received the usual greeting of the Cape, and were obliged to do homage to its strong spirit, under bare poles, for several hours. It will be supposed by those of my readers who will have the charity to consider me a man of taste, that during these three days I had not avoided the society of Mary Douglas and her father. If I may so speak, without being misunderstood, or expressing my meaning too strongly, I had become quite a favourite. I found her mind

all that her countenance had promised. Her sufferings had been cruel; sufficiently severe, indeed, to cause a temporary alienation of her reason, but its only remaining trace was an occasional wildness of the eye, and an imagination highly, and sometimes painfully, susceptible of excitement. In her moments of animation, it was delightful to stand by her side, leaning on the taffrail, and behold the world of romance, her playful fancy would call up above and around us. The ocean and every thing visible on its surface, the finny herds that glided through its depths, were all made to assist in supporting, adorning, and peopling her ideal world.

Her father was happy to see her possess even the shadow of enjoyment. "You will not have many days to revel in these watery realms of fairyland," said he, "if we go on at this rate."

The propitious and powerful breeze that had brought us out of port, and which had temporarily been put to the rout by a counter, and more violent gust from the Hatteras, had now revived, and came sweeping from the north-east in a steady gale. Swift flew the Seabird on her snowy wing, dashing recklessly through the exulting elements, as if anxious to redeem the time that had been lost in port.

Shortly after crossing the tropic, the breeze suddenly left us. There is nothing that a seaman loves less than a calm: the rushing of the wind in a small hurricane is far more welcome if it only blow the right way; and peculiarly aggravating is it to be becalmed within sight of his destined haven. We could not as yet see Jamaica, but along the south-western quarter of the horizon, lay a pile of dusky clouds, which the captain assured us was the *loom* of that island. The reader will not wonder, then, if, in our circumstances, all the strange oaths and imprecations found in a seaman's vocabulary were called into service by our nettlesome captain and his crew, and hurled without mercy on the winds and weather.

"You may have more wind than you want before you reach Kingston moorings," said I, a little nettled at their absurd conduct.

"Blow—blow—let it blow!" roared the captain; "I would rather go to the bottom at once than lie here, roasting in this sun that's enough to cook a Guineaman. Besides, Mr. Brae," added he, in a milder tone, and pointing to the north-west, "yonder is Cape Maise, the eastern end of Cuba, not fifteen miles off. Two hours' rowing would bring us off a gang of the picarooning rascals to cut our throats if we shouldn't happen to hit their fancy; and though this good ship is called the Seabird, she is one of that kind which can't rise without a swell. I say then let it blow." So saying, he took his glass and went into the main-top, where he might be seen for an hour reconnoitring the Cuba shore.

It was the fourth afternoon of the calm. Impatience was visible in almost every face. But my feelings agreed perfectly with the weather. There reigned as complete a tranquillity in my bosom as in the elements. Mary Douglas was there; it was enough; I felt not the sun; I feared no pirates. Mistake me not, gentle reader. I do not say that I was in love, for on the doctrine of tender sentiments, I entertain some sceptical, perhaps treasonable, ideas. I only found myself strangely fascinated, was glad I was just there, and as I was. I pitied Mary Douglas, and would have done much to have made her happy. She seemed better when we sailed; but well, or substantially happy, she certainly was not. Still that hectic glow would appear on her cheek, and flitter and depart like the tints of sunset, leaving it colourless as marble. She lived in a world of fancy, and beautifully would she deck the objects of her own creation; but then there would come a revulsion of her feelings—a deep dejection—when one who studied her speaking countenance, might readily conceive that fancy, aided by memory, was conjuring up a far distant scene. Oh! how has my heart yearned, as I have gazed upon her in these sad moments, for power to extract the worm that had taken such deep hold upon her peace; to recall her to a world she was so eminently qualified to bless and adorn, and that should no longer fright her from its stern realities by dreadful images of the past. She had closed her book and I had been sitting by her side, I know not how long, perhaps

an hour. Our conversation had been interesting, but of its subject I have only a confused recollection.

"Say no more, Mr. Brae," said she, rising; "I should be weak to deny that I understand you; but," looking up into my face with a melancholy smile, "you know something of my past history; you know that I once loved;" here her lip quivered and the colour left her cheeks; "but he proved himself unworthy, and I tore him from my heart! But oh! in doing this, think you that I did not rend my heartstrings? She left me in tears, and retired to her cabin, adding only as she passed, 'my heart is crushed, Mr. Brae, I feel that I can never love again.'"

The sun had settled far towards the Mexican Gulf before Captain Boltrop came down from his look-out. Standing on the quarter-deck, he again looked long and anxiously to the westward.

"There is that between us and that shore," he at length said, "that I dread more than I would that shore in a hurricane off St. Domingo."

"I thought that nothing could be more terrible to a seaman, than a gale of wind upon a lee shore," observed Mr Douglas.

"I had rather fall into the sea than into the hands of a bloodthirsty picaroon," said the Captain very decidedly, and with an air of great meaning.

Just then, the setting sun dipped its flaming circle in the waters of the Caribbean Sea.

"There is a spot in the sun," I exclaimed.

The captain looked at it a moment, and then smiling grimly—"Ay, a spot, and a dark one, too," said he; "watch it, Mr. Brae, and see if it sets."

The dark object, which appeared on the very disc of the sun, and which I had taken for one of those spots that are occasionally seen on his surface, instead of sinking behind the bright and level waters with the part of the luminary on which it was first observed, seemed to mount upwards, and after lingering a moment on the last visible arch of the glorious orb, it sprang into that pure and glowing element which the sun had shed along the western horizon. It wavered for a moment between the heavens and the earth, as if uncertain to which to attach itself, till, as the flashings of the dying light became fainter, it appeared on the sea a black and motionless speck.

"The sun has found water to wash him clear of your spot, Mr. Brae," said the captain, with another of his mysterious smiles; "I wish it had gone down with him."

An air of deep care settled over his face. I knew not what to make of him or of his words.

"Why, what do you take that speck to be?" I at length inquired.

"Look for yourself Mr. Brae," said he.

I took the glass from his hand, and examined the dim distant object.

"It is a boat, captain."

"Ay, a boat!" echoed he, "and coming for us as fast as twelve stout rowers can shove her through the water. Now you know why I wished for a wind, and a hard wind too."

The beautiful twilight of the tropics, had now settled in all its softness over the quiet bosom of the deep. The heights of Cuba rose majestically from its crystal depths, boldly lifting their pointed peaks to the spotless heavens, and I fancied that I could almost hear the soft murmur of the small wave, as it broke upon its coral strand. The heavy loom in the south-west, as if it had only waited to grace the setting of the king of day, after glittering for a moment in a thousand gorgeous colours, settled behind the heaving breast of the ocean, leaving only a dark mass like a church, with its spire in bold relief against the sky. It no sooner caught our captain's eye, than he shouted with as much rapture as a seaman ever allows himself to express, "The Blue Mountain Peak of Jamaica!" The cry was echoed with enthusiasm by a dozen joyful voices. We were still one hundred miles from the island, and were not gaining an inch on our way towards it; still every eye was turned to it with affection as to a long sought home, and an emotion awoke even in my breast, distinct from those which of late had usurped its entire possession. The whole view to the westward was beauty, unbroken by a single blemish, and

nothing of alarm was there save the dark spot on the sea, to which so suspicious a character had been attached by our captain, but which had already disappeared in the increasing darkness of the hour. But the east, as if envious of the tranquillity that reigned in the opposite quarter, wore a savage scowl. Enormous piles of vapour, black as the smoke from a volcano's crater, shrouded the heights of St. Domingo, and blotted out the very shores from our view. It looked indeed as if the island had sunk, and another of subterranean formation had risen from the depths of the sea to fill its place.

"I would give a month's wages," said the captain, with an air of deep thought, "if we could have that squall upon us within an hour."

I stared at him with a feeling between contempt and astonishment.

"You doubtless do honour to a seaman's taste," said I, drily; "for my part, I dislike my fellow-creatures so little, that I would rather see a piratical privateer within gun-shot, than encounter the contents of yonder mass of solid darkness."

"It may be proved before you leave the ship, Mr. Brae," replied he, with great coolness, "that I fear the face of man as little as another." Then turning to the whole ship's company, with very considerable dignity, "Gentlemen, and shipmates," said he, "I have reason to apprehend that danger is at hand. The boat that is putting off to us is doubtless a pirate. Of armed men, she is certainly full; for I have lived too long on the sea not to know the glitter of arms in the sun. It is more than probable, that she has comrades; for would one open boat venture to attack a vessel of our size? Something has been hinted about fear, and, to say the truth, I had rather run than meet these gentry. But that is out of the question, and fight we must, as long as there is a man to stand at one of those brass guns, or to pull a trigger."

Three cheers, were the echo to this chivalric speech, and not a moment was lost in preparing to give the pirate a warm reception. A formidable show of miscellaneous articles of warfare was drawn from the secret places of the ship, and there were finally mustered on deck fifteen men, twenty stand of arms, and two brass cannon. These last, after being wheeled to the starboard side of the quarter-deck, and charged nearly to the muzzle, were thrust through port-holes towards the quarter whence our foes were expected. Our small arms were loaded with three balls each—every man girded with a cutlass and a brace of pistols—and the captain even carried his precautions so far as to have the railings, bulwarks, and sides of the ship well *slushed*, in order to give a slippery foothold if they attempted boarding. After all this bustle of preparation, every man posted himself in a situation to command a view of the whole prospect to the westward, and a look-out was stationed in every top. By this time night had drawn her curtain close around the scene, and no trace of the sun's existence remained but in his pale-faced representative, now riding near her meridian. For an hour no sound broke the deep silence that reigned throughout the ship. Not a murmur to excite alarm, or even suspicion, arose from the slumbering ocean, and it seemed even criminal to believe that any being could be found daring enough to disturb a tranquillity so deep and holy.

"It is a lovely hour," said Mary, in a whisper, as if afraid to trust her voice. "Can there be danger?"

"It is just such an hour as man selects for the exercise of his evil genius," replied I, in her own tone.

The gigantic piles of vapour remained motionless as rocks of adamant, resembling more the black smoke of some smouldering mine of coal, than exhalations of the sun's raising. No lightning glanced from its bosom. The feeble and timorous moonbeams were unable to penetrate its dark depths, only faintly silversing their edges, and rendering visible and more gloomy the blackness below.

"There is a hurricane in a visible shape," said I.

Still the dark mass moved not, but stood upon the waters, motionless, and black as a mountain of infernal elements. Hour after hour rolled on, and the scenes on either hand continued the same. Suspense had rendered the men fretful and impatient, and, after straining in vain, to discover some dim trace

of the foe, or to detect the dip of their oars, many had closed their eyes in slumber. Mr. Douglas and his daughter had retired for the night. The hour of midnight came, and the moon was fast sinking towards the sea. Like the rest I had become weary. "Well, captain," said I, "what has become of our friends from Cuba?"

"Gone to the bottom, I hope," replied he; "but there is no knowing how to calculate for the rascals, so we had better keep a sharp look-out yet."

"For my part," said I, "I am tired with looking at nothing, and will just see how the squall comes on." I turned accordingly, and a flashing on the water, rising and disappearing, in quick and regular succession, met my eye.

"There they are!" exclaimed the captain, whose eye had taken the direction of mine; "the rascals have rowed clear round us, and are coming on from the St. Domingo side. Stand to your arms, boys? the rogues are upon us." In an instant every man was at his post, and on the alert. "Stand in the shadow of the spars and rigging to be out of sight," continued the captain, "and not a man of you fire till I give the word."

"Ay, ay, sir," responded the crew, with nautical precision.

"And now," said the captain, who really went to work in a business-like style, "let us get this gun on the other tack, Mr. Brae, to be ready for the gentlemen."

The muzzle of the piece was accordingly thrust through the opposite port, keeping a dead aim on the boat, which was now little more than a quarter of a mile distant from us.

"Strange," said I, "that the fellows should choose to row against the moon, when, by so doing, they must know we should see the glitter of their oars."

"I suspect," replied the captain, "that they had no choice about it. You forget that we have had more or less wind off the land since sunset, and are at least six miles from where we were then. The probability is, that the rogues lost us after nightfall; but it seems they have found us at last."

The boat was now very near us, still not a sound came from her. The closest and most painful attention could not hear the dip of her oars, which rose and fell like a piece of mechanism, glittering in the moonlight like blades of silver.

"Boat, ahoy!" cried the voice of Captain Boltrop, in its most startling tones. No answer was returned to this summons, and the oars were plied more lively. "Keep off! you rascals!" again shouted our commander—"off! or I'll blow you out of the water!"

This threat and the firebrand which I flourished with great fierceness, seemed to make the pirates hesitate. The motion of the boat was arrested. Captain Boltrop thought the victory already achieved, and he again raised his voice in tones of authority—"throw your arms overboard, and come alongside."

A volley of musketry, was the reply to this summons—a dozen balls whistled by, and the captain's hat flew across the deck. A deep imprecation burst from his lips. The next instant, a broad stream of flame issued from the quarter-deck, and the explosion of the piece, broke upon the dead stillness of the elements with a noise like thunder. A distant crash, a heavy splashing in the water, above which, a cry of mortal agony was terribly distinct, had arisen in the direction of the foe, before the smoke dispersed sufficiently to enable us to see the effect of our shot. No boat was then to be seen, nor any trace of her crew; we had in all probability sent every soul into eternity.

"By George!" cried the captain, with something like compunction in his tone, and rubbing his head with his handkerchief, "I would rather have taken the rascals, and had them decently hanged, than sent them to the bottom in this off-hand manner. You couldn't have made a better shot, Mr. Brae, if you —"

A horrid yell, rising apparently from the very depths beneath the ship, stopped him in the middle of his speech. A boat glided out of the smoke, and, shooting under our bows, a dozen dark forms were seen springing from it to the side of the ship. But our precautions had been wisely taken, and were completely successful. No sooner did they touch the

slippery vessel than most of them, with the most horrid blasphemies, fell back into the sea, snapping their pistols at us even after they were filled with water. At the same moment their boat, which had been completely riddled by our shot, filled and sunk to the bottom. Three only got upon deck, and were immediately overpowered and secured. Five more were with difficulty dragged out of the water, and disposed of in the same manner. One powerful fellow, however, was not so easily quelled. He had succeeded in getting one foot upon deck, when a young seaman, named Ralph, flew at him, with the fierceness of a tiger. They closed, and after balancing a moment between the deck and the water, the pirate who was the heavier man, fell backwards overboard, dragging his antagonist with him. They both sunk, but soon rose again about four rods from the ship, clinging closely together. Then commenced a combat the most singular and appalling I had ever witnessed. No one on board seemed to think of devising means of assisting our champion. No one dared to fire upon the pirate; for so closely were they coiled together, so rapid were their evolutions, and so dim the light shed by the moon, that it was impossible to hit one without endangering the life of the other. At the commencement of the struggle, their efforts seemed to be aimed solely at drowning each other. They whirled over on the top of the water, dashing it about like wounded sharks. Both, then sunk, and were for a while lost to our sight. Presently they arose again, and exchanged thick and heavy blows, and, closing with redoubled fury, sunk again. Neglecting to use their weapons, which would have put a speedy end to the fray, they fought more like savage beasts of prey, bent on throttling each other, than like human beings.

"Shall we stand and see our man murdered!" at length exclaimed a voice from among the crew. It operated like magic to break the spell that had fallen upon us all.

"Clear away the boat there!" shouted the captain, and six men sprang to execute the order. Just then, after an effort of unusual fierceness, both of the combatants sunk. They remained out of sight so long, that the men who were letting down the boat suspended their operations, and we all stood breathless with uncertainty and anxiety awaiting their reappearance. At length, about thirty yards off, the waters parted! but only one man was seen to rise.

"Is it you, Ralph?" cried the captain, in a suppressed voice.

"Here is some of him, at least, on my knife-blade," responded the freebooter, with the accent and laugh of a fiend; and springing nearly to his whole height out of the water, he threw the weapon with great force towards us. Another hollow laugh rung over the waters, and, on looking round, wide circles of ripples were seen moving on the face of the moon-lit sea, as if some heavy body had just sunk into it. Vengeance was the tardy thought that now rushed on every heart. Some, in the blinded fury of the moment, actually discharged their pieces in the centre of those waving eddies, without staying to reflect upon its utter uselessness. Others with their guns in readiness, and eyes glaring upon the sea like panthers, robbed of their prey, stood prepared to fire the moment he should show his head above the water. But he rose no more. The winged messengers of death, that had been aimed at his life, sped harmlessly over his head; and, had it been possible to penetrate the secrets of the great deep, he might have been seen reposing peacefully on its sandy bottom, by the side of his late antagonist. A sullen silence pervaded the ship. The men looked gloomily at each other, and with lowering brows, on their helpless prisoners, as if a sufficient atonement had not been rendered for the life of their comrade. To one skilled in the language of the human countenance, it was evident that nothing but the restraint of discipline, held them back from a summary vengeance and of crime that would have sunk them to a level with the pirates themselves. Judging of the feelings of his crew from their looks, or more probably from his own, and anxious to remove the temptation to evil, the captain ordered our eight prisoners to be stowed under the hatches, and they were accordingly tumbled in with very little ceremony. How many of this band of genuine desperadoes had been lost, we had no means of ascertaining; for our

prisoners either did not, or would not, understand English or French. But when they fired upon us, from twelve to sixteen men were visible, and the yell that followed our discharge, was such as is never extorted from mortal man, but by the pangs of the last agony. Six or eight, then, of the freebooters had certainly perished. What chance of success they might fancy that an open boat could have against a vessel of the size of ours, it completely bewildered us to imagine. They must either have been intoxicated, or in the situation of a beast of prey, whom the goadings of hunger will impel to rush upon a foe, from whose face he would otherwise have fled. Viewing it in either light, it was an act of the most daring hardihood. The struggle had been fierce and boisterous, but it had passed. The ship was restored to her usual tranquillity, and was moving before a gentle breeze from the shore, yet so slowly as scarcely to ruffle the face of the ocean.

The noise of the conflict had called up the terrified inmates of the cabin; and all the ship's company were now assembled on deck, silent, but too deeply affected with the scene just passed, to sleep more that night. Mary was there; her cheeks flushed with the excitement which the events of the night had occasioned. Still occasionally a cold shudder would rush through her frame, as she murmured, in a suppressed voice—"That fearful cry! I shall never forget it." She was in a state of high nervous agitation. Her eyes shone with uncommon lustre, and glanced over the sea unsteadily. "The elements are to have their turn next," said she.

A low creaking sound from the rigging and the warning voice of the captain, announced that the long-expected onset of the winds was at hand, and I had just time to hand Mary to the cabin when the ship was bending low upon her side by the pressure of a furious gust. No precaution which prudence and experience suggested, to put the ship in a condition to grapple safely with her powerful adversary, had been omitted by our wary commander. No canvases were spread aloft, but the three close-reefed top-sails. A large detachment of those brassy clouds before mentioned, had passed the zenith when the first squall struck us. It lasted but a minute. That minute however was sufficient to tear our top-sails into ribands, which were borne away like feathers on the wings of the blast. A dead calm and a "horror of great darkness" succeeded. Hollow, whispering sounds were heard in the air, and numerous little balls of pale light, gleamed and vanished on the dark canopy which had now completely invested the heavens.

"We shall have it soon," observed the captain, in a calm low voice.

Scarcely had he spoken, when a meteor of uncommon size and splendour shot from a point near the zenith, and glancing across the dark background of the east, sunk into the sea. Then the whisperings in the air were multiplied. A sound arose in the distance as of cavalry rushing to battle, and every sense was drowned in the roar of winds and the dash of waters. Like other landmen I had read of storms, and tempests, of mountain waves lashed into fury; but what description can do justice to the terrific truth of such a scene, or who that is a stranger to the ways of God on the mighty deep, can form even a faint idea of all that is meant by a 'storm at sea!' The hurricanes of these seas are as short-lived as they are violent. The dawn of the day showed no trace of the tempest that had raged during the night, but the tattered rigging and well-washed deck of our own vessel. Cuba and St. Domingo had sunk beneath the horizon, and other heights on our right were lifting their misty heads almost to the zenith. Within a mile of us lay a sloping shore clothed with brilliant green to the water's edge. No naked sand-hills marred the beauty of the landscape; all was green, save, where occasionally, a rising eminence of an opening vale presented its painted sugar works and breeze mills.

"If there be an Eden on earth," said I, "we have it before us."

"The sun shines not," observed Mr. Douglas, "on an island more beautiful than Jamaica; and but for man, who seems to have marked out the fairest portions of God's earth, for the exercise of his worst passions, it might justly be styled a terrestrial paradise."

The remark was just and striking. In taking a survey of the world, it is not upon the beauties of the landscape merely that the mind most delights to dwell. And although like the features of a stranger's face, they are the first objects that meet and interest its attention, yet, recollecting that it is man who stamps a character on all things here below, it turns from them to contemplate the manners of society. In a community of virtuous and enlightened freemen, it discovers a moral grandeur and beauty surpassing everything in the natural world. The pride of the forest must stoop to time; the beauties of vegetation must fade; the mighty hills are to sink in the general wreck of nature; but the virtues that exalt a nation are a garland which the breath of eternity will not wither. Such is its just estimation of the world. With what rapture, then, must it turn to view the country where the grandest scenes of nature wind into insignificance before the sublimity of man's virtue? But where on earth shall such a land be sought? Surely not within the tropics. By some strange fatality, this broad zone, emphatically the garden of the earth, is trodden by slaves and barbarians. Here, where the Deity is most visibly present by the works of his bounty and power, man sins with the highest hand. Here, where nature lifts her altars (the everlasting hills) highest heaven, his thoughts are most grovelling. The stranger who would leave Jamaica with most favourable impressions must view it at a distance as we did, or be spirited to its shores, and alight on a pinnacle of its sequestered mountains, where, without seeing a human being, he can view the island as it came from the hand of its Maker.

We passed up the beautiful bay of Kingston, and in the afternoon anchored about half a mile from the shore. Numerous boats were boarding us and departing on different errands. A hundred ships were discharging or receiving their cargoes, to the cheerful song of the sailors. The passengers soon collected in a group on the quarter-deck, gazing on the thousand novelties that met the eye from the island, town, and bay. Mary was there, in excellent spirits; every moment discovering and pointing out, with the most animated gestures and exclamations, some new object of admiration. At this moment a barge from the castle shot across the bay, containing an officer, and a platoon of soldiers, with orders for the delivery of our prisoners into the hands of justice. Accordingly, amidst a profound silence, they were marched one by one, from the hold, where they had been immured for fifteen hours, and passed over the side of the ship into the boat. There they were handcuffed and bound. Two other barges were in attendance with an equal number of men to act as guards. The sight of these wretches painfully affected Miss Douglas, and carried back her thoughts to the bloody scene of the preceding night. She shuddered at the recollection, and murmured, "He that uttered that dreadful cry is not here."

Although she had spoken in a low voice, her words fell upon the ear of the last prisoner, who was just in the act of leaving the ship. He was a youth of about two and twenty, with a slender, but very elegant figure. His countenance might have been striking and expressive; but it was now disfigured with a scar, and bore the infallible marks of long and habitual indulgence in intemperance. I said he heard the voice of Mary. He stopped, and looked as if he were nailed to the deck. He put his hand to his forehead like one bewildered, and his eye wandered over the ship, as if searching for the sound he had heard, till at length it fell upon Mary, and he stood gazing upon her, with a countenance varying strangely from the vacant stare of idiocy, to an expression of inexplicable meaning and even agony. She was absorbed in her own reflections and heeded him not. I made an exclamation of surprise, and directed her attention to the miserable man who was so closely observing her. She looked, her eye met the ghastly stare of his, and if a bolt from heaven had struck her, she could not have fallen more quickly.

"William Ashton!" cried the wretched father; "are you not satisfied? Will you take her life too?"

The miserable man rushed past his guards, threw back the curls from his forehead, and, gasping for breath, like one in the agonies of strangulation, gazed upon her. Then, spring-

ing to the vessel's side, before any arm could interpose, he buried himself in the sea, and never rose more. It was some time, before Miss Douglas showed any signs of life. At last after a strong convulsion, she opened her eyes.

"Where is he?" said she, starting up in the berth. She stared wildly around, and then, pointing with her finger, a single shriek, as if sent from her very soul, burst from her, and again, she sunk down insensible. The shock had been too much for reason, if not for nature. For the remainder of that day and all the succeeding night, we hung over her, uncertain whether each fit might not be her last of mortal suffering. At length she fell into a deep sleep, and reposed quietly. She awoke perfectly calm; and looking her father steadily in the face, she again said "Where is he?"

"My child, be calm," said the old man.

"Am I not calm? Have I not suffered? and think you I cannot suffer more? Let me know the worst. Where is William Ashton?"

"In pity to your father, Miss Douglas," said I, "endeavour to compose yourself, you shall know all in time."

"I do know it," said she, in a hollow voice; "I know it—I see it: they are leading him to a scaffold—to a death of shame."

"Mr. Douglas," said I, "let her know the truth; it is hardly more terrible than her present surmises."

The old man assented; and taking her hand, he related in the gentlest manner, the fate of her unworthy lover. With wonderful composure, she listened to the narration. The fountain of her tears broke up, and she wept long and freely; then, closing her eyes, her lips were seen to move as if in prayer. Her tears and mental devotion relieved her. Again she slept, and awoke in quiet spirits. It almost seemed that the news of Ashton's suicide, was to her less terrible than the idea of his suffering an ignominious death as a malefactor. She signified to her father that she felt able to travel. The hour had come when we were to separate: and now came my trial. I wished to speak to her of myself; but every principle of manhood, repressed the selfish thought, in her present situation. She seemed to comprehend my feelings, and, extending her hand to me with a smile, said, "Farewell, Mr. Brae; I have crossed your path like a dark vision; but, oh! forget me. Let it be as a dream, since we first met." She hesitated a moment. "I may have caused you unhappiness: most gladly would I have avoided it, and gladly would I remove it now, were it possible; but look upon my face, and be convinced that were it even as you wish, you would soon have to mourn again. May God bless you."

The boat that was to convey her to the shore was ready. I watched it till it disappeared.

"Are you ready to land, sir?"

Awaking, as from a trance, I gave the speaker a bewildered stare, and for the first time during many days, I recollected the objects of my voyage. With a feeling of solitude, which even the thoughts of my home could not subdue, I followed my baggage into the waiting wherry, and in a few minutes placed my foot upon my native land.

Twelve months after the events contained in the preceding narrative had transpired, I stood again upon my native soil. Various had been my fortunes in the interim, but they are of no consequence to the reader. The companions of my voyage, with but one exception, were nearly forgotten—its incidents that were not associated with that one individual remembered but faintly.

I was sitting in my study discussing a subtle point of ethics, when some one knocked. A servant entered and handed me the following note:—

"An old acquaintance requests the pleasure of Mr. Brae's company, for a few minutes at the hotel."

I rose instantly, adjusted my dress, and followed the messenger.

Mr. Douglas opened the door, and Mary, blooming and beautiful beyond even my gayest dream, stood beside him.

There was no romance in what followed to any but the par-

ties concerned, and it were needless to dwell upon the story. In a single sentence, therefore, I will say, that Mr. Douglas had travelled with his daughter until her health was re-established; that he was, at the time of which I speak, on his way home; and that the Mary Douglas of my story, is now the Mary Brae of my bosom.

THE SAILOR'S WIDOW

A Sketch from Life.

BY BRADSHAW WALKER,

Author of "*Way Side Flowers*," &c.

ALAS! 'tis she whom once I knew,
With laughing eye, of deepest blue,
With rosy cheek, and raven hair,
Her aged mother's only care.
No sorrow then sat on her brow,
O'er beauteous youth its shade to throw;
No cloud deform'd life's opening May,
But blithe, and innocently gay,
I've seen her range through balmy glades,
The peerless queen of village maids!

How blighted now, that wither'd form,
Unshelter'd from the angry storm,
She sits regardless of the gale,
In tatter'd clothes, and ghostly pale,
Like some wan tenant of the grave,
From pity's boon the mite to crave.

Adversity, she drags thy chains,
And struggles with thy dreadful pains.
When life's bright summer hours are gone,
And friends have left us, one by one,
How bitter is thy cup of gall,
Stern misery spreads its thickest pall;
And mortals seem to shrink beneath,
The cruel pains of lingering death.
How piteous is thy captive's moan,
As with a low sepulchral tone,
She tries to hush her infant's cries,
And dry its lovely tearful eyes.

Sweet babe, to early sorrows born,
No father hail'd thy natal morn;
Surveyed each lineament with joy,
Or fondly blest his blue-eyed boy.

Beneath the angry ocean wave,
Stern fate prepared the seaman's grave;
His well trimm'd bark, with fluttering sail,
Flew fast before the favouring gale;
And homeward bound from Afric's strand,
He hail'd once more his native land.
Bright hopes, in sight of home, how blest,
Again, in thought, the wanderer prest,
Young Mary to his faithful heart,
And vow'd they ne'er again should part.

But hark! that moaning breeze, how loud!
"There's danger lurks in yonder cloud!"
And scarcely had the sailor's eye,
Glanc'd wildly on the lowering sky,
When bursting from their viewless caves,
Like mountains rose the foaming waves;
And soon the lightning's flash display'd
Death in terrific gloom array'd!
Dark hour of woe, all skill was vain,
Convulsive yawn'd the stormy main;
And as the tempest howl'd its last,
Just clinging to a shatter'd mast

One struggled hard to gain the shore,
But, lost in that tremendous roar,
The waters closed upon his form,
And, save the hoarse expiring storm,
No funeral dirge, no hallowed rite,
In sorrow mark'd the spirit's flight;
But voiceless sounds swept o'er the sea,
Then, mingled with eternity.

'Tis past, and Mary's hopes are gone,
She wanders, weeps, and sighs alone,
Save when those bright and cherub smiles,
Her cheerless solitude beguiles,—
She then breaks forth in frantic joy,
To see her lost one in his boy.
Still chas'd by sorrows hurling blast,
Each sad remembrance of the past,
Embitters all her present woes,
Nor yields her mateless heart repose;
She dreams of home and early years,
While yet unknown to sighs and tears,—
She bloom'd within her native bower,
The hamlet's sweet and modest flower.

REAR ADMIRAL SIR H. C. CHRISTIAN.

REAR ADMIRAL SIR H. C. CHRISTIAN was a descendant from the ancient family of Christian, in the Isle of Man. He was born in London in 1747. He was made lieutenant January 21, 1771; and on August 9, 1778, having previously been advanced to the rank of master and commander, we find him in the Vigilant armed ship, of twenty guns. On December 8, 1778, he was made post. In Admiral Byron's memorable action with D'Estaing, on the 6th of July, 1779, his ship, the Suffolk, had seven killed and twenty-five wounded. He was in the actions with De Guichen on April 17th, and May 15th and 19th, 1780. On June 1st, 1795, he was made rear-admiral of the blue. On November 16th, having hoisted his flag in the Prince George, of ninety-eight guns, he sailed from St. Helen's, with a squadron of ships of war and a convoy of more than 200 sail of transports and West Indiamen, on board of which were embarked upwards of 16,000 troops. The most tempestuous weather ensued; several of the transports and merchantmen foundered, and many lives were lost. The admiral, having repaired the damage, sailed again from St. Helen's on the 9th of December, and after encountering the most dreadful weather, which dispersed the squadron, he was obliged to return to Spithead with eight ships, the Vesuvius bomb, and about fifty sail of transports and merchantmen. A third effort proved more successful. The rear-admiral sailed again on the 20th of March, 1796, in the Thunderer, of seventy-four guns, accompanied by the Invincible, seventy-four guns, Grampus, fifty-four guns, and four smaller vessels of war, with such of the transports and merchantmen as were ready, and after a passage of thirty-two days, arrived at Barbadoes. On the 22nd of April, he left Carlisle Bay, in company with Sir John Laforey, who, on his arrival at Martinique, resigned the command at the Leeward Isles to the rear-admiral. Sir Hugh immediately commenced preparations for the reduction of St. Lucia, which island surrendered, on the 25th of May, to the land and sea forces, commanded by Sir Ralph Abercrombie and the rear-admiral. The garrison amounted to 2000 men; a great quantity of stores, &c., were taken. After the restoration of tranquillity in Grenada, St. Vincent's, &c., he was superseded by Rear-Admiral Harvey, and returned to England in the Beaulieu frigate. On the 17th of February, he obtained the insignia of the Military Order of the Bath; on the 20th of February, 1797, he was made rear-admiral of the white. In the following year he succeeded Admiral Pringle, as commander-in-chief at the Cape, and died there in November 1798.

WRECK OF THE PENNSYLVANIA, LOCKWOODS, AND ST. ANDREW.

THE extraordinary interest which was excited by the lamentable effects of the dreadful hurricane of January 6th and 7th 1839, will render any apology unnecessary to our readers, on introducing to their notice the melancholy wrecks caused by the devastating gale, in the neighbourhood of Liverpool, where so many fine ships fell a sacrifice to the storm—more particularly the Pennsylvania, Lockwoods, and St. Andrew.

We proceed to give such accounts as were then compiled of the disasters which befel these vessels.

WRECK OF THE PENNSYLVANIA.

This fine ship had been on the station about four years. She was a remarkably powerful well-built vessel, and her com-

mander, Captain Smith, was universally esteemed, and his melancholy fate has been as universally lamented.

The Pennsylvania's day of sailing was the 25th of December, Christmas-day, on the morning of which she left the dock, and proceeded, in tow of a steamer, to the mouth of the river. She was tugged along through the bright waters, her tall taper masts and slender spars shown in beautiful relief against the Cheshire promontory, as they were partially illumined by the almost level beams of the winter sun, which was just rising above a few dark clouds in the south-eastern horizon. A sudden shift of the wind, which veered round, and began to blow in heavy gusts from the north-west, seemed to determine the commander not to proceed to sea on that day. The steamer was dismissed, the anchor was dropped, and the Pennsylvania rode in the stream. Here she remained in order to take advantage of the first favourable wind.

WRECK OF THE PENNSYLVANIA, LOCKWOODS, AND ST. ANDREW, JANUARY 6TH AND 7TH, 1839.

On that fatal morning she put to sea shortly before twelve o'clock. After discharging the pilot, she made an extremely expeditious run down the channel, and was off the Skerries about ten o'clock at night. At midnight the wind began to rise from S. S. E., and orders were given to take in the main-top-gallantsail. The wind continuing to increase its violence, they close-reefed topsails, furlled the fore and mainsail-jib, and, in this state, continued making considerable progress until four o'clock in the morning, when a perfect hurricane prevailed, the wind blowing S. W. During its continuance the fore-topsail, as also the mizen-topsail, gave way; and the foresail, mainsail, and jib were blown into ribands. Soon after the main-topsail shared the same fate. The vessel was then at the mercy of the elements, the sea making tremendous heavy breaks over her.

When daylight appeared on Monday morning, the fore-staysail was bent. She was kept with her head to the southward. In this state she lay-to during the whole of the day, and the greater part of the night. On the morning of Tuesday she bent her foresail, and Captain Smith made the requisite preparations for putting back. She ran before the wind in excellent style, until they made the Great Ormshead, when the captain shaped his course for the light-ship, and not finding it, hove-to. About ten o'clock, in the anticipation of meeting with a pilot, he proceeded onward, when the St. Andrew and the Lockwoods appeared in sight. At this time the lead was put in requisition, and, finding plenty of water, she continued her course. About noon they got into ten or twelve fathoms water. At half-past one, they made Hoylake, when the larboard anchor was thrown with a sixty-fathom cable,

and before the other anchor could be got over her, she swung with her head to the wind, and struck on Hoyle-bank. Strange to say, the *St. Andrew* and the *Lockwoods* struck on the same bank, not more than half a mile from each other, the *Pennsylvania* being in the centre. After striking, and owing to the violence of the gale, which brought her into collision with the bank, against which she struck with great force several times, she filled rapidly with water.

At this eventful crisis, she being then about three miles from the shore, a brief consultation was held with the passengers; the result was, that Captain Smith ordered the jolly-boat to be launched, into which, Mr. Parsons, of Manchester, Mr. Barrow, of New York, Mr. Douglas, of New York, and Mr. Suiter, of South America, and another gentleman entered, accompanied by the chief-mate, Mr. Blightenburgh, and a young Scotchman named Downy, together with five of the

crew. The ill-fated boat did not long live in the tempest. About midway between the vessel and the shore she swamped, and all were thrown into the foaming element. Two of the passengers, Messrs. Thompson and Douglas, had taken the precaution to provide themselves with swimming-belts, and they sustained themselves; but the rest of the poor fellows, after struggling in vain for some time, sank to rise no more. Mr. Thompson, finding it hopeless to contend with the waves, threw himself on his back, and, supported by his belt, trusted to the waves to carry him onward. As the tide was coming in, he was propelled with considerable speed, and eventually, much exhausted, reached the shore. His fellow-countryman, Mr. Douglas, was less fortunate: he early exhausted his strength in a useless conflict with the waves. He succeeded in reaching the shore, but so completely exhausted, that nature sank under the trial. He was immediately conveyed

to Leasowe Castle, where every attention was paid to him, but he only survived his escape a short time. He was a native of Dunferline, in Scotland, and was afterwards interred in Wallasey churchyard, together with Mr. Suiter, his unfortunate fellow-passenger, whose body was cast ashore on the beach opposite Leasowe. The funeral was attended by a number of the friends of the deceased from Liverpool.

After despatching the jolly-boat, Captain Smith ordered the long-boat to be got ready, when, to their indescribable agony, they could not find the line for lowering her into the sea. After some delay, however, she was got ready, provided with a rudder, oars, and other requisites; but in the act of lowering her, the ship heaved a dreadful sea, which stove in the boat, and thus cut off their only prospect of escape. The same vi-

bration of the vessel threw Captain Smith with great force on deck: he lost his footing, but, on regaining it, another sea swept over the devoted ship, threw him with great violence between two water-casks which were rolling on deck, and, immediately after, he was swept into the foaming abyss beneath. The crew then got into the rigging about three o'clock in the afternoon, where they remained from that hour until the following morning, about ten o'clock. Their sufferings during this period, without food or nourishment of any kind, exposed to all the horrors of a night unexampled for severity, have hardly ever been surpassed. Among those on the rigging during the night, was the stewardess, a native of Shropshire, who survived its severity. Three poor fellows, however, John Leng, the second cook; Dewit Reitner, the second steward; and a seaman, sank under the accumulated sufferings pro-

duced by the storm and intense cold. They were literally starved to death.

About ten o'clock on Wednesday morning, the Victoria steam-tug boat, which lay at anchor all night in the vicinity of the wrecks, within hearing of the sufferers, but unable to render any assistance, with great difficulty succeeded in reaching the Pennsylvania. The Victoria rescued twenty-five of the survivors, including the third mate, Mr. Richards, a highly intelligent young seaman; Mr. Essex, the chief steward; the stewardess, and twenty-two seamen. The total number of persons on board the Pennsylvania was forty, fifteen of whom perished. The merit of rescuing the remainder, (with the exception of Mr. Thompson,) belongs to those who manned the tug-boat.

The letter-bags recovered from the Pennsylvania were taken to the office of the consignees, Messrs. Wildes, Pickersgill, and Co.; and, as may be imagined, in woeful plight, saturated with water, and the superscriptions of many of the letters nearly obliterated.

Mr. Richards, the third-mate of the Pennsylvania, and son of the late respected Mr. Silas Richards, gives the following account of the melancholy event:—

"About half-past ten a.m., on Sunday, Captain Smith came on board in most excellent spirits, and desired the ship to be got under weigh immediately, which being done, we had a fine run with a south-west wind as far as Point Lynas, which we reached by nine, p.m., when a dead calm came on for about ten minutes, at the expiration of which time, it began to blow very fresh from the south-west. We then close-reefed our topsails, furlled the mainsail, and endeavoured to reef the foresail, but, failing in the attempt, were compelled to furl it. Things continued in this state till two a.m., on Monday, when the wind changed to the west and blew a perfect hurricane, carrying away our fore and mizen-topsail-yards, taking the main-topsail, clean out of the bolt-rope, and blowing the courses, though furlled at the time, into the merest ribands. At daylight we found, also, that our fore-yard was very badly sprung. During the whole of this day, we were employed in clearing the wreck, and wearing the ship every four hours. About two, a.m., on Tuesday, we succeeded in bending a new foresail to run up with, about daylight; and when daylight came, we made every effort to regain the harbour, keeping an anxious look-out for the light-ship, and following in the track of the Lockwoods, which kept about half-a-mile ahead of us; but being perfectly bewildered by the absence of the light-ship, we dropped anchor abreast of Hoylake beach, two or three miles from shore. When, however, we had got about thirty fathoms of cable out, the chain snapped, and the ship, after drifting for twelve minutes to leeward, struck very heavily on Hoyle Bank, and, after thumping eight or nine times, filled. When she had thumped two or three times, the first and second mates, five of the crew, and five passengers, went off in the jolly-boat. As soon as she filled, we cleared away the long-boat, but, to our consternation, we could not find lines to hoist her out with; and, just as we were straining every nerve to hoist her out by main force, the vessel shipped a heavy sea, which stove the boat, and bruised Captain Smith very much, on which he made an attempt to spring into the main-rigging, but falling, he fell down between two water-casks; when she shipped another tremendous sea, and Captain Smith, exclaiming, 'Oh! my God,' was washed overboard, and never seen more. This was at three o'clock, p.m. Just before the last sea came, I ordered the men into the rigging, to save themselves, if possible, and I followed them myself, when we finally took to the main and mizen-tops, and wrapped ourselves up in sails for preservation from the weather, and in this condition we remained until half-past ten, a.m., on Wednesday, when we were rescued from our perilous situation, and put on board the Victoria steam-tug, which brought us all to Liverpool, except three of the crew, who were starved to death in the rigging during the night.

"I ought to observe, that the Magazine life-boat, would not have attempted to render us the least service if they had not been shamed into doing so, by a small green gig, which succeeded, after a desperate effort, in reaching us."

WRECK OF THE LOCKWOODS.

The wreck of this vessel was attended with more fatal consequences to human life than that of any of the others. The Lockwoods was a British ship, and a regular trader between this port and New York. She generally carried out vast numbers of emigrants, but on this occasion she was not so crowded with passengers as usual. The total number of persons on board was one hundred and eight, of whom eighty-five were passengers, the crew consisting of twenty-three. Fifty-two of the emigrants, and only one of the crew have perished.

The Lockwoods sailed on the afternoon of Sunday, and with the favourable breeze which prevailed for some hours made considerable progress. Between eleven and twelve at night, she made the Great Ormshead, when a strong wind assailed her; her topsails were reefed in consequence. The awful storm came on, and the vessel during the night behaved nobly.

Early on Tuesday morning she was found drifting northward, opposite the Lancaster coast, and two hours after, the captain discovered that he was opposite the Black Combe, in Cumberland. He gave orders to hoist the foretop-staysails, and, tacking, made the Great Ormshead at ten, a.m. Having lost nearly the whole of his canvass during the storm, he deemed it prudent to make for Liverpool. He kept on his course, and soon fell in company with the St. Andrew and Pennsylvania, which sailed on the same day, and which were likewise making for port, the Lockwoods being ahead of both. Owing to the unfortunate absence of the floating light, the Lockwoods got aground, about noon on Tuesday, at Hoyle Bank, nearly opposite Leasowe Castle. When she struck, the cries of the wives and children of the emigrants were appalling; they appeared on deck in a frantic state, running about in wild despair, believing their fate to be inevitable. The crew, after some difficulty, got out two anchors. At this moment a terrific sea swept over the devoted craft, and the poop of the cabin was instantly dashed to pieces. To render her position still more desperate, one of her cables snapped about this time, and she was at the mercy of the raging storm. She began to fill rapidly, and the care of the affrighted emigrants was now devoted to rescuing their wives, children, and relatives from the impending ruin which stared them in the face. Great exertions were made by the captain and the crew to get the passengers into the rigging, as the only likely place of safety and refuge. The steamer, Victoria, hove in sight to windward, together with a pilot-boat, about four o'clock on Tuesday afternoon, which had the effect of imparting a ray of hope to their sinking spirits. Two hours elapsed before the steamer reached them. In the meantime the jolly-boat was launched, and the captain, steward, carpenter, and two other men got into it, they hailed the Victoria, into which they got, and then proceeded to the wreck. For the purpose of receiving the passengers, the stern of the steamer was placed to the stern of the Lockwoods; and such as had sufficient strength to jump from one to the other saved themselves. Two of the most robust of the passengers undertook the task of getting the children away; one throwing them from the vessel, the other, on board the steamer, receiving them in his arms. Twenty-six of the passengers were by this means taken from the wreck. With these the Victoria proceeded to Liverpool, leaving the unhappy beings exposed in the rigging, during the whole of the night, to a boisterous and piercing wind, accompanied by a keen frost, and interspersed with snow, sleet, thunder, and lightning. Their sufferings past description.

On Wednesday morning the steamer again reached the vessel, about eleven o'clock. The poor creatures who had survived the horrors of the night were weak and dying, every hour reducing their number. The conduct of the chief-mate, Mr. Thomas Flake, is beyond all praise. He exerted himself in every possible way for the safety of those committed to his care; many of them were carried by his directions to the mizen-top, some he had conveyed into the cabin, and to all, his attention was unbounded. He succeeded in getting to the stores, broke them open, and administered a little brandy to such as could partake of it. Had it not been for the noble conduct of Mr. Flake, who was the last person to quit the ship, the mortality must have been still greater. Many of the sufferers, who were washed away during the night, or who died from the extreme

severity of the weather, experienced the kind attention of the mate. One poor fellow lost his wife and four children.

WRECK OF THE ST. ANDREW.

The St. Andrew, a fine New York packet-ship, sailed on Sunday afternoon, about two o'clock. At five a smart breeze sprung up; at twelve a severe gale, which increased to a perfect hurricane by two o'clock. At that time the sails were literally torn into ribands: these sails were quite new, and never before bent. One of the hands was dashed from the yard-arm on the deck; he was severely injured, but is still alive. At that moment Captain Thompson ordered the men aloft, but they, seeing death staring them in the face, refused. After the loss of her sails, the ship became unmanageable, and in this condition she remained till the forenoon of Monday, when an attempt was made to relieve her, by cutting away the upper part of her masts. She was then rigged with a mizensail and foresail; early on Tuesday morning, in this crippled state, she was steering for Liverpool. About half-past ten, a.m., she struck on the Burbo Sands, with both anchors down, the sea beating heavily. The life-boats were sent off to extricate the passengers, who were conveyed on board the Victoria steam-vessel, and thus providentially saved. The steady and honourable conduct and presence of mind of Captain Thompson during the whole of this trying occasion is beyond all praise. As soon as the ship had struck, almost the first thing he did was to stave in all the spirit-casks; indeed, every bottle containing wine or spirits was emptied or destroyed, he being apprehensive of the consequences to the crew.

INQUEST ON THOSE WHO PERISHED BY SHIPWRECK.

The fine hotel, called Leasowe Castle, formerly Mock-beggar-hall (long known as a respectable place of refuge for the shipwrecked mariner), has, since the hurricane, been a scene of melancholy interest. From Tuesday, when it became known that the fate of hundreds of men, women, and children in the stranded vessels were pending by a fearfully slender tenure, an unusual number of persons in vehicles, on horseback, and on foot, continued to pass from the several ferries on the Mersey to the castle, many actuated by curiosity, and several (relatives of parties in the wrecked vessels), to learn the worst, and, if needful, to do the last offices of humanity to their departed friends.

On Thursday, it being known that an inquisition would be held at the Leasowe Castle on the bodies picked up on the immediate shore, the visitors were numerous from the neighbouring country, as well as from Liverpool, Manchester, and other places; and, amongst the vehicles from Woodside, appeared a hearse, for (we believe) the conveyance to Manchester of the body of a gentleman who was there well-known.

In a stable lay the bodies of three of those who had perished in the Pennsylvania. One of them was the body of Mr. Edward Lamb Parsons, a merchant of New York, of tall, slender make, and fashionably dressed. On his person lay a small India-rubber or Mackintosh life-preserver, found in his breast, the cloth sewed in tubes, but apparently not inflated. On this gentleman was found considerable property. Another body was that of Mr. Suiter, a fine-looking young man, of dark complexion, with whiskers. The other was the body of the mate, Mr. Blighenburgh, a stout man, in sea-faring garb and boots. The body of Mr. Douglas, another of the cabin-passengers, lay in the house. It was stripped, but covered with a blanket, attempts having been made to restore animation.

Amongst those present at the inquest, was a tall, good-looking young gentleman, named Thompson, the only survivor out of the boat in which those named, and about (as is supposed) eight others perished.

The body of Mr. Parsons was identified by Mr. John Cowan, merchant, of Manchester, who also stated, that he knew Mr. Douglas, who was a partner in the house of Messrs. Thompson and Co., of New York. Mr. Cowan was allowed by the coroner to take the necessary steps for the removal of the body of Mr. Parsons. The body of Mr. Suiter was taken out of the water by Thomas Upton, a labourer of Wallasey, on Tuesday.

Mr. Thompson, the young gentleman who was saved when

the boat from the Pennsylvania swamped, gave the following account of that event, and of his preservation.

"Some of us, in the afternoon, took to the boat that hung over the stern. I think there were ten or twelve persons in the boat. The captain, J. P. Smith, told us to take the boat, and take out such passengers as we could. The deceased Mr. Parsons, and Mr. W. Douglas, a Mr. Barrow (not found), myself, and about seven others, went in the boat. It was about three o'clock in the afternoon. The captain remained on board, as did most of the crew. We made for the land, distant about three miles, and when we got within about a mile of it, the boat was swamped. The waves rolled so much, that one of them took the boat by the stern, and lifted her so high as to push her bow under water. We did not attempt to pull her with the oars, but only to keep her in the direction in which the waves ran, as she would have instantly upset, had a wave struck her on the side. She filled with water, and I, being in the bow, was thrown by the shock into the sea. When I recovered a little, and found myself above the wave that had filled us, I was some yards astern of the boat, in which I saw the remainder of the men. A wave broke over me, and when I looked again I saw the boat upset, and three or four of those who had been in her, holding on by the keel. I saw Mr. Parsons and Mr. Suiter in the water. They both afterwards had hold of me. Mr. Suiter held me some time, but I dove (dived) under water to make him let go, and he quitted his hold. I saw that he was perfectly sensible at the time, and I pulled him under water to get clear of him. I saw nothing more of them until I saw their bodies. I had possession of my reason all the time, and did not swallow any salt water. I consider myself a good swimmer."

Mr. Jones, keeper of the Leasowe lighthouse, gave evidence to the effect that he picked up Mr. Douglas floating on the shore; and, finding some slight indications of remaining vitality, conveyed him with all promptitude to the Leasowe Castle. He was the first picked up after Mr. Thompson gained the shore, and was quite insensible. At the inn every possible exertion was made to restore animation, by stripping him, placing him before a large fire in a blanket and rubbing him with hot salt in flannel, but without any appearance of returning vitality. He was alive, as the witness believed, until they had nearly reached the inn. Mr. Lythgoe, a surgeon, of Wallasey, afterwards arrived, and made some subsequent endeavours to restore him, but it was too late.

This being the whole of the evidence it was thought necessary to adduce, the coroner summed up in a brief and able manner, and the jury returned a verdict accordingly—to the effect, that all the deceased had been "accidentally drowned."

On Friday night an inquest was taken before Mr. P. F. Currie, the coroner for the borough, on twenty-eight persons found on the wreck of the Lockwoods. The course of events, up to the time when the survivors left the ship, was detailed by the chief-mate and Edmund Tomkins, a mariner.

Peter Roberts, an Irishman belonging to Hoylake, deposed, that on Thursday morning he and others went in a boat, to the wreck of the Lockwoods. On the top of the poop-deck they found twenty-one dead bodies—men, women, and children. The bodies were in all positions, some lying and some sitting up. Two other bodies were found on the main-deck. They brought all the bodies, twenty-three in number, to Liverpool. They were taken to the workhouse. When they left the wreck there were two or three more bodies in the vessel, but so jammed in the rigging that they could not remove them.

Joshua Howell, clerk to the commissioner of police, stated, that he went on Thursday to the wreck of the Lockwoods, and found there two dead bodies, those of a woman and a boy, in the starboard mizen-rigging. Owing to the tide being nearly at its height, they could not discover any more bodies. He brought the two which he found to Liverpool. They were taken to the workhouse.

James Dodall, governor of the workhouse, deposed, that on Thursday the bodies of ten male, the apparent ages of whom

at a distance from Boston when you go to sea. Choose your terms; but let us meet."

"To the Commander of the U. S. Frigate Chesapeake,"

ENDORSEMENT ON THE ENVELOPE.

"We have thirteen American prisoners on board, which I will give you for as many British sailors, if you will send them out; otherwise, being privateer's-men, they must be detained."

Some rough weather occurring, it was not found practicable to send the letter in till the morning of the 1st of June. In the interim, however, the proposed measures had been taken to secure fair play to the enemy.

Captain Capel having left Captain Broke in charge of the blockade, whilst he went into port for water, the Chesapeake had no line-of-battle ships to fear; and Captain Broke detached all the remaining ships to such a distance, as precluded the possibility of their affording him any assistance in the anticipated action.

On the 1st of June, observing that the Chesapeake lay a long time with her sails loose, and wasting the morning, though she had a fair wind to come out, it was apprehended that she might not

sail that day. Captain Broke therefore sent in his challenge, to quicken her movements. The Chesapeake, however, stood out of the harbour before the boats reached the shore; and Captain Broke having no assurance that she would not receive aid from other armed craft in Boston, in case of being crippled in action, stood across the bay, till about five leagues from the land, directly opposite to Boston Lighthouse. There he lay-to, to wait for her, in such a position that the action might be seen from the heights over the town.

ACTION BETWEEN THE SHANNON AND CHESAPEAKE.

The approaching action excited the liveliest interest, and the most confident anticipation of victory, amongst the people of Boston. A number of pleasure-boats, it is said, came out with the Chesapeake, to see the Shannon compelled to strike; and a grand dinner was actually preparing on shore, for the Chesapeake's officers, against their return with the prize.

Soon, however, was their joy turned into sadness; their cheering shouts into cries of mourning and of lamentation. In fourteen minutes from the time that the action commenced, the Chesapeake was no longer an enemy; the American flag was hauled down, and the proud old British Union floated triumphant over it. The Shannon was lying-to, under topsails, top-gallant-sails, jib, and spanker, with just steerage-way, awaiting the approach of the Chesapeake, and leaving it in her power to commence the engagement as she pleased, either at a distance or close, either on the starboard or larboard side. She came down, in a very gallant style, on the Shannon's weather and starboard quarter, till within half-pistol-shot.

The Shannon's men having orders to fire as they could get their guns to bear, commenced by firing first their after-guns on the main-deck, and then their after-most carronade on the

quarter-deck, just as the Chesapeake's bows were upon their quarter; these two guns were distinctly heard before the Chesapeake returned her fire, which then became furious on both sides; but the superiority of the Shannon's was so great, that at her second broadside nearly all the men were swept from the upper deck of the Chesapeake. About this time the ships came in contact, and the Chesapeake having shot rather ahead, was caught by one of the Shannon's anchors, and lay obliquely athwart her starboard bow, exposed to a most tremendous fire from the Shannon's after-guns, which, battering her lee-quarter, and entering her port-holes from thence towards the main-mast, she strewed the main-deck with killed and wounded. A small open cask of musket cartridges, in an open chest abaft the mizen-mast of the Chesapeake, now caught fire and blew up, and when the smoke it occasioned had blown away, Captain Broke saw the favourable moment, and instantly, with a few men, not exceeding twenty, boarded her about the mizen-rigging, from the starboard bow. Not a man was left standing on the Chesapeake's quarter deck when she was boarded, but about twenty made a slight resistance on her gangway, who were instantly driven before the foremost, and there being obliged to stand, fought

desperately, but were quickly overpowered. A few endeavoured to get down the fore-hatchway, but in their eagerness prevented each other; some jumped over, and one or two of them escaped by getting in again at the main-deck ports.— Captain Broke and his first boarding party were almost immediately followed by between thirty and forty marines, who secured possession of the Chesapeake's quarter-deck, dislodged the men from the main and fore-tops, that were firing down on the boarders, and kept down all who attempted to come up from the

main-deck. Being thus completely captured, Mr. Watt, the first lieutenant, ran aft, and seizing the British colours from a sailor who brought them from the Shannon, bent them, and was in the act of hoisting them above the American, when he was struck on the forehead by a grape-shot, and killed in the very moment of victory. He was shot by one of the Shannon's main-deck guns, the commanding officers of which did not know that the contest was already decided. At the commencement of the brief contest which took place on board the Chesapeake, Captain Broke had the misfortune to be wounded. He was in the act of charging a party of the enemy, who had rallied on their fore-castle. He first parried a blow from the butt-end of a fire-lock, which had been raised to strike him. At the same instant, as it were, another of the Americans made a charge at him with a bayonet: but that, also, he successfully turned aside. The colours of the Chesapeake were down, when Captain Broke received a severe wound with a sabre, from one of three men whom he was earnestly calling upon his brave followers to spare. The man was instantly despatched; and one of the Chesapeake's midshipmen, who, having been in the fore-top, slid down a rope, and alighted close to Capt.

Broke, at the moment, would probably have experienced a similar fate, but for his humane interference.

The capture having been completed, Captain Broke, in a state of exhaustion and insensibility from exertion and loss of blood, was taken on board of his own ship, which, with her prize, afterwards proceeded to Halifax.

The loss on board the Shannon, out of three hundred and thirty men, was three officers, and twenty-three men killed; Captain Broke, two officers, and fifty-eight men wounded; eighty-seven total. On mustering the crew of the Chesapeake the following day, they found that out of four hundred and forty men, the second lieutenant, master, marine officers, some midshipmen, and ninety seamen and marines were killed; Captain Lawrence mortally wounded, and the first and second lieutenants, some midshipmen, and one hundred and ten men also wounded; making a total of killed and wounded between the two ships of nearly three hundred men, or twenty men for every minute the ships were in action.

The Chesapeake was a fine frigate, and mounted forty-nine guns, eighteens on her main-deck, two-and-thirties on her quarter-deck and fore-castle. Both ships came out of action in the most beautiful order, their rigging appearing as perfect as if they had only been exchanging a salute. Each fought from their tops, with guns and small arms. The Shannon had a four-pounder mounted in one of her tops, from which she fired fifty canister-shot at each discharge. These, by spreading greatly, did much execution. It was from some of the Shannon's top-men that Captain Lawrence, the commander of the Chesapeake, received his mortal wound. He had been carried below before the boarding commenced.

The Shannon suffered most on the fore part of the main-deck and fore-castle, and her greatest loss of men was on those parts. The Chesapeake was terribly battered on her larboard bow, and quarter; amidships there were not many marks of shot, which must have entered her port-holes, as the whole of her main-deck was strewed with dead and wounded.

"The enemy," says Captain Broke, "came into action with a complement of four hundred and forty men; the Shannon, having picked up some re-captured seamen, had three hundred and thirty." Thus it appears to have been the result of mere accident that the Shannon was only one hundred and ten men short of the number of her opponents. In this instance, American vanity, raised to the most inordinate height by their former successes in three very unequal contests, was mortified in the extreme, and stung almost to madness, by this unequivocal proof of their inferiority to us in fair and equal combat; hence we account for the ridiculous and extravagant falsehood of their statements, the baseness of their calumny, and the inveteracy of their malice. According to them, the fire of the Chesapeake was more "vivid and effectual," until the Shannon threw on board of her, "an immense body of combustibles and inflammable matter, (like an infernal machine of a new and horrible construction) which enveloped the Chesapeake in a volume of flame to her very tops; and that to the effects of the all-destroying explosion, the Shannon was indebted for her victory."

The only circumstance that could have given rise to this wonderful tale of mysterious horror, was the cask of musket cartridges which caught fire, and blew up abait the Chesapeake's mizen-mast, which had been placed there by themselves, to supply their marines. These cartridges not being confined, exploded with so little violence, that scarcely any of the effects were to be traced on her quarter-deck; the only appearance of a single singe that was to be found, was a small portion of the spanker-boom, and that so slight as to be scarcely visible.

Their assertion that the superiority of the Chesapeake's fire was proved by the fact of "its having carried away the jib-boom, and fore and mizen royal masts of the enemy," is totally false. Neither of the ships lost a single spar. The damage sustained by both was in their hulls; and that of the Shannon was trifling indeed, compared with that of the Chesapeake.

There was found on the Chesapeake's decks more shot than could have been fired away had the battle lasted several hours,

among which were (besides grape, canister, and double-headed shot) bars of wrought iron connected by links, so as to form an extended length of five feet, and others with four bars of more than a foot each, all connected at one end by a ring, which expanded in four points as they flew. The Shannon had only round shot, grape, and canister; but many of the Chesapeake's canisters were afterwards opened, and all were found to contain in the centre, angular and jagged pieces of iron, of various shapes and sizes; and all their musket cartridges had three, and some four buck-shot loose in the powder; the evident design of which must have been, not merely to disable and to destroy (for round balls are equally effectual for these purposes), but to increase the torment and retard the cure of the wounds they inflicted. They had also a large cask of unslacked lime, with the head open, standing on the fore-castle, and a bag of the same on the fore-top: and their intention was (if they had had time) to throw it by handfulls into the eyes of our men when they attempted to board.

It happened that, on the evening of the day on which the account of the action between the Shannon and the Chesapeake arrived, Mr. Croker had occasion to advert to some statements of Lord Cochrane, in the House of Commons, on a former night, respecting the capture of the Macedonian. By reading the sentence of the court-martial which had been holden on the officers of that ship, he vindicated the gallantry of her commander, the discipline and bravery of her crew, and in the signal display of coolness and courage to the last; and then, as a new instance of the bravery and skill of those officers and seamen which, he observed, the noble lord had been so much in the habit of depreciating, he detailed, in a style of lively, brilliant, and enthusiastic eloquence, the unexcelled, the almost unparalleled conduct of Captain Broke. The statement was new to the house; and the effect which it produced was almost equal to that of electricity. Towards the close of his speech, Mr. Croker remarked, that the British sailors not only boarded from every deck, but even those who were aloft sprang upon the enemy's yards, and stormed their tops. Lieutenant Falkner, he added, had described the action as the most beautiful and gallant scene that he had ever witnessed.

After the arrival of the despatches relating to the action, the Lords Commissioners of the Admiralty very promptly and handsomely acknowledged the services which had been rendered by the captain, officers, and ship's company of the Shannon. They complimented Captain Broke in the most flattering manner upon his gallant achievement, and informed him that they had awarded him the honour of a medal; adding, that they had immediately promoted the two surviving lieutenants (Wallis and Falkner) to the rank of commander, and Messrs. Etough and Smith to that of lieutenant; and that they should be happy to attend to the reward or promotion of such petty officers and seamen, as Captain Broke might particularly recommend for their conduct in the engagement.

On the 25th of September following, his Royal Highness the Prince Regent was pleased to confer upon Captain Broke the dignity of a baronet of the kingdom of Great Britain and Ireland; and on the 1st of February, 1814, as an additional and special mark of royal favour, his Royal Highness was pleased to allow him and his descendants to bear, as a memorial of his highly distinguished conduct and gallantry, the following crest of honourable augmentation:—*"Issuant from a naval crown, a dexter arm embowed, encircled by a wreath of laurel, the hand grasping a trident erect; together with the motto, Scævinqve tridentem scævamus."*

Amongst the tributes of a more substantial nature which were paid to the skill, intrepidity, and noble disinterestedness of Captain Broke, that of the under-writers of Halifax, in Nova Scotia, stands first in the order of time. As a grateful memorial of the estimation in which they held his services—services which had contributed, in an unusual manner, to the protection of their trade—they presented him with a flattering address, accompanied by a piece of plate, of the value of a hundred guineas.

were as follows: two, from sixty to seventy years of age; one, forty-nine to fifty-five; two, twenty to twenty-five; two, fifteen to seventeen; one, twelve to fourteen; and two, six to eight; also, the bodies of fifteen females, two of whom appeared to be between sixty and seventy; seven, between twenty-five and thirty-five; one, fourteen or sixteen; one, twelve or fourteen; and four, apparently between the ages of three and eight months—in all, twenty-five bodies were brought to the workhouse.

The jury returned a verdict of "accidental death." They passed an encomium upon the conduct of the captain, the crew, and pilots of the *Victoria*, and disapproved of the conduct of the crew of the *Magazine* life-boat.

FATE OF LA PEROUSE.

THE fate of this celebrated French navigator, which for upwards of forty years has remained enveloped in mystery, has at length been satisfactorily ascertained, a result that is owing to the active and spirited exertions of our gallant and enterprising countryman Captain Dillon.

It is a remarkable circumstance, that the discovery of the relics of *La Perouse*, arose out of the massacre of the ship *Hunter's* crew, at the *Feejee* Islands, in 1813.

In this unfortunate affair, fourteen persons in all, from the ship *Hunter*, lost their lives. The two that escaped with Mr. Dillon, were William Wilson and Martin Buehart, a Prussian, who resided for two years at Bough. The latter entreated captain Robson to give him and his wife a passage to the first land at which he might arrive as they would certainly be sacrificed if they returned to the island. Having made *Tucopia* on the 20th of September, Buehart, his wife, and a *Lascar*, were put on shore, and the *Hunter* proceeded on her voyage to Canton.

On the 13th of May, 1826, while in command of the *St. Patrick*, bound from Valparaiso to Pondicherry, captain Dillon came in sight of the island of *Tucopia*. Prompted by curiosity as well as regard for old companions in danger, he lay to, anxious to ascertain whether the persons left there in 1813, were still alive. A canoe, in which was the *Lascar*, soon afterwards put off from land and came alongside. This was immediately succeeded by another canoe containing Martin Buehart the Prussian. They were both in excellent health, and exceedingly rejoiced to see him. They informed him, that the natives had treated them very kindly; and that no ship had touched at the island from the time they were first landed, until about a year previous to his arrival, when an English whaler visited them, and was soon after followed by a second. The *Lascar* had an old silver sword-guard, which he bartered for a few fishing-hooks. Captain Dillon inquired where he had obtained it; the Prussian informed him, that on his arrival at the island, he saw it in the possession of the natives, also several chain-plates belonging to a ship, a number of iron bolts, five axes, the handle of a silver fork, a few knives, tea-cups, glass beads and bottles, one silver spoon with a crest and a cipher, a sword, &c. As soon as he became sufficiently acquainted with the language, he asked the natives how they obtained those articles, as they said that the *Hunter* was the first ship with which they had ever held communication. They replied, that about two days' sail in their canoes to leeward, there was a large group of islands, known generally by the name of *Manicolo*, to which they were in the habit of making frequent voyages, and that they had procured these articles from the inhabitants, who possessed many more of a similar description.

Buehart proceeded to state, that the *Tucopians* asserted that a great number of articles were on the *Manicolo* Islands in a state of preservation, and such articles were evidently obtained from the wreck of a vessel. About seven months before Captain Dillon touched at *Tucopia*, a canoe had returned from *Manicolo*, and brought away two large chain plates, and an iron bolt, about four feet in length. He spoke with some of the crew of the canoe which had last made the voyage to *Manicolo*. They told him that there was abundance of iron materials still remaining on the islands. Those which Martin Buehart saw were much oxy-

dized and worn. The only silver spoon brought to *Tucopia*, as far as Captain Dillon could learn, was beaten into a wire by Buehart, for the purpose of making rings and other ornaments for the female islanders. Upon examining the sword-guard minutely, Captain Dillon discovered, or thought he discovered, the initials of *Perouse* stamped upon it, which circumstance prompted him to be more eager in his inquiries.

The Prussian said he had himself never made a trip to *Manicolo* with the *Tucopians*, but the *Lascar* had gone once or twice. He positively affirmed, that he had seen and conversed at *Païow*, a native town, with the Europeans who spoke the language of the islanders. They were old men, he said, who told him that they had been wrecked several years ago in one of the ships, the remnants of which they pointed out to him. They informed him also that no vessel had touched at the islands since they had been there; that most of their comrades were dead, but they had been so scattered among the various islands, that they could not tell precisely how many of them were still living.

On hearing so many circumstances all tending to confirm his suspicions, from the moment he saw the silver sword-guard with the cipher, Captain Dillon determined to proceed as quickly as possible to the *Manicolo* Islands, examine the wrecks himself, and, if practicable, bring off the two men with whom the *Lascar* had spoken, and whom he said were Frenchmen. For this purpose he begged the latter to accompany him; but, as he was married and comfortably settled on the island, neither promises nor threats were of any avail, although Captain Dillon offered to bring him back to *Tucopia*. Martin Buehart, on the contrary, was tired of the savage life he had led for the last fourteen years, and gladly acceded to the wishes of Captain Dillon, who, after prevailing with a *Tucopian* also to come on board, sailed for the island. Unfortunately, as the ship neared the land, it fell a perfect calm, and continued so for seven days. At the time the stock of dry provisions was nearly exhausted, and there was no animal food to be procured on *Tucopia*. The crew lived principally on New Zealand potatoes and bananas. The vessel became every day more leaky from a long continuance at sea; and a person on board, who was interested in the cargo, had, during Captain Dillon's stay in the islands, shown himself particularly discontented, and had frequently and warmly remonstrated at what he considered an unnecessary and useless delay; for these reasons, therefore, Captain Dillon determined though with the greatest reluctance, to take advantage of a breeze which sprang up, continued his voyage, and arrived at Bengal with much difficulty, his ship being in a very leaky condition.

Unwilling to abandon his favourite object, Captain Dillon now applied to the Asiatic Society, and to the Bengal government; and in consequence of his representations, his suggestions were at length carried into effect. He was appointed to the command of one of the company's cruisers, of sixteen guns and eighty-five men, called the *Research*; and on the 27th of January, 1827, he sailed from Bengal, visited Van Dieman's Land, New South Wales, New Zealand, the Friendly Islands, Ro-Thoma, or Granville Island of the *Pandora*, *Tucopia*, and arrived at *Manicolo* on the 27th of September. This Island (*Manicolo* or *Vanicolo*) is not the *Manicolo* of Captain Cook, being situated only 118 miles to the leeward of *Tucopia* in latitude 11 deg. 47 min., whilst the former lies in south latitude 16 deg. 16 min.

Captain Dillon personally visited the reefs on which the French ships are ascertained to have struck and gone to pieces, according to the account of the natives, from which the following particulars have been obtained of that disastrous event:— "Many years ago two large ships arrived at the islands; one anchored off the island of *Whanoo*, and the other off that of *Païow*, a little distance from each other. Soon after, and before they had any communication with the natives, a heavy gale arose, and both vessels were driven ashore. The ship off *Whanoo* grounded upon the rocks. The natives came in crowds to the sea-shore, armed with clubs, spears, bows and arrows, and discharged some arrows into the vessel; the crew in return fired, and killed several of the islanders. The vessel continued to strike violently against the rocks, and soon went to pieces.

Some of the crew took to their boats, but were driven on shore, and murdered by the natives; others threw themselves into the sea, and such as reached the land, shared the fate of their unfortunate companions, so that not a single soul belonging to this vessel escaped alive.

"The ship which grounded on Païow, was driven on a sandy beach, and the natives came down and also discharged their arrows into her; but the crew prudently did not resent the aggression, but held up axes, beads, and toys, as peace-offerings, upon which the assailants desisted from farther hostilities. As soon as the wind had moderated, an aged chief, in a canoe, put off to the ship. He was received with caresses, accepted the presents offered to him; and upon going ashore, pacified the islanders by assurance that the ship's crew were peaceably inclined towards them. Upon this, several natives went on board, and were all presented with toys. In return, they supplied the crew with yams, fowls, bananas, cocoa-nuts, hogs, &c. and confidence was established between them. The ship was now abandoned, and the crew went on shore, bringing with them part of her stores. Here they remained for some time, and built a small vessel with the materials from the wreck. When it was ready to put to sea, as many as could conveniently, embarked in her, being plentifully supplied with fresh provisions by the islanders. The commander promised those who were left behind, to return immediately with presents for the natives, and to bring them off; but, as the little vessel was never afterwards heard of, the men sought the protection of the neighbouring chiefs, with whom they lived. Several muskets and some gunpowder had been left them by their comrades, and by means of these, they proved of great service to their friends, in encounters with the neighbouring islanders."

The natives of Manicolo are not cannibals: but when an enemy falls into their power he is immediately killed, and his body is deposited in sea-water, and kept there until the bones become perfectly bare. The skeleton is then taken up, the bones of the extremities scraped and cut into various forms, to point arrows and spears. Their arms consist of heavy clubs, spears, and bows and arrows. They poison the latter with a kind of red-dish gum, extracted from a species of tree peculiar to the island. When any one is struck by a poisoned arrow in any of the limbs, the part is quickly cut out, and his life is sometimes saved; but if the wound happens to be in the body, where it cannot be easily excised, he resigns himself quietly to death without a murmur, though he frequently lingers for four or five days in excruciating agony.

The Manicolans differ from almost all the other islanders in the South Sea; they are as black as negroes, have short woolly hair, and resemble them in their features. Their religion also is different; in every village in the island there is a house dedicated to the Deity. At the principal chapel, the skulls of all the people who were killed, belonging to the ship that grounded at Whanoo, are still preserved. The natives of Tuco-pia, unaccustomed to the sight of human bones, avoid, as much as possible, when they visit the island, approaching the sacred house where the skulls are deposited.

LOSS OF H. M. S. INVINCIBLE.

The *Invincible*, having on board Admiral Tötty, and commanded by Captain Rennie, set sail from Yarmouth on the 15th of March, 1801, to join the Baltic fleet, under the command of Sir Hyde Parker; and between two and three o'clock in the afternoon, struck on a sandbank. In this situation she continued to beat with the greatest violence for nearly three hours, when the mizenmast went by the board, and the mainmast was immediately cut away. The signals of distress were heard and answered by a cutter, which immediately bore down to Yarmouth to give intelligence of the distress of the ship, so that the crew hoped, with the assistance that might arrive, to be able to save the ship as well as their own lives. Having, however, unfortunately lost her rudder, the ship became unmanageable, and was driven back again upon the bank.

All now gave themselves up for lost. At this awful juncture, a fishing-smack approached the wreck, on which two boats, belonging to the *Invincible*, were ordered out. On board one of these, the admiral, the purser, four midshipmen, three of the admiral's servants, and six or eight seamen, reached the fishing-smack in safety, as did also the other boat, full of people. Both of them immediately returned to the ship; but on again approaching the smack, one was forced away, and every person on board would inevitably have perished, had not a collier, which happened to be passing by at this critical moment, picked them all up. This vessel afterwards afforded every assistance that humanity dictated, or that she was capable of giving; and was the means of saving the lives of many of the crew. All the other boats that were attempted to be got overboard were immediately lost.

The fishing-smack, with the admiral on board, being unable to afford the least assistance to the ship, remained at anchor during the whole of the night of the 16th. On the approach of day, the master of the vessel, expressed an unwillingness to go near the wreck; but Admiral Tötty, in direct opposition to him, caused the cable to be cut, and proceeded to the ship. Melancholy, however, to relate, while he was doing everything of which human exertion is capable, to assist the unhappy people on board, the wreck once more got into deep water, and gradually sunk, to the infinite distress of the admiral and the other spectators, who were nearly frantic with grief at this tremendous scene of human misery and destruction.

While the ship was thus rapidly going down, the launch was hove out; as many of the crew as she could possibly hold jumped on board, and had only time to clear the poop, when the vessel, with four hundred souls, entirely disappeared, and went to the bottom. A number of unhappy sufferers attempted to get on board the already over-laden launch, but as no more could be permitted to enter, without the certain destruction of the whole, they were struck away with the oars, and in a few seconds were wholly engulphed in the pitiless waves.

After the ship had sunk, Captain Rennie attempted to swim to the launch, and after severe exertions got within reach of the oars, when, exhausted with fatigue, and unable to make any farther effort, he calmly resigned himself to his fate; lifting up his hands, as if to implore the blessing of Heaven, and immediately afterwards placing them upon his face, he went down directly, without a struggle.

Thus perished a brave and meritorious officer, whose eminent virtues in life insured him the esteem of all who knew him, and whose professional fame, had he survived, bade fair to render him an ornament to his country. All the other commissioned officers of the ship, except Lieutenants Tucker and Quash, together with all the officers of marines, and most of their men, likewise went to the bottom.

About seventy or eighty of the crew were saved by means of the launch, the whole of whom had assembled upon the forecabin; but all who remained on the poop were lost. The total number of human beings who thus found a watery grave, was upwards of four hundred, among whom were several passengers on their way to join other ships belonging to the North Sea fleet.

Two seamen a few days afterwards arrived at the admiralty, who had survived the rest of the unfortunate crew that went down in the *Invincible*, by adhering, for two days and nights, to a part of the quarter-gallery, which broke away, and whence they were providentially taken up by the brig *Briton*, of Sunderland. They had no other sustenance till they were released from their perilous situation, but what they derived from a small quantity of tobacco, which one of them fortunately had in his jacket-pocket. One of them, named Daniel Brian, lost his hearing, and was much bruised. The unfortunate Captain Rennie was an amiable man and an excellent officer. He had been promoted by his own merit alone. At the Helder he distinguished himself when a lieutenant, in consequence of which, he was spoken of by Admiral Mitchell in his public despatches with merited praise, and was made post-captain. Since that time he had been waiting for a ship, had just been appointed to the command of the *Invincible*.

cible, and was, for the first time putting to sea in her, launching, as he thought, into good fortune.

The *Invincible* was an old ship, having been built in the year 1776. A ship bearing the same name was lost almost in the same manner, about forty years before this disaster.

SHIPWRECK OF A SPANISH VESSEL.

A SPANISH vessel of burthen, laden with various goods, set sail in 1678 from Callao, bound to Panama, at which place she arrived safely, and anchored on the 6th of May. From Panama she sailed with merchandize for Caldera, a port in New Spain, situated in the province of Costa Rica. There were several passengers in the vessel from Panama to Caldera. They sailed on the 10th of May, hoping to arrive at the end of their voyage in about nine days, as was usual. Instead of making the distance in the time they had anticipated, they were obliged, after beating about for five days, to cast anchor at the mouth of the Manglares, which descends from Chiriqui, a lofty mountain, noted for its gold mines. Most of those on board, thinking the passage would be short, had only taken with them provisions for eight days. At this anchorage, therefore, some of them were obliged to go on shore to purchase more. These provisions consisted of calves, pigs, fowls, Indian corn, and some of the fruits of the country.

Having set sail again, they encountered a heavy sea, which continued until the 18th, the time about which they had anticipated they should be able to anchor in the port of their destination. On the 19th, about four o'clock in the afternoon, a violent storm came on, which attacked them before they had time to prepare to meet its fury. The wind and sea drove them so close to a coast full of rocks and sand-banks, that, had the ship been carried a musket-shot farther, she must have been dashed into a thousand pieces, and every soul on board have perished, there being no beach on that coast, but all terribly bristled with rocks. In order to escape a fate so dreadful, the long-boat was set afloat, and eight vigorous rowers exerted their utmost to tow the vessel clear of the danger. By great exertion, they succeeded; but their labour during the storm subjected the crew to so much fatigue, that they ceased to keep a good look-out, and at midnight the ship got among the rocks, and was carried close to one of them with such impetuosity, that, before they were aware of it, the ports on the larboard side were carried away.

All on board were now aroused, and believed every thing was over; none doubted but that the keel of the vessel had struck. It was dark, and impossible to discover where they might be, or what injury was done. The night was passed in a state of dreadful anxiety, though, fortunately, the storm had abated. Happily, when day dawned they found that they had suffered more from fear than the injury done to the ship would justify, though a few feet nearer the rock, and they must have foundered. The wind was favourable, and they ventured to hoist their sails; but the breeze did not long continue in the same point: the four days following, it changed no less than six times. In fact, after beating about until they found they made no way, they were just off the mouth of the river where they had gone on shore a few days before to purchase provisions. They were now again short of sea stock; some of the passengers had eaten up all their provisions three days before, and were living on the captain's. It became necessary, therefore, to go on shore again, which most of them did, and furnished themselves with a store for fifteen days. They also brought off a quantity of bananas, which, roasted in the cinders, are an excellent substitute for bread. The captain laid in a month's stock, to guard against the worst that might happen. The sails were again hoisted, and they reached Cape Borica, but could get no farther, for it fell calm, and remained thus for twenty-two days. From sunrise to sun-set there was not a breath of wind. At night, a light breeze blew, which enabled them to proceed favourably; but when the day came and the wind died away, the current, which prevails on that coast, bore them farther back in an hour

than they had gone forward in six. Whenever day broke, the man at the helm cried out "land, land!" but as the light increased the point of Borica was sure to be recognized, from which they had sailed at nightfall. In this manner they were at last fired out, and given up almost to despair.

They endeavoured to entertain and amuse themselves as well as they could. Some fished, others read, or swam about in the sea. They passed a large portion of their time in lamenting their misfortune. Again their stock of provisions became so low, that it was necessary to replenish it at the same place as before. The captain was of opinion that they had better return to Panama. The pilot and sailors asserted, that in four or five days, with the least favourable wind, the ship would make Caldera. To this opinion the passengers ceded their own, for all were alike eager to reach their destination. They now got on board provisions for the third time, in greater quantity than they had done previously, and once more they set sail for Caldera. In eight days they made the Isle of Cagno, and the seamen flattered themselves that in two more they should enter the port which they so desired to gain. But human judgments are as frail as human hopes. The sky, which had been for some time serene, changed all at once. It was near the hour of sunset. The pilot, not liking the aspect of the heavens, lowered the sails. A small dark cloud was seen approaching with great rapidity. No sooner was it over the ship than it poured down a torrent of rain. A second deluge seemed falling from the heavens. The thunder and lightning were terrific, enough to make the most intrepid heart quail. The lightning and obscurity alternated so rapidly that it struck the crew with tenfold horror, and prevented anything being done on board which the urgency of the moment might demand, as it was impossible to see. In vain they fatigued themselves with successive attempts; they were absolutely obliged to give up all in despair, and abandon the vessel to the mercy of the wind and sea.

At day-break the storm ceased, but the sea continued to run high, and the heaven was still covered with clouds, which did not seem to announce the approach of fine weather. The captain wished to find out exactly the ship's place, but could not take an observation, from the state of the weather. It was proposed he should find out some secure place on the coast to remain sheltered from the wind and waves, until more settled weather appeared, rather than remain at sea, uncertain of their situation, and exposed to new storms, which were evidently approaching. The poor captain, with tears in his eyes, answered that he had no doubt his sins were the cause of the bad success of his vessel, and that he could do nothing, for the seamen refused to obey him. The sailors, on being questioned, asserted that they were now drawing so near Caldera, that if the sky were clear it might be distinguished.

In this assurance the passengers continued beating about for five days longer. The sixth was clear, and the captain took an observation, and then said that the ship was within five leagues of the port, and land must soon be seen. All sails were set and night came on, but no land appeared. The next day the captain persisted in his opinion until mid-day, when he discovered some high mountains, which he was nearly two hours examining. After he had done so, he said, with great chagrin, that these were the mountains of Chiriqui, towards which the currents had borne them back. The disappointment and anger of the passengers were great, both towards the pilot and captain, and they were appeased with difficulty. The captain proposed returning to Panama; but, as part of the passengers had business at Costa Rica, it was agreed to call at Chiriqui for provisions a fourth time. There they remained six days, to put the ship in order, get in the provisions, and refresh themselves. They then set sail again on the eighty-first day of their departure from Panama.

On the day after they sailed they encountered a breeze, which carried them rapidly forwards; but the very next day the wind fell again, and their hopes were once more destroyed. In short, in twelve days they made little or no way, from the want of wind and the re-action of the currents against the way which they did make. At length their provisions were again consumed, and they were not near enough to Chiriqui to purchase more. They were reduced to such a

necessity that a little dirty Indian corn, remaining in the pigsties, was equally shared among all on board. They afterwards made a ragout of the leathern flesh and limbs of an old spaniel, which had been the captain's favourite. All devoured the dish with avidity, but none had a sufficiency for a good meal.

The following day they prepared a bull's hide, which had, till then, served as a bed for the unfortunate dog. They boiled it a long time, until it was dissolved into a sort of black glue, not very agreeable to the eye, any more than to the taste; but so far from its exciting anything like disgust, they devoured it as if it had been a dish of most exquisite flavour. A negro sailor offered the captain a banana, of which he had two; one he eat with the paring and shell, and prayed the captain to give him the paring and shell of that which was presented him. He devoured it with greediness,

fearing any one might take it from him. There was plenty of wine in the ship, the use of which, beyond moderation, injured the discipline on board. The captain, seeing that hunger had taken from the pilot and seamen those insolent airs which they were accustomed to exhibit, now began to encourage them, by a little flattery and management, to keep a good look out, and see if they could discover in the distance a particular mountain, which might serve as a guide to the vessel.

The next day-break the man at the helm cried "a sail! a sail!" The crew were full of joy; for could they land upon a savage territory, or one inhabited by the bitterest enemies of the Spanish nation, they would gladly do it at such a time of distress. They soon made the usual signals, and the stranger, a Mexican and an acquaintance, informed them that they were near the Island del Cagno, or Isle of Dogs, on the south

THE SHIPWRECK OF A SPANISH VESSEL, IN 1678, ON THE COAST OF AMERICA.

side of the American isthmus, at the extremity of the province of Costa Rica. The island is about a league from the continent, in 8 deg. 35 min. north latitude. It is inhabited; and there they determined to take the ship. The captain of the Mexican vessel, being informed of the famine on board, supplied them with provisions, and thus they were finally able to reach the island the same day. There they disembarked, and dined under the shade of some banana trees, on the side of a pleasant rivulet, a hundred or two paces from the sea. The Mexican vessel being laden with provisions, the crew and passengers obtained enough for four days, certain now, in their own minds, of soon reaching Caldera. The captain refused payment for anything furnished, the generous Mexican saying, that it was possible the favour might be returned to him under similar circumstances. The vessels

both weighed anchor, sailing from the island the next morning, and proceeded on their respective voyages.

About seven in the evening, the day following, they saw the desired port. All was joy in the ship. The captain presented the sailors with a cask of wine, and a Genoese merchant on board gave them another. The men were in too good a temper to postpone tasting the wine until the next day. They attacked the cask at once, headed by the pilot, and it was soon emptied, but not without materially affecting their heads.

The Genoese merchant, fearing the ill effects that must arise from such a state of things when so near the shore, posted himself, in his excess of caution, between the man at the helm and the pilot, from having remarked that the pilot, sitting on his seat, quite drunk, worked the ship from recol-

lection alone, as he was close to a port perfectly well known to him. The merchant placed himself in the situation already mentioned, to repeat, with more precision, the words of the pilot to the timoneer, and this act caused the loss of the ship. The pilot gave the words "north-west, to the north-west," "*Al noruête*." The merchant, who stammered and spoke bad Spanish, repeated the words "*Al nornoruête*," to the north-north-west, which is a different point of the compass. The timoneer, thinking it was his master's orders, did as he was told, kept away from the port, and yet approached the coast.

In the meanwhile, night was approaching fast. The passengers and the captain were in their beds, wrapped in slumber. About two in the morning, the captain was surprised by hearing the waves breaking upon the rocks. He cried out to the pilot, "What is this, pilot? are we entering the port already?" The pilot, on the question being reiterated, roused from his lethargy, and saw, with astonishment and terror, that the vessel was steering right upon a rock, which could scarcely be seen for the obscurity. Above all, a high mountain towered in shadow, covered, apparently, with trees. The pilot called out to come about, but there was now no time; the vessel was close on the shore, and struck with such force that one of her sides opened. A huge wave recoiled from the rock against which it had dashed, swept over the vessel, and filled her with water.

Then there was nothing heard throughout the ship but clamorous cries and shrieks of horror. Lamentations succeeded to sounds of mirth and revelry, which had been heard so short a time before. Some awaked suddenly from their sleep, and cried in astonishment, as they heard the others do who were aware of the danger, though they knew not yet any reason wherefore. The noise of the vast waves of the Pacific thundering around and over the ship, the darkness of the night, the dashing of the sea on the rocks, increased the terror of the scene. What was still more extraordinary, the vessel was lost, none could tell how or where. This reverse of fortune was terrible to them. They had imagined themselves close to the entrance of the port. In the terror which came upon the crew, some fell on their knees in prayer, making vows to heaven for their safety; others, with uplifted hands, demanded God's mercy; while many, in a loud voice, heard even amid the louder thundering of the waves around, revealed their most secret sins.

The captain preserved his presence of mind. Seeing that all must perish if something were not attempted speedily for the safety of those on board, he encouraged the sailors to cut away the masts, and to provide themselves with planks, or any loose timber, upon which there was a chance of gaining the shore. Every thing above deck contributing to the breaking up of the ship by its weight, was cut away or flung overboard. In this state, morning broke upon them. The captain, when the vessel had opened her planks and was settling in the water, seeing that the sailors would endeavour to gain the shore upon anything they could seize that would swim, advised several of them to fasten themselves to the ends of a long rope, one at each end, so that whoever got on shore first might draw after him a second, who might not be so fortunate in his attempt at reaching it. In this manner the captain got the pilot safe to land, although he did not deserve it. Nearly all the crew escaped. Five or six only, who were dashed by the waves with great force against the ship or the rocks, head foremost, were lost.

Some hours after they landed, the tide ebbed, leaving the vessel nearly dry on the shore. They then found it was no difficult task to get out anything that was on board. They succeeded so well by their diligence in this undertaking, that they not only got out the cargo, but recovered most of what they had thrown overboard, the sea having cast nearly all upon the shore. They afterwards proceeded to burn the vessel, that they might save the iron-work in her construction. All their effects they placed under some shady trees, where they had taken up their quarters to keep themselves from the action of the sun's rays, which were very powerful in that torrid latitude.

As it was not desirable they should remain long in such a situation, the captain exhorted them to choose some one of the company for a leader, to repress any disorder or confusion which

might arise. They immediately begged the captain to take upon him full powers for such a purpose. He immediately divided them into three parties. One was detached to find fresh water, of which there was great want; another to search for provisions of any kind, as the sea had wetted those which were got out of the ship, and the third, to reconnoitre the country, and endeavour to find out the inhabitants, if any were to be found. The pilot said they could not be more than three or four leagues from Caldera. The first party were not long absent, returning with some good water, which they had discovered at no great distance. The second party returned not long after the first, loaded with wild fruit of an ill flavour, and with turtles' eggs; a porcupine had been seen, and also the dung of Indian fowl. These were satisfactory reports. A good quantity of water and turtles' eggs were provided; of the latter, there was no fear of a want; they were found in the sands two or three hundred together, and though they had a smell which was not agreeable, they were eaten with good appetite by the company.

They next proceeded to make themselves shelters, or roofs, of palm leaves, and passed the day at this labour until evening, when the third party returned, which pleased their companions, who made no doubt but that they had found human habitations. They reported that they had proceeded until they fell in with a river so deep, rapid, and full of alligators, that they could not cross it. The captain blamed them for returning, as they might have constructed a raft, and have got over that way. Fearful they had not done so much as they ought, the captain determined to go with them himself on the following day. When the morning came, having left one of those who had been at the river the day before, to serve as a guide to the party, if it were necessary for them to follow by that route, the captain and the others set off, leaving word that if they heard nothing of them in eight days, they had better set out the same way and try their fortune. In the interim, they had orders on no account to go far from the coast, where they had for the present taken up their abode.

After a journey of two hours over a sandy soil, which rendered walking exceedingly painful, they arrived at the river, which the party called the River of Alligators. It appeared that the truth had been spoken regarding its size. They were now obliged to traverse the banks as far as the first spot where they could obtain wood to construct a raft. After journeying about two leagues, they fell in with what they wanted. They carried the wood on their shoulders to the place where they had first seen the river, wishing to keep as near as possible to the coast, for they hoped by that means to fall in sooner with Caldera. Having formed the raft as well as they were able with their hatchets, and bound it together with ropes which they had brought with them for that purpose, they ventured to trust themselves upon the current, which was very rapid. The captain first went upon the raft, with his arquebuse in his hand, and then the pilot, who took his station at one end; the strongest seamen, with poles and oars to guide it, followed. As all could not be accommodated at once, one part remained on the bank while the others crossed. A long cord was fastened to the raft, that it might be pulled back by those who were to follow. This being arranged, they crossed in safety, and journeyed about ten leagues farther, when they came to a second river, which they crossed in the same manner as the former. About sunset, they arrived at a level country of considerable extent, where they halted, being much fatigued. The captain was more tired than the others, because his shoes, which had been soaked with water, stretched, and let in the sand, which gave him great annoyance. As they were looking around for a place where they might repose during the night, they heard a noise near the trunk of an old tree, and discovered an iguana, which, though an ugly looking animal, is excellent eating. The pilot killed it, and, as the party were hungry after their fatigue, they soon devoured it, having roasted it on the embers of their fire. They then went to sleep.

At day-break they set off again, and about ten o'clock in the forenoon, reached a hill exceedingly steep, and in order to save a point which would have obliged them to go a good way round, they entered a wood to go over it. The wood was full of thorns

and brambles. There the captain suffered a good deal of pain. His stockings were worn out, and his feet became blistered and sore, being little accustomed to so uneven a road. Matters became worse, when on leaving the wood, they were upon the sea shore. The heat of the sand, owing to the rays of an ardent tropical sun, raised bladders on his feet as large as pigeon's eggs. They broke, and the sand got into the wounds, which gave excessive pain on friction by walking. The captain's sufferings raised the pity of his companions, and obliged him to stop under the shade of a tree, where they washed his feet in a stream of fresh water, and remained some time sheltered from the burning sun. While the party were thus resting, one or two of them discovered, in the holes in the rocks, a great many periwinkles, called by the South Americans, *buyados*, which they deem very good eating. They are generally boiled, but having no cooking utensils they were now obliged to roast them.

After this sorry repast, they set out again. The feet of the captain were bound up as well as they could be, under such circumstances, in their torn linen and tattered clothes, much in the way mendicants supply the want of shoes. They then proceeded till sunset, and reached the borders of a pond, which so abounded in mosquitoes that they were obliged to continue their journey until ten o'clock in the morning. They passed the night with much inquietude, fearing an attack from the Indians, some of whom they had seen passing among the trees in a neighbouring wood. Fortunately, they remained till day-break undisturbed.

During the next day's journey they met with a river, on the bank of which they found the remains of a fire, and a quantity of banana skins, though none of the fruit grew there. About mid-day they came upon a large river, bordered with trees, which gave a pleasant shade. Hunger now pressed them, and and they were fortunate enough to catch three large fish, which they roasted. They crossed the stream in the way they had done before, until they came to another much larger, on the bank of which they slept, first planting a sentinel, for fear of being surprised by the Indians. They found a great number of palm trees growing near them, the buds of which they collected and ate; the hearts, which are poor food, are like a wax-candle in taste. A little further on, they found a fruit resembling an apricot, called by the people of the country the *icacos*; it was of a bitter, acid taste, but far better for food than palm buds. They now again came upon the coast, having crossed a wood and a mountain. They saw a good quantity of lobsters, but they could only capture four. They shot six paroquets in addition and thus supplied another day's provisions. They slept on a spot where there were plenty of *icacos*, eating the ripe, and roasting those which were unripe. On the fifth day they passed two rivers on rafts, but got nothing to eat until six o'clock at night, when the captain shot a peacock. The following day they reached a deserted house, where they found a quantity of ripe bananas. They eat half, and carried away the other half, not without the fear that the family might pursue them. At night, they rested on the bank of another river, and ate their stolen bananas. Hunger was the most disagreeable enemy they yet encountered, and they were obliged to supply themselves in the best way they could, without being too scrupulous about the mode.

The next day, four of the party went about two leagues off, to the top of a hill, to find wood fit to make a raft. While they were absent, leaving the captain and one man together, the latter were fortunate enough to see a number of wood-pigeons perch on a tree, not fifty paces off. The captain crept within a short distance of them, and brought down eighteen at a shot. These furnished them all with a banquet, in which, had they wine, their gratification would have been complete. Those who had gone to the wood, had found some dates, which they ate instead of bread.

After this unexpected feast, they set out once more. The captain was now so much worn down by pain, that he could proceed no farther. He was unable to stand on his feet, and he begged his companions to leave him, as it would be unjust to detain them there to perish for the sake of one of their number. He said he might get better, and follow them in a few

days, or they might fall in with some Spanish dwellings, and be able to send him assistance. He conjured them to keep together, happen what might, on their future journey. They shed tears upon this address, and declared they would not leave the captain, let the consequences be what they might. They offered to take him upon their shoulders, but he would not agree to it. He told them their time was dear, and that they had better get as quick as possible to Caldera. They would not stir until the captain consented to be carried, which they undertook with such good will, that it was seven o'clock in the evening before they stopped, as well to rest themselves, as to find something to eat. They were obliged to satisfy their appetite with periwinkles boiled on the coals. The fatigue they had undergone under a tropical sun during the day, and the hardships endured from the heat in those which preceded it, had made a great change in their appearance. Their throats were inflamed and parched, and they had no water to quench their thirst. To remain where they had stopped, was impossible. They set out again in their wearied state, and after reaching a league farther, discovered a stream bordered with bananas, and other fruits and trees, the shade of which meeting over the water, formed a beautiful and agreeable avenue. They thanked God for his goodness to them, and, rushing to the river, quenched their thirst.

The pilot added to their delight, by stating that the river was that of St. Antonio. He assured his companions that, about four leagues off, there was a rich farm belonging to Alonzo Macotela, where there was an abundance of cattle. Macotela was an inhabitant of the town of Esparza, in Costa Rica. They supped on the fruit around them, which they roasted on the cinders, when not ripe. The same night they crossed the river on a raft, and slept more soundly than they had done for many nights before, their anxiety respecting the termination of their journey being now dismissed.

They despatched several of their number the following morning to the farm of Macotela. The captain and two others remained behind to rest during that day and the next. They caught lobsters in the river for their support. The two who remained with the captain, were the Genoese merchant, and a religious brother of some order. The brother was charged with the duty of sentinel the second night, in order to guard against their being surprised. More accustomed to the cloister than to military duty, he fell asleep so soundly, that about eleven o'clock, the captain was awake by a voice calling out his name, and upon hailing the good brother to ask if he had spoken, got no reply. Upon finding this the case, he got up, and heard his own name again repeated, though from some distance off. He then awoke the Genoese and the slumbering sentinel, but had scarcely done so, before a large raft came floating down the river, with more than twenty people upon it. The raft was under the direction of Don Domingo de Chavarria, a native of Navarre, the curate of Esparza. Three of the shipwrecked party, who had been sent forward to the farm of Macotela, had met them, and related in what state they left their companions at the river St. Antonio, where they were waiting for assistance. The good curate, moved at their tale, set out with refreshments and necessities to recruit their health. He learned exactly where they were left by their companions, and summoning all his domestics and friends, well loaded with provisions, departed to their succour immediately. The joy of the Genoese and the religious brother was not less than that of the captain, upon finding there was now no fear of their perishing by hunger or the Indians. They were now soon mounted on horseback, except the captain, who was placed on a litter, in the manner customary for invalids in warm climates. Six Indians formed a relay, two taking the vehicle by turns, on their shoulders, and moving on as rapidly as the mules of the country. In this way a little before the dawn of day, they reached the farm of Macotela, where they rested for some time, and then proceeded to Esparza.

The small town of Esparza is described as placed in an admirable situation, upon a small eminence. Two convents and one parish only, were included in its limits. One of these religious houses, was of the order of St. Francis; the other of John of God. The captain was conducted with his com-

panions, to the house of the curate, where they met those who had preceded them. They now returned thanks to God for their preservation, and sent a courier to Carthago, the capital of Costa Rica, to give an account of their arrival to Don Juan de Salinos, the captain-general of the province, who was a friend of the captain. In twenty-four hours, so speedy did the courier travel, the governor made his appearance in the captain's chamber, who, relating his story, a frigate was sent off immediately to the place where the rest of the crew were left. It returned, without being able to find any traces of them. A second was then sent with orders to land and search the country round. The commander of the second vessel obeyed his orders, but could discover no traces of the crew of whom they were in search, until just as they were about to embark on their return, they saw a large quantity of leaves, which seemed placed in their position for some particular purpose, and, on examining, they found under them, placed as it were for concealment, goods, boxes, and the various things which had been preserved from the wreck. These they put on board and brought away. Of the ship's company, who had been left behind, they could discover nothing, and all began to think they had been cut off by the Indians.

In a few days afterwards, the governor being with the captain, at the house of the curate, a young cavallero came in with haste and in great terror, to say that the English had landed on the coast. All the place was in alarm. The governor mounted directly, and the captain, though an invalid, hobbled out to take measures with his party for their defence. People rushed in from all parts of the country, to get orders for their future conduct from the governor. Don Juan and the captain set out to reconnoitre, and had gone no great distance, when they saw approaching, with a very slow pace, the remainder of the shipwrecked crew, which had been taken for a formidable body of English threatening the country. Fear was now changed into joy. The reporters of the alarming tidings of the English having landed, slunk away ashamed, in the midst of the jeers of their countrymen, for having transformed a half-famished and unarmed body of their countrymen into formidable enemies in battle array.

The rest of the ship's company, having waited three days beyond the eight agreed upon with the captain, determined to follow the steps of those who had preceded them, and easily tracked their friends along the coast. They subsisted in much the same manner as the first party had done.

This shipwreck is remarkable for the singular account of the currents northward of Panama, and for the ignorance of the captain and pilot in obstinately following the same course along the coast, which constantly led them into the current again, when they should have run further out to sea. The discipline of the ship, from the chief downwards, and the wreck clearly owing to the revelling of the crew, are a curious picture of a Spanish vessel in those days. The English name was evidently very formidable at that period in the Spanish South American possessions. Perhaps the recollections of past times, and the achievements of Drake and others in the Gulf, and in the Pacific, had been handed down as *le grand Talbot* was in France, until the English name became a scarecrow to the children.

LORD KEITH.

"Only just do your duty, you'll find should death call, The same gracious Providence watches for all."

"WELL, messmates," exclaimed an old pensioner, entering the ward with a newspaper in his hand—"well, messmates, so Lord Keith is gone, full of years and honour! Death has grappled him at last! He was a worthy commander—a mild, unassuming man: but all our old friends are dropping off one by one, and by-and-bye poor Jack won't have a protector left. Howsoever, I hope, before that time, messmates, all hands will be standing on the same tack, till we moor ship in the port of Heaven at last. Ah! well do I remember the admiral—at Toulon, at Egypt, and afterwards in command of the Channel fleet. He was a father to his people—brave, and humane. I think I see him at this moment, a tall, thin figure, standing in his admiral's uniform on the deck of the *Queen Charlotte*. We were lying in Basque Roads. The white flag

was flying at Rochelle, but the French fleet had not yet hoisted it. A large party in their bag-wigs, and swords, (if I recollect right, a deputation from the town), came alongside on the larboard side. His lordship, very plainly dressed, placed himself near the gangway. On the starboard side of the quarter-deck stood Sir Pulteney Malcolm, firm and erect, one hand thrust into his waistcoat, the other arm a-kinbo, the right foot advanced. There he stood in all the conscious pride of a bold, intrepid, British tar. By-the-bye, I saw his portrait, some seasons ago, in the exhibition; I knew it in a moment, and my heart kindled with pleasure. Sailors have their feelings, and fine ones too, though they cannot always express them. Well, there he stood; and the *Monsieurs* came on board, passed his lordship, giving and receiving a slight salutation, and advanced, full of compliment, scraping and bowing to Sir Pulteney, who received them with that dignity and politeness so peculiarly his own. His lordship continued his station, unnoticed by the party, till the rear-admiral introduced them to him as the commander-in-chief. The last time I saw him was in the theatre at Bordeaux; oh, it was a glorious sight! In the starboard stage-box was his lordship, Lord James O'Brien, and I think Sir Pulteney Malcolm, and Sir Harry Neale, but I won't be positive. However, there were several of the captains and officers of the fleet in their full naval dress, blue and gold. On the larboard hand, Lord Wellington, Lord Hill, with other distinguished noblemen, and generals, in their scarlet uniforms; while every part of the house displayed the British costume, intermingled with the white of the ladies' dresses. It is true that many a regimental coat looked the worse for wear; but it heightened the interest of the scene—they had known hard service. The play was *Richard Cour de Lion*; and between the acts, 'Vive Henri Quatre' was played and sung by the whole strength of the house. The pit of a French theatre, messmates, has no seats like ours, but resembles the riding-ring at Astley's. Well, nearly in the centre of the area, stood a brother tar half-sprung, turning his quid, looking wonderfully knowing, but perfectly quiet, lest a suspicion should arise that he was ignorant of the language. Several shipmates were dispersed around, affording considerable amusement to the assembled group of all nations. The song ended, and, after a few demi-semi-quavers, our national anthem, 'God save the King,' commenced. 'Twas like an electric shock to poor Jack. 'What! God save the King, in France!' He roared, he bellowed, accompanying the music, seeming insensible to the presence of a single individual beside himself. It ceased for a moment, and then struck up 'The White Cockade.' 'Clear the decks! clear the decks!' cried Jack; and indeed all were glad to get out of his way. A space was cleared, and he went through the hornpipe in handsome style, to the great delight of all present. Bumper, after bumper, was proffered, and as readily swallowed. What sailor would shrink from splicing the main brace when his King was the toast? 'God save the King,' was again played; but this did not satisfy our jolly tar, now completely groggy. 'Rule, Britannia! Rule, Britannia!'—he would have 'Rule, Britannia!' or he'd board the stage, and thrash the fiddlers. 'Rule, Britannia! Britannia rules the waves! Play up! none of your gammon; Rule, Britannia! Britannia, Rule—What! you won't, eh? Then here goes!' advancing to the orchestra to commence his attack. This was too much even for French politeness; and, another act just commencing, a scuffle ensued, in which poor Jack was hoisted on the shoulders of his messmates, who bore him off in triumph, roaring—

'Rule, Britannia! Britannia rules the waves! For Britons never, never, never, never, shall be slaves!'

SIR CLOUDESLEY SHOVEL.

WHEN Sir Cloudesley Shovel was only a boy in the navy, under the patronage of Sir John Narborough, on hearing the admiral express an earnest wish that some papers might be conveyed to the captain of a ship then engaged in an action at considerable distance, he, with great resolution, undertook to swim with the despatches in his mouth, through the line of the enemy's fire, and this service he actually performed, to the astonishment of all who were witnesses of his courage.

THE GALLANT ACTION BETWEEN THE SHANNON AND CHESAPEAKE.

On the 18th of June, 1812, war was declared between England and the United States of America. This event gave rise to some of the most interesting passages which have ever distinguished maritime warfare. Frequently largely manned by British seamen, and greatly superior in size and weight of metal, the American navy, for nearly a year after the commencement of the war, had an almost uninterrupted career of success over the English. The British name was, however, at last gloriously retrieved, by the action between the Shannon and Chesapeake, an event which we shall detail at length, especially as it is one of the most brilliant naval actions on record, and unfolds to our view a scene of glory linked with the remembrance of many of our readers.

Captain P. B. V. Broke, the gallant commander of the Shannon, was appointed to watch the Chesapeake as she lay in Boston harbour, and about the middle of the month of May, 1813, she appeared to be nearly ready for sea, and engrossed all the attention of our intrepid hero. For various reasons his anxiety was naturally great. The Chesapeake seemed to present the last chance that season, of avenging the insulted honour of the British flag—of confounding the insolent pretensions of an enemy whose triumphs had originated solely in superiority of force—of making the Americans feel that, upon equal terms, they were unable successfully to contend against the prowess of their parent stock. Serious apprehensions were entertained lest the last remaining frigate might escape from her antagonists, as others, favoured by the weather, had lately done. Had the Chesapeake once passed beyond the blockading squadron, she would inevitably have effected considerable mischief amongst the British trade, where least expected; and she might probably have fallen in with English ships of war, which, being of inferior force, or weakened by the manning of prizes, would have been much less capable of supporting the national fame than the Shannon and the Tenedos, which had been particularly appointed to watch, and were thoroughly prepared to meet her. Under these considerations, Captain Broke regarded it as an important duty, to obtain, by any honourable means, a meeting with the enemy. He had previously sent several verbal invitations to Commodore Rodgers to meet the Shannon and Tenedos, his two frigates, with the President and Congress. The contest would have been very unequal; but Captain Broke trusted that his gallant second, Captain Parker, would vanquish the Congress in time to assist him against the President, should there be occasion for such aid. The badness of the weather, however, prevented the continuance of a close blockade, and afforded Rodgers the opportunity of escape. It is probable, too, that independently of his having other objects in view, the American commander, when out, might not have deemed it prudent to seek a meeting with the British frigates, without an assurance on their part that they would not receive assistance from other ships.

This consideration induced Captain Broke to draw up and combine, in a written form, the substance of the different proposals which he had already sent to the captain of the Chesapeake. In this letter, which was expressed in the following terms, Captain Broke endeavoured to answer every objection that could possibly be made to his wishes:—

“H. B. M.’s ship Shannon, off Boston, June, 1813.

“SIR,—As the Chesapeake appears now ready for sea, I request you will do me the favour to meet the Shannon with her, quest ship to ship, to try the fortune of our respective flags. To an officer of your character, it requires some apology for proceeding to further particulars. Be assured, sir, that it is not from any doubt I can entertain of your wishing to close with my proposals, but merely to provide an answer to any objection which might be made, and very reasonably, upon the chance of our receiving unfair support.

“After the diligent attention we had paid to Commodore Rodgers; the pains I took to detach all force but the Shannon and Tenedos to such a distance that they could not possibly join in any action fought in sight of the Capes; and the various verbal messages which had been sent into Boston to that effect, we were much disappointed to find the commodore had eluded us, by sailing the first chance, after the prevailing easterly winds had obliged us to keep an offing from the coast. He perhaps wished for some stronger assurance of a fair meeting. I am, therefore, induced to address you more particularly, and to assure you that what I write I pledge my honour to perform to the utmost of my power.

“The Shannon mounts twenty-four guns upon a broadside, and one light boat-gun; eighteen-pounders on her main-deck, and thirty-two-pound carronades on her quarter-deck and fore-castle; and is manned with a complement of three hundred men and boys, (a large proportion of the latter), besides thirty seamen, boys and passengers, who were taken out of re-captured vessels lately. I am thus minute, because a report prevailed in some of the Boston papers that we had one hundred and fifty men, additional, lent us from La Hogue, which really was never the case. La Hogue is now at Halifax for provisions, and I will send all other ships beyond the power of interfering with us, and meet you wherever it is most agreeable to you, within the limits of the undermentioned rendezvous, viz.:—

“From six to ten leagues east of Cape Cod Lighthouse, from eight to ten leagues east of Cape Ann Light, on Cashe’s Ledge, in lat. 43 deg., north, at any bearing and distance you please to fix off the South Breakers of Nantucket, or the Shoal in St. George’s Bank.

“If you will favour me with any plan of signals, or telegraph, I will warn you (if sailing under this promise) should any of my friends be too nigh or anywhere in sight, until I can detach them out of my way, or I would sail with you under a flag of truce to any place you think safest from our cruisers, hauling it down when fair to begin hostilities.

“You must, sir, be aware that my proposals are highly advantageous to you, as you cannot proceed to sea singly in the Chesapeake without imminent risk of being crushed by the superior force of the numerous British squadrons which are now abroad, where all your efforts, in a case of rencontre, would, however gallant, be perfectly hopeless. I treat you, sir, not to imagine that I am urged by mere personal vanity to the wish of meeting the Chesapeake; or that I depend only upon your personal ambition for your acceding to this invitation: we have both nobler motives. You will feel it a compliment if I say, that the result of our meeting may be the most grateful service I can render to my country, and I doubt not that you, equally confident of success, will feel convinced that it is only by repeated triumphs in *even combat* that your little navy can now hope to console your country for the loss of trade that it cannot protect. Favour me with a speedy reply. We are short of provisions and water, and cannot stay long here.

“I have the honour to be, sir, your obedient humble servant,

(Signed) P. B. V. BROKE,
Captain of H. B. M.’s ship Shannon.”

“N.B. For the general service of watching your coast, it is requisite for me to keep another ship in company, to support me with her guns and boats when employed near the land, and particularly to aid each other if either ship in chase should get on shore. You must be aware that I cannot, consistently with my duty, waive so great an advantage for this general service, by detaching my consort, without an assurance on your part of meeting me directly; and that you will neither seek or admit aid from any other of your armed vessels, if I detach mine expressly for the sake of meeting you. Should any special order restrain you from thus answering a formal challenge, you may yet oblige me by keeping a secret, and appointing any place you may like to meet us (within three hundred miles of Boston) in a given number of days after you sail; as unless you agree to an interview, I may be busied on other service, and perhaps be

The court of Common Council of London also voted Captain Broke, their thanks, with the freedom of that city, and the present of a sword of a hundred guineas value. The information was conveyed to him in a letter from the lord mayor, complimenting him on the glorious result of his intrepidity.

LIFE IN THE BACKWOODS.

A CAPTAIN SAMUEL BRADY appears to have once been as celebrated in the north-east part of a valley of the Ohio, as Daniel Boone in the south-west; but it is the historian that gives immortality to the hero; and no Timothy Flint has arisen to record his bold daring. A highly intelligent traveller, however, who has lately visited the state of Ohio, has given us one or two remarkable anecdotes of him. The captain, it appears, held a commission in the army of the U. S. during the war of the revolution, and commanded a company of rangers, who traversed the forests, for the protection of the frontiers; his father and brother were both killed by the Indians; and he was himself "an Indian hater," as many of the early borderers were. "Once (says the writer) when he and his little party were out in pursuit of the Indians, he was suddenly attacked by overpowering numbers, and their only safety was in a hasty retreat, which soon became a perfect flight. Brady now directed his men to separate, and each one to take care of himself; but the Indians knowing Brady, and having a most inveterate hatred and dread of him, from the numerous chastisements which he had inflicted upon them, left all the others, and, with united strength, pursued him alone. The Cuyahoga here makes a wide bend to the south, including a large tract of several miles of surface, in the form of a peninsula; within this tract the pursuit was hotly contested. The Indians, by extending their line to the right and left, forced him on to the bank of the stream. Having, in peaceful times, often hunted over this ground with the Indians, and knowing every turn of the Cuyahoga as familiarly as the villager knows the streets of his own hamlet, Brady directed his course to the river, at a spot where the whole stream is compressed, by the rocky cliffs, into a narrow channel of only twenty-two feet across the top of the chasm, although it is considerably wider beneath, near the water, and in height more than twice that number of feet above the current. Through this pass the water rushes like a race-horse, chafing and roaring at the confinement of its current by the rocky channel, while a short distance above, the stream is at least fifty yards wide. As he approached the chasm, Brady, knowing that life or death was in the effort, concentrated his mighty powers, and leapt the stream at a single bound. It so happened, that in the opposite cliff the leap was favoured by a low place, into which he dropped, and grasping the bushes, he thus helped himself to ascend to the top of the cliff. The Indians, for a few moments, were lost in wonder and admiration, and before they had recovered their recollection, he was half way up the opposite hill but still within reach of their rifles. They could easily have shot him at any moment before, but being bent on taking him alive, for torture, and to glut their long-delayed revenge, they forbore the use of the rifle; but seeing him now likely to escape, they all fired upon him; one bullet wounded him severely in the hip, but not so badly as to prevent his progress. The Indians having to make a considerable circuit before they could cross the stream, Brady advanced a good distance ahead. His limb was growing stiff from the wound, and as the Indians gained on him, he made for the pond which now bears his name, and plunging in, swam under water a considerable distance, and came up under the trunk of a large oak, which had fallen into the pond. This, although leaving only a small breathing place to support life, still completely sheltered him from their sight. The Indians, tracing him by the blood to the water, made diligent search all round the pond, but finding no signs of his exit, finally came to the conclusion that he had sunk and was drowned. As they were at one time standing on the very tree beneath which he was concealed, Brady, understanding their language, was very glad to hear

the result of their deliberations, and after they had gone, weary, lame, and hungry, he made good his retreat to his own home." On another occasion, in one of his adventurous trapping excursions to the waters of the Beaver River, or Mahoning, which, in early days, so abounded with the animals of this species, that it took its name from this fact, it so happened that the Indians surprised him in his camp, and took him prisoner. "To have shot or tomahawked him on the spot, would have been but a small gratification compared to that of satiating their revenge by burning him at a slow fire in presence of all the Indians of their village. He was therefore taken alive to their encampment, on the west bank of the Beaver River, about a mile and a half from its mouth. After the usual exultations and rejoicings at the capture of a noted enemy, and causing him to run the gauntlet, a fire, was prepared, near which Brady was placed, after being stripped naked, and with his arms unbound. Previously to tying him up to the stake, a large circle was formed around him, consisting of Indian men, women, and children, dancing and yelling, and uttering all manner of threats and abuse that their small knowledge of the English language could afford. The prisoner looked on these preparations for death, and on his savage foes, with a firm countenance and a steady eye, meeting all their threats with a truly savage fortitude. In the midst of their dancing and rejoicing, a squaw of one of the chiefs came near him with a child in her arms. Quick as thought, and with intuitive prescience, he snatched it from her and threw it into the flames. Horror-struck at the sudden outrage, the Indians simultaneously rushed to rescue the infant from the fire. In the midst of this confusion, Brady darted from the circle, overturning all that came in his way, and rushed into the adjacent thickets, with the Indians yelling at his heels. He ascended the steep side of the present hill (now called Brady's hill), amidst a shower of bullets, and darting down the opposite declivity, secreted himself in the deep ravines and laurel thickets that abound for several miles to the west of it. His knowledge of the country and wonderful activity enabled him to elude his enemies, and reach the settlements on the south of the Ohio River, which he crossed by swimming."

LOSS OF THE ANN, CAPT. POTTER, JULY 30, 1807.

The brig *Ann*, of Newcastle, commanded by Robert Potter, was chartered to proceed from Newry, in Ireland, where she was delivering her cargo, to Archangel, in Russia. The navigation to this place, which is situate in the White Sea, is considered, by skilful seamen, to be one of the most difficult and dangerous in the world, and can only be performed with safety in the mild months of summer.

The *Ann* was a good ship, and had been at the above place before, under the command of Captain Potter, who had effected the voyage from London to Archangel, and returned with a full cargo in three months, which was a proof of his consummate skill and perseverance.

The *Ann* sailed from Ireland on July 17, 1807, but the opening prospect was gloomy enough. The season was far advanced, and in a very few days the wind blew violently from the S.E., accompanied with heavy rain, and almost impenetrable fogs, which drove them with irresistible force, too far to the northward and westward.

After several days of awful uncertainty, they were at length enabled to ascertain by observation, that they were in latitude 71°, and 10° west longitude; and when the fog dispersed, to their great dismay, they found themselves surrounded by tremendous mountains of ice. In this extremity they attempted to tack, and, if possible, to avoid the impending danger; but the wind blowing with increased violence, they were unable to effect this. At this instant a large piece of ice struck the stern, and carried a great part of it away; immediately after, another piece struck the larboard bow, and went directly through it; and a third struck the starboard bow, but being larger than the former, the shock threw the ship on her beam-ends, from which she never again rose. The pumps were

manned, in order, if possible, to keep her above water till they could reach the island of John Maynes, which lies nearly in this latitude: contrary to their expectation, they were enabled to see this barren part, which rises like a huge mountain out of the sea.

At this time the water was above the beams, when the boats were hoisted out; but the ship being entirely filled with water, they were only able to procure a small quantity of biscuit and a little water, which was already so mixed with salt water that it was loathsome to them, even in their distress.

With this small supply, the captain entered the boats, with the whole of his crew, which consisted of thirteen, including boys; they were judiciously arranged, some in the small boat, towing the other as long as the turbulent waves permitted. Their first resolution was, to allow themselves but one glass of water and half a biscuit per day for each person, as their scanty stock would not afford them a larger allowance.

On July 30, they quitted this unfortunate vessel, and their only hope was to reach some part of the coast of Norway. For twenty-two days they continued to row and drive in the open boat for nearly nine hundred miles, suffering severely from the intense cold and the raging of the sea. The frost had affected various parts of their bodies, which at length began to mortify; and the situation of these poor men became truly deplorable.

While thus threatened by death in its most frightful form, they were discovered by some fishermen belonging to Norway, who, to their inexpressible joy, came to their relief, and towed them into the harbour of Christiansand, apparently in a state of dissolution; their only support having been the scanty allowance above-mentioned, of one glass of water and half a biscuit per day. It was found necessary to amputate the legs of the two apprentices, as they were in a dreadful state of mortification.

These shipwrecked men were treated by the natives of Christiansand with the greatest humanity. As soon as their strength was recruited, they were all made prisoners of war, with the exception of the two apprentices, and marched off many miles to Drontheim.

While every commendation is due to the nation who succoured them after their distress, it is but justice to add that, immediately after the receipt of this intelligence, the owners of the *Ann* used every exertion to remit pecuniary aid to the unhappy sufferers.

EXECUTION OF A CRIMINAL ON BOARD OF SHIP.

I RECOLLECT, that whilst the fleet lay at anchor in the Patuxent, a signal was hoisted at the mast-head of the *Royal Oak*, requiring a certain number of captains and other naval officers to come on board, for the purpose of holding a court-martial. Two seamen, captured in some of the late operations, had been recognised as deserters from one of His Majesty's ships, and they were now about to be tried. The court met; the prisoners were convicted, and they were sentenced to be hanged; and at noon, on the 20th of September, the sentence was carried into execution. As the circumstances attending the execution of a criminal on board of ship are rather solemn, I shall take the liberty of describing them somewhat at length.

Having heard that such an event was about to occur, two or three others and myself, obeying the dictates of a curiosity, not perhaps of the most refined nature, took boat, and went on board the *Royal Oak*, about an hour previous to the fatal moment. Whether any ceremonies were gone through, previous to the general muster of the ship's company, and if there were, of what nature they consisted, I cannot speak, because, till all hands were piped upon deck, I sat with the lieutenants in the ward-room. About ten minutes before twelve o'clock, however, the drum beat to quarters, and all, both officers and men, hurried to their stations. This done, the boatswain's whistle sounded, and all hands crowded the fore-castle, quarter-deck, and poop, in a moment. There we stood in profound silence till eight bells were tolled; and exactly as the last stroke ceased to reverberate, the captain made his appearance.

All eyes were now turned in fearful expectation upon the fore-hatches; nor was expectation long kept upon the stretch. A serjeant of marines, followed by a file of men, mounted the ladder; then came two persons, dressed in blue jackets and trousers, heavily ironed, and after them came another file of marines. They moved towards the quarter-deck, and having arrived opposite the gangway, stood still. In the meantime, it had not escaped our notice, that a couple of nooses hung from the fore-yard, one on each side of the mast, and that the ends of the ropes lay at length upon the fore-castle, ready to be hurried aft by the ship's company. Of course, we were all perfectly sensible to what uses these rope-ends were about to be turned; and though there was not one amongst us who felt disposed to deny the justice of a deserter's fate, there were few indeed who experienced no pity for the unhappy wretches about to suffer. No great while, however, was granted for the indulgence of such thoughts. The captain, unfolding a roll of paper which he held in his hand, read aloud the proceedings of the court-martial, which sentenced the prisoners before him to suffer death: and having stated that the sentence in question, received the approbation of the admiral on the station, he silently motioned to the culprits that their hour was come. I cannot pretend to convey to my reader any notion of the expression which passed across the poor men's countenances whilst these preliminaries went on. They were both deadly pale; the limbs of one, too, appeared to totter under him; but neither of them spoke a word. They seemed, indeed, especially one of them, to feel, as men may be supposed to feel, if indeed they feel at all, on whose heads a heavy stunning blow has fallen, for they suffered themselves to be led back towards the fatal noose without uttering one exclamation, or offering the slightest resistance. Their lips moved, however, though whether in prayer or execration, I cannot tell; and one raised his manacled hands with great apparent energy to his breast. But the struggle was soon over. The chains were struck from their legs, which were bound about at the ankle and thigh with cords; their hands, loosened from the handcuffs, were pinioned behind them, and a white night-cap being drawn over each of their faces, they were placed upright with their fronts towards the mast. Then was the noose silently cast on their necks, and a signal being given by the first lieutenant, about twenty stout fellows seized each of the ropes. One instant's, and only one instant's pause occurred, for the boatswain piping "hoist away," the executioners ran with all speed towards the poop; and the unfortunate culprits, hurried aloft with the rapidity of thought, and died in an instant. I forced myself to gaze steadfastly upon the whole proceeding, and I can vouch that not so much as a quiver, or motion of the limb, gave evidence of suffering; it seemed to me to be the most humane execution which I had ever witnessed. And now all was over. The sailors returned to their berths, and we to our transport; whilst the bodies of the deserters were left to swing in the air till sunset.

PERILOUS SITUATION.

ANOTHER rush drove irresistibly on the larboard quarter and stern, and forcing the ship ahead, raised her up on the ice. A chaotic ruin followed; our poor and cherished court-yard, its wall and arched doors, gallery, and well trodden paths, were rent, and, in some parts, ploughed up like dust. The ship was careened fully four streaks, and sprung a leak as before. Scarcely were ten minutes left us for the expression of our astonishment that anything of human build could outlive such assaults, when, at one, a.m., another equally violent rush succeeded; and in its way towards the starboard quarter, threw up a rolling wave thirty feet high, crowned by a blue square mass of many tons, resembling the entire side of a house, which, after hanging some time in doubtful poise on the ridge, at length fell with a crash into the hollow, in which, as in a cavern, the after-part of the ship seemed imbedded. It was indeed, an awful crisis, rendered more frightful from the mistiness of the night and dimness of the moon. The poor ship cracked and trembled violently; and no one could say that the next minute would not be her last, and, indeed, his own too, for with her our means of safety would probably perish.

A FIGHT WITH THE CHINESE.

V. EIGHTH PART. THE CHINESE

A FIGHT WITH THE CHINESE.

[A correspondent has favoured us with the following letter, which, from being the production of one, who was not only an eye-witness, but a sharer in the gallant engagement recorded, will doubtless prove entertaining to our readers.]

"H.M.S. Volage, off Hong-Kong.

"Dear Jack,—Here I am, my boy, laid up with one of the 'Celestial's' shots in my arm. May the devil admire 'em! I'd be bound to say the news has reached England long before this, but still I can't resist the temptation of telling you about our engagement with these precious tea-pots; and besides, I've some hopes that by-and-bye some fellow, with more brains in his head than gold in his purse, will take fancy to write the memoirs of your humble servant, so that his unparalleled achievements and exploits, may make the hearts of future generations bound, and be spoken of in the same breath as is a Nelson and a Collingwood. I hope so, d'y'e see, but I very much fear my hopes will be, like the Chinese guns, all smoke; for, by my faith, the pieces of mechanism seemed more fitted for frightening crows away than killing Englishmen.

"But I promised to tell you everything when I left England, so here goes, to begin at the beginning. I felt a devilish sight of difference between home and H.M.S. Volage, I must confess at first, but 'use is second nature,' they say, and I, at the present time, stand a perfect illustration of the truth of that observation. I might have drawn a long phiz at leaving home, and if the sketches and portraits these infernal midshipmen made were correct, I most assuredly did. Rare boys for tricks I can tell you they are. Such as when you're ordered on deck, on Sundays or inspecting day, and fancy yourself natty and nice, with your clean white ducks, you've either a ludicrous looking tail fastened on behind you, or an awful black streak down the mug, from the fingers of a cove, who was very officious, helping you at your toilet. I recollect once, when I was below, ready dressed, (clean ducks) the beggars sat me in a tar bucket, and then made me go on deck as I was. Perhaps you'll say I wasn't altered much, but, by Jove! I looked and felt very like a fool. There was the fellows looking, pointing, and tittering—'What a smell of tar,' 'There's a starn,' 'Call them there white ducks,' and similar exclamations, till one of the lieutenants' attention was attracted, and poor I had three hours at the mast-head, during a heavy gale, for having been victimised. All I could do was to grin and put up with it, for if I showed fight, I should have had to have taken all the mess in their turn; and to be thrashed as well as chaffed, would prove far from consoling. Matters began to mend, however, after a bit, and which might be attributed I think to one thing; for one of our mess, and the head of the tormentors, happening to make a false step, into the sea he went; there was little time for consideration, so I followed to the rescue, and succeeded in catching him by his locks (which were flowing then in reality), and we were both drawn on board, in a glorious state of water. This they called 'sailor-like,' a very flattering appellation to one fresh from land, I do assure you.

"Now for fighting news. On the 4th of September, as our pinnace, Captain Elliott's cutter, and a small vessel called the Pearl, were proceeding up the river, we were intercepted, and fired upon by three large Chinese junks. If we'd only expected a fight, and been prepared, we'd have given the beggars such a drubbing, as they never had in their lives; but, however, we let them have all the powder and shot we could for the honour of dear old England, and then sheered off. In the evening our vessel, the Volage, arrived in the bay, and us, young 'uns, flattered ourselves we should now show these infernally conceited Celestials, what us barbarians were made of; but, however, we were sadly disappointed, for our captain seemed more amicably inclined than we wanted, or thought the Chinese deserved. So out of gratitude for his forbearance, Mr. John Chinaman made the land of tea and teapots, ring from one end to the other, with their 'glorious victory!'

"It appears that a short time previous to this, in a row with some of our sailors at Hong-Kong, a Chinese was killed. Nothing would satisfy Commissioner Lin, but that an English-

man must be delivered up to them in exchange. Our captain seemed to have rather a strong prejudice against a man, who had committed no crime, suffering for one who had, merely because he was a fellow countryman; and as there were no volunteers for the honour of being publicly scragged; we were obliged to disappoint the very worthy commissioner. A great pity—wasn't it Jack?

"The Hyacinth now arrived and joined us, and negotiations were again entered into. The Chinese were preeminent in demanding a war, and we as firm in our denial. Twenty-nine sail of war-junks made towards us in order of battle. That was the time Jack we'd all been longing for, and the firm set lips, and flashing eyes, told how brave a spirit, our bonny boys possessed. On they came—a splendid sight; they're strange, yet not inelegant barks, flashing in the sun's rays. On we went to meet them, our hearts swelling with pride and courage, and our sails with the gentle morning breeze. We ran fearlessly down their line, and, as the command to 'fire,' was given, our broadsides charged with death and destruction, opened with terrific force upon them. I was stationed on the quarter-deck with some riflemen, whose weapons spread death wherever they were directed. One gallant young Chinaman sprang upon the poop of his vessel, urging with his gestures and voice, his men on. 'Down he goes,' muttered some one near me in a hoarse voice, and the next moment he had disappeared. At this juncture a junk blew up with an explosion that rose high above the cannons' roar. And many poor Chinese clung to its disjointed planks, as they floated on the water. In a few minutes longer, another, and then another; and finally, a third sunk. And the cries of the poor wretches, struggling for life in the sea, was frightful and appalling. A sight that many an after night will haunt the pillows of more than one of us; but one which we greeted then with the loud cheers of victory. The Chinese fought bravely, but vainly. Their admiral bore towards us in his junk in a noble style, and poured in his broadside (to which, by the bye, I'm indebted for my wound), in a most gallant, determined manner. In a few minutes we exchanged complimentary balls, and his sails bore more than one rent, and his deck more than one dead man. He was glad eventually to cut his lucky (and a lucky thing 'twas for him he did cut), and as we'd more Celestials to dispose of in our barbarous manner, we neither heeded nor noticed his departure. But 'twas evident his brave countrymen did, for more than one sought the shore, and soon we stood alone in our glory. Our commander seemed to think we'd fought in self-defence; and, had had enough of blood for one day (true enough), and so we offered no obstruction to their departure."

"In a few hours after we departed to gain the fleet at Hong-Kong, and the Hyacinth was left at Macao to keep a sharp look out on the Chinese, who, were full to the brim with every kind of treachery and artifice.

"Now, Jack, I've wound my adventure to an end, and if you, by this time, don't think me quite a hero, your ideas and mine upon the subject differ very considerably. I'm afraid your notions of peace and my love of war will clash rather harshly together; but, by Jove! old fellow, you must extend your old kindness towards me, and give me the favour of all extenuating points, for it's my firm conviction if a bishop, with all his proverbs and sayings, only had a cutlass shoved into his clerical fist, the flag of old England, fluttering buoyantly over head, three English cheers ringing in his ears, and last, but not least, England's enemies before him, he'd fight, ah! like a sailor. Hurrah, that I'm one! For, I rather be called aloft on a stormy night, and get into my hammock again, drenched to the skin, than lay on a landsman's bed of down, with a landsman's ease, and a landsman's cares about me. Here we get plenty of wind, and we give all our cares, heart-burnings, and troubles to it! Greet inconvenience and danger with a smiling face, and leave devil a care for the morrow.

"I long to see you and England again, though, dear Jack, and if I escape these Celestial bullets (which are anything but heavenly to the feel), I will, if possible. Never fear for my safety, old fellow, these coves are very well, mixing poison, but at fair shoot for shoot—muffs. Before we've done with them

they shall call us civilized English, instead of Barbarians. Talking about their firing, too, they shoot over us, both sides of us, but sorry a bullet comes within an inch of us. I shouldn't have been shot if the fellow hadn't squinted, wasn't fair play at all, 'twasn't.

"Remember me to all old chums. I've lots of curiosities to bring home, and lots of news, too; in fact, if I get tired of the salt water, I shall set up a shop, and sell both lots off."

"Believe me, old friend,

"With every respect,

"Your's, most sincerely,

"FRED LACY.

"To John Hill, Esq., Ashford, Kent."

A SIGNAL MISTAKE.

It was about ten o'clock; the officer of the watch talking very jolly, and very improperly, with the marine officer; the look-out man on the gangway, bobbing his head like a fisherman's float; the guardian on the quarter, under the lee of the hammock-netting; and the careful watch on the bow, sitting down on the forecable; when, whiz came a shot across our bows, which was followed by another, which went through the fore-sail. "Holloa! what the devil do you call this?" said the marine officer; "is it a three-decker or a gun-boat?" "Beat to quarters," roared the officer of the watch; the drummer being snug enough in his hammock. "Pipe the hammocks up," said the first-lieutenant, who had jumped up the hatchway like a lamp-lighter. Smack came another shot over the stern. "Where is the signal-man with the lantern?" said the captain. "Run, youngster, and tell the purser to have the fighting-lights ready; up with the fire screens, carpenters; clear away these guns here." "Watch and idlers, shorten sail!" said the first-lieutenant. "Watch below, bring the hammocks up!" The British blood was up; confusion, from want of proper discipline, prevailed; the top-gallant sails were handed (that is, furl'd), the ship brought to the wind, and the next shot was a wide one of the mark. "Send the marines aft with their muskets," said Bathurst, who was a fighter, a real good one at that; and if he stammered in his speech, he never wavered in his resolution when his enemy was near; a braver man never trod a quarter-deck. "Where—where—is the signal-man (as it 'tis en)? Why, you scoundrel, you (as it 'twas en), don't you hoist the s—s—signal when you're t—t—to—told? (as it 'tis en)." Independently of poor Bathurst's natural infirmity, he could not help saying, "'tis en—'twas en," at the end of every two or three words; and he was always called, "old 'tis and 'twas en," as long as I can remember him. This was the effect of hurry in expression, and was laughable to the highest degree, in serious discourse.

Up went the lanterns; but, as Dr. Johnson says, "Whatever is done in a hurry, is naturally done badly;" so we found; for we got dangling a parcel of lights, no more like the signal than an illuminated star at Vauxhall. Up went some lanterns from the stranger; but, as she was end on, we could neither make out her signal, or if she was a ship, or brig, or xebec. She looked large in the haze of the night; and I am willing to admit that I bobbed my head like a mandarin, or like one of the wag-jaw women carried about by the Italian boys, whenever she fired. She was now getting too close to be pleasant; we were, after a fashion, clear for quarters.

Each ship had mistaken the signal; and, of course, we believed her an enemy, and they paid us the same compliment. The night was confoundedly dark, and I kept tumbling over handspikes and crow-bars, and breaking my shins and toes over the loose shots. The captain was standing abaft, trumpet in hand, as cool as a cucumber. He desired the marines to treat our adversary with a few small shot. This rather astonished our opponent, who little dreamed he had got hold of a frigate; and, as we fired one or two of our main-deck guns, she yawed a little, and we discovered she was a brig. "I've got you s—s—snug enough, my b—b—boy!" said the captain.

"Avast! firing on the main-deck; why, we shall damage her." "Shall I just fire this thirty-two-pounder, your honour?" said an Irish captain of a quarter-deck gun. "Bad luck to me, if I don't make them blink on board!" "Silence! fore and aft," roared the first-lieutenant. "Ho! the brig, ahoy!" bellowed the captain, disguising the words as much as possible. "What brig is that?" "What ship is that?" replied a gruff voice. "This is his Majesty's ship, the Salsette." "This is his Majesty's ship the Monkey." "The devil it is!" said the first-lieutenant. "Heave-to, sir, and come on board directly," said the captain, in a most officer-like manner, "and haul that signal down!" I just heard the answer, "Why, you have got the wrong signal up, sir!" "The devil we have," said old Bathurst; and forthwith pulled some papers out of his pocket, asked the day of the month, looked for some moments, and then shuffling the private signals away, muttered, "C—c—curse the s—s—signals! I have b—b—bothered my b—b—brain so confoundedly! But I never could understand the business!"

GALLANT ACTION OF H.M.S. GAUDALOUPE WITH THE TACTIQUE AND TWO SMALL VESSELS.

EARLY in the year 1811, H.M.S. Gaudaloupe, of sixteen guns, commanded by Captain Tetley, was cruising under the high land of the coast of Catalonia on their way to join the fleet under the command of Sir Edward Pellew, off Toulon.

A pleasant breeze blew right into the gulf, and they were gallantly proceeding under top-gallant and royals, when the look-out man at the mast-head, vociferated, "Three sail in shore, ahead." The first lieutenant was instantly aloft with his spy-glass, and reported "A square and two fore-and-aft rigged vessels." All hands were instantly on deck, and all heads busy in anticipating prize-money. All sail was soon made, and studding-sails set, with a view to cut them off from making into port.

As, however, the Gaudaloupe neared her expected prize, and their hulls became visible, they soon discovered they had mistaken the character of their prey. One of them proved to be a large brig-corvette, carrying a commodore's pendant, in company with an armed sloop and xebec. They had now gone too far to recede, even if they had been so inclined, as the wind was dead against their getting out, except by tack, and the gallant captain determined to give the enemy battle, at all hazards. They still continued their course, gradually shortening sail and making all secure as they approached. The enemy also advanced to meet them, so that in a short time they could make out each other's force, and saw at once that they had fearful odds to encounter. Fortunately before they met, the wind veered; so as to bring them on opposite tacks, two or three points free. They met each other under topsails; but previous to coming within shot-range, Captain Tetley called all hands aft, and, addressing the crew in the most cool and collected manner, pointed out to them their situation, and stating it to be his determination to bring them into action, it was for them to fight their way out, as the enemy being so superior in force, and they on a lee-shore, and almost within range of the batteries, they must either beat or be beaten.

Inspired by the gallant address of their commander, the crew gave three hearty cheers, and every soul on board, with the exception of the captain, stripped for the fight. The yards and every other spar which might endanger their safety by being wounded, were hung with iron chains; the guns, which were mounted on long slides, were loaded with round and grape, up to the muzzle, and then screwed up to point-blank mark, determined that their first broadside should tell home amongst the enemy's men, who appeared to be very numerous.

In this state they were fast nearing each other; not a whisper being heard on board the little bark, and every man at his station. On reaching within pistol-shot, they hoisted their colours, and the enemy did the same; but as they had determined to waste neither powder nor shot, they were resolved

to run alongside and receive the enemy's fire first. As soon, therefore, as their bows were opposed, the gallant captain gave the command—"Men secure yourselves." In an instant every man fell flat on the deck, and the next moment, the enemy poured in his broadside from eleven guns, of the same calibre as their own, accompanied with a rattling volley from the small arms. In a moment every man was on his feet, unhurt, and the captain of each gun having the lanyard of his gunlock in his hand, a deadly broadside was poured into the enemy's quarter and stern, together with a volley from the marines and small-arm men. They then immediately sheered up on his larboard-side, and before he could return the first fire they slapped another broadside into him. After the first broadside, they heard a most dreadful crash on board the enemy, and the second only served to increase the confusion.

After this, they continued fighting at close quarters for nearly an hour and a half, till at length the crews of both ships became so exhausted that it was quite the turn of a straw which would have the best of it. Once more, however, the wearied but gallant crew of the *Gaudaloupe* rallied, and cheered with such hearty good will, that *Johnny Crapaud*, daunted with the sound, turned tail on the victorious British, and not being cut up as they were in sails and running-rigging, made all sail and ran into his own port, which was close under their lee—so close that the shot from the batteries actually passed them during the latter period of the action. The *Gaudaloupe* was so dreadfully mauled in her standing and running-rigging that they could not work the vessel, nor set a single sail in pursuit of their flying foe; and it was fortunate for them that they had smooth water, or their masts might have been endangered, she therefore escaped, much to their regret. Had the action commenced a little farther off shore, there is no doubt they would have secured the prize. Independent of the corvette alongside, they had also her two consorts, the sloop and xebec, upon them during the early part of the action; and had it not been for a providential circumstance, they might have suffered severely from the taking position which the xebec took under their stern, and into which, she kept continually firing from her great guns, not daring to come near enough for her small arms to take effect. Fortunately for the English, they had, during their cruise, erected shot-lockers at the stern-sheets, and boxed them off on each side of the rudder, for the purpose of trimming her by the stern, whereby her stern-posts were blocked up, in consequence of which, the shot from the xebec took no effect upon her decks, but lodged in the lockers, where, coming in contact with their thirty-two's, they were stopped short or otherwise split.

For some time they were unable to get a gun to bear upon the xebec, till at length the third officer, assisted by one of the midshipmen, and the remaining crew of the guns being but two, succeeded in sluing the after-most quarter-deck gun, so as to bring it to bear upon the decks of the little wasp which had so long annoyed them; and having loaded it with canister-shot almost to the muzzle, it was fired with such deadly aim, that the staggering xebec fled without returning to the contest, and the armed sloop was so alarmed at the execution of their single gun, that she did not dare to venture within reach, but left them to manage as they could with the commodore. After they had been engaged some time, the yard-braces and other running-rigging of the *Gaudaloupe* being shot away, and the wind almost lulled into a calm, the enemy fell on board of them with his bowsprit directly over their stern; and at the moment, they could not alter the position of the vessel for want of head-sail to pay her off; but observing that the crew of their opponent were forsaking their guns, and rushing forward to the bows with the intention of boarding them, the captain immediately called out for boarders, and all that could, instantly rushed to the point of attack to repel the enemy. At this moment, by a fortunate shift of wind, the vessel's head paid round, which brought their disengaged broadside to bear upon the enemy, and clearing them of her bowsprit, prevented the necessity of their waging battle on their own decks.

This proved a fortunate circumstance; for the enemy having left their guns, and crowded forward to board, the broadside made fearful execution among them, and completely sickened them from any wish to prolong the contest: but having made good their retreat, the crew of the *Gaudaloupe* were piped from quarters and supplied with refreshments, after which, they turned to to repair damages, in order to get out of the reach of danger. Having secured their standing-rigging, spliced and rove new running-rigging, cleared the decks as well as they could, and made all ready in case of meeting a fresh opponent, they made sail, gained an offing, and bore away for the fleet off Toulon.

On examining their loss in men, it was found not so heavy as might have been expected, considering the force opposed, and the length of time they were engaged: one man killed, and twelve wounded, of whom one died in the hospital. His wound was the result of cowardice; for during the hottest of the fight, he became so appalled, that he took refuge under the lee of the long-boat amidships, and lay under her bottom, stretched at length in full idea of security. While thus skulking, a two-pound grape-shot, passed between the booms through the bottom of the boat, and carried away with it part of the poor fellow's face, whilst another spent-ball lodged in the fleshy part of his back, near the shoulder-blade bone.

The first-lieutenant received a singular wound in his breast; at the commencement of the action he commanded the fore-deck guns; while there, a musket-ball from the enemy struck, it is supposed, one of the back-stays, or some other hard substance, whereby it got flattened and spent, and then obliquely entered his breast, taking in with it three folds of his black silk handkerchief, which hung down loose: fortunately for him, the silk prevented its entering far, so that the ball was extracted without difficulty, and without doing him any material injury.

The remaining portion of the crew who were wounded speedily recovered.

They soon joined the fleet off Toulon, where they astonished their brethren by the picture they cut, the riddled state of their mainsail sufficiently attesting the severity of the fire they had been under; while the hull had suffered so much, that the vessel was dismantled, her stern-frame partially renewed, many shot between wind and water, and upwards of a hundred others taken out of the sides, and new spars to replace the wounded ones. A respite of a few weeks made both vessel and crew all afloat again.

The comparative force of the vessels engaged were as follows:—

English Force.—The *Gaudaloupe*, sixteen thirty-two pound caronades, complement on board one hundred and four men and boys. Loss: one killed, twelve wounded, one of which, died afterwards.

French Force.—Tactique, twenty-two thirty-two pounders manned by two hundred men, picked out of the other vessels in port, for the express purpose of carrying the *Gaudaloupe* by boarding. Loss: ten killed, forty wounded; but subsequent accounts stated their loss to have been more.

The xebec was armed with eight guns, having a crew of eighty men; her loss could not be ascertained, but there is no doubt she must have suffered severely from the discharge of grape which was poured upon her decks. As to the armed sloop, they counted her nothing, having scarcely seen her since the action commenced. They were also under the fire of the batteries on shore during a great part of the action, a shot from whence actually carried away their main-royalmast. They learned, some time afterwards, that these three vessels had actually been sent out with express orders, to carry them off-hand by boarding; but, poor fellows, they got grievously disappointed.

Few battles exhibit more striking proofs of what determination, tact, and bravery can achieve under most disadvantageous circumstances.

ADMIRAL BRIDPORT.—Speaking of the intended invasion by the French in 1798, his lordship drily observed—"That they might come as they could; for his own part, he could only say that they should not come by water."

LOSS OF THE EMIGRANT SHIP MARY.

The melancholy details of the appalling shipwreck of the *Mary*, an emigrant ship of London, while on her homeward voyage from Sydney, and the dreadful fate of nearly all the female passengers, have been received by the arrival of the *Penyard Park* packet-ship, in the London Docks.

The *Mary*, which was built at Ipswich in the year 1811, has for some years been engaged in the conveyance of passengers and emigrants between London and New South Wales, and was the property of several persons. She was barque-rigged, and measured 368 tons burden. On her departure from Sydney, in addition to her crew, she had on board 43 passengers, viz., Captain J. G. Collins, late Captain of the 13th Light Dragoons, his lady, four daughters, a son and an attendant, named Sarah Sarson; the wife of the commander, Captain Newby, and three daughters; Mrs. Evans and five daughters, Mrs. Heather and three sons, Mrs. Turnbull, Mr. and Mrs. Bushell and child, Sarah Guy, Sarah Folkes, Eliza Robinson, Mr. and Mrs. Hofferman, Mr. and Mrs. Reeves, and ten emigrants, named J. Abbott, W. S. Hall, — Heather, M. Nicholson, S. Gayer, G. Hannon, G. Jones, J. Neale, J. Wilkinson, and T. Newman. She was also freighted with a valuable cargo, comprising wool, tallow, oil, and other merchandise, with a case of bullion.

The loss took place six days after leaving Sydney, on a sunken rock off Flinder's Island, in Bass's Straits, between 300 and 400 miles from Sydney. So sudden was the catastrophe, which happened in the middle of the night, that seven minutes only elapsed from the period of her striking and breaking up, and, lamentable to state, 17 women and children met with a watery grave. The chief mate had the watch at the time, and at about 11 o'clock he called Captain Newby up, saying he thought land was near. The captain, however, was unable to perceive it, and shortly afterwards saw broken water on the lee beam. There was no wind to make the ship answer her helm; she refused stays, and drove broadside on the rocks.

Captain Collins, of the 13th Light Dragoons, states—The *Mary* sailed from the heads of Port Jackson, on Monday morning, the 19th of May, 1845, and the wind being unfavourable, Captain Newby coasted to the south, and attempted the passage through Bass's Straits. At about a quarter past 11 o'clock, on a Saturday night, the alarm of the ship being in danger was given by Captain Newby to the cabin-passengers, who were all in bed, and he desired them to dress and hasten upon deck. The cabin-passengers were—Mrs. Newby, her three daughters and servant; Mrs. Turnbull; Mrs. Collins, four daughters, and one son at the breast, two maid-servants, and myself. We had scarcely left our berths when the ship struck upon the reef, and the crushing noise of the timbers was distinctly heard above the roar of the breakers; and in less than three minutes the water rushed violently into the cabin as high as our knees, when she struck a second time. The mainmast then sank through the bottom of the ship, its maintop and topmasts being supported by the main deck. The same shock that caused such devastation forced the cabin-door, which opened and shut in a slide, to close nearly on us, the ship at the time being so much on her starboard side that it was doubtful whether she would not capsize. Fortunately I perceived the door closing in sufficient time to introduce my hand into the open space, so as to push it back, and with the utmost difficulty I succeeded in getting upon deck all the passengers. This was scarcely effected, when the bottom of the ship separated from the sides, carrying away the lower cabin-deck, which we had just left, the tons of oil and cargo dashing against the reef, and the breakers beating over us with fearful violence. The only boats that were available were the whale-boat on the larboard quarter, and the long-boat on the main-deck. Some of the passengers were put into each of these boats, and had just placed Mrs. Collins in the long-boat, when I heard Sarah calling out for her to take the boy from her, as she was unable to hold him any longer. I, with great difficulty, reached her, and put a rope into her hand, which I desired her to hold by until I had put the child into the boat, when I would return

for her and my two girls, Augusta and Kate. I had scarcely left her when a breaker broke over the deck, carrying me with great force against a water-butt. I effected my way to the long-boat, and, while I was giving the child to its mother, the main-topmast fell on board, crushing the whale-boat, which was lying upon the skids alongside of it; and immediately after the fore and mizen-mast, with all their sails set, also fell overboard on the starboard side, on which the deck righted, but the rigging of these masts all lying across the deck, intercepted the communication fore and aft. I was searching for my two daughters, and their maid, when I met the captain, who informed me that he had just put them with his family, a moment before, in the whale-boat, on the larboard-quarter, where they were all safe; that the deck was about breaking up, and if I valued my life, I would follow him. He wished to have returned to the whale-boat, but the deck beginning to separate, he made immediately for the long-boat, which we managed to reach. The breakers continued to wash over us, and, the masts being gone, we had no power to launch the boat, and no visible means then presented themselves to save us from the fearful dangers that thus accumulated around us. At this critical moment, when all hope of preserving life had nearly abandoned us, the deck suddenly parted between the main and foremasts, and the long-boat pitched stern foremost into the sea; but notwithstanding the quantity of water and people in her, she quickly righted; we found the water gaining on us, and then discovered that both the plugs were out, on which one of the men tore the sleeve off his shirt, and by its aid partly succeeded in stopping the water. With the aid of boots, shoes, and hats, we contrived to keep the boat afloat, but having only one oar, we had the greatest difficulty in avoiding the numerous casks and broken wreck which threatened us on every side. From the time the ship struck until the deck broke up only seven minutes had elapsed. While we were surrounded with the broken pieces of the wreck a huge wave dashed a cask of tallow over my head, against the inside of the starboard side, near the stern, and carried away 18 inches of the gunwale and upper streaks; a tun of oil followed the course of the cask of tallow, striking off my hat in its passage, but the cask of tallow having already made a breach in the side of the boat, it met with no resistance and passed into the sea, deluging the boat with oil. One of the sailors, named Todd, swam to the boat from the wreck with an oar, and we then got into smooth water. The sea outside the reef, as well as the wind, being nearly calm, we heard the voices of some sailors, which we supposed to be the men in the whale-boat, and we steered in the direction the sound came from. On nearing these men they stated that the whale boat had foundered, and that Mrs. Newby was the only person saved. Her escape was effected by her catching a rope alongside the broken deck in the water, when one of the men hauled her on deck. The piece of the ship that was afloat was the quarter-deck, on which we found 12 men and Mrs. Newby. We obtained six oars more and two tubs, the men also found a cask of brandy, and asked whether they should drop it into the boat, but the sailors were unanimous in rejecting the brandy, from a sense of the evils it might cause. Nothing could surpass the undaunted self-possession which characterized the conduct of the captain and crew throughout this most fearful night, and the men rescued from the wreck waited there in the most collected and steady manner until each was called by name, when he dropped quietly into the part of the boat assigned him. The ladies and children were sitting up to their waists in water and oil, and the boat was stove in three places. The large breach made by the tallow cask the carpenter had contrived partially to repair with his coat and some tallow he found in the boat, and the broken pieces which he picked up. In this wretched state, the water gaining on us whenever the least interruption took place in baling the boat, we continued for nine hours and a half, and at half-past 8 o'clock on Sunday morning landed on the island, about 18 miles distant from the reef struck by the ship. We found a small spring of water on the beach, and determined to build a small hut to shelter us. The only tool we possessed was a carpenter's axe, the edge of which had been broken in endeavouring to cut away the masts, &c., of the ship. Some of the party went for shell fish along the beach, but only

succeeded in picking up a few limpets, which were divided in equal proportions, with a small piece of pumpkin to each person. On reckoning the number landed, we found that 42 persons had been saved, and 17 drowned. On the afternoon of Sunday, Captain Newby, with five of the crew, left us in search of the settlement, as we knew Government had a station on Flinder's Island, but we were uncertain whether the island we were on was it or not. The only food the party took with them was one slice of pumpkin each. All Monday passed over, the ladies and children began to sink, despair was expressed by many, and fervent were our prayers to God for aid. Never did the words of our Lord's prayers, "Give us this day our daily bread," appear to me so impressive as they then did; bereaved of two of my children, and those saved, hourly sinking before me, calling repeatedly for bread and nourishment, which I was unable to give them, almost naked, and exposed to incessant rain, which fell all Tuesday, and continued during the night. On the morning of Tuesday, the third day, my eldest surviving daughter, near seven years old, showed great symptoms of debility, and death seemed stamped in her countenance. I had succeeded in collecting some limpets, and was entering the hut, when I heard a cheer, and in a few minutes a strange man and boy, with a haversack, made their appearance. The man said he brought supplies of food and clothing, and that Dr. Milligan would send more in the course of the day. Two of the men who had accompanied the captain now made their appearance, and an abundant supply of bread and roast mutton was spread out before our famished eyes. The distance from the settlement was 25 miles and the road impracticable for women and children. The wind was unfortunately adverse, and we determined to await the return of the captain, who arrived in the middle of the night. The next morning the wind being still against us, the captain sent off all the crew and the passengers capable of travelling by land to the settlement. The rain continued to descend in torrents, and the wind continuing unfavourable and strong, the communication with the settlement, both by land and water, became impassable for several days—only the women and children receiving an allowance of food. On Saturday the weather became more moderate, the rain ceased, and we received a fresh supply of provisions. On the following day the wind being favourable, we, on the eighth day from our landing got into the long-boat, and proceeded by water towards the settlement, and reached it about half-past 10 o'clock that night. The owners of the *Mary*, in the most positive terms, contradicted the declarations of the ship's unseaworthiness, and in proof produce the certificate of her soundness, as given by Mr. Ashurst, surveyor for Lloyd's. Those who perished were—Mrs. Heather and two daughters, Mrs. Guy, Mrs. Turnbull, Sarah Folkes, the whole of the family of Mrs. Evans (six in number), the three daughters of the commander, Captain Newby, and the Misses Augusta and Katherine, daughters of Captain Collins. The ship and all she contained, valued at between £20,000 and £30,000, were a total loss.

THE NORTH POLE GAZETTE.

WHEN Captain Parry's company were wintering in the Arctic regions, one of the means of amusement fallen upon for the purpose of cheering—not the long nights, but the long night—for their's was some six months long—was the publication of a jocular newspaper, under the title of the *North Pole Gazette*. One of the sheets contained the following whimsical paragraph:

ACCIDENTS AND OFFENCES.—Yesterday, Tom Tarwig taking an airing with Jack Junk, happened by chance to thrust his nose within two inches of his comrade's link. Junk perceived that it was pale, and immediately called out "Splice me, mate! 't' your bowsprit's going." Tarwig immediately raised his hand to his face, but searched it in vain for his nose. Snow was promptly applied to the part affected; the danger was soon at an end, and Tom could feel his nose again. But for the well-timed efforts of Junk, it is more than probable that Tarwig would have returned with his nose in his pocket, which

might have proved a serious inconvenience to that accomplished snuff-taker.

Sam Topsail was brought yesterday morning before Lieutenant Larkish, charged with having purloined some brandy, the property of Dick Drylips, under the following circumstances:—It appears that the brandy being frozen as hard as glass, a diamond was used by the proper officer to cut out the regular allowances of the crew. Dick Drylips, at the dance on Wednesday evening, being about to perform a minuet with a bear, thought it prudent to put two slices of his brandy out of his jacket pocket, from an apprehension that they might be broken by his movements, in which case the smaller particles would have been in danger of being thawed by the warm hug of his partner. He accordingly laid them on the head of a cask on which Tom Topsail was seated. The prisoner at first denied having seen the brandy, but being confronted with Bill Bull's-eye, who saw him drilling holes in one of the cakes, with a view of inserting therein the prongs of a fork, for the purpose of toasting it, he was convicted of the fraud, and sentenced to pay the accuser two slices of his next allowance of brandy.

Roger Razorface was accused of cutting and maiming. The facts were these: Bob Breeze going down to be shaved, was lathered in the usual way. At that moment the cabin-door was unfortunately opened, and the soap suds on his muzzle became in one instant as hard as marble. Razorface tried to thaw the lather with a red-hot poker; but this being objected to by Bob, on account of its making the water boil, which had been laid with the soap in the indenture of his chin, Razorface at last took a chisel and hammer to the other part of his face, and succeeded in getting off the lather and beard, and with it part of the upper lip. It was admitted by Breeze that he objected to the use of the poker, and the magistrates thereupon dismissed the charge, considering the applicating of the chisel to be an act of his own; and moreover being of opinion, that the chisel in question was not a sharp instrument within the meaning of the act.

Now on sale, some excellent nose-gloves, lined with woollen, and made to tie behind.—Apply to Bobstay.

Also a few dozen superior nostrils, made of quills and reeds (warranted not liable to be frost-bitten), to be worn with Bobstay's noses.

BOARDING AN ENEMY'S VESSEL.

"THE enemy's vessel soon became unmanageable, and fell on board the *Spitfire*, hooking, with the flutes of his best bower anchor, the weather fore-rigging of the British brig. This opportunity was not overlooked by Burton, who, seizing his sabre, which lay unsheathed on the capstan, brandished it aloft, shouting, in a tone which was heard distinctly along the *Spitfire's* deck, whilst the fire of both ships slackened, 'Stand fast; stand fast your fire. Follow me, every man that can raise a cutlass!' Fast as he flew to gain a footing on the enemy's deck, he soon found himself not the foremost of about forty of the British, who mounted the side, swung themselves, sword in hand, on the enemy's forecastle, and tumbled, pell-mell, amongst the Americans, who now crowded forward to repel the invaders. The *Spitfire's* crew had been so long engaged amid fire and smoke, that the latter had begrimed not only their faces, but naked bodies, which were here and there palely seamed by streams of sweat, which ran from their burning temples. The effect of excessive excitement was, in more than one instance, contrasted by the sunken eye of exhaustion, which too visibly betrayed a frame deserted by nature, though a heart sustained by all-enduring valour. From these appalling appearances, heightened by the clotted gore, with which many had besmeared themselves, in heaving the mangled dead overboard, or the fresh blood gouts which streamed down from their own green wounds, the assailants assumed, if not the aspect of fiends, certainly the most formidable resemblance to those wild warriors who hideously paint and tattoo their bodies preparatory to battle. The moment they reached the enemy's deck, Burton, leading on his men, was met by the master, a powerful, strong-built, resolute-looking

man, armed with sword and pistol; the latter he levelled, with keen eye, at the British officer, which, happily for him, flashed in the pan. Foiled in his aim, he flung the treacherous weapon full at his adversary's head, carrying off the lieutenant's hat, and slightly scalping him. Burton now rushed on his huge antagonist, and they crossed swords, a weapon in the use of which he was peculiarly expert. A few seconds had hardly elapsed ere the Columbian Ajax lay stretched on the deck. The victor strode over the body and cheered on his men to the attack. Fierce and resolute was the contest, where nothing but valour could compensate for disparity of numbers. The roar of the cannon had now subsided, and was succeeded by the clink and clatter of brittle blades, which not unfrequently broke short in their handles, disappointing meditated revenge, and often occasioning the loss of the assailant's life for that of the assailed. The Americans were slowly dislodged from off their fore-castle, fighting foot by foot. Burton, elated by success, eagerly sought the American captain, who in consequence of the loss of both his lieutenants, was compelled to lead on his men alone, whom he now successfully rallied to a desperate charge, in which they beat down the British blades with the weight of their muskets' butt ends. Perceiving the Spitfire were beginning to give way, Burton shouted, with energy, 'Hold on, hold on your own, my lads.' At this moment the well known voice of the boatswain, who led on a few fresh hands, was heard roaring in the rear, 'Make a lane, there! I told the bush-fighting beggars I'd sarve 'em out! Hurrah, for Sally-port!' His furious haste into the thickest part of the combat, kindled afresh the spirit of emulation. Burton, thus supported, soon gained the quarter-deck, driving before him the enemy, who now tore down the fire-screens, and tumbled down the hatchways in the utmost consternation. This opportunity, it may be supposed, was not lost on some eager blades, for inflicting the broad R (arrow), as they term it, on the heads of several, as they vanished below, without picking their steps. 'Ship the gratings, and secure them below,' cried Burton. 'May be, Dan won't do that same,' said an Irish waister, who had spent four long years peeping through the bars of a French prison; 'It's myself, my joy, that likes to be lookin' at the inimy on the right side o' the gratin'. Here a scene of the most extraordinary exhilaration and extravagant joy ensued, surpassing all power of language to describe. A thousand tongues appeared to be unloosed at once. Congratulations, gratitude to Heaven, and the effusions of affectionate friendship, embodied themselves in short sentences. 'Thank God! thank God!'—'Well, Bill, my boy, I can swear you were first aboard.'—'Hurrah, for old England!'—'Didn't I tell you her mainmast 'ud go? I'll bet a week's grog, there's one of my own chalking in it now.'—'The slaughterhouse did the job.'—'They fought hard for it, too.'—'Nothing like boarding, after all.'—'Didn't I back you, Bob, like a trump?'—'My eyes and limbs, how the beggars tumbled below!'—'Bloody wars, how we sarved 'em out!'

LOSS OF THE DUKE WILLIAM.

THE Duke William having been ordered to Cork, under convoy of the York man of war, Captain Hugh Piggot, to take in soldiers for America, lost the man of war and the other ships by means of a fog, which thickened just as they came near the Irish coast. Captain Nicholls stood in as near as prudence would permit him. As the man of war had shortened sail in the fog, he was the longer in standing in, and just as he came near the land it cleared up, and the wind blew off the land, so that Captain Nicholls was a long way to leeward.

In the morning, as soon as he saw the man of war and the fleet to windward, he made all sail the ship could carry; and, as he went very fast, just as the man of war had got his pilot on board, the Duke William had gained so much, that the pilot-boat came directly to her, and put a pilot on board; but the flood-tide being come away, Captain Nicholls could not weather Powerhead,—the entrance of the harbour.

On a succeeding night it blew so hard, the transport was

driven as far as Bellerotten Island; and the wind still continuing high, the next day Captain Nicholls was obliged to bear away for Waterford. When they came off Credenhead, the captain fired several guns for a pilot; but none coming off, and not being acquainted with the harbour, they brought the ship up, though the sea was very high. At last a pilot-boat came off, and they took an old man out of her. The boat went on shore immediately. They went to work to get the anchor, and got it just a-peak, when the vial broke, and she ran away with all the cable before they could prevent it; and by the time they could heave it again, and get the ship under sail, it was almost dark. The pilot assured the captain, that if he would follow his directions he would carry the ship in safety. The captain ran under the fore-top-sail treble-reefed, and got a range of the sheet cable over-hauled. They ran for some time, and could just see the land.

Capain Nicholls asked the pilot several times if he should bring the ship up; but he said, "No," till he found the water shoaling very fast. The captain then made all clear to bring up; but at the same time asked the pilot which was the deepest water, who confessed he did not know. Captain Nicholls then brought up, and when day-light appeared, to his great surprise, he found high rocks astern of him, and so very near, that it was impossible to veer away a cable. They had let the sheet anchor go in the night, and as they had wore away the best bower, that it might beat likewise, it was providentially the means of their preservation.

They now got down yards and top-masts, hoisted the signal of distress, and fired a great many guns. At last they saw a boat coming from the windward. As soon as the boat came near enough, they hove a rope to those who were in it, and wore the boat clear of the counter. A man in the boat now offered the captain to come on board for 50*l*. to which he readily assented. Accordingly, he came up to the stern ladder; but as soon as he found they were so near the rocks, he declared for all the ship was worth he would not stay on board. The captain told him he came off as a pilot acquainted with the harbour, and therefore he should stay. Hereupon Captain Nicholls called to the people to hoist their sails, and immediately proceeded to cut the boat adrift. The pilot appeared in the greatest confusion; but the captain told him it was in vain to complain, and that if he thought, by cutting or slipping the cable, he could carry the ship in a place of safety, he was ready to do it. The man assured the captain he could not take charge of the vessel, nor could he venture to carry her in, for he was afraid she would be on shore and all to pieces against the rocks before she could veer; and if she did veer, there had been a large French East Indianan lost upon the bar which made the channel very narrow, and he did not know the marks to carry her clear of the wreck.

The ship rode very hard; and it being Sunday, there was a great number of people ready to plunder her should she strike. As she pitched so much, the captain was apprehensive that at low water she would strike. There were two English frigates in the harbour, which, as soon as the weather became more moderate, sent their boats to assist them. The custom-house smack also came to their aid, and put his mate on board as a pilot; and being a man well acquainted with the harbour, he confessed the vessel had been in great danger.

They lay there three weeks before they could get out to proceed for Cork. They got off Cork in the evening, and it being fine weather came immediately to anchor. On the succeeding morning the York, with the transports, came out, and put the soldiers on board the Duke William.

They sailed the day after, and saw two ships, the America, of 64 guns, and a frigate, cruising off Cape Clear. Upon the York's making a signal for the Duke William to come between them, they stood directly towards them; but through a mistake of the helm, the York ran on board the America, the sprit-sail taking her main-shrouds, and the bowsprit carrying all her weather-shrouds away. Before she could get clear, she had her main-mast pulled away, with the fore-top-mast and mizen-top-mast, having nothing left but the fore-sail, though the moment before she had three top-gallant-sails set and every stay-sail. The York got a little damage in her head.

The Duke William having proceeded to Halifax arrived there safe; and from thence went to besiege Louisbourg. After they had landed the troops, the transports and some of the men of war went into Gabours Bay. The crew of the Duke William being at this time very sickly, Captain Nicholls petitioned Admiral Boscawen to let him have a small peninsula, to put them on shore, and they would defend it, which he granted. Accordingly, all the masters of the transports armed themselves and people, and went on shore together, where Captain James Wilson was appointed their general, C. Price, Benj. Suggel, Saml. Henry, and Nicholls, captains, each having a lieutenant under him.

Captain Nicholls having fixed upon a convenient place in the island for an harbour to shelter himself and people, sent for a dozen men and the carpenter, by whose labour a commodious habitation was formed, and the sick speedily recovered.

On the reduction of Louisbourg, the island of St. John, in the entrance to the Gulph of St. Lawrence, fell by capitulation, and the inhabitants were to be sent to Old France. Lord Rollo, with a large party were sent on board the transports which were ordered thither for that purpose. The transports were nine in number, of which the Duke William was one. They proceeded under convoy of the Hind sloop of war, Captain Bond, but meeting with contrary winds and bad weather, had a long passage.

Having brought the fleet up off a cape called St. Louis, nine leagues distant from the Gut of Canso; and it blowing strong in the night, the Duke William's cable parted. In the morning the man of war made a signal to bear away to the Gut again. Captain Nicholls, however, resolved to stay, and endeavour to recover his anchor and cable. The ships all left the Duke William riding, and the next day the weather

LOSS OF THE DUKE WILLIAM, TRANSPORT, IN 1758.

became fine. They weighed, and dropped the ship at the buoy, and unbent him; took the buoy-rope into the hawser, and hove the anchor up; but by the time they got the anchor into the bows, it came on very bad weather; wind, hail, and rain, with terrible claps of thunder and severe lightning. A long winter's night was approaching, and as they were on an unknown coast (for their drafts were very erroneous) their situation was extremely unpleasant. The fleet were much afraid that some misfortune had befallen them; for though the weather was very bad with them, it was not so severe as with the Duke William.

Captain Bond in the morning made a signal for all masters of transports, and desired they would man their boats, as he thought he had heard several guns fired in the night, which he supposed to be signals of distress from the Duke William, who, he apprehended, was driven on shore, and the crew

WITH UPWARDS OF 300 FRENCH PRISONERS ON BOARD.

consequently attacked by the Indians. Accordingly, when their boats were manned, they were desired to row as far as it was prudent to venture. As the weather was still bad, and they could see nothing of Captain Nicholl's vessel, they returned, giving her up as lost.

In the interim, the captain kept the ship under a pair of courses, and in the morning bore away; but it coming on very dark he was obliged to lie to; and as it did not clear till late in the afternoon, he had a narrow escape in getting in, the Gut being very narrow, and, in consequence of the trees, very difficult to find. They shortly after sailed out of the Gut, and got to St. John's. In the passage, Captain S. Hurry, in the Yarmouth, was run ashore by the ignorance of his pilot, and was near being lost, but fortunately his ship got off without any damage.

A large party of soldiers having been ordered up the

country to bring the inhabitants down on board the different transports, as the Duke William was the largest used, the missionary priest (who was the head man of the country), with the principal inhabitants, were ordered by Lord Rollo, to go to France with Captain Nicholls. On his arrival, he requested the favour, that the people might come on board to mass, and to be married. Captain Nicholls told him he had no objection, on condition that he had a fee of every bride. Being asked what he demanded as a fee, the captain replied—the first kiss after she was married. The priest being a facetious man complied; and they had a great many marriages, as a notion prevailed among the crew, that all single men would be made soldiers.

Having got a great abundance of stock, they all sailed from St. John's together; Captain Wilson, with Lord Rollo, and some soldiers on board, and Captain Moore with soldiers, under convoy of the Hind. Captain Moore's vessel was lost going through the Gut, by striking on a rock under water, and the soldiers were put on board Captain Wilson, bound to Louisbourg. Captain Moore, his son, mate, and carpenter, took their passage in the Duke William.

As the wind was contrary, they lay in the Gut of Canso some time. The French used frequently to go on shore, and remain there all night, making fires in the wood to keep themselves warm. Some of them desired that they might be allowed muskets to shoot game, as they were not afraid of meeting with the Indians, which Captain Nicholls granted. About three hours after they were gone, one of them came running, and begged that the captain with his people would go immediately on board, as they had met with a party of Indians who were coming down to scalp them. Accordingly, Captain Nicholls, with the other masters and sailors, went off, and had but just got on board before the Indians came down; but, finding only Frenchmen, they went away directly.

November 25th, they sailed out of the Bay of Canso, with a strong gale at N.W., Captains Nicholls, Henry, Beaton, Dobson, Sugget, Whitty, and Kelsy, agreed to make the best of their way to France with the people, and not to go to Louisbourg, as it was a very bad time of the year to beat upon that coast. Captain Nicholls was appointed to lead the fleet. They took leave of the agent who was bound to Louisbourg.

The third day after they had been at sea, it blew a storm in the night, being thick with sleet, and very dark. The transport parted company with three ships of the fleet. The storm still continuing, in a day or two she parted with the rest. The Duke William continued in very good order, and though the sea ran mountains high, went over it like a bird, and made no water.

On the 10th of December they saw a sail, which proved to be the Violet, Capt. Sugget. On coming up, Capt. Nicholls inquired how all on board were; he replied, in a terrible situation, they had a great deal of water in the ship, her pumps were choked and he was much afraid that she would sink before morning. Captain Nicholls begged of him to keep up his spirits, and he would, if it were possible, stay by him, and spare him a pump, which he got out of the Parnassus. He also told him, that as the gale had lasted so long he was in hopes that it would moderate after twelve o'clock; but, unfortunately, it rather increased.

At changing the watch at twelve, Captain Nicholls found that they went fast a-head of the Violet, and that, before morning, if they did not shorten sail they would run her out of sight. While scudding under the fore-sail and treble-reefed main-sail, he consulted with Captain Moore and their mate, what was best to be done; and it was unanimously considered necessary that the main-top-sail should be taken in, as the only way to save their lives was by keeping them company till the weather should moderate. Accordingly they took in the main-top-sail, and got their three pumps ready in case of necessity. They had forced the spare pump down the after hatch-way, and shipped into an empty butt, of which the French had brought several on board for the purpose of washing. They aired them with spun yard, to bail in case of need. They now thought that the Violet gained on them; and at four o'clock, to their great satisfaction, they saw her very plainly.

On changing the watch, they found the Duke William still very tight and going well, the carpenter assuring the captain there was no water to strike a pump. Being very tired with walking the deck so long, Captain Nicholls thought he might go down and indulge himself with a pipe of tobacco; he told the mate to acquaint him immediately should there be any alteration. They had driven the board next the lower part of the pump to see how much water was in the well; and every half hour, when the ball was struck, the carpenter went down. As he had yet found no water, Captain Nicholls entertained no apprehensions of the safety of the Duke William; he was only concerned at present for the Violet.

Soon after the captain had filled and lighted his pipe, while sitting in the state room, he was thrown from the chair by a blow which the ship received from a terrible sea. He sent the boy to ask the mate (Mr. Fox) whether anything was washed over. The mate sent word that all was safe, and that he saw the Violet coming up fast.

Being still very much fatigued, the captain thought he would try to get a little sleep to refresh himself; and without pulling off his clothes, he threw himself on the side of the bed. Before he had closed his eyes, Mr. Fox came and told him that the carpenter had found the water above the keelson, and that the ship must certainly have sprung a leak. The captain immediately arose and took the carpenter with him into the hold, and, to his great surprise found the water roaring in dreadfully. On examination, he found it was a butt started, and the more they endeavoured to press anything to stop it, the more the plank forsook the timber. They then went on deck to encourage the people at the pumps. Captain Nicholls had made a mark with a piece of chalk to see how the water gained upon them. Finding their case desperate, he went to all the Frenchmen's cabins and begged of them to rise: telling them, that though their lives were not in danger, their help at the pumps was highly essential. They immediately got up, and cheerfully assisted.

By this time it was day-light, when, to their great surprise and concern, they saw the Violet on her broadside, a little distance from them; and the fore-yard broken in the slings, the fore-top-sail set, and her crew endeavouring to free her of the mizen-mast, as it appeared she had just then broached to, by the fore-yards giving way. It came on a most violent squall for ten minutes, and when it cleared up, they found, to their great and deep concern, that the poor unfortunate Violet, with near four hundred souls, was gone to the bottom. This fatal disaster shocked even the stoutest on board the Duke William; especially as a similar fate was now threatening them.

All the tubs before mentioned, were now got together and made gangways, the Frenchmen and women, who behaved with uncommon resolution, assisting. They then opened all the hatches, and as the water flowed fast into the hold, they filled the tubs and hauled them up, and turned them over the coming on the upper deck, which, with three pumps constantly at work, and baling out of the gun-room scuttle, must have vented a large quantity of water. A seam would not have hurt them, but a butt's end was more than they could manage; however, every method was tried which was thought of service. They quilted the sprit-sail with oakum and flax, with one of the top-gallant-sails in the same manner, to see whether anything would suck into the leak to stop it, but all in vain.

They continued in this dismal situation three days; the ship, notwithstanding their endeavours, full of water, and expected every minute to sink. The captain had given all the liquor that was left on board to the people, and all the provisions; the hold being full of water, and the ship swimming only by the decks being buoyed up with empty casks.

About six o'clock, on the fourth morning, the people came to the captain and declared they had done all in their power; that the vessel was full of water; and that it was in vain to pump any more. The captain told them he was convinced that what they said was too true, and complimented them upon their attention and exertion. He then acquainted the priest with their situation, assuring him that every method for saving the ship and the lives of the people had been resorted to in vain, and that they expected the decks would blow up every moment.

The priest appeared confused; but immediately went to give his people absolution; and a melancholy scene ensued. Strong, hearty, and healthy, looking at each other, with tears in their eyes, describing their unhappy condition, and preparing for death.

Captain Nicholls now walked upon the deck with Captain Moore, desiring him to think, if he could, of some expedient to avert their destruction. Captain Moore, with tears in his eyes, confessed that he knew of no method. Captain Nicholls proposed hoisting out the boats, that in case a ship should appear, they might save their lives, as the gale was more moderate. Captain Moore thought it would be impossible, as everyone would endeavour to get into them. The former captain, however, called his mates, carpenters, and men, and proposed getting their boats out, at the same time acquainting them that it was to save if possible, every soul on board, and that in case any person was to be so rash as to insist upon going into the boats, besides those who he should think proper, he would immediately punish such person. They all solemnly declared that his commands should be as implicitly obeyed, as if the ship was in her former good condition. A rare instance of obedience and submission!

The captain then went and acquainted the head prisoner whom they had on board, with what they were going to attempt. He was a hundred and ten years old, was the father of the whole island, and had a number of children, grandchildren, and other relations on board. He assured the captain that he and his fellow-prisoners would assist him in anything he proposed, and the captain in return assured them that he would run the same chance with them, and never desert them.

Captain Nicholls now asked Mr. Fox and the carpenter if they were willing to venture in the long-boat; they answered bravely that they were; for whether they died in the vessel or a mile or two farther was a matter of very little consequence; and, as there was no prospect but death if they stayed, they would willingly make the attempt. The captain then proposed to Captain Moore, the carpenter, and mate, their going into the cutter, which they also agreed to. As the sea was too high to lower the boats into the water with the runners and tackles, the captain told them his people should get the cutter over the side, and have a proper painter made fast to her before she dropped into the water; and that they should have two axes to cut the runners and tackles when they should think the most convenient time. They accordingly got the cutter over the sides; and the ship lying pretty quiet, they cut the tackles, and she dropt into the water very well, and the painter brought her up. They went then to work with the long-boat. Day-light now raised their spirits, and the weather was tolerably moderate. The mate and carpenter cut the runners, and the long-boat fell into the water as well as the cutter had done; and having a proper painter made fast, she brought up extremely well.

There were people at the fore and main-top-mast heads to look out for a sail, when, to their unspeakable joy, the man at the main-top-mast head cried out that he saw two ships, right astern, making after them. Captain Nicholls went and acquainted the priest and old prisoner with the good news. The latter took him in his aged arms and cried for joy. The captain then ordered the ensign to be hoisted to the main-top-mast shrouds, and to get the guns all clear to fire. It was very hazy, and the ships were not far from them when they discovered them first.

As soon as they hoisted their signal of distress, they hoisted English colours, and seemed to be West Indiamen, of about three or four hundred tons. They kept loading and firing as fast as possible, when they perceived that they spoke each other; and setting their fore-sail and top-sails they hauled their wind and made from them. Captain Nicholls, imagining that the bigness of the vessel, and her having so many men on board, it being war time, might occasion a distrust, ordered the mainmast to be cut away, to undeceive them. They had people all the time at the shrouds to cut away in case of necessity. One of the shrouds, not being properly cut, checked the mainmast, and brought her up right athwart the boats. Captain Nicholls run

ast himself and cut both the boat's painters, or else they would have been stove to pieces, and sunk immediately. A dismal thing to be obliged to cut away the only thing that could be the means of saving their lives, and afterwards to see the ships basely desert them! Driven from the greatest joy to the utmost despair, death now appeared more dreadful. They had only the fore-sail hanging in the brails, and the braces of both preventers being rendered useless by the falling off of the mainmast, and the yard flying backwards and forwards by the rolling of the ship, they were fearful she would overset entirely.

They ran from the boats till they could but just see them; and finding that they did not endeavour to join them, though they had each oars, fore-mast, and fore-sail, Captain Nicholls consulted with the boatswain on the best measures to be adopted in their deplorable situation. The captain thought, that at all events, they should bring the ship to, though he confessed it a terrible attempt to hazard her upsetting. The boatswain said it appeared too hazardous, as the vessel steered very well. However, finding the men in the boats did not attempt to join them, the captain called all the people ast, and told them his resolution. They declared it was desperate, but so was their condition, and that they were ready to do whatever he thought best. Captain Moore disapproved of the measure. Captain Nicholls then acquainted the priest, the old gentlemen, and the rest of the people, with his intentions, and the motives for them. They were all pleased to say, let the consequence be what it would, they should be satisfied that he had acted for the best, and they were therefore resigned to what might happen. This was a dreadful crisis; and great were Captain Nicholls's feelings when about doing that, which, though in his own judgment, was right, might be the means of sending four hundred persons to eternity. His resolution, however, did not forsake him.

He persevered, and gave orders to bring the ship to. In hauling out the mizen, which had been greatly chafed, it split. They then got a new stay-sail, and bent it to bring her to, which had the desired effect, though it was a long time before this was accomplished, and they were once afraid that they should be obliged to cut away the fore-mast, by a large sea striking on her starboard quarter. The next sea hove her to, and she stayed very well. When they saw, from the yawl, that they were lying to for them, they shipped their fore-mast, and ran them on board. As there was too much wind and a large sea, to sprit the sail, they came on board, holding their sheets in their hands. As soon as she came, Captain Nicholls sent some men into her to row and fetch the long boat. They soon joined her, got her foremast up, and set sail, as did the cutter; and, to their great joy, came safe to them.

Just as they had joined them, the people from the fore-top-mast cried out, "A sail! a sail!" The captain thought it better to let the ship lie to, as, by seeing the mainmast gone they might be certain they were in distress. It was hazy weather, and they could see at no great distance; but the strange ship was soon near enough to see and hear their guns. Just after she had hoisted her colours (which were Danish), her main-top-sail sheet gave way, which, when Captain Nicholls saw, he concluded that the other captain was going to clew his main-top-sail up, to pend him, and come to their assistance, which good news he immediately communicated to the priest and others. In transports of joy they embraced him, calling him their friend and preserver. But, alas! poor, mistaken men! this momentary joy was changed into many hours of despondency by a second disappointment; for, as soon as the strange captain had knotted or spliced his top-sail sheet, he sheeted it home, and hauled from them. This was about three in the afternoon. Gloomy despair then reigned in every countenance, and lamentations echoed in the air. Captain Nicholls now wore the ship, which she bore very well, and steered tolerably before the wind.

About half an hour after, the old French gentleman came to Captain Nicholls, and affectionately embracing him, said, that he and his countrymen requested that the captain and his people would endeavour to save their own lives in their boats, and leave them to their fate, as it was impossible the boats could carry all. The captain replied, that there were

no hopes of life for any; as they had all embarked in the same unhappy voyage, they ought all to take the same chance. Urged by their further solicitations, he mentioned their proposal to Captain Moore and his people, who said, as nothing further could be done, they would comply with their request. They took leave of each other with tears in their eyes, and the captain requested his people to keep the boats near the ship, which he was determined not to quit himself until it was dark. They all assured him that they would not leave him, and hastened down the stern-ladder. As the boats ranged up by the sea, under the ship's counter, those that went last hove themselves down, and were caught by them in the boat.

Captain Nicholls had a little Norse boy on board, whom no entreaties could prevail on to go into the boat until he did. When it grew dark, the captain insisted upon his going, saying he would follow him immediately. He got on the stern ladder, when a Frenchman, whom the fears of death had induced to quit his wife and children, unperceived by any, got over the taffrail, and treading upon the boy's fingers, made him shriek out. Imagining somebody was in danger, the captain went to see what was the matter, the old Frenchman following him; when the latter, perceiving the man and his intentions, called him by his name, and said he was sorry to find him so base as to desert his family. The man seemed ashamed of what he had done, and came over the taffrail again. The people in the boat begged the captain to come in, as the blows, which she took under the ship's counter, were likely to sink her.

Seeing the priest lay his arms over the rails in great emotion, with all the apprehensions of death painted in his countenance, the captain asked him if he were willing to take his chance with him? He replied, yes, if he had room for him. The captain told him he had. Immediately the priest went and gave his people his benediction: then, after saluting the old gentleman, he tucked up his canonical robes, and went into the boat.

As soon as the captain was in the boat, he bade the sailors cast them adrift. It was very dark; they had neither moon nor stars to direct them. Dreadful situation! twenty-seven in the long-boat and nine in the cutter, without victuals and drink, and wholly ignorant how far they were from the English coast. It began now to blow very fresh, with sleet and snow, and they agreed to keep as close to the ship as it was possible. The people, from their long exertions at the pumps, were very much fatigued; and, after sitting awhile in the wet and cold they began to wish they had stayed in the ship and perished, as now they might endure a lingering death.

The boats now began to make water, and the men being so exhausted, became indifferent of their fate, and refused to bale them. The captain, however, prevailed upon them to heave the water out of the long-boat. Having a brisk gale, they had run a great way from the time they left the unfortunate ship; but at ten a.m. to their great sorrow, it fell calm, which threw the people into absolute despair. Captain Nicholls observed that the water was coloured: and, asking for twine, one of the men gave him a ball which he had in his pocket. They then knocked out the bolts of the long-boat, to make a deep sea lead with, and, when sounded, to their great joy they found but forty-five fathoms water.

The people now began to complain of hunger and thirst, when the captain saw, that as they had nothing to eat or drink it was useless to complain. He was certain, by their soundings, they were near Scilly, and did not doubt, if it cleared up, but they should see land. He begged them then to hope for the best, and bear up with manly resolution. His little Norse boy (who always kept close to the captain) now told him that he had got some bread in the bosom of his shirt; but when he took it out it was like baker's dough. It was notwithstanding very acceptable, being about four pounds. The captain put it into his hat, and distributed it equally, calling the 'yaw' to have their share. This, instead of being a relief, increased their troubles; for, having been so wet and clammy, it hung to the roofs of their mouths, and they had nothing to wash it down. Mr. Fox had some allspice, which

was of very little service. One of the sailors having a pewter spoon, they cut it into junks, and by forcing them down their throats, created a saliva, and by that means they swallowed it.

A light breeze sprung up about noon at S.W. By the boats being foul of the main-mast, &c., the oars were all washed out, except two in each boat. The captain, hearing a noise among the crew, inquired the reason; and having been informed that two sailors were disputing about a couple of blankets, which one of them had brought from the ship, he observed that the present was no time for contentions, and ordered the blankets to be thrown overboard. On recollection, however, he desired them to be brought to him, as he would convert them to a purpose that would be serviceable to all. On asking for a needle and twine, which he was presently furnished with, he told them that he designed to make a main-sail of them, and requested the mate to take the remainder of the painter and unlay it; as, it being a three-strand rope, it would make them shrouds and a stay. They erected one oar for a main-mast, and the other they broke to the breadth of the blankets, and made a yard of. The people in the cutter seeing what they had done, and having a hammock with them, made a mainsail of that.

At four p. m. it cleared up, and they perceived a brig about two miles from them. Captain Nicholls now ordered the cutter to give chase, and let them know their distress; for being lighter than the long-boat, he thought that she would soon overtake them. The brig seeing them alter their course, stood from them directly. In consequence of their strange appearance, and it being war time, she probably took them for one of the lugg-sail boats, which the French privateers used to frequent the lands off Scilly with. The cutter, however, gained on the brig very fast, but, to the great mortification of those in the long-boat, by the time they supposed her mid-way, a very thick fog came on, and they saw neither the brig nor the cutter any more.

Night now coming on, and it being still very foggy, the people, almost dead for want of sleep, reposed themselves, sitting, half way in water, for it was impossible for so many to find seats. Captain Nicholls, anxious for the preservation of his people, endeavoured to keep his eyes open, though this was the fifth night that he had taken no rest. About eleven it cleared up. The captain thought he saw land. Everybody was asleep but the man at the helm and himself. The captain, however, was determined not to call out "land" till assured it was so. Again he thought he saw land. The man at the helm had by this time dropped asleep, and Captain Nicholls took the tiller. After some time, he awoke Captain Moore, and told him that he thought he saw land: but Captain Moore only answered in a tone of despondency, that they should never more see land, and dropped asleep again. Captain Nicholls then awoke Mr. Fox, who had had a good sleep, and seemed quite refreshed. Mr. Fox immediately cried out that they were near land, and close in with the breakers. Thus it was fortunate that Mr. Fox was awake; for in all probability they would all have perished by running on the breakers, as Captain Nicholls was totally unacquainted with them. At the word "land" everyone awoke, and, with some difficulty, they cleared the rocks.

At first they could not distinguish what part of the English coast it was; but it clearing more and more every moment, Captain Nicholls looked under the lee-leche of the blanket main-sail and discovered St. Michael's Mount in Mount's Bay. The boat would not fetch the land near Penzance; and as they had no oars, it was determined not to endeavour to run round the Lizard, but for Falmouth; and wherever she would chance to fetch, to run her boldly on shore. It was a fine night; and after they got round the point, they found the water very smooth. They kept the boat close to the wind, and fetched between Penzance and the Mount. The joy in finding themselves in such a happy condition is not to be described; it gave them new life and strength. The people forward called out that there were two rocks a-head. Captain Nicholls jumped up and carried the boat between them, without ever touching ground. In a little time after she ran ashore on a sandy beach.

The sailors immediately jumped into the water, and carried Captain Nicholls and the priest ashore. They left the boat as she was making the best of their way to Penzance. Some of the people, with sleeping half way in the water, by which they were wet from head to foot, found themselves so benumbed, that they with difficulty went along.

On their road, as they marched to Penzance, they fell in with a river of fresh water, of which they drank heartily, and were thereby greatly revived. They got into town about three o'clock in the morning, and seeing a light in a tavern, made up to it. Having been market-day, the people to the inn were all gone to bed, but the mistress of the house was up. She was terribly alarmed at the sight of the strangers, and indeed their shocking appearance, together with the unseasonable hour of their visit, were sufficient cause for apprehension. On hearing their story, the master of the inn got up and called his servants, who soon got for them what provision the house afforded. After drying and refreshing themselves, as many as could find beds went to them, and the rest slept on the floor by the fire-side.

The next day Captain Nicholls went, with the priest, to the mayor of the town, to make a protest before a notary, in order to get credit for the people as well as for himself, who were in want of every necessary. Having been referred to a Mr. Charles Langford, a merchant, the captain went to him. This gentleman received Captain Nicholls very politely, and asked him to breakfast with him, which the captain declined, saying, he wished to breakfast with his people at the inn. The captain then requested that he would furnish him with credit; but Mr. Langford declined complying with his request, as the captain was an entire stranger to him, and he had already suffered from having been lately imposed upon.

Captain Nicholls finding that the master of the inn refused him credit, applied again to Mr. Langford for some money on his ring, watch, buckles, &c.; but as he was going to take his buckles out of his shoes, Mr. Langford perceiving his tears, and believing him, he said, an honest man, told him he should have what credit he pleased. He then gave him the money he required without any deposit.

During this, the second mate, and eight men from the cutter, arrived. They informed Captain Nicholls, that in consequence of the fog they could not come up with the brig; that, when it cleared they saw the Land's End and got on shore. They had left the cutter as nobody would buy her, and had inquired the way to Penzance, where, as they were in great distress, they were happy in having met their fellow-sufferers.

Captain Nicholls went to the inn, paid what was owing, and for their unkindness, went to another house to breakfast. After this he got what necessities the people wanted. They stayed a day longer at Penzance in order to rest themselves. The captain then having provided a carriage for himself, Captain Moore and officers set out for Exeter. The rest of the people, who had procured a pass of the mayor, walked. At Exeter, Captain Nicholls was entertained by a worthy friend of his, Samuel Killet, Esq., collector of the customs, who sincerely sympathised with him on account of his misfortune, and the loss of the Duke William, with 360 souls. Mr. Killet provided a house, a good supper, and beds, for them at his own expense. They stayed in Exeter two days, and then set out for London.

What is very remarkable, when Captain Nicholls and his party left the Duke William in distress, there was a small jolly-boat on board; and just before she went down, four Frenchmen threw her, with two small paddles, overboard, and swam to her. They got into Falmouth soon after Captain Nicholls landed. They were no seamen, nor had ever seen the English coast, so that their's, like that of the long-boat and cutter, was a most miraculous escape. The Duke William (according to their report) swam till it fell calm, and as she went down her decks blew up. The noise was like the explosion of a gun, or a loud clap of thunder. The Frenchmen had but just left her when she was seen no more.

LOSS OF THE FRENCH GOVERNMENT STEAMER PAPIN.

THE French Government has just received intelligence of the loss of the Papin steamer. The following are the details of that melancholy event as published by the *Moniteur*:—"The Papin left Cadiz at 2 o'clock, p.m. on December 5, 1845, and was bound for Senegal. The weather was fine during the whole afternoon of the 5th, and the morning of the following day, but towards night it began to blow hard from the south-west. At 11 o'clock at night on the 6th, the vessel grounded on a sand-bank, nine miles to the north of Mogadore, and about three cables' length from the mainland. The order to 'back' could not be executed, as the paddles had already become choked by the sand. For three hours the vessel withstood the violent shocks of the waves, the sea running high at the time, without any very visible damage, but she then began to fill, and at 4 o'clock on the morning of the 7th she was quite full, and the sea dashing over her deck. At 5 o'clock the chimney fell, and killed several persons. At half-past 5 a.m., M. Marey Monge, the French Consul at Mogadore, was washed overboard by a wave, and instantly disappeared. A few moments afterwards M. Dieul, second lieutenant on board, met with the same fate. Several persons then threw themselves into the sea to lay hold of the spars, &c., which were constantly being washed from the wreck, or to try and gain the shore by swimming. The greater part of them sank to rise no more. Some few, after the most desperate efforts, reached Azimour, a village three miles to the north of the scene of the wreck. They fell in with some Moors, who instantly came to their relief; one of them gave his burnous (cloak) to M. Du Bourdieu, commissary at Gorée, and who had embarked as a passenger on board the Papin. Some camels, laden with brambles, having arrived, the Arabs instantly kindled a fire to warm the unfortunate shipwrecked passengers. At 11 a.m., the persons who had succeeded in reaching the shore amounted to 30. The mainmast, which had continued standing until that time, although the Papin was divided in two, fell, and in its descent, either crushed to death or carried overboard not less than 30 persons. About this time Messrs. Donesnard, Mirabeau, Desforges, Natalani, and Royot, who had succeeded in reaching the beach, got into the life-boat, which had been washed on shore, for the purpose of returning to the vessel and saving such persons as might be still alive; but they were unable to make head against the waves, and were again cast upon the shore. Mr. Redman, the English Consul at Mogadore, together with the French Consul in that place, who had started that same morning for Rabat, hearing that a vessel was wrecked upon the coast, instantly repaired to the scene of distress. Mr. Redman having attended to the immediate necessities of the passengers on shore, exerted his influence with the Arabs to induce them to go to the vessel, and bring away the unfortunate persons who still remained on board. The Arabs displayed, upon this occasion, as much courage as humanity. In less than two hours they succeeded in bringing off 44 persons, carrying them upon their shoulders, and swimming with them through a very heavy sea. After being assured that no other persons remained on board the vessel, and having interred eight bodies which had been washed on shore, Mr. Redman conducted the sufferers to Mazagan, where every attention was paid to their wants by him and his three brothers. Letters received from Mazagan," says the *Moniteur*, "speak in the highest terms of the conduct of Mr. Redman. It is certain that the 44 persons who remained on board the vessel are indebted to him for their safety. When intelligence of the shipwreck reached Gibraltar, Sir Frederick Nicholson, who commands the naval forces there, instantly wrote to our Consul, offering to despatch the English steamer Flamer, to render the necessary succour. The Flamer accordingly sailed shortly afterwards. Mr. Redman placed a guard of 30 men to save as much of the cargo of the unfortunate vessel as possible. Of 151 persons on board the Papin, 76 only remain to tell the tale."

OUR CAPTAIN.

BY HARRY BLUFF.

"The clouds fly fast, we shall have a rough night of it," said a fine old sailor, as he paced the deck of H. M. S. Neptune, which was bounding from the stirring breeze, like a horse of the blood.

"A true prophecy, that of yours, old Rum-punchoon," said the captain, who heard the remark.

He had derived this appellation from his having made an observation in the midshipman's berth, when some young swells, just taken from school, (where the only liquid which passed their lips was "sky-blue"), were bragging of the grog each had severally swallowed.

"Here comes one that knows the taste," cried one, as the old veteran entered.

"I believe ye," retorted the old chap; "I've drank enough rum to swim a seventy-four." From this arose his title of "Rum-punchoon," a name that lasted long after his requiem had been sung.

"Call up the men to furl sails; this wind in an hour would tear the strongest canvass to ribands," said the captain, as he descended to his cabin.

"There goes as brave and noble a heart as ever had life in," said the old sailor, following with an eye (as his commander took his departure) in which deep respect for the station he held, and a sincere esteem for his person, were pretty equally mixed.

"You are right, messmate," chimed in another, "if our navy was filled with hearts like his, a mutineer would be unknown, except by name."

There were a whole host of such like speeches uttered, each teeming with an eulogy on their commander, whose bravery and firmness in the hour of danger, was only equalled by his consideration and kindness towards his men.

"His has been a life full of bitter trials and adversities. For weeks, under the burning sun of the tropics, the only inhabitant of a bark, whose timbers creaked and yawned with the slightest strain."

"Here's old Rum-punchoon inclined for a yarn," said a junior lieutenant; "get your jawing-tackle in readiness, old fellow; think of nothing but facts—stow all lies; roll your quid to the other side, or take a fresh cargo; spit, and then heave ahoy! with a will. Hand Mr. Midshipman—what the devil's his name?" he inquired of a brother officer. "Oh, Waters, hand Mr. Midshipman Waters the grog, you young bastard; and as we all appreciate the liquor of a *Rum-punchoon* in preference to *Waters*, put as little of the latter in as possible. Bear a hand, you lubber!"

"I came from the water," said the old tar. "I've always lived on the water," he continued.

"Well, here's wishing you may never die by it then," interrupted the lieutenant. "We shall have water enough, by-and-bye, to conclude the tale, without your commencing with it," looking upwards, as he spoke, to the dark, lowering sky. "Come, go a-head!"

"Well, gentlemen, I'll give you the tale as I heard it from the captain's own lips, which I think is as good a voucher for its accuracy and truth as you need wish for. In the commencement of the year 1820, he embarked with his uncle, who was both captain and owner, on board the ship *Vesuvius*, of 600 tons, on a voyage to Calcutta. His uncle was a stern man; one who punished the slightest deviation from rectitude with the cat. The first lieutenant was passionate and haughty. They had not been many days at sea, before a quarrel arose between them. Day after day brought a repetition of this. Our captain, who was then a youth, noticed with fear these events, for he knew of the lieutenant's revengeful temper, and had heard sullen whisperings among the men, at the tyranny exercised towards them by the captain; and the lieutenant made oath that either the captain or him should never see land again. This went on. One night our captain heard the tramping of feet over head, and the heavy fall of a body on the deck. It partially awoke him from his sleep, but the fatigue he had un-

dergone the day previous, caused his heavy eyelids to close, and he was soon again in a state of peace and forgetfulness. It was broad daylight before he awoke, and then he dressed and hastened on deck. God, what a sight! His poor uncle lay there, dead—his body inhumanly mangled by his blood-thirsty, savage murderers. One shriek for help, and there he fell, senseless on his body. At last he awoke to the dreadful knowledge that all the crew had left the ship, and that he and his ill-fated uncle were the only tenants of that doomed bark; the crew having taken all the provisions and the boats to an adjacent island. With many a prayer, and a heart almost bursting with grief, our captain committed the body of his uncle to the sea. He had a hard struggle to do that. For many a day, to gaze upon the loved face of him who had been so cruelly murdered, was his only employment. At last, decay and putrescence began their hideous work, till the very air was tainted. The body fell with a splash, and sunk. Now, thoughts of the future filled his mind with dread forebodings. He searched for food: a few biscuits, thrown on one side, as unfit for eating, and a small cask of water, was all they had left. But he thanked Heaven fervently for this, in hopes it would last out until some friendly ship or port greeted his sight. On flew the ship, impelled by the fierce roaring wind. The top-mast bent, cracked, and at length, fell; still on was the fated vessel urged—on! on! One dark night, when the only light in Heaven's dark vault was the lightning's blue and vivid flash, the vessel was dashed against a sunken rock, and the timbers of the once bonny ship lay scattered around. To one of these our captain clung for life. Day came, but no hope—none! The only refuge from this misery was the grave that yawned about him; and yet, how he feared it! At length, his brain grew dizzy, his sight—his strength failed: then came, at the eleventh hour, the succouring hand. A boat was lowered from a ship driven from her course by the storm, and our captain was saved. Ere long, he again trod the shores of England—dear old England! and was pressed to the overjoyed hearts of his parents, from whom, when his tale was told, many a tear trickled at the fate of their poor brother. I was in England, some few years after, and received an invitation to a party. Our captain was paying his addresses to the young lady of the house, an only daughter, and exceedingly rich. She was very beautiful, and when our captain stood by her side, with the flush of youth on his cheek, and the pride of manhood flashing in his dark eye, they looked well worthy of each other. The dance was ended, and I found myself very soon at the bottom of a bottle of champagne, which one of the attendant sprites, with a powdered pate and spicy-looking jacket, had very accommodatingly placed near me. At this moment our captain and his lady passed by. 'I have yet one more honour to confer,' she said, in her soft sweet voice; 'and that is to introduce you to a relative of mine, whom from being also a naval officer, will, I flatter myself, become a chosen friend. Allow me to introduce'—and she tapped a tall, dark-complexioned man on the shoulder, who turned at the instant; but before she could finish the sentence, our captain sprang upon him, and seized him by the throat. All was confusion. I sprang up with the empty bottle in my hand, as the villain drew a pistol from his coat, which I struck down, and the bullet was buried in the floor. My blood was up, and to guard against further treachery, I seized his arms behind him. Our host now came up, 'What means this outrage, sirrah?' he asked of our captain, in a voice quivering with indignation. 'I charge this man with mutiny and murder!' he exclaimed; a dozen voices re-echoed the charge, and the young lady uttering a loud shriek, fell senseless. In another minute he was in custody.

"Our time, and by Jove! the wind's up too," interrupted the lieutenant; "spin away old tar, quick!"

"He was tried and hanged," "shortly after I left England. The next time I saw our captain, was ten years after, 'twas at the same house, and the same lady was hanging upon his arm, while a fine handsome boy, and a fair blue-eyed girl called him 'Father.'—God bless him and his, say I!"

"Amen!" cried the lieutenant heartily.

"Pipe for the watch, he's awain, ours is up."

LOSS OF FOUR BRITISH SHIPS, BY FIRE.

INTELLIGENCE has been received at Lloyd's of the destruction of four English ships by fire, the losses by which, are stated to be very considerable. The following are the particulars received. The vessels are the Achilles, Captain Thompson, master, from Leith, bound to Calcutta; the Aberfoyle, from the Clyde, of 417 tons burthen. The Abeona, of 500 tons burthen, from New Ross, bound for Waterford, and the Harlequin treasure Schooner, belonging to Calcutta. The loss of the first-named ship, the Achilles, which was chartered by the Royal Navigation Company for the conveyance of coals, to the Company's depot at Calcutta, took place on the morning of the 16th Sept., 1845. While the vessel was lying in Simon's Bay, Cape of Good Hope, waiting favourable winds, a quantity of smoke was discovered issuing into the cabin, through the bulkhead, from among the coals. Directly the alarm was raised, the hatchways were removed, and the crew set about throwing the cargo overboard, in order to get at the fire, which they supposed existed about the centre. However, in the course of an hour, the smoke and heat became so powerful, that the men were forced to desist, and eventually flames burst forth with great violence. As soon as the news of the outbreak of the fire reached on board H. M. S. Winchester, which was also lying in the Bay, the gallant Commander sent off all possible assistance to the Achilles, and one or two other ships also sent off other aid. For two hours water was poured on the burning cargo in great quantities, which, not having effect, and the destruction of the vessel appearing inevitable, orders were given to scuttle her, the ship being hauled close to the shore, unfortunately this occupied much time, and before it could be accomplished the hull was on fire in every part. At the time of her going down, the decks seemed burned through, and part of her masts was destroyed. Attempts were to be made to raise the wreck, but they had not taken place at the time the above particulars were written. The ship was insured at Leith. The burning of the Aberfoyle, which was nearly a new vessel, having been built only in the latter part of last year, occurred on the night of the 15th of October, while at Bombay. She had, according to the letters received, taken in her cargo, and would have sailed in a few days, when on the 15th she was found to be on fire, which was not extinguished until the same step was taken as in that of the Achilles, scuttling her. It is expected she is a wreck. Suspicions are entertained that she was wilfully fired. The third loss by fire, namely, that of the Harlequin, took place on the 29th of September, in the Indian Seas, at a place called the Hooghley. The vessel had on board 100,000 rupees, which unfortunately went down with her, and she is expected to be a total loss. The remaining loss, that of the Abeona, of New Ross, happened while on her passage from that port to Waterford, with a cargo of timber. The ship was totally destroyed, and her crew were saved by another vessel, which has since landed them at Liverpool.

ANECDOTE OF A SAILOR.

A BRITISH sailor, who had both his legs shot off while the Minerve lay under the fire of the batteries at Cherbourg, in 1803, was carried to the cockpit. Waiting for his turn to be dressed, he heard the cheers of the crew on deck, and eagerly demanded what they meant. He was told that the ship was off the shore, and would soon be clear of the forts.

"Then d—n the legs!" exclaimed the poor fellow, and taking his knife from his pocket, he cut the remaining muscles which attached them to him, and joined in cheers with the rest of his comrades. When the ship was taken, he was placed in a boat to be conveyed to the hospital; but, determined not to outlive the loss of liberty, he slackened his tourniquets, and bled to death.

A SMUGGLER'S ADVENTURES.

IN September I went to sea with some friends to take up some kegs which we had sunk; and it being night, a preventive boat came close up to us before we saw her. One of the men then laid hold of the out-rigger, but by a sudden jerk I shook his hand off from it, and put our boat out of their grasp. Having no sail, they were obliged to take to their oars; they then chased and fired at us, but a fine breeze springing up, the longer they pursued the more we left them astern. Finding their efforts useless, they gave up the chase, and we got safe on shore.

In the month of November I had a boat which came home, and having sunk her goods, was driven on shore; and just after this misfortune took place, another boat which belonged to me was stranded on Stapen sands, where she was dashed to pieces, and the greater part of the goods became the prey of the inhabitants. In the same month I went to Weymouth, and took all the money I could collect, and paid to my merchants. While I was there, the Lyme packet, bound for Guernsey, with passengers, drove in, in consequence of a gale of wind; and the captain getting drunk on Saturday, which was the day on which he had appointed to sail, all the passengers left him.

On Sunday he put to sea, and myself and one of my partners went with him to Cherbourg, where we took a cargo on board, with which we returned as passengers in the same vessel. When we came under Salcombe hill, which was in about fourteen hours, we hove the boat out, and a boy that was with us and myself went into her to try to get on shore, but the surf was so great near the beach, that we found it impossible to land; and on going off again with the intention of returning to the vessel, we could not find her through the haziness of the weather. We then made another attempt at landing; the first sea we saved, but seeing there was great danger from the second, I jumped overboard, and swam to the shore; and upon looking round, had the satisfaction to find that the boy also had escaped, but the boat had capsized. We then went forward to Sidmouth as fast as possible, where we found some of the men belonging to the packet who had come on shore, and I sent them after the boat.

The next morning, about the dawn of the day, we saw the packet about a mile off from land, and I was informed she had sunk about one hundred and twenty kegs. Soon after this the captain and the crew became intoxicated, in consequence of which they ran alongside the Scourge cutter, and were taken.

When the capture took place, some of the men were in the act of throwing the remaining part of the cargo overboard; one lot of the kegs was picked up by the people belonging to the Scourge floating on the waves, and when they came on board the packet, they found the captain and two of the sailors quite drunk. The crew then being promised a reward, turned informers. The first lot of goods consisted of about six-score kegs, which the Scourge took up, and proceeded with them to Exmouth.

When they got over the bar, my partner and the master of the packet gave information respecting the rest of the cargo, which the cutter likewise took up, and the captain of the Scourge then gave the money which he had promised to my partner and the master of the packet, which they shared between them. They were afterwards taken before the magistrates at Exeter, and my partner, being a passenger, was set free; but the captain and one of his men were sent to gaol.

After doing me all the injury they could, in the manner I have described, they then swore that the goods belonged to me, and that I was the sole proprietor of them, though I was only a passenger (the same as my partner was, who was cleared), and on shore at the time when the vessel and cargo were taken. Of all these particulars I was afterwards informed, but the information did not reach me till it was too late to be of any particular benefit to me, as will be seen in the sequel.

About a fortnight after this melancholy catastrophe I went to sea in a large open boat, with another man and two of my sons. Off Salterton we fell in with the Scourge cutter, and not knowing what had been said of me, but being suspicious that

all had not been right, I used my utmost endeavours to get away from her; but as she perceived us, she gave chase, and fired upon us the whole eighteen cannon-shots. When we got on shore we found several men from the cutter had arrived there before, and were waiting for us. They said that the captain had given them orders to detain my boat, to which I replied they should not; and I immediately took up a large stone and hove it into the boat, with an intention to stave her; but in consequence of their superior numbers, and being armed with authority, they at last, however, accomplished their point, and having taken the boat they towed her into Topsham, where she was laid up in the mud. By this means I was kept out of employ till the end of December, having no other boat to go to sea in; which was a great injury to myself and family, particularly at this period, as my circumstances, through the numerous and heavy losses which I had met with, were now in a very declining state.

An anecdote, told by a German naturalist, of a beaver, is wonderful. He declares he saw a beaver weeping over the crown of an old hat. Soon another beaver approached it, and she cried more piteously than the first: then a number of young beavers, attracted by their sobs, came running up, and they all cried too. He accounts for this by saying, that the hat, being made of beaver, the animals had evidently recognised in it the skin of one of their own kindred. "Who can say," he asks, "whether this very hat was not to them the sad remains of an affectionate son—the only remembrance of a favourite brother?"

NAUTICAL ANATOMIST.

BY T. DIBDIN.

Jack Jigger, a curious and whimsical tar, of a sort of a genus was Jack; One day with the French in a bit of a spar,

By a small shot was taken aback; It shiver'd his fingers, and splinter'd the bone, And the arm about pretty well knock'd; "Now," cried he, with a d—n instead of a groan,

"I suppose I must go and be dock'd." The surgeon, with feeling, made Jack understand That the arm must come off. Why, then, brother, Man the nippers and knife, for we tars understand, In misfortune to serve one another.

As he saw in his berth, in the cockpit below, That blood which his messmates had spilt; Of the doctor poor Jack was vast curious to know In what manner a seaman was built.

The surgeon held forth about art'ries and veins, About muscles, and sinews and limbs; While Jack all his lingo took in with great pains, His mouth open, and staring his gums.

And as he replied to each curious demand, Call'd the doctor a friend and a brother; And swore that all weathers, all tars bear a hand Just only to serve one another.

Why, if this is the maxim, by all that I see, A man's built just the same as a ship; From the keel, the backbone, to the tops and cross trees, To take in life's ocean a trip. A muscle and sinew's a brace and a stay, And as for men's fears and their hopes, They're for the masts, and the fibres his frame that belay, ed Running rigging, and all the small ropes.

And as all in their station to fill understand, Take the part of a friend or a brother; To their duty turn in, and like tars lend a hand, Just only to serve one another.

His senses and feeling, his lingo and wit,

The complement make of his crew;

And ships knock'd about must come in to refit,

All as one as I now come to you;

Then as ships by the wind, if a breeze or a gale,

Venture either for life or for death;

So a man through the ocean of life could not sail,

Were he not kept afloat by his breath;

And as men who sail under Ma'am Fortune's command,

Are all kind like a friend or a brother;

So from cables to ratlines the ropes lend a hand,

Just only to serve one another.

The heart is the rudder, the bowsprit the head;

Ship and man at fair weather rejoice;

Man struggles through life, just like heaving the lead;

The bold speaking trumpet's the voice,

And when wore to a hulk, or by storms took aback,

To the dogs fate has emptied his can;

The lot of all vessels, as well as poor Jack,

The ship founders and so does the man.

Let each man that sails under heaven's command,

Still turn out a friend and a brother;

And faithful to honour, like tars lend a hand,

Just only to serve one another.

LORD ST. VINCENT'S REMEDY FOR OBESITY.

A LIEUTENANT one day came on board Lord St. Vincent's ship to answer a signal. His lordship thought there was about him too much *embonpoint* for an officer of that rank. "Calder," said he to his captain of the fleet, "all the lieutenants are running to belly; they have been too long at anchor (for the fleet was still off Cadiz): block up the entering port, except for admirals and captains, and make them climb over the hammocks."

The entering-port of a three-decked ship is on the middle-deck, or second tier of guns from the water, and the difference between going into that, and climbing over the hammocks, may be compared to entering the drawing-room at the balcony window, or mounting up to the parapet, and taking the attic by storm. There was also a great inconvenience and expense attending this painful operation, namely, that whereas in those days, all officers wore white knee-breeches, or shorts, as they were called, the consequence was, that many useful garments, which could not so readily be replaced, were torn and spoiled in this attempt at juvenile activity; and also many oaths were sworn by young and thoughtless men, which, but for this needless exertion, would probably never have been elicited.

FAR, FAR AT SEA.

ANECDOTE OF A SAILOR.

'Twas at night when the bell had tolled twelve, And poor Susan was laid on her pillow, In her ear whispered some fleeting elve, Your love is now tossed on a billow.

All was dark! as she woke out of breath, Not an object her fear could discover; All was still as the silence of death, Saye fancy, which painted her lover.

So she whispered a prayer, closed her eyes, But the phantom still haunted her pillow; Whilst in terror she echoed his cries, As struggling, he sunk in the billow,

Far, far at sea.

Far, far at sea.

Far, far at sea.

BURNING OF THE LUXBOROUGH GALLEY.

THE narrative which we are about to give, is taken from a statement drawn up and authenticated by the signature of one of the survivors, a gentleman, whose station and character would be sufficient guarantee for its correctness, if indeed the simplicity of the tale did not give it the impress of truth, that gentleman, Mr. William Beys, was a native of Deal, in Kent, and descended from one of the most respectable families in the county. When only fourteen years of age, he went to sea, and, after serving ten years, in the navy, embarked as second-mate in the ship *Luxborough Galley*, of 26 guns, and 340 tons, employed by the South Sea Company for supplying Spanish America with slaves and European goods

under the Assiento contract. After escaping, in the manner we are about to narrate, from the wreck of his vessel, he again entered the royal navy, and was constantly employed at sea during nearly thirty years, passing through different gradations, of rank until he was commissioned to wear the broad pennant, as commodore, on board the *Royal Sovereign* of 100 guns, and was appointed commander-in-chief of his Majesty's ships in the Thames and Medway. In 1761, he was made lieutenant-governor of Greenwich Hospital, and died in 1774, while holding that appointment. Three of his grandchildren, who have distinguished themselves in the naval annals of the country, now bear commissions as admirals in the service.

"On the 23d of May, 1727," says Mr. Beys in his narrative "we sailed from Jamaica to London, and on the 25th of

BURNING OF THE LUXBOROUGH GALLEY AT SEA, AND SUFFERINGS OF THE SURVIVORS AMONG THE CREW.

June, were in latitude 41 deg. 45 min. north, and longitude 20 deg. 30 min. east, from Crooked Island. About half an hour past noon, the captain's cook discovered flames of fire through the lining of the fore-castle, and ran in consternation to the quarter-deck to give the alarm. At the same instant, the head of a puncheon of rum burst out with an explosion resembling the report of a cannon, which at once alarmed the whole ship's company. It appeared that two black boys had been sent by the steward to the store-room to draw off a bottle of rum, and observing some liquor on the deck, out of an unhappy curiosity, to discover whether it were spirit or water, for the water-casks were all there, had put their candle to it, and in an instant the whole was in a blaze. Finding themselves unable to extinguish the flame, they left the place

and hid themselves. The third-mate, the surgeon, the carpenter, and myself, got forward immediately, ripped off the tarpauling, opened the fore-hatchway, and then saw the lazaretto, or store-room, in a liquid fire. We went below and endeavoured to stifle the flame with swabs, rugs, blankets, our own clothes, and things of that sort; but finding all our efforts in this way ineffectual, we set the pump to work, in the head, whence the water was handed down to us. In the meantime, the captain indiscreetly ordered a scuttle to be cut through the deck of the fore-castle, with a view to pour water directly on the fire; but this made the flames rage with redoubled violence, and the whole fore-castle was soon in a blaze. We who were below, finding the fire to increase very much upon us, desired the people on deck to get out

the boats while we would still endeavour to quench the flames, which they promised to do ; but when we could stay no longer below, for the great heat, and came upon deck, we found not the least preparation made to hoist out the boats, the captain and the greatest part of the crew being on the quarter-deck crying to God for help, without using any means to save themselves. When I afterwards questioned the captain, in the boat, as to the cause of this inactivity, he told me they expected every moment the powder would take fire and blow up the ship. This powder was directly under the scuttle where the fire was raging, a circumstance we did not think of, or we might have done as they did. I immediately endeavoured to persuade the people that the boats were our only resource, and proceeded myself to prepare and apply the tackle to the yawl. I was hoisted out in this boat, by

desire of the chief-mate, for fear, when she should be in the water, the men should run away with her before the long-boat could be got out. As she was lowering down, he handed me the oars, one of which fell overboard, so we had but three. By the time she was in the water, there were seven or eight men in her, whom I entreated to return to the ship again in order to get out the long-boat but they were unwilling to go back, unless I would accompany them ; upon which, I took hold of a rope, and was stepping into the ship, when I observed the captain dropping into the boat. I pressed him to go back with me, but he told me the long-boat's bow was on fire, and at that instant, by a roll of the ship, I perceived the flames coming up the fore-hatchway above the long-boat's bow. At the same time it became necessary to put off the boat, as the people were crowding into her, and there were

then in her twenty-two men and boys. As we passed under the ship's quarter, the captain called to the chief-mate, who was his brother, entreating him to jump into the water and swim to the boat ; but he declined it, saying, it was impossible the boat could swim many minutes, she having then her gunwale nearly even with the water, and the wind blowing very fresh.

"We left sixteen men and boys in the ship, who all perished. They attempted to get out the long-boat, and had in part succeeded, but before they could get her over the side, we saw her bow fall on the deck; probably they could not stand near her for the flames, or the tackle was burned and gave way. In somewhat less than half-an hour after we quitted her, the ship was all on fire as far as the bulk-head of the steerage,

most of the unhappy men being then on the quarter-deck. Shortly after, the whole of this part burst up at once in a flame. The guns went off from time to time as the metal grew hot; but her upper works were wholly destroyed, and nearly three hours elapsed before the gunpowder took fire. The explosion rent her to pieces, and we saw no more of her. Could we have stayed by the ship we probably might have saved some provisions after she blew up, but we were obliged from the first, to put the boat right before the sea with two oars to prevent her filling.

"As soon as our attention was disengaged from the ship, and our comrades on board, we began to reflect on the horrors of our own situation. I came into the boat in my shirt and drawers, having thrown the rest of my clothes upon the

fire. We had not time to take with us a morsel of victuals, or drop of drink; we had neither mast, sail, nor compass, and were at least 120 leagues from the nearest land. It blew and rained hard the first two days and nights, and the sea ran so high, that we were obliged to sit close together abaft, on the gunwale, to keep out the waves. At this time we might have saved a considerable quantity of rain-water, but the apprehension of immediate destruction obliterated every thought of providing for our future wants, and besides, we had no vessels in which it might have been kept.

"On Wednesday it was fine weather, and then, as Providence had so wonderfully preserved us hitherto, we began to entertain some hope of deliverance, and contrived to make a sail, by sewing together three frocks and a shirt, with a sail-needle and some twine, which fortunately were in the pocket of one of the black boys. The broken blade of an oar, found in the boat, formed a tolerable yard. One of the oars served for a mast. The haulyards were formed of our garters, which were converted likewise into a tack and a sheet. We then ripped up the bottom-boards, under which we found several nails. A caulking-mallet was likewise discovered, and we were enabled to nail the boards to the gunwale, where the boat was straight, by way of wash-streak, and where she founded abaft, we nailed slips of the men's frocks, all which answered bravely.

"Thus equipped, we hoisted our sail and steered as well as we could to the northward, knowing Newfoundland to be in that quarter; for on the day the ship was burnt, I had worked my day's work, and pricked off my reckoning on the draught, and I took particular notice of our bearing and distance from Newfoundland. We judged of our course a few days by the sun, the stars, and the captain's watch, which went pretty well; but afterwards it proved foggy, and we could not then judge which way we went.

"On the 5th day it blew a storm, and, about noon, when the gale was at its height, and our little boat in the utmost jeopardy, it was proposed to throw overboard the two black boys who set the ship on fire, in order to lighten the boat, which I opposed strongly; but, at the same time, thought it expedient to cast lots and give all an equal chance, which the captain would not consent to. However, we continued to talk of these measures till the evening, when John Horn, who had been delirious with terror from the time we entered the boat, and one of the negro boys, both died, and then, the boat being lightened and the wind abating, we had no further occasion to consider the subject. The next day, in the afternoon, three more died raving, and calling out incessantly for water, as was the case with all who died afterwards; and it was no small fatigue to us to restrain the poor wretches from jumping overboard to cool and refresh themselves in the sea. Our thirst became intolerable. Every one but the captain, surgeon, and myself, drank sea-water, which, by a false taste, they thought to be quite fresh. We washed our mouths with it, but swallowed none. The sail was frequently lowered, and drained of every drop of moisture we could wring from it; then we sucked it all over, as we did every one his neighbour's clothes when wet with fogs or rain. Twice we saved some water, to the quantity, on the whole, of about three-quarters of a pint a-piece; but these sparing and irregular supplies availed but little to alleviate the torments of thirst under which we languished.

"The sensation of hunger was not so urgent, but we all saw the necessity of recruiting our bodies with some more substantial nourishment, and it was at this time we found ourselves impelled to adopt the horrible expedient of eating part of the bodies of our dead companions, and drinking their blood. Our surgeon, Mr. Serimsour, a man of the utmost humanity, first suggested the idea, and, resolute to set us an example, ate the first morsel himself; but, at the second mouthful, turned his face away from as many as he could and wept. With great reluctance we brought ourselves to try different parts of the bodies of six, but could relish only the hearts, of which we ate three. We drank the blood of four. By cutting the throat a little while after death, we collected a little more than a pint from each body. Here I cannot but mention the particular respect shown by the men to the

officers; for the men who were employed in the melancholy business of collecting the blood in a pewter basin that was in the boat, and the rest of the people, would never touch a drop till the captain, surgeon, and myself, had taken as much as we thought proper. And I can truly affirm, we were so affected by this strong instance of their regard that we always left them a larger share than of right belonged to them. This expedient, so shocking in relation, and so distressing to us in the use, was undoubtedly the means of preserving those who survived, as we constantly found ourselves refreshed and invigorated by this nourishment, however unnatural.

"We often saw birds flying over our heads, and fish playing round the boat's stern, which we strove to catch with our hat-bands knotted together, and a pin for a hook, baited with a piece of the dead men's bodies; but with all our contrivance, could not catch either fish or bird.

"On the 7th day our number was reduced to twelve. At night the wind came up moderately at S.S.E., as we judged, and increased till it blew a storm, which continued, with very thick weather, till about four the next morning, when it cleared up, and we found the wind to be about N.N.E., still blowing hard, and the sea breaking in a tremendous manner all around us; but it pleased kind Providence that no very heavy seas struck the boat, which must have occasioned instant destruction, though we shipped as much water as we could manage to bail out. During the gale we were obliged to scud before the wind, which carried us much out of our way, and greatly diminished our expectation of reaching land. Our only hope was to be seen and taken up by some vessel, if the weather should be clear, which, indeed, was seldom the case. When foggy, and in the night, we frequently made as loud a noise as we could, that we might be heard by any passing vessel. In the day-time, our deluded fancies often represented to us the forms of ships so plain and near us that we called to them a long time before we were undeceived; and, in the night, by the same delusion—the effect, probably, of fever—we heard bells ring, dogs bark, cocks crow, and men talk, on board of ships close to us; and blamed these phantoms for their cruelty in not attending to our distresses.

"On the 5th and 6th of July, three more of our company died. In the afternoon of the 6th, we found a dead duck, which was green and not sweet: but we ate it, and heartily praised God for it, though in a happier situation it would have been an object offensive and disgusting.

"July 7th, in the forenoon, we took a formal leave of one another, and lay down in the bottom of the boat with a dead body, which we tried, but had not strength, to throw overboard, never expecting to get up again. We covered ourselves with the sail, which we had lowered some time before, through despair of its being of further use to us. After a while, finding myself uneasy, and wanting to change my posture, about one in the afternoon, I laid my hand on the gunwale to raise myself a little, and, in the act of turning, thought I saw land, but said nothing till I was perfectly satisfied of its reality, having frequently suffered the most grievous disappointments in mistaking fog-banks for land. When I cried out 'Land! land!' and we were all convinced that it was so, good God, what were our emotions and exertions! From the lowest state of desponding weakness, we were at once raised to extacy, and with a degree of vigour that was astonishing to ourselves, we hoisted the sail immediately. The boatswain, who was the strongest man in the boat, crawled to the stern and took the tiller. Two others found strength to row, from which we had desisted the four preceding days, through weakness. At four o'clock another man died, and we managed to throw both the bodies overboard.

"The land, when I first discovered it, was about six leagues off. The wind was favourable, and, with sail and oars, we were three or four knots. About six o'clock we perceived some shallows in with the land. We steered for the nearest, and came up with her about half-past seven, just as she was getting under sail to carry in her fish. We hallooed to them as loud as we could, and they lowered their sail to wait for us; but, when we were close on board, to our great grief and astonishment, they hoisted their sail again and were going to leave us; our most

however, were so piteous and expressive, that they soon brought-to and took us in tow. They mistook us for Indians, or, rather, as they told us, did not know what to think of us, our whole aspect was so unaccountably dismal and horrible. They gave us biscuit and water, but the latter only was acceptable, having totally lost our appetite for solid food.

"At about eight in the evening, we got on shore in Old St. Lawrence Harbour, on the western side of Placentia Bay, in Newfoundland, and were most kindly treated. They made chowder (a mess made with the heads of codfish) for us, and gave us beer made of the tops of juniper, fermented with molasses. We lay all night before a large fire, expecting a good night's rest, but could get very little sleep on account of the violent pains all over us. Captain Killaway died about three o'clock in the morning, having been speechless thirty-six hours before. Our bodies were soon covered over with boils and sores, and it was eleven days before any of us could walk abroad.

"On the 20th of July we left St. Lawrence Harbour, and got to Placentia on the 24th, with our little boat astern, in which we went on board the Ludlow Castle, a man-of-war, commanded by Captain John St. Loo, who entered us immediately for victuals, and gave us leave to live on shore at the kind invitation of the governor, who paid for the board of the surgeon and me at the tavern, and sent the rest to the barracks, where they were taken good care of, and recovered fast. When I told Captain St. Loo of the number of persons who came from the Luxborough in one boat, he knew not how to give credit to my story; and one calm morning he ordered as many men as could be safely stowed in her to be carried on shore, when they could crowd no more than twenty into her with any prospect of working the boat. But, alas! we were forced to lie on one another, at first, in the most uneasy situation, till death made room for us. On the 4th of September, five of us (one went to New England) sailed for Biddeford, and arrived safely there on the 1st of October, after escaping great danger from the crazy state of the vessel. At Barnstable, the mayor paid our horse-hire to Ilfracombe. From thence we went by water to Bristol, where the merchants on 'Change collected money for our fare to London in the stage-coach, at which place we arrived on the 14th of October.

"The boat in which we were saved was sixteen feet long, five feet three inches broad, and two feet three inches deep, pretty sharp for rowing well, and made to row with four oars."

For the whole of his after life, Mr. Boys was accustomed annually to commemorate his escape by acts of private devotion, and an almost total abstinence from food during twelve successive days, beginning with the 25th of June, and besides adopted as a motto to his armorial bearings, the legend, "From fire, water, and famine, preserved by Providence."

SHIPWRECK OF THE SAN JUAN PRINCIPE, A PORTUGUESE FRIGATE, OFF GIBRALTAR, IN 1807.

THE feelings of admiration will be powerfully excited by a perusal of the following letter, which was written from Gibraltar, by Mr. Alexander Wilson, son of Mr. Wilson, watch-maker in Kelso; and, while admiring the heroism which he displayed in the melancholy circumstances which called it forth, the reader will be pleased with the simplicity and modesty which characterize the narrative.

"Gibraltar, April 19, 1807.

"On Sunday the 5th inst. I witnessed a scene of horror I never can forget. A Portuguese frigate, the San Juan Principe, Captain R. J. F. Lobo, was reported to be wrecked on the east coast, about four miles from the Spanish lines. About eight o'clock in the morning, I could plainly perceive with a glass the vessel dismasted, with a great number of men on board. A friend of mine, Mr. Masser, and I, immediately took horse, and arrived on the beach about nine. We found that the ship had almost at that instant gone to pieces, and about two hundred

men were floating on the fragments of the wreck, and driving towards the mouth of a small river, which was swelled by the late rains. At the same time a most tremendous sea set in, which had raised a bank of sand at its mouth. A number of Spaniards were looking on. I instantly plunged into the river, and found I could ford it about shoulder deep. Mr. Masser followed me, and four or five Spaniards imitated our example. For two hours we were employed in snatching from a watery grave the unfortunate creatures, who were clinging to pieces of timber, and dashing every moment upon the bank of sand, and upon each other. I with great difficulty saved Captain Lobo, he was driving upon a piece of the vessel, almost exhausted, and senseless; the next breaker, in all probability, would have been his end. I dragged out the second captain, and shortly after a lieutenant, who expired, on my landing him on the beach; I likewise saved a midshipman, as did Mr. Masser, the purser; these are all the officers saved. The crew consisted of three hundred and fifteen, out of which there are a hundred and sixteen survivors.

"I pledge my word, more than two-thirds of that number owe their lives to Mr. Masser's exertions and my own. One officer and four men died in my arms, from being bruised and exhausted before I could land them. Many a poor fellow we were obliged to let go, from the quantity of wood driving in every direction, and saw them dashed to pieces on the sand. The sight was most dreadful, but the cause we were embarked in nerved our arms. About half-past twelve, nine of the unhappy sufferers remained on the last piece of the wreck. Many about this time arrived from the garrison, and, with their assistance, four of them were got ashore. Mr. Masser and myself had many hair-breadth escapes; he was, at one time, swept from his feet by a breaker; I was most fortunately near him, and, making a dash, caught hold of his coat as he was floating into the surge, and by the assistance of one of the Spaniards saved him and a sailor. I was, as you may suppose, very poorly for some time, from the bruises and over exertion; but I am now recovered." After detailing a number of more minute particulars, the writer concludes his letter with the following apostrophe:—"God grant that I may never witness so melancholy a sight again; but, should that be my fate, God grant I may have it in my power to be equally serviceable!"

THE BATTLE OF THE NILE.

NELSON's attack, like the dread lightning's blast,
Rends the proud hull, and rives the tow'ring mast!
Whole sheets of flame on Gallia's host are driv'n,
And vengeance thunders to approaching heaven!
That impious race, who dared deny their God,
Now feel the scourge of his avenging rod;
Mad from despair, they plunge into the wave,
And seek the refuge of a wat'ry grave.
One tow'ring ship, the Gallic admiral's boast!
Enwrap't in flames, illumines all the coast!
A blazing Pharos, it appeared to be,
Emerging from the bosom of the sea!
'Till with a blast which seemed to rend the skies,
The mighty bulwark into atoms flies!
A dreadful wreck! that covers half the flood,
And dyes thy waters, Nile, with Gallic blood—
An awful silence stills the lurid air,
And horror checks the howlings of despair,
The foe, now finding all resistance vain,
Struck his proud flag, and yielded up the main;
While Arabs, witness of the Gaul's defeat,
With shouts of triumph hail the British fleet.
As long as Egypt's pyramids shall stand,
Long as the Nile shall fertilize her land;
So long the voice of never-dying fame,
Shall add to England's glory, Nelson's name.

CAPTURE OF LA PIQUE.

THE hero, whose last service we are about to record, was descended from a family whose name stands pre-eminent in the naval annals of our country, during the last two centuries. From the circumstances which preceded and attended the action in which Captain Faulknor lost his life, it may well be deemed a pitched battle; and among our records of single-handed naval engagements, there is scarcely one deserving a higher place in our estimation than this.

On the 5th of January, 1795, the *Blanche* frigate, of thirty-two guns, and two hundred and twenty men, discovered a large French frigate coming out of Point-a-Petre, in the island of Guadeloupe. In order to entice her to battle, Captain Faulknor stood as near the enemy's fort as he prudently could, every now and then heaving-to, and filling occasionally. Though the French frigate had come out of Guadeloupe for the express purpose of fighting the *Blanche*, yet the courage and resolution of her captain seems to have wavered when he came in sight of the British frigate. Captain Faulknor, however, was determined not to be baulked in his hopes of a battle: at first he tried whether he could provoke his opponent, by taking possession of a schooner which came out of Guadeloupe; finding that the enemy was not disposed to prevent him from making this capture, and despairing of his leaving the protection of the fort, while he continued in sight, he stood off towards the island of Marigante. When the day began to close, he stretched towards Dominica; and between these two islands, he perceived the frigate, about two leagues astern. He immediately made sail towards her. The *Blanche* was at this time on the starboard tack, and the enemy on the larboard. As they passed each other on these different tacks, they exchanged broadsides. In half an hour afterwards, the *Blanche* having got within musket shot, the enemy wore, with an intention to rake her. Captain Faulknor, however, aware of his design, by wearing his ship at the same time, not only prevented it from taking effect, but actually succeeded in bringing the *Blanche* close alongside the French frigate. The action now commenced with the most desperate fury on both sides. Captain Faulknor determined that the enemy should not escape, and that it should be a pure trial of resolution and bravery, ordered the *Blanche* to be laid across her opponent's bows; and when in this situation he himself lashed the bowsprit to the capstern. While on the bowsprit, he was much exposed to the musketry from the deck of the French frigate; but at this time he escaped unhurt. As the two vessels were so close to each other, very few guns could be used by either; the engagement was, therefore, principally kept up by musketry from the tops, and by the quarter-deck guns. The enemy perceiving that the deck of the *Blanche* was much encumbered by the fall of her masts and rigging, attempted to effect a boarding: in this attempt they were repulsed with considerable slaughter. Soon afterwards, the enemy's frigate got

clear of the *Blanche*, and dropped astern; as the latter was in no condition to have pursued her, Captain Faulknor again had recourse to the plan of lashing them together; and in order that it might be done this time more effectually, he ordered a hawser to be got up, with which he fastened the French frigate to the quarter of the *Blanche*. While he was superintending and assisting in this, he was shot dead. The officers and crew, instead of being daunted by his loss, were only stimulated and inflamed to greater feats of bravery. His place in the command of the ship was ably and meritoriously filled by Lieutenant Watkins, who continued the fight with increased obstinacy. He got up another hawser, and again secured the enemy by her bowsprit abreast of his starboard quarter; and after thus securing her, he payed off before the wind, dragging his antagonist after him. The marines still kept up a constant fire of musketry into her, which was afterwards seconded by the two aftermost main-deck guns run out at the stern-ports. In order to bring these guns to bear, the English were obliged to blow away their upper transom beam, as the ports could not be made large enough by the carpenters to admit the guns being run out.

The engagement lasted in this manner till five o'clock, when the enemy hailed that she had struck. As neither of the frigates had a single boat but what was shattered to pieces, the second lieutenant of the *Blanche* and ten men jumped overboard, swam to the enemy, and took possession of her. She proved to be *La Pique*, of forty guns, and four hundred and sixty men; her loss amounted to seventy-six killed, and one hundred and ten wounded. The loss of the *Blanche* was very small compared with that of the enemy, and considering the length and obstinacy of the engagement; besides Captain Faulknor, seven were killed and twenty-one wounded.

The death of this brave officer made a considerable impression on the public mind, and the brilliancy of the action in which he fell, was long the theme of his country's praise. On the 6th of May following, an interlude, called "The Death of Captain Faulknor," was performed at Covent Garden Theatre. This subject was also selected by an eminent artist, as well adapted to his genius; and the efforts of his pencil were worthy of this glorious event. The sense which the nation at large entertained of the professional renown of Captain Faulknor, was evinced by the erection of a monument to his memory in Saint Paul's Cathedral, with the following inscription

THIS MONUMENT
Was voted by his Country,
TO CAPTAIN ROBERT FAULKNOR,
Commander of His Majesty's Ship *Blanche*,
Whose ancestors had, without cessation,
Served with glory in the British Navy
For nearly two centuries;
And who himself fell on the 5th of January, 1795,
When engaging *La Pique*,
Of superior force,
Which was afterwards captured by the *Blanche*.

SITUATION OF THE SHIPS AT THE CLOSE OF THE ACTION.

liancy of the action in which he fell, was long the theme of his country's praise. On the 6th of May following, an interlude, called "The Death of Captain Faulknor," was performed at Covent Garden Theatre. This subject was also selected by an eminent artist, as well adapted to his genius; and the efforts of his pencil were worthy of this glorious event. The sense which the nation at large entertained of the professional renown of Captain Faulknor, was evinced by the erection of a monument to his memory in Saint Paul's Cathedral, with the following inscription

THIS MONUMENT
Was voted by his Country,
TO CAPTAIN ROBERT FAULKNOR,
Commander of His Majesty's Ship *Blanche*,
Whose ancestors had, without cessation,
Served with glory in the British Navy
For nearly two centuries;
And who himself fell on the 5th of January, 1795,
When engaging *La Pique*,
Of superior force,
Which was afterwards captured by the *Blanche*.

that the enemy should not escape, and that it should be a pure trial of resolution and bravery, ordered the *Blanche* to be laid across her opponent's bows; and when in this situation he himself lashed the bowsprit to the capstern. While on the bowsprit, he was much exposed to the musketry from the deck of the French frigate; but at this time he escaped unhurt. As the two vessels were so close to each other, very few guns could be used by either; the engagement was, therefore, principally kept up by musketry from the tops, and by the quarter-deck guns. The enemy perceiving that the deck of the *Blanche* was much encumbered by the fall of her masts and rigging, attempted to effect a boarding: in this attempt they were repulsed with considerable slaughter. Soon afterwards, the enemy's frigate got

CAPTAIN HENRY WHITBY.

THE youngest son of the Reverend Thomas Whitby, was born on July 21, 1781, at Creswell Hall, his father's seat in the county of Stafford, he was related to the late Earl St. Vincent. He went to sea towards the close of the year 1794, or early in 1795, as midshipman, on board the *Excellent*, the Hon. Rear-admiral Cornwallis, whose flag captain, though a very young man, was his brother, Captain John Whitby. While a youngster in the admiral's ship, he so conducted himself, as to gain the approbation and favour of that officer. At the time of his celebrated retreat on June 19, 1795, young Whitby was confined to his hammock with the measles; but no sooner did he learn that some sharp fighting was expected, than he jumped up, and declared that whatever might be the consequence he would stand by his gun, and share the dangers and credit of the day, from which he was prevented by positive orders. On June 4, 1799, he was made lieutenant; and on August 1, he was as much concerned in the ever-memorable engagement off Aboukir, as any person in a frigate could well be. In 1801, he was appointed to the *Leviathan*, Rear-admiral Duckworth, then commanding on the Jamaica station, by whom he was made commander and post captain of the *Proselyte* frigate. That ship being lost on a reef of sunken rocks, and becoming known to the Admiralty, previously to their confirmation of his rank as post captain, he was put back again into the *Leviathan*, as lieutenant. At length he was made commander, and appointed to the *Pelican*, in which ship, unaided, he carried on the blockade of Aux Cayes with such unremitting diligence and activity, as to reduce the inhabitants to a state of famine, and to terms of almost unconditional surrender. On February 6, he was made post. In 1805, we find him at Halifax, in North America, commanding the *Leander*, of 50 guns. In April, 1806, being off Sandy Hook, as senior officer of a squadron, consisting of the *Leander*, *Cambrian*, and *Driver* sloop of war, with instructions to examine all vessels, a man on board one of the American coasters was said to be killed by a shot from the *Leander*, as about that time the squadron were firing, to bring to some homeward-bound American merchantmen, which fearing the result of search, obstinately persisted in their course. An uproar of a most violent kind ensued in America: they demanded Captain Whitby from our government, to try him by their own laws: it was finally resolved that he should be tried by a court-martial, for the wilful murder of this man, John Pierce, for the violation of the rights of a neutral state, in amity with Great Britain. Accordingly, on April 16, 1807, he was tried at Portsmouth and acquitted. The president, Admiral Montague, returned him his sword, with this full assurance, "that it had never been stained in his hands." To soothe the Americans, however, he was refused employment. In November 1808, Captain Whitby obtained intelligence from a most authentic source, that the man, John Pierce, for whose murder he had been tried, and though acquitted, had been kept unemployed, had not been killed by a shot from the *Leander*, or from any one of the squadron then acting under his orders. He communicated this intelligence to the first lord of the Admiralty, and, through the secretary of state, to the American minister, resident in London. By him it was admitted, that no objection any longer existed to the *cidevant* captain of the *Leander* being brought into active service against the enemies of his country. In February 1809, he, therefore, received a commission for the *Cerberus*, of 32 guns; and in this ship, in company with Captain Hoste, of the *Amhion*, he put the seal to his naval fame in the action off the island of Lissa. On his arrival in England, he was presented by the first lord of the admiralty with a gold medal and ribbon, and promised the Briton, a new frigate, shortly to be launched. In April, 1812, he attended the launch at Chatham, and commissioned her a few days after. Scarcely had he performed this business, which he regarded as leading to an accession of glory, when he was arrested by a painful disease, to which he had been long occasionally subject, and, on May the 5th, he died, in the thirty-first year of his age.

WRECK OF THE SCOTIA, AND NARROW ESCAPE FROM DROWNING OF TWENTY-FOUR MEN.

LIVERPOOL, Dec. 14, 1839.—At a late hour this evening we have been furnished with highly interesting details of the preservation of twenty-four human beings from a watery grave, through the admirable conduct of Captain Collins, commander of the ship *Roscius*, which arrived here this day. The facts are furnished by an intelligent passenger. It appears that on the 5th of December, p.m., Captain Collins fell in with the wreck of a ship called the *Scotia*, bound from Quebec to Glasgow, burden 600 tons, laden with timber, water-logged, in lat. 46, long. 30. On seeing signals of distress flying, they altered their course, and bore down upon her, and on the *Roscius* approaching her, Captain Collins hailed her, and the answer was, "We are water-logged, with 17 feet water in the hold." The prompt reply of Captain Collins was, "Put out your boats if you want to come on board." A cheer from the people of the sinking vessel followed, and the thrilling cry arose as of men in the extremest peril suddenly restored to life and hope. Every person was instantly on the poop, and an effort was made to approach the *Scotia*, but the water-logged vessel was quite unmanageable. She pitched heavily, as if she would have gone down headlong as the seas swept over her. Her masts had been cut away to ease her, and the poop deck, where the crew were congregated, seemed the only place of safety left them. In attempting to near, she staggered down upon the *Roscius*, which was compelled to make sail to get out of the way. The sea was then very heavy. The *Roscius* again lay to about a mile from the *Scotia*. Night came on, and the unfortunate vessel was then lost sight of altogether. About six o'clock Captain Collins hoisted a lantern, and the light was immediately answered by the *Scotia*; it was the general opinion that one of the boats had put off, and had been swamped, and that the survivors had determined to wait till the morning before another attempt was made; but this conjecture happily proved unfounded. Indeed it seemed impossible for any to live in such a sea.

It is impossible sufficiently to commend the conduct of Captain Collins; his anxiety to reach Liverpool before the steamer which was to have sailed six days after us, made every moment of importance; we had, moreover, seventy steerage passengers, and twenty-one in the cabin; and to forego taking advantage of a fair wind, and to lay to for a night in a heavy sea, with every appearance of an approaching gale, was a determination which, I greatly fear, many a master of a ship would have found difficult in coming to.

Captain Collins, however, made this resolution prompt, and without any expression of impatience at the detention it occasioned. His only observation was, "We must stay by the poor devils at all events, till morning, we can't leave them to perish there, d—n it." May we hope, when "the accusing spirit flew up to heaven's chancery with the oath, and blushed as he gave it in, the recording angel, as he wrote it down, dropped a tear upon the word, and blotted it out for ever?" At seven p.m. cheering was heard in the direction of the *Scotia*; the people we supposed, had taken to the boats, and had then left the sinking vessel; in the course of an hour, the long-boat of the *Scotia*, filled with men, was on our lee quarter. By the admirable arrangements which were then made by Captain Collins for rescuing them, the men were taken on board without the least accident. This boat brought eighteen; the captain and five men still remained on board, and were preparing to put off in the jolly-boat. No little anxiety was felt for the safety of this small boat; in the course of half an hour, however, she was seen, and with two oars only, she gained the *Roscius*, and the captain and his five men were soon taken on board. To the credit of the master of the *Scotia*, he, Captain Jeans, was the last man to leave the sinking ship. The anxiety expressed by the men in the first boat for the safety of the captain, and, indeed, the terms in which the whole of his people, then and subsequently, spoke of Captain Jeans, showed how highly he was respected and esteemed by his crew, and, if he had not been so, he would probably not have kept his ship afloat so long as he had done.

Nor was the anxiety of Captain Jeans for the safety of his crew less manifest: the first question he asked, on coming on board the *Roscius*, was, "Are all my people safe?" The captain and crew were all Scotch, and their conduct throughout reflected no discredit on their country, when they came on board they were worn out with continual exertion. The men had been night and day at the pumps since the previous Tuesday: and, exhausted as they were, they turned to, and did duty with our crew; and no sooner were the boats cast adrift than there was ample occasion for their services, a violent gale from the north-east set in, which must have rendered it utterly impossible for the people to have taken to their boats, and the violence of which, on the following day, must have been inevitably fatal, for it would have been impossible to have kept the pumps going, and the sea already, even before the gale from the north-east set in, was making a clear breach over her, and threatening to carry away her poop cabin, the last place of refuge left for the poor people of the *Scotia*, except the top, where they had already stowed water and provisions, in the momentary expectation of being compelled to abandon the deck: and thus, providentially, were twenty-four human beings preserved from a watery grave.

LOSS OF THE QUEEN EAST INDIAMAN, BY FIRE ON THE COAST OF BRAZIL, IN THE YEAR 1806.

A FEW days after the unfortunate loss of the *Queen*, an officer belonging to the *Kent* Indiaman, transmitted the following account of that event, in a letter to one of his friends in England.

"We should have left this place ere now, but for a melancholy accident which has befallen the *Queen* Indiaman, which had put in here with us a few days since, for want of water. On the 9th of July, between two and three o'clock, a.m. our officer, who had the watch on deck, discovered a smoke issuing from the gun-room ports of the *Queen*, which was moored a little way from us. Immediately we called the captain and officers; for although no alarm was given from the *Queen*, yet, as she was evidently on fire, every exertion was made to man our boats with the fire engines, buckets, &c. for their assistance; but, within a few minutes of our discovering the smoke, she was completely in flames from stern to bow; and, in a few minutes more, the three masts were overboard. Unfortunately it blew very fresh, and a current of at least three or four knots. This of course rendered it difficult for the boats to get alongside to save the people; and so rapid were the flames, that about thirty soldiers perished below deck, being unable to get up the hatchways. All the officers of the ship were saved; and, fortunately for us, the current carried her clear of the bay, and she drove a considerable distance before she blew up, about seven, a.m. The cause of the fire is not ascertained, as no person had been in the gun-room after eight o'clock; and although several people slept over the gun-room scuttle, the smoke was not discovered till near three o'clock. The scene was dreadful, from the cries of between two and three hundred men, and many perishing in the flames or in the sea. Those saved were almost entirely naked, from being hurried out of their beds. The remaining troops, and all the passengers (about three hundred), proceeded in the *Kent*, to India. There were five ladies; and General St. John and family, were accommodated by the captain of the *Kent* with his cabin apartment.

"Most of the passengers, Captain Craig, and some of the officers, were ashore at the time. Unfortunately six of the passengers, and seventy of the crew perished. The first mate, Mr. John Craig, was on board, and did not leave the ship till the very last moment, after having done everything that it was possible for a man to do. The only way in which this dreadful disaster could be accounted for is, that immediately upon the arrival of the *Queen* at St. Salvador, a guard of Portuguese were sent on board, to prevent, as they said, smuggling; and a gun-boat, at the same time, was laid alongside of her, the crew of which kept a fire of wood constantly burning; some of it, it is supposed, they threw in at the scuttle hole of the gun-room.

"Among the unfortunate sufferers on board, was Edward Mayne, Esq., jun., of Powis Lodge, in Scotland, writer in the service of the Hon. East India Company. When just about to step into the boat, which was to carry him from the awful scene, he recollected that there was an unfortunate passenger confined by sickness to his cabin. He flew to rescue him from impending destruction, and in a short time, appeared with the hapless invalid on his shoulders. Alas! it was too late; the boat had put off, and in a few minutes the ship blew up.

The fate of Mr. Smith, was truly deplorable. In endeavouring to get from the ship, one of his arms was jammed between her and a boat alongside. In this dilemma, he intreated some of the people to cut off his arm, that he might join them; which, not being complied with, he contrived to take a pen-knife from his pocket, and put an immediate end to his life, by cutting his throat.

A SHIP OVERWHELMED WITH ICEBERGS.

THE next morning the ice drew more to the northward, and, what was worse, blew fresh, thereby setting the seaward ice down towards the land with more force than had yet been experienced. Shortly after nine, a.m., a fine piece split in two, and the extreme violence of the pressure curled and crumbled the windward ice up in an awful manner, forcing it against the beam fully eighteen feet high. The ship creaked as it were in agony, and, strong as she was, must have been stove and crushed, had not some of the smaller masses been forced under her bottom, and so diminished the strain by actually lifting her bow nearly two feet out of the water. In this perilous crisis steps were taken to have everything in readiness for hoisting out the barge; and without creating unnecessary alarm, the officers and men were called on the quarter-deck, and desired, in case of emergency, to be active in the performance of their duties at the respective stations then notified to them. It was a serious moment for all, as the pressure still continued, nor could we expect much, if any abatement until the wind changed. At noon the weather and our prospects remained the same. The barometer was falling, and the temperature was 56° minus, with unceasing snow. Much ice had been sunk under the bottom, and a doubt existed whether it was not finding its way beneath the lee floe also; for the uplifted ruins, within fifty paces of the weather-beam were advancing slowly towards us like an immense wave fraught with destruction. Resistance would not, could not have been effectual beyond a few seconds; for what of human construction could withstand the impact of an icy continent, driven onward by a furious storm? In the meantime, symptoms, too unequivocal to be misunderstood, demonstrated the intensity of the pressure. The butt-ends began to start, and the copper, in which the galley apparatus was fixed, became creased, sliding doors refused to shut, and leaks found access through the bolt-heads and bull's eyes. On sounding the well, too, an increase of water was reported, not sufficient to excite apprehension in itself, but such as to render hourly pumping necessary. Moved by these indications, and to guard against the worst, I ordered the provisions and preserved meats, with various other necessities, to be got up from below, and stowed on deck, so as to be ready at a moment to be thrown upon the large floe alongside. To add to our anxiety, night closed prematurely, when suddenly, from some unknown cause, the floe which threatened instant destruction, turned so as in a great degree to protect us against an increase of pressure, though, for several hours afterwards, the same creaking and grinding sounds continued, to annoy our ears. The barometer and other instruments, fell with a regularity unprecedented, yet the gale was broken and by night had abated considerably.—*Capt. Back's Narrative.*

SHIPWRECK OF THE JONGE THOMAS.

On the 1st of June, 1773, being Whit-Monday, there arose at the Cape a very high north-west wind, and violent hurricanes and showers of rain. At night, in this storm, the Jonge Thomas, one of the four ships belonging to the company that were still on the road, having lost all her anchors, one after the other, was driven on the sands near the Zoul river, and, in consequence of her heavy lading, parted in two pieces in the middle. The surge arose to an alarming height on the shore, and Zoul river was so swollen as to be almost impassable. It is true, from the middle of May to the middle of August, the company's ships are prohibited from lying in the road, yet it sometimes happens that the governor permits it, in order to avoid the inconveniences of victualling and lading the ships in False Bay. Independently of the loss sustained by the company, as well in the ships as in merchandise, a

number of the crew likewise unfortunately perished on this occasion. They were lost for want of assistance, and met with a deplorable death very near the land. Only sixty-three men escaped; one hundred and forty-nine being unhappily drowned.

The ship had scarcely struck, which happened just at day-break, when the most efficacious measures were employed to save as much as possible of the company's property, that might chance to be thrown on shore, though not the least care was taken to deliver a single soul of the crew from their forlorn and miserable situation. Thirty men were instantly ordered out, with a stripling of a lieutenant, from the citadel to the place where the ship lay, in order to keep a strict look out, and prevent any of the company's effects from being stolen. A gibbet was erected, and an edict issued at the same time, importing, that whoever should come near the spot should be hanged immediately, without trial or sentence being

SHIPWRECK OF THE JONGE THOMAS, A DUTCH EAST INDIAMAN, AT THE CAPE OF GOOD HOPE, JUNE 2, 1773.

passed on them. On this account, the compassionate inhabitants, who had gone on horseback to the assistance of the wretched sufferers, were obliged to return, without being able to do them the least service; but, on the contrary, witnessed the brutality and want of feeling evinced on this occasion by certain persons, who did not bestow a thought on affording the least assistance or relief to their fellow-creatures upon the wreck, who were perishing with cold, hunger, and thirst, and almost in the arms of death.

Another circumstance tended to render this otherwise distressing scene still more affecting. Among the crew who were lucky enough to save their lives by swimming from the

wreck, was the gunner, who stripped himself quite naked, in order that he might swim the easier, and had the good luck to come alive to shore, which was not the case with every one that could swim; for many were either dashed to pieces against the rocks, or, by the violence of the surf, carried back again to sea. When he arrived on shore, he found his chest landed before him; but, just as he was going to open it, and take out his greatcoat, the lieutenant who commanded the party drove him away from it, and, though he earnestly begged for leave to take out the clothes necessary for covering his naked and shivering body, and could also prove by the key, fastened, according to the sailor's custom, to his waist,

as well as by his name being cut on the lid of the chest, that it was actually his property, he was, nevertheless, forced to retreat, without effecting his purpose, by this merciless hero, who gave him several smart blows with a cane, on his bare back. After he had passed the whole day naked and hungry, and exposed to the piercing winds, and was going to be taken in the evening to town along with the others, who had been saved from the wreck, he asked leave to take a coat out of his chest, to cover himself with; but this having been previously plundered, he found it empty. On entering the town, where he arrived stark naked, he met with a burgher, who took compassion on his situation, and lent him his greatcoat. Afterwards he, as well as the other unfortunate wretches, were obliged to run about the town, several days together, begging victuals, clothes, and money, till, at length, they received support at the company's expense, and were again taken into its service.

Another action, honourable to humanity, deserves the more to be recorded, as it shews that, at all times, and in all places, there are both kind and considerate people, as well as such who have nothing human but the shape. An old man, of the name of Woltemad, by birth an European, who was at this time a keeper of the beasts at the menagerie, near the garden, had a son in the citadel, who was a corporal, and among the first who had been ordered out to Paarden Island (Horse Island), where a guard was to be placed for the preservation of the wrecked goods. This worthy veteran borrowed a horse, and rode out in the morning, with a bottle of wine and a loaf of bread for his son's breakfast. This happened so early, that the gibbet had not yet been erected, nor the edict posted up to point out to the traveller the nearest way to eternity. The hoary sire had no sooner delivered to his son the refreshments he had brought him, and heard the lamentations of the distressed crew from the wreck, than he resolved to ride his horse, which was a good swimmer, to the wreck, with a view of saving some of them. He repeated this dangerous trip six times more, bringing each time two men alive on shore, and thus saved, in all, fourteen persons. The horse was, by this time, so much fatigued, that he did not think it prudent to venture out again; but the cries and entreaties of the poor wretches on the wreck still increasing, he ventured to take one trip more, which proved so unfortunate that he lost his own life, as, upon this occasion, too many rushed upon him at once, some of them catching hold of the horse's tail, and others of the bridle, by which means the horse, both wearied out, and too heavily laden, turned head over heels, and all were drowned together.

This noble and heroic action of a superannuated old man, shews that a strong rope of lives might probably have been saved, if a great rope had been fastened by one end to the wreck, and by the other to the shore. When the storm and waves had subsided, the ship was found to lie at so small a distance from the land, that one might almost have leaped from her upon shore.

On receiving intelligence of the above event, the East India Directors in Holland ordered one of their ships to be called by the name of Woltemad, after this heroic old man, and the story of his humanity to be painted on the stern; they also enjoined the regency of the Cape to provide for his descendants.

Unfortunately, in the southern hemisphere, all were not impressed with the same sentiments of gratitude. The young corporal, Woltemad, who had been an unavailing witness of his father having sacrificed himself in the service of the company, and of mankind, wished, in vain, to be gratified with his father's situation, humble as it was. Stung with the disappointment, he left that ungrateful country, and went to Batavia, where he died before the news of such a great and unexpected recommendation could reach him.

FATE OF SEVEN DUTCH SEAMEN, 1633-1634.

LOSS OF A DUTCH WHALER, 1639.

Nothing exhibits more strongly the march of maritime improvement than the perfect impunity with which seamen now winter in the inclement climates of the polar circle. The Dutch endeavoured in vain, for a long time, to obtain, by high rewards, volunteers for the purpose of wintering in the icy seas. Science has now shown how easily all the obstacles which are opposed to human life there may be obviated. We have found the Polar Seas in modern times the receptacle of jovial seamen during the coldest season. When the thermometer was 47 degs. below zero, in latitude 74 deg. 45 min., we have heard of our gallant countrymen acting plays to remove the tedium of a darkness some months in duration, when the earth and sea were under the dominion of frost, and there seemed to be no other empire beneath the stars.

Very different was the fate of seven Dutch sailors who volunteered to pass the winter in Mayen's Island on the coast of Greenland, in the year 1634. It appears that the Greenland Company of Holland had determined to obtain all the information they were able respecting these climates, and the nature of the winters there. Some curious discussions had taken place among astronomers, which it was probable might be thus decided. Seven of the boldest and most resolute of the fleet offered their services on the occasion, and were accepted. The names of these men were Outgert Jacobson of Groetbroek, commander of the party; Adrian Martin Carman of Schiedam, clerk; Thaunniss Thaunnissen of Shermerhem, cook; Dick and Peter Peterson of Harlem; Sebastian Gyse of Delfts Haven; and Gerard Beautin of Bruges. Seven other seamen were left at Spitzbergen about the same time, as will be seen in the sequel.

The island called Mayen's Island, and sometimes the Isle of St. Maurice, is situated in 71 degs. of north latitude. It is about fifty miles long, and very narrow, consisting of barren mountains covered with eternal snow, among which one more conspicuous than the rest is called by mariners Beerensberg. The Dutch formerly made this island the head-quarters of their whale-fishery, and drawing from it a very considerable revenue, they were anxious to establish a colony there. Two thousand quintals of oil were shipped off from this island in one season. At present the oil is extracted from the whales on board-ship, the fish being towed alongside and cut up on the sea; formerly this was performed on shore in the most convenient situations near the fishery. Furnaces and huts were built for the accommodation of the people employed, and were annually tenanted during the season for the fishing. The whales have since left the shores of these establishments near which they experienced so harassing a warfare, and the works have been abandoned as useless.

These seven seamen were left upon the island on the twenty-sixth of August, 1633. There was no night at this period, the sun being exceedingly powerful, so that they took off even their shirts, and amused themselves on a hill-side near the huts which they had erected for their abode. They allowed themselves two pounds of tobacco each a week, and a measure of brandy for eleven days was given out at a time. They caught sea-gulls, of which great numbers resorted to the island, and collected all the vegetables they could find for salad. Thus they lived without inconvenience, as far as can be gathered from the narrative of their sufferings, found in their abode, until the end of September, when the weather grew stormy. In the beginning of October their huts were violently shaken by the wind, so that their rest at night was broken; and once they heard a terrible noise for which they could not account. On the eighth of October they had recourse, for the first time, to fires. They found a fine spring of water on the south side of the island.

The winter now approached rapidly. Two whales were cast on shore this month, which they endeavoured to kill with harpoons and lances, but the tide coming in they made their escape. The cold set in so severe they were obliged to shut themselves up in their huts. The arctic bears visited them, and became so numerous, that at night they were afraid to venture out. In the day time they killed several which they roasted for food. These animals were so strong, that after being shot through

and through they would sometimes run off and escape. Snow fell constantly, and a barrel of bear's flesh froze only six feet from the fire.

On the nineteenth of October the sea shore began to be covered with ice. The rays of the sun did not descend more than a foot down the elevation under which they had erected their huts. The ice on the sea augmented constantly. The cold grew so intense that it broke the vessel which held their liquors: at length the sea became frozen as far out as they could see with the naked eye.

The bears continued to visit them, and they now and then succeeded in killing one for provisions. They were obliged to make a large fire where they kept their liquors to prevent their being frozen. The sea-gulls soon disappeared, the water was everywhere frozen too hard for it to be obtained by breaking the ice, and they were obliged to content themselves with snow. After the nineteenth of November the days grew so short that they had scarcely light to read in their tents, and they were in consequence overpowered with melancholy and idleness. The end of this month and the beginning of November, however, it grew so mild that the weather did not appear more severe than it usually is during winter in Holland. On the eighth of December the frost returned. The cold set in again with dreadful severity, and the day, which was only four hours long, was rendered so gloomy by the thickness of the atmosphere, that for the greater part of the month they were obliged to keep within their huts without once going outside.

On the beginning of the new year they enjoyed themselves, as much as circumstances would permit, in celebration of the time, but they did not forget going regularly to prayers. The cold became excessive. The ice, which covered the bay, was heaped up in hillocks. A bear visited them on the thirteenth, which they shot and dragged into their hut, out of which they feared to venture any more for the cold. They had lived long upon salt meat, and the flesh of the bear came opportunely to give them a respite. During the whole of January the snow continued to fall, and the weather was very tempestuous. It continued the same until the middle of February. The bears now no longer approached them, and though the south wind once or twice produced a slight thaw, the north-east which followed it always redoubled the severity of the cold.

In March, the weather continued the same until the end of the second week, when the air became calm, and even agreeable, and they were cheered by the light of the sun, which they had not seen since the first. They fancied that its feeble rays imparted a slight warmth when the wind was south. They succeeded in killing another bear, and the flesh was found to yield great relief. They were now attacked with scurvy, which rendered any fresh meat they could obtain more valuable. The weather was fine during the whole month, and the days became pleasantly serene, but the progress of the scurvy from their bad food was rapidly reducing them. They saw very large whales in great numbers come into the bay.

On the third of April they were so reduced by the scurvy, that only two of their number could stand on their legs, and the two last fowls which they possessed were killed for the sick, in the hope it would refresh and strengthen them. The greater part of the rest of the month the air was very cold, the wind blowing from the north-east, so that there was no leaving their hut. The scurvy began its work of death. On the sixteenth, the clerk, who had kept their journal, died, and the survivors implored Heaven to have mercy on his soul. Rain began to fall, and the prospect of summer, now rapidly approaching, was not sufficient to keep them in spirits or enable them to combat their malady. They daily grew worse. Not one of them could move without excessive pain. No article of fresh provisions was left, and the intense cold still prevailing, hurried on their last hour. The power of warming themselves by exercise, which had hitherto been some relief, was over, and the journal of their sufferings wound up with the following entry, after which the attempt of the dying hand to continue the narrative was attested by the illegible characters with which the only one of them whose hand was capable of using the pen had in vain essayed to close the latest record of their fate. "We are now reduced to so deplorable a state that none of my comrades can help them-

selves, and the whole burden, therefore, lies on my shoulders. I shall perform my duty as long as I am able, and it pleases God to give me strength. I am now about to assist our commander out of his cabin; he thinks it will relieve his pain, he is struggling with death. The night is dark, and the wind blows from the south."

On the twenty-third of April the commander died. On the twenty-seventh, they killed their dog, which afforded them a very poor repast of fresh meat. The night was fine although a little cloudy, and there was frost. On the twenty-eighth the ice left the bay, and the sea was open. On the twenty-ninth there was a storm. On the thirty-first, the weather was fine, and the sun, that was lighting them to their doom, as if in mockery, shone out brilliantly.

Thus far the journal, which, as is observed above, could with difficulty be deciphered; the hand that held the pen then ceased to move. The soul of him who wrote was probably yielded up soon afterwards to its Creator.

The Dutch fleet arrived at Mayen's Island about a month afterwards, on the fourth of June, 1634, and the crews were naturally anxious to ascertain how their late companions had fared, though they had little hope of seeing them alive. They entered the hut, and found them as their fears had too truly presaged. From all they could see, they imagined that the survivors of the clerk, who died on the sixteenth of April, followed him in the commencement of the next month. Bread and cheese were found close to one of them, on which it is probable he had subsisted to the last moment. Each lay in his own cabin. By the side of one was a prayer-book, in which he had been reading; and by the side of another, a box of ointment, with which he had anointed his teeth and joints, his arm was found extended upwards towards his mouth. When grown too weak to help themselves, they most likely perished, one by one, from the severity of the weather, their weakness preventing their getting up to make themselves a fire. Their malady arose from living so long upon salt provisions: had they not been reduced in bodily strength, so as to be unable to make a fire or take proper exercise, they had most likely survived until the arrival of the fleet, as the cold must have diminished every day.

The commander of the Dutch fleet had the bodies put into coffins in the snow, until the earth was sufficiently thawed to allow of graves being dug for them. On St. John's day, when the earth was free from the effects of the frost, the bodies were interred under a general discharge of the cannon from the fleet.

Seven other sailors had been left in a bay, on the north side of Spitzbergen, called North Bay, by the same fleet which left the foregoing seven at Mayen's Island. The fleet sailed away on the thirtieth of August, leaving them nearly nine degrees higher in latitude than Mayen's Island, where the seven, who subsequently died, had been left at the same time. As soon as the ships were gone, they began to collect provisions to last them until the following year. They hunted the rein-deer, and caught many sea fowl, adding to their stock such herbs as were likely to prove refreshing, and beneficial to health. They made numerous excursions as long as the weather permitted, and attacked the whales and narwals in the neighbouring bays. On the third of October they were prepared for the approach of the cold season by the departure of all the feathered creation; and after that they found that the cold augmented progressively. By the thirteenth, the beer in barrels was frozen three inches thick, and not many days afterwards became a mass of ice, though only at the distance of eight feet from the fire. They daily broke the ice for fishing, and put down a net, but in two hours found that ice two feet thick had closed up the hole.

The cold now became so excessive they were obliged to keep in their beds, although they had both a stove and grate. They rose sometimes for exercise, which they took as smartly as they could continue it, that they might thereby keep up their natural heat. The Aurora Borealis was seen in great splendour, and other aerial phenomena were witnessed, which they imagined to proceed from the icy mountains. On the third of March they had a combat with a huge bear, in which one of their number was very near being killed,

The animal, mad from the wounds he had received, sprang upon the man who was in the act of piercing it with his lance, beat him to the ground, and but for the prompt assistance of his comrades he would have been torn in pieces.

The privations and cold which these men endured were put an end to by the arrival of a Greenlander on the twenty-seventh of May, which took them off in safety.

The degree of suffering encountered by the seamen, and their comrades who perished so much farther the south as Mayen's Island, seems to prove that the intensity of cold, as it affects life, does not depend upon proximity of situation to the pole. The cold of latitude 80 deg. is sustained with as little endangerment of life as that of 72 degs. More recent experience has shown that neither situation presents difficulties which are not easily surmounted. There is more dependant upon counteracting the action of diseases arising from bad food and inaction, than from severe cold. These last seven men were succeeded by seven more, who on the same spot, and under the same circumstances, all perished. It is reasonable to suppose that the cause was in the neglect of those steps which their predecessors had taken in regard to food and exercise.

On the eleventh of September, 1634, encouraged by the success of the preceding adventurers, seven other sailors volunteered to winter in the same spot. Medicines, food, herbs, liquors, everything they could need was left for their use. They were not so fortunate as those who preceded them, in killing bears or obtaining vegetables, probable from being left a fortnight later in the season. They saw a good many whales near the shore, at which they fired, without success, or, indeed, without producing the slightest effect. They took leave of the sun on the twentieth or twenty-first of October, and on the twenty-fourth of November were first attacked with symptoms of scurvy, upon which they used double diligence in search of herbs. They also looked out for bears and foxes to supply them with fresh meat, but were unsuccessful in meeting with them. They ate separately from each other, under the idea of avoiding the spread of the disease by infection, most of them being still free from attack.

Three of their number being out together, they encountered a bear, which received them on its hind legs. They fired at it, and it fell roaring terribly, and bleeding, in which state it seized a halbert from one of the men, and gnawed it with great fury, and then collecting all its strength ran off. Although it was followed with a lantern for some distance it succeeded in getting away, to the great mortification of its pursuers, who were in hopes of obtaining a few meals of fresh meat, to arrest the march of the scurvy, which continued to increase, so that the sick were in the utmost agony of suffering. On the fourteenth of January, Adrian Johnson died in great pain, and was speedily followed to the dust on the seventeenth, by Cornelius Thyse, a very sensible man, and the best seaman of the party. In him they all put implicit confidence, and it is likely his fate, from the gloom it cast over their minds hastened the end of the rest of the party. All were now ill; Fettje Otters, another seaman, died. Thus reduced to four, they awaited their last hour with resignation, yet they were employed, weak as they were, in the useless task of making coffins for those deceased, and putting the bodies into them. Who was to do this office for them?

In the beginning of February they caught a fox, which put them in good spirits for the moment, but they were too far gone to derive permanent benefit from one or two fresh meals. They saw many bears, but could not lift a musket to their shoulders to kill them. They could not have got the carcass to their habitation, had they been able to kill one, nor could they pursue them if wounded. Their feet were scarcely able to sustain them, their knees were inflamed, and their teeth so bad they were obliged to leave off eating biscuit. Their bowels were attacked with excruciating pains, which were increased by the cold. One of them spit blood, and another was seized with dysentery. One alone, James Corcoen, could still bring in fuel to maintain the fire.

On the 23rd of February, they were unable to leave their cabins, and they resigned themselves to God's mercy, their misery being at the utmost limit of human endurance. On the 24th there was a feeble gleam of sunlight. The 26th was the last day on which the writer could put his pen to the paper. At that time they remarked that four of them still survived, lying flat on the floor of their hut. They could still have eaten if there were any one able to get fuel, but none could move for pain. Their time was spent in prayer, that God in his mercy would take them from their misery whenever he pleased to see fit. "We cannot long survive without food or firing," they write; "we are unable to render each other the least assistance, and each must bear his own burden."

On the arrival of the whaling ships of 1635, these unfortunate men were found in their hut, with the door secured to keep out the bears. The first man who entered, discovered part of a dead dog up stairs, and passing towards the door, trod on the carcass of another, and then stumbled over the dead bodies. Three of the deceased were in their coffins, two in their cabins, Nicolas Florissen and another, and two lay on the floor on some sails, their knees drawn up to their chins. They were all interred when the ground was penetrable, and stones were heaped over their graves as a security from beasts of prey. Thirty years afterwards, their graves being opened, their bodies were found entire, and as if the breath had only just left them, nor were their dresses at all changed, such is the anti-corruptive influence of cold in those high northern latitudes.

In the year 1639, a Dutch Greenlandman, commanded by Captain Didier Albert Raevn, reached the coast of Spitzbergen after a good voyage. A furious gale began to blow, and the violence of the storm, with the vicinity of shoals and icebergs, rendered the hazard of the situation very great, as from the want of sea-room it was not practicable to manage the vessel in the way necessary for her security. The snow fell thick and fast, so that it was impossible for the man at the helm to know how he was steering, and the seamen on the look-out at the bows could not see ahead of the vessel, which rolled so dreadfully that her yards dipped in the sea. The deck was covered with a thick glazing of ice, and they became unable to walk upon it from its slipperiness, and the motion of the ship; this the captain endeavoured to obviate, by strewing salt over the frozen surface to prevent accidents to the seamen from falling. In the midst of their alarming situation, the sheet anchor broke loose and went overboard.

The vessel, which had driven all day before the wind, was found in the evening to be approaching a great barrier of solid ice. This was not all, on the larboard bow a large field was descried, and right ahead a second. The captain hoped there might be room to pass through some opening between the two fields, and, therefore, kept on his course. This was soon found to be impossible, the danger increased, and the vessel rapidly drove on towards the ice. They now put up the helm. The ship lay almost on her beam ends; as she struck on one field, the other was close under the mizen-mast. The concussion was terrible, and all the crew believed the ship was crushed to pieces, but no wreck floated up, and they had time to recover themselves. They now discovered that the ship had sprung a leak, in fact, she began to sink. The main and fore-masts were cut away, and as she settled, she drove about at the mercy of the winds and waves. The boats were hoisted out, but from too many pressing into them they sank, and all who were in them perished.

The vessel now seemed to be going down; her head was under water, and the surviving crew got upon the poop. Some ascended the mizen mast, which giving way, hurled them into the waves, and they were drowned. The stern soon separated from the fore part of the vessel, and remained about six feet out of the water. Many of the crew fell into the sea at the moment of the separation, and perished miserably. The state of those who survived was now pitiable. Wet and exposed to the cold of a polar atmosphere, the survivors could only hope for a short protraction of their wretched existence. Every successive wave broke over them, and carried away some of their number, while several lost their hold of the cordage from being

benumbed by the cold, and fell into the sea. There were other vessels in sight, but it was in vain to hope for aid from them, as they were too much occupied with their own safety. The part of the vessel which floated began most providentially to rise in the water, and right itself. The captain and twenty-nine men remained upon it.

The night which followed was a terrible one for the sufferers. They had to struggle with a violent storm, during which every moment threatened to be their last. Hunger and cold continued to do the work of destruction, and yet when the morning dawned the survivors were still sensible, and the storm had abated. Frozen stiff, the sailors could not use their limbs for exercise to keep in a little of the vital warmth. They became heavy, felt drowsiness overcome all their faculties, lay down, fell into an immediate lethargy, and slept their last sleep. The captain was washed overboard in the night, but having firm hold of the cordage recovered the floating wreck.

The weather now moderated, but the floating portion of the vessel seemed to sink deeper and deeper. They contrived to cut loose everything that added to her weight which they could reach, and thus to lighten her a little, which they imagined was attended with some success. One of them proposed, that as the danger increased every moment they should make a raft with a few planks which they could still reach. The captain tried in vain to dissuade them. It was begun, but the sea fortunately tore it away at the moment they were going to launch it and themselves to certain destruction.

Insatiate thirst was now felt by these unhappy people, until it became so tormenting, they drank their own water for relief. The second night was fatal to many of them, and far more difficult to endure than the first had been. The sea was smooth towards the morning, but it brought no alleviation of their sufferings. They had but little hope of salvation, for their hunger increased, and the war of the elements which they had outlived, seemed only to cease, and afford a protraction of existence that it might terminate still more painfully. Frozen stiff, drenched by the sea at intervals, and having to combat their want of food, and unquenchable thirst, nine of their original number beyond the reach of suffering, and they momentarily expecting to share their fate; a gleam of hope kindled in their bosoms about noon, on the third day, the pilot observing that he saw a sail. All were now as alert as men could be, who, a few minutes before were awaiting their last hour. They exerted themselves to show signals of distress—they were seen—joy once more cast its sunshine upon them. Presently three boats put off to their assistance, and soon were alongside.

Sixty-six had perished, twenty were now carried into the boats, more dead than living, and taken to the vessel. Great care was bestowed upon them. Their feet were put into brine, previously made warm, and they soon recovered their feeling. Their limbs were rubbed to cure the frost bites, and they were put to bed, being supplied with proper food, and carefully nursed. They all recovered except a master's mate, whose limbs were frozen quite through, and whose life the greatest skill and attention could not preserve.

A counterpart to this narrative may be found in the relation of John Cornelius of Muniken, who sailed to Spitzbergen, on the whale fishery, in a galliot from the Texel, May the 6th, 1646. His deliverance of four Englishmen, whose sufferings were still greater than those of Captain Albert Raevn, and his twenty seamen, is related as follows:—Cornelius reached Spitzbergen on the 3rd of June, intending to anchor in a bay of that island, but was prevented by vast fields of ice floating near the land, and was obliged, in consequence, to keep out at sea. He cruised up and down, among the ice-shoals, for some time, until he was able to get into the bay an anchor. Seeing two whales further out at sea, he sent his sloop in pursuit of them. While the people of the sloop were watching the motions of the whales, with the view of capturing them, they fell in with a vast ice-field, on which, at a great distance, they discovered something white. They took it at first sight for a bear, the arctic animal of that name being white. One of the crew, named

Ellert Johnson, who was standing in the sloop with a harpoon to strike the whales, thought by the motion of the object that it could not be a bear, and persuaded the crew to row in that direction. They agreed to do so, and when they got nearer perceived it was a man holding up a piece of rope belonging to the sail of a ship, apparently as a signal of distress. They pulled hard towards him, and on coming up found to their great wonder four living men, and one dead body, all Englishmen, and all upon an ice field. They fell upon their knees, and expressed their thankfulness for their deliverance the moment the Dutchmen came up. They were taken into the boat, and carried on board the galliot in the bay. Their story was a dreadful one.

These sailors belonged to a vessel which had been lost, and were part of forty-two who had reached the ice in the boat, and also saved some provisions and tools. The commander who was with them, perceiving it impossible for men to live long in such a situation, determined to go on shore, with seventeen of the crew, in the boat, and if possible endeavour to send aid to them from thence. He set sail, but the weather became bad, it blew very hard, and as no tidings were heard of him any more, by the people on the ice, they concluded that the boat and her crew had perished. Twenty-four had been left on the ice. Their provisions now grew scanty, and being all of them nearly starving, and expecting death every moment, they dispersed themselves, being in hopes to reach other ice-shoals, and by chance drift upon the shore, or get taken off by some vessel. What became of the men who left them afterwards they could not tell.

Those who were found on the ice field or shoal, cut a great hole in the ice like a cave, and round the entrance placed the pieces they had cut out to form the concavity, as a fence to keep off the wind and spray of the sea. In this cold and dismal excavation they had lived fourteen days from the time they lost their ship. Four were all that now remained out of forty-two. They who had quitted them could be no better situated, for what hope could be indulged of prolonging life in wandering from one piece of ice to another, and every moment drifting further and further from land, as must have been the case at that season of the year, the ice having broken up for the summer. The seamen saved, it may be judged, were at the last extremity. They were found huddled together on the field emaciated by frost and hunger. The last article of food which they had consumed was a leathern belt, belonging to one of them, which they had equally divided into shares, and wholly eaten up.

They were carefully attended by the surgeon of the Dutch ship, notwithstanding which three out of the four died within a few days after they were taken on board. Thus only one escaped out of the ship's crew, and he sailing to Holland, with the Dutchmen, arrived at Delft in 1646, and from thence reached England.

DESTRUCTION OF HIS MAJESTY'S SHIP BOYNE, BY FIRE, AT SPITHEAD, IN THE YEAR 1793.

AT 11 o'clock in the morning, on the 1st of May, a fire broke out on board the Boyne, of 98 guns, at Spithead, commanded by Captain George Grey. The flames burst through the poop before the fire was discovered, and spread so rapidly, that in less than half an hour this noble ship was in a blaze fore and aft. Every exertion of the officers and crew to extinguish it became abortive; and, immediately on the fire being noticed by the fleet, all the boats were sent to her assistance, by which fortunate circumstance most of the crew were saved; eleven only are supposed to have perished.

The port-admiral, Sir Peter Parker, went on board the Royal William, and made the signal for all those ships most in danger to get under weigh; which, although the wind and tide was unfavourable, they executed with great promptness and judgment, and dropped down to St. Helen's.

All her guns, being loaded, went off as they became heated, the shot falling among the shipping, and some even reached the shore in Stokes Bay. Two men on board the *Queen Charlotte* were killed, and one wounded.

About half-past one o'clock she burned her cables, and drifted slowly to the eastward, till she took ground on the Spit, opposite South Sea Castle, where she continued to burn till near six in the evening, when, the flames having reached the magazine, she blew up with a great explosion.

It has never been exactly ascertained from whence the cause of this dreadful fire originated. The most probable seems to be, that a part of the lighted paper from the cartridges of the marines, who were exercising and firing on the windward side of the ship, flew into the admiral's cabin, and communicated with some papers and other inflammable materials.

At the time that the conflagration commenced, a marine was peacefully sitting in his berth, with his wife and son, a boy about twenty months old, just beneath the place where the misfortune began; and finding every effort to escape the flames in the ordinary way ineffectual, he, with the greatest composure and presence of mind, took from the pens a sheep of the captain's live stock, and braced his boy on the animal's fleecy back, dropped them into the sea. "There," said he, "turn to the land, and God go with you!" Encouraged by her husband's resolution, his wife leaped into the sea, and the man followed, supporting his companion above water till the boats got to their assistance when they were taken up, little worse for the venture. The sheep, with the greatest steadiness, was seen making for the shore, with young *Ben Bowline* riding upon his back, like an infant river god, to the vast delight of the spectators on shore, who, from the tenderest motives, finding themselves interested in the boy's safety, rushed into the watery element to meet the young navigator, whom they presently *unsheeped*, and succoured with tenderness, till he again fell into the arms of his adventurous parents.

The singularity of this event attracted the patronage of a most liberal lady near Fairy Hill, in the Isle of Wight, who, having prevailed on the mother of the child to leave his future fortune to her guidance, declared, in the most friendly manner, "that, as the boy had begun his naval career on a lamb, she would never leave him till he was able to end it like a lion."

SUFFERINGS OF PETER SERRANO,

Who, having escaped from Shipwreck, lived Seven Years on a desolate and Sandy Island, on the Coast of Peru.

This man, as related by Garcilasso de la Vega, escaped from shipwreck by swimming to that island, which from him received its name, being, as he reported, about two leagues in compass, and for so much it is estimated in the Book of Charts, three little islands with divers shallow places about them; so that all ships keep at a distance from them, avoiding them with all possible care and circumspection.

It was Peter Serrano's misfortune to be cast on this spot, and to save his life on this desolate island, where was no water, wood, grass, or anything for support of human life, at least, not for maintenance of him so long a time as until some ship passing by, might redeem him from perishing by hunger and thirst; which languishing manner of death is much more miserable, than by a speedy suffocation in the waters. With the sad thoughts thereof he passed the first night, lamenting his affliction, with as many melancholy reflections as we imagine capable to enter into the mind of a wretch in like extremity.

As soon as it grew day, he began to traverse his island, and found on the shore some cockles, shrimps, and other creatures of like nature, which the sea had thrown up, and he was obliged to eat them raw, because he had no fire to roast them.

With this small entertainment he passed his time, till observing some turtles not far from the shore, he watched a convenience until they came within his reach, and then throwing them on their backs (which is the manner of taking that sort of fish), he cut the throat, drinking the blood instead of water; and slicing out the flesh with a knife, which was fastened to his girdle, he laid the pieces to be dried and roasted by the sun; the shell he made use of to take up the rain-water, which lay in little puddles, for that is a country often subject to great and sudden rains.

In this manner he passed the first of his days, by killing all the turtles that he was able, some of which were so large, that their shells were as big as targets or bucklers. Others were so great, that he was not able to turn them or stop them in their progress to the sea; so that in a short time experience taught him which sort he was able to deal with, and which were above his strength. With his lesser shells he poured water into the greater, some of which contained twelve gallons; so that having made sufficient provisions, both of meat and drink, he began to contrive some way to strike fire, that he might not only dress his meat with it, but also make a smoke, to give a sign to any ship that was passing. Considering of this invention (for seamen are much more ingenious in all time of extremity than men bred on land), he searched everywhere to find out a couple of hard pebbles, instead of flints; his knife serving instead of a steel; but the island being covered all over with a dead sand, and no stone appearing, he swam into the sea, and diving often to the bottom he at length found a couple of stones fit for that purpose, which he rubbed together until he got them to an edge, with which being able to strike fire, he drew some threads out of his shirt, which he worked so small, that it was like cotton, and served for tinder; so that having contrived a means to kindle fire, he gathered a great quantity of sea-weeds, thrown up by the waves, which, with the shells of fish and the planks of ships, which had been wrecked on those shoals, afforded nourishment for his fuel; and lest sudden showers of rain should extinguish his fire, he made a little covering, like a small hut, with the shells of the largest turtles or tortoises that he had killed, taking great care that his fire should not go out.

In the space of two months, and sooner, he was as unprovided of all things as he was at first; for, with the rains, heat, and moisture of that climate, his provisions were corrupted, and the heat of the sun was so violent on him, having neither clothes to cover him, nor shadow for shelter, that when he was, as it were, broiled in the sun, he had no remedy but to run into the sea.

In this misery and care he passed three years, during which time he saw several ships at sea, and as often made his smoke; but none turned out of their way to see what it meant, for fear of those shelves and sands, which wary pilots avoid with all imaginable circumspection, so that the poor wretch, despairing of all manner of relief, esteemed it a mercy for him to die, and arrive at that period which could only put an end to his miseries.

Being exposed in this manner to all weathers, the hair of his body grew in that manner, that he was covered all over with bristles, and the hair of his head and beard reaching to his waist, he appeared like some wild savage creature.

At the end of three years, Serrano was strangely surprised with the appearance of a man on his island, whose ship had, the night before, been cast away upon these sands, and who had saved himself on a plank of the vessel; so soon as it was day, he espied the smoke, and imagining whence it was he made towards it.

As soon as they saw each other, it is hard to say which was the most amazed; Serrano imagined that it was the devil, who came in the shape of a man, to tempt him to despair. The new comer believed Serrano to be the devil in his own proper shape and figure, being covered over with hair and beard; in fine, they were both afraid, flying one from the other. Peter Serrano cried out, as he ran, "Jesus, Jesus, deliver me from the devil!" The other, hearing this, took courage, and again returning to him, called out, "Brother, brother, don't fly from

me, for I am a Christian, as thou art." And because he saw that Serrano still ran from him, he repeated the credo, or Apostle's creed, in words aloud; which, when Serrano heard, he knew that it was no devil that would recite those words, and thereupon gave a stop to his flight, and returning with great kindness, they embraced each other with sighs and tears, lamenting their sad state, without any hopes of deliverance. Serrano, supposing that his guest needed refreshment, entertained him with such provisions as his miserable life afforded; and having a little comforted each other, they began to recount the manner and occasion of their sad disasters.

For the better government of their way of living, they apportioned their hours of day and night to certain services; such a time was appointed to kill fish for eating, such hours for gathering weeds, fish-bones, and other matters which the sea threw up, to maintain their constant fire; and especial care had they to observe their watches, and relieve each other at certain hours, so that they might be sure their fire went not out.

In this manner they lived amicably together for certain days; for many did not pass before a quarrel arose between them, so high, that they were ready to fight. The occasion proceeded from some words that one gave the other, hinting that he took not that care and labour as the extremity of their condition required. This difference so increased (for to such misery do our passions often betray us), that at length they separated, and lived apart one from the other. However, in a short time, having experienced the want of that comfort which mutual society procures, their choler was appeased, and they returned to enjoy converse, and the assistance which friendship and company afforded; in which condition they passed four years, during all which time they saw many ships sail near them, yet none would be so charitable or curious, as to be invited by their smoke or flame: so that being now almost desperate, they expected no other remedy besides death, to put an end to their miseries.

However, at length a ship venturing to pass nearer than ordinary, espied the smoke; and rightly judging that it must be made by some shipwrecked persons escaped to those sands, hoisted out their boat to take them in. Serrano and his companion readily ran to the place where they saw the boat coming; but as soon as the mariners approached near enough to distinguish the strange figure and looks of these two men, they were so affrighted that they began to row back: but the poor men cried out, and, that they might not believe them to be devils or evil spirits, they rehearsed the creed, and called aloud on the name of Jesus, with which words the mariners returned, took them into the boat, and carried them to the ship, to the great wonder of all present, who with admiration beheld their hairy shapes, not like men, but beasts, and with singular pleasure heard them relate the story of their past misfortunes.

The companion died on his voyage to Spain, but Serrano lived to come thither; from whence he travelled into Germany, where the Emperor Charles V. then resided; all which time he nourished his hair and beard, to serve as an evidence and proof of his past life. Wheresoever he came, the crowd pressed, as to a sight, to see him. Persons of quality having the same curiosity, gave him sufficient to defray his charges; and his Imperial Majesty presented him with an annuity for life. He died at Panama.

STORMING OF FORT MUROS.

ON the 3rd of July, 1805, Captain Maitland being informed that there was a French privateer, of 26 guns, fitting out at Muros, thought it practicable to bring her away, or destroy her; he accordingly appointed Mr. Yeo to head the boarders, amounting, officers included, to 50 men. On hauling round the point of the road, a small battery of two guns opened a fire on the ship, which was returned; but perceiving it would be a considerable annoyance, Mr. Yeo pushed on shore, and spiked the guns. As the ship drew in, and more fully

opened the bay, Captain Maitland perceived a very large corvette, called the *Confiance* of 26 ports, and a large brig called *Le Belier*, of 20 ports; but neither of them firing, he concluded they had not their guns on board. The sole object of his attention therefore was the fort, which began a well-directed fire, every shot taking place in the hull. The fire was returned with great effect, and the fort would, no doubt, have been soon silenced, notwithstanding its spirited defence, had it not been completely embrasured. Mr. Yeo's galantry soon put an end to their fire. After taking the small battery on the point, Mr. Yeo perceived, at the distance of a quarter of a mile, a regular fort, ditched, and with a gate, which the enemy (fortunately not suspecting his landing) had neglected to secure, and which was firing upon the ship. Without waiting for orders, he pushed forward, was the first to enter the port, with one blow laid the governor dead at his feet, and after a dreadful slaughter on the part of the enemy, the remainder surrendered, and the British colours were instantly hoisted. Lieutenant Mallock, of the royal marines; Mr. Charles Clinch, master's mate; and Lieutenant Douglas, of the royal marines, conducted themselves with great gallantry; indeed every seaman and marine of the party behaving with such bravery, that nothing could withstand them; and, to the credit of their valour as Britons, as well as of their profession as seamen, the instant the fort was taken, they seemed to try who could be the first to relieve and assist the poor wounded prisoners, lying in numbers in different parts of the fort. Thus they "conquered to save;" and their humanity was amply repaid by the gratitude of the unfortunate men's friends, when they came to take them away. The British had 15 wounded; the governor of the fort, and a Spanish gentleman who had volunteered, the second captain of the *Confiance*, and nine others of the Spaniards, were killed; thirty, amongst whom were most of the officers of the *Confiance*, were wounded. The enemy's force, at the commencement of the action, was a fort of 12 guns, 22 soldiers, several Spanish gentlemen and townsmen volunteers, and about 100 of the ship's company of the *Confiance*.

SALL'S SHOE.

You must know when I was aboard the *Terp-sychore*, there was a fore-topman, of the name of Bill Harness, a good sort of chap enough, but rather soft in the upper works. Now we'd been on the Jamaica station for some years, and had come home, and merry enough, and happy enough, we were (those that were left of us), and were spending our money like the devil. Bill Harness had a wife, who was very fond of he and he very fond of she, but she was a slatternly sort of body, never tidy in her rigging, all adrift at all times and, what's more, she never had a shoe up at heel, so she went by the name of Slatternly Sall, and the first lieutenant, who was a 'ticular sort of a chap, never liked to see her on deck, for you see she put her hair in paper on New Year's day, and never changed it or took it out till the year came round again. However, be it as it may be, she loved Bill, and Bill loved she, and they were very happy together. After all, it arn't whether a woman's tidy without, that makes a man's happiness, it depends upon whether she be right within; that is, if she be good-tempered, and obliging, and civil, and 'commodating, and so forth. After the first day or two, person's nothing—eyes get palled, like the capstern when the anchor's up to the bows; but what a man likes, is not to be disturbed by vagaries, or gusts of temper. Well, Bill was happy—but one day, he was devilish unhappy, because Sall had lost one of her shoes, which wasn't to be wondered at, considering as how she was always slip-shod. "Who has seen my wife's shoe?" says he. "Hang your wife's shoe," said one, "it warn't worth casting an eye upon." Still he cried out, "Who has seen my wife's shoe?" "I see'd it," said another. "Where?" says Bill. "I see'd it down at heel," says the fellow. But Bill still hallooed out about his

wife's shoe, which it appeared she had dropped off her foot as she was going up the fore-castle ladder, to take the air a bit, just as it was dark. At last, Bill made so much fuss about it, that the ship's company laughed, and called out to each other, "who has seen Sall's shoe?"—"Have you got Sall's shoe?" and they passed the word fore and aft the whole of the evening, till they went to their hammocks. Notwithstanding, as Sall's shoe was not forthcoming, the next morning Bill goes on the quarter-deck, and complains to the first lieutenant, as how he had lost Sall's shoe. "D—n Sall's shoe," said he, "haven't I enough to look after without your wife's shoes, which can't be worth two-pence." Well, Bill argues that his wife has only one shoe left, and that won't keep two feet dry, and begs the first lieutenant to order a search for it; but the first lieutenant turns away, and tells him to go to the devil, and all the men grin at Bill's making such a fuss about nothing. So Bill at last goes up to the first lieutenant, and whispers something, and the first lieutenant booms him off with his speaking trumpet, as if he was making too free, in whispering to his commanding officer, and then sends to the master-at-arms. "Collier," says he, "this man has lost his wife's shoe; let a search be made for it immediately—take all the ship's boys, and look everywhere for it: if you find it bring it up to me." So away goes the master-at-arms with his cane, and collects all the boys to look for Sall's shoe—and they go peeping about the main deck, under the guns, and under the hen-coops, and in the sheep-pen, and every where; now and then getting a smart slap with the cane behind, upon the taut part of their trousers, to make them look sharp, until they all wished Sall's shoe at Old Nick and her too, and Bill in the bargain. At last one of the boys picked it out of the manger, where it had lain all night, poked up and down by the noses of the pigs, who didn't think it eatable, although it might have smelt human-like; the fact was, it was the same boy who had picked up Sall's shoe when she dropped it, and had shied it forward.

It sartainly did not seem to be worth all the trouble, but howsoever it was taken aft by the master-at-arms and laid on the capstern head. Then Bill steps out, and takes the shoe before the first lieutenant, and cuts it open, and from between the lining pulls out four ten pound notes, which Sall had sewn up there by way of security; and the first lieutenant tells Bill he was a great fool to trust his money in the shoe of a woman who always went slip-shod, and tells him to go about his business, and stow his money away in a safer place next time. Arter that, if anything was better than it looked to be, the ship's company used always to say it was like *Sall's shoe*.

THE NAVAL ENGINEER.

BY DAVID VEDDER, ESQ.

WITH roses wreath the wine-cup,
Let joy prevail to-night,
New strength has been imparted
To England's naval might;
Resistless power and science
Hold on their high career,
'Neath the hand
And command
Of the Naval Engineer!

When storms rage round the welkin,
And angry ocean's stirred,
Our bark o'ertops the billows,
As gaily as a bird;
And urges through the blue profound,
Though gales a-head should veer,
By the will
And the skill
Of the Naval Engineer!

The chiefs who fought at Acre,
And blazon history's page—
Immortal Napier at their head,
The Nelson of the age;—
When flame, and smoke, and shot, and shell,
And rockets did career,
Highly prized,
Eulogized
The bold Naval Engineer!

Then toast we "Rods and pistons,
And cylinders and valves;
And glorious sixty-eighteens,
That don't do work by halves."
May vapour hiss, and wheels revolve,
Where England's foes appear,
'Neath the hand
And command
Of the Naval Engineer!

ANCIENT SHIPPING.

THE first mention of ships of great burthen in England is derivable from an inscription on Canning's tomb in Radcliffe Church, Bristol, which states, that he had "forfeited the king's peace," or, in plain words, committed piracies on the high seas, for which he was condemned to pay 3,000 marks: in lieu of which the king took of him 2,470 tons of shipping,—amongst which there was one ship of 900 tons, another of 500, one of 100, and the rest smaller. These ships had English names, yet it is doubtful whether at that time ships of so large a size were built in England: it seems more probable that Canning had purchased or taken these ships from the Hanseatics, or else from the Venetians, Genoese, Luccese, Ragusians, or Pisans, all of whom then had ships of larger tonnage.

LONDON BRIDGE.

IN 1176, one Coleman, a Priest, began to build London Bridge of stone, in consequence of an order made by the king and council. It was thirty-three years ere it was finished, and the course of the Thames was changed during that time by a trench (probably that made by Canute) from Battersea to Rotherhithe.

SIXTY-FOURS IN DISGUISE;

A LONG-BOAT STORY.

"Don't tell me," said Fearnought Weatherall to his watch-mates, assembled under the lee of the long-boat, every man of whom had an old stocking about his neck, "don't tell me about '*Sixty-fours in Disguise*;' I have been on board the Constitution, the *Yankees* call her Old Ironsides, the pride of Boston; and I have been on board of the United States; they are thundering frigates to be sure, but they are not bigger than the *Le Forte* was, if they are so big; they don't carry more guns, nor do they carry heavier metal; and yet, when we took the *Le Forte* we heard nothing about '*Sixty-fours in disguise*,' not we. Our ship, the *Le Sybille*, you know, was a French frigate before we had her; and I believe she was taken by the Romney, fifty, up the Mediterranean. Howsoever, she was what they call an eight-an'-thirty, because she had fourteen ports of a side, besides the bride port;—well, and the *Guerriere*, the Macedonian, and the *Java*, were just the same: they were all looked upon as a match for a French or Spanish sixty-four, especially in any thing of a breeze, you know. But what's the use of talking about the size of a ship, the ship's company is every thing; and if there had not been so many English fighting, as it were, with halters about their necks, on board of the Yankee frigates, they would not have carried the swag as they did. No, no: look how we, in the *Sybille*, ripped up the *Le Forte*, and that too in a brace of shakes, although the *Le Forte* was laid down for an eighty-four, on two decks, and mounted fifty-six guns, besides swivels, long French thirty-

sixes on her main-deck, and forty-two pounder carronades on her quarter-deck and forecastle. Lord have mercy on us! there was smashing work! We got sight of her in the dog-watch, from four to six, and she lay-to us, thinking we were an Indian; and we afterwards heard that her captain made coxswain of us; but he made a Scotch prize, as we shall presently see. Why, the d—d fool let his ship lay like a log upon the water, and never thought of filling to give her steerage-way, until it was too late; but then you know he thought it was an Indian he was about to deal with. Howsoever, he paid dearly enough for it, for the first broadside we gave her sent him to glory!

"We expected tight work, and were prepared for it. It was dark before we got down to her; but not a light was to be seen on board of our ship. As soon as we got within hail she hailed us in French, and then in English; but we returned no answer. She fired a gun, but we heeded it not; and, as she was laying-to on the larboard tack, we run down close under her stern, took the bags off our lanterns, and gave her a raking broadside, which, we afterwards heard, knocked out all her lights fore and aft. We then hauled to the wind on the starboard tack, crossed her stern again, and gave her another raking broadside before they had time to recover from the confusion occasioned by the first. We then hove about, and brought-to upon her larboard quarter, and before you could say Jack Robinson, knocked five or six of her after-ports into one; but just at this time a barrel of musket-cartridges, I think it was, blew up near our main-mast, which made the *Crappos* think we were on fire. They manned their rigging to give us three cheers; but we returned the compliment with a whole broadside, which completely dismasted her at once, when they hailed, and begged us to cease firing, as they had struck.

"Never was ship so cruelly mauled—our shot went in on the larboard quarter and out on the starboard bow, leaving scarcely a whole beam in her; we killed 76, and wounded 170, on board of her; both her captains, and nearly all of her officers were killed. We had 3 killed and 19 wounded, and our captain died of his wounds at Calcutta, and was buried in grand style. God rest his soul!

"But, harkye, nothing was said about a 'sixty-four in disguise' then; it was only a frigate taking a frigate—our first lieutenant Hardyman, was posted; and our master Douglas was made a lieutenant!"

LOSS OF THE BRILLIANT, ABERDEEN AND LEITH STEAM-SHIP, DEC. 12, 1839.

We regret to announce the loss of this very fine vessel, on her voyage from Leith to Aberdeen. She was one of the steam-vessels which ply between these two ports, and had sailed from Leith on Wednesday. The night was very boisterous, with a strong gale from the south-east, and a heavy sea. Notwithstanding the head-wind and stormy sea she had to encounter, she proved the power and efficacy of steam navigation, and her excellent qualities as a sea-boat, having reached Aberdeen about seven o'clock on Tuesday morning; but here, when almost in apparent safety, the disaster occurred. In making the harbour, the ebb-tide and heavy sea drove her upon the inner point of the pier, and, striking heavily against the bulwark, the blow-off pipes of the engine burst, and in a short time the boilers became red hot, which set fire to the vessel, and notwithstanding every effort made by the manager of the Company, aided by boats from the harbour, she was burnt to the water's edge. We deeply regret that Captain Wade, the master, was washed overboard and drowned, about six miles from Aberdeen.

The *Aberdeen Herald* says—"The steamer made comparatively easy weather until abreast of Montrose, when a dead swell came away from the north-east, which opened up as the gale freshened, about two a.m. She now laboured hard, taking on board a good deal of water, and occasionally a whole sea. The *Brilliant* reached the bay about half-past six a.m. by which a tremendous sea was running; and, though it was an

hour past high water, and quite dark, Captain Wade, finding that she would not keep the sea, and that there was little prospect of being able to clear the headlands and open the Firth south or north, made for the harbour. The *Brilliant* was scarcely end on, till she took a sea lurch, shipped a sea over the starboard quarter, which shook the vessel hard, and, we are sorry to add, washed the captain off the poop to meet a watery grave.

In these distressing circumstances, the mate (Mr. James Rae), had no alternative but to take the fair way. The steamer opened up the harbour freely, but just as she got over the bar, a strong fresh in the Dee, occasioned by the late rains, took her on the larboard bow, in consequence of which she hung heavily, refused the helm, and falling to leeward, struck on the south side of the pier head with a tremendous crash. One poor fellow, a passenger, got his leg broke, but no other accident happened.

An incident here took place of a very affecting character, and is worthy of recording:—one of the female passengers had four children with her. She managed to get two of them ashore with little difficulty; she then ran for the other two that she had left in the cabin, but the moment they were handed on the quay, the vessel fell off, leaving the mother, the cook, and second engineer only on board. By the cook's presence of mind a line was soon made fast round the woman's waist, and one end thrown on shore, the other being held by him and the engineer, by which means she was safely landed on the quay. The steamer had now caught fire abaft the engine-rooms, in consequence of the firemen not being able to draw the fires from the furnaces, in the hurry to save their lives. About noon the flames reached the fore cabin: by about one o'clock she was enveloped from stem to stern, and by dusk she was burned to the water's edge. The whole of the cargo, though considerably damaged, and a good deal of the materials of the vessel were saved. Thus ended the *Brilliant*, after eighteen years of hard but faithful service; for, during the whole of that period, there never was a single accident happened on board of her. The *Brilliant* was built at Greenock in 1821, and was the first regular vessel on the Aberdeen and Leith station. Captain Wade, who has been lost, was a gentleman much respected, and had a high character as a seaman. He has left a wife, but no children. He was only lately married."

The following is an extract from a letter received from Aberdeen:—

"**ABERDEEN, Dec. 12.**—I am sorry to have to inform you of the total loss of the *Brilliant* this morning, between seven and eight o'clock, in taking this harbour; the passengers and crew were saved, except the master (Wade), who was washed overboard and drowned, when off the Cove, about five o'clock in the morning. We had a dreadful night, with the wind from the south-east, and the sea very high. Everything was working well on board the steamer, but being nearly two hours after high-water, and a strong ebb-tide and heavy breach, she would not steer, and struck on the inner point of the pier, where she now lies burnt to the water's edge. From beating against the stones the blow-off pipes had burst, and the boilers immediately emptied, and the heat of the empty boilers set the vessel on fire, which gained such an ascendancy that nothing could save her. All the cargo was got out in a damaged state, at least the most of it."

NAUTICAL KNOWLEDGE.

SAILORS, though they are the best fighters in the world, are not always the greatest scholars, or theologians. One of these being lately at church, and hearing it read that the ark was carried on men's shoulders, left the church in a great passion, affirming with an oath, that master chaplain there had told a damned lie, "for as how, do ye see," says he, "I have heard that that same ark was big enough to stow one Captain Noah, his crew, and a great deal of live stock."

A SHIPWRECK ON THE SOUTH COAST OF AFRICA.

A VERY curious and circumstantial relation of the shipwreck of a Portuguese vessel in 1686 at the Cape Agulhas, the southern extremity of Africa, with the subsequent adventures of the crew, was communicated by a Siamese attached to the embassy sent from Siam to the king of Portugal. The truth of the narration was vouched by the respectability of the relator, Occum Chamnam, an officer of distinction in Siam, and corroborated in its principal circumstances by the testimony of several Portuguese who were in the vessel. The whole account is curious, from the extraordinary circumstances of the Siamese party being placed among persons differing from them in country, manners, religion, and almost every other particular, and at last

left alone in deserts inhabited only by savages of whom they had had no previous idea. The account is taken from the voyage of the Jesuit Tachard, to whom it was communicated by Occum Chamnam, during a subsequent voyage from Siam, in the suite of the Siamese embassy to Louis XIV.

The crew of the vessel consisted of 150 men, and the passengers were nine Siamese mandarins and their suite, three Catholic missionaries, and some other persons. In consequence of mistaking the Point Agulhas for the Cape of Good Hope, the vessel struck, on a fine moonlight night, the 27th of April, 1686, when all on board were in the greatest imagined security. In a few minutes the vessel filled,—the most horrible confusion prevailed,—some knelt to utter a prayer, while others endeavoured to lighten the vessel by cutting away the masts or

SIAMESE NARRATION OF A SHIPWRECK ON THE SOUTH COAST OF AFRICA.

throwing overboard any articles within their reach. A few were swept off the deck by the waves which broke over the vessel; and some who tried to save themselves by swimming were drowned in the attempt.

After some time, a certain degree of calm took place on board, and the survivors began to think more coolly of means of saving their lives. They made rafts of planks, and all got on shore safe, but cold, wet, and hungry. The poor Siamese party, accustomed to the luxury of a warm climate, suffered severely, and after a miserable night, the narrator, a good swimmer, resolved to return to the vessel, to try to pick up some clothes and victuals. By the help of a sort of hurdle, he found means to bring on shore some pieces of cloth of gold, six bottles of wine, and some biscuit. His object was, he says, singularly enough, considering the circumstances, to find gold and precious

stones; but he could only obtain what we have stated, and even that, as it turned out, was of little value to himself.

"There were some Siamese," says he, "who escaped without any clothing whatever. I gave them the clothes I had brought from the ship, with which they covered themselves; but judging that if I entrusted the wine to their care it would not last long, I gave it to a Portuguese who had shown me a great deal of kindness, and told him I would give it all to him except a little which I might want for myself from time to time. On this occasion I experienced how weak friendship is against want, and how little we care for others when we are ourselves in necessity. This friend gave me a little glass of wine every day for the first two or three days of our journey, while we were expecting to find water; but when thirst came on, and no fresh water was to be procured, my request for a small portion of

what I had liberally given to him was so harshly repulsed with the reply that 'he would not give a drop to his own father,' that I was afraid to renew my request. As to the biscuit, it was of no use, being soaked with sea-water: I could not touch a bit of it, it was so bitter and salt."

The party on shore took the first opportunity of reckoning their numbers, and they found that nearly 200 had escaped, so that the whole loss amounted to but seven or eight. The survivors, however, found little reason to congratulate themselves; they were cold and hungry, some had scarcely any clothing, and very few had saved anything eatable. Winter was approaching, and the nearest habitation of civilized man was more than a hundred miles distant, the only settlement at that early period being in the neighbourhood of the Cape; the road to

which was over mountains and through rivers unknown to any but the natives. Some of the Portuguese had taken the precaution of getting their guns and some powder ashore, which were found useful on several occasions, particularly for making a fire at night, without which the poor Siamese had no doubt he should have died of cold.

The shipwrecked crew seem to have calculated on reaching the Dutch settlement in a day or two, and in their eagerness to arrive they left behind them the few provisions they had saved, that they might not be delayed on the road. But their first day's journey only brought them to a pond of fresh water, by the side of which they passed the night. The next day the Siamese were forced to linger behind in consequence of the weakness of the first ambassador, who was

infirm; but that they might not lose the Portuguese body from whom they were afraid to be far separated, they divided themselves into three parties, the first of which kept at a certain distance behind the Portuguese, so far as not altogether to lose sight of them; the second remained behind at an equal interval, and the third slowly proceeded with the ambassador. But all advance of the unfortunate man soon became impracticable. He begged his followers to leave him as the only means of safety, and requested that if they should be so happy as to reach the Cape, they would send some provisions for him with a horse to carry him on if alive. However painful this separation was, it was inevitable; but the poor ambassador was not left to die alone. A youth of fifteen, son of a mandarin, would not quit a friend to whom he was attached, and a faithful servant could not be prevailed

upon to leave his old master. The remainder of the party left those three persons to almost certain death, and followed the traces of the Portuguese, with whom they came up about midnight, and found them tired and hungry as themselves, without any provisions whatever.

The next day was like the preceding. A mandarin dropped with fatigue and was abandoned. The only food taken by any of the party was a few bitter herbs.

The fourth day brought some change. The wanderers met a few Hottentots, by whom they were conducted to a village of 400 or 500 persons; but they had not much aid from these men, who would give nothing nor sell anything but for tobacco or Dutch silver coin. Gold they refused, and even two large diamonds, offered by the Siamese, proved no temptation. One of the Portuguese luckily found a few pieces of Dutch money,

with which he bought an ox; but the animal was divided amongst his own friends, and the poor Siamese could not get a bit of it. They found, however, that some gold ornaments pleased the Hottentots, and a quarter of a sheep was procured by the offer of more than one hundred pistoles' worth. With this and a bason of milk bought for a few gold buttons, and the skin of the ox, which the Portuguese had thrown away, but which Siamese delicacy did not reject, they made more than one meal.

After a night passed amidst the dances and howlings of the Hottentots, (who appear to have been those natives whom we call Bushmen, though named indiscriminately Caffres, and Hottentots in the narration,) the party resolved to continue their journey by the sea shore, for the sake of the food they expected to find there, and probably from a fear of the savages. On the third day after they had left the Hottentots, they saw a lofty cape which they fancied was the Cape of Good Hope; a near approach soon showed the mistake, but they were consoled for the disappointment by finding a little rock in the sea covered with muscles, and a stream of fresh water close by, where they resolved to stay a day or two to recruit their wasted strength. On this day the Siamese lost another mandarin, and the narrator makes one of those reflections which show that human nature is the same everywhere. "Misery," says he, "must have the power of hardening the heart. In any other situation, if I had heard of a friend dying in so miserable a manner I should have been inconsolable; but I hardly felt anything from the death of this mandarin, who was however my intimate friend. All that we did was to show for a moment some regret at his death, and then we separated to look about for something to eat."

They remained by the rock of muscles two nights and one day, and then found their strength sufficiently recruited to venture to resume their miserable journey. They had found in the neighbourhood of the rock something which proved very useful to them: this was a sort of hollow stick, like a bamboo, which would hold water enough to supply a man one day; every one of the party provided himself with such a stick, and from that time the misery of thirst was much lessened. On the first day of their resumed journey, the Siamese were luckier than the Portuguese, having met with a serpent which they found eatable, while their companions fasted. "It was not bigger than my thumb," says the narrator, "but it was as long as my arm. We put him on the fire without fear, and eat him all up, skin, head, and bones, without leaving a morsel. It tasted very well, and I did not make a nicer meal during our whole journey."

A day or two after this, on awaking in the morning the Siamese found themselves alone, abandoned by the Portuguese, who had left them during the night. After seeking about on all sides, crying as loudly as they could, and searching in vain for a trace of the fugitives, the Siamese gave themselves up to despair; until at last the second ambassador, a man of courage and address, called all his party about him and made them a set speech. He excused the Portuguese for leaving them, because they could not go so fast as they did, and instanced their own conduct in leaving the first ambassador under similar circumstances; he then exhorted them to act as men who did not want a leader but who knew how to conduct themselves, and explained to them, that by following the sea-coast, they could not possibly go wrong. But the most curious part of his address was that relating to the respect due to the letter written by the great king their master: "My first, my only care in our shipwreck was to save this letter. I attribute my safety entirely to the good fortune which always attends anything which has once had the honour of approaching the supreme majesty of the king whom we serve. From that moment you have all seen with what care I have carried it. When we encamped upon the mountains, I always placed it upon the summit, or, at least, above the heads of any of our party, and stationing myself a little lower, I remained at a respectful distance to keep watch over it. When we stopped in the plains, I attached it to the top of the highest tree that I could find near us."

He then proceeds to direct that in case of his death, the third ambassador may do as he has done, and that in this man-

ner it may descend to the last survivor of the troop. And if, unhappily, none of us arrive at the Cape of Good Hope, let the last man bury it on the summit of a mountain, if possible, or at least, in the most elevated situation he can find, in order that the precious deposit may be free from insult and accident. Let him then prostrate himself, and die near it, showing in death the respect he owed it during life.

The influence of the sacred deposit seems to have extended itself to the whole party, who set out with vigour, in spite of pained and swelled limbs, and arrived at mid-day on the bank of a wide and rapid river. This they determined to cross; and for that purpose they tied all their scarfs together, end to end, giving one end of this long streamer to the best swimmer amongst them, who would be able, when he reached the opposite bank, to help the others by pulling it as they swam. The attempt failed; their best swimmer reached with great difficulty the bank, but he suffered severely from bruises in the attempt, and was also obliged to let go his hold of the scarf, so that the others were unable to follow. The saw, too, that from the rapidity of the stream, the Portuguese could not possibly have crossed; they therefore resolved to ascend the stream, and the mandarin who had crossed, was forced to swim back again, in doing which he escaped with the risk of his life.

For three or four days they continued to ascend the bank of the river, suffering dreadfully from cold and hunger, and heartily regretting the rock of muscles they had left behind them. They had soon evidences that they were in the track of the Portuguese. Once they found a torn stocking, and on another occasion, a fusil, the lock of which they took off to serve as a tinder-box. The next proof was a very melancholy one; it was the body of one of their interpreters, a half-caste, who had followed the Portuguese in their progress; they found him with his knees on the ground, and his body huddled up in a heap, all together, and quite stiff. They were themselves now almost dead with hunger; they had found absolutely nothing eatable, and were reduced to devour their shoes, which were probably made of undressed skin; they had for some time deliberated on returning to the rock; and were at last determined to do so on arriving at a point where they could see no means of getting on, but either climbing over a mountain, which they thought inaccessible, or wading through a deep and dangerous marsh. Here they passed the night, and the next morning they began to retrace their steps, resolving to remain by the rock until all the muscles were eaten, and then to give themselves up as slaves to the Hottentots.

They put their resolution in practice with so much eagerness that in three days they returned to the land of abundance, as it appeared to them; but now they found a new enemy in the increasing cold, which affected them to such a degree that, after remaining six days, and burning up all the fuel within their reach, they set out to find the Hottentots, carrying with them all the muscles they could find. Early the next morning they were found by three Hottentots, who were much more civilized than those they had before communicated with; and who were evidently acquainted with Europeans. They were, in fact, servants of the Dutch Government at the Cape, and appeared to be in search of them.

The Siamese party consisted of fifteen persons, and seven of those now found themselves completely exhausted. It was therefore resolved that they should be left in the best spot they could find, with as many of the muscles as they could spare, and that the others should follow the Hottentots, who appeared willing to act as guides, until they arrived at the first settlement, when they would send conveyances for those left behind. This was done: the eight who could walk followed their guides, but so slowly that two of the Hottentots left them. They followed the remaining guide through dreadful roads, and along precipices which made them shudder. On one occasion their nimble guide conducted them to a place so difficult to get along, that some of the party imagined they were brought there for no other purpose but to be killed; they actually came to a resolution to knock their guide upon the head, and would have put their unreasonable design into execution, had not the second ambassador commanded them to desist.

They lived all this time on their muscles, and on what they

picked up on their road. Sometimes they met with a few locusts, and, what they found much more agreeable, some frogs. But the narrators seem to have been most pleased with a sort of beetle. "I have no difficulty in saying," he observes, "that the insect which appeared most agreeable to my taste, was a sort of large fly or beetle, of very dark colour, of which we found many on our road. All the dressing we applied to them before eating, was merely to broil them on the fire, and we found them excellent."

At length, on the thirty-first day of their march, and the sixth from their finding a guide, they met two Dutchmen, accompanied by the Hottentot guides, who had left them six days before, loaded with provisions. "When we saw that they had brought us fresh bread, dressed meat, and wine, we could not contain our gratitude. Some of us threw ourselves at their feet, and embraced their knees, others named them fathers and deliverers." The narrator gave each of the Dutchmen a large diamond set in a gold ring, which had been presents from the king of Siam to the first ambassador.

Their chief difficulties were now terminated. They procured carriages to send for the companions they left behind them; and in a few days more were all carried safely to the Cape of Good Hope, where they were received in a most friendly manner, and where they found the Portuguese, who had arrived eight days before, but in a much more miserable plight than themselves, having lost between fifty and sixty of their party from fatigue and hunger, who dropped one after another, racked with horrid pains, and groaning at the same time from their sufferings, and with the prospect of their friends leaving them to perish miserably. "All that we could do," said one of the monks to the narrator, "not to appear cruel and barbarous when we saw any of our body drop, which at last happened several times a day, was to exhort him to recommend his soul to God. Without another word we turned our eyes away, and stopped our ears to avoid the lamentable cries which so often reached us."

The most melancholy incident of the whole narrative is the death of the son of the captain of the vessel, a fine youth of ten or twelve years, whom the father had taken with him on his voyage. "His father had carefully carried him to the shore when the vessel struck, and during the journey he made his slaves carry him. But all the negroes dying on the road, the poor child became so weak and swollen three days after the Portuguese left us, that he threw himself down upon a rock from which he could not rise again; he lay there extended, with his limbs so stiffened that he could not even bend them. This sight was a death-blow to his father, who raised him and assisted him to walk for some time, but he could no longer help himself. He could only be carried, and those whom his father had begged to render this service to his son, told the captain plainly that they could not do it without perishing themselves with him. The poor man then tried his own powers; he put his boy upon his shoulders, but he was unable to advance a single step, and he fell down with the youth, who seemed more touched with his father's grief than his own sufferings. He begged him to leave him to die, and urged that, although they might carry him on a little further, he could not possibly survive the night; that the affliction of his father, and the tears which he saw him shed, were more painful to him than his own sufferings. The captain was still more affected by his son's words than before, and he resolved to stay and die by his side. The poor boy then addressed the other Portuguese, and earnestly begged them to remove his father, saying that his presence was a cruel addition to his sufferings, and that the sight of him would but hasten his death.

"The representations made to the captain of the sinfulness of the real self-murder of which he would be guilty by remaining there, were all in vain; at length he was led off by main force, and compelled to accompany the rest of the party. The separation was so grievous and afflicting for the unfortunate man, that he never recovered the stroke: his grief was so violent that he died a day after he reached the Cape."

ADVENTURES OF A YOUNG SAILOR.

ONE day visiting the docks, my attention was arrested by a smart little 'Mudian-built brig, the *Astrea*, of Antigua, on board of which, at the moment, they were occupied in sending up the top-gallant yards. Perceiving, from the usual paucity of hands in these vessels, that there was but one man aloft in the fore-top, to bear the yard off, I sprang up the cross-trees, rigged the upper yard-arm, sung out to sway away, and with all the familiar nonchalance of an old shipmate, performed my part so dexterously, that on coming down, the captain, who had witnessed my movements, called me aft, and after a few inquiries, demanded if I should like to sail with him, offering me the berth of cabin-boy, and twenty shillings a month. My ambition, however, soared a step above this, and I at once told him I preferred being a seaman, and would willingly go before the mast for fifteen. Young as I was, he closed with my offer, but was too generous to reduce the wages first offered.

I was then only twelve years old, but already quite an independent personage, concluded the contract without my good aunt's knowledge or participation. At first she seemed to regret the step I had taken, but knowing that it was useless to remonstrate, she set about preparing my kit for the voyage, an undertaking not quite so complicated or laborious as rigging or fitting out a three-decker, for Heaven knows I was not overburthened with superfluities.

The brig, being a prime sailer, was insured to run it out. We were not long getting ready for sea, and sailing with a fair wind soon reached Madeira, which struck me as one of the most delightful countries I had ever visited. Here we remained a few days to take in a supply of wine, and proceeded on our voyage, ran down before a brisk trade-wind with fine weather, all promising a prosperous termination to the passage, until within about a day's sail of our destination. During the night, we stood under easy sail, anxiously awaiting, with the opening dawn, the announcement of land.

The fates, however, ordered it otherwise: day-break instead of the green valleys and smiling hills of Antigua, only disclosed to us two whacking rakish-looking ships, evidently cruisers, close hauled on the starboard tack, under all the canvass they could carry, right ahead; these, the captain, an experienced clever fellow, soon pronounced, by the sinister cut of their jibs, to be French frigates. We instantly luffed close up to the wind, but it was evident, that the enemy had the advantage on this point of sailing, and as dead before, it was considered the 'Mudian's forte, the captain watching their manœuvres, and observing them widely apart on opposite tacks, determined, as a *dernier resort*, to bother them, by making a dash between them. Accordingly, suiting the action to the word, the helm was up in a moment, the studding-sails spread on both sides, and every stitch that would draw packed on her. They were not slow in following the movement, getting soon into our wake at gun-shot distance, and opening a fire from their bow-chasers; nevertheless, we kept our distance, and held them a tug for some time, but at length, from the enemy's trimming; or some other cause, one of them began to overhaul us. Seeing this, we luffed-to, so as to bring the wind on the quarter, keeping the lee studding-sails all ready for setting again, and as soon as our pursuer had trimmed after us, we changed our course, bringing the wind on the opposite quarter. This, as we could manœuvre more rapidly than a larger ship, so teased the Frenchman, that (seeing the day was closing in, and fearing to lose us in the darkness) he suddenly rounded to, and let fly his whole broadside. This settled the business; an unlucky shot, but for which, there is little doubt we should have got away, having knocked away our main-top-mast, we hove-to, and were taken possession of by the French national frigate *La Pensée*, a fine new ship of forty-six guns; her consort proved to be *La Thetis*, carrying also forty-six guns.

It being nearly dark when we got on board the former, we were instantly thrust down the fore-hold, which we already

found so occupied by a number of our captive countrymen, that there was scarcely room to move, and I found myself so hustled and kicked about in my endeavours to nestle for the night, that I was at length fain to coil myself away as well as I could between two large purchase blocks. Here I remained till morning, melted by the heat, intensely augmented by a large oven in full occupation with the officers' bread, wet through with perspiration, and suffering the most intolerable thirst. When at length permitted to mount on deck, under a guard of marines, I inhaled the pure breath of Heaven, I then felt there were luxuries, indiscriminately shared by the creatures of a kind Providence, which no rank and fortune could—as with so many others of its blessings—entirely monopolise, but which the unthinking, pampered mass of mankind cannot appreciate. Sweet, sweet are the uses of adversity! Notwithstanding our abuse and vituperation, of hard-featured and ugly old mother Evil, there is no doubt, after all, that she is often the parent of the lovely genius of Good; to what extent the one may exist without the other, it is for casuists to determine.

But I am getting in the clouds. Our captain making interest for my enlargement, I was allowed to remain with him, and soon had the range of the whole ship unnoticed. The observations I was thus enabled to make of the discipline and interior economy of French men-of-war, subsequently compared with our own, have given me such a contempt for the former, that I should never feel doubtful of the result of any conflict between the vessels of the two nations, when there was anything like an approximation to an equality of force.

The crew of the *Pensee* consisted of about three hundred and fifty men, a great portion of whom, were blacks and mulattoes. They were clothed in the spoils of the vessels they had plundered, and in all the colours of the rainbow, scarcely any two being dressed alike, and they constituted as ferocious and motley a gang as (save the heterogeneous assemblage in the first cruiser under Admiral Noah) ever congregated on the decks of a ship; the whole affording a fine specimen of liberty and equality; for they ate, drank, played cards, and even dressed their hair on the quarter-deck.

The infliction of the lash or other systematic corporal punishment was prohibited. An individual having been detected in a theft, by the commander, the only penalty he suffered was a sound kicking and cuffing by the latter on the quarter-deck, with a plentiful volley of abuse for thus disgracing “la grande nation.” The black-gun-room-cook, however, attended table with our captain's shirts on his back with impunity. The officers messes in common, but each individual furnished and brought to table, his own plate, knife, fork, spoon, and napkin. Save those of the gun-room and cabin, there was not a bed or hammock on board, the crew planking it in their clothes. Under these circumstances, it is not to be wondered at, that they mustered nearly one hundred in the sick list, and scarcely a day passed that two or three individuals were not consigned to the deep.

The two ships had been cruising nearly two months, some fifty leagues to windward of the islands; had taken twelve vessels, English and American—for they made no distinction between the two nations—and had about ninety prisoners each on board, who were strictly guarded by day, and confined in the fore-hold by night. One of these, a young English seaman, of the name of John Edwards, having served the greater part of his time in the *Bourdeaux* trade, spoke the French language so fluently, that the captain and officers could not be persuaded he was not a natural-born Frenchman, and—it will scarcely be credited—he was actually tied up with his clothes on, and flogged with points, by two boatswain's mates, one on each side until he fainted, to extort a confession to that effect.

The celebration of the anniversary of the death of their unfortunate King, Louis XVI. was quite a festivity; the ships were gaily dressed out in flags and streamers, and wine and brandy were distributed among the crew, who, mustering aft on the quarter-deck, fraternized with the officers, singing the *Marseillais*, *Caira*, and other republican songs, in full chorus, and dancing the *caramagnole* the whole day; while the

wretched prisoners, neglected, were pent up in the fore-hold, half-suffocated for want of fresh air.

The following morning, we fell in with an American schooner, laden with live stock and other supplies; these were transferred to the two ships before the astonished Yankee could well look about him; his generous visitors modestly, however, declined to furnish him with their names. The first lieutenant had a son on board, about my own age, ycleped “le petit Louis.” Monsieur Louis and I soon became great cronies, but national pretensions occasioning a breach between us, we frequently came to the scratch, wrestling, and endeavouring to get each other down, by mutual consent the party thrown being considered the vanquished. These scuffles were preceded in form by hoisting the colours of our respective nations, patched together out of the tailor's clippings, and imitating a cannonading with our mouths. On the last, as on many others of these occasions, I came off the conqueror, though I had good reason to exclaim, “another such a victory, and I am ruined;” for, pitching poor Louis head-foremost down the after-hatchway, I nearly broke his neck, for which, his vindictive father having ordered me a sound flogging, I was forthwith conducted to the fore-castle, stretched over a capstan-bar, and through the medium of a sheepskin cat received my allowance.

About five weeks after our capture, the frigates standing in need of supplies, &c., bore up under all sail for Guadeloupe, and the next morning found us becalmed about four miles north of Basse-Terre; thus we lay without a breath of wind, the sails flapping to the mast, until ten o'clock, when the appearance of a line of battle ship rounding the south-west point of the bay with a staggering breeze, created no small panic. She had reached nearly within gun-shot, but keeping too close in, with a view of cutting us off, the breeze failed them; meanwhile a number of small craft coming out to assist, took the two ships in tow, and they were soon safe under the batteries.

We were immediately landed, and lodged in an old church in the town of Basse-Terre. Here our allowance consisted of about three-quarters of a pound of sour black bread, with a quarter of a pound of salt beef, pork, or cod-fish, alternately: the latter we were obliged to swallow raw, being too rotten to stand boiling, and, but for the humanity of the planters, who sometimes sent us a supply of yams or plantains, we might have starved.

At the end of two months, about one hundred of us were embarked on board a schooner, to be exchanged; and in two hours from our quitting the prison, we found ourselves once more on board an English ship, *l'Aimable*, of thirty-six guns. We stood for the *Saintes*, and the following day were transferred to the *Vanguard*, of seventy-four guns, lying at anchor there. Quitting the *Saintes*, we proceeded to Fort Royal, Martinico, where myself and three other of the smallest boys having been selected by Captain George Wilson, of the *Bellona*, seventy-four, we were sent on board that ship. No sooner had we mounted the side, than we were made to exhibit a specimen of our respective agility by running a race to the maintop-gallant mast-head. I had the good fortune to win, which gained me the kind notice of the captain, who, giving me a glass of wine and an orange, placed me under the charge of the captain of the maintop, a fine smart fellow, since boatswain of a frigate.

Never, before or since, have I seen a finer specimen of the genuine British man-of-war's man, than was exhibited by the mess of which Jack Gore was the head; they were fourteen in number, all maintop men, and messed between the third and fourth guns in the starboard bay. Long previous service together, in a forty-four gun ship on the coast of Africa, had established a fraternity among them of the strongest kind. Jack's influence and ascendancy over his messmates were remarkable; his advice and example were followed with a truly filial respect, and no father could have felt prouder of his family, or more hurt at any irregularity, than Jack Gore. When rigged for muster or for shore, each individual, with a tie of half a fathom hanging down his back, their manly bronzed countenances shaded by long side-locks, surmounted by a neat tarpaulin or straw hat, in their blue jackets and

wide duck trousers, the latter fluttering in the gale, in the attitude of tossing their oars in the barge, nothing could be more strikingly characteristic than their appearance.

SHIPWRECKS OF JAMES SADEUR

Who was cast upon an unknown Island, December, 1623, where he lived Thirty-five years; including a Description thereof, and of its Inhabitants.

THE hero of these adventures was conceived in America, but brought forth upon the ocean, May 10, 1603; his father, James Sadeur, and his mother, Willemetta Ilin, having accompanied Monsieur de Sarre to the West Indies.

The voyage was very successful in all the places which were esteemed dangerous, even to the coast of Aquitain, where an unexpected tempest so furiously engaged the vessel that it was cast upon the coast of Spain, and wrecked near the cape of Finisterre, in the province of Galicia, in Spain. His mother seeing the vessel, let in water on every side, lifted him up out of the cradle, and embracing him with great tenderness, exclaimed, "Ah! my dear child, have I brought thee forth upon the waters to see thee so soon swallowed up by them? at least I shall have this consolation, of perishing with thee!" She had hardly finished this complaint, when a more impetuous wave than any of the former, breaking into the vessel, bore her away from her husband who, instead of making to the shore, as did the rest, embraced his lifeless wife, and drew her and the child to the bank side.—Overcome, however, by his exertions, and unable to restore breath to the companion of his days, he soon followed her to the grave.

Thus our hero became an orphan in his infancy. The captain of the vessel, however, Mons. de Sarre, who had lost an only son, and had been godfather to young Sadeur, took pity on his desperate situation, and was pleased to adopt him as his own. His wife became equally fond of him; and this orphan for a long time believed them to be his natural parents. The Countess of Villa Franca afterwards took him into her service, when he was about eight years of age. He was now instructed in several languages; astronomy, geography, &c.

The countess's son being determined to go to sea, young Sadeur, though much against his inclinations, was obliged to accompany him. Having, however, a great aversion to the sea (which he naturally imbibed from his infancy), he requested the count's permission to go by land. Accordingly, the count embarked May 15, 1623, and young Sadeur and the count's suite pursued their way on foot.

Sadeur believed, that in going by land he should shun the dangers of the sea; but the sea seemed to have found him upon shore; for some pirates perceiving them at a distance, by the shining liveries of the count, fired upon them from an ambuscade, killing one page, two servants, and the horse on which Sadeur was mounted—the rest being incapable of defending themselves, fled away; and Sadeur, thus forsaken, was seized by the pirates, who brought him into one of their vessels, and immediately weighed anchor.

They were not long on the open sea before a violent tempest arose; the mast of their vessel broke, the rudder split, the ship leaked on all sides, and for twenty-four hours they were labouring hard day and night, at six great pumps, till at last, being overcome with labour, the water gained upon them and the ship sunk.

At this critical juncture our young adventurer found himself, by chance, near the door of the captain's chamber, which was borne up and began to swim; and as he was about to perish he caught hold of it, and floated thereon. Fortunately, by means of the moonlight, a vessel, which was sailing towards the north perceived the youth on the raft, and having sent a boat to his assistance, he was taken into the vessel.

As soon as Sadeur came to himself he was taken for a Portuguese; but the captain of the vessel having recollected to have seen him in the house of Villa Franca, to which illustri-

ous house he had been under great obligations, ordered that peculiar care should be taken of him. In vain, therefore, Sadeur solicited to be sent on shore; the captain insisted he must deliver him safe to the countess. The vessel he was in, belonged to the Portuguese merchants, which went occasionally to the East Indies.

The voyage was now so favourable, that every one said Sadeur brought good luck to the vessel. They came to the line on the 15th of July, very well and healthy. On the 1st of September they reached Congo, where they anchored on the 6th, at Maninga. The secretary was now the only person who was ill, and his sickness increased daily. It was the physician's opinion that he ought to be sent on shore, and every one thought that he should not be exposed to double the Cape of Good Hope during the approaches of the Equinox. It was at length resolved to stay in this port till December, as well for their health, as to avoid danger.

Maninga has not half the inhabitants that Portugal has. The men are entirely naked; but, within these few years; some have imitated the Europeans by covering their bodies. The abundance of the country seems to render the inhabitants slothful, stupid, and negligent.

The soil, which is watered throughout by the rivers of Zair and Carizo, produces great quantities of fruit without any labour, and these fruits are exceedingly nourishing and delicious. This abundance renders the people negligent of gain; and consequently the captain and his crew stayed here a considerable time without any expense. There is so little use for houses, that nobody goes into them. Beds are disregarded, every body sleeping on the ground, except invalids for whom certain mattresses are provided.

The Zair abounds in fish, of which there are two remarkable sorts peculiar to this river. The first may be called amphibious, for they come out of the water and leap like foxes, with this difference, that their paws are as large as the feet of drakes, and those before, are twice or thrice as short as those behind. They are very free, as they will frequently leap into boats and play with the watermen. The natives call them cadzeick, and the flesh resembles that of Spanish otters.

The other sort are flying-fishes, which are of a more elegant appearance than peacocks; they seldom swim at the bottom of the water, but are constantly seen at the top. The feathers of these sea-peacocks (as they may be called) are like the scales of fishes, but with a diversity of green, blue, yellow, and red, which renders them very handsome. Some are as large as great eagles, with five or six feet.

The shores were full of many kinds of animals; but the most common, and the most charming were, a kind of sheep of almost all colours. These colours are remarkably bright, but are said to fail with the lives of the animals.

Our adventurers visited a small island in the middle of the lake which belongs to the king Jassaler, who also calls himself the King of the Lake. The natives of this country call him Zassa, and he keeps a fortress, which, though esteemed famous by his own people, is very insignificant. This place was very odoriferous, in consequence of the fruits, &c. Here is also a fountain, the liquor of which is very fascinating; but our adventurers were told by the natives that it would be fatal to drink the water of it to excess. Soon after, indeed, a great drowsiness came upon them; they were obliged to lie down on the ground, where they slept fifteen hours. This sleep, however, had no ill effect upon them, for they rose up as healthy and as brisk as before.

From this isle they went to the source of the river Cuama, which they found narrow, and incapable of receiving a boat. Soon after, they discovered the fountain of the lake itself, and they reckoned above two hundred brooks which came down from the mountains, which are over against the middle of it, and which these Spaniards call the Mountains of the Moon, a name they received from Vasea de Gama, because, when he discovered them (1597), the moon appeared as if touching the top of them.

They returned by the river of Carizo, and stayed twenty days on the road. Immediately after, they set sail with a favourable wind and sea, and arrived at the Cape of Good Hope

in eight days. They did not stay here, for fear of losing the opportunity of so fair a season, which is so very rare in this place, and proceeded till they got in sight of Port Donanbolo, in the isle of Madagascar, where they were wind-bound upwards of forty-six hours. A furious east wind afterwards broke their cordage, and drove them above a thousand leagues to the west. Many of the crew saw some isles on the right hand, and took them for those called Trinity. Here, unfortunately, their vessel split upon a rock, and they were now exposed to the merciless waves.

Sadeur could not tell what became of the other vessels which accompanied them, nor the fate of his companions, for the night was very dark. He sought for a plank to save himself, and having found one, he clung to it, and floated for many hours. After turning over several times he came to himself, found a calm sea, and perceived an isle very near. He felt his hands so clenched to the plank that he could hardly loosen them, and his fingers were so crooked that he could not by any means straighten them. The sight of the island, however, encouraged him, and by means of fresh exertion he came to shore, and dragged himself under a tree, from the fruit of which he derived considerable refreshment. He was exceedingly bruised, and consequently in great pain; but after a sleep, of at least twenty hours, he recovered his strength. The sun shone, and his clothes were soon dry. He now felt himself inspired with courage, and he resolved to advance into the isle to discover if there were any inhabitants.

He plainly saw the appearance of some ways, which led him into very thick bushes, where he could not pass without stooping. This filled him with strange sensations. Having found a tree much higher than the rest, he ascended it, in hope of making some discovery; but as he got up he heard a great noise, and saw two prodigious birds, which appeared to him like beasts, which came to the top of the tree, and obliged him to get down faster than he got up. As soon as he descended he heard a frightful cry, which so alarmed him, that he hastened back to the sea-shore.

On his retreating he was followed by a great number of animals of different kinds, and meeting with the plank which bore him to shore, he flourished it, in order to keep them aloof; but one of them advancing near, he gave him a violent blow, which set them all howling. A violent contest now ensued, and our hero was obliged to swim for his security. Some of the natives, who perceived this encounter, and who probably admired his courage, came to his assistance. They washed his wounds, and gave him some kind of drink, which quite revived him.

The custom of the inhabitants of this country is, not to receive any person amongst them with whose birth and disposition they are unacquainted. The heroism of Sadeur, however, recommended him to their notice, and he was, without any hesitation, admitted into the neighbouring quarter, where everyone came to kiss his hands. They would also have carried him upon their heads, the greatest mark of esteem that they show to any person; but as his state of health did not admit of this ceremony, it was dispensed with.

The whole of this hitherto unknown land (*terra incognita Australis*) is called *Hust*; that on the western side, *Hump*; and the eastern side, *Hue*. Its length is about eight hundred leagues; and its breadth six hundred in some places, and in most only three. All this vast land is called *Fund*, and is under two or three governors, who often make very cruel war against each other.

What is very surprising in the Australian dominions is, that there is not one mountain to be seen, the natives having levelled them all. To this prodigy may be added the admirable uniformity of languages, customs, buildings, &c., which are to be seen here. The grand houses are called *habs*, and the common ones, *hebs*. There is an abundance of rich fruits, but little or no rain.

The natives are very active, and remarkably tall; their flesh bears a reddish hue; they have long faces, high foreheads, small mouths, noses more inclined to be long than round, and black hair and beards. They always go naked.

Our hero, during his long stay in this island, assisted in two wars made by the Fondins a kind of barbarians, who bordered

upon the Australians. The first was made about seventeen years after his arrival, and the other the last year of his stay. In the first, the Australians, though victorious, lost a considerable number, and Sadeur was among those wounded, having had his arm broke, and one of his thighs run through.

In the second battle, which happened seventeen years after the other, the Australians were also the conquerors, and the country inhabited by the Fondins was entirely dispeopled. The women, who were exceedingly beautiful, were all butchered. It happened that Sadeur when breaking into a house, that seemed more considerable than the rest, found therein a venerable matron, with two beautiful daughters, the elder about twenty-five years of age, who threw themselves at his feet. The compassion which he exhibited on this occasion was very near incurring his own death; but having escaped, he feigned himself wounded, and under this pretence withdrew from the army.

Soon after this battle, however, Sadeur was accused of not having fought like the others, since he could not produce an ear of the Fondins; for it is the custom of the Australians to cut off the ears of those they kill in battle, and he that brings most is esteemed the most courageous. He was likewise accused, not only of sparing the women before mentioned, but of embracing them. In consequence of these accusations, he was imperiously sentenced to die. Sadeur did not deny the charges against him, nor flinch from the sentence. He only requested a delay of a few days, which being granted, he contrived means of escaping; and having, by good chance, desecrated a vessel, he was taken on board, and, after eight days' sailing, they arrived at the port of Tombolo, which is S. W. of Madagascar.

This country is inhabited by French, Portuguese, English, and a few Hollanders. It is not only barren, but unhealthy. Sadeur related his story to the governor; two ships arrived from the Mogul, which were to depart in a few days for Leghorn; and Sadeur availed himself of this opportunity of returning to his own country.

The above narrative is taken from a translation of a French copy then printed at Paris, by public authority, dated 1693. It abounds, however, so much in the romantic, that we have rejected many parts as incredible.

THE FIRST DIVING BELL.

THE first diving bell we read of was nothing more than a very large kettle, suspended by ropes with the mouth downwards, and planks to sit on fixed in the middle of its concavity. Two Greeks of Toledo, in 1588, made an experiment with it before Charles the Fifth. They descended in it with a lighted candle, to a considerable depth. In 1683, William Phipps the son of a blacksmith, formed a project for unloading a rich Spanish ship sunk on the coast of Hispaniola. Charles the Second gave him a ship, with every necessary for his undertaking, but being unsuccessful, he returned in great poverty. He then endeavoured to procure another vessel, but failing, he got a subscription, to which the Duke of Albemarle contributed. In 1687, Phipps set sail in a ship of 230 tons, having previously engaged to divide the profit according to the twenty shares of which the subscription consisted. At first, all his labours proved fruitless; but at last, when he seemed almost to despair, he was fortunate enough to bring up so much treasure, that he returned to England with £100,000. Of this sum, he got about £10,000., and the Duke £90,000. Phipps was knighted by the king, and laid the foundation of the fortunes of the present nobleman.

A ROYAL PUN.

WHEN a noble Admiral of the White, well known for his gallant spirit, his gentlemanly manners, and real goodness of heart, was introduced to William the Fourth, to return thanks for his promotion, the cheerful and affable monarch, looking at his hair, which was almost as white as the newly-fallen snow, jocosely exclaimed, "White at the main, Admiral! white at the main!"

SHIPWRECK OF THE PRINCESS OF WALES.

On the 9th of May, 1820, the Princess of Wales smack, 75 tons burden, Mr. T. Beckwith, No. 80, Old Broad Street, commander, sailed from London for Prince Edward's Island, in the Indian ocean, with a crew of fifteen men, for the purpose of catching seals and sea elephants for their skins. The sailors on such expeditions are generally made partners in the venture, as they receive only a certain share of what is caught as their wages. She arrived at her destination, and "sealing" was commenced on the 1st of November, 1820, and they continued their work until near March, when they went farther on to some desert islands, discovered by Captain Cook, in 47 deg. S. latitude, and 47 deg. E. longitude, which are rarely visited, called the Crozettes. On the 17th of that month

a party, consisting of eight of the crew, were sealing on one of the islands, and the vessel was at anchor at another, within sight of the first island. In the course of that day a heavy swell came from the S. E. and the captain, in order to gain an offing, was obliged to slip the cable, and stand to sea.

A calm came on soon after, and they lost all power over the smack, for the current ran strong against a reef of rocks and the swell continued very heavy. In this condition they continued, in hourly expectation of striking until midnight when she struck with tremendous force. It was then proposed to get the boat out and try to gain the island; but the captain, who knew its desolate condition, and believed they could only linger out a few days there, in dreadful want, opposed the proposition, and he chose rather to close his suffer-

SHIPWRECK OF THE PRINCESS OF WALES SMACK, ON A DESERT ISLAND.

ings by a speedy death as the less horrible alternative. The crew, however, considered that there was still hope, and under the circumstance, assuming the right of acting for themselves, they got the boat out over the gunwale, and threw into her a few things which they were able hastily to collect. Still however, they refused to leave their captain to perish, and after some entreaty, they prevailed upon him to commit himself to the boat with them. The night was dark, rainy, and boisterous, and the sea dashed over the rocks by which they were surrounded. They found the shore to be much nearer than they expected, but could not land, as it was bounded by a perpendicular rock. After rowing about for nearly four hours, they came into a sort of cove, where they got on shore in safety, but the boat was swamped. How

they escaped the rocks in that darkness and heavy sea, was afterwards matter of astonishment to them. They hauled up to the boat, turned it over, and got under it.

When the day broke they perceived the vessel lying on her beam-ends, with a large hole in her lower planks, which proved that from the instant she first struck she could not afterwards have lived. The sea was washing over her, and it was evident that she must soon go to pieces. They were unable to launch the boat to save anything from the wreck. Amongst the articles put into the boat was a tinder box, and with a few materials, which they picked up on the shore, they made a fire, and caught a few birds, which they dressed.

On the next day they succeeded in launching the boat, and

proceeded in her to a cove at about five miles distance, which was nearer the vessel. They succeeded in reaching her, and getting out the captain's and the mate's chests, landing them, and in picking up a number of planks. The next day they picked up a try-sail, and some casks of bread which was spoilt, but a gale coming on, prevented them from putting out in the boat to visit the wreck, as it blew furiously. The next day they saw, to their distress, that nothing was left of her but the masts, which had got entangled by the rigging among the rocks. This was the last thing they saved. They then hauled the boat up to live, or rather to sleep, under her, and this was their only shelter for three weeks, during which time they subsisted chiefly on birds, and the tongues and hearts of sea-elephants. They had got some of their hunting implements on shore, and were able to kill this animal with ease, whenever they caught it, and its great importance to them will appear in the course of the narrative. The weather was so rainy and inclement, that until the end of three weeks they were unable to begin to erect any commodious shelter. At the expiration of that time they collected all the timber they could find, for the island did not produce a shrub. With a part of these materials, and some stones, at the end of a few weeks they completed a house or shed. They covered the top with sea-elephant's skins, to keep out the rain, and the weather, at the sides, by means of turf. They made their beds of a soft, dry grass, with which the island abounded, and over this they had coverlids of sea-elephant's skins, and on the whole, they made their shelter tolerable. They soon got into a settled course of life. They hunted seals and sea-elephants. The latter animals were their chief subsistence, and, to use the expression of one of the sailors, it was "meat, drink, fire and lodging" to them. The carcase is often much larger than that of the largest ox, but it was only certain parts of it they could eat, the most considerable part of it being blubber, this blubber serving them as fuel. They made a grate with some stones, and the hoops of a cask. They placed at the bottom some dried grass, and over that some elephant's blubber, and when the grass, arranged in this manner, was lighted, the blubber burnt of itself, and made fine blazing fires. They were enabled to divide the time by a watch which the captain had saved. In the mornings they rose about eight o'clock, and breakfasted on fried birds. These consisted of several species peculiar to those latitudes, but the chief was a species which the sailors call "Nellys," which burrow in the ground, and are easily caught. After breakfast they went out to hunt, leaving one or two behind to cook dinner. This dinner consisted generally of a sort of soup, composed of sea-elephant's flippers, heart, and tongue, chopped in pieces. They could find no vegetables on the island, which produced nothing but grass, excepting a plant like a cabbage, that was extremely bitter, and this they made use of occasionally to flavour their soup. Great inconveniences were at first sustained for want of proper eating utensils, as there was only the large kettle in which their soup was made. They managed, however, to make some wooden spoons for themselves. They next cut down an old cask, and with it made a kind of soup tureen, out of which they all ate together.

Their last improvement was to manufacture a sort of wooden trencher for themselves, when they eat comparatively in a superior style of comfort. In the soup they sometimes put elephant skin, which had the appearance of tripe, but in taste and substance it is described as of a more "leathery" nature. After dinner some of them went out again to hunt for "grub," some remaining at home, the swiftest runners being chosen to hunt the seal. At "tea-time," or dusk, they returned and partook of a mess composed of penguin's eggs boiled in water. Now and then they killed the albatross, which is rather a strong bird, and roasted it; but as the young ones were highly esteemed, and as the mariners daily began to lose their hope of being delivered, they were afraid to kill the old birds lest they should quit the island, and in this fear they permitted them to live as "stand boys." For the same reason they spared the penguins, which supplied them plentifully with eggs. The young seals were considered as the greatest luxury, but they, as well as the old ones, were but too scarce, and their skins

were in high request for clothes. For at the end of a few months, from their mode of life, their clothes gave way; and indeed, the climate was so cold and wet that they were not fit to withstand the inclemency of the weather. The men set to work and made themselves clothes of the seal-skin, some using the hair inwards. They made a needle out of a nail. For shoes they made themselves a sort of sock or buskin of the same material, and they constructed various kinds of caps, which, as their beards were pretty long, by no means tended to improve the physiognomy.

When the boat, containing the sealing party of eight men, quitted the ship to go to the first island, it was appointed that they should remain fishing on the island for a week, when the smack should proceed on to the next island, and at the end of the time, return to them with fresh provisions. In order to give a notion of the kind of life which these hardy men endure in the fisheries or places of this description, it may be worth stating, that with provisions for a week or so, they set out from the vessel round these desert islands, to the difficult parts frequented by the seals. They haul the boat a-shore in the quarter where they hunt the prey. They turn the boat, which is generally built light, bottom upwards, placing a large stone at each end to elevate her, and make her rest on one side to allow an opening. The space along the side, with the exception of one hole to crawl in at, is then closed up by dirt to keep out the wind and rain. Under this shelter, they sleep during their absence from the vessel, in weather generally rainy, and often with snow upon the ground for days, and yet the men are mostly in fine robust health, and under the incitement which they partake as sharers of the spoil (though that share is sadly disproportionate to their labours) they pursue the chase with the greatest vigour, and in an ordinary voyage, we understand, will often take upwards of 10,000 skins. The party, on going, at the end of the week, to the place where it was agreed the smack should take them up, were greatly perplexed that she did not make her appearance, but their distress may be conceived, on finding different parts of the wreck floating near the shore, which led them to the conclusion, from perceiving no other traces, that she, with all their comrades on board, had perished in the storm. They remained in this spot more than six weeks, in a most gloomy situation, and then removed to another part of the island for the convenience of provisions. They there stayed out the winter, living on seals and sea elephants, which they also cooked with the blubber which is highly inflammable. At the expiration of that time provisions became scarce, and they removed round the island for the purpose of crossing over to the next island, in hopes of finding the seals there in great plenty. The distance between the two islands is little more than ten miles. They fortunately landed at the very spot near where their shipmates had built the house, and there they met, to the great joy of both parties. The fishing party brought with them their kettle, frying-pan, and some implements which were highly acceptable, and increased their scanty means of comfort. They lived altogether for a time in the manner stated. Their occupation was either hunting for provisions, or preparing them, and mending or making their clothes. The snow was sometimes for a long period on the ground, and there were but three weeks' fine clear weather in the year. Some months the weather was so bad that they remained in the house for more than three days together. In those dreary times their great consolation was a Bible, which had been given to them by Captain Cox, the agent to the Merchant Seamen's Bible Society, which the captain and others of the crew read aloud to the rest. It was in fact, read every day by one or the other of them, and some who had never read it before, read it during the time they lived on the island several times over. It effected in the characters of several, a change highly beneficial, and promoted piety and resignation in the whole. During their stay, there were no parties amongst them; no quarrelling, and none assumed command, but obedience of the best kind existed—namely, that produced by a conviction of the utility and propriety of the thing proposed, and a mutual desire to be serviceable. They all gave their utmost exertions to the execution of whatever was suggested by the most experienced, or received the sanction of the majority.

After they had been together for about three weeks, and the prospect of deliverance from the dreary solitude, getting every day more remote, it was proposed to construct a vessel with the timber of the wreck, and the materials of which the house was built.—There were the remains of a hut built on the other island by some Americans who visited it some years before, when seals were more plentiful. With these and what had been saved from the wreck, the carpenter reported that a vessel might be built, and they set to work upon that object immediately. The sails were to be made of seal-skins sown together, and a party consisting of eleven, went to the first island, for the purpose of collecting and preparing them, and digging up the timber which had been used for the house. The collection and preparation of the skins took three weeks' and in a week more they collected all the timber for the building of the vessel. From the state of their provisions, it was found convenient that five of their number should return and stay at the other island, as there were no provisions sufficient for the subsistence of all at the island, where the house was built. This party, therefore, having received a proportionate share of the utensils—namely, one kettle, and the bottom of an old one, which was used as a frying-pan, they set off. Those who remained, in order that they might apply the timber used in constructing the old house to the building of their vessel, set to work to build a new habitation, which they formed chiefly of stones and turf. This house appears to have been an improvement on the first, inasmuch, as it had the luxury of three chimneys, which, however, either would not draw, or were insufficient, as the inmates were obliged to cut a hole in the gable end to let out the smoke. At this time they used the elephants' bones, with the blubber as fuel, the fumes from which were by no means agreeable. Having finished this, they shifted their things into it: tore down the first, and then cleared the place where it stood for the purpose of building the vessel upon it. They laid the keel, made from the topmast of the wreck, to erect a vessel whose keel should be twenty-nine feet, and built like a lugger, and of about four and a half feet high. It was calculated that she would be about twelve tons burden. They worked at it with assiduity, animated by the hope of delivering themselves. Their history of their various expedients to supply the place of regular tools and materials, though unintelligible to the general readers would be highly interesting to nautical men. At the end of five months they had completed her with her seal-skin sails, and they set off to the other island to fetch the other five men, that they might assist in the launch.

Nearly two years had now rolled over since they were first wrecked—a time which, as marked by their privations and anxieties, appeared as long as their lives. The five men who were in this first island were dispersed in search of food, and the larger party were obliged to go in pursuit of them.

On the next day after their arrival, a gale sprung up, and their boat was driven about seventy yards from where she was made fast, and her stern knocked to pieces. They occupied themselves in attempting to repair the disaster, which threw them into great dismay. The day was fine, when an old man, who was out on a mountainous point trying to descry their comrades, came running down in great haste, and presented himself before them in a bewildered state. He gesticulated without being able to speak a word, when the captain, not conceiving the cause, said, "What's the matter with you, you foolish fellow?" At last he recovered as far from effects of his joy as to be able to tell them he had seen a vessel standing in towards the shore. This none of them would believe, and all said it must be a bird sitting on the water, an object which had often deceived their hopes. The man, however, was convinced that he was not mistaken, and asked who would go with him to see the vessel, when one offered to go with him and ascertain the fact; and a tinder-box was given to them. What they might, if it were true, make a fire to show those on board that there were human beings on the island. To their indescribable joy, these two men, on getting to the place where she was first discovered, saw a schooner standing along shore, and, from the carcase of a sea-elephant just killed,

and other traces, perceived that the crew must have been on shore. They then sought for and killed one of those animals, and with its blubber they soon made a fire on the promontory, that evidently caught the attention of the schooner, as a boat was seen to proceed from her towards the shore. The men ran down eagerly to meet her, but when the boat got near the shore, the crew evidently hesitated, on seeing the two men, whose appearance must certainly have been of a dubious nature. They were naked, with the exception of their rough brown fur jackets, as they had thrown off their skin trousers, which were exceedingly thick and heavy, for the convenience of running. They, however, hailed the crew, in a manner which proved them to be civilized beings, and they were taken on board. The vessel turned out to be an American schooner, which had come for the purpose of sealing and trading in those seas. The captain received them very kindly, and gave them shirts and trousers. It was sunset when they were taken on board, and the next day the captain and the remaining party were fetched. They proceeded in search of the other party, who described the vessel with a degree of joy equal to that of the first man who saw it, and on the boat approaching the shore, hailed it with three cheers, which was returned by their comrades on board. Those on shore were so overjoyed, that they did not wait for her coming to shore, but rushed into the water to haul her up. They were all taken on board. They assisted the schooner in loading, and after taking all things on board, she sailed for the Isle of France, her destination. On the way, however, the mate of the smack had a disagreement with the American captain, and was voluntarily put on shore on the island of St. Paul, where there are plenty of wild pigs, and provisions, such as the mariners had of late been used to, and which island is in the track of the vessel trading in the direction of the Isle of France. All the mariners, excepting two, named Veale and Petherbridge, and their captain, preferred going on shore with their mate, and waiting there for some of the trading vessels that should touch there. Not the least apprehension was felt by themselves or the others that they would be able to meet with a passage, and the captain and the two men, Veale and Petherbridge, were landed at the Isle of France, where a subscription was raised for them, and they were treated with great humanity by the governor. The captain went on to the Cape of Good Hope, by the Welsh brig, *Hero*. The two men, Veale and Petherbridge, returned home in the *Lord Exmouth*, Captain Evans, which is now in the East India Dock. This is, perhaps, the only instance since the days of Selkirk, the original Robinson Crusoe, of a number of men having been wrecked, and lived for a length of time on a desert island. Their health was in general good, excepting now and then, when from the extremely oily nature of their food, their bowels were disordered. They then found a dose of salt water an effectual remedy.

ADMIRAL KEPPEL MYSTIFIED BY GEORGE III.

In the "Life of Admiral Keppel, by the Hon. and Rev. Thos. Keppel," the following amusing incident is told of the admiral being duped by George the Third, when his majesty was about to dissolve the "Coalition" Administration.—"The same night Keppel had an audience with the king. He had previously appointed Mr. Adair to sup with him at 10 o'clock. It was past 12 before Keppel returned home. 'Why, admiral,' said Adair, 'where have you been? Here have I been waiting for my supper these two hours.' Keppel replied, 'I have been with the king; I thought I should never have got away. His majesty has been most kind to me; he inquired about our prospects and plans, and treated me with so much openness and honesty, that I entered fully into the state of affairs with which he seemed highly pleased.' And you believe him?" drily asked Mr. Adair. Keppel felt hurt at the doubt Adair contented himself with saying, 'Well, we shall see.' Before they parted, a note arrived from Lord Temple, to inform Lord Keppel that his majesty had no further occasion for his services. This was one of those apparent marks of kindness which the king knew so well how to practise."

THE LIFE OF ALEXANDER SELKIRK.

In the beginning of the year 1705, two ships, the *St. George*, of twenty-six guns, commanded by Captain Dampier, and the *Cinque Ports*, of sixteen guns, commanded by Captain Stradling, set sail from England to cruise against the Spaniards in the South Seas. On board of the latter vessel was a sailor of the name of Alexander Selkirk, whose strange adventures and long and lonely stay on an uninhabited island, Defoe took as the groundwork of his celebrated romance of *Robinson Crusoe*.

In the course of the voyage, it was found that the captains could not agree. They had frequent quarrels, and long before the ships arrived at the island of Juan Fernandez, they had more than once threatened to part, and pursue a separate course. Having taken in water, however, at Juan Fernandez, they proceeded on their voyage; and coming in sight of a Spanish vessel, they forgot their disagreements for a time, and uniting their forces, attacked and took her.

She proved to be a merchant ship with a valuable cargo. The division of the spoil, unfortunately, led to a fresh and more obstinate quarrel; in consequence of which, Dampier refused to sail any longer with Stradling. The ships accordingly parted; the former persevered in his cruise, while the latter returned to Juan Fernandez. Here dissension broke out among the crew; and while the *Cinque Ports* was taking in wood and water, Alexander Selkirk had so violent a quarrel with the captain that he determined to quit the ship altogether. He appears to have been rather passionate and hasty in his temper; and, seeing no sign on the part of Captain Stradling of a desire to baulk him of his humour, he persevered in his intention to leave the vessel; while the captain, on his side, glad to get rid of a man whom he disliked, and no doubt wishing to furnish an example to his mutinous crew, readily complied with Selkirk's request, whom he ordered to be sent ashore, with his box of clothes, his bedding, his gun, and some gunpowder,—to which were added, an axe, a hatchet, a kettle, and some books and mathematical instruments.

The island was uninhabited, and the ship remained three days there after Selkirk's landing; during this time he recovered from his anger, and having had leisure to reflect, repented of his conduct. The solitude of the island alarmed him, and he earnestly begged to be taken on board again. But the captain refused to forgive him, and would upon no account allow him to be received into the ship. The crew were intimidated, and the vessel sailed away, leaving Selkirk by himself on the island.

The unfortunate man watched the departure of the ship with feelings which may be more easily imagined than described. Several times he felt tempted to fling himself into the sea, and swim after her; but he knew that such an attempt would be useless, and that even if he should have the strength to reach her, the inexorable captain would not take him on board. His only hope of ever leaving the island, was the chance arrival of some English ship coming there for water. So long as the daylight lasted, he remained on the shore, in the vain expectation of seeing some sail in the distance.

On the approach of night, his despair and grief were turned into terror; and when he found himself in darkness and solitude, his alarm increased so much, that he could scarcely sleep or get any rest. This continued for some days; but by degrees his alarm became less and less, and when he had lived eight months on the island, he had recovered his former courage, and was no longer afraid of being alone, having become used to his solitude.

Fortunately, there were no beasts of prey on the island, which abounded with goats, cats, rats, birds, and seals. Of these animals, the rats alone gave him any annoyance.

It was not long before he could relish the only food that the island afforded, because he had neither salt nor bread to eat it with. His food consisted of goat's flesh, either broiled or made into broth, and sometimes he caught a large kind of cray-fish, about the size of a lobster, which when boiled, he found very pleasant to the taste.

He had lived some time upon the island before he thought of building himself a house or hut. The day he passed on the sea-shore; and at night he climbed a tree. But when he felt that he had nothing to fear, and saw no appearance of any vessel, he determined to make himself as comfortable as he could and in some degree became contented with his condition.

The island abounded with pimento trees, which supplied him with wood for building and for burning. He also seasoned his meat with the fruit of the tree, it being the same as Jamaica pepper. In a sheltered spot in the wood, he built himself two huts, and covered them with a roof of long grass. Having dried the skins of the goats that he had killed, he lined the inside of the walls with them, and so made his dwelling secure from wind, rain, and heat. He cooked and ate his food in the smaller hut, and put his hammock into the other, where he slept.

This being finished, he now turned his attention to taming some of the wild cats. By placing some goats' flesh for them regularly every day at his house, he soon attracted a prodigious number of them; and by degrees he coaxed a few of them to remain with him altogether. These animals followed him in his walks, sat with him at home, and even learned to dance, while he sang tunes to them. They were useful, besides, in destroying and driving away the rats, which had not only stolen and spoiled his food and clothing, but while he slept, they had actually tried to gnaw his feet. He also succeeded in taming some kids, and the frolics and games of his cats and goats with one another, afforded him amusement, and served to beguile many an otherwise tedious hour.

The whole of the western coast of America, at that time, belonged to the Spaniards; and they had suffered much from the English cruizers, who had taken several of their valuable ships, and burnt and plundered many of the towns. The Spaniards, in their turn, were in the practice of making prisoners of all the Englishmen that they met with, and either put them to death, or what was worse, sent them to work in the mines. This, Selkirk knew; and he dreaded lest he should be found and taken by any of the Spaniards, who might happen to land on the shores of the island for water. Otherwise, he might have been relieved from his captivity much sooner than he was.

One day, a Spanish ship arrived in a harbour close to that part of the island in which he had fixed his dwelling; and some of the sailors had landed before he was even aware of the ship's arrival. Finding that he was observed, and alarmed at his danger, he fled into the woods for safety. He was fired at and pursued. Running at his utmost speed—and he had become as swift of foot as a goat, from his endeavours to catch his prey—he soon outstripped his pursuers, and climbed a tree before the Spaniards could overtake him.

It happened that the Spaniards stopped under the very tree in which poor Selkirk had taken shelter. He saw them load their guns, and then, after looking about as if in search of him, fire at the goats that were feeding near. Carrying off such of these animals as they had killed, they departed to the ship without discovering him. All that night, and the greater part of next day, he remained in the tree, afraid to come down; and when he did venture to leave it, being forced by hunger and thirst to do so, he crept cautiously to his hut, and was rejoiced to find that it had not been discovered. When he at length ventured to walk towards the shore, the ship had sailed, and he had the satisfaction to feel himself once more alone.

The want of gunpowder soon added to the difficulties of his situation. So long as it lasted, he did not want for food or fire; but he was afterwards obliged to trust to fleetness of foot in securing the goats, and once, after a hard chase, he caught hold of the horns of a goat just as it reached the edge of a steep precipice, and was pulled over along with it, and got himself severely bruised, so that he was confined to his hut for ten days, and suffered from it for some time after.

The clothes that he had with him when left upon the island were now worn out; his shoes also were done; and, with all his efforts, he could not make himself any substitute for the latter. Constant use, however, made his feet so hard that he could run anywhere without difficulty or inconvenience. But he could not go without clothes; accordingly, he prepared some

goats' skins, and with his knife cut the skins into the proper shapes, and then, with narrow strips or thongs, he sewed the different pieces together. A nail served him for a needle; he pierced holes in the skins, and drew the thongs through. In this rude way he contrived to make himself a jacket and trousers, and a cap, all of goats' skins. In his sea-chest, he found some pieces of linen; and with the help of his nail-needle, he set about making himself a new shirt. Instead of the thongs of skin, he used the worsted threads drawn out of his old worsted stockings.

He now had leisure to examine the state of his tools. His knife, so valuable to him, had become worn away to the back, and he contrived to make a new one in the following manner. From off the cask which had held the stores landed for his use, he stripped some of the iron hoops, which he heated, and while they were hot, he beat them thin with a hammer. He then both shaped them and gave them an edge, by grinding them upon stones; and it was an easy matter to give the blades so formed, handles; and rude as they were, these knives were of considerable use to him.

Selkirk kept an account of the goats that he caught during his stay upon the island. Besides those which he tamed, he caught and killed five hundred for food. He also caught as many more for amusement; and after marking them, by slitting one of their ears, he allowed them to go at large again. Several of these goats were alive more than thirty years afterwards, when they were seen by Commodore Anson, when he stayed some time at the island, for the purpose of recovering his sick crew.

Four years and four months passed away, and Selkirk had become almost reconciled to his lonely life. One day he descried two ships at some distance, which, from their appearance, he was convinced were English vessels. He immediately lighted a large fire as a signal, and waved a piece of linen cloth as a flag, in order to attract the attention of those on board. Ere long he had the pleasure of seeing a boat put off and row towards the shore. As the boat neared the beach, he saw, to his inexpressible joy, that the men were English; but the boat's crew advanced cautiously after landing, lest the signal should have been made by an enemy, for the purpose of deceiving them.

The astonishment of the sailors was extreme, when, as they approached, they perceived the singular figure of a man advancing towards them, clad in goats' skins, and calling to them in a language which they could not doubt to be English, although spoken in such a way that they could not make out the word.

Selkirk soon made the boat's crew understand that there was nothing for them to be afraid of, that he was the only person living upon the island, and had been so for more than four years; and believing the two ships to be English he had lighted the fire to attract their notice, in order that they might deliver him from his solitude.

The sailors, after recovering from their astonishment, invited Selkirk to dine with them on the beach; and they were

surprised that he would neither eat their salted provisions, nor drink their brandy and rum. He had drank nothing stronger than water during his stay on the island, and he could not bear the strong liquors which the sailors offered him. He had so much forgotten the pronunciation of his native language that he could scarcely make himself understood. When dinner was over, Selkirk, in his turn, invited the sailors to his hut, but the way being intricate and rugged, only a few of them had the curiosity to go. He returned with his visitors to the beach, and then accepted the offer of the boat's crew to take him with them to the ships. These vessels were called the Duke and the Duchess, and were commanded by Captain Woodes Rogers and Captain Courtenay, who, when they heard that there was no enemy in the island, ordered the ships to be brought to anchor.

On board the Duke, Selkirk met with one of his former companions. This was no other than Dampier, who, as soon as he heard the name of Selkirk, at once recognised him as one of the crew of the Cinque Ports, and gave him so good a character to Captain Rogers, that the captain offered him immediate employment on board his own ship.

While the ships remained at the island, Selkirk was very useful in assisting to supply them with fresh provisions, and with wood and water. On one occasion, he entertained his new companions by calling his cats and goats around him, and making them dance, while he sang to them one of the songs which had so often amused him in his solitude.

He was asked many questions as to his manner of living. The seamen could hardly believe him when he told them that he could, on foot, pursue and overtake the goats. But he at once offered to prove the truth of what he said, and catch a goat for the use of the ship's company.

This was agreed to;

and some of the sailors, who reckoned themselves capital runners, offered to run with him. There was a bull-dog on board of one of the ships, and Selkirk proposed that it should also be brought to join in the race. Accordingly, the whole party set off; but Selkirk soon tired both men and dog, and left them far behind. He returned to them shortly afterwards, bringing on his shoulders a live goat that he had overtaken and caught.

Captain Rogers gave Selkirk shoes, and stockings, and clothes. His feet had been so long accustomed to the want of the former, that the wearing of them again caused him much pain and uneasiness, and it was some time before he could endure them.

He was thirty years of age when first left upon the island, and therefore more than thirty-four when he quitted it. After a protracted voyage, he arrived in London; and then the recollections of his peaceful, quiet life on the island came strong upon him. The bustle of the streets distracted him, and he walked along them very quick, and sometimes even ran, quite unaware of the crowd that stopped wondering at him. In the streets of London, he forgot how much he had often suffered from solitude, and he sometimes wished to be restored to his

SELKIRK AND THE SAILORS.

uninhabited island, where he was "monarch of all he surveyed," and lonely life again. He had enjoyed good health during the time he was on the island, owing to his temperate manner of living, and the exercise he was obliged to take in procuring his food.

The account of Selkirk's adventures was, as we have already said, the groundwork of Defoe's delightful and instructive life of Robinson Crusoe; and Cowper, the poet, has written a very expressive poem on the subject of Selkirk's long sojourn on the island of Juan Fernandez. Let it not, therefore, be thought that the four years and four months of his life that he spent there, were idly wasted, or passed without their use, when they have given rise to a work which, like Defoe's, has imparted, and will continue to impart, pleasure and information to succeeding generations, as long as the language exists.

THE SMUGGLER'S GRAVE.

CHAPTER I.—THE ALARM.

THE very romantically situated village of L—, in the county of Kent, was, some fifty or sixty years ago, one of the most noted smuggling stations on the coast. The noted inefficiency of the preventive service of the period only acted as a stimulus to those bold and daring men, and without checking the evil, served but to excite their ingenuity and courage—their love of adventure and thirst of wealth, the more. Many are the wild stories related of the deeds and exploits of these fearless sea-rovers, and wonderful and numerous instances of their cunning and quickness in devising expedients, and of their dexterity and valour in carrying their plans into execution, are still told by the hoary chroniclers of the sequestered hamlet. Amongst these traditions of a rover, and perhaps not the least interesting, will be found "The Smuggler's Grave."

It was a calm and mellow evening in autumn, the slanting beams of the sinking sun were tingeing with his own golden hue the peaks and projections of the rocky shore, and making "the village windows blaze," as ten or twelve men in fisher's garb were seated upon the long bench that extended in front of the solitary village ale-house. The foaming ale was passed from hand to hand with the freedom of long tried and ready fellowship, and jest and laugh, and harmless glee, enlivened their hour of enjoyment. In the little bay in front, which seemed to have scooped itself a nest from out of the surrounding rocks, a long, low-hulled, yet high raking vessel rocked to and fro on the swells. She was alone, and held by a short cable, with her sails clewed up in such fashion that they could in one instant be shook out, at the same moment the anchor could be tripped, and she put before the breeze, and ready and able to brace any sea and dare any danger.

"Is she not a beautiful creature, Martin," said one of the men, addressing his nearest comrade, while he rested the measure on his knee, and surveyed the trim and gallant bark with a glance of admiration. "Is she not a palace for a prince—there's not such a model swims from Jersey to Jerusalem, and as right and tight as one of old Hans Vanderpumps flasks of Schmiedem, with his own seal on the cork!"

"Aye, aye," responded Martin, "and quiet as she looks, I warrant me she has gone through more wicked work in her time than a dozen of the king's cruisers all together."

"Well, messmates," said a third, "here's success to the jolly little Rover, and here's to

The wind that blows,

The ship that goes,

And the lass that loves a sailor."

And draining each his measure dry, they all joined in one enthusiastic hurrah.

"Come, Bill Barnacle," said the first speaker, turning to a young man who sat near, "Come, Bill, give a stave, a real sou'-wester lilt—like what you tip the revenue lubbers, when the little Rover is giving his Majesty's cutter the go-by on a hazy night."

"Aye, Martin," replied the young man, "that is the time to sing, when the winds laugh in our bellying canvass, and the waves join in chorus around us, while the little skimmer there

is dancing under us as if she were endued with life and rejoiced in her speed."

"Come, Bill, the song—the song," joined in all the rest, and the young man without hesitation, but like one who knew and felt confident in his powers, trilled out in free, manly, and sonorous tones, the following sea ditty, made expressly in praise of the idol of his heart, the lovely little Rover.

Come heave ahead, her white wings spread

Before the sweeping breeze;

And mark how gallantly she'll tread

The surface of the seas.

Lay out, lay out, spread out each sheet,

Until you crack the mast—

How joyously she flies to meet

The rushing of the blast.

See how the sparkling waves at war,

Rush on to kiss her prow;

Oh! what cares now the Rover for

A fellow or a foe.

She loves the singing of the wind,

She loves the wild waves roar,

But most she loves to leave behind

The false and faithless shore.

Now where's "the sea-dog," that would dare

To cross us in our path,

Ah! soon the fools shall learn to fear

The Rover in her wrath.

She is no dolphin of the deep,

But the fierce and fanged shark;

For fearless hearts and hands now keep

The bold free-trader's bark.

This song was received with reiterated cheers of applause, and the flowing measure was passed round the group with a rapturous enthusiasm. In the midst of their revelry they were joined by the landlord of the "hostelrie" and a young man in the garb of a seaman of a superior rank from those around him. His appearance also bespoke one of a more elevated stamp of mind, while his bright unquailing eye—firm-cast, yet handsome features—his well knit, yet lithe frame, and his ample shoulders, and expanded chest, told of him as one who had the strength to do, and the recklessness and will to dare.

"Well, messmates," said the youth, sitting down amongst them, "I am proud to see you all so hearty—push about my hearts of oak, never let the jug come to an anchor while it holds a drop—our cargo is all safe—so we may defy the land sharks and give loose for one night to mirth and good fellowship. There she sits as close as a duck, and as clear as a new cutlass. That was a regular dog-watch song of yours, Bill Barnacle; come let me have drink with you—say, fill it man—up to the brim, 'here's success to the Jolly Rover and her crew,'" and he drained the goblet to the bottom. Again their wild hurrahs made the caverns of the shore resound, and his health and a life of happiness were toasted with fervid and earnest zeal. Young Harry Herne was the son of a wealthy farmer, who resided near the village of L—. From his infancy an uncommon predilection for the sea led him early to associate with the fearful fishers of the coast, with whom, to the terror of his parents, he spent most part of his time; sometimes engaged in the unlawful pursuits which occupied the better share of their time and thoughts, and sometimes busied in the arduous tasks which ostensibly formed the avocation of their lives. In these desperate adventures he soon acquired a name above his compeers for daring and dexterity, and his love for this life of danger continuing to increase, his father was induced to purchase for him a share in a small coasting vessel. Here he acquired skill in the management of a trader, but soon sold his share in the coaster, and entered on board a Dutch vessel, half trader, half smuggler. He remained with the Dutch for a voyage or two, and then returned to his native village much improved in circumstances, and with a thorough confidence in his own skill and science. He got the little Rover built after a certain model, and engaging some of the boldest and most expert of his former companions, she was furnished and put to sea as a regular free trader. She proved unequalled for speed, and was always able

to baffle the revenue cruisers; and once being surprised while landing a rich cargo, she fought the king's ship, and so disabled her, that she was glad to be allowed to sheer off, and leave the daring smuggler to make the best hand of his contraband merchandise. Herne was now a passing wealthy man; he had a stout vessel of his own, and a brave and numerous crew devoted to his interests. His fame was the theme of every tongue, and his unparalleled successes trumpeted far and near; while his dexterity, prowess, and courage, were magnified beyond that of any other free trader that had ever visited the coast. Harry had long fixed his affections on Alice, the fair daughter of Justin Fairbrother, mine host of the British flag, and the agent to the Rover. Alice, too, had long and tenderly loved Harry, and purely for himself alone. His fame and the prosperity which attended him in his illegal pursuits, and which she was taught to consider as the reward and results of his superior virtues, made her feel a double pride in being the heart's chosen of such a man. Every voice raised in his praise sounded in her ears like the words of angelic spirits, and sunk into her heart like a balm and a benediction. Harry had won her father's consent, and this was the evening on which the wedding was to take place. Everything was in happy preparation; his men were ashore, and the villagers were gathering round to celebrate the union of two fond hearts with all becoming festivity.

"Messmates," said Harry, after a short pause, "our kind landlord here informs me, that certain suspicious-looking strangers have been seen prowling about here this day or two, as if waiting our arrival, and that this very morning the rascal of an exciseman set off on horseback to Deal, where a cutter has been lying this week back."

"Ha, ha, ha," laughed the mariners simultaneously.—"Why let 'em come, Master Herne. Bless your lively limbs, the bird has fled, the prize has vanished like the sails of a lugger in a fog-bank, and the guns, why they're stowed away as snug as if she never carried an ounce of powder since her keel left the stocks. Ha! ha! how innocent she looks—let 'em come, let 'em come."

"Why," said the landlord, "there must be something in it—something serious, and I fear treachery may be at the bottom, for as I passed through the Fisher's Glen this morning I called at the cottage of Bumps, and he was not at home. You know the disgrace he has suffered at our hands—he never will forget. Bumps is a revengeful and black-hearted man. Harry Herne, I warn you to beware."

"He broke our laws three times," said the young man, "and we expelled him, but he will not turn traitor; he cannot break the oath by which he is bound—nay, he knows he dare not—he knows me too well. At the worst all he can 'peach about is the skirmish with a king's cruiser—but what of that—he dare not."

"Too much, too much," replied the landlord, "and its bad trusting your chickens to a sleeping fox, and foolishness to walk blindfolded through the house when a halter hangs at the gate. I would not trust him, and my advice would be that you immediately be off to sea for a day or two, until all doubts are removed. If I am wrong, why no harm is done—if I am right, the evil were well avoided."

"Justin Fairbrother," replied Harry, "you see more in a passing cloud than another man would in a hurricane. You have lived so long on shore that you fancy every breeze a tornado; come, man, look on the bright side of the weather—or is it that you wish to defer my happiness, are you playing me the child, Master Justin?"

"No, Henry Herne," answered the landlord, "you should know me better; my daughter's welfare has been ever held too precious for me to trifle with one who is soon to have it in his keeping. But I am done; I spoke but for your good."

"Well, here's my hand, Justin," said the young man, "it is all over. We'll have a happy night. Come, Bill Barnacle, give us t'other song: let us have one of your merriest ditties; this is no time to think about sharks or sea-bailiffs—they may all go to Davy Jones. The song, Bill, the song!" Bill, as usual, without the slightest indication of bashfulness, spread his broad horny palm, on which he rested his bronzed brow, and after pausing a moment as if to recollect the words or the tune, gave out the following rude song,

Come, fill up the sparkling glasses high,
For a bumper it must be;
And may his cup though life run dry,
Who would not pledge with me.
Then here's, the wide world over,
To hearts—the brave and the free;
And here's to the fearless Rover,
Whether on the land or sea.

He drinks of the rich and ruby wine
Wherever the grape grows free,
From the farthest East to the rolling Rhine;
And the Frenchman's *eau de vie*.
The Western Isles send rum for his use,
And brown ale the banks of Trent;
And his is the Dutchman's Juniper juice,
And the Spaniard's *Aguardiente*.

There is pleasure for him on every strand
And beauty on every shore,
And a hope that greets him in every land,
Makes him love his own the more.
Then drink the wide world over,
To hearts that are brave and free,
And a health to the jolly Rover,
Whether on land or sea.

That night Harry Herne was a happy man—he had within his arms "the visioned hope of years," for the one whom he had long and faithfully loved was now his own. Many and many were the guests of the humble but comfortable hostelry, and the laugh, and the song and the dance followed in rapid succession through the night. Articles of foreign luxury were scattered in profusion, whilst the native October, "brown and bright," followed in rivers. The bride and bridegroom had retired, but still the seamen and villagers stood stoutly to the carouse, and long and sturdily did their strong and well practised heads resist the potent effects of the liquor.

The revel was waxing dull—some were still loud and boisterous over their cups, others were nodding in half stupid weariness, and many lay prone upon the benches and the floor. The dawn was breaking in the misty east, and eclipsing with its grey light the lowly burning tapers, when a man but half-dressed rushed in, and with a loud exclamation, roused the slumbering, and startled the drinkers.

"Up, men, up!" he cried, "is this a time to be bawling your ballads and swilling like swine, when the little Rover has been boarded and carried by the crew of a king's cutter, and two armed boats are within a pistol's shot of the beach?"

In an instant all was in confusion. Cups half-drained were dashed from the lips, and those who were nodding started to their feet, and with staring eyes seemed to inquire if what they had heard, as in a dream, could be true. One was shouting for one thing to be done—another was ordering something else—the bold were arming, and the timid seeking for a hiding-place. The wire had reached the bridal chamber, and Harry Herne made his appearance amongst them half-dressed. The matter was briefly explained.

"It is right, then," said he; "my dream is true. Arm, Rovers, arm!—it is now for life or a rope's end, and a dog's death at the yard-arm, for we are betrayed;—the traitor has sold us, but dearly shall he rue the treachery. But let us out and face them manfully—let them not catch us under hatches until they smoke us out. Come, my lads, show them what the jolly Rovers can do once more."

So saying the smuggler led his men to the beach.

CHAPTER II.—THE ENCOUNTER.

THE sailors were all provided with pistols, in addition to which they laid hold of whatever weapons they could catch up at the instant—bludgeons, pokers, and boat-hooks; while Herne, with his pistols in his belt, an axe in his hand, and a red handkerchief tied round his head, without coat or waistcoat, directed their motions. They were joined by most of the wedding guests, some under the false courage inspired by drunkenness, and by others through recklessness, and a habitual love of excitement and enterprise.

They rushed out; the first object that met their sight was the king's flag floating from the mast-head of the little

Rover—the next, two boats full of armed men just touching the yellow line of sand on the beach. Both parties advanced with rapidity, when, within about half pistol-shot distance, the officer commanding the seaward gang ordered his men to halt, and stepped forward a few paces.

"I command you," said he, "in his Majesty's name to surrender yourselves prisoners—your sloop is already taken, and resistance is now useless."

"Why should you seize on our peaceful sloop," replied Herne, "or what crime have we committed that we should surrender ourselves prisoners?"

"You are a smuggler," said the officer, "and on the night of — you fired into his Majesty's cutter the Wizard, disabled her, and killed Lieutenant Cotterel, her commander, and four seamen."

"Yes," said an individual, wrapped in a great shaggy pea-jacket, which was muffled with a huge woollen scarf about his face, "and that is Henry Herne, the skipper of the Rover, and the very man who pointed the first gun at the Wizard!"

"By heavens!" exclaimed Henry, "it is the villain Bumps himself," and losing all self-control he fired at the traitor—the ball grazed the shoulder of the informer, but penetrated to the brain of the man immediately behind him, who fell dead with a terrific shriek. This was the signal—Herne and his party, with a wild shout, set on their opponents, who received them with a general discharge of fire-arms, which brought down some three or four of the foremost—in the next moment they were all mingled in one general *melée*, hand to hand, and man to man. The king's sailors, being armed with cutlasses and boarding pikes, did dreadful and bloody work—whilst the free traders, with ruder and more homely, but not less dangerous weapons, fought like demons. Herne in the midst of the conflict sought but one person, Bumps the traitor—waving his bloody axe, and dashing his enemies about on all sides, he cut his way through all opposition, until he seized his victim by the red swathing about his throat. His eye seemed leaping with exultation from his head, and he gazed on him as the tiger does upon his prey—his set teeth ground audibly against each other as he exclaimed:—

"Now, betrayer, take the reward of your treachery!" and crash went the weapon through his skull, and the brains and gore mingled, spouted, and scattered even into the face of his destroyer. One hoarse gurgling, half-smothered yell, deep down in his breast, escaped him as he fell. His limbs quivered for an instant, and then he lay motionless and still. At the same instant a pistol bullet entered Herne's back a little below the shoulder blade—he leaped up into the air, faced about, and attempting to raise his axe, he sunk across the corpse of Bumps, the informer.

His companions seeing their leader fall, set up a wild yell of revenge, and a party of fishermen making their appearance from behind a jutting crag, the king's officer ordered all his men who were not disabled to make for the boats. A rapid retreat to the beach commenced—the free traders and fishermen pursued them with fury, and out of thirty men who landed but nine escaped from that fearful encounter.

The spot is still shown, where this sanguinary fray took place; it is a smooth green platform, a little above the strand. There lay the combatants, some extended in the quietness of death, others in the last mortal agonies, still surveyed their enemies with looks of unsatisfied malignity. Harry Herne was not dead when his victorious party returned: they found him leaning on his elbow, and surveying with a ghastly smile the mangled features of his old comrade, Bumps the traitor. They bore him to his bride, and the bridal couch was changed into his death-bed. He lingered through the torments of that night, and expired as the dawn stole from darkness the following morning. His last words were—

"Bury me on the green where we fought; let my grave be dug in the very spot where I killed the betrayer. I shall rest softly there; the earth has drank the blood of my enemy, and my own. The hum of the sea—the sea I ever loved, will lull me in my rest, and my Alice, my own Alice, will sometimes come and drop a tear over the cold bed where her Harry is laid to sleep."

Why should we strive to describe the agony, the misery, and the despair of Alice, the bride of a few brief hours? It were a vain task. "In the dead of the night his last will was complied with;" he was laid in his narrow house "by the crew that he died with;" and a green mound above the surrounding level neatly bordered with the sweet primrose in the spring, and the pansies of summer, points out "the Smuggler's Grave."

His bride did not long survive him—her days, were spent sitting on the grassy knoll where all her hopes and affections were entombed. There would she linger, lonely and sad, from the rising of the sun to the going down thereof, gazing mutely on the ever-moving ocean, and listening to the dirge-like moanings of the blast; and when the shades of night were gathering around, she would lay her head upon the grave and sigh herself to sleep. Her aged father beheld with many a tear the sad ruin of his beautiful child. He would not allow any one to disturb her in this her only enjoyment on earth, for all besides—the world, its strifes, interests, and passions—were forgotten by her. To sit on the grave and weep and to gaze on the bursting billows of her native bay, was all her pleasure in this world, and to sleep beside him she so loved, was the sole wish of her life; and soon did she slumber from her sorrow; she sunk and faded, sweet and noiselessly, and like a wounded flower she withered, and was buried beside her husband.

The grassy mound still remains a monument of the truth of the tale, which still, on the long winter nights, is fondly repeated round many a cottage hearth; and the deeds of Harry Herne, the bold free-trader, and the love of the beautiful Alice, are still held up as models for the imitation of the young and fair, who even in these days of sceptical improvement, look upon the Smuggler's Grave as a sacred spot of earth.

SEA LOVE.

I REMEMBER once having been told by a young lady who had eloped to be married, that a woman in such a situation never goes off unprovided with a bundle. Whether it be that the woman's love of dress never forsakes her, or that she looks to maintain the conquest her beauty has achieved, by the adventitious aid of the milliner and mantua-maker.

When Captain Brilliant came to the window to Cassandra, at the appointed hour, she had not only dressed in an appropriate manner to elope, but had made up a little bundle of clothes to accompany her.

The admiral was now out, and Brilliant was admitted to her room by Prudence, her faithful servant and confidant, who was ready to partake of the fortunes of her mistress.

"Oh, Brilliant," cried Cassandra, "how I tremble! My hand shakes so that I am utterly incapable of writing a note to my uncle."

"Give me the pen, my dear," said Brilliant; "I will write the admiral a note ship-shape."

Captain Brilliant took the pen, and wrote as follows:—

"SIR,—Your niece, being a lass who loves a sailor, declines the marriage settlement of my Lord Fiddle-fumble, to be spliced to a man who has no other house but his ship; which will sufficiently explain the motive of her shoving her boat off."

"I have the honour to be, &c."

"BRYAN BRILLIANT."

The every-day writers of tales have an invariable custom of making their lovers elope at the conclusion of their histories; but, disdaining such rules, behold the hero and heroine of this page running away in the middle of my eventful story: or, in language more correct, run away with by four blood horses, and pursuing their course to the New Ferry Passage. Yes, let the reader picture to his imagination Cassandra, Prudence, and the captain, sitting in a comfortable chaise, and galloping hurry-scurry to the altar of Hymen.

Captain Brilliant was married to Cassandra at Bristol; and it would require language superior to that of mortals to paint the bliss of Captain Brilliant, when he found himself in the arms of his beloved Cassandra. It has been said by the poet "man never is, but always to be blest." Here Pope deceived

himself, for Brilliant was supremely blest in the possession of so much loveliness. And had Pope tasted the happiness of the marriage state, he never would have advanced such a position.

It now remains for me to relate that Captain Brilliant proceeded with his lady to Portsmouth, where his orders had fortunately arrived only an hour before.

"Bravo!" cried the captain to his wife. "Everything smiles upon our union. Touch and go is a good pilot."

"But when do you go on board?"

"The moment you are ready."

"I am ready, now," said Cassandra, throwing her arms round his neck.

"Well, then, my love," cried the captain. "I will write a note to my first lieutenant, to get the whip ready for you."

"My dear Brilliant!" said Cassandra, "surely you are not a Russian. What have I done to deserve the whip?"

Here the captain laughed heartily (as I humbly trust my readers will do) when having explained himself to Cassandra, he wrote his first lieutenant a note.

"DEAR HURRICANE,

"Get the whip ready. I am spliced."

"Yours,

"BRYAN BRILLIANT."

The coxswain of the barge returned with the following answer:

"DEAR SIR, So am I! and a devil of a splice I have made."

"I have the honour to be, &c."

"HENRY HURRICANE."

Captain Brilliant having dined with Cassandra, at the hotel on the Point, and introduced his bride to Lord Fearless, Sir Joshua Invincible, and the honourable Captain Outwater, who commanded ships lying in the harbour, he embarked with Cassandra and Prudence, and a French lap-dog, in the barge, and was conveyed on board the *Desdemona*.

But, on ascending the ship's side, our noble captain could not repress his astonishment at the uproar that prevailed on the quarter-deck of the frigate.

There was a young woman leaning against the capstern, stamping her cap under her foot, and upbraiding the first lieutenant with the most opprobrious epithets that an enraged woman could utter.

"You deceitful man!" cried the lady. "Was it for this I married you before my last husband was laid in his grave, and put you in possession of a bag full of joes?† Shame on you, you low fellow. To descend to a strumpet, when you had a wife on board your ship."

"Indeed, Flora, you are wrong."

"What! have I not the use of my eyes, that you thus exculpate your conduct. Did I not see the woman take you by the arm. Did you not smile on her? Ha! you thought I was snug on board, and ignorant of your villany. But I suspected your conduct. Put me, I say, ashore. I will not stay another moment on board."

"Avast there, Flora! The boats are all hoisted in. We have got our sailing orders on board. The foretopsail is loose. Captain Brilliant is come. I must get the ship under weigh."

Cassandra and Prudence were now hoisted on board, and the former was melted into tenderness on beholding the distraction of a young and beautiful girl.

"What, my dear," said she to her husband, "is the matter?"

"Faith," cried the captain, "here is the devil to pay and no pitch hot. I think I have had the pleasure of seeing that lady before. Mrs. Factor, if I mistake not?"

"Yes, sir," sobbed the lady, "my name was Factor. You not long ago had the goodness to take me and my husband into your ship. You remember the morning I left you, Mr. Factor died the same night, of convulsions, in his bed, Not

knowing a soul at Portsmouth, I returned on board the ship and wanted to see you, hoping you could recommend me to some lady to lodge with. You was gone to your friends, but your first lieutenant received me, and when I told him my tale, he affected to feel for me; beseeched me not to afflict myself, and immediately accompanied me to Mrs. Read, who accommodated me with a first floor on the Point. At that time, sir, I had no more thoughts of him than I have now of you; and I was not a little surprised to receive from him a letter. I will read it to you."

"Avast there!" cried the lieutenant, "Avast, and spare my blushes."

"This is the letter, sir," said Flora.

"DIVINE FLORA!

"The havoc committed by shells thrown into the sea-port of an enemy is a mere trifle in war time, compared, queen of queens, to the destruction of my heart from the fire of your eyes. Yes! goddess of goddesses! a shot from either one or both of those heavenly bow-chasers has raked my heart fore and aft, and knocked it into splinters; splinters that no carpenter can repair, but the magic of your smiles. Alack! alack! every time I lie down in my hammock, I fairly make the clues strand, conceiving I hold you, beautiful Flora, in my arms: and if this be not a proof of my most ardent love, I know not in which point of the compass it lies. Lowering my top-gallant sails to you,

"I am, your dying lieutenant,

"HENRY HURRICANE."

To be grave on hearing this letter read, exceeded all power of face; "Ha! ha! ha!" roared the captain. "Bravo, Hurricane! By the piper that played before Moses in the woods, you went upon the right tack. Ay! let a sailor alone for laying an anchor to windward of a fair lady!"

"Well, sir," continued Mrs. Factor; "the next morning he came ashore in a full suit of uniform, a gold laced hat, and a swaggering sword by his side; and being admitted to my presence, threw himself at my feet. He swore I was more beautiful in my undress (I was then in my dishabille) than a seventy-four gun ship in full sail; and after heaping a thousand praises on what he called my top-lights, he implored I would suffer him to send for a chaplain to splice us together. At first, I could with difficulty repress my smiles; but when I saw the man take his handkerchief from his pocket and cry like a school boy—

"I beg pardon for interrupting you, madame," said the captain, "but I suspect Mr. Hurricane had an onion in his pocket."

"Upon my soul, sir," answered the lieutenant, "when I thought she scorned my passion, I wept like a child."

"Belay there!" cried the captain; "you may tell that to the marines, but I'll be d—d if the sailors will believe it."

"Well, sir," returned Flora, "beholding a man weep for me, who I knew but a few days before was burning with impatience to encounter the enemies of his country, my heart was melted into tenderness, and I consented to become his wife. We were married privately the next day; and I will candidly acknowledge that the ardour of a young sea-officer soothed into oblivion the memory of my old merchant."

"Yes, Flora," interrupted the lieutenant, "you found me no Plato-comic lover."

"Well, captain," continued Flora, "I now thought myself happy; and I put into the hands of my new husband a bag full of joes; I also accompanied him on board the frigate, and I loved him so in my heart, that I would have gone with him, cheerfully, on a voyage round the world. But I soon found my happiness vanish like a dream. My husband pretended that he had business at the dock-yard, and desired I would amuse myself with a book till he returned. But, suspecting that in reality, he was tired of my company, I followed in another boat, and popped upon my dying lieutenant at the door of a bad house, toying in the company of some more lieutenants, with several vulgar wenches, whose bold looks would have disgusted a man of the least sentiment."

"Hurricane," said the captain, "here is a grand charge

* Ladies are hoisted on board in a chair fastened to a rope on the topsail-yard, which is called a whip.

† Joes are golden coins that go in the West Indies; and would indeed, I presume, go anywhere. A bag full would be equivalent to a great fortune, if the bag were pretty large.

against you. Were you to be tried by a court-martial, where there was a jury of husband's, you would certainly be transferred to the bottom of Hymen's list."

"Indeed, sir," said the lieutenant, "I am an innocent fellow."

"Yes," rejoined the captain, "so it appears."

"Why, sir," said the lieutenant, "the fact was this: Having dined at the Blue Posts, with three or four of my old mess-mates, in walking down together to the boat at the Point, we passed a house where there were half a dozen young women before the door. They all of them hailed us; but all I wanted was to luff up, to bear away, and keep clear of the fleet; for I had now got a wife, and had entirely done with drifting. But I was embarrassed in the clench. For just as I was endeavouring to shove off my boat from them, a girl laid hold of me, stock and flute, and swears I shall not leave her."

"Yes," cried Flora, "she hanged and lolled upon you; and you smiled, and was ready to accompany her into the house."

"How now?" rejoined the lieutenant "I was trying to get

from the house, and had already cleared myself from the arms of the woman, when, lo! my wife appears, and reads the articles of war to me."

"Well," said the captain, "we will hoist the barge in upon the strength of it."

The yard and stay-tackles of the frigate were now hauled down and hooked to the barge; the falls were manned, and the boatswain, together with his three mates, began to tune—

"The shrill whistle, which doth order give

To sounds confus'd."

The sailors were making a run of the tackle-falls, and Mr. Hurricane, the lieutenant, was heard to exclaim, "Silence there! Step out, men; step out. Walk away with him, cheerily."

In one minute the barge was suspended in the air, between the main and fore-yards. And now were heard the following orders, which had the magic to place the boat upon the booms.

"High enough with the stays. Avast there! Lower away the yards! Lower away the stays! Let go!"

LOSS OF THE SHIP FANNY, CAPTAIN ROBERTSON COMMANDER, NOVEMBER 29, 1803.

LOSS OF THE FANNY.

THOMAS PAGE, who was second officer to the Fanny, and who has communicated the particulars of her loss, went out to India as a free mariner, in the Elphinstone (Captain Craig) March 1803. Twelve days after their sailing from the Downs, they arrived at Madeira. The following morning they proceeded to the Cape, and arrived there about the middle of May,

No. 41

after experiencing, in their course, variable winds, and much bad weather.

Their stay at the Cape was but short, the troops whom they were to have taken from thence to India, having been embarked in some other vessel a short time before their arrival. They therefore continued their course to Bombay, where they arrived July 7.

Our correspondent now received a packet from a friend, enclosing letters of recommendation of different gentlemen. He accordingly hired a palanquin, and with great confidence and cheerfulness, set out to present these letters.

The first person he waited on, was a merchant, opulent and haughty, who hardly deigned to notice him on his entrance, but at length read his letter, and condescended to inform him, with a very supercilious air, that he had no ships in want of officers. Mr. Page feeling himself rather independent (as he had yet two letters unpresented) and piqued at his cavalier behaviour, wished him a good morning in a dry and ironical style, of which he felt the force; for, immediately changing his tone, he requested him to leave his address, assuring him that he should recommend him to the first vacancy. The second letter was addressed to a lieutenant of the Bombay marine, from whom our author received every attention; and the third was to Lieutenant Mickie, the naval store-keeper at Bombay, who told him that no ship could arrive in the harbour without his knowledge, and that he would give him the earliest tidings of any which might want officers. About ten

days afterwards this gentleman informed him, that there was a ship in the roads in want of a chief mate, and that the captain of her wished to see him. Mr. Page waited upon him accordingly; and, as he was not very conversant in the Malay tongue, it was agreed that he should be his second mate, and that he should go on board immediately, as the ship was to get under weigh the next morning. Accordingly he went on board the *Fanny*, Captain Robertson, bound for China. It has been a long established custom at Bombay, for every officer to receive four month's advance of wages previous to the ship sailing; this amount, therefore, should have been paid to him; but not having occasion for it, he deferred receiving it till they should arrive in China, when he intended to lay it out, with others moneys, in the purchase of articles for private trade, which is always sure to turn to good account in Bombay.

Early the next morning, August 8, the ship got under weigh, and proceeded without any interruption, until they arrived at the Straits of Malacca, where they unfortunately got aground, and knocked off their rudder, but soon shipped

it again, and went on as smoothly as before, until the middle of September; a month pregnant with danger in those seas, as the breaking up of the S.W. wind generally takes place then, accompanied with such tremendous gales, as few ships can withstand. This hurricane is called a typhon, vulgarly, tiffoon by the seamen, and ta-fun by the Chinese, which, in their language means a great wind. Mr Barrow, in his tra-

vels in China, gives the following description of these violent winds:—

These hurricanes sometimes blow with such strength, that according to the assertion of an experienced and intelligent commander of one of the East India Company's ships, were it possible to blow ten thousand trumpets, and beat as many drums on the fore-castle of an *Indiaman*, in the height of a ta-

fun, neither the sound of the one or the other would be heard by a person on the quarter-deck of the same ship. In fact, vast numbers of Chinese vessels are lost in these heavy gales, of wind, and ten or twelve thousand subjects from the port of Canton alone, are reckoned to perish annually by shipwreck.

About the 15th of August, from the appearance of the moon, they expected blowing weather; and accordingly, on the 19th they had a fresh gale, with increasing sea, until the 19th, when the sky presented throughout a vivid glare; the clouds were flying about in all directions, greatly agitated, and not fixing to any point, and the sea tossing about in the same manner. They were certain that something more than usual was coming on, and accordingly prepared their vessel to meet it; she was tight and strong, and capable of resisting any common gale, and they made her as snug and secure as possible. On the 21st, at noon, the gale came on, and by eight o'clock p.m. it blew so exceedingly hard, that they could not carry a stitch of canvass; it increased in violence during the night, attended with a very high sea, until eight o'clock the next morning, when, on a sudden, it changed from a heavy gale of wind to a start calm.

Nor were they aware of the typhon's approach, which came on with great violence at half-past eight. The frothy ocean appeared like a boiling cauldron, and, about nine, their foremast went by the board, and the wreck going astern, tore away the rudder; there were now three feet water in the hold, and the ship was driving to and fro, at the mercy of the wind at sea. They got all hands to the pumps; the chief mate was now raving mad, and they knew not what to do with him; the captain was in very low spirits, and as for Mr. Page, his feelings cannot be described, but his duty kept him constantly cheering the men at the pumps. Providence, however, preserved them for greater trials still.

At midnight the gale abated, and by nine o'clock the next morning (the 23rd) by incessant pumping, they had reduced the water in the hold to nine inches. The ship was still drifting at the mercy of the waves, on account of the loss of the rudder: had they lost all their masts, the accident would not have been so unfortunate. They were in the midst of dangers, being then 17. 42. North latitude, 112. 18. East longitude. The wind was dying away, and they were not able to carry sail to steady the ship, which made her roll about excessively; and at ten at night, her main-top-mast went overboard, by which one man was killed, and five wounded.

On the 24th, they got up a jury fore-mast, and after drifting about nearly a month in these dangerous seas, steering by the sails, and encountering innumerable dangers, they at length gained the coast of Hainan on the 13th of October, and came to anchor in a bay there on the same day. The day following, they shipped a temporary rudder, which they had made since the loss of the former.

On the afternoon of the 15th, a gale blew them out of the bay, with the loss of a cable and anchor. Although they grieved at this (as they could not replace them) yet they were consoled with the thought of the rudder being shipped, which placed the vessel again under command.

We should have observed, that when they first arrived in the bay, the chief mate left the ship, determining, as he said, to take his chance among wild beasts in a desert, in preference to remaining longer with them, where he found himself rather an incumbrance than useful, and where, too, his malady was evidently increasing, owing to the excessive difficulties and hardships of their situation. He went accordingly in one of their boats which they sent on shore for water, and the boat had not returned when the ship was driven out of the bay, so that there were four men, besides the chief mate and his servant, left behind.

On the 16th they had another gale of wind; on the 17th they stood in, made land, and came to anchor in Tongsoi Bay, on the S.E. part of the island of Hainan, well sheltered from the N.E. monsoon. They remained there three weeks, and got plenty of water; but the natives being forbidden to trade with them, they could procure no provisions, notwithstanding the repeated entreaties of the captain and Mr. Page. Their rice being consumed, they had to support them only

four bags of dohl (a kind of peas, of which the Lascars are very fond). There were indeed forty bags of rice in the ship: but they knew not where they were stowed; and it would have taken them a month to ransack the hold, and perhaps to no purpose, a cotton cargo being so tightly screwed, that it becomes as solid as a mass of iron, and cannot be unstowed without a great number of hands, and even then with great difficulty. Their men were too weak to undertake this task, had they even known where the rice lay; so that they were just as badly off as if they had nothad a grain on board. Finding they could not procure rice from the Hainanese, they were obliged to allowance their men, at the rate of only half a pound of peas for the twenty-four hours. They bore it with patience, but soon began to droop, and frequently told the mate they were very hungry; but allowed that no one was to blame.

Previous to their leaving the place, they received a note from the chief mate, informing them that himself and the boat's crew were made prisoners immediately on their landing: that they had been marched across the country to the place off which the ship lay, and had been treated with the greatest cruelty. This usage, he added, had brought him to his senses, and he now earnestly entreated to be admitted on board.

Four of their men about the same time stole the long boat and got ashore, after which she was dashed to pieces in the surf; they had driven considerably down the bay in a squall of wind; and as the Hainanese would not give up their people without ransom, the captain determined to resort to force; and having four six-pounders, they intended to get abreast of the town to intimidate them, and show, if they withheld their people, they should lay the town in ashes.

They accordingly got under weigh on the 4th of November to carry this design into execution, and kept a Chinaman (an Hainanese) as an hostage. When under sail, the wind became unfavourable, and blew them from the land; and at two o'clock they split their main-sail, which hindered them a little. However, they got up another, tacked ship, and stood into the bay at seven p.m., and were at thirty fathoms water, when unfortunately their rudder broke from the stern, and away they drifted to sea, surrounded with dangers, and the Paracels, a dreadful reef which has never yet been completely explored, under their lee.

Happily they drifted between the rocks and Cochin-China; and wonderful were the escapes which they continually made, every hour bringing them into some new danger, till at length the ship came round upon the other tack, and they drifted to the south-east, across the southern tail of the Paracels, going in a south-east direction until November 21st, by which time they had finished another rudder, and got it shipped.

Having once more their ship under command, they felt themselves more at ease, and stood to the south-east that night: at day-light next morning they perceived rocks and sands around them in every direction; they tried every way to get out but could not succeed, and therefore came to anchor.

They had a small China boat which they procured at Hainan; and it being so leaky as not to be sea-worthy, it was agreed that they should repair it immediately, and search for a passage through the reefs. The repairs of the boat took up three whole days, during which time the ship drew nearer the lee rocks at every puff of wind; and at times they were not more than a mile from the nearest rocks, over some parts of which the sea broke with the greatest fury. They had two anchors down, the only two indeed which they had. The boat on trial was found to be as leaky as ever, and there was therefore, no time to be lost; they hove up one anchor, cut the cable of the other, and made sail.

The reef was now about one hundred yards from them, and they had every hope of clearing it, and of saving the ship and their lives, when unfortunately the wind altered, and drove them right upon it. They endeavoured to tack, and exerted every means in their power to avoid the fate, but in vain.

At one o'clock, p.m. of the 26th November, the Fanny struck. The first blow knocked off the rudder, which they

had been at such pains to make. The ship struck very hard, driving further among the rocks. Expecting her to go to pieces every moment, they cut away the mizen-mast; which eased her, and she appeared to be fixed. It was high-water when they got upon the reef, and they could then see no appearance of anything but the shoal water; but as the tide sunk, the rocks began to show their heads, and at dead low water they were dry for several miles round them. There were twelve feet water where the ship was, and she laid over very much. Although they doubted whether they should ever live to see the sun rise again, they cut down the yards from the masts, and put them overboard as props to support her.

Such was the perilous situation of this unfortunate crew. They were cast away upon a reef never before known, in lat. 9. 44. North, long. 113. 51. East (from lunar observations) the north-east monsoon at its height; the nearest coast to them was Cochin-China, and that was distant two hundred and fifty miles; and the nearest land they could possibly make was Pulo Auro, eight hundred miles; they had not a boat fit to carry them; their ship's company amounted to fifty-six persons, and they every moment expected the ship to go to pieces. She remained, however, perfectly tight as yet, but seemed likely to afford them only a few days longer of a miserable existence. The poor blacks, half dead with hunger before, and nearly dead with fear now, were incapable of much exertion.

After many consultations, they resolved on cutting off the poop (if the ship should hold together long enough), and making out of it two flat-bottomed floats; this appeared the only method which afforded them any chance of saving the lives of all; and although they never expected to see it accomplished, they set about the task with alacrity, and the poop-deck was cut off the next day and sawed into lengths. They then broke open the hatches, and hove overboard a great number of bales of cotton, to prevent the vessel oversetting; in doing this, they had the satisfaction to find the rice, twenty-six bags of which were in good condition, and they now gave the poor Lascars a hearty meal, which they ate with great avidity. This repast put them into better spirits, and all assisted in the work but one, who swore he would rather die than do anything more:—the fate of this man our readers will hereafter learn.

Mr. Page now considered, that the little boat which they had, and which was about twelve feet long, with some labour, might be made serviceable, and therefore proposed to the captain, as it was uncertain how long the ship might hold together, that the gunner and himself (who with the captain were the only English on board) should endeavour to make her water-tight; for both the carpenters being employed on the floats or rather rafts, they could not expect the least assistance from them. This boat, he remarked, would just do for him, (the captain) his servant, the gunner, and himself, and they could place her under the ship's stern, with a few pounds of rice and some bottles of wine, ready to be thrown in instantly; that after repairing it they could go on with the floats, and if the ship went to pieces the four should endeavour to save themselves, though they might be swallowed up by the ocean before they had been long afloat. The captain assented to this proposal. It was now the 29th of November, and the ship had two feet seven inches water in the hold.

The next morning the gunner and mate went to work upon their little vessel. They pursued their task diligently, the floats going on at the same time, and the water increasing in the hold to three feet four inches; and on the 1st of December it was four feet nine inches.

On the 2nd they completed their boat, and thought her perfectly tight; they surveyed her from head to stern, calculated her dimensions, and made many learned remarks concerning the buoyancy of Chinese boats. The gunner, however, got half a dozen buckets of water, and threw them into her; but alas! it ran out as fast as he poured it in—unable to speak, they first looked at each other, then at the boat, and so on alternately.

There were now six feet two inches in the hold; and this boat being still the only chance they had left, they tore off all

their former work and began afresh the next day, December 3, on which morning the water was seven feet nine inches in the hold, and in the evening, eight feet six inches; on the succeeding morning, the 4th, there were nine feet ten inches in her, and at noon she was completely bulged, the water within being at the same height as that without. The ship now began to give, the timbers started, and the planks were broke in several places, which alarmed them, and gave them reason to think she would not hold long together. In five days they finished their boat, and had the pleasure to find her completely tight. Their fresh water now began to fail them; but the Almighty provided for them; they had two showers of heavy rain, which they caught with sails spread, and filled their butts. They continued to work at the floats with the greatest diligence.

The reef upon which they struck was composed entirely of sharp rocks, in every part except the spot where the wreck lay, which was a little sandy bay, formed by two points, or a prong, of the reef. They were driven close up to the rocks in this little bay, and the points secured, sheltered them from the force of the sea; and had they not most providentially been driven on this very spot, even had they struck a hundred yards farther, backwards or forwards, they must inevitably have been dashed to pieces in a few hours. At low-water, when the rocks were dry around them, their people often went on them in quest of shell-fish, and there found a quantity of rock oysters, which however were so strong that none could eat them but the blacks. They sometimes caught a few fish, which the tide had left in the holes of the rocks, and they afforded the captain and mate some good meals. Mr. Page once ventured on the reef; but the sharp coral rock cutting his feet like a knife, he was glad to return. But the Lascars who had never been accustomed to wear shoes or stockings, and the soles of whose feet were consequently of the substance of horn, trampled over the rock with the greatest facility.

After they had been upon the wreck about a fortnight, they began to feel the effects of the effluvia, arising from the putrefaction of the cotton in the hold, which was produced by the salt-water. It was so pernicious, that a silver spoon, placed between decks, became black in the space of a very short time, and their people soon fell sick. This uncommon disorder began with an excessive swelling of the face and head, and many who were well at night were so disfigured in the morning, that it required some degree of skill to recognise them. The captain was also taken ill, but his disorder proceeded from the liver, and to which a long course of living upon scarcely anything but rice and salt beef had reduced him. He was soon obliged to keep his bed, and daily grew worse. Disease, in fact, had affected the whole crew; four men died in the course of a week; all the others were drooping, the carpenters lost their spirits, and the work upon the rafts went on slowly. In addition to which, the ship continued to give more and more; and in this deplorable condition they remained until the 22nd of December, when to their great surprise, they perceived a sail in the east, standing towards the wreck.

Supposing it to be a Malay vessel blown from the coast of Borneo, and knowing the savage disposition of those barbarians, they did not wish to have any communication with them; the reef was between this vessel and their's and they could not come near them without much difficulty. They made no signal until she approached nearer, when they perceived her to be a brig under American colours; they then hoisted the English ensign, union down, as a signal of distress; upon which she came close to the edge of the reef and hove to, at about the distance of two miles from them, and then sent off her boat to them, which rowed along the reef, over which the sea broke with the utmost fury.

There was but one small passage through which a boat could pass; and fearing they might not find it out, Mr. Page took the little boat with three men and went to the mouth of the passage, at the extreme edge of the reef, and, by waving his hat, brought the boat abreast of him. Even here the surf was very high. The people in the boat waved to him, to

come to them; which he could very easily have done in his boat, which was of a peculiar construction, but a thought occurred to him which made him hesitate. He considered that if he got through the surf into deep water on the outside, it might be impossible for him to return to the wreck; in which case he must have gone on board the American, and have left those on the wreck to their fate. This he could not reconcile to himself to do, although by so doing he had a fair prospect of saving his own life; but, resisting the impulse of self-preservation, he resolved not to go outside the reef, but stayed for some time waving to the Americans to come through the surf to him: this, however, they could not do, and he returned to the wreck. They then rowed back to the ship, which made sail and stood away from the reef.

They now concluded that she had left them, but they were mistaken. She again appeared about noon, came nearer to the reef, and sent her boat off again; which after some attempts, got through the surf, and coming alongside, informed them they belonged to the brig *Pennsylvania*, from Philadelphia, bound to China, had been out forty-three days from Malacca, and were going the eastern passage; which accounted for their being in these unfrequented seas. They brought a note to Captain Robertson, offering to convey his ship's company immediately from the wreck: and next morning to take what rigging and stores might be necessary. To this the captain replied, "That he was determined to take his chance in the floats he was building, but that if any of his people wished to go they might."

The chief mate of the American, who came in the boat, took Mr. Page aside, and said, he had better not neglect this opportunity, but go with him on board the brig, adding as an inducement, that all contracts between him and the captain were necessarily void, as the ship was a complete wreck; that he was certain he had done his duty, and that he would justify his character at Canton, to everybody. The Lascars were all ready to go, and Mr. Page, notwithstanding the chief mate had already deserted the ship, had the resolution to resist this friendly advice; he had never heard of a true sailor deserting his ship until the last extremity, or ever leaving his commander behind him; and, he therefore told the American, that he was very sorry the captain had formed such a desperate resolution; but that, impelled by a strong sense of duty, it became altogether impossible for him to leave him, and he hoped they would take care of the Lascars.

The American mate then rowed away to his ship; and his commander, hearing that the captain and mate were inflexible, directed him immediately to return to them with a few trifling articles, such as sugar, vinegar, bread, &c., for Captain Robertson, telling him at the same time that he would now take only four persons from the wreck, and that they must be Christians. This threw a damp on the spirits of the rest; however, four Portuguese were selected, and they gave with them some cordage and sails, and they put off to join the brig.

The next morning, the 25th, they saw the brig at a great distance, and at ten a.m. she was out of sight. Our sufferers were very glad when she was so, as it put an end to all disagreeable reflections; they passed Christmas-day very gloomily, reflecting on the many happy festivals which, at that season, they had passed with their friends in England, and contrasting that happiness with their then miserable situation.

In a few days, by the assistance of the sugar, vinegar, &c. the captain's health was so far re-established, that he was able to superintend the building of the floats, which were at length finished on the last day of the old year. They in some measure resembled two large boxes or chests, the fore part projecting in an angle of 45 deg. like the barges in England: they were each seventeen feet and a half long at the bottom, and, by the projection forward, they became twenty feet long above; they were five feet deep, five feet broad below, and as the sides projected in the same manner as the fore part, but only to an angle of 15 deg., the extreme breadth above was eight feet: they were very small, considering the num-

ber of the crew, and were, besides, entirely open, their size not admitting of any deck. The work had been very long and tedious; for, to make them as strong as possible, they had ripped planks from off the sides, and copper from the bottom of the ship.—They were afterwards employed three days more in getting in their rigging, sails, provisions, and water, of which last article they had a butt and a half in each float.

At length, on the 4th of January, 1804 (after having been upon the rocks from the 26th of November), they left the wreck, and, stowed as they were, and that closely in these uncommon rafts, or rather boxes, they again trusted themselves to the elements: the captain, mate, and Europeans, to the number of twenty-three, being in one, and the natives, in number twenty-four, in the other. It is impossible to describe their sensations, on quitting this scene of their misfortunes. Their long stay upon the rock made the place familiar to them, and they were by this time inured to the hardships which, in such a situation, they were hourly experiencing; and though to have remained there would have been inevitable destruction, yet they had little prospect of avoiding it, even in the attempt they were now making to escape. The construction of their vessels was such (being flat forward and on the sides) that they would answer only before the wind and sea; and if by any accident, they should come side-long to the sea, it was ten to one that, having no deck, they would have filled and gone down. The nearest place they could reach with any safety was Malacca, which was a distance of no less than eleven hundred miles; for the inhabitants of Pulo Auro (and that was eight hundred miles off) were a set of barbarous Malays, who would in all probability have destroyed them, had they made for that part of the coast.

Every way dangers surrounded them, and they had only a choice of evils. Anything, however, was better than remaining to starve upon the rocks; and therefore, hopeless as it appeared, they determined to make for Malacca. They had eleven muskets and some ammunition, the whole of which was taken into the captain's boat; for the Lascars being at all times but ill-disposed to fighting, they thought they should make better use of these articles than they would, and they therefore undertook to protect them. They then fastened the little Chinese boat to the stern of their raft; and thus equipped, and trusting to Providence for protection, they bid adieu to the rock.

Their outset was very inauspicious; for as they could only go before the wind, and in a south-west direction, they were obliged to pass over the reef; in attempting which, both the rafts grounded on the rocks, and beat so violently upon them, that they expected every moment they would go to pieces. They were two hours in this condition: but at length they found a hollow with eight feet water in it, and there came to anchor for the night. The striking on the rock had beat the copper off the bottom of their float, and made it so leaky that they were obliged to keep two men constantly bailing during the night.

In the morning, January 5th, at high-water, they sought for a passage with the utmost care, and at length found one, though it was scarcely the length of the raft, and got clearly off the reef. They then sent the small boat to the assistance of the other float, which was still aground, and in great distress, and with difficulty they succeeded in getting her outside also.

When the men whom they had sent returned from her, they brought intelligence that one of the Lascars had poisoned himself in the night. It was no other than the fellow who refused to work on the wreck! and it appears that, unable to bear the taunts of his shipmates, and perhaps the reproaches of his own conscience, he had swallowed a large quantity of opium, which he had reserved for the purpose, and thus put an end to his existence which had become miserable to him. This circumstance made the numbers equal in each raft.

They now set sail together: but when they got out to sea, they found that their float was only nine inches out of the water; for she was loaded as deep as four feet three inches,

to make her steady and carry sail. The spray was constantly washing into her, and rendered baling continually necessary. They therefore, ran along another plank nine inches wide, and over that a length of canvass, which prevented the force of the sea from filling her, but could not hinder a great quantity of water from washing in. They then set two of the natives in the little boat, which they were towing, and gave them particular directions as to their steering. They continued their course gently through the day, and at night they hoisted a lanthorn at their mast-head to guide the other raft, and they had the pleasure of seeing her the next morning at no great distance.

Next day, January 8th, there was no appearance of their consort. After standing under easy sail for her during the day, they concluded she must have foundered in the night; they therefore proceeded on their course, not without apprehensions of soon sharing the same fate. The further they got into the open ocean, the higher they found the sea. But the little boat astern rose remarkably well to the waves; and as the lives of those in it depended on their steerage, the mate was continually cautioning them to be very vigilant, especially before dark.

These instructions had been generally attended to; but on the 9th of January, a heavy sea overtook them, and upset the boat at about eleven o'clock at night. They were both washed out, and the poor fellows were heard crying out in despair, "Allah! Allah!" but they knew not how to assist them. One, however, fortunately seized hold of the boat's tow-rope, and was taken in—the other was seen no more; the last that was heard of him was his crying out "Allah!" when the sea stopped his crying for ever.

It was very remarkable, and on superstitious minds the circumstance might have a strong impression, that two enormous sharks had kept pace with this boat, night and day, from the time of their leaving the rocks; they kept on each side of her, usually swimming with their back fins above water; but after this poor man was lost, they saw no more of them.

They now cut away the boat from the stern, as it impeded the steerage, and proceeded for several days with the same caution as before. The sea rising higher and higher, became at last almost too much for their little fabric to bear; and about the seventeenth day of their voyage, it was truly tremendous, that, situated as they were in a little box, they all thought that they must have been overwhelmed, and prepared themselves to meet that fate at which every man shudders.

Their situation now was every way deplorable; for the captain had lost the use of his limbs, and a dreadful scurvy had broken out among the crew: ten of them were incapable of doing any duty, their gums and throats having become so putrid that they could scarcely swallow; even wounds which had been healed many years, now broke out with their former inveteracy; and one man lay dead before them, who had just departed this miserable life in extreme agony. This scurvy was occasioned by their eating damaged rice, which was wetted with salt water, on the day they left the wreck.

The whole of the crew (although they were still able to do a little duty) were very ill, the mate only excepted, it having pleased Heaven to bestow health on him, while his companions in misfortune were so dreadfully afflicted. But all these calamities they surmounted, and on the 23rd of January, came in sight of the Southern Anambas.

On the 26th they were driven to the westward by the force of the current to Pulo Tingey, an uninhabited island. Here they stayed two days, hoping to discover an antidote for the scurvy, but without success. However, they filled their butts with fresh water, and resumed their course.

On the 20th they saw a brig at the entrance of the Straits of Malacca, bound to Rhio, on the island of Bentang, to trade with the Malays for pepper. She assisted our mariners with some provisions, and her captain advised them to keep close to the Malay shore, as the straits were infested by pirates, with whom he lately had an engagement in which his chief mate had been killed, himself wounded, and the ship nearly shattered to pieces. Thus cautioned, our wretched sufferers left

him and proceeded on their way; but the current carried them down upon the Sumatra coast, which they were so desirous to avoid.

When within six miles of the shore, they fell in with a fishing-boat, by which they sent a note to the governor, who in a short time sent two boats to them, with plenty of fowls, wines, fruit, and vegetables, and directions to tow them in. They got in the same night, and next morning were towed up the river where they moored their crazy bark and afterwards removed their sick to the hospital.

Thousands of persons came down to see them; and the kindest attention was paid to them by all the gentlemen in the settlement, who strove to make them forget their late misfortunes. The captain was removed to a gentlemen's house where he was taken proper care of; but Mr. Page remained in the float, where he was supplied by the governor with fowls and other provisions.

The float, and every thing belonging to her, was sold for eight hundred dollars; and Mr. Page, who, as before observed, had no advance of wages, and consequently expected to be now paid, received from the captain no remuneration whatever for his services, losses, &c.

About this time a vessel came in, on board of which was one of the Lascars belonging to the other float, which was supposed to have foundered.

This Lascar reported, that their float had steered right before the wind, until they came to a small island near the Straits of Malacca, when, being in want of water, they went on shore to procure some. The barbarous Malays, natives of this island, now attacked these poor half-starved defenceless men, and most inhumanly murdered them. Fortunately this poor Lascar escaped the cruel fate of his companions, by taking refuge in the woods, and having, during the night-time, stole a canoe, he got to Rhio, in the island of Bentang (which forms the south-eastern part of the straits) where he met with this vessel, the captain of which kindly took him in.

After a long stay at Malacca, of about twenty days, the Bombay fleet came from China. Captain Robertson procured a passage to Bombay for himself, but refused to take our author (Mr. Page) with him, alleging that the vessels were too much crowded already. Mr. Page was, however, determined to get to Bombay by this fleet if possible, in order to answer any question which the underwriters might have put to him; and at length, in spite of Captain Robertson, got a passage on board the *Minerva*, Captain Pope, from whom he received the kindest attention. Captain Pope supplied him linen and every thing else which he stood in need of. They stopped at Penang, which is in the Straits of Malacca, to take in water, and thence proceeded for Bombay.

The following is a list of the crew which was on board the *Fanny*, and the particulars of their fate.

On leaving Bombay, her crew consisted of 64
On their passage, they took on board at Malacca, &c. 6
And the Chinese hostage at the island of Hainan 1

In all 71

Of these were killed by the fall of the mast (in the typhoon) 1
Died at sea, on their passage to China 3
Ditto on the rocks (by the effluvia of the cotton) 4
Poisoned himself (in the Lascar's boat) 1
Murdered by the Malays 22
Died of the scurvy 2
Washed overboard and drowned 1

Dead —36

The chief mate and his servant went on shore at Hainan, accompanied by four men 6
Run away with the long-boat, at the same place 4

Missing —10

Portuguese taken on board the American 4
Arrived at Malacca 20
Ditto, ditto (from the Lascar's float) 1

Preserved from the wreck —25

THE HEROINE OF THE HUON.

BY MARY LEMAN GILLIES.

It was a bright spring morning when the signal at Mount Nelson announced a ship in sight, and immediately the yellow flag was hoisted at Mulgrave Battery, and proclaimed the welcome news to the inhabitants of Hobart Town. Those of London, that emporium in which culminate all the great interests of existence, could but poorly imagine the emotions excited by the event. Expectation was on tiptoe; the vessel might be from Sydney, from India, above all, it might be from England. At the period of my story all were exiles. Natives, save the dark race which is fast disappearing before the white man, there were none. All I repeat were exiles, but all were not *penal* exiles. The exiles to whom I allude were those settlers whom step-dame fortune had driven from their father-land, or whom the hope of winning her favour had allured from it. All these had left their loves and dearest interests behind them, and all their dreams and wishes were directed to the fair fields and bright firsides of their childhood. It is now far otherwise. Van Dieman's Land, like other lands, has grown national, with the usual exclusive prejudices and partialities. Beautiful girls and gallant youths, born in its sweet valleys, have ripened into womanhood and manhood, have become surrounded by a young progeny, and they love the land of their own, and their children's birth, in a manner impossible to their fathers, to whom it was but the land of adoption.

If the approaching bark was anticipated by many a beating heart in Hobart Town and its vicinity, what were the feelings of those on board the Dart, the gallant ship that had now been nearly five months from England. It carried a miscellaneous assemblage of passengers, and had touched at Cork to take in some women and children who were going to join their husbands and fathers in the colony. In all this freight of humanity there were two women singularly remarkable,—the one, Dora Callan, for beauty; the other, Bridget Ryan, for an extreme ugliness, which would have been repulsive, had it not been redeemed by honesty, simplicity, and good nature. She had an infant of a few weeks old, to which she was a tender, watchful mother; but it did not engross her genial heart. She had a kind word for every one, and a helping hand for all who needed her aid: the sick found her ready to forego her rest to soothe his sufferings, and the sorrowing never called upon her sympathy in vain; and it was soon the feeling of all on board to seek Bridget Ryan under any emergency of annoyance or distress. But above all, she became to Dora Callan the very stay and prop of her existence: the young creature had come on board in bad health, and with a prospect of becoming a mother, a prospect realized before they were many weeks at sea. In her hour of trial who was beside her? Bridget Ryan. When the new-born made its feeble appeal to its feeble mother, who took it to a cherishing breast? Bridget Ryan. Amid all her own and her infant's wants, she found the means to minister to the wants of the young mother and her nursing; amid all the claims upon her time and toil she found hours to devote to them.

"Bridget Ryan," said Dora, "I shall never see the far land we are seeking, and one is waiting me there to whom it will be a sore sorrow. Here is his last letter, which I have read every night after my prayers, and every morning as soon as it was light. He will be on the watch for our ship, and among the first on board."

"Heaven speed him, my woman!" exclaimed the cheerful Bridget, "and wot he be proud of the gift you have for him," she added, looking at the sleeping child; "oh! sure and it is I must be at the merry meeting!"

"Who has such right, Bridget? But it will never be."

"Tush, woman dear, tush! Don't talk such nonsense, child. It is the *wakeness* that has come over you. Wait awhile, and a blithe christening we'll have when we are once on shore."

The young mother bowed her beautiful face upon her pillow, and the heaving of her breast revealed the emotion that con-

quysed her. After an effort at composure, she raised herself in the bed, and flung her arms around the neck of her friend.

"Oh, on this wide, wide sea, where I thought to find only danger and sorrow, I have found a friend like unto the mother I have left. You will have her blessing, Bridget, and *his*. Oh, that I might live to tell him all I owe you!"

"Now, Dora dear, if you go on after this manner," said Bridget, struggling with emotion, and gently trying to disengage herself, "what will I do! Sure I shall be fit for nothing this blessed day—and the babes, too—why we are changing places with them, and crying as if they could not do it much better than we. Take heart, woman dear, the boy will need all your care."

"All your's, Bridget, all your's. Oh! tell me you will never forsake him. I know it, I feel it, he will soon be alone with you—have only you. Oh! let him creep to your heart when the salt sea covers his mother. Nay, Bridget, you shall not unclasp my hands until I have your promise: say that in danger, in distress, in sickness, he shall be to you as your own."

"Mother of God, be my witness!" fervently ejaculated Bridget. "He shall have half my heart, half my strength. When I forego my hold of him, sorrow be my portion. But you will live, Dora Callan, and my child may call you mother by *manes* of this boy of ours; for now he is mine, you see, and I *mane* to dispose of him."

A faint smile played upon the lips of the sinking girl in answer to this sportive sally, and then closing her eyes, she folded her hands upon her breast in silent prayer. The prophetic spirit in which the young creature had spoken was soon apparent. A rapid change passed over the fair face; the power of utterance suddenly failed; but while life lingered her grateful and beseeching eyes were raised to the face of Bridget, at whose breast the creature so soon to be orphaned nestled in comfort.

The next night a white hammock was lowered into the sea beneath the solemn starlight. The passengers and crew stood round whilst the captain read the funeral service; his voice often faltered, and at intervals a deep sob was heard; it burst from the bosom of Bridget Ryan, who, with both children clasped in her arms, knelt upon the deck. When the solemn ceremony was over, and the fair form of Dora had sunk many fathoms to its deep and silent grave, a low wail of excessive anguish broke from the lips of Bridget.

"Dora Callan! Dora Callan!" she at length uttered, with a deep fervency of tone which was in itself eloquence. "Why have you gone from me—from me whose heart loved you like its life? But who may keep what the Great Maker wants? Bright be your place among the angels—welcome be your fair face where all is beautiful! Och! shall I ever forget how sweet you were, how kind, how loving. When you wake from your great winding sheet, Dora mine, may we who mourn you now, meet you rejoicing."

Then her voice sunk till its murmurs became inaudible; while rocking herself to and fro on the deck, she cowered over the children and bathed them with her tears. Impressed by the scene, all stood in deep silence, watching the subsiding struggles of her grief. Almost unmarked, a change of weather had gradually come on, and a more than common activity on board declared that some exigency was approaching. Low winds seemed from afar gathering the clouds that soon overspread the sky, till the hollow dismal wailings became long howls, and hoarse shrieks, and the darkness grew into blackest night. Oh, for the pen of Cooper to portray the storm which broke above the devoted ship, while it reeled and staggered amid the rage of contending winds and boiling seas. The captain and crew did their duty firmly. Perhaps there is no energy, no courage, equal to that of the English sailor; no sense of duty so high, so perfectly, so nobly fulfilled. Vain were all their efforts; the sea surged above the yards, sweeping down on the doomed bark, which would bravely rise again and again above the briny deluge. Desperately she ploughed her wild way, till at midnight she became a total wreck on one of the small islands in D'Entrecasteaux's channel.

The morning broke at length, but it came rather to reveal,

than to relieve their distress. When the vessel struck, a shriek compounded of many wild voices pierced the thick darkness; the masts went by the board, a rushing sea swept the deck, carrying many despairing wretches into the engulfing waters; but with the grey drear light of morning came a lull. The captain, who still survived with some few of the passengers and crew, felt deep anxiety for the fate of Bridget, and was seeking her, inquiring for her, when she crept forth with the two children in her arms. "The bravest heart on board by heavens!" he exclaimed, as he beheld her. "Hope on," he continued, springing forward, "we are desecrated; there are boats making towards us." At these words Bridget started to her feet, just as a tremendous wave struck the ship, and, sweeping the deck, carried her and the children overboard. Much is said of human selfishness in the emergencies of great danger, and much is of course exhibited, but so powerfully had Bridget's example and beauty of character impressed her fellow sufferers, that the most vital interest was felt in her fate, and at this catastrophe, many cried aloud, "Save her! save her!" while at the moment hopeless of saving themselves. The boats which had put off from Bruné Island, redoubled their efforts. Bridget succeeded in grasping a fragment of timber, and thus kept herself afloat; the heavy rain, which had been some time falling, increasing, refreshed her, and the sea subsided, as if calmed by the tears of heaven; the cheering voices of the approaching men kept alive the pulses of her heart, and at last Bridget and the children were rescued, the little helpless creatures, wonderful to relate, alive. This, however, she scarcely was herself; yet amid, what were apparently the pangs of death, her sense of duty was still paramount. Carried on shore, soothing voices and succouring hands were soon around her, but she made a feeble effort to retain the children, while she exclaimed with what strength remained to her—"Michael Callan." The name was repeated aloud by those who marked her anxiety; and immediately a young man who had helped to man the boat that saved her, pressed eagerly forward. "Here I am," he cried, "what would you with Michael Callan?" He was directed to the dying woman, he knelt down beside her. Bridget opened her eyes, which a moment before had been closing in the last exhaustion and faintness, "Are you he?" she asked. "I am, Michael Callan." "Now the father of mercy and all his saints be praised," she faintly ejaculated. "Michael Callan, here is your child—DORA'S CHILD!" and with these words her long sustained energies forsook her, and she sunk insensibly into the arms of the people near her.

The story soon spread through the colony, and by the time Bridget was restored to health and strength, she found herself possessed of a little fortune. All who, like herself, had survived the wreck, bore testimony to her Christian charity and heroism, and from every quarter of the island subscriptions in her behalf poured in. Her home was on the banks of the Huon; thither every year Michael Callan and his boy make a pilgrimage to the fond friend of Dora, and the faithful preserver of her child.

ANECDOTE.

THE Britannia East Indiaman, when sailing to the Brazils, with the expedition to the Cape, in 1806, having on board a large sum of specie, suddenly struck on a sunken rock, then got off, and immediately went down. The narrator tells the following highly characteristic anecdote of a British Sailor: "one poor fellow refused to quit the ship, saying he had lived poor, and he would be d—d if he would not die rich! He went below, where the dollars were stowed, filled his shirt bosom, and came upon the deck, shouting huzza! till the ship was nearly under water. He then took off his hat, gave three cheers, and went down with her."

DREADFUL ADVENTURE AT SEA.

THE Magpie, a small schooner, under the command of Lieutenant Smith, an active, intelligent officer, was ordered to cruise between the Colorados, a shoal at the western extremity of the island of Cuba, and the Havannah, in order to intercept a piratical vessel, which had committed innumerable depredations both on shore and at sea, and which every trader had seen, but none could accurately describe. It was a service of the utmost importance, inasmuch as the existence of this vessel rendered higher insurances requisite; the merchant-vessels dared not sail without a convoy, and the men-of-war were otherwise in great request in every part of Columbia and Mexico, to protect the merchant from the rapacity of the different governments, or the constant revolutions which threw the weak entirely on the power of the strongest, without a chance of assistance. The Magpie proceeded to her destination, and there remained, in hopes of capturing the marauder. It was one evening when the sea-breeze had lulled, and the calm in being which occurs before the land-breeze commences, that the schooner lay upon the silent waters without a motion, with her head towards the shore, and about eight miles distant from the Colorados. Smith, who had swept the horizon with his glass from the mast-head of his charge, until the twilight had died into darkness, was in his cabin, the mate on deck, the crew talking over past scenes and occurrences, everything apparently in the most perfect security, when an event occurred, which I well know I cannot paint in the glowing colours the heart-rending tale deserves. It is requisite here to mention, that the schooner had her fore-top-sail set, the yard being braced for the starboard tack: the fore-sail was in the brails, and the jib and boom main-sail, the latter with the tack triced up, hanging up and down in the calm. On the larboard bow, a small black cloud had hung over the land; and in tropical climates, almost invariably, the clouds setting on the hills is the sign of the land-breeze being about to commence.

Perhaps many of my readers have not been in these climates, where the blessings of the cool night-breeze must be felt to be appreciated; generally speaking, the land-wind comes on in light flaws, until it settles into its strength, which is rarely sufficient to drive a frigate at the rate of five knots an hour. No one can guess with what impatience the navigator, who has been beating all day against the sea-breeze and current, awaits the arrival of his fair wind, and cooling breeze, which is to give him renewed existence by its bracing qualities, and to forward him towards his port. It is a blessing eagerly sought after, and heartily welcome when it comes. The cloud, which at first seemed only of small dimensions, gradually increased; and the moon, which was shining brightly just over the vapour, perhaps made it appear darker than it really was. The mate looked at the gathering blackness without apprehension, although some foreboding of approaching mischief seemed to render him uneasy. "Mr. Smith," said the mate, looking down the hatchway, "I think the land-breeze is coming off rather strong, sir; the clouds look very black." "Very well," replied Smith; "keep a sharp look-out. I shall be on deck myself in a moment."

It is proper for the historian of all misfortunes to show how, by cautious attention, such misfortunes might have been guarded against. When the mate observed the increasing blackness and density of the cloud, he ought to have braced the fore-yard round, and thus to have prevented the schooner being taken aback; for there are no vessels so ticklish (as we call it) as schooners, and no yards so difficult to manage in a squall, as the long overgrown yard for a schooner's fore-top-sail, or square-sail. Had this slight manœuvre been executed, the horrible consequences which ensued might have been obviated; at any rate, the men ought to have been kept in readiness, the fore-top-sail should have been furled, or lowered, and preparations to meet any circumstances ought to have been made.

It is a singular fact, that the crew, who had been engaged in relating all kinds of wonderful events, about five minutes

before the catastrophe occurred became awfully silent ; not a word escaped them ; there seemed a preparatory stillness for death itself, or a respectful fear at its reproach. A squall of wind, which must have been fearfully strong, seemed to burst from the cloud alongside the schooner: it reached her before the mate could call the watch into activity. The vessel was taken aback ; and Mr. Smith, as he put his foot upon the last step of the ladder, found his schooner upset, and scarcely had he time to reach the deck, before she sunk, to rise no more.

The crew, amounting in all to twenty-four, happened luckily to be on deck, with the exception of two, who were drowned in the schooner ; and in one minute they found themselves struggling in the water—their home, their ship, and some of their companions, lost for ever. The wild cry for assistance from some, of surprise from others, and fear from all, seemed to drown the wind ; for, as if sent by Pro-

vidence to effect this single event, no sooner had the schooner sunk than the wind entirely ceased, a calm came on, and the bright rays of the moon fell upon the wet faces of the struggling crew.

Most fortunately, as some would think, but in reality most painfully unfortunate from what followed—the boat on the booms of the schooner floated clear of the sinking vessel, and seemed prepared for their salvation ; the fore-yard-arm had somehow got fixed on the gunwale ; and as the schooner sunk, it naturally heeled the boat, until she was nearly upset and half full of water, when the yard got disentangled, the schooner sunk, and the boat floated. The only ark of their safety was amply large enough to have saved the twenty-two men, who instantly swam to her ; and such was the impetuosity occasioned by their fright, that prudence was overlooked : and in the hurried exertion of eight or ten endeavouring to scramble in, all on one side, the half-filled

boat heeled below her gunwale in the water, and rolled over and over ; some got across her keel—the others held on by her—and all were saved from drowning.

Mr. Smith, who appears to have been a man of most consummate command and coolness, began to reason with his crew on the impossibility of their being saved, if they continued in their present position ; for those who were on the keel would shortly roll off, and exertion and fatigue would soon force the others to relinquish their holds, or urge them to endeavour forcibly to dislodge the possessors from their quiet seats. He pointed out the necessity of righting the boat, of allowing only two men to get in her and bale her out, whilst the others, supported by the gunwales, which they kept upright, might remain in the water until the boat was in such a condition as to receive two more ; and thus by degrees to ship the whole crew in security. Even in this moment of peril, the discipline of the navy assumed its command. At the

order from the lieutenant for the men on the keel to relinquish their position, they instantly obeyed, the boat was turned over, and once more the expedient was tried—but quite in vain : for no sooner had the two men begun to bale with a couple of hats, and the safety of the crew to appear within the bounds of probability, than one man declared he saw the fin of a shark. No language can convey the panic which seized the struggling seamen ; a shark is at all times an object of horror to a sailor ; and those who have seen the destructive jaws of these voracious fish, and their immense and almost incredible power—their love of blood, and their bold daring to obtain it—alone can form an idea of the sensations produced to a swimmer by the cry of "A shark ! a shark !"

Every man now struggled to obtain a moment's safety. Well they knew that one drop of blood would have been scented by the everlasting pilot-fish, the jackalls of the shark ; and that

their destruction was inevitable, if one only of these monsters should discover the rich repast, or be led to its food by the little rapid hunter of its prey. All discipline was now unavailing; the boat again turned keel up; one man only gained his security, to be pushed from it by others; and thus their strength began to fail from long-continued exertion. As, however, the enemy so much dreaded did not make its appearance, Smith once more urged them to endeavour to save themselves by the only means left, that of the boat; but as he knew that he would only increase their alarm by endeavouring to persuade them sharks did not abound in those parts, he used the wisest plan of desiring those who held on by the gunwale, to keep splashing in the water with their legs, in order to frighten the monsters at which they were so alarmed. Once more had hope begun to dawn; the boat was clear to her thwarts, and four men were in her, hard at work: a little forbearance, and they were safe. At this moment, when those in the water urged their messmates in the boat to keep baling with unremitted exertion, a noise was heard close to them, and about fifteen sharks came right in amongst them. The panic was ten times more dreadful than before; the boat again was upset by the simultaneous endeavour to escape the danger; and the twenty-two sailors were again devoted to destruction. At first the sharks did not seem inclined to seize their prey, but swam in amongst the men, playing in the water, sometimes leaping about and rubbing against their victims, this was of short duration—a loud shriek from one of the men announced his sudden pain: a shark had seized him by the leg, and severed it entirely from the body. No sooner had the blood been tasted, than the long-dreaded attack took place; another and another shriek proclaimed the loss of limbs; some were torn from the boat, to which they vainly endeavoured to cling—some, it was supposed, sunk from fear alone—all were in dreadful peril. Mr. Smith, even now, when of all deaths the most horrible seemed to await him, gave his orders with clearness and coolness; and, to the everlasting honour of the poor departed crew be it known, they were obeyed: again the boat was righted, and again two men were in her.

Incredible as it may appear, still, however, it is true, that the voice of the officer was heard amidst the danger; and the survivors actually, as before, clung to the gunwale, and kept the boat upright. Mr. Smith himself, held by the stern, and cheered and applauded his men. The sharks had tasted the blood, and were not driven from their feast; in one short moment, when Mr. Smith ceased splashing, as he looked into the boat to watch its progress, a shark seized both his legs, and bit them off just above the knees. Human nature was not strong enough to bear the immense pain without a groan; but Smith endeavoured to conceal the misfortune; nature, true to herself, resisted the endeavour, and the groan was deep and audible. The crew had long respected their gallant commander; they knew his worth and his courage; on hearing him express his pain, and seeing him relinquish his hold to sink, two of the men grasped their dying officer, and placed him in the stern sheets.

Even now, in almost insupportable agony, that gallant fellow forgot his own sufferings, and thought only on rescuing the remaining few from the untimely grave which awaited them; he told them again of their only hope, deplored their perilous state, and concluded with these words:—"If any of you survive this fatal night, and return to Jamaica, tell the admiral (Sir Laurence Halsted) that I was in search of the pirate when this lamentable occurrence took place; tell him I hope I have always done my duty, and that I—" here the endeavour of some of the men to get into the boat, gave her a heel on one side; the men who were supporting poor Smith, relinquished him for a moment, and he rolled overboard, and was drowned. His last bubbling cry was soon lost amidst the shrieks of his former companions—he sunk to rise no more. Could he have been saved, his life would have been irksome; and, but for the time which even the best desire to make atonement for the sins and errors of early life—to offer their contrite prayers to the throne of grace—to implore that salvation we all hope for, and none of themselves can claim—he had better have died as he did, than live to be dependent on others;

to hear the peevish complaint of his attendants, or to sigh for pleasures he could never obtain. With him died every hope; all but two of the crew gave way to loud execrations and cursings. Some, who had not been seriously injured by the monsters of the deep, endeavoured to get upon the keel of the boat, which was again upset: but, worn out with excessive fatigue, and smarting under the keen pain, they gave up the chance of safety, and were either eaten immediately by the sharks, or, courting death, which appeared inevitable, they threw themselves from their only support, and were drowned.

At eight o'clock in the evening, the Magpie was upset; it was calculated by the two survivors, that their companions had all died by nine. The sharks seemed satisfied for the moment; and they with gallant hearts resolved to profit by the precious time in order to save themselves; they righted the boat, and one getting over the bows, and the other over the stern, they found themselves, although nearly exhausted, yet alive, and in comparative security; they began the work of baling, and soon lightened the boat sufficiently not to be easily upset, when both sat down to rest. The return of the sharks was the signal for their return to labour. The voracious monsters endeavoured to upset the boat: they swam by its side in seeming anxiety for their prey; but, after waiting some time, they separated—the two rescued seamen found themselves free from their insatiable enemies.

Tired as they were, they continued their labour until the boat was nearly dry, when both lay down to rest, the one forward, and the other aft; so completely had fear operated on their minds, that they did not dare even to move, dreading that an incautious step might again have capsize the boat. They soon, in spite of the horrors they had witnessed, fell into a sound sleep—and day had dawned before they awoke to horrible reflections, and apparently worse dangers. The sun rose clear and unclouded, the cool calm of the night was followed by the sultry calm of the morning; and heat and hunger, thirst and fatigue, seemed to settle on the unfortunate men, rescued by Providence and their own exertions from the jaws of a horrible death. They awoke and looked at each other—the very gaze of despair was appalling: far as the eye could reach, no object could be discerned; the bright haze of the morning, added to the strong refraction of light; one smooth interminable plain, one endless ocean, one cloudless sky, and one burning sun, were all they had to gaze upon. The boat lay like the ark, in a world alone! They had no oar, no mast, no sail—nothing but the bare planks and themselves, without provisions or water, food or raiment. They lay upon the calm ocean, hopeless, friendless, miserable. It was a time of intense anxiety; their eyes rested upon each other in silent pity, not unmixed with fear. Each knew the dreadful alternative to which nature would urge them. The cannibal was already in their looks, and fearful would have been the first attack on either side, for they were both brave and stout men, and equals in strength and courage. "Tis a bad business, this, Tom," said the man on the bow; "a very bad business, indeed: I think I am sorry I was not eaten by the sharks, with the rest of the poor fellows, and then I should never have known the misery of this moment." "I have been," replied Jack, "in many a heavy squall before now; but I never felt such a gale as this—no hope, Tom, none! Here we are, doomed to die of thirst and hunger!—nothing to eat, you know, Tom, nothing!"

The word "nothing" was repeated by Tom, who afterwards continued the conversation:—"Well, boy, many's the ship that passes through the Gulf of Florida, and which must come nearly within hail of us; so that if we, or one of us, can but live a little while—and I dare say we can find food for one—why, then, you know the whole story will be told, and that will be something." "Food for one!" re-echoed the other, and advanced a little towards his only companion, with a look of savage determination. Both understood the allusion: there was no doubt but that they could have outlived the day without resorting to the last resource: but they stood afraid of each other. Both had knives, for sailors always carry these instruments suspended to their necks by a strong piece of white line, which they call a lanyard. Although not driven to the dreadful alternative, they anticipated the worst results; they knew they could not both

long survive the awful situation in which they were placed. If no ship passed them within four-and-twenty hours, it was evident that one must have been murdered to save the other. In all times of tribulation and danger, men turn their thoughts to God; and solicit that support for which, when in health and security, they had omitted to pray. There is a delightful calm which generally comes over the mind of the most hardened after they have been induced to pray for support and forgiveness; and few there are who, having once experienced the consolations of religion, totally abandon it afterwards.

In the situation in which the two men were placed, they had not even the comfort of employment, for they had nothing to employ themselves upon; all they could do, was, or could be done, in a second—namely, when the sea-breeze came, to place a thwart upright with a jacket upon it in the bows of the boat, and send before the wind: in which case, if they could exist four or five days, they might reach the western shore of the Gulf of Mexico. The man abaft fell upon his knees, and, lifting his clasped hands to heaven, silently began his prayer. The throb of religion reached the heart of his companion, who, fearing to approach too near the only human being he was likely to see again, knelt down on the fore part of the boat: and thus, in silence, they prayed for support, and a happy issue out of all their afflictions.

It was now about half-past six in the morning, the sun was beginning to prove its burning power, the sea was as smooth as a looking-glass; and, saving now and then the slight cat's-paw of air, which ruffled the face of the water for a few yards, all was calm and hushed. In vain they strained their eyes—in vain they turned from side to side to escape the burning rays of the sun: they could not sleep, for now anxiety and fear kept both vigilant and on their guard; they dared not to court sleep, for that might have been the last of mortal repose.

Once, they nearly quarrelled, but fortunately the better feelings of humanity overcame the bitterness of despair. The foremost man had long complained of thirst, and had frequently dipped his hand into the water, and sucked the fluid: this was hastily done, for all the horrors of the night were still before them, and not unfrequently the sharp fin of a shark was seen not very far from the boat. In the midst of the excruciating torments of thirst, heightened by the salt-water, and the irritable temper of the bowman, as he stamped his impatient foot against the bottom boards, and tore his hair with unfeeling indifference, he suddenly stopped the expression of his rage, and call out—"By G—d, there is a sail!" The extravagance of joy was now equal to the former despair; they jumped into each other's arms—they laughed and cried together. It was a sail, a brig which had a light breeze aloft, and was steering exactly in their direction. Every means of making a signal was resorted to: one stood upon the thwart and flung his jacket in the air; whilst the other, although the stranger was miles distant, endeavoured to hail her. Sometimes they hailed together, in order to produce a louder sound, and occasionally both stood up to make some signal. Their eyes were never off the brig: they thought no longer of the burning sun, or of hunger, or of thirst; deliverance was at hand, at least so they flattered themselves, and no time of greatest joy could have beat the excitement and gratification of that moment. Whilst they stood watching in silence the approach of the brig, which slowly made her way through the water—and at the very instant that they were assuring each other that they were seen, and that the vessel was purposely steered on the course she was keeping to reach them,—the whole fabric of hope was destroyed in a second; the brig kept away about three points, and began to make more sail. Then was it an awful moment: their countenances saddened as they looked at each other; for in vain they hailed—in vain they threw their jackets in the air—it was evident they had never been seen, and that the brig was steering her proper course. Both now attempted to break adrift one of the fixed thwarts: the loose ones had been lost during the night; and although, as all may fancy, every muscle was exerted, and all the strength nature had given them pushed to its utmost, yet were they insufficient in power to succeed. Their object was to use two of

these thwarts as paddles, and to edge down at an angle from the course of the brig; so that they would, if they did not reach her, at any rate pass so near, as to be certain of being seen. This last was a sad disappointment; but, sailor-like, they would not despair while hope was in sight: they endeavoured, by heeling the boat on one side, to propel her by their hands: but they were soon worn out with fatigue, and obliged to relinquish the attempt; for, independently of the impossibility of success in such an undertaking, they lost the better opportunity of being seen from the vessel. It was after a long deep sigh from the man in the stern sheets, and after wiping away a stream of tears as he looked at the vessel, then about two miles and a half distant, that he broke into a loud lamentation on the utter hopelessness of their condition if they were not seen. In vain they declared that the brig had purposely altered her course to avoid them—in vain they pointed to a man going aloft, whom they could distinctly see—and in vain they waved their jackets, and assisted the signal with speech. The time was slipping away, and if once they got abaft the beam of the brig, every second would lessen the chance of being seen; besides, the sea-breeze might come down, and then she would be far away, and beyond all hope in a quarter of an hour. Now was it that the man who had been so loudly lamenting his fate, seemed suddenly inspired with fresh hope and courage; he looked attentively at the brig, then at his companion, and said—"By Heaven, I'll do it, or we are lost!" "Do what?" said his shipmate. "Though," said the first man, "it is no trifle to do, after what we have seen and known; yet I will try, for if she passes us, what can we do? I tell you, Jack, I'll swim to her; if I get safe to her, you are safe; if not, why I shall die without adding murder to my crimes." "What! jump overboard, and leave me all alone!" replied his companion: "look, look at that shark, which has followed us all night—why, it is only waiting for you to get into the water to swallow you, as it did perhaps half of our messmates: no, no—wait, do wait, perhaps another vessel may come; besides, I can't swim half the distance, and I should be afraid to remain behind: think, Tom, only think of the sharks, and of last night."

This appeal staggered the determination of the gallant fellow. There, about twenty yards from the boat, was the fin of the shark, and now and then another and another might be seen; he looked at his enemies, and then at himself. Certain death awaited him in the boat, perhaps heightened by crime: a chance of death awaited him in the sea; but there was hope to buoy him up—the time was flying, the breeze had begun to freshen a little, the brig was fast advancing, and hope was every minute growing less. "Well," said he, "Jack, it comes to this, you see, that if we wait we must die,—if I get to the brig we must be saved. If the sharks—God Almighty protect me!" said he, shuddering as he mentioned the word—"should take me, and you live to get back again, you know where to remember me. I say, Jack, it's no use being frightened to death when we can but die: come, give us your hand my last companion. I'll do it, if it is to be done. Good-bye:—now if you see those devils in chase of me, splash, or make some noise to frighten them, but don't tell me you see them coming. (Another shake of the hand—) God bless you; Jack, keep your eye upon me, and make signals to the brig:—there," said he, putting his knife down, "that might be of use to you, and here's my toggery. If I am taken, it's none the better for last night's swim." Then falling on his knees, and saying, "God protect me!" he jumped overboard with as much calmness as if he was bathing in security. No sooner had he begun to strike out in the direction he intended, than his companion turned towards the sharks. The fins had disappeared, and it was evident they had heard the splash, and would soon follow their prey. It is hard to say who suffered the most anxiety. The one left in the boat cheered his companion; looked at the brig, and kept waving his jacket—then turned to watch the sharks; his horror may be imagined when he saw three of these terrific monsters swim past the boat exactly in the direction of his companion! he splashed his jacket in the water, to scare

them away, but they seemed quite aware of the impotency of the attack, and lazily pursued their course. The man swam well and strongly. There was no doubt he would pass within hail of the brig, provided the sharks did not interfere; and he, knowing that they would not be long in following him, kept kicking the water and splashing as he swam.

There is no fish more cowardly, and yet more desperately savage than a shark. I have seen one harpooned twice, with a hook in its jaws, and come again to a fresh bait: yet will they suffer themselves to be scared by the smallest noise, and hardly ever take their prey without it is quite still. Generally speaking, any place surrounded by rocks where the surf breaks, although there may be a passage for a ship, will be secure from sharks. It was not until a great distance had been accomplished, that the swimmer became apprised of his danger, and saw by his side one of the terrific creatures: still, however, he bravely swam, and kicked! his mind was made up for the worst, and he had little hope of success. In the meantime the breeze had gradually freshened, and the brig passed with greater velocity through the water; every stitch of canvass was spread. To the poor swimmer the sails seemed bursting with the breeze; and as he used the utmost endeavour to propel himself, so as to cut off the vessel, the spray appeared to dash from the bow, and the brig to fly through the sea. He was now close enough to hope his voice might be heard; but he hailed and hailed in vain—not a soul was to be seen on deck; the man who steered was too intent upon his avocation to listen to the call of mercy. The brig passed, and the swimmer was every second getting farther in the distance: every hope was gone, not a ray of that bright divinity remained; the fatigue had nearly exhausted him, and the sharks only waited for the first quiet moment to swallow their victim. It was in vain, he thought, of returning to the boat, for he never could have reached her, and his companion had no means of assisting him. In the act of offering up his last prayer, ere he made up his mind to float and be eaten, he saw a man look over the quarter of the brig: he raised both his hands; he jumped himself up in the water, and, by the singularity of his motions, fortunately attracted notice. A telescope soon made clear the object: the brig was hove-to, a boat sent, and the man saved. The attention of the crew was then awakened to the Magpie's boat; she was soon alongside; and thus through the bold exertions of as gallant a fellow as ever breathed, both were rescued from their perilous situation.

At first the dreadful tale was discredited; and the American captain rather fancied the addition to his crew to be two pirates, who had, to avoid a surer death, put to sea in an oarless, mastless, sailless boat. They were landed at the Havannah, and then conveyed to Port Royal in the first man-of-war. Such were the sufferings and the deaths of the crew of the unfortunate Magpie; and these facts were related to the officers composing the court-martial, which sat upon the two remaining men. The story was told with unaffected modesty; and he who had so generously risked his life to save his messmate, could not be prevailed upon to tell that part which solely related to himself: but when the truth was out, and his messmate had done ample justice to the heroic act, they both burst into tears in the court, and ran into each other's arms. There was not a man in that court, either captain or crew, who did not show how quickly the feelings of sailors can be touched, and how alive they are to recording a generous and manly act. The survivors were both strongly recommended for promotion; and the recommendation was not in vain—a few short months saw them warrant-officers; and when I left that station some years afterwards, these two men had gained the confidence and esteem of their commanding officers, who found them sober, attentive, and alert, in doing their duties; and thus it sometimes happens that the most unfortunate circumstances are the best roads to promotion and contentment.

LIFE OF PAUL JONES.

JOHN PAUL, which was the real name of this notorious character, was born at Dumfries, in the year 1748. He was educated at Whitehaven, in the best manner a youth of his station and expectation in life could be supposed to be, his father being a gardener in the service of the Earl of Selkirk.

Being a lad of remarkable activity and quick apprehension, at fourteen years of age he was apprenticed to one Captain Johnstone, in the coal trade at Whitehaven; and, during this period of his time, every one thought that, with the patronage of the Noble Earl, his father's master, he would one day become owner of a vessel or two in that trading port; but he himself judged otherwise of things; and though he served his time out, he showed during that short period many refractory instances of perverseness, that equally chagrined his father and master. His rebellious disposition, however, did not openly break out till he had served his apprenticeship.

A short time after he came out of his time, he made a few trips to the Coast of Guinea, in a vessel belonging to Captain Baynes, of Kilkowry, on board of which he disgraced himself by his wanton cruelty, and attempting to sink the ship. He was tried for these offences on his return; and though he was acquitted, his character suffered so much that he was long out of employment; and it was the reason that the Liverpool owners would never employ him. He did not prevail better with the Leith and Scarborough merchants: in short he found himself so circumstanced in the world, that none that knew him would encourage him, and he was forced to return to his father, who as it has been before observed, was head gardener to the Earl of Selkirk.

Upon his return, he debauched three young women, servants in the neighbourhood: and two of them became pregnant. He then took great pride in boasting that he had the address to prevail upon the women to swear the children to an opulent farmer, though he was firmly persuaded that the man had not been engaged in a criminal intercourse with either of them.

Though the Earl of Selkirk was acquainted with many of his misdemeanours, yet, from a long regard to his father, he still retained him in his service, and even took frequent opportunities of expostulating with him on the impropriety of his conduct.

To indulge the wanton cruelty of his disposition, he frequently whipped the horses while they were in the stable till they were almost irritated to madness; and he generally continued this exercise till he was either interrupted, or, through fatigue, was no longer able to hold the instrument of his cruelty.

Being one morning engaged in this barbarous practice, he received a slight kick on the thigh from a fine young gelding, that was a particular favourite of the Earl's; in consequence of this, he fetched a knife from the dwelling-house, and stabbed the horse in several parts of his body, to such an extent, that with all the care and attention bestowed on him by the other servants of the earl, the noble creature died in a short time.

When the above circumstance came to the earl's knowledge, he dismissed Paul, informing him, that the whole line of his conduct had been so extraordinary, that he could not, consistently with the dictates of his conscience, give him such a character as would recommend him to another service.

He afterwards engaged with an innkeeper, near Whitehaven, as a post-chaise driver; but on account of his disobliging and quarrelsome temper, and his cruelty to the horses under his care, he was in a short time discharged from this employment.

Paul was not so intimidated with these matters as his father, who now prevailed upon his son to write to the earl a penitential letter, which had the desired effect, being backed by the persuasions of a naval officer, nearly related to the earl, who engaged to answer for Paul's future good behaviour; but how far he deserved such a friend, the reader will soon discover.

The various artifices he put in practice for seducing one of the servant girls proving abortive, he actually attempted the violation of her chastity by force, and had nearly accomplished his purpose, when the earl, who had been walking in the gar-

den, alarmed by the cries of a person in distress, came into the dairy-house, and rescued the young woman from her intentional ravisher.

The earl severely reprimanded him, and threatened him with a prosecution; but at length yielded to his entreaties, and granted him a pardon, on condition of his solemnly promising to conduct himself with more propriety in future.

Not many days after the above transaction, great complaints were made respecting Paul; the earl then ordered the delinquent into his presence, and questioned him in relation to the complaints that had been exhibited against him. His answers were so disrespectful and insulting, that the earl was betrayed into a momentary forgetfulness of the dignity of his character, and actually struck this unworthy servant; who departed, breathing forth the most violent denunciations of vengeance. It will be found in the course of these pages that though many years had elapsed, his desire of wreaking revenge upon the earl suffered no abatement.

Soon after leaving the service of the Earl of Selkirk, Paul formed an acquaintance with a party of smugglers, who observing him to be a young fellow of an active and enterprising spirit, and of a desperate resolution, they invited him to become a party in an exploit they had under contemplation.

He remained some months with this gang of desperadoes, during which time he saved upwards of two hundred pounds; but being deserted by his companions on account of his violent, quarrelsome and revengeful spirit, he lived in an idle dissolute manner at Whitehaven, Sunderland, Shields, and some other towns in the North, till his money was exhausted. After this he committed several highway and other robberies, for one of which he was indicted and tried at Lancaster, but acquitted in defect of evidence.

Paul now engaged himself as a foremast man on board a Sunderland vessel, and being afterwards engaged in the same capacity on board several traders belonging to Shields and Whitby, he acquired the reputation of an expert seaman, and gained a very accurate knowledge of the northern coast.

Being impressed on board a man-of-war, he availed himself of the first opportunity to escape, and a second time commenced a smuggler. After an unsuccessful cruise of a few weeks, he and his companions landed on the coast of Sussex, and Paul took up his residence at a farmer's in the neighbourhood of Brighton, whose daughter he, in a short time, married, and received with her a fortune of about three hundred pounds.

Notwithstanding that his wife was a most amiable young woman, Paul abandoned her in a few weeks, and entering into contract with some of his former associates, purchased a vessel for the purpose of carrying on the illegal practice of smuggling, and assumed the command of her himself, appointing such of his companions officers, as he knew, from experience, to be able seamen.

His crew consisted of fifteen persons (himself included)

and the vessel was provided with every kind of ammunition and necessary for hazarding desperate adventures. This gang of resolute desperadoes proved a most formidable annoyance to the trade of England, Scotland, and Ireland. They plundered several of our West India ships; but their most capital depredations were committed on the coast of Ireland and Scotland. Some days after having made a booty of the most valuable part of the cargo of one of our homeward bound Baltic ships, Paul was overtaken by so violent a storm, that he was under the necessity of ordering all his guns to be thrown overboard; and the vessel springing a leak the next day, he judged it expedient to have the mainmast cut away, lest she should be water-logged. During the violence of the storm he behaved in the most outrageous and blasphemous manner that can be conceived; and for some slight instance of neglect to his orders, he laid hold of the man at the wheel and threw him overboard, and would not allow any person to go to his assistance.

With great difficulty they navigated the vessel, which was in a most deplorable shattered condition, to Boulogne, where they sold their cargo at a very low price; the greater part of the goods being so much damaged as to be of little value.

The hotel where Paul took up his lodgings was kept by a young widow, a native of Ireland, to whom he made overtures of marriage; but these she declined, qualifying her denial, however, with an intimation that she might yield to his entreaties, if he could convince her that he was entitled to the property that he had assured her he had possessed in England.

He remained about three months at Boulogne, during which time he became so enamoured of the fair Hibernian hostess, that he deposited two hundred guineas with her, as a secu-

rity of his speedy return. He then embarked for England with a view of renewing his illicit practices, and continuing them till he should obtain a sum sufficient to ensure him a favourable reception from the widow.

He first went to Dover, and then to the Isle of Man, where he hired a house and assumed the character of a merchant; and, indeed, his dealings were considerable among the smugglers. Having employed a deputy to transact his business in the Isle of Man, he proceeded to Sunderland, where he was, in a short time, joined by ten of his former accomplices, whom he had left in France, and they contrived a scheme for running away with an armed vessel, which had been fitted out by a company of merchants to act against the corsairs.

Bold and dangerous as the undertaking was, they actually succeeded; and it was supposed that the vessel was lost, as when she was seized, there were only two men and a boy on board, whom it is supposed they murdered. Their first expedition was to the coast of Ireland, on different parts of which they landed, and plundered several gentlemen's houses of plate, jewels, money, and other valuable effects.

They now steered towards the Sussex coast, and while they were attempting to effect a landing, they observed one of the

PAUL JONES LANDING AT WHITEHAVEN AND FIRING THE SHIPPING.

king's armed cutters within a league and a half of shore. By taking advantage of a thick fog that rose at the close of the day, they proceeded further along the coast, and disembarked with some of their most valuable effects; soon after which they were surprised by a party of custom-house officers, and a desperate contest ensued, which lasted near an hour, when victory was declared in favour of the smugglers. In the conflict, one of Paul's men was so desperately hurt, that he died on the following day, and one of the custom-house officers was disabled in the arm.

Fearing the country would be up in arms, and that vessels would be despatched in pursuit of them, they put to sea with all possible expedition, and directed their course towards the Isle of Man, where they procured a supply of ammunition and provisions; and then sailed again with a view of plundering some vessels bound for London, on board of which they had received intelligence was gold and silver to a considerable amount. They met with only one of these ships, and that not one of the most richly laden. In a few weeks they committed depredations upon several vessels, particularly two belonging to Bristol. Paul now found himself entitled to a share of the spoils amounting to upwards of five hundred pounds, when he determined to pursue his amour at Boulogne.

When he was on the point of disembarking at Port l'Orient, he gave up all claim to the vessel and her appurtenances in favour of his companions; binding them, however, in a solemn oath, that they should deal with him only in such articles as were proper for sale at Boulogne and the Isle of Man.

Having supped, and spent the greatest part of the night in a jolly manner on board the vessel, Paul took leave of his friends, apologizing to them respectively, for the severe treatment they had received from him.

In the morning, after sending his companions a present of twelve dozen of wine, and a liberal supply of fresh provisions, Paul set out for Boulogne. On his arrival he was heartily received by the widow, with whom he had held a correspondence during the several months of his absence. In about four days they were married; and having assumed the character of landlord, he gave the principal customers of the house an elegant entertainment, and among the poorer sort he made a very liberal distribution of wine, spirits, and roast beef. In this last instance he paid one mark of respect to Old England, whose hospitable fare will never be forgotten.

For several weeks his behaviour was so affable and condescending and the articles in which he dealt so good of their respective kinds, and so moderate in price, that the custom of the house surprisingly increased. But nature had not formed him to keep within the bounds of moderation. The idea of being possessed of property sufficient to render him independent of business, and the prospect of greater riches, inflated his pride to that degree, that he was no longer able to act under the mask of humility, that had for some time disguised the natural turbulence of his disposition.

He often abruptly interfered in the conversation in which the frequenters of his house was engaged; obtruded his own dogmatical observations; and if the company declined an immediate acquiescence in them, he insulted them in the most abusive language that the most depraved imagination could possibly suggest. Such conduct soon drove away his customers, which obliged him to leave the business to the care of his wife; and, with a venture he sailed to the Isle of Man.

A few hours after he had embarked, the vessel was accosted by the gang of smugglers with whom he had parted at Port l'Orient; but upon his appearing upon deck, and waving his hand, they immediately altered their course. As soon as he arrived, he made the first entry of licensed goods transported from England into the Isle of Man, and his name stands first in the custom-house books at Douglas.

He then returned back to Boulogne and for some time carried on an extensive trade with different parties of smugglers. Upon the decease of his wife, he again went to the Isle of Man, and transacted some business in the legal way, the better to elude the suspicion of his being engaged in contraband dealings.

When any capital enterprise was resolved on, he frequently took the command of a smuggling vessel; and on these occa-

sions, it was seldom that he did not prove successful. He came to England three or four times a year, in order to settle with his agents, and to dispose of goods. In one of these trips the following incident occurred, which is highly expressive of the degenerate character of the man. Paul requested one of his fellow passengers to oblige him with some trifling circumstance, and the stranger was about to comply; but not being so expeditious as the impatient temper of the other required, he actually clapped a loaded pistol to his head, and drew the trigger; but the weapon fortunately flashed in the pan, and no damage was sustained.

In consequence of this act of extravagance, the crew of the vessel made preparations for confining Paul, supposing him to be a lunatic; but he fought in a most desperate manner against five men, three of whom he wounded so terribly, that their lives were for several days judged to be in the most imminent danger. Fearing his conduct would produce a mutiny, he gave them a double allowance of grog, and a barrel of fine pork, with promises of greater allowance; concluding, however, with an emphatic denunciation of instant death, to such as should offer any further violence to his person.

Paul was not yet an absolute pirate, but a desperate smuggler; and his crew consisted of some of the boldest and hardiest fellows he could pick up, or who sought refuge from their crimes under his colours. Blacks, Swedes, Americans, Irish, Whitehaven, and Liverpool men, were particularly welcome to him; and in the north of England, he was called the English Corsair.

Paul having amassed upwards of two thousand pounds by the most iniquitous practices, considered that his situation was very precarious, as his avaricious turn of mind had led him to take great advantages of several of the smugglers with whom he dealt, some of whom he apprehended, might, however, at length, be provoked to lodge information against him on account of the illegal traffic, he had so long pursued. He therefore determined to sell off what effects he had in the Isle of Man, and repair to London; but before he put his scheme in execution, he borrowed several sums of money, and obtained goods from different people to a large amount, after which he secretly decamped.

Fearing that if he came immediately to England, his place of residence would be discovered, and measures pursued to punish him for his fraudulent practices, he went to Dunkirk, in France, and there opened a coffee-house for the entertainment of English travellers. Here he renewed his practice of dealing in contraband goods; but in a few months he, in several instances, experienced a reverse of fortune.

Several capital seizures being made of goods that he had sent to England for sale, he was driven nearly to a state of distraction, and vowed destruction to the persons with whom he had entrusted so considerable a part of his property; as through their want of precaution, the goods had fallen into the hands of the king's officers.

Paul now shut up his house at Dunkirk, and prepared to embark for England, having previously remitted a small sum to each of the persons he had defrauded in the Isle of Man; and as they accepted of payment in part, they destroyed every legal idea of felony, and constituted their respective claims into mere matters of debt; he was therefore no longer apprehensive of prosecutions under the criminal laws.

He then took shipping for Edinburgh, whence he proceeded by land to Newcastle, where he met with two of the persons from whom a part of his effects had been a short time before seized by the custom-house officers. He attacked the men in the most grossly insulting terms, upbraiding them of treachery and cowardice; they resented his ill-language; on which he drew his hanger, and threatened to put them both to instant death: in consequence whereof, one of the men challenged him to single combat; and small swords and pistols being procured, they met in about two hours in a field upwards of a mile from the town. When the antagonists came within sight of each other they almost at the same instant fired their pistols in the air, and drawing their swords a desperate contest ensued, in which great dexterity was dis-

played on both sides; but the warmth of Paul's temper exposed him to the assaults of his adversary, who wounded him in three places, and he fell to the ground, where through the very great loss of blood, he lay more than half an hour without the least signs of sensibility: but his wounds being bound up, he was conveyed to the nearest inn, and in about a fortnight he was perfectly recovered.

Paul now went to Rochester, in Kent, in order to solicit payment for some smuggled goods, which a tradesman of that town had bought of him about nine months before. Having succeeded in that business, he rode on horseback to Chatham, and came to London in the tide-coach.

Paul hired a lodging in Mercer's-street, Long-acre, where he had not resided many weeks before he debauched his landlady's daughter, who removed with him to Tottenham-court-road; but in about three months he deserted her, and she became a common prostitute, in which station she continued near seven years, when a dangerous fit of sickness struck her mind with a conviction of the heinous course of life she led, and she determined on a reformation of her conduct. She adhered to her resolution, and was soon after very comfortably settled in a small village adjacent to the metropolis.

Paul now engaged in a criminal intercourse with the mistress of a notorious brothel, in the neighbourhood of Covent-garden, who assumed his name and passed under the character of his wife. This woman was seized with a fit of apoplexy, and she died while he was examining some accounts in a small parlour adjoining to her bed-room. He no sooner discovered her situation than he searched her pockets and taking her keys, secreted all her ready-money, and some other valuable effects, amounting in the whole to about two hundred pounds; when having alarmed the servants, he went off with the booty.

He now found means to procure the command of a small vessel; and after some depredations committed on the trading ships of these kingdoms, he went to the coast of Spain, and made capture of a rich vessel bound to the port of Ferrol. Paul intended to carry this prize to Genoa, but two days after her capture she struck on a rock, and sunk with all her cargo; four of the men were drowned, but the rest were taken up by a Danish vessel.

Soon after this exploit, he returned to his old practice of annoying the coasting trade of our northern parts, and in a short time engaged the John and Mary, near Leith, which, after an obstinate resistance, he drove right upon the Bell rock in the harbour, where the ship sunk, and he lost his prize once more. He picked up all the hands but four, who were wounded and unable to swim.

In retiring from this action, he fell in with his old master, Captain Johnstone, of Whitehaven, in his own ship, the Anne. He gave a salute as he passed; for he fired into his ship, and kept up the fight with his stern chase till he got into Whitehaven; but the Lynx, and another king's sloop heaving in sight, he retired without doing further mischief. He now only kept hovering near the Humber, where he picked up but little; for the coasters cautiously kept in shore, and he was forced to sheer off without accomplishing his purpose.

Upon his return to Whitehaven, which he had soon the audacity to do, he stole a young woman, one Mary Young, a maid-servant, that lived in Duke or Lowther-street, as she was standing on the quay. At the same time, he had a fisherman, that kept a liquor-shop in the town, brought on board his vessel by force. How he disposed of the girl is quite unknown; but the man returned about seven years afterwards, and found his wife married to another man, and several children born in his absence. This was upon the event of the first open rupture between England and America in 1774, when it became evident that hostilities would soon ensue. He now set out for America, and as soon as he arrived, he wrote to Silas Deane and others, afterwards leaders of Congress, and offering very valuable communications and intelligence, he obtained from time to time, several remittances, and crossed the Atlantic to Europe twice, to pick up further particulars of the situation of our coasts. Upon this account he is generally said to have

changed his name, and assumed that of Captain Paul Jones. Government not being apprised of the sort of spy that had arrived in the country, he was at liberty to go about the capital, and dwell for a short time in Wapping, daily buying maps, charts, soundings, and everything relating to the navigation of the home seas, abundance of which he found on Tower-hill, as well as upon the disposition of our naval force.

At his return he was examined by several persons of science respecting the coasts of England, and parts adjacent. His information was considered of so much importance, that great distinction was paid to him by the leaders of the American opposition, and he was soon appointed to the command of one of the privateers fitted out against this country. His success greatly exalted him in the opinion of the great men there, who were so entirely satisfied with his conduct, that they imposed no commands on him, but left him to act according to his own discretion, and in this their policy was very conspicuous, for he proved a far greater annoyance to our trade in those parts than any other commander in the American service; his repeated successes, about the early part of 1775, being so highly thought of by the principal leading men of America, that he was soon employed to fit out the little squadron which the Congress had placed under Commodore Hopkins, who had then the command of all the armed vessels belonging to America, and accordingly it is a fact that he then hoisted with his own hands the first American flag on board the Alfred, which was then the first display of the thirteen stripes!

(To be continued.)

AMERICAN ANECDOTE.

A TRAVELLER in America records the following anecdote: "I had a genuine Yankee story from one of the party on deck. I was inquiring if the Hudson was frozen up or not during the winter? This led to a conversation as to the severity of the winter, when one man, by way of proving how cold it was, said—'Why I had a cow on my lot up the river, and last winter she got in among the ice, and was carried down three miles before we could get her out again. The consequence has been, that she has milked nothing but ice creams ever since.'"

THE SEA.

There is something exquisitely pleasant in sitting upon a pier projecting far out into the sea, and surveying the immense expanse of waters stretching almost all around you. If you have cares to devour in secret, the gloomy aspect of the element in its hour of coming storm, seems to frown in unison with our own dark fate: and if you have joys on which you would ponder, the face of the sunny deep, as it lies cradled in tranquillity in its mighty bed, appears to wear the smile of fellowship. Have you little domestic disputes to arrange, with your better half, conduct her to the pier—provided you live near one; let her either imbibe the soothing and calming influence of the silent sea, when it is in repose, swathed in blue and purple; or may you both perceive the folly of indulging in your own rude passions, by marking with what useless violence the ocean, in the moments of its fury, lashes on the sounding strand. Many a moral is taught by the mighty deep: and not another section of the vast whole of Nature retains her secrets, and preserves her mysteries so faithfully or so well. The ocean, like the avaricious miser, clings to the treasures which its own mad career has caused the powerless vessel to pour into its depths—those caverns of eternal silence, fearful even as the tomb:—more fatal than war, pestilence, or famine, the ocean swallows up its victims from day to day, nor contents itself with human hecatombs at long intervals of time; and less stable than even the vacillating mind of the most capricious coquette, that same powerful but inconstant ocean, suddenly surrounds with all its terrors the luckless mariner, whom but a few hours before it wooed to its bosom by the melodious sounds of its gentle ripples, the sunny smiles of its countenance, and the balmy breath which waved over its vast expanse!

THE IMMINENT DANGERS

Of William Okely, John Anthony, William Adams, John Jepps, and the Carpenter, on board the Mary, of London, who made their escape from Slavery in Algiers, in a boat of their own building, June 30, 1644.

In the year 1639, William Okely and his companions went on board the *Mary*, of London, at Gravesend, (Captain Boarder, commander) bound for the Isle of Providence in the West Indies. Having lain in the Downs five weeks waiting for a favourable wind, they at length set sail, and came to anchor near the Isle of Wight.

By this time they were obliged to throw overboard all the beer in their ship, which was spoiled, and to take in vinegar to mix with water for the remainder of their voyage. Having set sail again, and coming between the island and the main land, they stuck fast in the sands; but the tide afterwards came in, and heaved them off.

On the sixth day they discovered six Turkish men-of-war who chased them, and at break of day boarded and took them. Having kept them close prisoners about six weeks, they brought them to Algiers, where William Okely was sold for a slave, the first market-day, to a patron, who told him he must allow him two dollars a month, get it where he could, and live on shore wherever he was able.

Driven thus to seek his fortune in a strange country, Okely, during his rambles, met with an Englishman in his little shop, who traded in tobacco, and other trifles. He immediately became his partner by means of a little money, which he had reserved, and a small sum which his patron allowed him for his stock. Here our adventurer got money, and hired a cellar to lay up his goods.

Tired, however, of slavery, he was determined to make his escape, if possible, and communicated his bold design to John Anthony, carpenter, John — another carpenter, William Adams, bricklayer, John Jepps, seaman, and two others, men of stout constitutions, and formed by nature for the execution of any laborious undertaking. These agreed to contrive the model of a boat, which being formed in parcels, and then put together, might be the means of their deliverance.

This work was commenced in Okely's cellar; a piece of timber twelve feet long, having been first provided for the keel, which, in order to convey it the better out of the city, they cut in two, and fitted it for joining in the middle. They then procured ribs, and made the boat water-tight; but because boards would require hammering, which noise would doubtless have led to a discovery, they bought strong canvass to cover their boat twice over upon the convex of the carine. They also provided as much pitch, tar, and tallow as would serve to make a kind of tarpauling cerecloth to swaddle the naked body of their infant-boat. Of two pipe-staves sawed at the corners, they made two things to serve for oars. They purchased some canvass for a sail, and having carried out these by parcels, they fitted them together in the valley half a mile from the sea, whither four of their company carried the new-made boat on their shoulders being followed by the rest. Having stripped themselves by the sea side, they put their clothes into the boat, and now carried it as far into the sea as they could wade. Their provisions consisted of a little bread and two leather bottles of fresh water, and all the seven men now got into the boat, June 30, 1644.

Finding, however, the boat was overlaiden, two of the company agreed to stay on shore, and only John Anthony, William Adams, John Jepps, John the carpenter, and William Okely remained in her. Four of them pulled at the oars, and the fifth freed the boat, which by degrees leaked through the canvass. Their bread was soon spoiled with the salt water, and their fresh water stunk of the tanned skins and owse; these misfortunes, however, they bore with considerable patience.

—By their economical management their bread lasted them three days, at the expiration of which time famine began to stare them in the face, and they were in the utmost distress for water. They frequently drank the salt water, but this instead of assuaging, increased their thirst. To add to their misfortunes the wind was full against them for some time;—at length it changed in their favour. Another inconvenience was, that their labour was without intermission, which, added to

the extreme heat of the season, and the want of necessary drink, rendered them exceedingly faint and spiritless. He that emptied the boat frequently threw the water on the body of his companions, by their own request, in order to cool them; but this afforded them only a temporary relief; after which it was productive of much continued pain; for their bodies thus alternately scorched and cooled, rose up all over in blisters, and rendered their condition truly lamentable.

During day, they steered their course to Mayork by a pocket-dial, and during night by the stars and clouds. Four days and nights elapsed in this state of dreadful suspense—on the fifth they were so exhausted with fatigue and overcome by despair, that they toiled no longer except in emptying the boat of water. They now lay hulling up and down, and happily discovered a tortoise, asleep in the sea. They took up their oars, silently rowed to their prey, took it into the boat with exultation, cut off its head, and let it bleed into a pot. They now feasted on the blood, liver, and flesh, which wonderfully refreshed their spirits, and, in some degree restored their strength.

Apprehending about noon that they saw land,

—“their gloomy souls cheered up,

Their hopes reviv'd, and gladness dawn'd within them.”

Hereupon they exerted all their strength, and their hopes were speedily confirmed by their coming in sight of the island of Mayork.

On the 6th of July, about ten at night, they came under the island, and crept as near the shore as they durst till they found a convenient place to thrust in their weather-beaten boat. When they came to land they were not insensible of their deliverance, but though they had escaped the sea, they were apprehensive of dying on shore. They had no food since they eat the liver, and drank the blood of the tortoise; therefore William Okely, and John Anthony were sent to scout abroad for fresh water, because they had some knowledge of the Spanish language.

Having arrived at a watch-tower of the Spaniards, these two men addressed the sentinel, and told their condition, earnestly begging some fresh water and bread. He threw them a stale cake, which, notwithstanding its mouldiness, was very acceptable, and directed them to a place not far distant, where they could get some water. They immediately proceeded to the place, and came to a well, where was a pot with strings to draw with. They drank a little water and ate a piece of the cake, but in consequence of their long fasting, they could with difficulty swallow. Mindful of their companions behind, they then returned to the boat, and acquainted them with their success. Having tied their boat fast to the shore, they all hastened to the well together and there refreshed themselves with copious draughts.

As soon as it was broad daylight, they hastened to the sentinel again, and requested him to direct them to the nearest house or town, where they might find relief. He accordingly pointed them to one about two miles on, which, on account of the blisters on their feet they with difficulty reached. An honest farmer, moved at their miserable appearance, sent them out bread, water, and olives, and on hearing their melancholy story, called them into his house, and gave them warm bean pottage, which was very acceptable to them.

From hence they proceeded to the city of Mayork, about ten miles off, having lain during night by a well side, and in the morning entered the suburbs. The viceroy being told of them, commanded them into his presence, and, when acquainted with their story, ordered that they should be maintained at his cost till they could procure a passage to their own country.

The English ships, however, seldom trading thither, they petitioned the viceroy for a passage in the king of Spain's galleys, then in the road, bound for Alicante, which he generously granted.

Owing to the contrary winds, it was five weeks before they reached the Downs, where they arrived in the month of September, 1644. Their boat hung for a monument upon the side of the great church at Mayork, where the remains of it were seen in 1687.

GREAT WESTERN STEAM SHIP.

BY A PASSENGER.

SATURDAY, APRIL 7.—We departed from Bristol at the appointed time of sailing, and having got on board a small steamer, a twaddling little thing, we left the foot of the Cumberland, or outer basin, at a few minutes past two, p.m. to join the Great Western, at the mouth of the river Avon—a tributary to the Severn—and upon which, at some six or eight miles from its confluence with the parent stream, Bristol is situated.

The day was an unpropitious one. A strong breeze, almost a gale, blew dead against us; the clouds lowered, and a cutting rain alternated with a fitful sunshine. Had our lot been cast in those good old times, when Nature, in her freaks, revealed to

grandames the butter-milk and unhatched eggs, we had surely deemed it ominous, for the elements seemed to fret and fume over the commencement of the voyage. Thanks to the darkness of the latter days, however, the wind to us was but wind, and the rain but rain; so wrapping our cloaks still closer about us to exclude both, our duckling of a steamer was permitted to paddle on.

The scenery in the vicinity of Bristol is, perhaps, the finest of its character in England, and passing down the Avon it is seen in some of its most enchanting features. For some miles below the city the shore, on either side, is a continuity of stupendous granite rock, sometimes attaining the height of three hundred feet above the water mark. Starting from the stream, with but a narrow road or towpath at the base, occasionally to relieve the abruptness, they rise, piling mass on mass and vein

FIRST VOYAGE OF THE "GREAT WESTERN" STEAM-SHIP, LIEUTENANT HOSKEN, R.N., FROM BRISTOL TO NEW YORK, APRIL, 1838.

on vein, frowning in naked crags, the impracticable precipice—or yielding their severity, gently recede, grudging their rude cliffs to the mountain larch.

At one point on the river, the heights of Clifton were visible, with their graceful crescents peering above like the creations of a fairy land. Near to these we passed the site of the contemplated suspension bridge over the Avon. The workmen were as yet engaged only on the abutments—enormous structures—wrought upon the hill side, resembling rather the gigantic efforts of a giant race, the engrafting of rock on rock, than the work of common men. An iron bar, seven hundred and eighty-five feet in length, stretched from summit to summit on either side, at an elevation of one hundred and seventy-two feet from low-water mark, shows the precise spot, height, and length of the intended bridge.

Beyond this rocky section the shore breaks into finely sloped hills, abounding in wood, hedge, and lawn. Foliage had not yet burst; still had the plough and harrow been busy, contrasting delightfully the warm and mellow earth with the verdure of the sward, already in the rich hue of spring.

We reached the Great Western at about five, p.m., and strange it seemed. So strongly had curiosity been excited by this vessel, that we, who had now come to take our departure by her, were obliged to wait whilst a small steamer, thronged with eager visitants, left her side to make room for us.

We joined her; and as is ever the case on ship-board, at the appointed moment of sailing, everything was pell-mell. It seems little short of professional, or in conformity with some quirk in a sailor's creed, that it should be so; and had not experience given me a hint of this fact, I would really

have been dismayed — spars, boards, boxes, barrels, sails, cordage, seemingly without number, stirred well together; coals for the groundwork—baggage to infinity; captain scolding, mates bawling, men growling, and passengers, in the midst of all, in the way of everything and everybody, is a pretty good description of the state of a ship's deck generally, when about to get under weigh.

It happens mostly that a very little time is sufficient to put matters in tolerable order, and off they go, relying upon the sea to do the rest, in shaking persons as well as things into their proper places. With us, however, the derangement was a little beyond this, and the breeze having now increased to a gale, it was determined by Captain Hosken to lie by until the morning; so each installing himself in his little castle, found enough to do in the arrangement of it to amuse him

for the evening, and all I believe found an early bed made welcome by a day of fatigue.

Sunday, 8th.—At eight, a.m., this morning, our ears were saluted by the low roar of the furnaces, which announced the kindling of the fires, the note of preparation for departure.

At nine the steam was up; our colours were hoisted—the British ensign at our gaff, while that of our sister country, the land of our present hope, was assigned an honourable place at the fore. The call for all hands was immediately made, with the order to man the windlass. It was over two hours before the anchor was to the bow, a delay at which all grew impatient, but unavoidable, by reason of the great scope of chain out, and everything being new, the windlass worked stiffly.

At twelve we were fairly off, and whatever misgivings might

previously have assailed us in the contemplation of our voyage, I believe that at this moment there was not a faltering heart amongst us. Such stability, such power, such provision against every probable or barely possible contingency, and such order presented itself everywhere on board, as was sufficient to allay all fear. That there should latterly have been a doubt as to the practicability and safety of a passage by steam across the Atlantic, seems indeed strange, when with any effort of reason we look at the question. The North Sea and the Mediterranean, by way of Gibraltar from England, have been long navigated by steam; and it is now two years since the passage to India, by way of the Cape of Good Hope, has been successfully made by four or five different vessels; and in all this there has surely been as much encountered as is ever likely to assail a navigation by the same

means between Europe and America: yet, that doubts have existed on the score of this new attempt, extensively, and in the minds of many who ought to be able to form a correct judgment upon the subject, there can be no question. It is a weakness of our nature that sometimes so strangely permits our imaginations to beset us with difficulties, which exist only in the fact that an effort to confront them has not been made. Thus it was in a former age that regions unexplored were invested with fancied terrors, and more than half the globe lay for centuries unknown.

The evening found us at the mouth of the Bristol Channel, Lundy bearing N., making our way against a head wind, and upon an ugly hard sea.

Monday, 9th.—The morning opened upon us delightfully, and with such a face as made our steamer glorious; sunny

and quiet, the sea heaved in glassy volumes, disturbed only immediately around us by the plunge of our paddle-wheels, and the rapid progress of the vessel. To one accustomed to the associations of the sea, as they are usually presented to the voyager in a sailing vessel, the effect was very striking. In his feelings, the waves and the expanse of water have, in some measure, taken the places of friends and a stirring world; and their rippings and splashings are to him like the voices and glee of boon companions, or their tossings and foamings, as the angry discord of other elements; and the absence of these, the quietude of a calm; the glare of the unruffled ocean; conveys to his feelings a sense of solitude and silence not less powerful, perhaps, than would the wilderness itself to one accustomed only to the jarrings and jostlings of the every-day world. This, indeed, is the only soliloquy the sailor knows—the only silence he truly feels; and to see the repose of the deep thus invaded, our vessel coursing on, I can scarce call it aught else, for her swiftness appeared the eagerness of hot pursuit, seemed strange as the sight of some startling apparition of active life in the midst of the unbroken desert.

At twelve, noon, we came up with and spoke with the American ship *Neponset*, of Boston, four days out of Liverpool, for Charleston.

Tuesday, 10th.—Fairly shaking hands with old Neptune, through a head wind, and over a head sea. The incipient symptoms of yesterday have become confirmed cases this morning. Sea-sickness stalks in stifling horror among us, and the dreadful cry of “steward, steward!” the last ejaculation of despair, comes from a dozen nooks, hurried in a piercing treble, or growled forth with muttered maledictions on the dilatory bucket-bearer, in the deep tones of thorough bass.

At nine, a.m., two sail in sight—a large ship abeam, to windward, standing E., a ship on the weather-bow, close hauled on the larboard tack; wind W.S.W. Soon discovered a black ball painted in the fore-top-sail of the latter, by which we knew her for a packet-ship; hoisted our colours, the American at the fore; kept the steamer up a point, and at eleven passed and spoke her—the South America, seven days out of Liverpool, for New York.

Whatever might have been the kindness and good will with which we graced our greeting of this fellow wayfarer of the deep, and however warmly and sincerely we would have yielded to any claim upon our charities in his behalf, yet I much fear that, with it all, we entertained at heart a feeling that partook of unbecoming exultation. It was impossible almost that it could be otherwise, and the frailty can hardly be called unpardonable.

The meeting of a packet-ship, a creature, I may call it, of proud pre-eminence, was a sort of contest, and triumph was at that moment in our hands. The feelings of the sailor are ever enlisted for his own ship, whatever she may be; yet sailing, quick sailing, being the beauty—the point of pride—the one thing needful to constitute her perfect, whenever that is found, especially if combined with other merits, she is supremely the object of his regard above all else that he may meet. Her conquests are his, and he would be little less affected by anything impairing her high claims, than if he himself had become the victim of disaster and defeat.

Our salutations were in the courtesy of the seas; our colours were answered by his numbers, to which we again responded by hoisting ours. Thus decked with flags we bore up to speak him. As we approached, the steamer stretched to windward, though not near enough to hail; our engines were stopped, the ship shot a-head, and gathering our way again we passed under her stern and up to leeward. It was a noble sight; and she was under top-gallantsails, making the best of a fresh breeze, dead a-head, jammed upon a wind, a sailor would term it—and I really know no phrase of more polished form by which to convey the idea better, even to a landsman.

Fancy her careering to the breeze, plunging at one moment, the foam rolling in volumes from beneath her bows—rising at the next—up—up her polished copper bare, her keel almost out, seeming the very exertion of instinctive effort, then down with a plunge, dashing off the foam again, every inch of can-

vass stretched to its uttermost, and the wind seeming in her very teeth—fancy this, and you have some notion of a ship at sea “close hauled.” Her sides were crowded with passengers; there were but two ladies. We too bore “a cottage,” with its flaunting veil, and our pride dilated in the display of such a sharer in the venture of our voyage.

Our captains exchanged a mystic tone; the indefinable below of a “hail!” “Where from?” and “how long out?” were soon asked; adieus were made; and exchanging three hearty cheers, first given by our friends, the steamer urged her way a-head, the helm was ordered hard a-starboard, our colours were hauled down, and we were again upon our course.

Wednesday, 11th.—This morning we were surprised by the appearance of a bouquet on one of our cabin tables; hyacinths, daffodils, violets, and primroses, at sea! It were vain to inquire whence they came, so we scout the question, and, like good heathens, receive them, rendering thanks to the Nereides.

It would be difficult for the uninitiated to conceive how ardently every circumstance on shipboard is taken hold of, however trifling it may be in itself, that can in any way be made to contribute to agreeable occupation, or even to a momentary pastime. The mind seems unwillingly to partake of the restraint upon our corporeal freedom, and to shrink instinctively from its accustomed flights to others of a narrower range. A sail in the distance, a wearied land bird flitting by, an excursion in the boat, a gun let off, a burning barrel turned adrift, the veriest jest that can be named, trifles that at another time and in another mood, would scarce cast the shadow of a gnaw upon one's brain, are there made the objects of delighted interest. They are sought with the zeal of hungry childhood and if by chance the incident, as in the present instance, assume a familiar feature of domestic life, a household seeming, it is seized with the quick avidity and enjoyed with the zest of a stolen pleasure.

Thursday, 12th.—The repose of last night might be compared to a tossing in a blanket, and a dance of pot-hooks and frying-pans were nothing in din to the glorious clatter among the moveables that accompanied it; to a sailor it would be quite enough to say, the wind was “right aft,” the text to a whole chapter of horrors. The motion of a ship under sail has sometimes been compared to the noble bearing of a stately horse; it is a pretty simile, and a vastly exciting one, when upon a smooth sea we can fancy our nag ambles well; or even in a breeze, when mounting the waves with a “side wind,” the exhilaration of the moment may persuade us that we prance upon the deep; but with the wind abaft, the roll, the interminable, ceaseless roll, is beyond the power of imagination to liken to anything to which Providence ever gave a gait. The congregated infirmities of all the halt in Christendom could scarce be worse.

The difference of motion by a “side wind” and the wind abaft is, that with the former, however the ship may pitch, she is still so much inclined always—pressed over by the wind, that whatever moves is sure to go to the lower side, or “down to leeward,” and will there lie quietly. But when before the wind the ship rolls, descending to equal points on either side, and the consequence is, that everything not absolutely spiked or lashed down hard and fast, plays at every oscillation to the utmost of its tether, accompanying the movement with its own peculiar music of creak, clatter, or squeak, as the case may be. Sometimes, as if by way of climax, the water tumbles in over one gunwale, washing over the deck, and dribbling by every aperture into the cabin below; then rolling again, as if to court the embraces of a sister wave, the ship descends, and again it pours a briny sweep one over the other. Sitting or standing at such a time is equally an exertion of our best powers of tenacity, and to take to one's berth may be likened to seeking refuge within the arms of a “demented sentry-box.” And with all this, the confusion, the row among chairs, trunks, and all the locomotive paraphernalia of the cabins, the never-dying conflict of platters, spoons, and dishes in the steward's room, the creaking of bulk-heads, and the occasional thump and rumble of a “fetch away” on deck, form an aggregate of ludicrous discomfiture, unequalled by the most refined misery which any derangement or disorder on shore could

possibly inflict. I speak now of what sometimes occurs at sea. We have not had anything quite of this order.

Friday, 13th.—A fine morning: the sea in its richest livery, a brilliant blue, studded with flowing "white caps," and looking gay and merry. The day has been interesting by experiments upon our engines; the object was, to ascertain the speed of the vessel relatively, with the degree of power applied and the required consumption of coal.

The result is reducible to figures in a very small compass.

Power of Steam to the square inch.	Revolutions per Minute.	Miles per Hour.	Cwt. of Coals per Hour.
3½ lbs. or full steam	15½	12½	28
8-10ths of 3½ lbs.	15	12½	27
7-10ths ditto	14	12½	26
5-10ths ditto	13	11	23

The power of the engines being 225 horses each.

The gradations were arrived at by the cramm, a part of the engine adapted to "cut off the stroke," as it is technically termed, to any desired proportion, which is done by its action on one of the principal valves in such a manner as partially to close it. The proof of the amount of pressure was shown by an instrument called the indicator, which was screwed upon the cylinder, communicating with it from within for the purpose, and which, by the action of the engine, most ingeniously given to it, described with a lead pencil upon paper a parallelogram, cutting off one corner, showing the precise vacuum in the cylinder, and by this the proportion of power applied.

To a novice, the whole process seemed a mystic operation, and reminded one of the story of an Indian, who seeing a steam-engine, fancied that a spirit lay imprisoned within the boilers, and that by building a fire beneath them, it was excited to fury, and thus put the whole in motion.

The experiments strikingly illustrate the mechanical principle of the differences between the ratio of power applied, and that of its results. Our sails were set during the day, with the wind from the southward, but so light as could have had no appreciable influence on our experiments.

The morning was thus well nigh consumed, and a day thus began at sea, to and fro on deck—upon the wing, as it might be—is seldom given in the end to sedentary occupations, or to any pursuit more profitable than a prolonged lounge. Our strolls for the afternoon lay between the jib-boom end and the poop, watching the heaving of the sea and the motion of the vessel; and we were at least exhilarated, if made none the wiser by our peregrinations.

Saturday, 14th.—The bouquet has our care. It is now among the first duties of the morning to look to it; to cull its withered leaves and replenish the water. It has become a matter of ambition with us to carry into New York a flower still fresh, though plucked in England. How incongruous it seems that a simple violet should become the testimony to a great achievement!—even to beward the philosopher himself.

Saturday afternoon on board ship is made to bear some likeness to a termination of the same day on shore by a likeness in its duties—a general clearing up and marked preparation for Sunday. We have had enough of it. Forgetting all else in the bustle, I will merely mention that our decks were "holy-stoned!" Hast ever seen or heard of holy stones? They are of the good old family of grindstones, bearing a relationship to it, kindred to that of squeaking pigs to their grandmother. To describe them: they are blocks of stone, something larger, and nearly as heavy, as a square of fifty-six pounds weight. They have brush handles attached, and are used with as much sand as may be needful to aid the operation and bring the music to a certain pitch, to scour the decks. Now imagine a dozen or more of these put in motion over head, some two or three feet above you, for the purpose and in the manner I have named; that is, "holy stoning simply," infliction in the first degree, and suited to an age ere the inquisition became an exquisite. But the moment chosen invariably happens to be that at which you have just fallen into an afternoon nap, or are enjoying the raptures of delicious morning dreams! and this—but I cannot find a name for the foul torture.

The day being smooth, the engines were stopped at noon for the first time on the passage, to examine the paddle-wheels, and to "screw up." Lay by two hours.

Sunday, 15th.—Commences with a fine breeze from the southward and a smooth sea—a brilliant morning. All sail set, our ship going nobly on. Nowhere is the influence of fine weather upon the spirits more strongly felt than at sea—a bright day, a fair wind, and the sea glittering in the sun, seem spells which charm every element of happiness within us into activity and life. This seems strange in the absence of so much generally associated with our pleasures, yet it is so; and the reason I take it to be, is this: that though deprived of much that under other circumstances might minister to feelings of a grosser birth, yet the freedom from care, and the abstraction from the world which every one at sea feels, leaves us the more susceptible to a subtle influence and a high enjoyment.

Monday, 16th.—Morning comes and evening goes at sea, as elsewhere, and every day has its chronicle. A ship is a little empire; it has its monarch and its chief councillors, its patricians and plebeians, its codes and customs, its laws and their vindication, its fashions and its follies; and the history of a voyage might be compared to the annals of an era in the existence of one of those greater members of the world's community. There is this difference, that while men remain sufficiently unchanged at sea, to carry still the seeds of discord and disunion within, it is left to a nobler influence from without, than that of a fear of our fellow men—a dread of the elements themselves, to overcome them; an influence, that in its character of an appellant to our fears, one is almost ready to believe involves the only principles of combination—the only impulse to a common purpose, to which our imperfect natures are susceptible. A member of our state, of the plebeian order, was this morning given over to the chief judge, and by the chief judge to the king! In plain truth, Jack had been refractory, and refusing his work, he was brought to judgment. The hearing was a short one; a negotiation was entered upon with the belligerent, and terms offered for his ratification, either to do duty and share the privileges and protection extended to faithful subjects, or to do nothing and share nothing appertaining to those things which men are pleased to deem wholesome and comfortable—meat and drink. Jack was too much a man of the world to desire to place himself in a position so peculiar as the latter would have entailed, so accepting the former, the affair was ended.

Tuesday, 17th.—An appropriate figure-head for our ship would be, Vulcan with Neptune by the beard, and old Æolus fairly under foot. Such had been the picture had Ovid told the story of our voyage, for it seems little short of a conquest of the elements.

The past night and day have afforded us, in some measure, an opportunity of testing the powers of steam against the adverse influences of weather—a gale in our teeth, and a sea a-head, which in volume is seldom found in any part of the Atlantic beyond the limits of the banks of Newfoundland. Our ship behaved nobly. She plunged and rolled, as every vessel in similar circumstances must have done—often burying her paddle wheels to the shaft, and was as uncomfortable as any huge cradle well tossed and tumbled could be: yet her motions were easy, and her progress without intermission.

In consequence of the heavy sea, the working of the engines was reduced to ten revolutions per minute, during which time it is shown, by the result of the observations of the morning, that we made an average of five and a half knots per hour.

The morning found our cabin in some confusion, as is usual on ship-board after a rough night. Among other mishaps, the little pitcher holding our bouquet had "fetched way," and the flowers lay bruised and strewn about the carpet. Our drowsy senses, after a wakeful night, seemed little affected by the event; an undisturbed nap, and an absence of care for our own proper equilibrium on a smoother sea, will doubtless leave us more alive to our loss.

Wednesday, 18th.—It is quite clear we have no fraternity

with the fishes. The porpoise, the most frequent of our ocean visitors usually, whose gambols around the bows are often the subject of a moment's interest to the voyager, comes now, dashing forward with its merry troop in all their accustomed glee, until near our paddle-wheels they turn—startled by the splashing—and dash off, tumbling and rolling, it would seem upon each other in their haste, like a bevy of frightened children who had become suddenly assured of having mistaken a hobgoblin for a well-known friend. In making a voyage in the Great Western, every day affords occasion for the expression of astonishment at the progress of science and the attainment of human power; and as vain or as commonplace as the question may appear, it seems to present itself there, invested with something like solemnity—when and at what point shall the pile be shaken which constitutes the sublime fabric of human knowledge? But a few generations since, and the ocean upon which we sail, the continent to which our course is directed—aye, more than half the world, were beyond the ken of men? and now, what are they? What is man himself, and what are human means, wrought out by the divinity within us, compared with the creature and his aids of those days? The question, where will these things find an end is irresistible.

Thursday, 19th.—To an accustomed sailor—a minion of the winds—it is long before the novelty of a steamer at sea, with all the attendant circumstances of its internal economy, can wear itself into familiarity. Chiefly he feels a strange relief in the absence of care about the weather or the winds—sources to which he has habitually looked for a large proportion of his contentment. The never-ceasing question of the morning to which he is used—"how is the wind?" or, "how does she head?" presents itself at his waking like the remembrance of some nauseous morning dose now discontinued and in place of the excitement among his fellow voyagers by a fair wind and the prospect of a fine run, on the despondencies by a foul one and all sorts of evil forebodings, he hears the common parlance of every-day life, or issuing from his room, finds them distributed in groups awaiting breakfast, in the discussion of the merit of their favourite picture! The space, too, and, as far as regards the Great Western, the splendour around continually surprise him. The light spars, light sails and light rigging on deck, look like light walls and great windows to an accustomed prison—robbing it of half its terrors. A sailor, to whom a dark cloud has ever been a thing of watchful apprehension—like a stealing, crafty enemy—cannot cast his eyes aloft but, feeling a new sense of safety, he will turn to the squall with a grin, and looking it in the face, bid it "blow his heart out."

The richness below—the cabin—seems the expression of individual taste, and the elegance of a bountiful hospitality, rather than a provision for the common participation of the wayfarer; and this at sea, too! The change is a pleasant one, and to the old voyager, unfamiliar as it may be, it is perhaps the more delightful, as he alone can truly estimate the change—a transition from the endurances to what may be called the luxuries of the enjoyments of a sea life.

Friday, 20th.—A thoroughly uncomfortable day, and decidedly a bad road, with such tracks left us to crawl over as the wind-god makes when there has been heavy work—our coach rolling and pitching to the very hubbs. A more than usually heavy sea has left us little with which to occupy ourselves to-day, beyond the care needful to maintain that position which is the pride of our nature—a well-poised equilibrium on both legs. The motion of the ship was greater this morning than any we had before. Nearly calm, or the little wind there was nearly a-head, our sails were of no service, and a heavy sea, such as usually follows a violent gale, tossed us like a floating bird upon the waves. It was satisfactory, however, as affording further illustrations of the capabilities of the vessel. Her engines were eased, yet she continued at a speed of not less than six or seven knots per hour. And those features in her model which, before sailing, were the only grounds of doubt, as far as mere model was concerned—her length and sharpness—seemed now the characteristics

best adapted to her purpose. She cleaves the sea upon her water-line, while her bearings below are quite sufficient to give her buoyancy, almost without a plunge; and a remarkable consequence of this, aided by her length, is, that her way, though abated, as must ever occur to any vessel upon a head sea, is yet never wholly lost; hence have we been during her whole voyage without that jar and check, by the stroke of the sea, to which vessels are usually subject under similar circumstances. The nature of the propelling power has, also, an important agency in this distinction; the action of the paddle-wheel being from the centre of the vessel horizontally, has no effect upon her perpendicular motions, while that of the mast under a heavy press of sail, being from above, acts partially as a lever upon the hull, to make every plunge the more severe.

Towards the evening the sea became more smooth, the wind hauling to the northward. Sudden transitions of this kind, more than once upon our voyage, have led us to the idea that the power of locomotion gives us an advantage never before dreamt of; that we are enabled, in some measure, to verify the Munchausen story of keeping the rain at our horse's tail—that, in short, we may very much decrease the endurance of foul weather by running out of it. It would, at all events, be an interesting subject of inquiry, by a comparison of log, from time to time, with the account of other vessels, to ascertain how far the changes arising from this circumstance really do occur.

Saturday, 21st.—We have to congratulate ourselves upon another fine morning and another smooth sea. With a fine breeze from the northward, we are staggering under all our canvass, and the engines in full play—it is impossible to conceive anything of human sway or human power upon the deep more exhilarating or delightful. Few positions in life carry with them a greater spell upon the feelings, or excite us to a nobler sense of our own nature, than that of the voyager upon the ocean, when his ship, bending under a press of canvass, and mounting majestically at every succeeding wave, she urges her rapid way. Such magnitude, such power, and yet so child-like! A word—the slightest movement of the helm—and she is governed; the winds and the very sea seems to be at her commander's control.

With us, too, there is much to aid the excitement; we are of the first to make the great adventure, to establish that success which may, and probably will, mark an era in the intercourse—in the fraternity of a wide world.

The afternoon was diversified by a sharp snow squall. It continued until our masts, sails, and rigging were completely hung in its fleecy drapery, and until the snow lay nearly two inches deep upon our decks; the result of all which was, a thorough set-to at snow-balls by all the idlers of the cabin.

A mass of heavy clouds had gathered above and around, darkening the day. It broke in the west, and rose in a broad, low, and strongly-defined arch, like the lifting of a curtain, displaying the setting sun through an atmosphere so rich and so pure that the fancy might almost deem it such as angels dwell in. The ocean lay tinted in its hues; blending the gold and purple with its own deep blue; and as the sun sank still lower, streams of light shot upward, bathing the heavens and the whole canopy of clouds in floods of richest crimson. It was a sunset and twilight of the new world.

Saturday evening on board ship is mostly a time of some distinction, and this being the last we looked for on our voyage, both dinner-time and evening were made merry: at the former the health of our captain was drunk for the tenth time on the passage, I believe, and, responded to with that enthusiasm which warm hearts own, when feeling points to an object worthy their high regard.

Sunday, 22nd.—The day has partaken something of the excitement of anticipated arrival. The anchors were got over the bows, the cables were got up and bent, and all those arrangements made which mark the approach to land; and, as is ever the case among the idlers, the disposition to do little else than lounge and talk, and dream of the things of the morrow, prevailed over every other incentive to occupation.

Monday, 23rd.—The morning of arrival to the journalist is

one of brief periods. Objects multiply upon his attention too fast—the occasion itself distracts him. The number of vessels within the horizon, the bustle of active preparation, the momentary expectation of making the land, and the dimly-described pilot-boat in the distance, are excitements too great to admit of that equanimity which is needful to prolonged remark. One almost breathes hurriedly at the thought of all that fits before him in the delightful picture of gratified curiosity, or of home, and friends, and fire-side enjoyments which his imagination paints as so nearly within his reach.

At ten, a.m., we were joined by the pilot. His boat—a graceful little schooner—came down before a fine breeze, and hauling up to windward, salutations were exchanged, his skiff was launched, and a few moments brought him to our deck. It was amusing to observe the wonderment of the tenants of the little craft at our vessel. If eyes and mouths be any indices to feeling, there must have been something not often of this earth in theirs.

At twelve, noon, the cry of land ran through the ship; and in an instant there was a rush to the poop, the rigging, the forecabin, the highest point of the vessel—it was there—a-head, and “land, O!” was re-echoed loudly and merrily upon every tongue. It is difficult—impossible, justly to describe the expressions which pervade a ship at the moment of first discovering land. It is a look of joy—not the expression of common passion, but a highly-wrought sense,—an eruption of the feelings which displays itself in all that tongue can utter, all that smiles can say, all that eye can speak. It is a time as well of grave ejaculations as of merry jest. “My country!” cried one, extending his arms half solemnly, and with a look of thought. And “there,” cried another, peeping through his nether eye, and pointing to the broad sheet of foam which marked our way upon the water, as far as eye could reach—“there is the road to mine.”

There is something, too, of the ludicrous with all at such a time. The resurrection of “other” clothes, and the exchange of hats for caps, make such changes as seem almost to claim the necessity of other introductions. The rusty jacket has suddenly become the superfine black long-tailed, and the out-at-elbows of yesterday, sports now perhaps the finest fleece in the flock.

Our progress was rapid, and the land which at first was but a dark line on the horizon’s verge—a cloud seemingly at its early birth—soon became distinctly visible—the heights of Neversink.

Before crossing the bar, our “poles,” which had been some time “housed,” were all aloft, and flags streaming at each; the British ensign at the gaff. That at the fore was one adopted at the launching of the ship—a combination of the British and American ensigns, the stars quartered on the British union, the stripes on the field—an emblem one might fancy of that regard for each other, if one may so speak of states, of that alliance in a noble fellowship of parent with its daughter empire, which it is quite certain the intelligence of both countries ratifies, and would desire should ever be.

At one moment it seemed probable we should be afforded the opportunity of adding an act of kindness to the events of the day. The wind light and baffling. A little schooner at some distance, in attempting to pass too near the edge of a shoal, was so drifted by a strong tide, that her grounding amidst the breakers seemed to us inevitable; and it was only after the most positive assurances of the pilot that she would work clear, that our captain would allow the steamer to proceed further, without first sending her a hawser, and relieving her from the difficulty. At three, p.m., we passed the Narrows, opening the bay and harbour of New York, our sails all furled, and the engines at their topmast speed. The city was scarcely discernible, reposing, it seemed, in the distance in the quietude of majesty, while little islands on either hand, cannon crested, stood like Nature’s ushers to this queen of the western world. The country around looked arid and unsightly, the vegetation of spring having not yet put forward.

As we proceeded, an exciting scene awaited us. Coming abreast of Bradlow’s Island, we were saluted by the fort with twenty-six guns, and the coincidence of this with our own

movements on board, heightened our enjoyment of it immeasurably. The sky-lights to our cabin abaft are made to form two tables on deck, mahogany topped, and with a most bewitching look of invitation to a repast upon them, whenever a smooth sea and sunny day make it pleasant to dine or lunch beneath the awning.

It had been agreed amongst us some days previously, that before we left the ship, one of these tables should be christened the Victoria, the other the President. Wine and fruit had been set upon them for this purpose—we were standing round the former of them—the health of Briton’s Queen had been proposed—the toast was drunk, and amidst the cheers that followed, the arm was just raised to consummate the naming, when the fort opened its fire. The fire was electric. Our colours were lowered in acknowledgment of the compliment, and the burst which accompanied it from our decks—drinking to the president and the country, and breaking wine again, was more loud and more joyous, than if at that moment we had unitedly overcome a common enemy. Proceeding still, the city became more distinct—trees, streets, the people—the announcement of the arrival of the ship by telegraph had brought thousands to every point of view upon the water-side; boats too, in shoals were out to welcome her, and every object seemed a superadded impulse to our feelings. The first to which our attention was now given was the Sirius, lying at anchor in the North River, gay with flowing streamers, and literally crammed with spectators—her decks, her paddle-boxes, her rigging, mast-head high! We passed around her, receiving and giving three hearty cheers, then turned towards the Battery. Here myriads seemed collected; boats had gathered around us in countless confusion; flags flying, guns were firing, and cheering again—the shore, the boats, on all hands around, loudly and gloriously, seemed as though they would never have done.

It was an exciting moment—a moment which, in the tame events of life, find few parallels; it seemed the outpouring congratulations of a whole people, when swelling hearts were open to receive and to return them. It was a moment, that if both nations could have witnessed, would have assured them, though babblers may rail, and fools may affect contempt, that at heart there is still a feeling and an affinity between them. It was a moment of achievement!—we had been sharers in the chances of a noble effort, and each one of us felt the pride of participation in the success of it, and this was the crowning instant: experiment then ceased—certainty was attained—our voyage was accomplished.

SHIPWRECK OF A PORTUGUESE VESSEL ON THE COAST OF AFRICA, IN 1553.

EMMANUEL SOSA DE SEPULVEDA, descended from one of the most ancient and distinguished families of Portugal, obtained great reputation in the Indies by his courage and talents. About the middle of the sixteenth century he obtained the government of the citadel of Dia, a post given only to officers of merit and tried valour. This situation he held several years, till conceiving an irresistible desire to revisit his native land, he embarked at the port of Cochin. The vessel in which he sailed had on board the wealth he had amassed, together with the property of the officers and passengers who had accompanied him. Sosa likewise took with him his wife, Eleonora Garcia, the daughter of Sala, at that time general of the Portuguese in the Indies; his children, his brother-in-law, Pantaleon Sala, together with several officers and gentlemen. The number of sailors, servants, and slaves, was very great; the whole of the crew and passengers amounting to about six hundred.

An acquaintance with the sea and winds has proved that the month of January is the most favourable season for the passage from India to Europe. Sala stopped to make some purchases at Coulan, by which he was detained till February. On the 13th of April they discovered the coast of Caffaria;

from thence they proceeded, without accident, to the Cape of Good Hope, when a north wind that arose produced the most tremendous hurricane that had ever been experienced in those seas. The sky was suddenly overcast; the waves, rising to the clouds, threatened every moment to engulf the vessel: the darkness was interrupted only by the lightning's blaze and the peeling thunder, which struck terror into the hearts of the most resolute. The pilot and sailors deliberated whether they should strike the yards and wait at sea till the tempest was over; but being terrified by its continuing with redoubled fury, and deprived of all hope of being able to double the Cape, on account of the season, they unanimously agreed to steer their course back to India. In this design they were not more fortunate than in the other, and the unrelenting winds seemed to have conspired the destruction of the wretched vessel, which was already considerably injured; in vain the pilot and sailors employed their utmost efforts, to save her from their fury. The sides were so rudely shaken by the waves, that at length the planks gave way, and the ship made more water than the pumps were able to discharge. The goods were thrown overboard to lighten the vessel, but this measure did not lessen the danger. Their condition was hopeless, and every wave threatened them with inevitable destruction; but after the tempest had continued several days without intermission, a south wind decided their fate, and drove the ship aground, which was the least misfortune that could happen to them.

The anchor was immediately thrown out, and the boats, which were their last resource, were hoisted overboard. Sosa, his wife, and children, and the principal persons of his suite, snatching up in haste their most valuable effects, threw themselves into the boats. New dangers attended them; the waves, impelled by the force of the wind, dashed against the shore and formed mountains that appeared ready to overwhelm their feeble bark. At length, after much difficulty and danger, they reached the shore. All could not effect their escape in the boats, for after the second or third voyage they were dashed to pieces upon hidden rocks; at the same time the cable parted, and those who remained in the vessel, had no other method of saving their lives than to throw themselves overboard, and endeavour to gain the shore. Some seized hold of casks, or boxes while others trusted to their strength and their expertness in swimming. Very few, however, were so fortunate as to arrive without accident, and by this disaster three hundred men, Portuguese and foreigners, lost their lives. Those who escaped had scarcely reached the shore, when the vessel foundered. This loss overwhelmed the Portuguese with despair; from the fragments of the ship, they might have constructed a brigantine, and have gone to seek some relief at Sofala and Mozambique; but from this hope they were completely cut off.

The country on which they were wrecked was in the latitude of 31 deg. south. Sosa directed large fires to be made, in order to dry and warm his people, who suffered exceedingly from cold and hunger, and their wounds. He distributed among them, with the greatest economy, a small quantity of flour picked up from the wreck, but half spoiled by the salt water. Their situation was dreadful. The shore presented to their view nothing but desert sands and arid rocks. After a long search, they discovered some springs of fresh water, which were extremely serviceable, and then began to form an entrenchment of boxes, and large stones that they might pass the night in safety. Sosa, on this occasion, forgot none of the duties of a good citizen and a benevolent master. Here he remained with his people till they had recovered from the fatigues of the sea, and as long as he entertained any hope of being able to subsist upon the provisions thrown on shore from the vessel. It became necessary, however, to think of removing, and they deliberated upon the course they ought to pursue; all were in favour of proceeding along the coast till they found the river to which Marchesez had given the name of Santo Spiritu, and where the Portuguese of Sofala and Mozambique carried on a considerable traffic.

That river was about one hundred and eighty leagues distant from their post. Sosa, after adopting the resolution, encouraged his troop, and exhorted them, by his words and example, not to lose their courage. "Before a person exposes himself, (said he) to the dangers of the sea, he ought to be resolved to bear thirst, hunger, hardships, and inconvenience of every kind. Far from being dejected at their approach, he ought to meet them as if he expected them, and substitute those transitory evils instead of the eternal misery due to the crimes he has committed. In our present misfortune (added he) we ought less to consider what we have lost than what we have saved; the loss of our property is a small object when compared with the preservation of our lives. I can give you no better advice than to resign all private claims, and relinquish all personal and individual interest in favour of the public welfare. If we are split into parties we can never be secure; but while united we have nothing to fear." He concluded with a prayer, extorted by love, in behalf of his wife and children, and entreated his companions in misfortune to pay some respect, on the way, to the sex of one and the age of the others. All replied, it was but just that the strongest and most robust should assist the weakest, that he might lead them wherever he pleased, and that they would never withdraw themselves from his command.

They immediately set off. This caravan was composed of Sosa, his wife Eleonora, a woman of masculine courage, their children, as yet too young to know the dangers of their situation, Andrew Vasez, the master of the vessel, and eighty Portuguese. This first troop was followed by about one hundred servants, who alternately carried the children on their backs, and their mistress on a rude kind of chair. These were succeeded by the sailors, and the female servants; and Pantaleon, with a number of Portuguese and slaves, closed the rear.

After proceeding several days through a very dangerous country, they were stopped by inaccessible rocks, and torrents, swelled by the rains that had recently fallen. By endeavouring to discover the easiest roads, they had made a circuit of above one hundred leagues, while they would have to go about thirty if they had kept along the seacoast. Their provisions were soon consumed, and they were obliged to live upon apples and wild fruit, and even upon herbs, of which the animals of that country are very fond.

After a progress of four months they at length arrived at the river Santo Spiritu, but without recognising it, for the country is traversed by three different branches, which unite before they discharge themselves into the sea.

Their doubts were removed by the king of the district, who was the more favourably disposed towards the Portuguese, because he had, some time before, traded peaceably with Lorenzo Marchesez and Antonio Caldera. That prince gave a kind reception to Sosa and his people, and informed them, that the king of the country contiguous to his dominions was a crafty and rapacious man, of whom they ought to beware. The desire of speedily reaching some place inhabited by Europeans, rendered them blind to the misfortunes that were predicted; but they soon had reason to repent having passed the second arm of the river.

The following day they perceived two hundred Caffrees coming towards them. Though exhausted with hardships and fatigue, they prepared their arms and put themselves in a posture for defence; but seeing that the Caffrees approached them peaceably, and rather showed a desire of forming an acquaintance with them than of doing them an injury, their fears were dissipated, and they endeavoured to obtain provisions, either for money or in exchange for implements of iron, which those people highly value. A mutual confidence appeared to be established, and the wants of the Portuguese encouraged their good opinion of the natives, but the opportunity of stripping the strangers of all they possessed was too favourable for the barbarians to be neglected. In order to accomplish their design with the greater facility, they gave the Portuguese to understand, that if they would proceed to the habitation of their king, they would experience a gracious reception. Their excessive weariness, their joy at having found the river they were in

search of, and a still more powerful motive, the want of provisions, induced them to embrace the proposal of the Caffres. They followed them towards the habitation of their chief; but the latter directed them to stop on the way, in a place shaded by trees. Here they remained several days, during which they purchased various kinds of coarse provisions with the effects they had saved from the wreck. Deceived by the air of sincerity of those people, Sosa conceived he might wait at this place for the arrival of some merchants from Sofala, and demanded permission of the king to erect huts for himself, his wife, and all his people, whose number had been much diminished by the fatigues of their long peregrination.

The king, with more artifice than he could be suspected of, told Sosa, that two circumstances retarded the favourable reception which he wished to give them; the first was, the dearth and scarcity of provisions; and the second, the fear which his subjects entertained of the swords and fire-arms of the Portuguese; and if these were sent to him as a pledge of their peaceable and tranquil disposition; he would agree to their request.

The hope of arriving at the end of their hardships, induced the Portuguese to comply with these conditions, to which prudence ought to have dictated a refusal. In vain Eleonora reminded Sosa of the unfavourable account given of this sovereign by the other king; deaf to the entreaties and admonitions of his wife, he accepted with fatal credulity the subtle offers of this prince. The rest of the troop followed their captain's example, and the arms were delivered to the perfidious monarch. They, however, soon repented of this step, for the Caffres immediately seized upon the treasures they had brought with them with such fatigue, and stripped them of all their clothes. Those who attempted to make any resistance were massacred by the merciless barbarians.

Eleonora alone resisted with courage; but of what avail are the efforts of a female against men of a disposition so ferocious! They stripped her likewise of all her clothes. Ashamed to be exposed stark naked to the view of those wretches, and of her own servants, she threw herself into a ditch a few paces distant, and buried herself, as it were, in the sand, resolving not to leave that situation. Overwhelmed with fatigue and chagrin, she could not forbear saying to Andrew Vasez, and others of the Portuguese who would not leave her. "There, my friends, you see the consequence of your silly confidence. Go: I want nothing more; think only of yourselves; and should Heaven permit you to revisit your native land, tell those who inquire after the unfortunate Eleonora and her husband, that our sins have drawn upon us the indignation of Heaven." Here sighs choked her utterance, but she cast a tender look at her children and her husband. The latter, overcome with grief for his imprudence, and its fatal consequences, remained motionless. The Caffres, had, by this time, retired with all their booty; his companions had dispersed to avoid the fate that impended over them, and not one was to be seen. At length the sentiments of tenderness were again excited in his breast, and he ran about, in every direction, in quest of fruit, of any kind, by which he might prolong the existence of his wife and wretched infants. But, naked and unarmed, Sosa was unable to find anything in a country ravaged by barbarians, and burned up by the sun. He frequently returned exhausted with fatigue, and the last time he returned, he found that his wife and children had expired with hunger and thirst. He had sufficient strength to perform the rites of interment, after which, fleeing from this scene of horror, he roved about in the deserts, where, doubtless, he died, as he was never heard of afterwards. The miserable remains of this troop, reduced us to twenty-six persons, by the fatigues and miseries they endured, wandered about a long time, and were, at length, treated as slaves. They would all have finished their career in this state of hardship and humiliation, had not a Portuguese merchant, who repaired from Mozambique to this part of the country to purchase ivory, ransomed them for four piastres a piece. Of these Pantaleon Sala was one; he died at Lisbon of an apoplexy, at a very advanced age.

The disaster of Sosa excited great compassion among his countrymen, but did not correct their imprudence. The following year, five more vessels sailed from the port of Cochín

for Portugal, under the command of Fernand Alvarez Capral. Only one of these ships arrived at Lisbon, after encountering a thousand dangers. It is not known what became of any of the others, excepting the St. Benedict, which was so deeply laden that the sailors could scarcely work her. A violent tempest overtook her in the middle of her course, near the Cape of Good Hope; a gale of wind drove her ashore, and destroyed her on the desert coast called Natal. Two hundred men, who endeavoured to save themselves by swimming, perished on this occasion.

Mesquita Perestrella, who survived this disaster, and has left a very accurate account of it, exaggerates the terrors which his companions underwent by the apparition of demons in the air, and the noise of the wandering spirits of the sailors, which he declares that he both saw and heard. The unfortunate wretches who escaped from the wreck, experienced the same hardships as Sosa and his company; for having pursued almost the same course, they had to endure the greatest extremity of hunger and thirst. In short, from three hundred, they were reduced to twenty-three, who, half dead with famine and fatigue, were at length made slaves. A few months afterwards some merchants, who visited that part of the country for the purposes of trade, ransomed and conveyed them to Sofala and Mozambique, where they arrived, after suffering almost incredible misery.

NAUTICAL SUPERSTITIONS.

THE most exaggerated of the many extant in the Orkneys, is the belief that the spirit of the mariner, immediately after its committal to the world of waters, is consigned for a certain period, as a kind of purgatory, to the care of the Demons of the Norse. The following free translation from the Bunic ballad will sufficiently illustrate:—

We are the merry mariners, who trade in human souls,
And we never want a noble freight where'er our vessel rolls:
We seek it on the eastern wave, we seek it in the west,
And, of all the trades for mariners, the human soul is best.
Our weapons are the thunderbolt, and strong arm of the wave,
That strike the clay from prison'd souls, and hurl it in the grave!
We wither up the heart of man, with lightning from the cloud,
And ocean is its sepulchre, and the tempest sky its shroud.
We envy not the ocean depth's that hold the lifeless forms,
We only give to fishes food, that else had been for worms;
Let others look for pearls and gold, for diamonds bright and rare;
Oh! what are diamonds, pearls, and gold, to the noble freight we hear.

We are the mere mariners, that trade in human souls,
And we never want a noble freight, where'er our vessel rolls;
We seek it on the eastern wave, we seek it in the west,
And, of all the trades for mariners, the human soul is best.

SALT LAKE.

AMONGST the many wonderful discoveries made by the mission to the court of Shoo, in Abyssinia, one of the most extraordinary is that of a magnificent salt lake, some distance inland. It is seven hundred feet below the level of the nearest sea, of which it has at one time obviously formed a portion—having been cut off by the elevation of an enormous mass of volcanic matter which now separates it from the shore. It is so extremely saline, that a man walking into it floats in spite of himself, while his skin feels sore from the brine. The shores are covered with one thick white sheet of crystallized salt. The depression of its surface appears to have been occasioned by evaporation; and it is probable that in a few years more, its waters may have disappeared—its basin forming an immense mass of rock salt.

CUTTING OUT OF THE CHEVRETTE.

It has been universally allowed in the Navy, that the capture of this vessel was an exploit of peculiar difficulty, and could alone have been achieved by the most prompt and dexterous heroism.

We have the satisfaction to subjoin the following full and authentic narrative of the enterprise, which we think will be read with equal surprise and admiration:—

In the month of July, 1801, a squadron of British frigates, employed in watching the enemy's fleet, lay at anchor close in with the harbour of Brest. The combined fleets of France and Spain were full in their view; still nearer, and quite open to them, was the bay of Camaret, where the French national

corvette, La Chevrette, lay protected by the batteries. In this situation she was considered by the French as no less secure than if she had been in the roads of Brest; while the effect which this seemingly impregnable position had upon the British squadron was to inspire a wish to cut her out. It was resolved by the commander of the squadron that this attempt should be made. Accordingly, the boats of the Doris and Beaulieu, manned entirely by volunteers, under the orders of Lieutenant Losack, who had been sent from the admiral's ship to conduct the enterprise, set out on the night of Monday, the 20th of July, to endeavour to bring out the corvette. But a separation of the boats having taken place, no attempt was made that night. Some of the boats having reached the entrance of the bay, lay there on their oars till dawn of day, in expectation of being joined by the rest; and before they got

SCENE ON THE DECK OF THE CHEVRETTE.

back to the frigates, were unfortunately seen, both from the corvette and from the shore.

The enemy now concluded, what they never before imagined, that an attack was meditated. Though they judged it a measure of extreme rashness, they were resolved to omit no possible preparation. In the morning of the 21st, they got the corvette under way, moved her a mile-and-a-half up the bay, and moored her under the batteries. They put on board of her troops from the shore, so that her number of men now amounted nearly to four hundred. The arms and ammunition were brought upon deck, and the great guns were loaded to the muzzle with grape shot. The batteries were prepared; temporary redoubts were thrown up upon the points; and a gun-vessel, with a couple of thirty-two pounders, was moored at the entrance of the bay as a guard-boat. Having taken these

precautions, they, in the afternoon, displayed a large French ensign above an English one, as a signal of defiance.

All these manoeuvres were well observed from the Beaulieu the crew of which ship had showed extraordinary ardour to engage in this enterprise. Though they now saw that a most desperate resistance was certain, the severe disappointment which they experienced from the fruitless expedition of the former night, filled them with eagerness to make an effectual attempt. Mr. Maxwell, the first lieutenant, who had not been out on the night before, and who was ordered on an expedition then in agitation, of carrying fire-ships into Brest, gladly embraced this opportunity of practising his boat's crew selected on this occasion, preparatory to the grand object, and resolved to head his own shipmates in the attack to be made that night. This officer, warned by the former failure, resolved to keep his

own boats in close order; and should a separation of the other boats happen as before, through any unfortunate accident, to proceed to the attack with the Beaulieu's boats alone. This resolution, so congenial to their wishes, his shipmates heard with much satisfaction, and employed themselves through the day in putting their arms in the best order, particularly in grinding their cutlasses to cut the boarding nettings, and other impediments which they expected to meet with.

When night arrived, six boats, manned with between eighty and ninety officers and men of the Beaulieu, all volunteers, joined, about half-past nine, the boats of the Doris, Uranie, and Robust; the whole being, as before, under the command of Lieutenant Losack. The orders which he then gave were, to lie on their oars, or pull easy, as it was much too soon for the attack. About a quarter of an hour afterwards, Lieutenant Losack, with his own boat, accompanied by some other boats, went in chase of a boat from the shore, supposed to be a look-out boat belonging to the enemy, and therefore, of consequence to be secured, if possible. For a considerable time after he parted company, the remainder of the boats continued as he left them, lying-to on their oars, and sometimes pulling easy. Finding he did not return, Mr. Maxwell, reflecting upon the miscarriage of the preceding night, considering that the boats were yet at least six miles from the scene of action, and aware of the time requisite to row that distance against a fresh breeze, judged it expedient, in order that the enterprise might have the best chance of succeeding, to proceed immediately towards the entrance of the bay, a situation evidently more eligible for them to lie-to, should this be necessary, than where they then were. He therefore gave way ahead with the boats of the Beaulieu, and the other boats followed his example. As they proceeded, they perceived the signals of the enemy, both to and from the shore, and at length they arrived off the entrance of the bay.

It was now half-past twelve. The moon was sinking beneath the horizon. The wind, which for the first part of the night blew right into the bay, had been dying away, and it was now a perfect calm. Every thing concurred to render this the time at which an attack might be made with probability of success. The night was too far advanced to admit of any longer delay; and had the attempt been deferred till next night, it must have been made to great disadvantage, on account of the increasing moon, now in the eleventh day of her age. However, Mr. Losack, and the boats which accompanied him, were still absent. In consequence of his absence there was much difference of opinion through the remaining boats. Many were undetermined in what manner to act, whether to go on, or return to their ships.

These circumstances were adverted to by Mr. Maxwell, who was now the senior officer. He saw that there remained but one way of preventing a total failure of the enterprise; and that was to assume the command himself, and immediately proceed to the attack with the boats present. He declared that this was his resolution; he intimated his intention to the boats within hail, and despatched a midshipman to those astern; and seemingly returning, with orders to them, in the name of his Majesty's service, to follow the boats of the Beaulieu to the attack. This determination was received with rapture by the volunteers of the Beaulieu.

About this time, by good fortune, a gentle breeze sprung up from the south, right out of the bay. This breeze, so auspicious to the success of the enterprise, animated the men to enthusiasm. To Mr. Maxwell it dictated a manœuvre singular and daring. He gave orders, that immediately upon boarding, while the rest were engaged in endeavouring to disarm the enemy's crew on deck, the smartest topmen of the Beaulieu, whose qualifications he well knew, should fight their way aloft and cut the sails loose with their cutlasses. He also appointed the most trusty hands to cut the cable, one of the best men in the boats for the helm, and hands for the rudder-chains, in case of the tiller-ropes being cut. Having made this arrangement for setting the ship adrift instantly upon boarding, and thus taking advantage of the favourable breeze, he gave orders for the charge.

The sky being clear, though the moon was set, they soon

came in sight of the corvette, and were as soon seen from her; the instant she halted, at the distance of four or five cables, she opened a heavy fire of musketry from every part of the ship, accompanied by showers of grape shot from the great guns. A heavy fire of musketry at the same time commenced from the shore, and batteries; in the face of which the Beaulieu's boats, in the most gallant and intrepid manner, rushed on to the attack, most nobly assisted by those of the Uranie, commanded by Lieutenant Neville, who stood up in his boat, cheering and animating his men, with the most undaunted bravery, while the bullets were flying about their heads like hail, and many were dropping down, killed or wounded, before they came alongside. When they reached the vessel, the Beaulieu's boats boarded on the starboard bow and quarter; the Uranie's, one of the Robust's and one of the Doris's on the larboard bow. The attempt to board was most obstinately opposed by the French, armed at all points with fire-arms, sabres, tomahawks, and pikes, who in their turn even boarded the boats.

Notwithstanding this obstinate resistance, in the course of which the assailants lost all their fire-arms, and had nothing remaining but their swords, the boarding was effected. The men who had been ordered for that service, proceeded to fight their way aloft. In this attempt several of them were killed, and others desperately wounded; but the rest persevered with unparalleled courage. Many of them, bleeding of their wounds, got upon the yards, upon which they were obliged to scramble out with their cutlasses, upon their hands and knees, the foot ropes having been all strapped up; and surmounting every obstacle, they executed, with inconceivable expedition, the arduous service in which they were engaged. In less than three minutes after the boats came alongside, in the very heat of the conflict, when almost half of the British sailors were killed or wounded, and the enemy were three to one against them, down came the three top-sails and courses, the ship at the same time casting, the cable being cut outside.

The prompt execution of these operations proved decisive. The moment the French saw the sails fall, and found themselves, as if by a miracle, under way and drifting out, they were seized with astonishment and consternation. Some of them jumped overboard, others threw down their arms, and tumbled down the hatchways. The British sailors now soon got possession of the quarter-deck and fore-castle, which in five minutes after boarding were nearly covered with dead bodies. The rest of the enemy, having retreated below, kept up a heavy fire of musketry from the main deck and up the hatch-ways. They also frequently set off large trains of powder, endeavouring to blow up the quarter-deck, and throw the British into confusion. This obliged the British to divide into two parties. One party guarded the hatchways and gangways, and returned the fire of the enemy with their own arms and ammunition; the other party made sail, in order to clear the decks, for which it was necessary for them to throw overboard two or three dozen of the Frenchmen who had fallen in the conflict, among whom were some of their own gallant companions.

In the meantime the breeze was gently drifting the vessel out of the bay, the batteries continuing to direct their fire right upon her, as they had done from the time she got under way. Scarcely was she clear of the point, from which showers of musketry and grape played upon her, when it again fell calm. This calm left her still exposed to the fire of the batteries. Though she was now free from the danger principally apprehended, that of getting on shore, still the two and-thirty pound shot and shells from all directions were flying about through the ship's side, masts, sails, and rigging. The state of the boats prevented towing: some of them were sunk, others were adrift with killed and wounded men, and the rest were engaged in towing out these from under the fire of the batteries. However, a light breeze springing up from the north-east, at length drew her out.

The engagement had now lasted upwards of two hours; though during this time the enemy had kept up a constant fire from the main deck and from the shore, yet the British seamen managed to set every sail in the ship, and had even got top-gallant yards across. The ship being now quite clear of the batteries, and our men having twice threatened that they would

give the enemy no quarter if they continued their fire from below, they at last surrendered themselves prisoners of war.

About this time some boats were perceived coming from the direction of Brest, which accordingly were suspected to be enemies. Mr. Maxwell, therefore, immediately prepared for a new conflict and had the sides of the ship manned with pikes and arms to defend her. But on nearer approach, these were found to be the boats which had not been present during the action, and with them Mr. Losack, to whom Mr. Maxwell then resigned the command.

The morning's dawn displayed a dreadful scene of carnage, and at the same time, close to the scene of action, the harbour of Brest, with the combined fleets of France and Spain; and, to the enemy, the mortifying sight of one of their ships of war brought out, in their immediate presence, from a position that was deemed impregnable, and sailing down to join the British frigates.

Thus terminated an enterprise, which in this species of warfare may safely be pronounced to be without a parallel. In the late war, many ships of the enemy were, with the greatest gallantry, boarded and cut out by the meritorious British seamen; but the cutting out of the Chevrette is distinguished from all similar achievements, by several material circumstances. The enemy were not taken by surprise—they expected an attack, they prepared themselves for it, and they defied it. Not only the vessel, but the batteries on shore which protected her, were in readiness and on their guard; the British seamen were exposed to a severe fire, both from the ship and from the shore, before they came alongside; they then fought their way up the sides of a vessel full of men, armed with every kind of weapon calculated to resist their attempt. Having succeeded in boarding, they at once contended with an enemy three times their number, and made themselves masters of the rigging, and got the vessel under way; exposed to a dreadful fire from the numerous surrounding batteries, and occupied with the conflict within, they brought her in the night out of a roadstead narrow and difficult. All this was done in the presence of the grand fleet of the enemy; it was done by nine boats out of fifteen, which originally set out upon the expedition; it was done under the conduct of an officer who, in the absence of the person appointed to command, undertook it upon his own responsibility, and whose intrepidity, judgment, and presence of mind, seconded by the wonderful exertions of the officers and men under his command, succeeded in effecting an enterprise, which, by those who reflect upon its peculiar circumstances, will ever be regarded with astonishment.

Total of the English killed, eighteen; wounded, fifty-seven; missing one.

Total of the French killed:—first captain, two lieutenants, three midshipmen, one lieutenant of the troops, with eighty-five seamen and troops. Wounded:—one lieutenant, four midshipmen, with fifty-seven seamen and troops.

We think the following anecdotes, descriptive of individual exertion on the memorable occasion above described, will be acceptable to our readers:

Mr. Brown, boatswain of the Beaulieu, after forcing his way into the Chevrette's quarter gallery, found the door planked up, and so securely barricaded, that all his efforts to force it were ineffectual; through the crevices of the planks he discovered a number of men sitting on the cabin deck, armed with pikes and pistols; with the fire of the latter he was frequently annoyed whilst attempting to burst in. He next tried the quarter, and, after an obstinate resistance, gained the taffrail (the officer who commanded the party was at this time fighting his way up a little farther forward), for an instant, whilst looking round to see where he should make his push, he stood exposed a mark to the enemy's fire; when, waving his cutlass, he cried, "make a lane there," gallantly dashed among them, and fought his way forward, until he reached his old post, the forecabin, which the men, animated by his example, soon cleared of the enemy. Here Mr. Brown remained during the rest of the contest, not only repulsing the French in their frequent attempts to retake his post, but attending to the orders from the quarter-deck, and assisting in

casting the ship, and making sail, with as much coolness as though he had been on board the Beaulieu.

Henry Wallis, quarter-master of the Beaulieu, was appointed by the officer who commanded during the attack, to the Chevrette's helm. This gallant seaman fought his way to the wheel, killing one or two of the enemy in his progress. Although severely wounded in the contest, and bleeding, he steadily remained at his station, steering the Chevrette out until she was in safety from the fire of the batteries. On his officer's saying, he was afraid his wounds were severe, the brave fellow said, it was only a graze and a prick with a cutlass, and would not prevent him from going again on such another expedition, and wished it were the following night. He knew there was an arduous and important service about to be performed by the fleet, and being among the volunteers from the Beaulieu, concealed the state of his wounds that he might not be laid aside. This brave man had served near seven years in the ship, and constantly distinguished himself on every service of danger or difficulty that occurred. Was any extraordinary exertion required, Wallis was sure to be the foremost. If a man had fallen overboard, he was always, fortunately, in the way, and either in the boat or the water. During the time he belonged to the ship, nearly a dozen men were indebted to him for their lives which he had saved by plunging overboard, sometimes even in a gale of wind, at the utmost hazard of his own.

After this sketch of his character, it will be natural to suppose he possessed the confidence of his officer; and his behaviour in this arduous contest justified the high opinion entertained of his courage and perseverance.

Another of these brave fellows, Richard Smith, quarter-master, was desperately wounded while steering one of the boats, before they reached the corvette; after laying stunned for some time, he recovered himself, and was very much distinguished during the whole of the combat on board the Chevrette.

One of the top-men, who had been appointed to cut loose the sails, was wounded in the body and arm while boarding; after they gained a footing, the commanding officer observing him going aloft with his arm bleeding fast, desired he would wait while a tourniquet was put on; the brave fellow refused, saying it would be time enough when he had performed his duty. He persevered, and did not descend until the sails were set. The enemy, among other precautions, having stopped the horses up, he was obliged to crawl out on the yard; and the exertion, while aloft, occasioned his wounds to bleed so profusely, that he fainted the instant he came down.

John Ware, boatswain's mate, lost his left arm by the cut of a sabre, while boarding. He fell into the boat, but, having bound up the stump, returned to the charge, and behaved gallantly during the whole of the contest.

LIFE OF PAUL JONES.

Concluded.

HE at the same time acquainted Mr. Hewes, a member of Congress, and his particular friend, with a project he had conceived for seizing on the Island of St. Helena, by means of his little squadron, which would have inevitably rendered the Americans masters of great part of the homeward-bound East India fleet; and as the Congress at that time proposed to appropriate two thirds of all the prizes to itself, they would have been furnished with better means of carrying on the war during several years; but other events and of a more pressing nature, prevented this scheme from being carried into execution. The vexatious conduct at that time exercised by Lord Dunmore, in Virginia, determined the Congress to detach the squadron against him; but Mr. Hopkins the commander, who was secretly in the interest of Great Britain, displayed neither zeal nor talents for such an enterprise, and on this occasion lost so much time, that the squadron was froze up in the Delaware River.

The frost continued more than two months; and after that

delay the squadron was disengaged, when it set sail for New Providence, the principal of the Bahama Islands, where they found a large quantity of military stores and artillery, of which the Americans then stood greatly in need; with particularly large quantities of slops and shoes, sufficient to supply ten thousand men. Here he had the good fortune to recommend himself to the commodore, by his diligence and tactical knowledge. This officer, it seems, was but very little acquainted with naval knowledge and operations, and he was entirely indebted to Paul Jones for the plan he adopted, when his squadron arrived in sight of New Providence, where he moored the ships in a proper manner to execute the purposes of the expedition.

On their return from this service, they took two armed vessels, one of which was loaded with bombs; and fell in, near Rhode Island, with the Glasgow, an English man-of-war, of twenty-four guns; but, notwithstanding the Americans' superiority, both in force and sailing, this clever commodore, suffered her to escape, after having many men killed and wounded, both on board the Alfred and Cabot. Had the Yankees appointed a few more such officers, they would not at this hour boast of independence.

After this, the squadron entered the port of New London, in Connecticut; when Commodore Hopkins, on receiving intelligence that the English frigates had been driven from Newport, and were out at sea, took advantage of the darkness of the night, to repair to Rhode Island. At this place a council of war having dismissed the captain of the Providence, one of the ships of the squadron, the commodore gave Paul Jones orders, in writing, to take the command of her, and to escort some troops that were proceeding from Rhode Island to New York, and who were destined for General Washington's camp. After this he received instructions to escort a convoy of artillery and ammunition from Rhode Island to New York, for the defence of which, it was destined. On this occasion he had two different engagements, with the Cerberus frigate: the first, for the protection of a vessel from St. Domingo, laden with naval stores, for the Congress. In the course of this service, between Boston and New York, he had also many actions with ships of war under the command of Lord Howe; but on these, as on former occasions, he was enabled to preserve his convoy; and at length he arrived safe in the Delaware, August 1, 1776.

On the 8th of the same month, the President of the Congress, presented Paul Jones in person, with the commission of Captain in the Marine of the United States. This was the first granted by Congress, after the declaration of independence, which took place on the 4th of July of that same year.

The prudence of Congress was visible in the choice they had made, and Captain Paul Jones looked up yet with ambition upon future elevation in the American marine; in short, he seemed made for the time and measures he pursued.

The orders of Congress were given, and the necessary preparations begun for the construction of thirteen frigates; but, as none of them were yet ready, he proceeded to sea alone, on board the Providence, which was a vessel of but small force, as she carried no more than seventy men, and twelve small cannon. When in the neighbourhood of the Bermudas, they fell in with the Solebay, and her convoy, from Charlestown; she was a thirty-two gun frigate, and formed part of the squadron under Rear-Admiral Parker. Captain Jones was of course desirous of avoiding an engagement with such superior force; but, as his officers and men insisted that it was the Jamaica fleet, and as it was necessary to command by means of persuasion at this epoch of the war, the result was a serious engagement during six hours, which towards the close, was carried on within pistol-shot. A desperate manœuvre was the sole resource left him; he attempted this, it succeeded, and he was fortunate enough to disengage himself.

A short time after this, he took several prizes, and sailed towards the coast of Nova Scotia, on purpose to destroy the whale and cod fisheries in that neighbourhood. When near Sable Island, they fell in with the Milford frigate, carrying thirty-two guns, with which it was impossible to avoid an engagement. A cannonade accordingly took place, from ten

o'clock in the morning till sun-set; but the engagement was neither so close nor so hot as that with the Solebay and Paul at length escaped by passing through the flats, and entered a little harbour next day, where he destroyed the fisheries and vessels.

After this, he set sail for Ile Madame, where he made two descents, at the same time destroying the fisheries, and burning all the vessels he could not carry away with him. Having accomplished this service, he returned to Rhode Island, after an absence of six weeks and five days from the Delaware; during which interval he had taken sixteen prizes, without including those destroyed.

The Americans were at this period, so unprovided with able commanders at sea, that every adventurer that boldly stepped forward was sure of employ. Jones, while negotiating with the Congress, had become intimately acquainted with Brigadier-general Benedict Arnold.

The Americans this summer, by extraordinary exertions, having collected a naval force, the command of a squadron was given to Mr. Arnold, now a brigadier-general and an admiral. His conduct in this situation was equally spirited and brave: he seemed alike qualified for the service, both by land and sea. Meeting with the fleet commanded by Captain Phillips, and General Carleton, he engaged it, though with ill-success; and finding he had no chance to escape, he ran his vessel a-ground, but did not desert it, until she was on fire, keeping his flag flying to the last. For his gallantry in this affair, he was promoted to the rank of Major-general.

At this period, it must be observed, that Paul Jones's vigilance was indefatigable; he seemed now to live quite another life from what he had done before, and his success enabled him to procure consideration and attention. He now proposed to the commander-in-chief, Hopkins, who had remained a long while inactive in harbour, the following scheme, and which consisted in the destruction of the enemy's fisheries at Ile Royale; and of restoring to liberty more than three hundred American prisoners, detained there in the coal mines. Three vessels were destined for this service, the Alfred, the Hampden, and the Providence; but the Hampden, commanded by Arnold, having received considerable damage in consequence of running on a rock, could not accompany him. He, however, embarked on board the Alfred, and taking the Providence by way of consort, he set sail on the 2nd of November, 1776. The first he made prize of, was a vessel from Liverpool, and soon after, the Mellish a large armed vessel, having two British naval officers on board, and a captain belonging to the land service, with a company of soldiers. This ship was carrying ten thousand complete suits of uniform to Canada, for the army posted there under the orders of Generals Carleton and Burgoyne. Nothing could be more seasonable or welcome to the American service than this capture; and they were so sensible of it, that the commodore ordered their secretary to transmit the public thanks of the country to him, his officers, and the men serving under his command.

The Providence having now left the Alfred during the night, without any pretext whatever, he remained alone, and that too during the stormy season, on the enemy's coast; but notwithstanding this, and that he was also greatly embarrassed with many prisoners, he resolved not to renounce his project. He accordingly effected a descent, destroyed a transport of great value, and also burned the magazines and buildings destined for the whale and cod fishery.

In addition to this, he took three transports and a vessel laden with ling and furs, near Ile Royale; these prizes were escorted by the Flora frigate, which happened to be at a small distance, but which was concealed from him by a fog. Having taken a privateer from Liverpool, mounting sixteen guns, in the course of the next day, he instantly returned with his prizes towards the United States; but when in the latitude of Boston, fell in with the Milford frigate, which he unwillingly engaged. Towards night, however, he placed the Alfred between the enemy and his prizes, and having given the necessary instructions to the latter, to make for the nearest port, he changed his course, set up lights, and by this stratagem saved the vessels he had captured, as the

frigate continued in chase of him. Next day he was fortunate to escape, after a very serious action, which was not terminated until dark, and even then in consequence of a hard gale of wind.

Having returned to Boston December 1, 1776, the intelligence of the uniforms he had taken on board the *Mellish*, re-animated the courage of the army under General Washington, which at that period happened to be almost destitute of clothing. Besides, it may be said, that this unexpected succour contributed not a little to the success of the affair at Trentown, against the Hessians, which took place immediately after his arrival.

He now paid out of his own purse, the wages due to the crews of the *Alfred* and *Providence*, and lent the rest of his money to the Congress. That assembly transmitted him orders from Philadelphia, on the 5th of February, to undertake a secret expedition of great importance, the design of which was, to lay the island of St. Christopher, and the north side of Jamaica, under contribution; after which they were to attack Pensacola. This project was first conceived by himself, and then communicated to Mr. Morris, afterwards minister of finance; but such was the jealousy of Hopkins, the commander-in-chief, and Arnold, who had five of the best frigates under his command, that it was never carried into execution. Hopkins was suspended for this, and dismissed from the service; while Arnold made his case to the Congress, and left the naval service for the military again.

The season being too far advanced for the execution of the scheme in the West Indies, Paul Jones received orders to take the command of the *Amphitrite*, a French vessel destined to sail from Portsmouth, in the New Hampshire, to France, and make for Halifax harbour, where its entrance, called Partridge Island, afforded shelter to two British frigates, which he was directed to cut out, or destroy, as he might find most convenient to his strength.

It was now the depth of winter, and when he arrived off the coast, the British vessels he found were withdrawn. He determined not to lay long here; but, before he departed, he sent his cutter and long-boat into the harbour, to discover if possible, the situation of any considerable British settlement on the coast. It was the morning of Christmas day; and though the cold was extremely severe, yet the sun illumined the icy shores with its enlivening rays.

Returned from this expedition, he was ordered to France, whence they were to pass into Holland, and take possession of the *Indienne*, a large frigate, constructing there for the Congress. Some difficulties, however, ensued, and he was ordered to prepare the *Ranger*, a vessel mounting eighteen guns.

After his first sailing from America on this expedition, a scheme was formed by a number of the seamen to take the ship from him, and pilot her to England, when an Irishman on board discovered the plot. The men were all called over, and charged with it, but denied any concern in, or knowledge

of it. The informer was then put in irons; but Jones relied so much on the man's assertion, that he returned and had all the people ordered on shore, and on a more strict examination, upwards of ninety were dismissed, for refusing to swear allegiance to the Congress.

When General Burgoyne and his army were obliged to surrender at Saratoga, it was Paul Jones who was the first to carry this interesting intelligence to Nantz, whither he arrived on the 2nd of December, 1777. In the course of his voyage he took two prizes forming part of a convoy from the Mediterranean, under protection of the *Invincible*, a seventy-four gun ship, under the guns of which, one of them was taken.

In the month of January, 1778, he repaired to Paris, to make the necessary arrangements with the American ministers relative to the equipment of the *Indienne*; but, as the recent intelligence relative to the capture of Burgoyne, had determined the court of France to recognise the independence of America, by means of a treaty of alliance, and as the English ambassador at the Hague, in consequence of obtaining possession of the papers of an American agent, found that the *Indienne* was the property of the Congress, he ac-

quiesced in the opinion of the American ministers; and it was determined to cede the property to his most Christian Majesty, this being the most likely method of preserving the ship.

Indignant at the barbarous treatment experienced by the Americans, he determined to make a grand effort in their behalf. Paul Jones accordingly planned, by way of retaliation, to effect a descent on some part of England, with a view of destroying the shipping. It was also his intention to make some person of distinction prisoner, whom he resolved to detain as a hostage for the security of, and in order to exchange with, the American pri-

[DESPERATE ENGAGEMENT BETWEEN THE BON HOMME AND THE SERAPIS.]

oners that were confined in England.

Paul was now acting a conspicuous part on the theatre of the world, and in the midst of the greatest revolution that ever agitated the political world. Admiral D'Orvilliers, to whom he told his project, offered to procure for him a captain's commission in the French marine, that, in case he met with any disaster, he might claim the protection of his Most Christian Majesty; but, however advantageous this was, he determined to decline the acceptance, because, in the first place, he was not authorised by Congress to change his flag: and in the second, such conduct might have rendered his attachment to America suspected.

He accordingly sailed from Brest to Ireland, neglecting the capture of a number of vessels within his reach, as he did not wish to diminish the strength of his crew. Near to the entrance to Carrickfergus, he, however, seized on a fishing boat, manned by six persons, who proved to be pilots. The *Drake*, a twenty-gun ship, happened to be then in the road, and even within sight, and he imagined it possible to obtain possession of her by surprise during the night.

With this view, he immediately gave orders for making the necessary preparations; but the mate, who had drank too

much brandy, did not let go the anchor according to orders, which prevented the *Ranger* from running foul of the *Drake*, according to his intentions. As he had reason to believe that his appearance had not hitherto given any alarm, he deemed it prudent to cut his cable, and return into St. George's Channel.

When the weather became favourable, he determined a second time to attempt a descent; this project, however, greatly alarmed his lieutenants; they were poor, they said, and their object was gain, not honour; they accordingly excited disobedience in the ship's company, by persuading them that they had a right to determine on the operations of their commodore.

They happened to be at this period within sight of Whitehaven, at the mouth of the Solway Frith, in which there were about four hundred sail, some of them of two hundred and fifty tons burden; and Paul determined to take advantage of the ebb-tide when the shipping was dry, to destroy them. To effect this it was necessary to land about midnight, with a party of determined men, and seize on a fort and a battery which defended the port. His two lieutenants being averse to the enterprise, and yet being unwilling to discover their true motives, feigned illness. On this he determined to take the command in person, and with some difficulty prevailed on thirty volunteers to follow him.

With this handful of men, and two small boats, he quitted the *Ranger*, at eleven o'clock at night, and rowed towards the harbour; but it being further off than they imagined, and the tide against them, day broke before they effected a landing.

He now sent the smallest of the boats towards the northern side of the harbour, to set fire to the vessels, and he advanced with the other to the south, to take possession of the fort and battery, the first of which was taken by assault, he himself being the first to enter it through one of the embrasures. They then spiked the thirty-six cannon mounted on the batteries, and then advanced towards the south, with a view of burning all the vessels, when to his infinite astonishment, he beheld the other boat returning without having accomplished any thing.

On this he thought it best to unite his forces with a view of effecting, at least, some part of the enterprize. In short, they set fire to some of the vessels, and they soon burned with great fierceness, and began to communicate; but, as it was now eight o'clock in the morning, and the inhabitants began to approach near the invaders in crowds, he could no longer defer his retreat.

On his return on board the *Ranger*, the wind being favourable, he set sail for the coast of Scotland. It was now his intention to take the Earl of Selkirk prisoner, and detain his lordship as a hostage, in conformity with the project already mentioned. It was with this view, that about noon of the same day, he landed on that nobleman's estate with two officers and a few men. In the course of their progress, he fell in with some of the inhabitants, who taking him for an Englishman, observed that Lord Selkirk, was then in London, but that her ladyship and several ladies were at the Castle.

On this, he determined to return; but such moderate conduct was not conformable to the wishes of his people who were disposed to pillage, burn, and destroy every thing, in imitation of the conduct of the English towards the Americans. Although he was not disposed to copy such horrid proceedings, more especially when a lady was in question, it was yet necessary to recur to such means as should satisfy their cupidity, and, at the same time, provide for Lady Selkirk's safety. It immediately appeared to him to be the mode to give orders to the two officers to repair to the castle with men, who were to remain on the outside under arms, while they themselves entered alone. They were then instructed to enter, and demand the family plate in a polite manner, accept whatever was offered to them, and then to return, without making any further inquiries or attempting to search for more.

In this he was punctually obeyed; the plate was delivered. Lady Selkirk herself observed to the officers, that she was exceedingly sensible of their commander's moderation; she even intimated a wish to repair to the shore although a mile distant from her residence, in order to invite him to din-

ner; but the officers would not allow her ladyship to take so much trouble.

Next day he prepared to return to Carrickfergus, to attack the *Drake* in open day, but the lieutenants were so averse to the project, that the crew of the *Ranger* became so mutinous, that he ran no small risk of being killed or thrown into the sea; and but two days before, he was on the point of being abandoned, and left ashore at Whitehaven.

In the meantime, the captain of the *Drake* sloop of war, having been informed of their descent at Whitehaven, prepared to attack him; and while every thing was getting ready, he despatched an officer on board his boat, with a spy-glass, in order to reconnoitre the *Ranger*. On this, Jones immediately masked his guns, kept his men out of sight, and disguised his vessel in such a manner as to resemble a merchantman; in consequence of this, the crew of the boat were deceived and taken. This trifling success produced the effects of enchantment on his sailors, who were no longer averse from giving her battle.

The *Drake* having fired a gun to recall her boat, hoisted her anchor, and came out, attended by a number of yachts and pleasure-boats, with ladies and gentlemen on board; but, when the engagement became serious, they thought proper to withdraw to a respectful distance. No sooner did the enemy make his appearance, than he lay-to, determined not to engage until she came within pistol-shot. The engagement was accordingly sustained with great vivacity on both sides during an hour and five minutes, when the English captain and lieutenant being both mortally wounded, the English flag was lowered, and Paul took possession of her. He regretted greatly the death of these brave men; and committed them to the ocean with all the honours due to their valour. He at the same time dismissed the six fishermen, whom we have before mentioned, whose loss he repaired, and whose services he recompensed out of his own purse.

The *Drake* was greatly damaged in her masts and tackling, and lost forty-two men either killed or wounded during the action. He had before also taken several prizes; but as his complement of men had only amounted to one hundred and twenty-three, he retained no more than two of them, which arrived in safety at Brest, where he himself anchored with the *Ranger*, and *Drake* on the 7th of May, after an absence of twenty-eight days, during which he had taken upwards of two hundred prisoners. This expedition was of great detriment to Great Britain, as she was not only obliged to fortify her ports, but also to permit the arming of the Irish volunteers, as Lord Mountmorris demonstrated in a speech in Parliament that year.

During the course of the war, he found it impossible to restore the plate belonging to the Selkirk family: he, however, purchased it at a great price, and at length found means to send it by land from l'Orient to Calais, by means of Mr. de Calonne, who transmitted him a very flattering letter on the occasion: in short, he at length received a very obliging letter from the Earl of Selkirk, acknowledging the receipt of the plate.

Paul next obtained the command of the *Le Duras*, until a better vessel could be procured; he called her the *Bon Homme Richard*. She was a very old and infirm vessel, that had made four voyages to the East Indies, &c.

He now received orders to escort a fleet of transports and merchantmen from l'Orient, destined for different ports, between that and Bourdeaux; and after that, he was to drive away the English cruizers from the Bay of Biscay, and then to return for further orders.

After executing this commission, on his representing how necessary it was to make a diversion in favour of the Count D'Orvilliers, then cruising in the Channel, he then received a *carte blanche*, during six weeks, without any other restriction than that of repairing to the Texel by the 1st of October. By this time he received intimation from England, that eight East Indiamen were soon expected on the coast of Ireland, near Limerick. This was an object of great attention, and as there were two privateers at l'Orient ready for sea, the captains of which offered to place themselves under his orders, he accepted the proposition.

Towards the latter end of August, Jones entered the North Sea, where he captured several vessels; and learned by the prisoners that the capital of Scotland and the port of Leith were left totally defenceless, he deemed it practicable to lay these two places under contribution; therefore he distributed red clothes to his men, and put some of them on board the prizes, so as to give them the appearance of transports full of troops.

All the necessary arrangements were taken to carry the enterprise into execution, but about a quarter of an hour before the descent was to have been made, a sudden tempest arose, and drove them out of the Forth, or Edinburgh Frith. This did not, however, deter him, notwithstanding the smallness of his force, from forming enterprises of a similar nature; but he was obliged to content himself with spreading alarm on the coast, and destroying the shipping, which he did as far as Hull.

On the morning of the 23rd, a fleet of forty-one sail appeared off Flamborough-head, and Jones hoisted the signal for a general chase. The merchantmen, observing the American squadron bearing down upon them, made directly for the shore; the two convoys steered for the open sea, and prepared for battle. These two were the *Serapis* and the *Countess* of Scarborough. The alliance paid no attention to signals from the *Bon Homme*, and Jones could not come up with the *Serapis* till seven in the evening, when commenced one of the fiercest naval engagements which history has recorded. The *Serapis* was a new ship, of forty-four guns; her crew picked men; and her commander, Captain Richard Pearson, celebrated for skill and courage.

Except as regarded her captain, the *Bon Homme* was in all respects the contrary of the *Serapis*. The vessel was old, the timbers unsound, some of the guns worn out, and the crew, a heterogeneous medley of six nations,—Americans, French, Maltese, Portuguese, and Malays. Add to which, the *Bon Homme* had not her full complement of men, two boats' crews having been lost on the coast of Ireland, and a third boat's crew Jones had sent away to seize a brigantine. The decided superiority of the *Serapis* over the *Bon Homme* was evident to all on board the latter. Jones felt that everything depended on himself, and wonderfully did he approve himself equal to the task.

The action commenced, the two vessels being abreast of each other, and the broadsides were almost simultaneous; but their nearness to each other prevented the *Serapis* from manœuvring to advantage, and in a short time the *Bon Homme* ran her bows into the stern of the *Serapis*. Captain Pearson, aware of the vast inferiority of the *Bon Homme*, deemed this the consequence of her crew's inability to work her, and demanded if she had struck. Jones himself replied that, "he had not yet begun to fight."

Paul's vessel, however, was already much galled by the broadsides of the *Serapis*, and was pierced in several places under water. The water was fast rushing in, and she was in manifest danger of sinking. All this time, though the need of support must have been evident, the *Bon Homme* received no aid from the rest of the squadron; the *Pallas* was engaged with the *Countess* of Scarborough, and the other two, the *Vengeance* and the *Alliance*, kept aloof, with the hope that Paul Jones might be beaten. The *Serapis* was much more manageable than Jones's ship; but in attempting to separate from the *Bon Homme*, her bowsprit ran in over the *Bon Homme*'s poop by the mizen-mast.

In the midst of the confusion, Jones instantly grappled, the action of the wind brought her stern round to the *Bon Homme*'s bows; by this means the ships lay close alongside of each other, their guns touching, and their yards entangled. This was a bold expedient of saving a sinking ship, and preventing the effect of the eighteen pounders under water.

The battle, to use his own words, was fought with unremitting fury.

The rammers were run into the respective ships to enable the men to load. The *Serapis* now fought with the actual view of sinking the enemy, and her broadsides were incessant. But for the two ships being lashed together, the *Bon Homme* must have struck or sunk, or both. The battery of twelve pounders, on which Jones had placed his chief dependence, which was commanded by his only lieutenant, and manned by Americans, was entirely silenced and abandoned. Colo-

nel Chamillard, who commanded a party of twenty French volunteers on the poop, abandoned his station, having lost nearly all his band. Notwithstanding this, and the certainty that, sooner or later the *Bon Homme* must sink, Paul Jones fought as if assured of victory; he shouted again—"Now victory was sure—was his." The main mast of the *Serapis* went overboard, when Captain Pearson hauled down his colours, and struck to Paul Jones, nor was there time to do more than remove the wounded before the *Bon Homme* sank!

The glory of this victory must be conceded entirely to Paul Jones; but for the exercise of his authority as captain, his vessel had long before struck. The result was wholly owing to his cool and determined courage.

After this victory, Paul Jones instantly assumed the command of the *Serapis*, on which he erected jury-masts; but the sea was so tempestuous, that it was ten days before they reached the Texel. No sooner was his arrival known, than vessels of every description were fitted out from the ports of Great Britain against him, and two of these were stationed for three months at the mouth of the Texel; he, however, had the good fortune to escape, and entered the port of Corunna, January 16, 1780.

On his return to France, he found that the French commissary had made a private sale of his prizes to the king without consulting him; on this he repaired to Versailles, along with Dr. Franklin, but was received with great coolness by the minister of marine. The public, however, received him at the opera, and all the public places where he appeared, with the most lively enthusiasm; this, added to the very favourable reception he received from his Majesty, afforded him singular satisfaction; and the Minister of the Marine, from that moment paid him the most marked attention. The Minister of the Marine, a short time after this, lent him the *Ariel*, a king's ship carrying twenty guns, with which he sailed, October 8th, 1780, for America. The wind was at first favourable; but he was soon found after in danger of foundering on the Penmarks, and escaped only by cutting away his main and mizen-masts. As soon as the storm abated, they erected jury-masts, and returned to refit. In short, it was the 18th of December before he could proceed for Philadelphia.

During the voyage, he fell in with an English twenty-gun ship, called the *Triumph*, and, partly by stratagem, and partly by hard fighting, forced her to strike her flag; but, while they were about to take possession of her, the captain, taking advantage of her superior sailing, made off, and escaped. On his arrival in America, the Congress, on the representation of the Chevalier de la Luzerne, passed a law to enable him to accept the Military Order of France. The French Minister, on this occasion, gave an entertainment, to which all the Members of the Congress, and the principal inhabitants of Philadelphia, were invited; after which he was invested, in their presence, with the decorations of the Order.

Paul's health being impaired, he remained here till the latter end of 1783, when by an act of Congress, dated at Prince Town, November 1st, of that year, he obtained permission to come to Europe, to receive his share of prize-money due to him, and to his officers for their captures from the belligerent powers at war with France and America. This took him two years to settle; and he returned back in March, 1785.

Sickness now began to make serious inroads on Jones's constitution, thus he lingered till the beginning of June, 1792, when he breathed his last, in the forty-sixth year of his age.

NARRATIVE OF CAPTAIN KENNEDY'S DISTRESSES, FROM LOSING HIS VESSEL AT SEA, DECEMBER 23, 1768.

CAPTAIN KENNEDY and his crew, being twelve in number, sailed from Port Royal, in Jamaica, on the 21st of December, 1768, bound for Whitehaven; but on the 23rd, having met with a hard gale at north, they were obliged to lie to under a fore-sail for the space of ten hours, which occasioned the

vessel to make more water than she could free with both pumps. Under this situation they set sail, in hopes of making the island of Jamaica again, which, from their reckoning they judged, lay about ten leagues to the eastward. In less than an hour's time the water overflowed the lower deck, and they could scarcely get into the yawl, before the vessel sunk; having with much difficulty been able to take out only a keg, containing about sixteen pounds of biscuit, ten pounds of cheese, and two bottles of wine, with which small pittance they endeavoured to make the land. But the wind continuing to blow hard from the north, and the sea running high, they were obliged, after an unsuccessful attempt of three days, to bear away for Honduras, as the wind seemed to favour them for that course, and it being the only visible means they had of preserving their lives.

On the 7th day, they made Swan's Island, but being destitute of a quadrant and other needful helps, they were uncertain what land it was. However, they went on shore, under the flattering hopes of finding some refreshments: but to their unspeakable regret and heavy disappointment, they only found a few quarts of brackish water, in the hollow of a rock, and a few periwinkles. Notwithstanding there was no prospect whatever of finding water, or any other of the necessities of life, it was with the utmost reluctance some of the crew quitted the island. Having been at length prevailed upon, through the captain's remonstrances and persuasions, they embarked in the evening with only six quarts of water, for the bay of Honduras.

Between the seventh and fourteenth days of their being in the boat, they were most miraculously supported, and at a time when nature was almost exhausted, having nothing to eat or drink. The wild sea-fowls, hovered over their heads in the evening and lighted on their hands when held up to receive them. Of these the sailors ate the flesh, and drank the blood, declaring it to be as palatable as new milk. The captain ate twice of the flesh, and thought it very good.

Though Captain Kennedy neither tasted food nor drank for eight days, remarkable as it may seem, he did not feel the sensations of either hunger or thirst; but on the 14th, in the evening, his drought often required him to gargle his mouth with salt water, and on the 15th it increased, when happily for them they made land, which proved to be an island called Ambugris, lying at a small distance from the main land, and about fourteen leagues to the northward of St. George's quay (where the white people reside) in the bay of Honduras; though the want of a quadrant and other necessities left them still in suspense. They slept four nights on this island, and every evening picked up periwinkles and conchs for next day's provision, embarked every morning, and towed along the shore to the southward. On the first evening of their arrival here, they found a lake of fresh water, by which they lay all night, and near it buried one of their people.

On walking along the shore, they found a few cocoa-nuts, which were full of milk. The substance of the nuts they ate with the periwinkles instead of bread, thinking it a delicious repast, although eaten raw, having no implements whereby to kindle a fire. The support which they received from this shell fish was very great.

On the 3rd day after their arrival at this island, they buried another of their crew, which, with four who died on the passage, made six, who perished through hunger and fatigue.

On the fifth day after the arrival at Ambugris, they fortunately discovered a small vessel at some distance under sail, which they made for. In the evening they got on board of her, and in a few hours (being the 10th of January, 1769) arrived at St George's quay, in a very languid state.

During this distressing voyage Captain Kennedy, had recourse to the following efficacious expedients, which he had learned from the perusal of a treatise written by Dr. Lind, and which beneficial circumstances should certainly be known to all sea-faring people, in case of similar calamities; this was soaking his clothes twice a day in salt water, and putting them on without wringing. It was a considerable time before he could prevail upon the crew to follow his example; but when they witnessed the good effects which this

measure produced, they afterwards practised it twice a day of their own accord; and to this may be attributed the preservation of their lives.

There is another remarkable circumstance, which is, that they daily made the same quantity of urine, as if they had drank moderately of any liquid; this must be owing to a body of water having been absorbed through the pores of the skin. The saline particles remaining in their clothing, became incrustrated by the heat of their bodies and that of the sun, which cut and wounded their posteriors, and from the intense pain, rendered sitting very disagreeable. They found, however, upon washing out the saline particles, and frequently wetting their clothes without wringing, that the skin became well in a very short time, and such very great advantage did they derive from this practice, that the violent thirst went off; the parched tongue was cured in a few minutes, after bathing and washing their clothes; at the same time they found themselves as much refreshed as if they had received some actual nourishment.

LOSS OF THE AMERICAN SHIP GOLDEN RULE, CAPTAIN AUSTIN, COMMANDER,

Which sprung a Leak, September, 29, 1807, and of the Sufferings of the Crew.

The ship, Golden Rule, Captain Austin, sailed from Willcas, set with a cargo of timber, September 8, 1807.

On the 29th, she experienced a severe gale from the south-east; and at eight o'clock, a.m. they discovered she had sprung a leak, and had four feet water in her hold; at nine it had increased to eight feet, notwithstanding they had two pumps going, and were throwing her deck load overboard, which they were enabled to do very slowly, from the sea driving the planks about the deck, and wounding the crew.

About ten o'clock, the water had risen to twelve feet, and the gale had also evidently increased; the crew and all on board were quite exhausted; and going into the cabin, they found she was welling fast. The main and mizen-masts were now cut away, to prevent her upsetting, and she was quite clear of her deck load. At eleven o'clock she was full up to her main deck, and all her bulk heads were knocked away.

It now occurred to the crew, to endeavour to save some bread; and Mr. Boyd, the first mate, with great resolution, went into the cabin, and gave out some bread, and two bottles of rum; but so rapidly did she fill, from the timber of her cargo shifting, that he was forced to break through the skylight to save himself.

Their small stock of provisions was now put into the binnacle, as a secure place. It had been there but a few minutes, when a tremendous sea struck them, and carried away the binnacle. They had now little hope left—the wheel was broken, and they proceeded to secure themselves as well as they could, some in the fore-top, and the rest were lashing themselves to the taffrail; before they could accomplish the latter plan, another sea, if possible, more heavy than the former, hurried them all from their places, and washed two of their poor men overboard; they were seen swimming for the ship a short time, when a wave hurried them from the sight of their lamenting comrades.

They now endeavoured to keep the ship before the wind, which they were enabled partially to do through the night. The next day, another of their men died from cold and hunger.

The ship's deck was now blown up, and her side stove in, and they had all given themselves up, when on the 30th, at noon, they were roused by the cry of, "A sail!" and they had the satisfaction to see her bear down for them. About three she came alongside. She was the brig George, of Portland; and Captain Wildridge sent his long-boat, and took them from the wreck.

THE MURDERS ON BOARD THE TORY.

The following is a complete account of the above horrible transactions, and is as gross a specimen of cold-blooded atrocity and brutality as ever stained the annals of this, or any other country. We cannot but feel surprise, as Englishmen, that a crew of twenty-six persons could be eye-witnesses, and, in more than one instance, sufferers, by this man's (the Captain's) demoniacal ferocity, and yet raise no arm to resist and stop them. His cunning and artifice, in charging his crew with mutiny, to screen himself from the consequences of his own inhuman sins, are only paralleled by his barbarity and cruelty.

The dreadful occurrences on board the Tory commenced

on or about the 23d of September, when the ship missed the Island of Ascension. The crew, who were in general exceedingly obedient, became dissatisfied at the shortness of provisions and the scanty supply of water, and a complaint was made, which appears to have been too well founded, that the captain had not taken in a sufficient store of water and provisions at the last place he touched at. However, there was no open revolt or disobedience of orders. About the same time, the Tory spoke to a French barque, *L'Avenir*, and obtained a supply of water, provisions, a cask of wine, and some brandy. After this, the captain, who was sober, steady, and collected during the former part of the voyage, was continually intoxicated, and drank to excess of the wine and spirits which he obtained of the French vessel. He suspected the crew of having some design upon him, and questioned Rambert, the chief mate

THE BARQUE TORY, CAPTAIN GEORGE JOHNSTONE.

who denied that he knew of any hostile intentions towards him. He kept the mate on his knees for several hours in the cabin, wounded him, and then sent him upon deck. He also sent for the crew, and cut three of them, named Reason, Cone, and Lee, in a most savage manner, and while they were bleeding from their wounds, he sent two to the mizen-top and one to the main-top, loaded with irons and shackles, and again cut at them with a sword. The chief mate, who knew his tyrannical disposition, advised the crew to secure him, and said he had threatened to kill all hands, and with some difficulty he made them go aft, armed with belaying pins and capstan bars. They made known their design to one of the men named French, an especial favourite of the captain's, who advised them to desist from their attempt, and the crew, who had

not quite made up their minds what to do, went forward again. It is to be regretted that, after the atrocious and cowardly manner in which the captain mutilated three of the men, and after he had wounded the chief mate, they did not secure him, sail the vessel to the nearest place, St. Helena, and openly and fearlessly appeal to the British authorities there. If this had been done, several murders and much bloodshed would have been prevented. Directly after the crew had relinquished their half-formed design to seize the captain, he ordered the chief mate in irons, and wounded him in several places with a sword, and nearly cut his ear off. He wounded him while he was in irons, and ordered him to be released, and chased him round the deck, cutting at him as hard as he was able. The unfortunate mate, fearful he would be cut to pieces, jumped overboard and

perished. This was the first murder; and all the horrible circumstances are so well substantiated as to preclude the possibility of a doubt. The wounded men were taken out of irons a day or two afterwards, and, with an exception of an occasional outbreak on the part of the drunken captain, nothing happened until the arrival of the ship at Fayal, where the captain went ashore and transacted some business with the British Consul, at whose house he drank to excess of wine. He told a boy, named Stephens, the son of one of the female passengers on board, and who accompanied him on shore, that he intended to kill all hands when he returned to the ship. He wounded one of the men in the boat on the way to the vessel, and swore he would clear the boat's crew fore and aft. As he ascended the ship's side, he appeared to be drunk, and exclaimed, "Here I come, like a seven bells half struck." He commenced cutting

and wounding the crew soon after he returned to the ship. Mars, the second mate, and Reason, an able seaman, were wounded and put in irons, and while in that state, the savage monster mutilated them in a barbarous manner. They were placed against the cabin door, and the captain pitched the sword at them, and when Mars was unable to stand, from loss of blood, some of the men were ordered to prick him with a bayonet to make him stand up. This proving ineffectual, he was hauled from the floor of the cabin and raised on his feet, by means of a rope fastened to his body, and drawn over a cleet. He was then sent on deck, and orders were given to squeeze him, which the men, acting from fear, proceeded to do; but the poor fellow died while they were about to effect the horrible process. Reason died in the cabin, after being cut to pieces by the captain, who completed his death by running him through the

body with a bayonet. The only remorse which the ferocious monster displayed, was at the time Reason was dying; for he held him up, and said, "Tom—dear Tom—do speak two words." The captain had been drinking nearly the whole of the day he murdered Reason, and while cutting him about, he exclaimed vauntingly, "here's the arm that slew the van at Bannockburn." Some others of the crew were wounded about the same time, and without the least provocation. The captain seemed to have felt the awful situation he was in after the three murders; for he compelled Spence, and one of the apprentices, to make false entries in the log relating to the transactions, and much cunning was exhibited by him. Raimbert, the chief mate, was stated to have been mutinous, and to save himself from the consequences, to have committed

suicide by jumping overboard, and to have given three cheers before he did so. It was entered that Mars and Reason were killed by the crew; and this remarkable entry was made in relation to Mars, "we have come to the conclusion that Mars was a mutineer of the blackest dye." The uneasiness of the captain increased as the ship approached, and he began to concoct measures to justify himself for the atrocious crimes he had committed. He proposed that all the crew should be called aft—that French who succeeded Raimbert as chief mate should call out mutiny, and that an attack should be made upon the men. This plan was carried into effect off Plymouth, where, if there had been any mutiny, immediate assistance could have been obtained. A dreadful scene ensued, the men were wounded by the captain and French, and the latter con-

tinued firing pistols, loaded with powder, at the men for three quarters of an hour; a Frenchman named Reulau, who, shipped in the name of Morris, was shot by the captain, with a pistol loaded with ball, which passed through his thigh while he was in a kneeling position, and entered the calf of his leg. A man named Gair received 25 sabre cuts about his head, face, and body, and his face was burnt with gunpowder. The Frenchman and Gair are ruined for life, and will never be able to go to sea again. Other men were burnt and mutilated in a shocking manner. The crew, including the master and boys, consisted only of twenty-six persons; of these, three were barbarously murdered; one was shot, and thirteen severely wounded and scorched. The mind recoils with horror at the detail of such atrocities. The closing scene of this tragedy was the confinement of the crew, and putting them in irons at Deal. They were brought to London, and to use the words of Mr. Lewis, the surgeon, they scarcely looked human. They were charged with mutiny, but the tables were soon turned, and their crafty accuser was soon compelled to change places with the unfortunate men. It has been a matter of surprise, that a British crew should have submitted to such barbarous treatment, and it does seem really astonishing. They were a mixed crew. There were two Swedes, a Norwegian, a German, a Frenchman, and an Italian among them. They appeared to be completely overawed by the ferocity and desperate conduct of the captain, who was cunning enough to arm his two countrymen, Sinclair, the carpenter, and Spence, (who have given their evidence very cautiously), French, and the apprentices, while he was cutting and wounding the men, and firing at them on deck.

SUMMARY OF THE EXAMINATION OF CAPTAIN JOHNSTONE.

CAPTAIN GEORGE JOHNSTONE, the master of the barque *Tory*, from Hong Kong, who preferred an unfounded charge of mutiny against seventeen of his crew, and who was subsequently taken into custody himself, was again brought before Mr. Broderip at the Thames Police Court. He stood charged with the Wilful Murder of William Rambert, chief mate; William Mars, second mate; and Thomas Reason, able seaman; during the voyage from Hong Kong to London.

The first witness called was Julian Cordivallio, an Italian seaman, who was given into custody at Deal, brought to London in irons, and charged with mutiny, when the captain excepted him from the others, and he was immediately liberated. On being sworn, he was desired by Mr. Symon's, the chief clerk, who conducted the examination, to confine himself to the circumstances attending the death of Reason. After a good deal of rambling, he stated "that he saw Tom Reason sitting on a sofa in the cabin, and the captain was asking him about a mutiny. Reason was hurt before this, and some physis was administered to him." The witness here begun muttering to himself, in broken English, about his determination to tell the truth, and that he would not tell a lie for £20,000. With some difficulty, it was elicited from him "that the captain had cut Reason with a sword, and that was the cause of giving him medicine. That was when the ship was crossing the line. On the last occasion when Reason was wounded, he was very prudent and quiet, and the captain asked the boy Jemmy for a bayonet, as the sword would not do. The bayonet was brought to the captain, who immediately hit Reason with it on the chest, but witness could not recollect whether it was the larboard or starboard side." (Some laughter was here indulged in, at the odd manner of the witness, which was repressed by the ushers.) The witness continued—"I called the cook directly and I cut Reason's flannel that I might discover the wound, so as to stop the blood with some cotton, and the captain then said 'Oh do, Tom, for God's sake, speak two words!' and the captain threw the bayonet on the cabin floor. The man soon died. He did not live above a quarter of an hour after he received the wound with the bayonet. The corpse was hauled on deck." He was directed to state what he knew about the death of Mars. He said "The captain repeatedly called Mars 'Brute, brute, brute,' and cut him with a sword. The last time he saw Mars, was at the time the captain was getting his dinner. The captain sent for Mars; but whether it was a boy or not he could not

say. But if it was a boy," said the witness, "send for him; let him speak. (Laughter.) Mars came down into the cabin, and Spence, Harry Slack, the carpenter, and witness, were in the cabin."—Mr. Broderip: "What did the captain do to him?" Witness: "He struck at him with the sword. He was almost killed when he came down, and all the blood over him, and he was in irons."—Mr. Broderip: "Where was he cut?" Witness: "He was cut any way—any way wherever you could name, on de breast, de face, over his head, and all his fingers were nearly cut off. (Sensation.) I respected my officer just as much when he was in the irons as if he was on duty. The captain ordered us not to call him any more Mr. Mars, but call him Mars. He told me and the boy not to touch him with our hands, but to prick him up with the bayonet, and make him stand up. Then he says, 'Are you and Harry not able to make him stand up?' and I said, 'No, sare.' Well, then," says he, "make him fast with a rope somewhere or other." There was a cleet run into the deck, and there was a bag of seizin (old rope) underneath the table—so he told us to make fast to this cleet. So we make fast to both Mars' hands, which were in irons together. We did it by the captain's order, 'or else,' said he, 'you and the boy, little Harry, shall be punished together,' and we were afraid of him. While he was fastened to the cleet, the captain struck at him with a sword, as if he was a porpoise."—The witness here described the sword as a spad, and Mr. Symons, being at a loss to understand him, Mr. Broderip said: "He is thinking in Italian, and endeavouring to explain himself in English."—The Italian proceeded, and was told to use the English word for the cutlass. "The captain while at dinner kept throwing the sword at Mars, and sometimes it stuck in one place and sometimes in another; and when it fell, he told little Harry to pick it up and throw it at him again, for he meant to stick him all over. (Great sensation.) Well, then, after he had done so, and all the blood came from his body, the captain said: 'Take that brute away; take him away; squeeze him.' The captain ordered him to be taken on deck, and the body was very heavy. The captain said: 'What for, don't you arm yourselves? Go and call all hands to squeeze that brute—that rascal; or else I'll squeeze somebody else.' The captain sent me up to tell all hands to squeeze him, but not for me to put my arm on him. I took Mars, along with the rest, to the main hatch, with the bayonet in my hand, but did not touch him. The captain sent for me back into the cabin. He asked me if that function was done; if they had squeezed the man; and I said: 'I don't know, sir.' At the time the boy came upon deck with a pistol in his hand."—Mr. Humphreys: "Which boy does he mean?" Witness: "Barry Yelverton, sir. He came and said he was dead. The captain said a single twine is enough for him; don't use so much twine. He meant the canvass, and twine to sew it up, to bury him. Before Mars was squeezed up, he asked for some water, and I brought him some. That is all I know, sir."

William Dunn, the cook, was then called and sworn. He is one of the men originally charged by the prisoner with mutiny, and brought from Deal to London in irons. He said "He could not recollect dates," and then deposed as follows:—"I was in the cabin when Reason was called down, about half-past 12 o'clock one day, and saw the captain, with a bayonet in his hand, standing over Reason. I heard a noise, as if the captain was sticking a bayonet into Reason's head, and he was calling out for mercy, to which the captain said 'he would show him none at all.' The boy Glover then came into the pantry where I was kept, and told me the captain had killed Reason. I was sent up for some water, and when I came down into the cabin again Reason was lying on the captain's sofa. The captain had his hand on Reason's left breast, and he told me Reason was dead. The captain took his hand off his breast, and I saw two wounds which had been made with a bayonet, from which the blood was oozing. I told the captain he had better get some cotton to be put on the wounds. The body of Reason was then taken out and laid at the pantry door, and five men were called to take him upon deck. The captain then ordered the body to be laid out on the fore-castle. Next morning the body was sewed up in some canvass, and Spence (one of the apprentices) read the funeral service, and the body was committed to the deep."

William Dunn, the cook, was re-called, to state what he knew relating to the death of Mars, and he confirmed all the horrible details as related by the Italian and other witnesses, but he gave a more distinct account as to what occurred when Mars was first called into the cabin after the captain came on board from Fayal, about the 25th of September. "The captain, on his return to the vessel, then off the island, sent for Mars and spoke to him, and immediately struck him with the cutlass, and cut his face, and he then told him to jump out of the stern windows of the cabin. Mars said 'he could not,' and was sent out of the cabin. In a few minutes he was again sent for, and again cut, but on this occasion with more severity. He was then sent forward to the forecabin."—Mr. Broderip: "Where was he cut? Now, be correct." Witness: "The first gash was across his whiskers, on the right side of his face—a dreadful cut. The captain came upon deck with his cutlass in his hand after Mars, went into the forecabin, and shortly afterwards he went below into the cabin and went to bed. Next morning the captain sent for Mars again. In the afternoon I saw Mars in the cabin in handcuffs. The captain sent for him several times that evening, and cut him every time he came down. The captain sent for him on the following afternoon, and he asked to be released from his handcuffs. The captain ordered the carpenter to take off his handcuffs, and then took him into his own cabin (an inner one in the principal cabin). I heard a great noise in the captain's cabin, and then heard Mars breathe short and thick as if he were strangling. Then all was quiet. In a minute I heard a noise again, and heard the captain tell Mars to jump out of the cabin window. Mars said 'he could not, and that he wished to be tried by the laws of his country.' The captain said 'he should not, but should have board-of-ship law.' Mars was then brought out of the captain's cabin into the other. He was then bleeding, his eyes glared, and he could scarcely speak. A few moans were all that could be heard to issue from him. He was put in irons, and sent on deck and laid on the main hatchway. In about three-quarters of an hour he was again brought down, cut with the sword, and again sent on deck with the blood streaming from him. He was sent for to the cabin several times that evening, and cut up by the captain. His fingers were cut to pieces, the joints were hanging down, and the bone was sticking out of his little finger. In the middle watch that night I was sent by the captain to tell the carpenter to put the best bower anchor shackle on his head. His neck was bared to let the shackle go over it, and the carpenter put it on him. Mars complained that his neck was too sore to bear it (the shackle, it ought to be stated, is of 50lbs. weight, made of iron). In the morning I saw the captain continually heaving a sword at Mars while he was at dinner. I went down into the cabin, and Mars was groaning and bleeding. I saw the captain repeatedly heave the sword at the dying man. The sword was frequently rattled against the cabin-door, against which Mars was standing. The captain said he would cut him up in inches. The cabin-door was opened, and I saw Mars with his head on one side dying. The captain ordered the hands to get a rope and haul him on deck, and squeeze him, and if they did not he would have their lives. Mars was taken to the main hatchway, and a strand was put round his body, but whether the men hove upon it, I cannot say. He asked for a drink of water, and he was given one, and a worm came up out of his throat. I went down into the cabin again, and shortly afterwards a man came into the cabin, and told the captain he was dead. The body was sewed up in canvass, and taken to the gangway. I read the prayers over him, and he was buried."

He was then examined on the transactions in the Channel, and deposed. "The pilot was taken on board off Plymouth. In the evening the captain sent for Thompson and Johnson, and cut them with the cutlass. He then sent for the boy, Beresford, and accused him of getting a strand to kill Mars. The captain cut Beresford with a cutlass. At 1 o'clock, next day, the captain sent for Cone and Gair out of irons. He told Gair he should be hung when he got to London, and hove a cutlass at him, but did not strike him. He told me to take them away, and put them in irons. Whilst at tea, in the evening, he sent for Gair again, and cut him with a cutlass. The captain then gave me his sword, telling me to go forward, and send all hands

down. They were forward, and were doing nothing, and came down directly. When they came, the captain cut them with a cutlass, and broke a chair over Thompson's head. They were then sent on deck again, but shortly after, I was sent for them again."—Mr. Broderip: "Were they doing any thing?" "Nothing, sir. I could not see them all, so I sent down four of them, Gair, Burton, Nelson, and Alison. When they came, the light was put out, and I heard the captain call 'Mutiny.' There were only four of the crew in the cabin. The captain asked French to fire at them. They had nothing in their hands, used no mutinous gesture or expression, and were on their knees. French fired at them repeatedly. I told French to put very little powder in the pistol. He fired with powder and crumbs of bread. I asked him to put in small charges, and he said he would not; that he would put in full charges, and let them know that he was chief mate now, and that he'd hang Thomas Gair. I don't know if the captain answered that, but French called me on deck to lend him a hand to do it, but we were called to the cabin by the captain. I was shortly after sent again for the men. Three came down. Gair was one of them. The captain was then asleep in the water-closet, and I told them to go on deck again. Gair was put in irons. I could not see what time the captain came out of the water-closet, but no more injuries were done from that time."—To Mr. Broderip: "I was in the cabin when Morris was shot. He knelt by the cabin-door. The captain took his pistol and aimed at him. He aimed at his breast, but it fell. The muzzle was at his breast, but it fell when it flashed in the pan."—"What happened then?" "He ordered the boy, Glover, to prime it again, which was done, and the captain aimed the pistol at the man again, at the same time turning away his head. The pistol dropped a second time, and went off, when Morris said that he was shot."—Mr. Broderip: "In what state was the captain?" "Not sober, sir; he was intoxicated at the time."—"Did he drink much during the voyage?" "I never saw him drunk before the 23rd of September."

Barry Yelverton, the apprentice (who has been erroneously described as the grandson of the celebrated Lord Avonmore), was next called. He is a very intelligent youth; and on being ordered to state all he knew relating to the death of Mars, the second mate, said: "I was in the cabin when the captain sent for Mars, and I saw him cut at him. I now allude to the last day—the day he died. He was down several days before that. I saw a large piece cut off his head by the captain. I cannot tell how many days that was before he died."—Mr. Broderip: "About how many?—recollect yourself." Witness: "I think it was the day before—the night time. I saw no more of Mars the day following that on which the piece was cut off his head. The last day he was called into the cabin, the captain cut at him a good deal with a cutlass, or sword. At that time Mars was all over blood. I could scarcely see his face for blood."—Mr. Symons: "Was he at liberty, or in any way confined?" Witness: "He had been in irons before that. I cannot exactly say whether he had the handcuffs on when he last came into the cabin, but his hands were in such a position before his body that I have no doubt they were confined. Mars could not stand at the time, and one of the boys and Julian tied his hands up to a beam, while the captain cut at him; I gave Julian a wink to take the man down out of that. Mars was so weak at that time, he could not hold his head up. He was taken down, and lay gasping on the cabin-floor for a short time, until the captain ordered him to be taken upon deck. The captain looked at him and said, 'Look at the murderer, don't he look like one?' I can't say who took him on deck, but I heard the captain say, 'Squeeze him, squeeze him; or I will squeeze you.' He was taken on deck, and shortly afterwards some one came down into the cabin, and said Mars was dead. The captain told me to go upon deck, and ascertain if he was dead. I went upon deck, and saw him lying dead, abreast of the main-hatch, on the larboard side."

Barry Yelverton desired to confine himself to what had occurred since the arrival of the vessel at Plymouth:—"On the day the pilot came aboard in the morning the captain was speaking to me and French about the men being cut so, and said, 'Now, boys, we'll send them all aft, and swear mutiny

against them." The night before he took me to the cabin, he took a strand, and tore the shirt off my back. The next morning my eyes were black, and my neck all swelled. He said to me, "Yelverton, I am sorry for what I have done to you; 'tis a wonder I did not kill you." He said, "Do you know the way you addressed me yesterday?" I said, "Yes, sir." It was at dinner, and he was threatening to kill all hands in the ship, and I said to the captain, "For God's sake, don't kill any more." French said, "Yes, Captain Johnstone, you can kill them all, if you please," and added, "Never mind this fellow; the moon affects him." I said to French, "There is very little of the moon in that; I speak for the man's good." This conversation took place the day before, and that was what the captain meant when he asked if I remembered how I addressed him. I said to that, "There was no harm done," and went on deck again. The pilot came on board shortly after, and things went on well till towards the latter part of the evening, when the captain sent the cook to tell the crew to come aft. Before the crew came to the cabin, he ordered me to my berth, and said, "When the crew come to the cabin, come you in and say, 'Look how they abused me,' and say, 'they had me lashed against the mizenmast, with a rope round my neck,' so that it would show the crew were determined to do something when they approached the cabin. I got up when the crew came aft, and went to the larboard after-cabin. They were firing away with pistols—French and the captain; sometimes one would fire, and sometimes the other. The crew were sober, sometimes kneeling and sometimes standing, as the captain ordered them. After I went into the cabin, I saw French and the captain shoot at Nelson and Gair, and cut them a good deal with the cutlass; French cut the most at that time. I was in the cabin when Morris was shot. They were called down several times that night. There was a good deal of confusion when Morris was shot. The man Lee was standing at his side."—Mr. Broderip: "In what position was Morris when he was shot?" "To the best of my knowledge he was kneeling at the time."—"In what position and state was the captain?" "I think, sir, he was rather intoxicated."—"Did you see anything else?" "The pistol missed fire the first time. The captain was standing with his arm extended and inclined downward. He snapped it, and it missed fire, when he cocked it again and it went off. The candle went out at the same time, and he called the boy to get him another light. When it came, Morris had left the cabin, but how he got out I cannot say. There was a good deal of cutting and hacking after that. The captain and French were cutting and hacking at the men every time they were sent down. He told me to take the pistol and shoot the men."—"Who?" "The captain."—Mr. Broderip: "Were the men doing anything at the time?" "No, they were kneeling on the deck. I held the pistol towards them."—Mr. Humphreys: "Were all the men there?" "They were. I threw the pistol on the deck, and told him it would not go off. He then gave me the cutlass to cut them down, and said, 'This will not miss fire,' or something that way. I stood with the cutlass in my hand, and spoke a little to the men, as I did not like to cut them, because I knew they had done nothing. I began speaking to the chaps—"Are you implicated in this?" but never struck one of them. I got them put off. The captain went by me speaking to Julian. I laid the cutlass on the table and shortly after went on deck. I do not recollect anything more."

James Glover, the steward of the *Tory*, a very young lad, was called to state what occurred between the captain and Rambert previously to the death of the latter. "Rambert dined with the captain in the cabin the day before his death, when they appeared to be on good terms."—Mr. Symons: "Was there anything particular amongst the crew that day?" "Nothing until about 7 o'clock at night, sir."—Mr. Symons: "What happened then?" "I was called to the cabin by the captain to give him a little brandy-and-water. I saw the mate, Rambert, on his knees praying the captain to forgive him. He was in the cabin about five hours in the same position—all the time on his knees. The captain was standing over him with a sword in his hand."—"Was Rambert then wounded at all?" "I did not observe that he was at that time. At 12

o'clock the captain left the cabin on some occasion or other; but previously to the captain going, he asked Mr. Spence, Barry Yelverton, and me, whether he should forgive Rambert. I did not hear what Spence or Barry Yelverton said, but I told the captain I would leave it to himself. He then left."—Mr. Symons: "Did you know of anything that Rambert had done?" "No, sir; after the captain went out of the cabin the mate slipped on deck. The captain then sent me and Barry Yelverton in search of him. That was about half-an-hour after the mate went on deck. We looked on deck, but could not find him. We then got a lantern, and saw him coming out of the maintops. He called out several times, and I returned him no answer, but went and told the captain where I had seen him. The captain told us to go and bring him into the cabin. We took the lantern again and went all round the decks, but could not find him. The captain then went on deck and sent French after him. He was not brought into the cabin again, and I did not see him afterwards. Thomas Lee, another of the crew, was in irons in the maintop, when Cone was in the mizen, also ironed. Saw Rambert come into the top. There were no wounds on him when he came to the top where I was. He tried to get off the jew's harp (shackle) which was round my neck. Captain Johnstone was then singing out for him, and away he went down the mainstay. The next thing I heard Captain Johnstone say was, 'I pardoned your life three times, you overgrown son of a b——, but I'll have your life now; I'll not grant you your life again.' He then chased Rambert round the decks, and the blood was flowing from the mate's side then, as he jumped up the poop-ladders. He then jumped overboard, the captain at the time following immediately with the sword. David Johnson was then at the wheel, which happened to slip out of his hand, and the sails just shook in the wind, for which Johnson thought the captain was going to kill him. The captain cried, 'Up helm again; keep her to, lads, lay aft, and get a glass of grog.' I lay in my irons until 6 o'clock that evening, when the carpenter was sent to fetch me down from the main-top. The captain gave me, Reason, and Stephen Cone (the three men in irons) a glass of wine each, and told the cook to get a pint of water to wash our wounds."—Mr. Symons: "How came you by these wounds?" "I got them from Captain Johnstone, who cut me on the back, head, hands, and shoulders, with the sword. There are two cuts on my head, one right down behind, and one on the left side of my face, right upon the whisker. I have not been able to put my jacket on since I came home, without the help of my wife. He probed me with the sword whilst I was in irons, both hands and knees. Perhaps you would like to see the clothes?"—Mr. Symons: "'Tis not, necessary."

Franklin Tucker, one of the seamen, who was brought from Deal in irons, said, "He knew no more about the death of Reason, except that he saw his corpse brought upon deck. He saw him go into the cabin alive about three-quarters of an hour previous. He was then in a dreadful state, and bleeding profusely from several wounds on the head. The deceased was in the cabin in the early part of the evening; witness did not then see any wounds or other injuries on his person. The deceased told him the captain had cut him."

The witness was then examined relative to the death of Mars, and he confirmed the last witness in all the material points of his evidence. "Tucker was called into the cabin by the captain after Mars was wounded, and the captain exclaimed, 'Look at the brute, see what he has brought upon himself, don't touch him with your hands, get a rope's end and haul him upon deck.' The captain also ordered Mars to be squeezed, and said 'if he was not well squeezed the witness should be.' Tucker also stated in addition, that "the savage order of the captain was obeyed, and that Julian Cordivallo was sent upon deck to see if it was done effectually. A rope was made taut round the body of the unfortunate creature, and Tucker and Blackden hove upon it as hard as they could. While the mate was undergoing this horrible torture, the witness put his hand on his face, and found he was dead. He went below and reported the fact to the captain, who asked 'if the mate had been well

squeezed?" Witness replied that he had, and the captain expressed his satisfaction; and ordered the irons to be removed from the body, and then buried."—Mr. Symons: "Did you examine his body?" Witness: "I did."—Mr. Symons: "How many wounds?" Witness: "I can't say how many wounds there were upon his body, for it was cut to pieces. There was hardly an inch of it without a wound."

David Johnson was again called, and said that, "He was called into the cabin with Reason and Mars, and he was so cut up that he could scarcely crawl to his berth."—Mr. Broderip: "You were cut. Who by?" Witness: "By Captain Johnstone, sir."—Mr. Broderip: "Where were you wounded?" Witness: "About the head and hands, sir. I also received several wounds on the shoulder. Next morning I found Mars in irons, and the captain called for a strand and a heaver, and made a kind of a bow-string of it, and hove it taut round my neck, till I was nearly choked, and he called a man named French, and told him to put me in irons, and said I was implicated with Mars. Mars was then sitting on an empty spirit cask. French, by the direction of the captain, took a sword, bent at the point, to the grindstone, to make the point straight and sharp. French brought it down again, and said that was the sword with the straight point. The captain then took the sword and cut Mars over the head with it, and the blood gushed forth very fiercely indeed. I was then ordered upon deck to my duty." The witness then gave a description of the terrible scenes which took place in the cabin and upon deck, similar to the evidence of the other witnesses, and said "the body of Mars was shocking to behold. The head and breast of Mars were in such a state that it was impossible to lay a finger upon the body without putting it upon a wound." The witness then proceeded to describe the intimidation practised by the captain towards the crew, to compel them to torture poor Mars. "Julian Cordiviallo told the men if they did not squeeze Mars and heave upon the strand round his body, the captain would kill all hands. French was armed with a sword and a brace of pistols, and Sinclair, the carpenter, and the apprentices were also armed, to overawe the crew, and compel them to put in execution the savage orders of the captain. When Mars was being squeezed he looked very ghastly, and the breath was not quite out of his body, but he died soon afterwards. French said to the witness, 'Do you know how your life stands?' and he said, 'If you do not—'"

Mr. Symons said "that would not be evidence," and stopped the witness.

Mr. Humphreys: "But a good deal of the conversation has been already taken down."

Mr. Broderip: "No, only that which is so material to the case that it could not be omitted."

Mr. Humphreys: "I do not object to it."

Stephen Cone, an able seaman, who had been grievously maltreated by the prisoner, was then examined. His evidence was very short but expressive. He said, "I was in the cabin before the death of Mars. I saw the captain make one cut at his head with a sword, and he took off a piece that size, your honour." [The witness placed one hand on the other, denoting that the prisoner cut a piece off the head of Mars half the size of his hand.]—Mr. Broderip: "Did you see the prisoner do that, Cone?" "I did, sir, he cut a piece right off his head, and he then stabbed him in different parts of his body."

Arthur Gilmore Spence, was called, one of the apprentices of the ship, who produced the log-book of the *Tory*, which he put in as evidence, and stated "That he made an entry of the deaths of Mars and Reason, by direction of Captain Johnstone. The entry of Reason's death was inserted in the log-book on the 24th of October. Upon entering the cabin that day, the captain said that Reason had died in the fit, and that he was to enter it in the log to that effect, and he did so." The witness was then directed to refer to the log for the entry of the death of Mars, of whose brutal murder, by the captain, he gave evidence a fortnight ago. Spence said "he was directed by the captain to make entry in the log, 'that Mars was murdered by the crew.'"—Mr. Broderip: "By the crew?" "Yes, sir."—Mr. Broderip: "You saw some of the circumstances attending the death of Mars?" Witness: "I did, sir; and related those cir-

cumstances on a former occasion. The captain cut Mars with a sword, and told the men to squeeze him."—Mr. Broderip: "When the prisoner told you to enter in the log-book that Mars was murdered by the crew, did he tell you of any circumstances to bear out his assertion?" Witness: "I can't exactly say he did. He said the crew had put an end to Mars." The witness then referred to the entry of Mars' death, which was dated October 25.—Mr. Symons: "You stated, on a former examination, you were called to take down evidence from the men. In what part of the ship did you go?" Witness: "In the larboard after-cabin. I found one of the men there. I can't exactly say whose evidence I took down first. He was called out of his bed by the boy Glover. The first man seemed very nervous and alarmed. Some of them told me to pay very particular attention to what they said, and I said I would."—Mr. Broderip: "Was there any one in the cabin armed when you took down the statements from the men?" "No, sir, not where I was."—Mr. Broderip: "Was any one armed upon deck?" Witness: "I really can't say, sir; I was not on deck myself. I took statements from five or six of the crew. They came down separately. I cannot say who brought them into the cabin. They came down by themselves. I do not recollect seeing the captain there any part of the time. Among the men, who told me to be particular, I can only recollect David Johnson, who also told me to take time. I wish to state further, that after these circumstances, now under investigation, the captain called me into his cabin five or six times every day, or else into the larboard after-cabin, and compelled me to read over the entries I had made in the log, to alter some, correct them, and make additions to what I had already written. I wish also to state, that the whole of the entries in the log were not made by the direction of the captain, only parts."—Mr. Broderip: "Which parts; those relating to alleged disturbances in the ship, or the customary entries?" Witness: "Those relating principally to these circumstances, and the deaths of the men."

Mrs. Mary Blewett, one of the female passengers, now residing at 12, Albany-street, Commercial-road: "Remembered three of the men in irons in part of the rigging. Understood she was a cabin passenger, and was there for the first fortnight, and was then removed to the half-deck, a little more forward, but had not left the poop on the 26th of September. I believe about 3 or four o'clock I heard Captain Johnstone demand the mate to be found and brought, wherever he was. Barry was the person who found and brought him on the poop close by the captain. I was then looking on, of which Captain Johnstone was not aware. He had a pistol in his left hand, and a cutlass in his right. I believe the pistol was loaded, for Captain Johnstone always ordered his pistols to be kept loaded. He was then sticking Rambert right and left across the head and shoulders. Rambert had no hat."—Mr. Broderip: "Had he any arms?" "No, your Worship."—"Were his hands bound or free?" "They were free."—"Did he strike the captain?" "I did not see him. During the time the captain was striking Rambert he begged him to have mercy; to spare him; to which Captain Johnstone replied, 'No, you overgrown monster; no, you cowardly brute, and again struck at him with the cutlass.'—Mr. Broderip: "Where did he strike him?" "He struck him on the head, and everywhere in this manner. [Here the witness waved her hand in such a way as represented a person cutting away with a sword indiscriminately.] The mate said, 'Ask the sailors, Captain Johnstone, did I ever say a word against you?' When he said, 'Ask the sailors!' Captain Johnstone got more enraged, and struck at him more violently than before. He ordered Rambert on his knees, and again calling him an overgrown monster, struck at him with the cutlass most severely. The mate, who was on his knees, cried out, 'Oh, my God! oh, my God! I am killed, and dropped on one side. Captain Johnstone then called for the irons, when the carpenter came, and was putting the irons on him in the smoking-hatch on the half-deck.'—Mr. Broderip: "In what state was Rambert after the captain struck him?" "Bleeding so that I could not see a feature. Rambert asked the boy Slack to bring him something to tie his hand up, but Slack said he had

nothing. During that time the captain retired to his cabin, I believe, for refreshments. He returned in a few minutes, and went to the mizen-top, where Stephen Cone was in irons, and struck at him in the most violent manner. I heard the blows from where I stood. I did not see what he struck him with, but I know he took up a cutlass in his hand. I said, 'My God, he's at Stephen again; he'll kill him.' I said so to Mrs. Thompson, and that was the first time I spoke. Rambert heard my voice, and said, 'Mrs. Blewett, Mrs. Blewett, I am dying. Give me a handkerchief to tie my head, for I am bleeding to death.' I answered, 'I am in that state, Mr. Rambert, I am not fit to move, I am so exhausted.' Rambert said, 'He is coming down again, Mrs. Blewett. He will kill me. Oh, my God! oh, my God!' I made no reply, as Captain Johnstone was coming towards us, and said, 'Where is the overgrown monster, or brute? I cannot say exactly which. He asked, 'Where is the carpenter, or chips?' I am not sure of the word. On seeing Rambert, the captain said, 'Take him from here; the overgrown monster, and throw him on the main hatch.' I said to Mrs. Thompson, 'Oh, my God; there's an end to us all to night.' I believe Captain Johnstone was forward; and I think I heard that Rambert was going to be taken out of irons. Directly after I heard a rush from the main deck to the poop, where there was a boat. I do not know whether on the starboard side or the other. I saw Rambert trying to make his escape between the end of the boat and the companion. Julian was in the poop at the time, with a musket, and a bayonet at the end of it. I heard Julian halloo out, 'Stop, stop,' and presented the bayonet towards Rambert. I then heard a voice say, 'Where is he? where is he?' and Julian answered, 'He's gone overboard.' Captain Johnstone, who was after him at the time, said, 'I do not like to use the word.'—Mr. Broderip: "However painful it may be, you must use the expression." Witness: "The captain said, 'The b——, I'll have half of them over the side before sun-set to-day.' Captain Johnstone then called the boy, and ordered a glass of grog for all hands; but I cannot say that all hands were there at the time. I felt so exhausted and faint that I either sat down or lay down, and observed no further, only I was in hopes there might be peace, which there was for about three weeks or so. Your worship, I was treated very unkindly by Captain Johnstone, and was obliged to come ashore at Deal on the 9th of last month, to save my life and the child's. He had me down in the cabin on the 7th of last month, having sent for me by Slack." "My God, Harry," I said, 'does he want to kill me?' and the boy replied, 'I do not know, I am sure, Mrs. Blewett.' I went to the cabin where Barry, French, and Mr. Spence were, as well as the captain. Mrs. Thompson seeing me alarmed accompanied me; besides, it was the wish of Captain Johnstone that she should. Captain Johnstone said, 'I wish you to understand, Mrs. Blewett, that I am going to put you in irons for the remainder of the voyage, and you are going to be hung at the Old Bailey.' He said, 'Is not that it, French?' who answered, 'Yes, I believe it is, sir,' I said, 'I'm willing to die, Captain Johnstone, for I've had no peace since I came into the ship; but may I speak one word or two?' I embarked on board on the 14th of last May, and from that time to this I never heard a man belonging to the crew say a word ill against you or the ship either; and if any soul can say I ever said a word against you, let him say it. The only word that ever passed was when they were frying flour with salt-water in the galley, French then said it was a hard case, and I asked him why he did not go and make his statement to the captain. I asked Mr. Spence if he ever heard me say anything, and he replied, 'I did not.' I was in such dread and fear of the captain, I apprehended I should never come out of the cabin alive, I asked Yelverton if he ever heard me speak ill of the captain. He answered, he did not, except that once he heard me say, 'A man's a man for a' that,' but he (Yelverton) said he did not know what I meant by that. If I said it I meant nothing by it; but, to tell you the truth, Captain Johnstone, it was a word of my father's. Nothing was done to me in the cabin. I felt very bad there, which I believe Captain Johnstone observed, and he ordered me a glass of wine."

Thomas Gair, whose appearance created a strong sensation

in the court, was then called, and desired to state all he knew respecting Rambert's case.—"On the night previous to Rambert's jumping overboard, witness went to the helm at 8 o'clock. After being there about 20 minutes, he heard Rambert call to Captain Johnstone to spare his life. There was a good deal of noise in the cabin, like rustling in a fall. When relieved at 10 o'clock, witness saw William Rambert, and the second-mate, William Mars, both on deck, and wounded. Rambert came forward and told him the captain intended to murder all hands, and they had better prepare themselves. Rambert gave some of us iron-belaying-pins and others capstan-bars. The mate was sent for down in the cabin again, and told us the captain was very quiet, and did not intend to harm him. He came up again in a quarter of an hour after, when the blood was running from his head down over his shoulders. He was put in irons on the main hatchway, whilst the Italian (Julian) was set as a guard over him. I heard him say that sooner than he would suffer the captain to take his life he would jump overboard. As soon as he saw the captain coming towards him, he jumped into the sea. He said, he (Gair) was put in irons on the false charge of threatening to take French's life on the 1st of November, and was continued so for 11 days. On the 11th day the captain sent for him to the cabin. Cordoviallo was the person sent. Witness went to the cabin, where he found Nelson, Burton, and the captain. As soon as witness entered the cabin the captain ordered him to go on his knees, and commenced cutting at him with the cutlass. He at the same time told the man French to load his pistol and fire. The captain told him to put a double charge of ball in the pistol. French put no ball in, but blew several charges of powder in witness's face and head. The captain told him if he did not load and fire as quick as possible he (the captain) would take his life. The captain afterwards cut witness several times on the head, and placed the point of the cutlass to his side, with his hip against the hilt of it, as if to thrust him through, which he said he would do. He being intoxicated at the time staggered, and the cutlass went through witness's clothes, inflicting a slight wound in his shoulder, through his clothes. After that he ordered the man French to fire again, and directed witness to be put on the table, which being done the captain pushed him off again with his cutlass. The crew were shortly after ordered to pump ship, which they went on deck and did.—Mr. Broderip: "Were you one of those who manned the pumps in that state?" Witness: "No, sir, I was not able. It was the carpenter who ordered the pumps to be manned. In a very few minutes the witness, Burton, and Nelson were ordered down to the cabin again, but the captain did not make his appearance. Witness was again put in irons, and placed in the lower fore-castle. Witness received 18 cuts in his head, two stabs in his left shoulder, two in his left breast, two in his left side, one in the right arm, besides several other cuts in different parts of the arms."—The Chief Clerk: "What was the state of your face?" "It was very much blown with powder, and I lost the sight of my right eye for six or seven days."—"Did you hear any expressions made use of by the captain whilst in the cabin?" "I heard very foul language, but cannot repeat the words. I did not see Morris whilst I was in the cabin."—Joseph Morris was then called and examined. He is the person who was confined on board the hospital-ship from the effects of a pistol-shot wound.—The Chief Clerk: "Describe what occurred since you came into the Channel." Witness: "I do not speak very good English."—Mr. Broderip: "You seem to speak what you do speak very well; but, as I know how difficult it is to think in one language and express one's self in another you must have an interpreter; if, as you go on, you find the need of one." The witness then attempted to proceed, but, finding it difficult to render himself clear, an interpreter was sworn, and he gave his evidence in French.—The Chief Clerk: "Keep to what occurred in the Channel." Witness: "The pilot came on board, and the same evening the captain called me down from the wheel to the cabin. When I was there he asked if I had heard the crew say anything about him. I was on my knees. He then said to me, 'You know all about it, you son of a b——.' I was ordered on my knees by the captain. During this time, the captain was striking me with a cutlass."—Mr. Broderip:

"Where?" "There is the mark" (pointing to his temple).—"Did he strike you with the flat or the edge?" "With the edge." He then called to the cabin-boy for a pistol, which he aimed at my stomach, but the pistol missed fire, only burning the priming. He then called for more powder to prime a fresh one, after which he fired, turning his head from me, but, in doing so, his hand dropped somewhat. The ball went through my thigh and the calf of my leg, whilst I was in the kneeling posture. I then ran on deck, when I found I was wounded. The cook then caught me, and brought me down again. When the cook took me below, he said to the captain, "This man is wounded," to which the captain answered, "Take him away." I then went on deck, and stowed myself away under some sail, beneath the long-boat. I have no more to say."

When asked by the magistrate to spell his name, he said he could not read or write. It was, however, ascertained that his right name was Joseph Ronilleau; the name Morris being a *nom de guerre* given by the shipping-master. William Burton examined: "Performed the duty of second mate after the death of Mars."—Mr. Broderip: "When were you put in irons?" "On the 7th of November, when the pilot came on board. He came about 10 o'clock, and went below with the captain. They returned in about half an hour, when the pilot took a parcel ashore, but I cannot say what it contained. The captain sent for me to the cabin about half-past one or two o'clock, to read the log-book over to me. I told him I partly knew what was in it, as it had been read to me once before. I told him the evidence I had to give was, that Mars and Rambert came and pulled me out of my berth to come aft and secure the cabin doors." He said that was not what I told him; that they came to bring me aft. I said it was not; and repeated the evidence I gave him before. He took the soup plate he was having soup from and threw it at my head, but it did not strike me, and he then ordered French to put me in irons. About seven o'clock that night he called me to the cabin and said that I was a rascal, and going to give false evidence. He then cut me in three places."—Mr. Broderip: "With what?" "A cutlass. He cut me on the ear and on the cheek, running the sword clean through. He also cut me on the wrist. Gair was then called down, and in my presence the captain cut him unmercifully. He ordered Dunn to go on deck, and bring the crew aft. Nelson, Alison, and Tucker came. When they got to the bottom of the cabin stairs the light was extinguished, and French and the captain sung out, 'Mutiny,' 'To arms, to arms.' They began to pull the three persons into the cabin, and the captain began cutting at them."—Mr. Broderip: "Had the crew anything in their hands at this time?"—Witness: "Nothing, sir."—Mr. Broderip: "Was there any mutiny going on at this time?"—None, sir; nor had any mutinous or threatening language, or mutinous or threatening gestures been used by the crew. Light was brought, and he began cutting at them for his own pleasure."—"In what position were they?" "On their knees. He then ordered French to load the pistols and fire on them as quick as he possibly could, or he'd have his life."—"French's life?"—"Yes, sir. French began firing on Gair and Nelson four or five times. He then put the pistol to my ear and said, 'You—, I'll shoot you.' To Mr. Broderip: "French said this. I was in irons (had irons on) all the time. He put the muzzle of the pistol to my ear and fired. It was loaded with powder, only. He struck me two blows with the lock of the pistol on the head. In about half an hour after the carpenter sang out to pump ship, and we were all ordered on deck. I was ordered to the long-boat and went there, staying all night. About 10 o'clock the next morning he sent for me to the cabin and told me to keep up my heart, as there was no fear of me. He ordered Julian to get some warm water to wash the blood and powder from off my face. Whilst Julian went for the water I went into the fore-castle, where I remained until I was washed. The captain ordered me to put on clean clothes and that I must have leg irons, to stop in the lower fore-castle till the ship got to London. On the 9th the revenue cutter boarded us off Deal. The second in command came on board and ordered the three men in irons, Cone, Gair, and myself, to be taken out of the lower fore-castle, and taken to the top-gallant fore-castle, which was accordingly

done. That day the remainder of the crew were confined on the half-deck. The three in irons were liberated that night by order of the second in command of her Majesty's cutter Ranger, and told to make ourselves as comfortable as we could, which we did to the time the ship reached London."

(To be continued.)

ANECDOTE OF A SAILOR.

His name was Jean Papineau, and he was a seaman belonging to Captain Defaud's ship, employed in one of her boats trading between Porto Nova and Wydah. The boat had arrived at Wydah, the officer commanding which reported, that, soon after he had got under weigh from Porto Nova, a tornado came on, and that, while Papineau was in the act of furling the topsail, he fell overboard. It was about eight o'clock in the evening when the accident occurred; and the wind blew with so much violence, that it was some time before the man was missed, and his fate known to his officer; and no doubt whatever was entertained by him but that he had perished. He however, by great muscular power, and skill in swimming, was enabled to keep himself above water all night without any extraneous aid, and he was picked up at six o'clock the following morning, by the ship Liverpool Hero's boat, about a quarter of a mile from the shore, in safety, without any assistance whatever. Joy at seeing him, and liberty and equality, being the order of the day, he was immediately placed at the dinner table, with a bottle of claret before him, when he related to the company what his feelings and recourses were during his perilous situation. The tornado had come on with unusual violence, just when he had got the sail secured, and he said that he was literally blown overboard, and fell into the water about a foot clear of the vessel's side. He called out, but the wind and sea made too much noise for him to be heard, and the vessel was quickly out of sight, scudding before the storm. He was aware that he was only three or four miles from the shore, and being an excellent swimmer, he was determined to struggle for his life. Sharks alone gave him any uneasiness, but even with them he was determined to contend. Sailors, in order to secure their knives, fasten them by lanyards, either to the flaps of their trousers' pocket, or round their neck. Papineau's was secured to his neck, and the possession of this weapon (which fortunately he had no occasion to use), gave him confidence against the tiger of the deep. Soon after he got into the water, he divested himself of his shirt and trousers, and tied his handkerchief about his head; the tornado continued to blow strong for an hour, when the wind veered to the northward, and blew fresh from the land during the greater part of the night, which retarded his progress to the shore. He swam towards it, as nearly as he could calculate, about half an hour at a time, and that alternately on his back, and on his stomach, when he would rest himself by remaining nearly motionless on his back for as long a period, with his head generally as he supposed towards the shore, and he often fancied that he had made much greater progress towards it, than proved to be the case; for the wind blowing from the land, and his ear being nearly on a level with the water, caused the sound of the surf roaring on the beach, to be sometimes so audible, as to give him the impression of his being just about to enter it, when he would renew his exertion of swimming, and be disappointed in the result. His remaining so long in the water as ten hours, and without any support but what he derived from his own exertion, appears almost fabulous, and can only be accounted for by his superior muscular strength and self possession, being aided by the temperature of the water approaching that of his body, by which means heat was but slowly, (if at all), abstracted from it; the specific gravity also of sea water being, in all probability, considerably augmented near the equator by excessive evaporations, his body floated in it without much muscular exertion being required.

LOSS OF THE AMPHITRITE.

THE *Amphitrite* convict ship, commanded by Captain Hunter, sailed from Woolwich on Sunday, August 25, 1833, on her voyage to New South Wales, having on board one hundred and eight female convicts, and twelve children, under the care of Mr. Forrester, the surgeon, and a crew of sixteen persons. The captain was part owner of the vessel.

When the ship arrived off Dungeoness, the gale of the 29th began; and on the morning of Friday, the 30th, the captain hove the ship to, the gale being too heavy to sail. On Saturday, at noon, the vessel was about three miles to the eastward of Boulogne harbour, when they made land; and the captain

set the topsail and main-foresail, in the hopes of keeping her off shore.

From three o'clock she was in sight of Boulogne, and certainly the sea was most heavy, and the wind extremely strong; but no pilot-boat went out to her, and no life-boats or other assistance were despatched. She was observed from three o'clock, till about half-past four in the afternoon, when she came round into Boulogne harbour, and struck on the sands. By four o'clock it was known that it was a British ship; but some said it was a brig, others said it was a merchant-vessel, though all said it was English.

It appeared from the statements of three men, who were saved out of the crew—all the rest having perished—that the captain ordered the anchor to be let go, in hopes of swinging round with the tide.

LOSS OF THE AMPHITRITE, CAPTAIN HUNTER, AUGUST 31, 1833.

In a few minutes after the vessel had gone aground, multitudes rushed to the beach, and a brave French sailor, named Pierre Henin, who had previously received the thanks of the Humane Society of London, addressed himself to the captain of the port, and said that he was resolved to go alone, and to reach the vessel, in order to tell the captain that he had not a moment to lose, but must, as it was low water, send all his crew and passengers on shore.

As soon as she had struck, a pilot-boat, commanded by François Heuret, who had, on many occasions, shown much courage and talent, was despatched, and by a little after five came under her bows. The captain refused to avail himself of the assistance of Heuret and his brave companions, and when a portion of the crew proposed going on shore, the captain prevented them. Two of the men saved, stated that they knew the

boat was under the bows, but that the rest were below making up their bundles. The crew could then have got on shore, and all the unfortunate women and children.

When the French boat had gone, the surgeon sent for Owen, one of the crew, and ordered him to get out the long-boat. This was about half-past five. The surgeon discussed the matter with his wife and with the captain. They were afraid of allowing the prisoners to go on shore. The wife of the surgeon is said to have proposed to leave the convicts there, and to go on shore without them.

In consequence of this discussion, no long-boat was sent out. Three of the convict women told Owen that they heard the surgeon persuade the captain not to accept the assistance of the French boat, on account of the prisoners who were on board.

Let us now return to Pierre Henin. The French pilot-

boat had been refused by the surgeon and captain—the long-boat had not been put out, through a discussion as to saving the convicts—and it was now nearly six o'clock. At that time Henin went to the beach, stripped himself, took a line, swam naked for about three quarters of an hour or an hour, and arrived at the vessel at about a little after seven. On touching the right side of the vessel, he hailed the crew, and said, "Give me a line to conduct you on shore, or you are lost, as the sea is coming in." He spoke English plain enough to be understood. He touched the vessel, and told them to speak to the captain. They threw (that is, some of the crew, but not the captain or surgeon) two lines, one from the stern, and the other from the bow. The one from the stern he he could not seize—the one from the bow he did. He then went towards the shore, but the rope was stopped. This was, it is believed, the act of the surgeon and captain. He (Henin) then swam back, and told them to give him more rope to get on shore. The captain and surgeon would not. They then tried to haul him in, but his strength failed, and he got on shore.

It will be perceived, then, that up to this moment, the same obstacle existed in the minds of the captain and of the surgeon. They did not dare, without authority, to land the convicts, and rather than leave them on board, or land them without such authority, they perished with them.

To return to the narrative of events. The female convicts who were battered down under the hatches, on the vessel running aground, broke away the half-deck hatch, and, frantic, rushed on deck. Of course they entreated the captain and surgeon to let them go on shore in the long-boat, but they were not listened to, as the captain and surgeon did not feel authorised to liberate prisoners committed to their care.

About seven o'clock the flood-tide began. The crew, seeing that there were no hopes, clung to the rigging. The poor one hundred and eight women and twelve children remained on deck, uttering the most piteous cries. The vessel was about three quarters of a mile English from shore, and no more. Owen, one of the three men saved, thinks that the women remained on deck in this state about an hour and a half. Owen and four others were on the spars, and he thinks they remained there three quarters of an hour; but, seeing no hope of being saved, he took to swimming, and was brought in a state of insensibility to the hotel. Towsey, another of the men saved, was on a plank with the captain. Towsey asked who he was. He said, "I am the captain," but the next moment he was gone. Rice, the third man, floated ashore on a ladder. He was aft when the other men took to the raft. When the French pilot-boat rowed away, after being rejected by the captain, he (Rice) saw a man waving his hat on the beach, and remarked to the captain that a gentleman was waving to them to come on shore. The captain turned away, and made no answer. At the moment the women all disappeared, the ship broke in two.

These are the facts of this awful case. The French Marine Humane Society immediately placed hundreds of men on the beach; and the office, or lodge, being close to the shore, as soon as the corpses were picked up they were brought to the rooms, where many assisted in endeavouring to restore them to life. Their efforts, however, were fruitless, except in the cases of the three men, Owen, Rice, and Towsey. Never were seen so many fine and beautiful bodies. Some of the women were the most perfectly made; and French and English wept together at such a horrible loss of life in sight of—ay, and even close to the port and town. Body after body was brought into the town, more than sixty having been found, and were buried on the Monday following. But, alas! after all their efforts, only three lives were saved out of one hundred and thirty-six.

Though young and gay they sailed from port,
How many a kind heart threw
A last farewell to the parting ship,
And her brave and gallant crew.

Now in the desert sea she lies,
A helpless, silent thing,
Linked to a tale of vice and crime,
Of death and sorrowing.

THE SKELETON OF THE WRECK.

WHILE Sir Michael Seymour was in the command of the Amethyst frigate, and was cruising in the Bay of Biscay, the wreck of a merchant ship drove past. Her deck was just above water, her lower masts alone standing. Not a soul could be seen on board; but there was a caboose on deck, which had the appearance of having been recently patched with old canvass and tarpaulin, as if to afford shelter to some forlorn remnant of the crew. It blew at this time a strong gale; but Sir Michael, listening only to the dictates of humanity, ordered the ship to be put about, and sent off a boat with instructions to board the wreck, and ascertain whether there was any being still surviving whom the help of his fellow-man might save from the grasp of death. The boat rowed towards the drifting mass, and while struggling with the difficulty of getting through a high-running sea, close alongside, the crew shouting all the time as loud as they could, an object, like in appearance to a bundle of clothes, was observed to roll out of the caboose against the lee shrouds of the mast. With the end of a boat-hook they managed to get hold of it, and hauled it into the boat, when it proved to be the trunk of a man, bent head and knees together, and so wasted away as scarce to be felt within the ample clothes which had once fitted it, in a state of life and strength. The boat's crew hastened back to the Amethyst, with this miserable remnant of mortality; and so small was it in bulk, that a lad of fourteen years of age was able, with his own hands, to lift it into the ship. When placed on deck, it showed for the first time, to the astonishment of all, signs of remaining life; it tried to move, and next moment muttered, in a hollow sepulchral tone, "there is another man." The instant these words were heard, Sir Michael ordered the boat to shove off again for the wreck. The sea having now become somewhat smoother, they succeeded this time in boarding the wreck; and looking into the caboose, they found two other human bodies, wasted, like the one they had saved, to the very bones, but without the least spark of life remaining. They were sitting in a shrunk-up posture, a hand of one was resting on a tin pot, in which there was about a gill of water; and a hand of the other reaching to the deck, as if to regain a piece of salt beef, of the size of a walnut, which had dropped from its perverse grasp! Unfortunate men! they had starved on their scanty store till they had not strength remaining to lift the last morsel to their mouths. The boat's crew having completed their last melancholy survey, returned on board, where they found the attention of the ship's company engrossed by their efforts to preserve the generous skeleton; who seemed to have just life enough left to breathe the remembrance that there was still "another man," his companion in suffering, to be saved. Captain S. committed him to the special charge of the surgeon, who spared no means which humanity or skill could suggest, to achieve the noble object of creating a new, as it were, a fellow creature, whom famine had stripped of almost every living energy. For three weeks he scarcely ever left his patient, giving him nourishment with his own hand every five or ten minutes; and at the end of three weeks more, the "skeleton of the wreck," was seen walking on the deck of the Amethyst; and to the surprise of all who recollected that he had been lifted into the ship by a cabin boy, presented the stately figure of a man nearly six feet high.

LOSS OF THE ATHENIENNE, CAPTAIN RAYNSFORD, Oct. 20th, 1806.

His Majesty's ship Athenienne, of sixty-four guns, commanded by Captain Raynsford, and manned by a crew of four hundred and seventy men, sailed from Gibraltar on October 10th, 1806, with a fair wind.

On the 4th day from their leaving, they passed Sardinia, and were all in high spirits, fully expecting to arrive at Malta the following day; but, dreadful to relate, at half past nine o'clock that very night, when going fully nine knots an hour

the Athenienne struck on the rocks known by the name of the Skirres (Esquerques), or Quilla. They were completely under water, and at least sixty miles from any shore. The shock was terrible, and the dreadful consternation into which the crew were thrown, must be left to the imagination to conceive. Every soul was instantly on deck, most of them naked, and in such a state of despair, as to be absolutely incapable of making any exertion. Some went below, and resigned themselves to their fate; while others took possession of the poop, which was highest out of the water, as the lee-side of the quarter was in a very few minutes under water; and some, who had more presence of mind, took to the boats, three of which, containing twenty-seven men, got off from the ship about a quarter of an hour after she struck.

The masts were immediately cut away to lighten the ship, and in order to prevent her falling over on her broadside; but in less than half an hour after, from violent concussion of the rock against her bottom, she filled up to the lower deck-ports, and fell on her beam ends on the larboard side.

Captain Raynsford, who foresaw the total loss of the ship from the first, ordered the boats to be hoisted out, with an idea that they would be useful in towing a raft which was constructing to leeward, and which might have been the means of saving a great many from destruction; but as soon as the jolly-boats were lowered down from the quarters, and clear of the ship, the men—for there were no officers in them—bore up, and were no more seen by their unhappy shipmates, who stayed by the wreck. The cutter and the barge, on being hoisted out, were stove and swamped; and thirty men, unable to regain the ship, perished. By the fall of the masts several people were killed, and others desperately mangled; and two midshipmen were killed by the spanker-boom crushing them between it and the side.

The termination of the miseries of all seemed fast approaching; and the launch being the only boat that was not either stove or wrecked, was filled with men on the booms; but the water having by this time covered the whole wreck, with the exception of the poop, they had not the mechanical power to move it, nor the necessity of using it, for, to the great joy of every one, she floated off the booms, and escaped the many dangers she had to encounter with the floating pieces of the ship and broken spars. She afterwards came under the stern, where many, in attempting to swim to her, shared the untimely fate of those who had preceded them.

No entreaties could prevail on Captain Raynsford to quit his ship. From the first moment of her striking till the time that the launch last quitted her, he conducted himself in the most heroic manner: his presence of mind never forsaking him, and his whole faculties being employed in saving his people. He and three hundred and forty-six others were supposed to have perished, while only one hundred and twenty-one men and two women were saved.

The Athenienne had on board dollars to the amount of ten thousand pounds sterling, and despatches for Malta and Sicily.

The launch left the wreck about an hour and a half after the ship struck, and immediately pulled towards the island of Maritimo, which they got a sight of at daylight on the morning of October 21, by the assistance of a miserable sail made out of the men's shirts. At the same time they boarded a Danish brig, that supplied them with a sail, some bread and water, and a little brandy. They put two officers and twenty men on board of her, who returned towards the wreck, in the hope of saving any who might have been still clinging to it; but the wind blew so fresh, that the Danish vessel failed in this benevolent intention. It is supposed that the wreck went to pieces soon after the launch quitted her, particularly as the wind continued to increase after the ship first struck, and blew stronger the following day.

Two of the boats which first escaped from the wreck, were in sight when the launch boarded the Dane, and followed them to Maritimo, which they reached about four o'clock in the evening. They were very humanely treated by the governor, and remained there all night. The next day they set out for Trepani, in Sicily, where they arrived the same night; and finding a small boat bound to Malta, some of them embarked,

and arrived there on the 25th, after encountering all the horrors of a shipwreck, as deadful, perhaps, in consequence, as was ever experienced.

Among the survivors of this disastrous calamity were Brigadier-general Campbell, Doctor Pym, Lieutenants John and James Little; Mr. Goodwyn, purser; Messrs. McLean, Silas Wells, George Thorn, Thomas Manning, John Frances, midshipmen; Richard Byrn and Augustus Cameron, master's mates; Samuel Parker, master, and ——— Dyer.

Those who escaped during the confusion and necessary hurry for the preservation of their lives, lost all their property which they had brought with them.

A HINT TO CRITICS.

A sailor who had been many years absent from his mother, who lived in an inland county, returned to his native village, after a variety of voyages to different parts of the globe, and was heartily welcomed home by the good old woman, who had long considered him as lost. Soon after his arrival, the old lady became inquisitive, and desirous to learn what strange things her son John had seen upon the mighty deep. Amongst a variety of things that Jack recollected, he mentioned his frequently having seen flying fish. "Stop Johnny," says his mother, "don't try to impose such monstrous improbabilities upon me, child; for in good truth I could as soon believe you had seen flying cows; for cows, you know, John, can live out of the water. Therefore, tell me honestly what you have seen in reality, but no more falsehoods, John." Jack felt himself affronted, and turning his quid about, when pressed for more information, he said, prefacing it with an oath, "mayhap, mother, you won't believe me, when I tell you that once casting anchor in the Red Sea, it was with difficulty we hove it up again; which was occasioned do you see, mother, by a large wheel hanging on one of the flukes of the anchor. It appeared a strange old Grecian to look at, so we hoisted it in; and our captain, do you mind me, being a scholar, overhauled him, and discovered that it was one of Pharaoh's chariot wheels, when he was capsized in the Red Sea." This suited the meridian of the old lady's understanding. "Aye, aye, Johnny," cried she, "I can believe this, for we read of this in the Bible; but never talk to me of flying fish."

THE BATTLE OF THE NILE.

AGAIN the yard-spinners assembled on the old spot before the foremast, and, once more they commenced their tough 'uns; their tongues being oiled with the lubricating liquor.

"I say, Bob!" exclaimed Joe Nighthead, "then I'm blessed if we shan't cut the shine out o' all the saucy frigates on the station; and they may get up a ginger-bread battle at the theatre, with the thrash-em-all Spankaway and her prizes!"

"I hope it'll be a better consarn than I once fell foul on in a place they called 'Bart'emy Fair,'" said the captain of the fore-castle. "Well, I'm blow'd if it warn't out-and-out gammon! Dye mind, I was in the owld Goliah seventy-four, in 'Ninety-eight, at the Nile; and led into the action, although Hood in the Zealous tried d—d hard for it; but our skipper, Captain Foley, warn't the boy to let him do the trick, for the Goliah had the heels of the Zealous, and we passed a-head of her, inside the enemy's line, every gun double-shotted. 'Because,' says our skipper, says he, 'we'll take 'em on the in-shore side, as the chance is they'll not expect us there, and that broadside won't be manned;' which in course was all right enough, and just as we found it. Well then, I'm blessed if it didn't look funny to run so close to 'em that you might have seen a moskito wink his eye. We tried first for the French Gorear, but slipped past him to the Conquerant, 'cause

the best bower hung in the stopper arter they'd got the cable out abaft. Howsomever, I arn't going to fight the battle over again; ownly at the peace we got long leave, and, having lots of prize-money, I thought I'd go up to Lunnon, just to see what sort of a place it was, as I'd heard my shipmates in their watch overhaul a good deal about it. Well, my boys, I just takes a berth 'pon deck in one o' your fly-by-night vehicles from Portsmouth; but, as to what sort of a passage we had, I don't much disremember about it, seeing as I'd had more plush that day than any cook in the service. Howsomver, next morning, I finds myself all snug, riding it out in a four-masted thing-em-he, as they calls a post-bed along shore, and the canvass was hanging in the brails; and there was chairs, and a table, and a looking-glass, and 't other thing, all ship-shape; and I'm blow'd if there warn't a beauty alongside o' me: 'Yo-hoy!' says I, 'what ship, my darling?' 'The Goliah, to be sure,' says she; 'don't you know that?' 'I'm blow'd,' says I, 'if you arn't more like a cousin than an acquaintance. How came you in my hammock?' says I. 'You was groggy last night,' says she, laughing like a tickled Venus, 'and so I was afeard you'd rowl out.'—'All right, my precious!' says I; 'but, where's the shot, my darling?'—'All safe in the locker,' says she; and so it was, shipmates, every bit of it, not a stiver missing. 'That's my tight 'un!' says I; and, in course, Bob, we consorts together, and that arternoon we hauled our wind for what she called 'showing me the city; but I'm bless'd, shipmates, if I could see anything for the houses till we got to a place, as I said afore, was named 'Bart'lemy Fair.'

Now, in regard o' Sal's kindness, d'ye mind, I'd rigged her out, fore-and-aft, from the keel to the truck, with a spick-and-span new suit o' sails; and, as for colours, then I'm—if she hadn't an ensign and pennant as long as that 'ere craft as swept all the sheep off the Isle of Wight, going down Channel. Her gownd was covered with flowers, every one on 'em as big as a cabbage; and her bonnet would have sheltered the frigate's marines in a snow-storm. Then she'd pink silk stockings upon her legs, as warn't like yer kick-shaw-spindle-shank sliding-gunter ladies', but a reg'lar pair of good, stout lower-deck stancheons, as 'ud howld up stiff in a squall. She wanted boots; but I thought it 'ud be a sin and a shame to hide such handsome and proper consarns in leather-casings, so I stepped her heels into pink long-quartered pumps, with blue sandals, in regard o' the colour o' the jacket. Then she'd a broad red band round her waist, with a fathom and a half of the same towing over her stern, and when the wind caught it, why it blow'd out like a pennant from the peak, as a signal for going to church. She'd blue at the main, and a banging gold watch hanging a cockbill under one of her cat-heads; and a smarter looking frigate—ownly she was pimpled a little about the nose with grog blossoms—I never set eyes on. Well, shipmates, so she said she'd show me Lunnon; but,

Lord love yer hearts! I couldn't never make out nothing but a big church as they called Sam Paul's, booming up in the air so, as you couldn't see anybody in the tops. At last we got to Bart'lemy fair, and then there was som't to look at, for I'm blow'd if they hadn't turned the hands up to skylark, or rather to mischief! There was such a halloo bulloo, and some of the lubbers began to overhaul their jawing gear so as to pay out of the slack of their gammon, that I should have been dead flabbergasted if it hadn't been for Sal, who pitched it at 'em again, sometimes sending a long shot a head, and then giving 'em round and grape from her stern-chasers. As for the shows! well then, I'm blessed if there warn't a little sum't of everything! At last I spies outside one of the booths 'The Battle of the Nile to be seen here!' with some more lingo about mechanical figures and tommytons; but 'Blow me tight, Sal!' says I, 'that 'ere's just what I must see, in regard o' the owld Goliah and Lord Nelson.' So I tips the blunt to a fellow in a box, and walks in, with Sal alongside of me, and a woman comes round with a basket of oranges, and axes me to buy. Well, shipmates, seeing as I'd plenty o' dumps, I buys the whole cargo, and serves 'em out to all hands, young and old, whilst the fiddlers struck up 'Jack's alive!' and presently they maws the fore-clew garnets, buntlings, and leechlins, and up went the forsel in a crack, and the music changed to 'Come cheer up, my lads!' and says I to Sal, 'Then I'm—if I don't, owld gal, and so here goes!' and I took a precious nip from a bottle o' rum she'd stowed away in her ridicule. And there was the sea all pretty and picterlike, and the shore beyond; but the devil a bit could I see of the French fleet at anchor, or a craft of any build or rig, till there was a flash o' priming, and then in sails a ship under British colours, and fires a gun; and then in comes another, and another, till there wur the whole of Nelson's squadron, though they were no more like line o' battlers than Mungo Pearl is like the Archbishop of Canterbury. Still, shipmates, I says nothing; for 'Mayhap,' thinks I to myself, 'it may all do very well for them know-nothings as never seed a seventy-four in their lives.' But, presently, when they'd all hove in sight, in comes the French fleet arter them, just for all the world as if Nelson had run away, and owld Brewy was in chase. 'D—my precious limbs!' says I to myself, 'but that's coming it pretty strong!' and I shies an orange at the French admiral and capises him, so that he went down directly. 'Who threw that ere?' shouts a man, poking his head up, right up in the middle of the sea, like a grampus coming up to blow. 'It was I, and be d—d to you!' says I, shieing another at him, that took him right in his bridle port. 'You lubberly son of a sea-coote!' says I, 'when did Nelson ever run away from the enemy, you wagabone? And here goes again!' says I; for, shipmates, my blood was up, and I slaps another shot at a Frenchman, and sunk him in an instant. Sal hailed me to sit still, and everybody shouted, and the fellow bobs his head down under the sea again; 'Battle of the Nile!' says I, 'and me one of the owld Goliah's, as had young Muster Davies killed alongside o' me! Make the French run, and be d—d to you!' says I; 'heave about, and strike your colours. That arn't the battle of the Nile, yer tinkering tailors.' But, finding that they were slack in stays, and that the French fleet were pursuing the English, I couldn't bear it any longer, shipmates; so up I jumps, and boards the stage, and put two or three of the French liners into my pocket, when the same fellow rouses out again right through the water, and pitches into me right and left; and I lets fly at him again, till a parcel of pollis-officers came in, and there I was grabbed, and brought up all standing. Howsomever, as they axed me purtly to go with 'm, why in course I did, carrying my prizes and Sal along with me, afore some of the big-wigs, and 'Yo-hoy, yer honours,' says I, making my salaams in all due civility, 'I'm come to have justice done me on that 'ere gander-faced chap as pretends to fight the battle of the Nile, and me one of the owld Goliah's!'—'Yer worships,' says the man, 'he 'salted me, and 'salted my ships.'—'And pretty pickle you've made of it, you lubber,' says I. And then the big-wigs axed what it was all about, and the man ups and tells 'em about the fleets, and my shieing the oranges, and hitting him in the eye, and the whole consarn, even to my having the Frenchmen stowed away in my lockers.

And the big-wigs laughed; and one on them says to me, says he, 'Now, sailor, let us hear what you've got to say for the defence.'—'The defence, yer honours?' says I, glad to find that they know'd som't about the squadron; 'the defence,' says I, 'why, yer honours, she came up a-starn o' the Minnytaw, though she afterwards took her station a-head of her, and engaged the Franklin, French eighty'—'All very good,' says the genelman; 'but we want to know what you have got to say for yourself?'—'Well, yer honour,' says I, 'it arn't altogether ship-shape for a fellow to blow his own trumpet, but I was stationed the fifth gun from chock aft on the lower deck, and I hopes I did my duty.'—'We've no doubt on it, my man,' says another of 'em; 'but how came you to attack this man's expedition?'—'Oh, yer honours, if it's owly an expedition,' says I, 'then I got nothing to say again it, owly he chalked up that it was the Battle o' the Nile, and there warn't one of the French fleet at anchor, but all under way, and giving chase to the English.'—'He mistakes, yer worship,' says the man; 'I brought the English fleet on first out of compliment to 'em.'—'And a pretty compliment, too, yer lubber, to make 'em be running away!' says I.—'But you have done wrong, sailor, in mistaking him,' says one of the big-wigs. 'Let us see the vessels you have taken.' So, shipmates, I hauls 'em out of my pocket; and I'm blessed if they wur anything more nor painted pasteboard as went upon wheels, and 'Here's the prizes, yer honours!' says I, handing 'em over; 'it's easy enough to see the wagabone's a cheat.'—'Still he's entitled to his expedition,' says the magistrate; 'and I'm sure one of Lord Nelson's tars wouldn't wish to injure a fellow-countryman!'—'Lord love yer honour's heart; no, to be sure I wouldn't,' says I, 'and so he may have the prizes back again.'—'But you have done him some damage, my man; and you're too honest not to pay for it,' says he.—'All right, yer honour!' says I, 'in course I'll pay. What's the damages, owld chap?' So the fellow pulled a long face; and at last the big-wigs axed him whether ten shillings would satisfy him? and he makes a low bow, as much as to say 'Yes.'—'All square,' says I, 'and I pitches a guinea on the table. 'Take it out o' that,' says I; 'and, yer honours, he may keep the whole on it, if he'll let me go and have another shy at the French.' But the gentleman laughed me out of it, and the lubber had his ten shillings; and Sal and I made sail for a tavern, where we got all happy, and then bowled home in the cabin of a coach, singing 'Rule Britannia.'

"Ah, you man-handled 'em like a Briton!" said old Jack Sheavehole. "There's nothing like a shot or two to bring the lubbers to reason."

"Trim sails a-hoy;" went the pipe of the second boat-swain's mate from abaft, and every soul was instantly on the alert. The breeze freshened from the northward; canvass was packed upon the frigate and her prizes, and away they danced cheerily over the waters, making a goodly show.—*Bentley's Miscellany.*

AN AWFUL MOMENT.

I SAILED from New Orleans in the beginning of February, 1823, in a small schooner, bound for New York. We descended the river without any accident, and went to sea with a fine breeze; we had favourable winds and good weather for the first five days. On the morning of the sixth, it began to cloud up; as the day wore away the gloom increased, and when the night set in it was as intensely dark as I ever remember to have seen it. The novelty and interest of my situation prevented me from turning in; the scene was awfully grand,—the rolling of the thunder could just be distinguished above the roaring of the waves, and the vivid flashes of lightning dispersed for a moment the gloom, and showed the raging waters round us. I continued walking the deck with the captain, who was relating to me some of the many dangers and difficulties, that a life of thirty years on the ocean had subjected him to. He had been thrice shipwrecked, and twice captured by the enemy, in the late war with England. He was a good seaman and

had all the virtues and vices of a sailor. We continued on deck some time; the wind had now increased to a gale. The waves ran mountain high, and our little vessel danced over them in fine style, when accidentally casting my eye over her side, I thought I perceived something dark moving in the water; I pointed it out to the captain, who no sooner saw it than with an exclamation of terror and despair he cried, "we are all lost," and sprung to the binnacle for his trumpet. I saw in an instant our danger; it was a large ship with all her sails set bearing full upon us. I knew if she struck us our destruction was inevitable; she would pass over us in a moment; the people on her deck would be scarcely sensible of the event, and we should be buried in the ocean without the least possibility of relief. The captain twice raised the trumpet to hail her, but fright and despair made him mute; I snatched it from him, and in a voice rendered supernaturally loud by the danger of my situation, and which was heard even above the roaring of the waves, I hailed her with "starboard your helm." In an instant after, I heard the officer on her deck, in a voice scarcely less loud than mine, pass the word of "hard a starboard." In another moment she passed us with the velocity of lightning, her huge bulk and lofty sails casting a still deeper gloom over the deck of our little vessel. She rolled in the chasm, occasioned by the passing of the vast body, so high her, and nearly upset. I sank on deck, overcome by the intensity of my feelings, and deprived, as it were, of the power of motion. I recovered myself, and approached our captain; he was standing in the same position, as before the vessel had passed us, and appeared to be insensible to the objects around him. I spoke to him, but he answered me not. I shook him, and he roused as from a stupor or reverie. It was some time before his mind resumed her empire, and he afterwards told me, that in all his danger and perils, and when death stared him in the face, and deliverance seemed impossible, he was never so impressed with the certainty of his destruction as at that moment. As for me I shall never forget my feelings on that eventful night, and cannot even now look back without horror on the danger of my situation.

THE OCEAN FIEND.

"And my thoughts were of human things, as I hung
In the depths of the ocean drear,
The only warm-feeling breast, among
Spectres, and monsters, and shapes of fear.
I thought of the light, and the air above,
And of human voices, and human love."

At a coffee-house in London, I became acquainted with a gentleman, whose singular life is worthy of being related. From the first moment I felt interested in the stranger: the naval uniform, and his handsome, sunburnt countenance, showed he had visited foreign climes. We generally dined at the same table, but seldom addressed each other. A circumstance, however, brought us intimately acquainted. Indisposition had, for some time, confined me to my apartment; when I returned to the coffee-room, I found my friend in his usual place. He welcomed me with a smile, saying, "You have been a long time absent, sir; I am afraid you have been unwell; and, indeed, from your paleness, I fear you suffer still." The restraint which at first existed between us being thus removed, we soon became intimate, and the more I saw of my new friend, the more I esteemed the qualities both of his head and heart. One day he invited me to take a sail with him as far as Greenwich, and we reached that noble hospital, which is a refuge for more than two thousand invalid seamen. We had scarcely entered the court, when I observed that the eyes of my companion were anxiously in search of some one. With hasty steps he approached an old sailor, with snow-white hair and a weather-beaten countenance, who was seated on a bench, warming himself in the sun. The moment the old man saw the captain, he instantly rose and touched his hat. "Why, my old shipmate," said the captain, "you seem to be lying quietly at anchor here;

you have tumbled into a secure and peaceful haven, after the storms of life." "Thanks to my king, and to you, sir," said the old man, with a cheerful smile, while he again resumed his seat. "I still sail with a fair wind, and hope to enjoy a few more years, yet, in this quiet home. This day, twenty-five years since," he continued, with a significant wink, "we little thought to live to see this day, or to reach such a secure port; and, to think that I still sail with a fair wind, and have anchorage in this good haven here, to rest from all my toils and cares, is more than I could have looked for. Take it not amiss, that I speak thus freely; but our meeting, this day, brings back many a long year." "Yes, yes, Tomkins," said the captain, "this day, twenty-five years since, was a dreadful day; and I would not have given sixpence for either of our lives; but courage and firmness often overcome danger, as the spectre found, who so obstinately persisted in taking up his quarters with us." Tomkins gave a significant nod in reply; and my friend, having spoken a few words aside to the old sailor, slipped some money into his hand, and we left him.

On our return, my friend informed me, that Tomkins had served many years under him; that he was steady and faithful, and that he owed to him his life. This account gave me a desire to hear more of his history, and I requested my friend to gratify me. "Yes," said my companion, with a thoughtful look, "it is, indeed, a wonderful story, of which I have never yet spoken; but to you, my young friend, I will confide what has never yet crossed my lips.

"About twenty-five years since, I served as lieutenant on board the *Minerva*. Our ship had gone as a convoy to some merchant-vessels, bound to Canton, and it was our intention to return the same way, as soon as they had taken in their lading. The season was far advancing, and we were prepared to encounter many dangers. The captain of the *Minerva* was of a stern and determined character, and so obstinate that he would listen to no one's advice. Avarice was his ruling passion; and from this vice the crew suffered great privations, as he never laid in stores sufficient for the voyage; but trusted to receiving a supply from the merchant-vessels, should it be required, without reflecting, that if we were to be separated from them, our situation would indeed be dreadful. As we lay at anchor at Java, I thought it my duty to warn the captain of what might take place: but he replied that it was no business of mine, and not to meddle in matters that did not concern me; and that, unless I wished to bring punishment upon myself, I would instantly desist from my impertinent interference. Upon this I was silent; and although we have the fruitful coast of Java before our eyes, yet no one dared approach the island. At length we put to sea, and sailed between Sumatra and Malacca, through the dangerous straits. Here it was, that our captain showed his skill and courage. With the greatest ability he piloted us through the numerous rocks and sand-banks, by which we were encircled, and the merchant-vessels followed in our course. We safely passed the dangerous sound; but we had hardly reached the open sea, when a dreadful storm arose, which raged during the whole of the night. Our vessel, though good and strong built, yet sustained some damage, though fortunately not of much consequence. But you may imagine our horror, when day-light broke, on finding that the ships under convoy had all disappeared. Not a sail was to be seen. For the first time, the captain seemed anxious and discomposed. All on board were aware that the cutter had only provisions for a few days. The evil which I had anticipated had now overtaken us; and, with one voice, the crew insisted that we should return and procure provisions at the first port. This proposal recalled the captain to himself. A dark shade overspread his countenance, while, with a voice of thunder, he exclaimed, "Silence, every man of you! the first who dares to murmur, I will hang at the yard-arm. I know my duty—I command here—my orders shall be obeyed, though every soul should go to the bottom." To this, none had the courage to reply. I myself could not but wonder at this bold speech.

"For some days we continued to cruise in the Eastern Ocean, without meeting a single sail, and always receding from the coast. The daily rations at length were so dimin-

ished, that, from exhaustion, the crew were disabled from working the ship. I now remarked that the captain had become extremely irritable; his countenance alternately changed from the flush of fever, to the paleness of death. The others he formerly issued with determination, were now given with intemperance; and if not instantly obeyed, the crew were severely punished. Amongst others, Tomkins was harshly punished for a very trifling fault; but on my remarking that it was from the effects of fever, he thought no more of the matter. The same day the captain died. His body was the first that was food for the fishes: but many were to follow. Already had the spirit of destruction marked us for his prey.

"After the captain's death, I assumed the command. As I thought it probable that the dispersed vessels were driven to the coast of Sumatra, I determined to bend our course there; and this determination gave universal satisfaction to the crew. The state of exhaustion, however, to which hunger had reduced us, rendered our reaching the coast so improbable, that a feeling of despondency took possession of us. Notwithstanding all our economy and care, in regard to distributing the provisions, to our horror we found that we had only one day's allowance on board; and, even with a favourable wind, we could not expect to reach the nearest coast in less than five or six days. With a heavy heart I watched the ship's course, which, with a slight wind, moved slowly on. The heat now became oppressive. I was the only one on deck. When twilight began, Tomkins approached, with a mysterious look, and said, in a half-whisper, 'Lieutenant, it goes ill with us; in a short time the *Minerva* will be driven out to the open sea. Have you not remarked the oppressive heat? See how her sails flap together. All hope is past, for there will be a dead calm, which will last for many days.' Tomkins, I replied, 'you yesterday predicted calm weather—it may be so—but may we not be fortunate enough to procure some fish or wild-fowl? or, perhaps, we may fall in with some vessels that will bring us assistance?' 'Sir,' answered Tomkins, with a serious look, 'don't be offended that I speak my mind freely. I am not the man to grumble at the want of provisions. Do you think that an empty larder is distressing to me? that that is the evil I dread? No, no; old Tomkins has suffered that privation too often to be cast down by it.' But, continued he, with earnestness, 'there is a spirit coming on board, which is always the forerunner of destruction. Do you see nothing, sir? Do you not observe something extraordinary upon deck? Hist! it moves!' he exclaimed, in a suppressed voice. And now I did remark that the evening mist had assumed a strange and spectral form, which laid itself down upon the deck. 'How, Tomkins!' said I, in an ironical tone, 'have you no other grounds for your anxiety than the phantoms which are raised by the mists of the evening? You, who are an old sailor, ought to know that this frequently occurs without any evil agency.' 'Ah! to be sure,' grumbled the old sailor, 'every cabin-boy would stare at me if I did not know that; but a fog in this shape, and upon these seas, is something worse than common evening mist. Have you never heard, lieutenant,' he continued, 'of the sea-spectre? I shook my head.' 'Well,' said he, 'I shall tell you of this spirit, of which I have heard from old sailors, who have been in these seas. It is well known that this spectre comes on board every vessel which has the misfortune to enter these seas. Over the winds and the provisions has this spirit, which is called the spectre of the mist, no power, but only over the wretched crew. It takes its place at the helm, and steers where it thinks fit. This spectre seems every moment to increase in size; it begins to move a few steps from the helm, to which it soon returns, and, at every step it takes, dooms its victims to death; but if it once reaches the other end of the ship, all hope is lost, and the spectre either brings the captive ship on a rock, or sinks it in the deep.'

"The story of the old sailor appeared so truly ridiculous, that but for our melancholy situation, I would have laughed outright. 'Tomkins,' said I, as I turned to go to the cabin, 'I fear not your spectre; we have enough of real evils, without troubling ourselves with a fabulous spirit.' 'We shall see enough of it by and by,' grumbled the old man, as I left him.

"Want of sustenance, and the fatigue of watching upon deck, had so much exhausted me, that I soon fell into a deep slumber. About midnight, I was suddenly awakened by a dreadful tumult on deck; the noise of voices, the clashing of swords, and the firing of pistols became tremendous. I flew to the door, but, to my rage and disappointment, I found it locked. This is mutiny," was my first thought. I called on the mate, the boatswain, old Tomkins, but no one answered me. I went to the cabin window, and listened attentively; the tumult appeared to be over the gangway. I fired my pistol, but no notice was taken of it.

"It was nearly an hour before the affray ceased. I heard the boatswain exclaim—'Surrender instantly, you rascals! or, as sure as you are imps of Satan, I'll fire the powder-room, though we all should dance in the air together.' This threat seemed to take effect; for I again heard the boatswain say—'Ah, it is well, old boy; and now I will bind you so tight, that the blood shall spring out from your fingers' ends. And now, Tomkins,' he added, 'you may go and free the lieutenant, whom we locked in.'

"In a few minutes the cabin-door flew open, and old Tomkins entered; who told me that the crew had broken open the provision-room, and had helped themselves to all that they found there; and that some of them had entered into a conspiracy to barricade the cabin-door, and leave the vessel to its fate. They carried the stolen provisions on deck, where an unexpected reception awaited them: they were immediately attacked by that part of the crew who would not join in their enterprise, and a severe conflict ensued. In the meantime, some of the mutineers had, unobserved, placed the provisions in the boat, which they instantly lowered into the sea; and having taken possession of it, they were soon joined by their companions, who had the good fortune to fight their way through those who opposed them, and to reach the boat in safety. Deep was the indignation of those who remained, at the treachery of their companions. All had taken to flight, except four, who had been placed as a guard at the door of the cabin. I immediately ordered lights to be hung out, and sent several shots after the cowardly rascals, which unfortunately missed them, and they soon vanished in the dark. In the gangway we found many dead, and some severely wounded: the first we lowered into the sea, and we bound up the wounds of the latter. Our situation was now indeed deplorable.

"At break of day, as I stood mournfully on deck, gazing upon the calm sea, old Tomkins again approached me, saying, 'Well, sir, you yesterday laughed at me for telling you the spectre would pay the Minerva a visit; but I don't think that you will again take the old sailor Tomkins for a man who troubles his head with a fabulous spirit.' In truth I did again observe something standing immovable by the helm, which appeared like the figure of a very large, tall man. Without waiting to reply to Tomkins' remark, I quickly approached this singular apparition. The nearer I approached it, the more indistinct and shadowy it became. When I reached the place where the phantom stood, to my astonishment it had disappeared; but the instant I left the place, the spectre re-appeared, and assumed the singular form of an old sailor, in a bending attitude. 'See, lieutenant,' said Tomkins, 'the spectre makes himself sure of a good prey during this night, because he is seen more distinctly. He will now begin to take command of the ship, which he will keep for days.' I knew not what to think of the matter, but on being called down to the cabin, where two of the steersmen lay mortally wounded, I cautioned Tomkins to say nothing of it to any of the crew, as not a man would stir from horror at the apparition. I found both the wounded men at the point of death. The same day, four more of the crew died, and at midnight we had only twelve men on board the Minerva.

"When we sunk the last body in the sea, I looked towards the helm, but the apparition had vanished. Tomkins, who stood beside me, whispered, that it would again appear in the evening, and that it would be more distinctly seen than hitherto. We had paid the last honours to the dead, and my unhappy comrades had gone below to avoid the oppressive heat, whilst I stood lost in thought on our melancholy situation; not a breath of air cooled the burning atmosphere; not a star glimmered in

the wide horizon. Our vessel rocked from side to side; the helm had lost all power over her. I now apportioned what remained of our provisions to the crew; for myself I retained none. Tomkins was still the most active and unrepining.

"As soon as I dealt out the small remains of the provisions, I returned on deck. Here I found my favourite dog, Cynthia, who, the moment he saw me, turned with feeble steps towards the helm, and looking steadfastly on the place, began to howl sorrowfully. I called the faithful dog to me. 'Cynthia,' said I, 'for many years you have faithfully served your master: you must now receive your death from his hand.' I need not express to you what my sensations were; seizing my pistol, a deep groan followed the shot, and then 'all was still.' The report brought all the crew upon deck. With a bitter sigh, I gave the dog to the poor fellows. Their repast was soon prepared, and they all expressed their gratitude for the sacrifice I had made. When Tomkins returned upon deck, he approached me and said, 'Lieutenant, you are a generous man, and spare nothing to your crew.' 'Truly, I have never had that in my power until now,' said I; 'I have done nothing more than you would have done, had you been in my place, Tomkins; for I think you are a warm-hearted fellow.' 'But,' answered Tomkins, 'I would rather have kept the dog for another and a worse time, which we may yet see.'

"In the evening I felt some one touch my shoulder; I quickly turned round—it was Tomkins. 'Our steersman is here again,' he whispered; see 'how restless he becomes, and how he strides backwards and forwards.' 'Courage will not help us here: those over whose heads he walks, are doomed by him, and he makes himself sure of us also.' I now looked towards the helm, and saw the spectre more distinctly than I had done in the morning. On approaching nearer, I remarked, with horror and astonishment, two eyeless sockets; and the dark and furrowed countenance of the phantom was meagre and ghastly. With crossed arms and measured steps, he paced between the helm and the mast. I summoned my courage to my aid, approached and addressed him; but he silently continued his walk, without appearing to have observed me. I now drew my sword from the scabbard, and made a thrust at the unbidden guest; but it only cut the air, and the spectre quietly pursued his wanderings. 'You are right, Tomkins,' said I, as I turned to the old man; 'Satan has taken up his abode with us, and I have no power to drive him away.' With a feeling of terror, which till then I had never experienced, I went forward, leaving the spectre to continue his walk, undisturbed. The moon had risen; the heavens were bespangled with stars; Tomkins and I were sitting upon the deck, lost in thought, when suddenly a wild song arose from the steerage. Without doubt the unfortunate beings were endeavouring by this means to restore their cheerfulness. As I was still in hope that the spectre would suddenly vanish, I looked towards the helm; but, to my disappointment, I still saw him pacing backwards and forwards as before. Since the evening, I had allowed all the work of the ship to stand, as the famished crew were quite unfit for service; and as no exertions on our parts could be of the slightest use. All was now quiet in the steerage. That is the calm of desperation, thought I; and as none came on deck to enjoy the cool breeze, I went down to inquire the reason, and, to my surprise, I found them all in a state of insensibility. They had emptied the last anker of rum; the empty keg lay upon the table, and the unhappy crew lay extended on the ground, without any signs of life. At first, I thought it was from intoxication, but on finding behind the empty anker, a bottle with 'opium' inscribed upon it, and which was also empty, I soon found that the miserable wretches, to console themselves under their privations, had had recourse to this dangerous and fatal remedy. I hastily called Tomkins, and told him my suspicions: we tried to restore them to consciousness, but without success. 'Sir,' said Tomkins, 'I greatly fear none of these poor fellows will ever come to life again: take notice, 'tis not for nothing the spectre is walking over their heads.' He was right. The same night eight of the unhappy crew died in violent convulsions: but the boatswain and cabin-boy became sensible next morning. They told us that they had all partaken of the drug, for the purpose of

delivering them from their wretchedness. As they had frequently indulged in the use of opium, its operation was slow, but at length death asserted his power, and by mid-day all was over.

"With a mind full of sadness, I paid the last rites to the dead. Tomkins was still active and cheerful, whilst I, who was much younger, could hardly support myself upon this sorrowful occasion. When all was concluded, I became extremely faint. I threw myself down upon deck, every thing appeared to move around me, and I soon fell into a stupor: my thoughts wandered and became unsettled. I dreamt that I was on a fertile coast, and that several persons approached me with the most delicious fruits. A number of slaves came near, bringing in their hands cups of gold, which emitted the most delicious perfumes. From this enchanting vision I suddenly awoke; but on opening my eyes, I thought I still dreamt, for Tomkins stood before me, holding in his hand some of the fruit I had seen in my dream. Without inquiry, I took part of it, from which I found great refreshment. Inquiringly I looked at Tomkins, who, in confusion, threw down his eyes. 'How came you by this fruit, Tomkins?' I asked, after a pause, 'Did you swim for it to-day, sir?—that's a sign we must be near some coast.' 'Not to-day,' said Tomkins; 'but I swam for it when we lay at anchor, on the coast of Java.' 'Impossible, Tomkins!' I replied, as I angrily sprung up; 'surely you could not have kept this refreshing fruit when so many of your messmates were dying of want?' 'I give you my word, sir,' said Tomkins, with a firm voice, 'I have always divided my rations with them; they are now dead; but not from famine alone, but from their wounds, and the opium they drank.' This reply placed the old sailor in a favourable light. He told me he had overheard my conversation with the captain, in regard to our want of provisions; in consequence of which, when keeping watch during the night, he swam secretly to the shore, brought some fruit, and returned without being missed. He expressed his happiness in having an opportunity of showing his gratitude to me, for having saved him from a punishment with which the captain had threatened him. We now went down to the steerage, where he showed me where he hid the fruit and some cocoa nuts, under an old chest.

"In the evening our spectre friend again appeared: he was even more restless than ever. With rapid steps he quickly strode to the bench where we sat, and with a commanding air, he stretched forth his right hand. On his deep furrowed features lay the expression of a fiend. By heavens, my young friend, I have stood the battle's thunder without feeling the terror which seized me at the sight of this spectre! The nearer it approached me, a shudder ran through my veins. The dreadful feeling of expectation which filled me, at every turn the spectre took, became at length so insufferable, that, drawing a pistol from my belt, I fired at this wandering spirit; but it had not the least effect on him. 'Of what use is it, sir,' said Tomkins, as I threw myself, in deep disappointment, by his side; 'no human hand can injure him. We, too, are marked out for his sacrifice, and he is compelled to continue his wanderings over the whole ship. If he again come this way we are lost. You had better now write down the melancholy intelligence, how that the cutter *Minerva*, and her crew, were sunk into the sea.'

"In the evening the spectre again began its wanderings, which continued till next morning. After we had divided the last cocoa-nut, 'Tomkins,' said I, 'I owe my life to you, and the service you have rendered me is the more to be praised, as you will probably live some days longer, and have nothing left for yourself. Let us, Tomkins, boldly meet death as brave seamen, nor fear the spirit as he stands before us with his threatening looks and gestures.' Upon this, I went down to the cabin, to give an account of the destruction of the vessel and the crew. I had just finished my document, which was to be thrown into the sea, and believing my last hour to draw near, I lay down in my hammock, when I was suddenly aroused from my uneasy and disturbed slumber by the joyful voice of Tomkins; who, rushing into the cabin, exclaimed, 'Hurrah, sir, our deliverance is near; the spectre has disappeared, and a stiff breeze now fills the sails.' I flew upon deck, and found to my relief, that the dreadful spectre had indeed taken to

flight; but I could not restrain a sigh at the loss of the crew, as, from want of hands, we could make but little way. 'Courage, lieutenant,' said Tomkins; 'if this wind will not take us to any vessels, it may bring them to us. The phantom has taken himself off—that is the principal thing, and convinces me that we will soon be succoured.' Tomkins was so strong in this hope, that, in the evening, he hung out lights, and fired a signal gun; but, as the morning dawned, not a sail could we descrie on the wide and solitary ocean. I now gave up to despair, but nothing could damp the hopes of Tomkins. He ascended to the mast-head, declaring he would stay there till he saw a sail, or die like a brave sailor. This affected me much: I threw myself upon deck, there to await our unhappy fate. I was soon aroused from my painful reflections by an exclamation from Tomkins, of 'A sail! a sail!—a sail before the wind!' he exclaimed in breathless haste. The joyful intelligence instantly restored my strength. While Tomkins fired a signal gun, I went up the mast, and there saw not one, two, or three, but four sails. It was the fleet which we had conveyed to Canton, and, to my great joy, I saw the vessels bending their course towards us.

"I was soon in the arms of my friends. Some sailors who were on board, informed us that the spectre was the apparition of a Portuguese corsair, who, two hundred years ago, had drowned himself in the Eastern Ocean, from remorse, at having, in the most cruel manner, allowed his crew to die of hunger.

"We returned to England. Tomkins made some new voyages with me, after which, we went to Greenwich. He is now nearly ninety years of age; we have not met for a year; and, my young friend, this is the anniversary of that day on which the phantom disappeared, whose presence had caused so much terror."

SIR ROGER CURTIS.

This admiral having received orders, while in London, to take command of a squadron at Portsmouth, travelled, for despatch, without servants, plainly dressed, in the mail coach. As it frequently happens in this sort of conveyance, the passengers were unknown to each other, and Sir Roger found himself in company with a young man, who proved, by his uniform, to be a mate of one of the East Indianmen, then lying at the Motherbank. When they had proceeded within a few miles of Petersfield, the young officer pulled out some bread and cheese from a bundle, and invited his fellow travellers to eat. During the repast, he entertained them with sea phrases, which induced the admiral, jocosely, to ask him many simple questions relating to nautical tactics. Among others, he demanded how sailors could see at night, and whether they were not compelled to tie the ship to a tree or post until morning? The mate was not backward in bestowing a few hearty damns upon the ignorance and lubberly lingo of the admiral, who laughed heartily at the joke; and he not only bore the rough observations of the sailor with good humour, but the contemptuous grins of his fellow-passengers. On their arrival at Portsmouth, the admiral shook hands with the mate, and went on board his ship.

The same day, Sir Roger came on shore in his broad gold-laced hat and uniform; he was attended by several of his bargemen, and while walking up Point-street, he met his late fellow passenger, the mate of the Indianmen. Before the latter could recover from his surprise, Sir Roger accosted him with, "What cheer, messmate? you see I am not the lubber you took me for; but come, as I breakfasted out of your locker this morning, you shall *splice the main brace* with me this evening; then you may square your yards, and run before the wind to the Motherbank." The mate, with astonishment, apologised, as well as he was able, for the liberty he had taken with the admiral, who soon released him from his embarrassment, and advised him, over a bottle, never to be decoyed in future by false colours, but to look sharply at the mould and trim of every vessel he met, before he suffered her to surprise him.

ADVENTURES OF CAPTAIN ROBERT JOHNSON,

From his first leaving England for Madras, in the year 1768, to his return to England, in 1776.

Our hero, Captain Robert Johnson, son of an eminent doctor, then of Edinburgh, having in 1768, accepted of an appointment in the military service of the East India Company, took his passage accordingly on board a vessel at Gravesend. Having been accustomed to a naval life, he was treated with much respect by the captain of the ship, and chief officers. They had a number of raw recruits on board, and Captain Johnson was requested to teach them the new exercise. He undertook this task with great pleasure, and it was no small

matter of astonishment to the captain and officers of the vessel, when they saw him throw the musket about so smartly, in order to teach them their motions. They stared with surprise, and declared they never thought before, that a sailor and a soldier could be worked out of the same stuff.

Captain Johnson likewise taught some few of the cadets, at their own particular request; but they were all more inclined to learn and play at single stick and with foils, than with the musket, the captain's time, however, was thus filled up.

Having stopped some time at the Cape of Good Hope, our hero and four others undertook to climb up the Table Mount. It was very late when they set out, and scarcely were they half way up, when their guide, looking at the clouds, which began to roll down from the top of the mount, declared he would proceed no farther, for they should be so enveloped in a

THE WATER SPOUT.

thick dust, that it would be both dangerous and difficult for them either to go on or return; and if they did succeed in safely ascending it, they could not possibly derive any benefit from the view, as the mist would inevitably confine it to a very few yards.

Notwithstanding these plausible reasons of the guide, Captain Johnson, and another of the company, persisted in the undertaking. The rest of his companions were persuaded by the guide to return. As the captain and his partner proceeded, they found the ascent much more difficult and dangerous, nor could they discover any kind of a path to convince them they were right. In about an hour's time they were completely wet, and the mist was so thick that they could not possibly ascend higher. They now saw their own folly, and the prudence

No. 44.

of the guide; and the captain and his companion immediately began to descend, to overtake the rest of their companions, if possible. The foggy mist having rendered the way extremely slippery, they found it more difficult and tedious to descend than it had been to ascend. They could see no further than three yards on any side, and having passed several dreadful precipices, they stepped with great caution, and were frequently obliged to descend backwards, and lay hold of scrub bushes, and other things in the way, in order to defend themselves.

Thus proceeding for some time, they at length arrived at a kind of wood or wilderness, by which it was evident they had lost their way. They were also uncertain whether they should find it again before night, and equally doubtful whether they

ought to attempt. The captain and his companion had pocket pistols, and other articles with them, which they had taken as a measure and precaution, understanding there were several wild animals on these mountains.

After consulting with each other what they should do, it was mutually agreed, that while thus involved in darkness, they should take shelter in the trees. Accordingly they made choice of a spot under two trees, that were close enough together for the branches to entwine; and having gathered brushwood enough for a good fire, they began to think how they should light it. Captain Johnson soon made a kind of tinder, or touchpaper, of some brown paper which he had about him, by rubbing it with gunpowder. As he wished to preserve his pistols loaded, he now strove to strike a light by their knives, &c. but these attempts being ineffectual, he was constrained to

draw the charge out of one of the pistols. They made plenty of touch paper, and gathering some moss, the captain fired the paper by the priming; then putting it in the middle of some of the driest moss they had, held it between the palms of his hands, and blowing it well, they soon kindled a fire, which they found no difficulty in keeping up, and which was the only consolation they had till the morning began to dawn.

They heard the noise of several animals during the night, but it was impossible for them to discover of what kind they were. Their chief consideration was to keep up a good fire, in order to defend themselves from them. Their next consideration was to procure, if possible, some repose. One of the trees suited very well for one person to lie down at the top, amidst the branches, without the danger of falling; but the remaining branches only afforded a seat for another. It was

therefore agreed to watch alternately for two hours to keep up the fire, while the other took his repose. In this manner they passed the night, and met with no harm.

The thick clouds having been dispersed before day-light, they saw the ships at anchor in Table Bay, which accordingly directed their course. They soon recovered their path, and returned to their companions, who rallied them on the agreeable night they had passed.

During their stay at Cape Town, they lived most luxuriously at the rate of one dollar each per day. They were invited by the first inhabitants, to board and lodge with them at this price. The table was spread with great variety of fish, flesh, and fowl, and to every plate a bottle of wine was set. After dinner, as much wine as they desired was also brought. They

had likewise desserts of excellent fruit at breakfast, dinner, and supper. Of this plenty our adventurers availed themselves, having laid in a large stock of every thing desirable for the remainder of their voyage.

Captain Johnson arrived at Madras just time enough to assist at the close of the war with Hyder Ally. The army was soon separated, and ordered into various districts. Captain Johnson's destiny was in the Northern Circars, on his departure for which he was honoured with letters of recommendation from the general, to an old officer who had the command there. The major also made him a present of a handsome horse, well accoutred. This horse the captain sent by land to meet him at Masulipatam, for which place he embarked with others on board a country vessel.

The captain had a Gentoo servant who had never been on salt water before. The weather being rough, he was very seasick, and consequently incapable of taking care of anything: the provision therefore appropriated to himself was all stolen. There was plenty of provisions on board the vessel, but this Gentoo, unfortunately, from his religious tenets, durst not partake of any of them. Had there not been two or three Rajahpoots, who were passengers, and whose caste allowed this poor fellow's drinking some of the water they had brought with them, though not to eat of their food, it is probable the captain would have lost his servant before they had reached Masulipatam on the sixth day. The sickness having cleared his stomach and bowels of all nourishment, he appeared for the last two days he was on board, in a state of immediate dissolution. He was conveyed on shore by the first boat, under the care of the Rajahpoots, and soon recovered. He was exceedingly attached to Captain Jones after this, and proved not only a faithful, but a clever servant.

On his arrival at Masulipatam, our hero experienced the most polite attention of several persons of distinction. After some months' stay, he was unexpectedly appointed judge-advocate for the Northern Circars. He felt rather diffident in undertaking this new office, and had it not been for the friendly advice of several officers of rank, who generously offered to assist him when necessary, in all probability he would have declined it. By their persuasions, however, he accepted it.

Captain Johnson was much hurt at the indecorous mode which was practised here of burying the dead. There was no person appointed as chaplain, or to officiate as such, either as to burials, christenings, or any other religious forms. A military ceremony of firing over the grave, was frequently all the compliment that was paid to the deceased. He was resolved, if ever he found it possible, to rectify this evil; and fortunately an opportunity occurred. On a visit that was paid him by the chief, from Masulipatam in his way to Rajahmundry, to settle the rents which the different rajahs were to pay the three following years. Captain Johnson mentioned to him the disgraceful appearance of this want of religious ceremony among the natives. He persuaded the chief to represent the necessity of a chaplain, who should have a regular salary, to the governor and council; and till such a chaplain to the garrison was obtained, our hero offered to officiate himself as such, without any pay. Accordingly, the captain became a parson for about ten months, marrying, christening, burying, and reading the church service to the troops, under a large banyan tree every Sunday. Thus the captain performed the double duties of judge and parson; and during their convivial meetings of an evening, when he was obliged to throw off the austerity of the one and the gravity of the other, it was diverting to hear the judge or parson called on for a love ditty or a bacchanalian song.

Captain Johnson having been at Condepillie, in the province of Golconda, with four companies of Seapoys under his command, he was suddenly ordered to join his battalion, and march against the rajah, who had declined meeting the before mentioned chief at Rajahmundry, and who had also refused to pay the rent affixed to the territory he held.

This rajah, it seems, depended on the natural state of his situation, which was amid hills, bamboo woods, and jungles. Notwithstanding the bold resistance which he made, he fell, and his country was taken possession of, but not before the English had lost some of their officers, and several of their men. Our hero was among the number of those who were severely wounded, by which he was rendered incapable of further active service. At first it was supposed that he could not possibly survive, having lost an immense quantity of blood before he had procured any surgical assistance. His patience, however, during his pain, and resignation to his fate, happily prevented a fever; and by means of the kind attention which was paid to him, his life was saved.

At this time the Ginee fever had raged violently, and carried off several officers and men. One of the former, who lay dangerously ill with it, was much esteemed in the army; and every time the surgeon visited him, there were many anxious inquiries made about his health. Once, when the surgeon was

quitting, he was stopped, and the usual question, "How is the captain now?" put to him. "Ah!" said the surgeon, with a melancholy face, "I shall not see him alive on my return from the other sick." As this passed close in front of his tent, the patient heard it, but as he felt sound in heart, though so much reduced as to be incapable of assisting himself, he thought the surgeon was deviating a little from the truth. This patient, it appears had repeatedly requested of the surgeon, his permission to drink a magnum bonum (that is, about three pints of claret), which was peremptorily refused him by his doctor, who declared that it was absolute poison for him. As soon, however, as the surgeon was gone, his patient prevailed upon the servant, who was attending him, to bring to him the above mentioned quantity of wine. At first the servant, knowing that it had been strongly prohibited, endeavoured to dissuade him from his purpose; but his enraged master (though not able to rise from his bed) violently swore, that if he did not immediately obey him, he would blow out his brains with a pistol. This threat sufficiently alarmed the servant, who never recollected his master's capability of performing it. Accordingly he obeyed his master, drew the cork, and held the long wished for bottle to his mouth. The patient, determined upon curing himself, sucked in the delicious wine as long as he had breath; and when he had satisfied his longing, he told his servant to place the remainder under his cot, and in a few minutes he fell fast asleep.

The surgeon having returned about three hours afterwards, and saw the servant outside his master's tent, concluded, according to his prediction, that the latter was dead. He was, however, told by the servant that he had been in a sound sleep for those two hours. "I dare say it is a sound sleep," replied the surgeon, "a very sound sleep indeed." He then stepped into his tent, and to his very great surprise found that his patient was actually asleep, and in a fine perspiration. He felt his pulse, and being further astonished at this unexpected change, he inquired of the servant if he had taken anything besides what he had prescribed for him. The servant then related what had passed, and produced the remainder of the wine as a corroboration of his story. The surgeon looked at the bottle with an additional amazement, told the servant to replace it, and then leaving the tent, added, "when your master awakes give him as much of it again as he likes." In about an hour afterwards, the patient awoke with increased strength, and having drunk the remainder of his delicious beverage, soon recovered, and used frequently afterwards to laugh at the surgeon, declaring that he would always be his own doctor for the future.

Another patient, who was also dangerously ill, expressed the same desire for milk, which was in like manner refused to him. Having been ordered by his medical friends to the sea-coast, though they despaired of his ever being able to outlive the journey, he was accordingly conveyed thither, on a palanquin, in as gentle a manner as possible. Being now free from his doctors, he desired to rest at the first village he came to, and immediately ordered his servants to procure him some milk, in which he was indulged, and of which he drank copiously. During the whole journey he continued to drink this and nothing else; and when he arrived at the sea-coast he persevered in his milk diet, by means of which he soon recovered. Thus it is evident that nature is the best physician—"she ways us to the mood of what she likes or loaths."

Another patient had continually called for porter, which, notwithstanding his earnest entreaties, was denied his wish, and the consequence was that he died. Several were afterwards of opinion, that had the porter, agreeable to his wish, been given him, it might have saved his life. This supposition occasioned an agreement to be drawn up among the officers, which was immediately signed, purporting that every patient, in the last stage of illness, should have anything he wished for, notwithstanding the prohibition of their doctors; and in consequence of this strange agreement, it is supposed that many lives were afterwards preserved.

Condepillie, which signifies the Hills of Tigers, abound also in wild peacocks. These peacocks are very good substitutes for turkeys; but whenever a party went out to shoot them,

it was necessary that they should be both strong in numbers and arms, in order to guard against the attacks of the tigers. Here are likewise various sorts of monkeys; also large flocks of beautiful green pigeons and paroquets.

Notwithstanding the danger resulting from meeting any of the tigers which infest these hills, yet some of the natives will go singly into the most unfrequented wild parts of them, and remain there for two or three days, in the hope of killing a tiger for the sake of his skin. This method of proceeding is very curious. They fix on a tree, in a likely situation, whose branches are high and convenient enough for them to build what they call a man's nest, which consists of a number of sticks and boughs interwoven among the branches, large enough to be out of the spring of a tiger. To this they go in the day time, carrying boiled rice and water sufficient for the time proposed to watch for the chance of a tiger's passing near enough to fire at with a matchlock gun. The principal danger is in the passing to and fro from their nest, which will serve them for a long time. Sometimes two of these natives make their nests near enough, though on different trees, to see, converse with, and aid each other; however, during the time of watching the most profound silence is observed.

The wildest parts of these mountains are greatly frequented by large mountain snakes, which are as extensive in circumference as four stout men. The covra capell and covra manill, are also reckoned very poisonous snakes; one of the latter description was discovered by Captain Johnson's servant coiled up under his pillow. The captain, on receiving this information, took a bamboo in his hand, and, accompanied by other officers, went in search of the snake. On turning the pillow back with the end of the cane, it was soon discovered; this covra manill was still lying coiled up, but on raising its head it received such a violent blow from Captain Johnson's bamboo as rendered it incapable of doing the company any mischief.

The whole of Condepillee comprehends three forts, one within the other; the village called the Pettar is to the eastward, on the outside of the fort, at the foot of the hills, and opening on the plains of Golconda. The wall of the outer fort, as it is called, is built not much unlike some of the stone fences to be seen in various parts of England, nor is it stronger. The middle fort is so high up the hills as to make the greater part of it inaccessible by perpendicular rocks. The passage up from the lower fort is formed by regularly cut stone steps, several feet wide, and winding in its ascent up the valley. The inner fort is an exceeding high pinnacle of a rock, completely inaccessible every way, except a narrow path up stone steps, so high from one to the other, and insecure withal, as to require both hands and feet to climb up in safety. A large stone tank, or reservoir, hollowed out of the solid rock, was full of water, and must have been supplied by the clouds, which often encompassed and crowned its head.

The gentlemen, in hot weather, frequently ascend to the middle fort, on account of the pleasant temperature of the air; the difference being such, that, while people below would be gasping for breath from heat, those at the top could with facility even play at trap-ball.

Our hero having once ascended the upper fort in order to enjoy the extensive prospect, and breathe the refreshing air, the clouds suddenly began to gather along the eastern side of the mountain, about midway between the captain and the plain, or lower fort, where he and his friends desired. It was not long before the lightning and thunder produced a tremendous but most awfully grand effect from the clouds below him. The lower fort, village, and plains, were deluged with rain, while the captain sat on high, with a serene beautiful sky over his head, calmly looking down, delighted with the playful appearance of the lightning, as it darted in lovely zig-zags from the clouds at his feet, while the loud peals or thunder reverberated along the different valleys between the mountains. This was one of the grandest sights Captain Johnson thinks he ever saw.

The royal tigers (as they are called) of these hills, are prodigiously large, and the following is an extraordinary instance of their strength, which came within view of the captain,

[THE CAPTAIN ALARMED BY THE UNEXPECTED APPEARANCE OF A TIGER.]

while on a visit to a gentleman, who had engaged to supply by contract, a quantity of stone chunam, or lime, for the Honourable Company's use. He resided in a village formed chiefly of his own workmen in a district across the Kistna, one of the Company's territories. It was a complete wilderness where he lived, and without any other European. During this visit, they made a party of four, taking a guard of seapoys with them. About midnight, they were alarmed by the cry of "A great tiger!" vociferated by several voices, and attended with loud screaming from the natives in

the village. The sentinel immediately turned out the guard; the gentlemen were soon up and armed, and sallied forth with lighted torches. Pursuing a track of blood for more than a hundred yards, they found a buffalo which had been dragged away, after he was struck, and torn from the ropes to which he had been fastened, by a tiger, whom the gentlemen did not see, the lights, together with the violent screams of the people, having made him quit his prey. The buffalo was stretched along the earth in an expiring state. The tiger had struck him in the throat with one of his fore paws, so deep as to injure the windpipe, and occasion his death. Captain Johnson having a large hand and long fingers, tried in vain to put the ends of his fingers into the holes which the tiger's claws had made in the buffalo's neck.

Captain Johnson one morning, while taking a ride before breakfast, met with a royal tiger, who, without being in the least disturbed himself, put our hero and his horse into a terrible aguish fit, which was succeeded by profuse perspiration. The captain had ordered his horse-keeper to wait for his coming back at some little distance from the fort, instead of accompanying him. Our adventurer rode on smartly

by himself for four or five miles, when this handsome tiger, whom he had the dissatisfaction of meeting, was sitting as a cat generally does when licking his hind foot. The noise of the horse made the tiger look about. The horse, which certainly beheld the tiger as soon as his rider did, made a dead halt almost down upon his haunches, and nearly unseated the captain. The royal tiger, though about six yards distance, never altered his position or betrayed the least sign of alarm, but seemed patiently to wait for their nearer approach. Both the captain and his horse appeared to be so charmed with the unexpected sight, that neither of them could take their eyes off him. In vain the former endeavoured to turn the horse's head; however, having a strong cutting moorman's bit in his mouth, with great difficulty the captain forced him back, until at last they had receded to such a distance, that they fortunately lost sight of that which had acted upon their sense of seeing like enchantment. The horse was no longer ashamed of turning his back, but notwithstanding he was a fine spirited beast, it was some time before the captain could force him into a gallop. It is remarkable that the horse did not recover from his fright for several days, nor did he ever relish taking that path again, though in company with others.

Several other alarms our adventurer experienced. Once having been ordered to another station, he and a comrade had travelled two days, making regular halts with their baggage, servants, and a small guard of sepoy. At length, resting beneath the branches of some lofty trees, they were diverted by the frolics of some dancing girls, from a neighbouring village. In order to enjoy this amusement, they sent their baggage and all their articles off before them, that their quarters might be prepared on their arrival, keeping only their horses and the servants belonging to them. Unfortunately they took too long a nap in the afternoon, and by the time they reached a long wood they had to pass through, nearly fourteen miles in extent, the sun was going down and the clouds threatened a storm. Our adventurers being soldiers, thought that to return to the village would be derogatory to their dignity, and therefore boldly proceeded. They put on a dog trot, as fast as their horse-keepers could travel; but it became exceedingly dark and stormy before they reached one-third of the way through the wood. It is impossible to describe the several discordant sounds which now issued from the numerous wild animals which inhabited this immense wood. The approaching storm no doubt was the occasion of this disagreeable and tremendous chorus. Add to this, the thick darkness of the night, rendered any warning of their approach impossible; all our adventurers could do, was to ride with their pistols ready cocked in their hands; to which, as a preventive against any attack, the gentlemen and horse-keepers, added all the terror their united voices were capable of inspiring, from a general supposition, that all wild animals; however bold and greedy, are alarmed at the human voice. They also began to sing martial and bacchanalian songs, and in short made all the noise that was possible. At last the storm came on most violently, and they had still two miles of this gloomy desert to pass. The lightning, thunder, wind, and rain, were so severe, that their horses turned tail, and remained immovable for near half an hour. The horse-keepers now fared better than the gentlemen, for they took shelter under the beasts, while the riders were exposed to the severity of the weather. The storm having at length abated, they proceeded, and after riding briskly for about three miles further, they had the consolation of soon reaching their quarters.

Among the several amusements of this place, Captain Johnson assures us that conjuration is one of the most principal. He and his friends were, one afternoon, very much entertained by the exploits of a conjurer and his son. The boy, who was about thirteen years of age, kneeled down at some distance from his father, and one of the gentlemen, at the request of the latter, put a melon upon his head. The father, who never stirred from his place, charged his matchlock gun with powder, and then desired another of the company to load it with a bullet which he produced. This done, he kneeled down, and, taking aim at his son, fired through the melon. This exploit he performed three times running, and with the same success. No

deception was discovered; but that there was some trick was certain from the nature of his other exploits. He afterwards put the boy into a round basket with a lid to cover it; but first sent the youth with another similar basket empty, which he placed on the ground about the same distance he had been fired at. When the lid of the basket was tied down over the boy, the father asked him a question, and the voice of the boy, in reply, sounded as if it came from the other distant basket. The boy was then ordered to go into the empty basket, which he did, and having been interrogated as before, the answer sounded as if it came from the other. Both these baskets were critically examined by the spectator, and the trick was several times repeated, but no discovery could be made.

During the time Captain Johnson officiated as judge-advocate, only one trial of any importance came before him; which was that of a young soldier for thieving, notwithstanding he had been repeatedly punished for his pilfering. This cunning rogue made it appear that the fort was haunted; for every portable thing in it, even the soldiers' victuals, used to vanish in a most wonderful manner. A serjeant going his rounds early on a gloomy morning, saw something glide across, and instantly disappear. On the report of this story, the ghost was properly watched, and at length a den was discovered inhabited by the apparition; when everything he had stolen, for more than two months (except the provisions), was also found with him. The evidence was so clear, that he was soon found guilty. The fellow, however, having displayed some degree of ingenuity, received a conditional pardon.

The Gentoo religion which prevails here, renders the natives exceedingly superstitious, and tenacious of their rights. A ludicrous affair happened during the captain's stay in India, which proves at once these remarks, and shows the real character of these people. In a village, where the captain resided for awhile, one of the natives rudely forced himself into the tent where he and his friends were dining, making a strange noise, and using unaccountable gestures. He was at last forced out by the palanquin bearers; when the fellow, who pretended to be devoted, swooned away, as it were from the effects of pollution, having been touched by these men of low caste. The natives consequently assembled round the man, and in loud lamentations bewailed his supposed death. Captain Johnson found it necessary to order out his guard, and convince the inhabitants of the deception. He claimed their attention as he officiated himself in the religious character of chaplain, and declared he would prove whether there was, or was not a spark of life remaining. He then took a wax taper, a match, a bottle of phosphorous, and some sealing-wax, these being articles he never travelled without. Then using all the mummery of a conjurer, and repeating a few unintelligible words, which had a wonderful effect on the bystanders, our hero bent himself over the body, and drew the cork from the bottle of phosphorous just above his navel. "Now," cried he, "if this man only counterfeited death, a flame will arise from his body, which in the end shall consume him, and he shall be really dead." This said, he applied the match to the phosphorous, and immediately the flame was seen. The natives instantly raised a horrible yell, and the impostor, by the motion of his muscles, now manifested some alarm. To complete this miracle, the captain melted some sealing wax with the taper, and dropped it close above the man's navel. Three drops were sufficient. The fellow no longer able to endure the pain, jumped up and ran away, bellowing and rubbing his belly, to the great astonishment of all the spectators. This trick had the desired effect; for the captain was never afterwards visited by these impostors.

Capt. Johnson, in consequence of his wound, was now obliged to resign his situation, and quit these quarters. Accordingly, he took his passage for Benecolen, in a country vessel belonging to Bombay, then lying in the roads, bound to Acheen, the northern-most end of Sumatra. In crossing the bay of Bengal he saw several water spouts, one of which threatened the vessel with considerable danger. The sea within the circle of its influence, boiled up with increasing rage and height, whirling round with great velocity and a kind of hissing noise. At times the water was thus raised nearly as high as the fore-yard; then sinking as from some

obstruction, and again commencing as before. As the firing of guns at water spouts is declared to be an excellent mode of decreasing their evil, the captain of the ship gave directions accordingly; but though they had several loaded, unfortunately not one was found in proper condition; they only burned the priming. Orders were then given to load a fresh gun; but the men were so panic-struck, that except the mate, not one of them was able to move. While the mate was busy after the carriage gun, Capt. Johnson proposed to the captain of the vessel, the effect, which loud cheers might have, by making a slight concussion in the air. As the experiment cost nothing but the exertion of their lungs, it was accordingly made. Every man joined his voice, and it was imagined the bellowing they made had some effect. By this time the gun was loaded and primed. The match was then applied, and the firing was then succeeded by loud shouts as before. Hereupon the water spouts subsided; and they had the satisfaction to find that the vessel was not the least affected by them, except by the undulating swell when the water fell down again; yet from the whirlwind kind of hissing, they were every moment apprehensive that the yards and masts would be torn to atoms, and whirled into the air. Indeed some were afraid that the ship would be engulfed in the vortex.

On their arrival at Acheen, a boat, or rather a barge, was by the sultan's orders sent off to the vessel; in which was the agent and several officers of his court, who invited Captain Johnson to the sultan's palace. They were saluted by the ship's guns as they came on board, and on their departure. On landing, our hero was met by an Indian Portuguese, a resident merchant, who spoke English fluently, and was to act as an interpreter. He was also met, and attended to the palace by other officers of the court.

Our adventurer was graciously received by the sultan, who immediately gave orders that the vessel should be allowed to trade, a permission seldom obtained without considerable delay, and till after several presents are made. However, by Captain Johnson's means those presents were saved, and no time was lost.

The captain's time was now partly occupied in strolling about, and seeing the curiosities; having three Malay attendants to escort and show him wherever he liked. The pain of his leg, however, prevented him from ever going very far, as our hero was afterwards informed he made too free with it, and thereby prevented an immediate cure. Every day he was invited to the sultan, to chew chenam and beetle-nut with him. His table was also well supplied, by direction of the Portuguese, with female slaves to attend him.

In the captain's first rambles, particularly about the market-place, he was very much accustomed to see several cripples, some without hands, others without feet, and many without both. On inquiry, he was told they were all culprits, punished according to their offences, by the chopping off a hand or foot. Some by the repetition of crimes, and the consequent repetition of punishments, had no hand or foot; and were therefore rendered incapable of offending again. Our adventurer inquired how these limbs were cut off, and was astonished to hear that a bamboo cane was first prepared, ready suited to the size and length of the culprit's leg, the hollow of which cane was nearly filled with a heated kind of substance, something like pitch. The instant the punishment was inflicted by lopping off the foot (which was literally chopped off, by an instrument at one stroke, a little above the ankle), the bleeding stump was thrust into the heated rosin within the bamboo, which as it cooled, became fixed; and thus, if the sufferer lived, he was provided with an excellent bamboo leg to stump upon.

That singular and barbarous custom of running a muck, is practised by the Malays, in the following manner. A Malay, who abandons himself to despair from any cause, though it most commonly proceeds from the ruin attending his extreme propensity to gambling, takes opium till he becomes frantic. Then, with dishevelled hair, he draws his creese (a kind of dagger worn by these people), runs along, and stabs and destroys all he meets, until he is destroyed himself.

The people are savagely jealous, and revenge themselves by

assassinating the party they suspect even without any proof. When the crime of adultery is actually detected, the injured Malay kills both the man and woman if he can. The latter is sure to fall a sacrifice, and should the man escape, and be afterwards taken and accused, though even suspected to be guilty, he has to go through the following dreadful ordeal, from which few can escape with life. He is brought to a large open spot, where every Malay in the neighbourhood, who wears a creese, attends. A ring is then formed according to the number assembled, and the delinquent is placed in the centre. If he can make his way through these surrounding opponents, thus armed, and then by flight can make a certain tree his sanctuary, he is immediately acquitted of the crime. If he makes no attempt to escape, the circle is drawn in closer and nearer, until one or more stabs him with their creeses. His only chance is to start off at the beginning, before the ranks draw in and thicken. Notwithstanding the severity of punishment for adultery, it is still a prevailing crime in this country. Indeed the Malays are brought up in such a savage manner, that they seemed to disregard, not only the loss of a limb, but even life itself.

Captain Johnson, after leaving Acheen, touched at other Malay ports along the coast, some of which were said to be at war with the Sultan of Acheen, and this appeared true from the captain of the vessel being refused permission to trade in those places. They touched at Ayerbungy and Padang, two Dutch settlements, where they were treated with civility. They also stopped some time at Tappanooly, which is one of the out-settlements belonging to Bencoolen. Here our adventurer met with three of the mountaineer natives of the island, supposed to be cannibals. These men, reputed to be of the class of the original inhabitants, were paid the greatest attention to by the resident at Tappanooly. They were very different from the Malay natives on the coast, and, as it appeared were driven from the sea-coast, some centuries back, by the Malays, when, retiring to some extraordinary strong fortresses in the mountains; they have maintained a complete independence ever since.

These men usually dined with Captain Johnson at the resident's table, and partook of everything with infinitely more ease than could have been expected. In the course of conversation, the captain boldly inquired whether or no there was any truth in the reports concerning their eating human flesh. The Europeans present were astonished at the captain's abrupt question, and were much afraid his temerity would occasion some disagreeable consequences. The men, however, instead of being offended, seemingly thought themselves complimented by the question, and readily informed the company that it was customary for warriors to cut up a vanquished enemy, and to take a piece of flesh and champ it with their teeth, smearing their faces and arms with the blood, in token of triumph, as well as to increase their courage. This practice, however savage, is still not so detestable as cannibalism.

From Tappanooly, our adventurer sailed for Morocco, a place so very warm, that it is called Hell, by English sailors. From hence he proceeded to Bencoolen, where he paid his personal respects to the governor, commanding officer, &c., and was most hospitably received. Unfortunately, the ship that was bound to England, was not expected to sail for several months. The numerous invitations, however, which Captain Johnson received, and the pleasant excursions which he frequently took into the country, rendered the interim very agreeable.

This island is very subject to earthquakes, productive at all times of much mischief, and serious changes. During our hero's stay, there was a shock, when the earth trembled under him, and he distinctly felt a tremulous motion of his body. It passed away in a few seconds, and was spoken of with indifference by the inhabitants. The excessive heat of the place is the occasion of many destructive fevers, and, consequently, of several deaths.

In some of the captain's excursions to the interior parts of the island, he had an opportunity of seeing the wild elephants and wild buffaloes. One day, while at dinner at a gentleman's country box, a herd of more than twenty wild elephants came

in full view, moving slowly along, one after the other. As the headmost elephant was entering a wood, two or three gentlemen took up muskets, loaded with ball, and fired at them. They were at too great a distance to injure them much; and either from the report, or some of them being struck, they instantly rushed into the wood with great impetuosity, and were soon out of sight; but the crackling noise of the trees and boughs, borne down by their weight and strength, was remarkably loud.

The vessel in which Captain Johnson took his passage in for England, had been so long upon the coast, that many of the sailors, from a total want of vegetables, and a scarcity of fresh meat, were laid up with the scurvy. Their passage to the Cape of Good Hope being very tedious, they buried more than one-third of the ship's company, who fell victims to this dreadful disorder. It was very common for those who were apparently stout and hearty the day previous to their complaining, to droop so suddenly and quick in their strength and spirits, that within two or three days they were incapable of doing the least work. They became so exceedingly feeble, from the loss of appetite, that they had not even power to creep from their hammocks to the doctor's berth for advice. In this gloomy situation, scarcely a day passed, for the last three weeks they were at sea, that they had not to bury one or more of them; frequently three at a time. For more than a week before the vessel got to the Cape, the whole of the ship's company, before the masts, were not able to eat one sauceman of fresh pork and fowls, cooked for them as savoury as possible. To add to their misfortunes, the vessel was exceeding leaky, and as their hands were incapable of working hard at the pumps, the water gained upon them fast.

In this dreadful and perilous situation, they were at length becalmed in sight of the Cape. A Dutch India vessel was now in sight, about seven miles to the southward. She was seen in a strange position, apparently down on her beam-ends. At this time it was a dead calm, without the least appearance of any wind. The captain of the ship and his crew could not conceive what was the matter with the Dutch ship. At this time, and for some hours before, their vessel's courses were hauled up, the top-gallant sails lowered on the caps, top sails hanging to the masts (the ship having neither wind nor motion) and the stay-sails down, every eye was looking earnestly at the Dutch ship, without discovering any cause for her strange position. The captain of the vessel in which our hero was, ordered some hands up to furl the top-gallant sails; and then ordered the top-sails to be lowered, and a reef to be taken in. The men were going aloft, and were actually on the yards, when so sudden and violent a squall came on, as to lay the ship on her broadside. The first effect was violent, increasing every second of time; and in less than two minutes it blew a perfect hurricane. The few men on the yards fortunately got off again, and all hands were ordered down for their safety. In less than ten minutes, every loose sail in the ship, except the fore-sail, was blown clear away from the yards. Had the top-sails remained up, her masts must have been carried away, or she must have overset; the latter more likely, for she was very crank; owing to the great quantity of arrack which the captain had taken on board for his private venture, to sell at the Cape and St. Helena; and which, being stowed between the decks, made her very heavy. Though at a considerable distance from the land, they were on a lee-shore, and it was very fortunate that the fore-sail (though split in getting the tack down) being a strong new sail, enabled them to haul the wind sufficiently to clear the land. Other requisite sails were soon bent; and the squall terminated in a strong gale, which lasted some days; but their main bustle was over in two hours.

In consequence of the daily decrease of the ship's company, through the severe scurvy, as before mentioned, passengers and all were obliged occasionally to give their assistance. Neither the captain of the vessel, nor any of the senior officers had ever been at the Cape. Captain Johnson, therefore undertook to pilot the ship in, but they had not sufficient strength left to bring the vessel to an anchor and moor her in safety,

without aid from the shore, the last gale having proved fatal in destroying the feeble remains of life in many of the crew. Indeed, so much was the assistance of every person on board required to work the vessel in, and bend the cables, that the bodies of two men who died the preceding night, were left uninterred upon the poop when the ship came to an anchor; and another poor fellow, who lay ill in his hammock, spoke to the gunner (as he passed along to fire a signal gun for assistance) rejoicing he was likely to get on shore soon; however, on the gunner's return a few minutes after, he was found dead. It was supposed, the feeble remnant of his breath was driven away by the shock of the gun, which had been unavoidably fired near him.

As soon as they came to an anchor, between forty and fifty of the ship's crew were conveyed to the shore, many of whom were incapable of walking. One only died after landing; he was a strong, stout built negro. When landed, they moored rapidly recovered; indeed, within three days, more than half of these patients were found drunk in the streets, taken up by order of the fiscal, imprisoned for the night, and next morning sent on board the ship. They had been directed to drink new wine medicinally, and this, with a superabundant supply of excellent vegetables, accelerated their recovery. In consequence of the number of the crew being thus reduced, as well as the debility of those who survived they were obliged to stay some weeks at the Cape, for the purpose of recruiting.

On the recovery of their few men, and having procured some fresh hands, they made a pleasant and short passage from the Cape to the island of St. Helena; their decks were covered with sheep and cattle, chiefly for the island. Here the captain of the vessel found it convenient to make a stay of three weeks; nor did the time appear at all long to the passengers, being continually engaged in parties of pleasure to the country houses of the governor and principal inhabitants. The ladies of this island are remarkable for their beauty; during our hero's stay here, he had not less than fifty sweethearts.

From St. Helena, they ran down with the trade wind to the Isle of Ascension, a scraggy barren rock, which, were it not for the famous large turtle that are caught on it, would be known but as a mark in the middle of the ocean, to be shunned by navigators. It is about five hundred miles from any other land, and reckoned about twenty eight miles in circumference.

The captain and his friends bestowed one whole day in exploring the interior, in detached parties, but none of them were fortunate enough to find a spot that had soil or vegetable mould sufficient to grow a common salad. The whole surface was covered with rough, sharp, cinder-burnt, honey-comb rocks, except where there appeared a stream of lava, that had formerly flowed from the crater of a high mountainous pinnacle, some miles from the part of the island they were at. On this hardened lava, which terminated in the sea, they could walk very well. On some of the elevated parts of the rock they found sea birds of all descriptions, assembled together by thousands. The greater part of them continued on their legs, without attempting to fly, when they were surprised by our adventurers; some walking or waddling about, and others standing, and all joining in a most discordant noise. Captain Johnson took a great number of their eggs with him. He also made a prisoner of a tropic bird, which had a beautiful long plumage, with its two young, entertaining a hope of keeping one or the other alive; but the attempt was unsuccessful.

Some of the sailors, for sport, ran down two or three of the wild goats, which are numerous on those rocks; but they were miserable looking, shaggy, lean creatures, and more offensive to the nose than even pole-cats. The turtle, however, that they caught, made ample amends. They divided into companies, taking separate bays, and lying on the sand all the night, in order to turn the turtle that came upon the beach to lay their eggs in deep holes, which they scoop out in the sand with their fins. They caught fourteen in this manner, the smallest of which weighed more than two hundred pounds. The shores of this island abound with rats; and by

the thousand of little skeleton turtle shells scattered on the top of the beech it is evident that these animals made them their chief food. The turtle probably subsist by grazing on a great variety of sea weed, if not coral, growing at the bottom of the sea; and likewise on some species of shell-fish, and slow moving insects found there. This opinion seems very plausible, on account of their great strength.

From the innumerable quantities of eggs, the produce of one turtle, a person would be apt to imagine, that they must swarm with them; but when their numerous enemies, from each of the three elements, are considered, who attack them the moment they are burst from their shells, it appears as extraordinary that so many of them should escape. Our hero has watched the fish lying in wait for their prey, and cruising about at the edge of the outer surf, with the water as transparent as glass; when, if the little animals swim in ever so small a degree above the surface of the sandy bottom, they dart at it with almost a certainty of devouring. Its safety, while so young, small, and tender, appeared to be in keeping close upon the sandy bottom, where it seemed to bury its little body, while, by its fins, it crept almost imperceptibly along into deep water.

The remainder of our hero's passage to Europe had nothing remarkable in it; their ship's company continued in good health and free from the scurvy, after so good a recruit at the Cape. After an absence of some years Captain Johnson landed at Plymouth, to the great joy of his friends. That joy, however, was short lived. The wound which he had received in his leg not having been properly treated, a mortification took place, of which he died about nine months after his arrival.

Captain Johnson's account of the Malays, is by no means exaggerated; Captain Percival, in his narrative of the Cape of Good Hope, thus describes them:—

"The slaves of the Malay race are tolerably numerous. They are employed in many kinds of laborious work, such as gardening, and attending the grounds belonging to the pleasure houses round the town; and in the kitchens, and in the drudgery work belonging to them. They are also often employed in fishing and procuring fuel. This last class of people are extremely vindictive, treacherous and ferocious; implacable in their revenge, and on the slightest provocation, or imaginary insult, will commit murder. They are indeed a scourge to the people they come amongst. When bent on revenge, or irritated at some supposed insult, they scarcely ever fail of wreaking their vengeance. Many shocking murders have been committed by the Malay slaves on their masters and mistresses, not for the purpose of robbing, but merely to gratify their thirst of revenge, which nothing but the blood of their object will satisfy, though at the certain loss of their own lives. When the Malay has determined on revenge, he takes a quantity of opium to work himself up to a state of madness, when he rushes out with a knife or dagger, which is called a creese, and after putting to death the object of his infernal passion, he next rushes at every one he meets, till he is overpowered and taken, which perhaps is not the case till several victims fall before him. Nothing but a lucky shot or blow, that stuns him to the ground, will ensure the safety of his opponent, as he proceeds with such a savage fierceness and impetuosity, that it is reckoned a most arduous and dangerous service to encounter him in this state. This is what is called running a muck; on the slightest alarm of which every one flies before him, and escapes the best way he can. Whoever kills a Malay, in the act of running a muck is entitled to a very high reward from government; and he certainly deserves it, for the most cool and intrepid are scarcely a match for the Malay when worked to this pitch of desperate madness.

"The two following instances occurred whilst I was at Cape Town:—A Malay, for some insult or necessary chastisement received from his master, drew a knife, and stabbed him to the heart, and immediately ran into the streets with the weapon reeking with the blood of his unfortunate victim. The first person he met was a very fine slave girl, about seventeen years old, into whose face he darted the

weapon. Fortunately a country farmer was at the moment passing by Strand-street, where it happened, and having a gun loaded in the waggon he was driving, fired and killed the Malay on the spot. If this shot had not succeeded in bringing him down, I, and a brother officer, who came to the spot a few moments after, would, in all probability, have been the next victims. The poor slave girl died in a few hours after.

"This was the second time that a slave of the Malay race, running a muck, was prevented from falling in with me. Once, indeed, at Ponamola, in the East Indies, I very narrowly escaped, having been slightly wounded in the arm by a Malay who had attacked some seapoys; and if I had not been fortunate enough to give him, at the first cut, so severe a wound as to disable him, he would certainly have put me to death. The creese he struck me with was poisoned, and, my arm, in consequence, swelled to a very great degree, and for some time it was thought I must have lost it, if not my life. I must here remark, that I received the greatest benefit from the Eau de Luce, which I have every reason to believe is a valuable antidote against poison; it has been found to prevent the fatal effects from the most venomous bites of snakes.

"Another instance of the barbarity of this race of slaves, which happened at the Cape whilst I was there, occurred in a Malay, who, on being refused leave by his master to go out to a festival, or merry-making with his fellows, took a knife and stabbed him to the heart, then went to his mistress in an adjoining room, and committed on her the same barbarous and inhuman act. An old Malabar slave who was cutting wood before the door, having observed him perpetrate these horrid murders, watched the opportunity as he rushed out of the door, and striking him on the head with the axe with which he was cleaving the wood, killed him on the spot. The government was generous enough to reward the Malabar with his liberty, and one hundred dollars."

THE SEA BREEZE.

"WHENCE comest thou, O wind of the sea,
Bounding as fresh, and as mirthfully
As a lion in his pride?
Lending strength to the morbid weak,
And to young beauty's faded cheek
Health's renovated tide?"

"I'm from my range o'er the baseless deep;
From my ceaseless flight afar:
From the sparkling, odorless lands that sleep
Cradled in waters—each a star
In liquid sapphire burning:
I come from my wild career o'er the wave:—
From my maddening dance o'er the briny grave
Of ships and their crews, am returning.

"I've sped o'er coral reefs—I've brush'd
The slack beseeching sail;
I've rush'd—when all thought of ill was hush'd—
All read of the sea and gale—
And dash'd at the barque, and rent her shrouds,
And shriek'd, as I brought up my warrior clouds,
Till the freshest cheek turned pale;

"I too have howl'd and shriek'd for a few—
The horrid wreck of a famished crew,
Clinging to life with feverish strength;
Hope long since dead; and I've seen at length
How the rav'ning wretches madly fought
For the sick'ning morsel dearly bought
By bitterest lot; and how they fed
Like wolves, on their brothers slain for bread.

"No more—no more; to a distant shore
The breeze of the sea must haste;
There's a barque to sink, ere the pale stars wink,
And an island to lay waste!"

THE STORMING OF FORT MUROS.

On the 3rd of July, 1805, Captain Maitland of the Loire frigate, being informed that a French privateer was fitting out at Muros, and being perfectly acquainted with that bay, he resolved to attempt her capture or destruction; for which purpose he stood as close in as possible, and, having made every preparation for engaging at anchor, he directed Mr. Yeo, his first lieutenant, with two other officers and fifty men, to land, and storm the fort which protected the privateer. The boats in which they were to embark were kept alongside of the frigate till she got well into the bay. On hauling round a point of land, a small battery unexpectedly opened a fire on the ship, which was promptly returned; and as Captain Maitland found that, unless this fire was silenced, the frigate would be much annoyed, he desired Lieutenant Yeo and his men to push on shore and spike the guns. As they were about to leave the side of the ship, Captain Maitland reminded the boat's crew that it was their sovereign's birth-day; which they saluted with three hearty cheers, and pushed off in high spirits for the enterprise. As the ship drew in, and more fully opened the bay, fresh difficulties presented themselves, for besides the privateer of which Captain Maitland had received information, a very large corvette, called the *Confiance*, pierced for twenty-six guns, and a large brig, called *Le Belier*, pierced for twenty guns, were seen, apparently ready for sea; but as neither of them began to fire, hopes were entertained that they had not their guns on board. Captain Maitland, therefore, directed his first and principal attention to a strong fort, which opened a heavy and well-directed fire, every shot taking place in the hull; and as it was evident that the nearer the frigate approached, the more she would be exposed, he anchored in an advantageous position, and began to return the fire; but owing to the fort being completely embrasured, very little impression could be made upon it.

In the meantime, Lieutenant Yeo, with the men under his command, had made good their landing; as soon as they approached the fort on the point, the enemy abandoned it. Lieut. Yeo next directed his attention to such other measures as he thought would best aid the purpose for which he had been sent on shore; he soon observed the strong fort at the entrance of the town, which, as has been noticed, fired with such effect against the Loire. Notwithstanding its great strength, both from its position, and from the guns which were in it, Lieutenant Yeo was convinced it might be carried by storm; he well knew the bravery of the officers and men that were with him; and that whatever was possible, they would attempt and execute. He, therefore, ordered them to follow him for the purpose of taking the fort by storm; no sooner was the word given, than he was obeyed with all that energy and bravery which, on such an occasion, Britons always display. It fortunately happened that the enemy had neglected to secure the gate of the fort, through which the British entered; they were, however, met at

the inner gate by the governor with all the troops he could collect, and the crews of the privateers. Lieutenant Yeo was the first who entered the fort, and, with one blow, he laid the governor dead at his feet, at the same time breaking his own sabre in two. The enemy had the advantage at first, from the extreme narrowness of the gate; but they were soon dislodged, and compelled to fly to the farthest part of the fort; such was their confusion and dismay, that many of them actually leaped from the embrasures, a height of about twenty-five feet, on the rocks below. The instant the British gained possession of the fort, they laid aside one of their characteristic qualities, bravery, and assumed another, humanity; as soon as the enemy had surrendered, he was to them a fellow-creature, to whose assistance and comfort they were anxious to contribute all in their power; each rivalled the others in relieving the poor wounded prisoners; and their humanity was amply acknowledged and repaid by the gratitude which the unfortunate men's friends expressed when they came to take them away.

Soon after the British flag was displayed on the fort, Captain Maitland took possession of the enemy's vessels already mentioned, and hoisted a flag of truce, informing the inhabitants that, if they would deliver up such of the stores as

were on shore, he would do them no damage, which proposal was instantly and cheerfully agreed to.

The captain, in his official despatch, praises in the highest terms, the bravery and discipline of such of his men as were on shore. "Much to the credit of the ship's company," he says, "the bishop and one of the principal inhabitants of the town, came off to express their gratitude for the orderly behaviour of the people, and to make offer of every refreshment the place afforded."

This spirited enterprise was effected at noon-day, though the fortress mounted twelve eighteen-

pounders, and was garrisoned with more than two hundred and fifty men. Lieutenant Yeo and some of his men were wounded. For his valour and conduct on this occasion, he was promoted to the rank of master and commander, and finally appointed to the command of the *Confiance*, one of the captured vessels.

FRENCH AND ENGLISH SAILORS.

In Admiral Hotham's naval victory off Genoa, in 1795, when the surviving officer of a line-of-battle ship which was taken, had, some days afterwards, his sword returned to him, he congratulated himself upon receiving it, and at the same time observed, that he had been obliged to thrust that sword through the bodies of several of his seamen to make the remainder stand to their guns; he, at the same time, asked the first lieutenant of the admiral's ship, on board of which the Frenchman was prisoner, "How the English officers contrived to keep their men to their guns?" "We have no necessity to keep them to their guns," replied the lieutenant, "for the devil himself could not drive them from them."

THE BRITISH ENTERING THE INNER GATE OF THE FORT.

THE MURDERS ON BOARD THE TORY.

(Concluded)

Henry Slack, an apprentice to the owner (Mr. Gibbs), was then called, and examined as to what occurred from the day the pilot came on board. "William Burton was coming down the companion with his palm and needle. The captain asked, 'who is that?' He replied, 'I am coming down for some twine.' The captain asked 'if he was prepared to say what he had to say when he came to the court.' More words passed, which I do not remember. I believe he struck Burton; I am sure he did, but cannot say what with."—Mr. Broderip: "was it with his hand?" "I cannot say, sir. He ordered him to be put in irons, which was done in the cabin, and he was then sent on the deck to the fore-castle or long-boat, I cannot say which. About five o'clock, to the best of my recollection, the captain called Thomas Lee, Thomas Gair, and Stephen Cone, to be brought to him. They were brought from the lower fore-castle. He told Cone that he would clear him if he could, but that he would hang Thomas Gair. They were again ordered to the lower fore-castle. All hands were called, about eight o'clock, to the after-cabin, when I saw the captain strike Thomas Gair on the head with a cutlass."—Mr. Broderip: "Was Gair in irons then?" Witness: "I cannot say, sir. The captain told French to fire away, and French did fire a pistol, and for about three quarters of an hour, he still continued firing. The candle was put out several times, and I was ordered in to light it. The carpenter came down and said the ship wanted pumping out. All hands went on deck. The captain sent me on deck for Gair. I went, and he came with me to the cabin. I held him by the arm. He was very weak, bleeding from the head, and it was as much as he could do to walk. When he came down, Richard French made two blows at him with a pistol, without any order to do so. William Dunn, the cook, went on deck, I believe, to send down the rest of the crew. When they got down the companion-stairs, French cried out, 'Mutiny, mutiny,—arms, arms,' and the captain and French drove them all into the after-cabin. I heard the captain say 'Fire away, French! Load and charge, cook.' The candle went out several times, and I was called in again to light it."—Mr. Broderip: "Were any of the crew armed at the time?" "Not that I saw."—Mr. Broderip: "Was any threatening language or gesture used?" "Not that I heard or saw, sir."—Mr. Broderip: "In what position were the crew when French was firing at them?" "Kneeling down and lying down. When I went into the cabin I saw French fire a pistol, but I could not say at whom. The captain went into the water-closet, and fell asleep there. All hands then left the cabin, and I turned into my berth. There was no more that night. I did not see Morris shot."

Robert Thompson, another of the crew, examined: "On or about the 6th of November, after the pilot came on board, but on the same day, I was at the wheel, and the top-gallant sheets were carried away. The captain sung out to the boy to bring up his cutlass and pistol. He told the men 'if they did not look sharp, and stow the sails, he'd blow their brains out.' I was at the wheel, and he came after me and cut me on the head with a cutlass.—To Mr. Broderip: I had a cap on, which was cut through, and also my head was cut. The mark is on the top of it. He then called me from the wheel, and said I had no business there. He caught me by the shirt, and gave me a stick with the point of the cutlass. He struck twice; once below the eye, and once in the forehead. I got clear from him and ran forward. The fore-top-sail then blew away, and he sent for me to the cabin. He told me to go on my knees, and asked why I gave my arms up to Mr. Rambert to take his life. I said I did not; that Thomas Gair relieved me in the poop. He then called up French, and said to him, 'Did not this fellow give up his arms to the mate to take my life?' French said, 'Yes; if it was I, I would take his life this minute,' upon which the captain took the cutlass, and was going to run it through me. He took the blade then, and bit me on the arm with the handle of it. He afterwards struck

me with the point in the arm and side."—Mr. Broderip. "Were you wounded in those places?" "Yes, sir, the marks are there still. He then sent for Johnson, and asked why did he give arms to the mate, and then began cutting at him. He also kicked both of us with his feet, after which, he made us kiss the sole of his foot. He then told me to go to the main-royal."—Mr. Humphreys: "Did you kiss the sole of his foot?" "We did. He sent Johnson to the fore-top-sail-yard, to bend another topsail. In an hour after, I was sent for to the cabin again. Beresford was also sent for, when the captain asked about a log-book that one of the men was keeping. He began hitting Beresford with the handle of the cutlass, and struck me two or three times, also with the handle. He sent French to fetch me down the next night, when he ordered me on my knees, and told Dunn to sit on a chair close by me. He asked French if there were any others whom he wanted to get down. French said 'Yes, Nelson and Morris,' on which the cook was sent to fetch them. French told Dunn not to go on deck without arms, when the captain desired him to take a bayonet. He did so, and went on deck, bringing Nelson and Morris down. The captain ordered them on their knees, and when they did so, the captain gave directions to send for all hands. Dunn and French went up with a bayonet each to bring them down. They were told to go on their knees, which they did; and he asked Morris if he was not going to stick him with a knife. Morris said, 'No; he had never intended to do so.' The captain asked French if he did not say so; to which French replied, 'He did.' The captain then took a chair in one hand, and a cutlass in the other. He beat me on the head with a chair, until he broke it. He then went to Gair, and hit him also. He then ordered French to put me, Gair, and Nelson, on the table. He directed French to load the pistols. French got one, and shot Nelson in the face. I was bleeding so much, Spence told me to go off the table. The captain asked French if Nelson was dead? French replied he was not. He then told him to carry Nelson on deck, and ordered us all on deck, where we began to pump the ship, when he sent for us to the cabin again, and he began at Morris once more, ordering the boy Glover, to get his pistol, which was done. French sung out that the pistol was double-loaded. The captain said he did not care; that he'd blow his (Morris's) brains out. He pointed the pistol at his head; it missed fire. He told Glover to prime the pistol again. It was primed, and given to the captain, who pointed it at Morris. The captain's hand fell a little, and the pistol went off through Morris's leg. The candle went out, and all hands ran upon deck. I stowed myself under the long-boat."

Andrew Nelson, a Norwegian, was examined: "After the pilot came on board, we carried away our fore-top-sails. I don't recollect the day of the month, but it was blowing hard that day. Other ships carried close-reefed main-top-sails, topsails, and fore-top-sails. I was told by French to go in the cabin, when the captain asked me what I had to say for myself. He held a cutlass hard against my breast, and said, 'if you do not tell the truth, the way you are going to do it, I will have you on the point of this cutlass before morning.' 'I told him I had been laid up sick for three months and a half,' but he said, 'That does not matter, I will have your life before morning.' We came into the Downs and got a crew on board from Deal, when he (the captain) ordered me to the cabin again, and told me he was sorry for what he had done."—Mr. Broderip: "What had he done?" "He fired into me on Friday night after the pilot came on board. That was when he said he'd have me at the point of the cutlass. He stabbed me that same night, and fired into me."—Mr. Broderip: "Relate all that occurred to you that night." "I was called down with Tom Lee and Morris, the Frenchman. The captain had a loaded pistol, and told Morris to go on his knees. He fired once at him, and the pistol missed fire. The second time he fired, the pistol went off through Morris's leg and thigh. Some of the crew went on deck at the same time. I was kept in the cabin and the door locked. I was shot both before and after Morris was shot. Before he was sent on deck, the captain ordered French to fire into me, saying if he did

not do it, he would blow his brains out and mine. It was fired in my face twice, and I rather think, Captain Johnstone fired the second time. The pistol was within four or five feet of me. The powder came full in my face, and I was burnt."—Mr. Broderip: "You say you were stabbed!" "Yes."—"Was it before or after Morris was stabbed?" "It was the same night."—"How did the master, Captain Johnstone, as you call him, stab you?" "I was called to the cabin, and he began cutting away at me; he cut me on the head, on the arm, and in the groin. I was wounded by the blows. (Here the witness exhibited a large patch of plaster on his head.)"

Henry James Stephenson, a lad about 14 years old, not examined before, and son to Mrs. Thompson, a passenger on board the *Tory*, was then called, and said:—"I remember when the *Tory* was off *Fayal*, but cannot tell the date. I went ashore there with the captain, before anything had happened to Reason or Mars. The captain told me he'd kill all the crew when he got aboard."—Mr. Broderip: "Did you say any thing before that?" "No, sir."—"When did he say he would kill them all?" "When we were going up-stairs to the English Consul. He did not say why. I said 'Don't, sir.' I returned with him to the ship in about a quarter of an hour afterwards. He said nothing whilst in the boat, but he cut David Johnson."—"What with?" "A cutlass."—"Where did he cut him?" "On the back, and about the head. In a little while after, he said he'd clear all the boat's crew, fore and aft."—"Did he say any thing of having been drinking?" "Yes, he said he drunk a bottle of wine with the English Consul's daughter. When going on board, he said, 'Here I come, like seven bells half struck.' I could not say if he was steady, or had been drinking. The Harbour-master left the ship about a quarter of an hour after the captain had got aboard. The captain, in a few minutes after the Harbour-master left, asked for his pistols and sword. They were brought to him by James Glover, and he then struck Mars with the edge of the sword once. When I saw it I went down below. Mars was standing by the gangway at the time. He had not said or done any thing, but had a lantern assisting the things on board from the boat."—Mr. Broderip: "Was there any thing like threatening language or gesture from the crew?" "No, sir, I never heard any."—Mr. Broderip: "Neither on the part of Mars or any one else?" "No, sir."—Mr. Hayward: "When did you next see Mars?" "Next morning, all over blood. Three days afterwards I was at the funeral of Reason and Mars."—"Had Reason and Mars been in good health before?" "Yes, sir."

Alexander Sinclair, the carpenter, was then called and examined.—"The ship was quiet, and as usual, until we arrived off the Island of Ascension, somewhat about the 23rd of September. We were short of water and provisions there. Several of the crew were dissatisfied, and grumbled. There had been no disturbance that I am aware of, up to that time. I cannot tell the date when we spoke to the French barque, but it was about four or five days after passing the parallel of Ascension. Rambert jumped overboard the third day after we spoke to the French barque. We got water from her, some provisions, and a cask of wine. The captain found fault with the mate for the boat being damaged. The mate said, 'if he had not a wife and family he'd jump overboard.' I did not hear him then make reference to the conduct of the captain. I heard Yelverton, that night, tell the captain that he heard Reason say, 'if the captain would not make the Island of Ascension on the following morning, he would be no more Captain Johnstone.' Yelverton told this to the captain after we spoke to the French barque. The captain called the first mate, in reference to Yelverton's information, and told him he had heard the intentions amongst the crew against him. Rambert said, 'he did not know of any.' The captain then ordered Rambert, Mars, myself, and the three boys, to take arms, which we did. It was about nine o'clock at night. One watch was asleep below, consisting of about eight men and a boy. The other watch was on deck, doing duty, and all orderly, as far as I know, up to this time. I heard no more of any mutiny, more than what Yelverton said. The captain told us they had sharpened their knives to take his life. He meant the crew,

I had seen nothing of the kind myself. The captain, when we were armed, ordered us to follow him on deck, and when there, directed the watch to be called from below. Reason, Cone, and Lee, were amongst them. All hands were then on deck. The captain first, charged Reason and Cone, and Lee next. He charged them with having sharpened their knives to take his life. They denied having done so. He called all the crew, then, and asked if he had behaved unkindly to them. They said, 'No, he had not.' They all denied, as far as I know, having had any intention of doing him injury. He then cut Reason, Cone, and Lee, with a cutlass."—Mr. Broderip: "Did you see any of them doing any thing at that time?" "I did not, sir."—"Did they stand still?" "No, they ran about the deck, to try and avoid him; but he followed them about, cutting at them. By the captain's orders I put Reason, Cone, and Lee, in double irons. They were all bleeding. Nothing was done to their wounds. He told me to put Rambert in irons. The mate was bleeding from a wound behind the left ear, which he got from the captain, whilst I put him in irons."—Mr. Broderip: "With what was the wound inflicted?" "I believe, by a stroke of the pistol. I soon after took him out of irons, by the captain's orders, and shifted him to the main-hatchway, where I again put him in irons. After which, the captain came to me in the poop. French was with me. French told the captain that the crew had been stationed round the companion with bolts and bars, with some intentions upon the captain, as he came up, and that the mate seized him (French) by the collar, saying, 'D—n you, come along.' The captain then ordered me to set the mate at liberty, and asked him if he had been armed to take his life. I did not hear him answer. I must have heard, unless it were given in a very low tone. He struck with the sword at the mate, who escaped by running, whilst the captain pursued him with a drawn sword. Rambert got aback the main rigging. This was about day-break. The mate jumped overboard. The master was not far behind, with a drawn sword. The mate was bleeding. I was on the poop at the opposite side, about twenty-four feet from him. He did not give three huzzas, as entered in the log-book. The helm was put down, and the captain consulted the crew as they were all aft, as to whether it would be any use to try and get the boat out, and they agreed that, as there was such a crowd of canvass on the ship, it would be of no use. I heard Curtis say the mate was the cause of the whole disturbance, as he wanted them to take the ship from the captain, and carry her to America. I am quite sure he said to America."

William Beresford was then examined as to the state of Mars when he had to attend and feed him, off *Fayal*, for three or four days before his death: "He was then on the main hatch. He was in irons, hands and feet, and also had a large shackle round his neck."—"What state was he in?" "He was covered all over with blood."—"Could you see what from?" "He had several cuts about his head, and his upper lip was nearly cut off. It hung over his mouth. I had to lift it up to put the bread in."—"What sort of bread?" "It was hard bread. I had to soak it in coffee or in tea, to give it to him. I saw him hauled out of the cabin with the rope. He was not then quite dead."—Mr. Broderip: "In what state was he?" "Very near dead. He died in about a quarter of an hour after. When he was hauled out of the cabin there was a rope put round his waist, but I do not know whether they squeezed him or not." He also stated "that the captain called him to the cabin on arriving in the Channel (but before the pilot came on board) and gave him two cuts on the head and one on the wrist. He asked me why I had given up my arms when I was walking sentry. He told Spence to go out of the cabin, as he did not want any one to witness the son of a —'s death. He then made me kiss the sole of his foot."

Peter Curtis stated "That after the pilot came on board, the captain cut him that night in several places about the head and body. It was in the cabin, and almost all hands were in the cabin at the same time on their knees. French, Julian, and Dunn brought me down. I was stowed away the best part of the night, whilst they were looking for me with lanterns. I went under the long-boat, because the captain said he would have my life."

Franklin Neckar called: "I was called to the cabin on the 7th of November, and the captain ordered me on my knees, telling me to stop there a few minutes. He called French, and told him to fire as long as the powder lasted. He fired at Burton and at me also, in the face. French stood right alongside me, and the captain stood before me with the cutlass over my head. When next I was called to the cabin, the captain cried out, 'Mutiny! to arms!' There was no mutiny. The lights were blown out, and French caught me by the collar, saying, 'Here you are, you son of a—,' and struck me on the head with a pistol, of which I have the scar now. The captain was present, and sung out, 'He's my prisoner, put him in irons.'"

James Blackden, a German, said, "The day after the pilot left us we were ordered to the cabin, and the captain told us to go on our knees. He struck me with the flat of the cutlass over the shoulders twice, and said, 'You have all to die to-night. I'll have your lives.'"

John Allendson, a Swede, hitherto called Alison, in the depositions, said, "The captain cut me in the ear and head with a sword after our arrival in the Channel. I was on deck at the time, helping to put the ship about. I believe it was before the pilot came aboard."

Barry Yelverton was recalled, and examined as to the papers signed by the crew, and the accounts in the log-book relative to the death of Mars and Reason.—Mr. Broderip: "How came you to sign accounts so different from your present statements?" "I refused at first, but the captain said, 'if we did not he would cut our hearts out, and make us sign them with our heart's blood.' Julian, the Italian, the cook, William Dunn, and I think Spence, were there when the expression was used. This was said after the death of Mars, and repeated several times. In consequence of that I signed the documents."

John Cordoviallo was then called, and said: "I signed some papers by force, but I do not know what they were, nor can I exactly say whether before or after Mars's death. The captain or Spence said, 'You must sign it, or else I'll kill you.' It was in consequence of that I signed it."

William Dunn, the cook, said: "I signed my name to some papers relative to the death of Mars and Reason. I signed three or four times. They were read over to me by Spence in the presence of the captain, whilst I was in the cabin. We were required to sign the paper. French and some of the crew would not sign them with a pen, and the captain said 'he'd cut their heart's out and make them sign them with their heart's blood.' I only heard him say it once. 'Twas in consequence of that I signed the papers. I signed three or four papers at one time."

Mr. John Lavies, surgeon of the Westminster House of Correction, saw several of the crew of the *Tory* on the night of their arrival, and produced a memorandum made the following morning. "He saw Nelson, Gair, and Burton, on the night they were committed to prison, on the evening of the 17th of November."—"State their condition." Witness: "They were scarcely human in appearance. They were dirty, their hair much dishevelled, and their wounds had not been dressed or washed, apparently, for some days. I attended the captain when he came to the prison, and found an apparently punctured wound on the back part of his right leg. It was healing, but inflammation had set in, which has since become extensive, suppuration affecting the whole leg and thigh. He has been very ill. I suspect there was bad habit of body, and there was, besides, much depression. There was no sign of *delirium tremens*, nor any symptoms to show that he had recently been addicted to drinking."

Mr. William Clapp, another surgeon, was then examined: He stated "That he was second surgeon of the *Dreadnought*, and a man named Joseph Morris, was placed under his care on the 12th of last November. He had a wound on the outside of the right thigh, on the lower part."—"Mr. Broderip: "A gun shot wound?" "Apparently. It was four inches in length, and about one in depth."

The depositions were then fully read over. When it came to Sinclair's turn, Mr. Broderip asked him "Whether he was

sure he heard Curtis tell the captain that Rambert intended to take the vessel to America?" Witness: "I am almost certain I did."—Mr. Broderip: "Recollect yourself, and think whether it was Curtis, or the captain, who made the observations about America?" Witness: "To the best of my recollection, it was Curtis."—Mr. Broderip: "Are you certain?" Witness: "Yes, I do recollect the words."

Mr. Broderip, then, solemnly addressing the prisoner, amidst the most perfect stillness, asked, "If he had any thing to say?"

The prisoner, under the direction of his solicitor, was silent.

Mr. Broderip: "Prisoner, at the bar, it is now my duty to send you to take your trial at the next Session of the Central Criminal Court, for the Wilful Murder of Thomas Reason; also for the Wilful Murder of William Mars, and also for the Wilful Murder of William Rambert. I have, moreover, to commit you to take your trial on the charge of feloniously wounding Stephen Cone, Thomas Lee, David Johnson, Thomas Gair, Joseph Ronilleau (Morris), William Burton, Robert Thompson, Andrew Nelson, William Beresford, and Peter Curtis."

The prisoner was removed from the bar in a very feeble condition.

THE TRIAL.

[Having already laid before our readers, a detail of all the evidence adduced against Captain Johnstone, we abstain from giving a report of the first day's proceedings, as it would be a mere repetition of what have already been stated.]

Friday, February 6.

The judges took their seats on the bench shortly after ten o'clock, and the prisoner was immediately placed at the bar.

The Attorney-General, with Mr. Bodkin and Mr. Clark, appeared for the Crown, and Mr. Jervis and Mr. Huddleston, for the prisoner.

Mr. Jervis then rose to address the jury, and he commenced by observing, that the interval which had been afforded to him, by the kindness of the court and jury, to prepare the defence, had not at all tended to diminish the anxiety with which he now rose to address them on behalf of the prisoner at the bar. That anxiety was not occasioned by any fear that the jury would be, in any way, prejudiced by what they had heard out of court—and he would take that opportunity of thanking the Attorney-General for the very fair and impartial manner in which he had laid the case before the jury—but from the difficulty in which he was placed by the very extraordinary character of the occurrence which they were inquiring into. He had no anxiety which arose from a belief of the prisoner's guilt, for he assured the jury that, in his own opinion, whatever might be the character of the act committed by the prisoner, that it would be impossible for the jury, under the circumstances that had been detailed by the witnesses, to find the prisoner guilty of the offence imputed to him by the present indictment, namely, wilful murder, and in the terms of the law, of his malice aforethought, and he trusted he should be able to satisfy them that at the time the prisoner committed the act imputed to him, he was not in such a state of mind or consciousness as would render him criminally responsible for his actions. He would pass over the discrepancies that appeared in the testimony of the different witnesses, because he agreed with the Attorney-General, that under the exciting circumstances in which they were placed, it was impossible to expect that they should remember everything that occurred, and the fairest way would be to take a general view of the effect of their testimony. The learned counsel then said, that the main point upon which he rested the defence of the prisoner was, that his mind had become in such a state, that when he killed the deceased, he was not criminally responsible, and that it would be the duty of the jury to acquit him upon that ground. He wished them to understand that he did not mean to contend that the prisoner was in point of fact a madman, without any lucid intervals, but that what had occurred on board the vessel had the effect of rendering him subject to paroxysms of

madness, and that in one of those paroxysms he destroyed the deceased. The evidence for the prosecution clearly proved the prisoner's conduct to have been most extravagant and extraordinary; he appeared to have attacked the crew without any provocation, cutting them most cruelly, and acting altogether in a manner totally unaccountable. The witnesses had denied that any mutinous spirit existed on board the vessel; but whether there was an actual mutiny or not, he submitted that it was abundantly clear the crew were perfectly well satisfied that their conduct had been such as to subject them to punishment, for otherwise, when the captain had behaved to them in such a violent and cruel manner, they would surely have complained to the captain of the other English vessel when he came on board, or at all events when they got to Fayal, they would have made their complaint; but although Reason, the deceased, Cone, and Lee, the three men who had so shortly before been treated in such a cruel manner, were the very parties who rowed the captain ashore, it did not appear that they made a single word of complaint; and this he submitted could only arise from a fear, that if inquiry were instituted, it would have the effect of bringing punishment upon them for their own conduct. It was admitted, that up to a certain period, the conduct of the prisoner had been particularly kind to his crew, and there could not have been a greater proof of his kind feeling than the fact that, out of his own small allowance of water, he gave a portion to one of the crew who was sick, and this kindness continued until his reasoning powers were destroyed by the cause to which he should afterwards allude. The learned counsel then proceeded to read extracts from different works upon the subject of crime and insanity, contending that they bore out the conviction he had expressed, that the prisoner was not legally accountable for his actions. He should rely upon the circumstances of the case deposed to by the witnesses for the prosecution in support of that defence. What was the position of the prisoner? He was the captain of a vessel containing a valuable cargo, said to be worth £80,000, with an unknown crew, whom he had very good reason to believe were in a mutinous state. He knew that there was a scarcity of provisions and water, and he might very naturally suppose that this would increase the discontent of his crew, and while things were in this state he was led to believe that the crew intended to destroy his life, and to seize the vessel and her valuable cargo. The jury were aware of the representations that were made to the prisoner—he was told that the crew had sharpened their knives—that they had armed themselves, and also that there was a determination if he did not reach the island of Ascension the next morning, which he might at the time have known to be impossible, that he would no longer be captain of the vessel. The jury would also remember that French had told him a story about Dunn, and while he imagined that he was his friend, another of the crew came to him and told him that French had sharpened his knife to kill him, and this would naturally lead him to imagine that the whole of the crew were leagued against him, and that there were none of them upon whom he could place any confidence. What was the immediate effect of this? Why, from being a kind and mild well-conducted man, he was at once changed to a state of wildness and intemperance, and apparently to be regardless of his actions. He became furious and raving. The three men whom he supposed to be concerned in the mutiny he put in irons, and while in that condition, according to the testimony of one of the witnesses, he cut at them 50 times; and afterwards, with a drawn cutlass in his hand, he pursued the chief mate, Rambert, wounded him, and eventually drove him into the sea; and his whole conduct at that time, he should submit, was such as to show that he was then clearly not accountable for his actions. It might be said that after this, which occurred in the month of September, the prisoner conducted himself perfectly quiet and calm for a month, and until the vessel had sailed from Fayal; but he should contend that the blow upon the mind of the prisoner had been struck, his reason was affected, and, the moment the chord was again struck, a paroxysm of madness was the consequence. At Fayal there could be no doubt that he had conversed with the

Consul or the harbour-master upon the subject of the conduct of his crew, and that by this means was laid the foundation of what occurred so soon after their departure from that port. The string had been touched that effected his mind, and, according to the testimony of the boy who had been called, he at that place, without receiving any provocation, declared that when he got on board, he "would kill them all." The sight of the crew, who he believed were the persons whom he had such good reason to dread, again drove him to frenzy, and unchecked by reason, and uncontrolled by judgment, there was no doubt, that in a paroxysm of madness, he committed the act for which he was now called upon to answer. He requested the jury to consider the circumstances under which the unfortunate man met his death. If the prisoner really desired to gratify any vindictive feeling, would he have sent for the man into his cabin, and destroyed him in the presence of the crew? He first sent for him at 7 o'clock, and then, without any provocation, he attacked him, and cut him in a most brutal manner. At twelve o'clock the same night, he again sent for him, and immediately, and without a word being said, again attacked him, and while several persons were standing by, stabbed him to death. Were not these the acts of a madman—of a person bereft of all reason and judgment; but if any proof of insanity were wanting, he considered it amply supplied by the conduct of the prisoner afterwards, in falling on his knees before the dead body, imploring the deceased to speak to him; saying that if he would only say two words, he, his murderer, would forgive him, and after this, revelling and laughing by the side of the dead body, which he (Mr. Jervis) considered could be looked upon in no other light than the last frantic act of a raving maniac. It might be said, in reference to the condition of the prisoner's mind, that his conduct in making the entry in the log-book, that the deceased died in a fit, and compelling the crew to sign it, was a proof that he was perfectly well aware what position he had placed himself in; but he should contend that it was merely the cunning of insanity, which it was well known in several cases had been established in a most extraordinary manner. In a celebrated case, cited by Lord Erskine, a gentleman who had been confined as a lunatic, preferred indictments against the parties who were concerned in his incarceration, and he underwent a strict and protracted cross-examination, without evincing any symptoms of insanity, until he was asked whether he was not the Almighty? This was the chord that vibrated upon his whole system, and the state of his mind became immediately apparent by his answer; but, to show the cunning of insanity, the same party afterwards preferred other indictments, and being fully aware of the effect of his former answers, when the same question was put to him on the second occasion, he refused to give any reply. The learned council, then referred to the other circumstances that had been deposed to, contending that all went to show that at the time the prisoner committed the act with which he was charged, he was unconscious of the effect of it, and was not, therefore, criminally responsible. He said he should wish the jury to understand that the ground upon which he asked for the acquittal of the prisoner was, that he was in a state of temporary insanity when he destroyed the deceased. He did not mean to deny that afterwards his mind recovered, and that at the present time, he might be perfectly sane, but the exciting cause had passed away, and this was the manner in which that would be accounted for. The learned counsel concluded a very eloquent and able address, by imploring the jury, if they had any doubt, to lean to the side of mercy, which was the greatest attribute of British justice.

The name of one witness was called, who, it was supposed, was to speak to the character of the accused, but he did not answer.

The ATTORNEY GENERAL said he should wave his right of reply on behalf of the Crown.

Mr. Justice WILLIAMS then proceeded to sum up. He observed that the learned counsel for the prisoner had rested his defence entirely upon the ground that at the time he committed the act he was not in such a state of mind as to render him accountable for his actions, and this was the question,

therefore, which the jury had to decide. After going through the evidence minutely, his lordship said in conclusion, that the mere fact of a crime being committed, under most atrocious and revolting circumstances, ought not to be taken as a proof of the insanity of the person who committed it, but those circumstances were merely an ingredient in the case for the consideration of the jury. It was for them to weigh all the facts carefully and attentively, and after having done so, if they felt a doubt whether the accused at the time he committed the act really was in such a state of mind as not to be aware what he was about, they should acquit him on that ground; but if, on the contrary, they thought that notwithstanding all the circumstances he should be considered as responsible for his actions, it would then equally be their duty to find him guilty.

The jury retired at one o'clock, and at twenty-five minutes after two they returned into court.

Mr. Straight, the deputy clerk of arraigns then inquired "whether they had agreed upon their verdict?"

The Foreman replied: "We find the prisoner guilty, but that he was not at the time in a sound state of mind."

Mr. Justice WILLIAMS: "Am I to understand that you think he was not in a sane state of mind when he committed the act? If so, that would be a verdict of not guilty on the ground of insanity. Is that what you mean to say, gentlemen?"

The jury returned no answer, and did not appear to understand what was said by the learned Judge.

Mr. Justice WILLIAMS said, if they had not agreed upon what verdict they should deliver, they had better retire.

The jury wished to know what would be the effect of finding such a verdict as that mentioned by the court.

Mr. Justice WILLIAMS said, "the jury had nothing to do with the consequences of any verdict they might deliver."

The jury then again deliberated for a short time, when—

Mr. Justice WILLIAMS said "they had better retire, and discuss the matter," and, accordingly, they again left the Court.

They were absent nearly half an hour, when they again returned, and gave a verdict of "Not Guilty, on the ground that the prisoner was in a state of insanity at the time he committed the offence."

The ATTORNEY-GENERAL then addressed the Court, and said "there were several other indictments against the prisoner, but after the verdict that had been delivered, he did not consider it would be necessary to proceed with them."

Mr. Justice WILLIAMS said "he thought he exercised a proper discretion in taking this course."

The prisoner was then removed: the usual order being given, that he should be kept in safe custody until Her Majesty's pleasure should be made known respecting him.

We cannot close this most important trial, without passing a few words on the sentence.—A conclusion has been come to; the man has been proved by the tongues of more than one, who were eye witnesses of his revolting cruelties, to have been guilty of *three murders*, perpetrated without cause—And yet with these facts staring them in the face, the twelve men, whose duty 'tis to hear and judge impartially, to uphold virtue, and punish vice; after one hour and a half's discussion returned into court and delivered their verdict "NOT GUILTY."

Full of truth are the words of a contemporary, who says, "A little murder, like a little learning, is a dangerous thing." The assassin who hopes to escape the gallows, must wade deep into blood; for so 'things had begun make strong themselves by ill.' To kill one man would be murder, but to kill three is insanity! Any superaddition of barbarity, also, conduces to safety, as it is looked upon as a corroborative evidence of madness."

Another (*The Times*) observes with equal truth "The trial of Captain Johnstone, of the Tory, has ended in his acquittal. The jury have found, after an investigation of two days, that the prisoner is, in fact, guilty of the homicide of three human beings, under circumstances of the most deliberate and revolting cruelty; but that he is not guilty, in theory, of the crime of

murder, because he was not at the time a reasonable and responsible creature. Their verdict of 'Not Guilty' is given on the ground of insanity; they are satisfied that the murderous hackings, and hewings, and stabblings, committed by the captain on his helpless, abject crew, and continued with little intermission for the space of several days, were all the acts of a madman, of a being without reasonable motives or moral restraints, ungovernable and ungoverned. It is not for us to question the propriety of this verdict, nor to inquire by what process of ratiocination it was arrived at. The law ascribes to those awful twelve men, to whom it is given to pronounce the fiat of life or death the attribute of infallibility. In criminal cases there is no appeal. Whether the guilty escape or the innocent be condemned, whether the iron inflexibility of written law be used to crush the helpless victim of overwhelming misery, or the sinuous tortuosities of technical chicanery be applied to rescue the hardened villain from the fate he has well deserved, in the face of plain conviction and in the teeth of justice, in any and in every case, the decision of those twelve men is final and irrevocable.

"It is difficult to restrain one's indignation, it is impossible to abstain from bitterness, in beholding the first principles of law perverted and made to work the grossest injustice. It is laid down by all writers on criminal jurisprudence, and is in fact a very axiom among lawyers, that in a charge of murder, if the act be proved, the malice is implied. This position rests upon the universal law of human responsibility, upon the principle that every man can, if he will, control his own acts, and is therefore accountable for them. If circumstances can be brought forward to show that the party accused has not this power of control, and consequently should not be held accountable to his fellow men, it is for him to make these circumstances appear. But in the first place he must be held guilty, if he has taken away life. It is not to be denied, as a consequence of this doctrine, that insanity is a just ground for remitting the punishment for any and every offence. But it must be admitted, at the same time, that it is a dangerous ground. Insanity is a malady that hardly admits of definition. There is moral and physical insanity, temporary and permanent. Then there is idiotcy and frenzy, mere mental aberration and monomania. Examine a dozen physicians, and each will give a different description of the disease, but all will agree in pronouncing its varieties infinite. Some will say it is an absence of motive in the general conduct, a 'lesion of the will.' Others will call it a general inability to appreciate cause and effect. Others, again, will describe it generally as an absence of reason. All are right as far as they go, but none go far enough. The truth is insanity is not to be defined, and is, therefore, a most dangerous word to write in books of criminal jurisprudence. Each man, each dozen of men, may give it a meaning to suit a particular view of a given case; and, as we see daily in investigations before coroners, it may be used as a means of evading a law that has become distasteful, though perhaps without sufficient reason, to the general feelings of the community.

"We speak here more particularly, though not exclusively, of temporary insanity. It is become almost a fashion, of late years, to presume the existence of this disease in every criminal, whose offence is characterised by extraordinary atrocity. The maudlin philanthropists of these charitable times cannot believe in the possibility of guilt so enormous as to approach what themselves might call a demoniacal frenzy. The commission of a great crime without apparent motive is supposed to be in itself a proof of insanity. Such was the idea that prevailed in M'Naughton's case, and now in Captain Johnstone's. Such an idea, however, is, in our estimation, subversive of every principle of sound humanity. Once admit it, and you give a premium to enormous crimes. The deeper the guilt, the greater the chance of escape; the more atrocious, the more hideous, the more monstrous the act, the more perfect the impunity. Let the murder but exceed belief, let it only lack a precedent in the Newgate calendar, and find no parallel in the annals of blood, and the murderer shall be acquitted, though a thousand eyes had witnessed his crime, and a thousand voices attest its perpetration.

"Observe how this absurd, this dangerous doctrine of irresponsibility, has been applied in the trial before us. The master of a merchant vessel, with a crew of some thirty men, sails from China for an English port. Midway on his homeward voyage, the water and provisions run short. The crew are placed upon short allowance, and, of course, show some symptoms of discontent. These are conveyed to the captain's ears by meddling, sneaking rascals, such as are always to be found on board ship, ready with any act of meanness to curry favour. The captain is alarmed (we put the matter in the most favourable light for himself) for the safety of his valuable cargo. He determines, to crush the spirit of mutiny in the very outset; and to do this by a system of intimidation. In order to wind up his feelings to the necessary point of savage barbarity, he seeks the usual resource and incentive of crime—the bottle. An unfortunate occurrence—the meeting with another vessel on the high seas—supplies him with an unlimited means of intoxication. He drinks to drown fear, and drowns at the same time, every spark of reason, and quail of conscience. He becomes furious in his cups, and, as many drunken men are, savage, and careless of consequences. He commits, with a reckless, indiscriminate atrocity, and a barbarous exultation, repeated acts of cruelty upon his trembling crew. He perpetrates murders wholesale, cuts and slashes men as though they were senseless stocks, then drinks again to deaden the stings of remorse, and returns to the attack. He arrives at length in port, and, having had ample time for deliberation, resolves to assume the initiative, and charges his crew with mutiny. The charge is investigated, but in the course of it, such tales are told as throw the guilt upon the master, instead of the men, and the Crown is compelled to intervene. The captain is placed at the bar of his country on a charge of murder. The case is proved against him, with all the attendant horrors of a cold-blooded and motiveless inhumanity. He offers no defence—not even an attempt is made to prove his insanity. On the contrary, it is admitted that up to the moment of the supposed mutiny, he was quiet, and sufficiently inoffensive. His defence rests solely on the unaccountableness of his conduct, on the fashionable idea, *that a crime without a motive is no crime at all*. The jury find him guilty and insane. They are told the verdict is a contradiction. They are puzzled at first, and no wonder. At last they acquit him on the ground of insanity.

"And this trial takes place in 1846, in the heart of London, in the centre of enlightenment and civilisation, before a jury sworn "to give a true verdict, according to the evidence." That they have not done so, we do not hesitate to affirm. They may have decided according to their consciences, but they have not decided according to the evidence. The contest lies between their judgment and their honour. The one has failed. We will not suppose it to be the latter.

PUNISHMENT OF SEAMEN IN THE REIGN OF QUEEN ELIZABETH.

[From the Harleian MSS.]

"These executions and capitall punishments I finde to be thus in Queene Elisabeth's tyme, aborde her owne shippes. If any one man killed another, he was to be bownde to the dead man, and soe throwne into the sea. If any one drew a weapon wherewith to stryke his captaine, he was to loose his righte hande. If any one drew a weapon within borde in anye waye of tumult or murder, he was to loose his righte hande. If any one pilfered, or stole awaye anye goods or monies from anye of his fellows, he was to be thrise ducked att the boltsprits, and then to be dragged at the bote's sterne, and sett on shoare upon the next land, with a lofe of bread and a can of beere. If any one practysed to steale awaye anye of her Majesty's shippes, the captaine was to cause him to be hanged by the heels untill his braines were beaten out against the shippe's sides, and then to be cutt downe and lett fall intoe the sea. If anye one slept in his watche, for the first time he was to be headed with a bucket of water; for the second time, he was to be haled upp by the wrysts, and to have two buckets of water poured in his

sleeves; for the third tyme, he was to be bounde to the maynemast with plates of iron, and to have some gunn chambers, or a basket of bulletts, tied to his arms, and soe to remain at the pleasure of the captaine; for the fourthe time, he was to be hanged at the boltsprite, with a can of beere and a biscott of breade, and a sharp knife, and soe to hange and chuse whether he woulde cutt himself downe and fall into the sea, or hang still and starve. If anye one marryner or soldier stole awaye from Her Majesty's service, without lycense of his captaine, he was to be hanged. If anye one did mutinye about his allowde proportion of victuals, he was to be laid in the bilboes during the captaine's pleasure. As for all pettie pilferings, and commisions of that kinde, those were generallie punished with the whippe, the offender beinge for that purpose bounde faste to the capstan; and the waggerie and idleness of shippe boys paid by the boatswayne with a roddle; and commonlie this execution is done upon Mondaye mornings, and is so frequentlie in use, that some meere seamen and saylers doe believe in good earnest that they shall never have a faire winde untill the poore boyes be dulle brought to the chest; that is, whipped every Mondaye morninge.

ANECDOTE OF GEORGE THE FOURTH.

WHEN the yacht was endeavouring to double the Land's End (on the return from Ireland), the weather was terrific; it blew a hurricane, and seemed setting in. Sir Charles Paget told the king that he would not be answerable for the consequences of persevering. His Majesty said, "Paget, do nothing but what is right; act as you would do if I were not here."

In altering the course to run for Milford, a thick fog came on, and it was impossible to see a ship's length; the gale increased, and Sir Charles, naturally anxious in having such a charge as the king, again felt it his duty to state the danger in which he thought the vessel. His Majesty received the communication with the greatest coolness, and again desired him not to think about him.

Still the weather grew worse, and while the yacht was under bare poles, or nearly so, a sea struck her wheel, and unshipped her tiller ropes. To any person acquainted with nautical matters, this occurrence, in a storm, needs no remark; and Sir Charles felt it his duty (not able himself to quit the deck) to despatch an officer to report the accident to the king. "Tell Paget," said the monarch, "that I am quite satisfied in having as gallant and skilful officers, and as active a crew as Europe can produce—for the rest we must rely upon Providence."

Similar fortitude and presence of mind marked his Majesty's conduct in his short excursion to Calais. When the yacht arrived off that port, it was blowing hard, with a heavy sea running; the waves rolling in, struck her on the weather-side, and dashed furiously over the quarter-deck. It was reported that as his Majesty's barge was not arrived, and no means of insuring a safe landing were at hand, they must stand out to sea for the night. The king asked if there was no French boat; a French fishing-boat was dancing before the yacht at the moment; the people offered their services. Sir E. Nagle and Sir C. Paget (both experienced naval officers) wished to deter his Majesty from going, but he called to the Frenchmen in their own language, and asked them if they could carry him safe ashore; they affirmed that they could: upon which his Majesty, turning with a smile upon his nautical attendants, said, "Come—I am quite sure you don't mind a ducking;" and instantly went down the side—they of course followed.

The boat having got entangled in some ropes which were adrift, a sea completely washed the whole crew. Sir C. Paget, alarmed for the king, was about to seize the helm, when the king, touching his arm, said—"Be quiet, my good friend; leave the Frenchmen to manage their own boat in their own way, and I'll be bound for them they will land us safe." They, however, struck three times on the bar, and were very nearly swamped.

The landing of his Majesty at Calais was not accomplished without a little risk, owing, it is said, to some awkward mismanagement of a French sailing-boat, which had the honour of receiving his Majesty from the Royal George, improperly coming to the bow of the yacht, where the boats mast got entangled for a moment. At this period the king's cap fell into the water, and he lost it. His Majesty, however, got safe on shore, and in high spirits; he seemed much entertained with the difference of the manner and appearance of the French, from that of the people whom he had so recently left at Ramsgate.

HIS MAJESTY'S BRIG, PELICAN, AND THE UNITED STATES' BRIG, ARGUS.

HIS MAJESTY's brig of war, Pelican, Captain J. F. Maples, was ordered, on the 12th of August, 1813, to cruise in St. George's channel, for the protection of the trade, and particularly for the purpose of seeking an American sloop of war, which had been committing serious depredations on our commerce, and which had made little short of twenty captures. The Pelican had only arrived at Cork at about six o'clock on the morning of the 12th; before the sails were furled she received the order, and by half-past eight a.m. she was beating out of harbour, against a heavy head wind and sea. About four o'clock a.m. on the 14th, after two days' anxious search, the Pelican discovered a vessel on fire, and a brig standing from her; which latter, the vigilant eye of Captain Maples soon made out to be the long looked-for cruiser.

All sail was immediately set in chase; but the enemy, which proved to be the United States' brig of war, Argus, made no preparations for flight, but shortened sail, being unable to get the weather-gage, which gave Captain Maples an opportunity of running alongside her at about six a.m.; her commander, as it afterwards appeared, being confident of victory "in ten minutes." The American's colours were now hoisted, and her larboard broadside discharged. The Pelican, being in a most favourable position, saluted her opponent with three cheers; the old English ensign flew up at the same instant, the broadside returned, and the action commenced within the range of musket-shot, with the greatest spirit on both sides. At about twenty minutes after the commencement of the action, the American captain and first lieutenant were carried below severely wounded; and the Pelican, being on the weather quarter, edged off for the purpose of passing under her opponent's stern. But the Argus, dexterously throwing her main-topsail aback, luffed close to, and frustrated the attempt of the Pelican, giving her at the same time a raking broadside. The bold commander and crew of the latter, not dismayed by this failure, again attempted the manœuvre; and having shot away the preventer main-brace of the Argus, she, in consequence fell off before the wind, and the Pelican, passing under her stern, succeeded in taking her position on her starboard beam.

The first lieutenant of the Argus now returning to the deck of his ship, found her most terribly mauled; and the Pelican, profiting by her condition, passed her broadside, and raked her for some minutes longer, when the two vessels fell on board each other. Captain Maples immediately gave the signal to board, and, with his gallant crew, dashed on the deck of the American. A volley of musketry was the only opposition they encountered, but by this fell the master's mate, Mr. Young, in the moment of victory, and, as Captain Maples expresses it in his despatch, "while animating, by his courage and example, all around him."

All resistance now ceased, and the Argus was taken possession of by her conquerors; the action lasting forty-five minutes. She lost six killed and twenty-one wounded; six of the latter (among whom was her commander) mortally. She was much cut up in her hull, lower masts, and rigging, though no spar of consequence was shot away. The Pelican lost her brave master's mate and one seaman killed, and five seamen slightly wounded. She also suffered much in her hull and rigging, her sides being literally sown with grape shot; but, like the Argus,

she lost no spar of moment. She was rather superior in size and tonnage to the Argus, and also in weight of metal; her broadside weight in pounds being 274, and that of the latter 228. In complement, however, the American brig was superior, and not less in *apparent* quality than in number; for her crew consisted of 122 picked men and three boys (so called); total, 125. A finer set of fellows than whom never was seen, few of them less than six feet in height, and many of them British subjects. The Pelican's complement was 104 men, of all shapes, sizes, and ages, and twelve boys, total, 116.

When we consider (deducting the killed, wounded, and boys from each side) that ninety-eight athletic Americans surrendered to ninety-nine various sized Englishmen, without any material resistance, when boarding was resorted to, we may rank the capture of the Argus by the gallant Captain Maples among the most brilliant exploits recorded in British naval annals.

LOSS OF THE DUTTON, EAST INDIAMAN, JANUARY 26, 1796.

THE Dutton, East Indiaman, arrived at Plymouth on the 25th of January, 1796, from Admiral Christian's fleet; but on the following day, at about ten o'clock in the morning, a dreadful gale of wind came on from the S. W., when she was driven to leeward, and about two hours afterwards, she struck on the S. W. part of Mount Batten, and immediately after, parted her cables. She then veered round with her head to the N. W., and stretched across the harbour under her fore-topsail; but by her striking on the Batten, having knocked her rudder off, she became unmanageable, and, at about half-past twelve o'clock, was driven on shore, under the citadel, when her masts were all cut away. After violently beating on the strand for several hours, her back was entirely broken, and she became a mere wreck.

The number of persons that were on board when the ship struck, amounted to five hundred, including soldiers, seamen, women, and children; but notwithstanding the violence of the sea, and the imminent danger, from the dreadful situation of the ship, not more than three or four persons perished—and those were carried away by being entangled in the rigging when the main-mast was cut away; but, such was the eager anxiety of the soldiers and seamen to get to land, that numbers of them jumped overboard, and had very nearly lost their lives by the violence of the sea dashing them on the rocks.

Then rose from sea to sky the wild farewell;
Then shrieked the timid, and stood still the brave;
Then some leaped overboard with dreadful yell,
As eager to anticipate their grave;
And the sea yawned around her like a hell.

It was on this account that Sir Edward Pellew, with great intrepidity, got himself conveyed on board the Dutton, by means of a rope extended from the ship to the shore; and by his able conduct, put an end to the confusion that existed, assuring them, that he would be the last man to quit the ship. To this was owing the order and regularity which instantly prevailed.

Measures were immediately taken to get the men out of the ship, which was effected by means of boats, and by ropes fastened to the shore; and it is a singular circumstance, almost unparalleled in the history of maritime disasters, that owing to the manly conduct and efficient presence of mind which was evinced by Sir Edward Pellew on this occasion, and for which the corporation of Plymouth afterwards presented him with its freedom, that not another life was lost, although, such was the dreadful situation of the vessel, but very little hope could be reasonably entertained that any of them would be saved.

LOSS OF THE TER SCHELLING;

Including the various Calamities of the Crew, during an unfortunate Voyage to Bengal, in 1661.

On the 3rd of September, 1661, the *Ter Schelling*, which carried about eight pieces of cannon, and had upwards of seventy men on board, left Batavia for Bengal, with the *Wesop*, *Brouwers-haven*, and *Nieuwenhove*. Their freight consisted chiefly of pieces of silver coin, and copper-plates.

On the 18th of October, they were in sight of the coast of Bengal, but knew it not. In this state of uncertainty, they steered towards it, and cast anchor within two leagues of the shore, where the captain, Jacob Jantz Stroom, a native of Amsterdam, sent out the long-boat, and despatched the pilot

to the inhabitants, with seven or eight seamen, and the steward, who had some knowledge of the language of that country, in order to inquire into the nature and name of the coast they saw. They knew, from information, that the coast of Bengal was surrounded with rocks and dangerous shelves, whereon several vessels had been cast away, but for want of experience they were ignorant whereabouts they lay, and consequently had not the precaution to avoid them.

Three days elapsed, during which time they were in anxious expectation of their men's return; but now suspecting that they either perished through some unforeseen accident, or that they were made prisoners on shore, they weighed anchor, and sought a port where they might make inquiries about them. After a long search, they descried three small barques that made towards them from the land side. The sight of these

LOSS OF THE TER SCHELLING.

afforded them infinite pleasure, as they hoped now to obtain some intelligence of the long-boat. These barques stopped at a small distance from their vessel, seemingly in a consultation whether they had better or not come on board her, the *Ter Schelling* being a man of war. After about a quarter of an hour's deliberation, their commander, whom they called Orangkai, drew near with his barque, and told them by signs, that the two others were laden with fowls, fish and several fruits of their country. The people of the *Ter Schelling* now gave him to understand in the best manner they could, that he had no reason for apprehension; and being at length encouraged by their promises, he came on board. As soon as he entered the vessel, he ordered the other barques to come up and unlade their provisions, which were, at this time, very acceptable.

Captain Jantz Stroom took Orangkai into his cabin, where he entertained him in the kindest manner. He made inquiries,

but to no purpose, respecting the fate of the long-boat; and as they began to discourse about the country, the *Ter Schelling* touched upon a shelf, which occasioned a general alarm. The noise and confusion produced by the means which were employed to extricate themselves from their sudden danger, filled Orangkai with the apprehension that it was a signal to betray him. He was, therefore, anxious to make his escape, which he did so dexterously, that none of them were aware of his departure, till he was at some distance. For awhile they expected his return; but when they perceived that he had left behind him the money which they had paid him for the provisions, they soon guessed the cause of his sudden retreat, and heartily regretted his mistake.

Their vessel being now afloat, they found themselves as far advanced as they were before. In this dilemma, the greatest part of the crew was of opinion that they should stay here for

some time, in hopes of finding the long-boat; which they did for eight days, but to no purpose. Hereupon they cleared themselves of this place, and hoisted sail in search of the vessels that set out with them.

After a tedious look-out, they ran upon a long shoal, from which they got clear, but afterwards fell upon another, more dangerous than the former. This obliged them to let down their boat into the sea, as well to sound the depth of the water as to understand the nature and quality of the place. Far and near, they could discover nothing but shallows and flats, and there was so little water everywhere, that they knew not which way to pass. The melancholy situation in which they were placed, filled them with the most gloomy apprehensions. They cast anchor behind and before; but in spite of their endeavours to preserve the vessel, the roughness of the sea, and the vio-

lence of the wind, soon occasioned a great breach in her, when, in order to prevent her sinking, they immediately cut down their bowsprit. Their boat was instantaneously swallowed up in the sand, and one man who was in it, was happily preserved by the assistance which the crew of the vessel gave him.

Thus were they deprived of their small boat, out of sight of land, and in an unknown sea; these calamities almost drove them to despair; yet it was the will of Providence that they should encounter worse misfortunes. While thinking on the best measures to adopt, a violent gale of wind snapped both their cables. They immediately threw out two others; these, however, did not prevent the vessel from striking against a sandy hill; therefore they were obliged to cut them with hatchets, leaving their anchors in the sea. As to their sails, the wind not only carried away their fore-top, but they were forced

to clear the vessel of water, and let them all down. The wind, moreover, swelled the waves to such a degree that the vessel let in water through the port-holes, and every moment they expected her to be dashed against a rock.

In this distressing situation, while some were sending up their imperfect but ardent prayers to heaven, and others drowning their sorrows in copious draughts of liquor, another sudden gale drove the ship from between the shoals, and set it on float again. This unexpected occurrence revived their hopes, but they were short-lived hopes; the water sprung in from all sides; whereupon they fell to work with their pumps, but to little purpose; the water still gained upon them; the greater part of the crew, through weakness, being incapable of exertion.

Several consultations were now held which course to steer, when contrary opinions prevailed; the commander's advice,

however, was followed, which afterwards proved a fortunate circumstance; for, if the seamen had had their will, they would have carried the vessel far from the coast. Though now assured that they were in the right course, they had several difficulties to encounter with—the water was still gaining upon them, they had been a great while out of the sight of land, and in want of provisions. Moreover they were all so overcome with sleep and fatigue, that they were not able to stand. While in this deplorable condition, he that was upon the watch, cried out, "Land! land!" declaring that it was near them. This good news put them all in heart again, and made them fall to work afresh. Their hope, however, did not last long, for they had the tide against them for three or four hours, which hindered them from advancing, so that at night they were forced to cast anchor at three leagues distance from land, about four fathoms deep. This last misfortune completed their sorrow.

for they could pump no longer: but the strongest of the crew, perceiving that they were now almost ready to perish in sight of land, used their utmost endeavours to encourage each other, resolving to cut the cable the next morning, and advance with the flood as near as they could to shore. They had scarcely spent six hours in this undertaking, when they perceived that of one bucket of water, half of it was sand with which they had ballasted their vessel, which of course rendered their measures abortive.

All means of preservation having been tried in vain, some gave themselves up to sleep, patiently waiting their expected dissolution: others resolved not to close their eyes till they should be closed for ever. Many indeed, mad with hunger, became outrageous for want of meat, whereupon the captain ordered that every man should have his share of water and smoked beef. It was with much difficulty the steward obeyed this injunction; but finding himself obliged to comply, he distributed such a quantity of both, that one would have imagined they had still a long voyage to make. Several, whose spirits had been exhausted through watching and fatigue, became frantic; in short, the situation of all was truly deplorable.

As soon as they left off pumping, their yard, and foreyards, which they let down, were full of duckers, which were easily taken. A parcel of beans called Kiteri, which were found lying at the bottom of a seaman's chest that lay asleep, were also dressed, which, though they supposed it would have been their last meal, they ate with a great deal of satisfaction. Soon after, there entered so much water through the port-hole of the cook's cabin, where the violence of the waves had made a breach, that they were forced to make holes in the deck to let the water run down into the hold. This they stopped with great difficulty, with plates of lead wrapt about with tow. Exhausted with fatigue, the stoutest then was obliged to yield to the powers of sleep; the captain, who had endeavoured to stay awake, lay down on a chest which was fastened to the deck, not willing to give himself an easy couch at a time of such imminent danger.

The captain had scarcely rested an hour, when he was awoke by the violent screams of some, who having been on the watch, perceived the vessel to incline on one side. A general confusion then took place, every man endeavouring to withdraw from the crowd, to seek alone some means to preserve himself. At this time it was observed that three of their seamen were wanting, who it was supposed were drowned at the bottom of the hold, where they had reposed themselves.

They were two hours in this dreadful condition, most of them half dead and hopeless, when the vessel suddenly and miraculously raised itself up again. Their astonishment at this unexpected change could only be equalled by their joy. Taking advantage of this opportunity, which heaven afforded them, they determined on forming a raft in order to save themselves when the vessel sunk. Accordingly the carpenter, with the assistance of others, took down the sail-yards, masts, and other necessities, with which he made a kind of vessel, which held about forty men. Though the number of the crew exceeded this, there were several who derided the undertaking, and were so far from assisting in it, that they even refused to lend their hatchets and other utensils for the purpose. The cook's mate; whose name was William Usbrants, was particularly averse to it. This man dissuaded many from helping the carpenter, assuring them he would suggest a more probable plan for their preservation. In spite of all opposition, however, they finished their float-boat, which they fastened to the ship, till the oars were made to guide it. When every thing was ready, each man who was willing to confide himself to the raft had ten pieces of money current in Bengal, given him for his relief when on shore. One of the crew was very desirous to go on board this new made boat, but finding that it lay level with the water and was overladen, and particularly those who were appointed to guide it, were unfortunately drunk and disposed to quarrel, he thought it best to stay in the vessel with the commander, and those few who remained behind. Scarcely had the men

in the raft rowed a few yards from the ship, when several, repenting of the undertaking, jumped out and swam back to the vessel; so that, upon their return, there were thirty-two who took the chance of the ship. The men in the raft endeavoured to use the sail of the shallop, but it proved too heavy, and the wind having ceased, they made very little progress.

They were afterwards seen at a great distance by the anxious crew of the ship, who, depending upon their promises, were in hopes of deriving some advantage from their enterprise. Soon, however, they lost sight of them, and as they never saw them any more, concluded, as was probably the case, that the raft sunk, and that all the men on it perished. Oppressed with these melancholy thoughts, for they now despaired of any boat coming to their relief, some of them resolved to make another raft; accordingly they went to work, but when finished they found it would not hold more than about a dozen at most. It being therefore expedient to enlarge it, for this purpose they began to cut down the scuttles of the main mast, which had been already stripped from its tackle. They afterwards wanted the sail-yard, but this being far in the water, entangled with ropes and sail, they despaired of getting it out from thence. One William Bastians, however, caused a rope to be fastened round his middle, and having been let down in the sea, he cut away all those entanglements which hindered them from accomplishing their work. In the meantime they were so incommoded by the darkness of the night and the violence of the waves, that they were every moment in danger of perishing.

While the greatest part of the crew were employed in cutting down the fore-mast (the only one that stood) six of the men had secretly planned together, to run away with the raft, and leave their companions in the lurch. They were about executing this their treacherous design (having already cut the two ropes by which the raft was fastened) and beginning to put off from the vessel; when unfortunately the mast which the others had just cut, fell down into the sea before the raft, and, by its fall, discovered their evil intentions, and forced them back again. Had they succeeded in their scheme, those in the ship doubtless must have perished that night, for the foul weather increased, the waves became boisterous, and the vessel was not in a state to resist them.

The mast which they had felled having been duly accommodated to the raft, it was thereby rendered fit to carry about twenty, though the number of the crew now in the vessel was thirty-two. The tide having been half spent by midnight, they would willingly have waited its return, and embarked by daylight; but their danger was too pressing to admit of delay: accordingly they prepared for their departure out of the vessel, taking along with them a quantity of provisions, two compasses, two cutlasses, a sword, a pole-axe, some oars, made in haste, and a lanthorn and candles for the night.

Thus wretchedly furnished, they forsook the ship, and embarked in their new boat, where each of them, with an oar in his hand, made towards the shore. It is impossible to describe the severe sufferings which they endured, while up to their middle in water, in a cold season and dark night. As soon as the day appeared, they had the tide against them, and not being able to resist it, they were carried off by it so far, that they lost sight of land. An hour after they desisted it, and exerted their utmost endeavours to reach it, but the swiftness of the currents rendered all their attempts fruitless. The greatest part of the crew now became delirious, and by their frantic fits were exceedingly troublesome to the rest. In the meantime, the tide carried them so far that they lost all hope, and now betook themselves to prayer. Some time after, they thought they saw land, and cows feeding; this, though merely the force of imagination, yielded them for a while no small satisfaction, but they soon discovered their mistake, for it was only a sandy bank which they saw, that had been cast up by the violence of the sea.

Finding their danger increasing, it was resolved by the most resolute of the crew, to push, during night, as many of

their companions as they could, into the sea, in order to lighten the boat. The carpenter, however, prevented this cruel design; he recollected that they had money to a considerable weight, which might serve them instead of an anchor or counterpoise, and consequently be serviceable in two respects, as it would also lighten the raft. His advice was also readily taken, and every man immediately gave his money, which was put into a pair of close knee breeches, tied with a cord; then into another pair, and also into a third, which were equally tied, and then the whole fastened to a rope, which they let down to the bottom, when desirous to stop. They made another packet of this money, which they used instead of a plummet, to find on what side the tides cast them. Both one and the other of these were so useful to them, that in a short time they found themselves near land, without any apprehension of again losing it.

About two in the afternoon they took up their anchor to give every man his own again. After this distribution, there was found a sack in a barrel, full of biscuit, which nobody regarded, and which would have been left behind, if the captain had not taken charge of it.

They came at length so near the shore, that they thought they saw fishermen stretching out their nets to dry them. On a nearer approach, they believed they saw other persons who seemed to wear the same habits as they did, and whom they supposed to be those that had left them. They had all the same clothes, hats, and caps, except some that wore canvass taken out of a sail, and others that were only in their drawers. The tide carried them not to that side neither brought them so soon to shore as they desired. This tedious progress rendered them still apprehensive, and one of the men was so impatient, that he absolutely threw himself into the water to try whether he could not swim to land, but he was soon glad to return to the raft. In the meantime, they recollected that the inhabitants of Bengal had a great antipathy to swine's flesh, and it was therefore agreed to throw what they had remaining into the sea.

They now came on shore, and left their crazy raft at the disposal of the sea. As soon as they were landed, the captain, with ten or twelve of the stoutest of his crew, went in search of some convenient place where they might dry and refresh themselves. Those who remained behind were alarmed at their long absence, and went in search of them. After much fatigue and agitation of mind, they found them lying fast asleep, and being equally tired, they also lay down in the same place, and fell fast asleep with them.

The next day we spent in providing wood, of which they made three piles, in a triangular form, which they set on fire with the candle they brought with them in the lanthorn. Near each fire a sentinel was placed, in order to apprise them of the attacks of any wild beasts, and by this means they warmed themselves in greater tranquillity.

They now walked near the shore, in hopes of meeting with some fishermen, or others, from whom they might procure relief. The first object they saw was a great tortoise, without a head, and soon after a buffalo stretched out on the ground, whose head was half rotten, and full of maggots. Several animals, which the inhabitants called leganes, were about this creature's body, which smelt so strong that they could not bear to come near it. Hunger, however, subdued this delicacy; for, some days after this, they were very glad to feast upon this carcase, and pick even the very bones.

About a quarter of a league from this place, they found themselves near a river, on the other side of which they saw eight Moors, viz., four men, two women, and two children, whom they took for natives of Bengal. They immediately endeavoured to pass over it, but found it too deep; about an hour afterwards it appeared more fordable, and they succeeded in crossing it. The Moors now ran to meet them, and casting themselves at their feet, kissed them. They seemed much afflicted, but their signs were not perfectly understood. It was however conjectured, from seeing a certain kind of boat or float, that they were some poor slaves, whom their master's cruelty had obliged to run away. Finding that these people were in want of relief themselves, and consequently incapable of being any service to them, our distressed mariners left them, and repassing the river,

went in search of the tortoise they saw, which they roasted in its shell. Each of them took a part (which on account of their number was very trifling), and greedily devoured it.

The next morning before they set out on their march, their commander, gave each a slice of cheese (from one that weighed about three pounds which he brought from the ship) and by advice of the surgeon, they drank a cup of water, half salt, which seemed to refresh them.

After about five or six hours' march they came to the land's end, by which they supposed this place to be an island, and distant from the main land about eight or nine leagues. These conjectures extremely dismayed them, and, from the apparent barrenness of the island, they concluded that they must shortly perish with hunger.

They now agreed on returning to the place where they had spent the preceding night, in hopes of finding in their way some of these before-mentioned leganes. For fear of rendering them wild, two of their men, armed with a hatchet or cutlass, marched before, and the rest followed at a distance. They returned soon after with one of these animals, which they carried to the place they intended. Having left their chaplain here, they searched about for, and called him, but could neither see nor hear him.

They afterwards sought a more commodious place to reside in during their stay in this island, and fixed upon a place near the shore, which they deemed preferable to that of the wood, as their only hope of meeting with relief was, in being seen by some vessels that were passing by.

Having gathered wood, and therewith kindled a fire, they cut up the legane, with his skin, which though about the size of a cat, was divided into as many pieces as there were men. Every one took his share, and dressed it according to his taste. Some, oppressed with hunger, scarcely warmed the flesh; and others fearing to reduce it, roasted it only a little. This flesh though very unsavoury and unpleasant, was highly relished by these hungry men.

The next morning as they walked along, the surgeon began to taste the leaves of the trees, which he found very good, and the rest immediately followed his example. These were so exceedingly delicate, that they thought they had never tasted bread which had half such a nice relish.

One day, while walking along the shore, they perceived two great serpents, which filled them with some alarm. Though they retreated from them at first, yet hunger gave them courage, and arming themselves with sticks, they gathered round about them, and soon conquered them; they then cut off their heads and tails, and having flayed and washed them well, gave each man his share, which was greedily devoured; and which contrary to their expectations, agreed very well with their stomachs.

Thus were they every day obliged to go in small companies in search of food, in which expeditions they were generally unsuccessful; they frequently went to the sea-side in hopes of finding something cast on shore, but were continually disappointed. One time, being more than usually hungry, they were all bewailing their unhappy situation, when some of them happened to find a few beans, on which they feasted, and thought them highly delicious. They paid dearly, however, for this meal, being soon after seized with violent pains, and a difficulty of breathing. They were three hours in these agonies, and on their recovery, were so exceedingly languid and weak, that they were incapable of gathering sticks to kindle a fire. This gave them a disgust to those leaves which they relished so much before; instead of being so nice as they thought them, they now seemed to have not only a disagreeable, but an offensive taste.

As their strength was every day decreasing, and there was no probability of any vessel approaching the island, they now agreed to make a kind of boat which might carry them to some more friendly island. Accordingly, they cut down several small trees that grew along the water-side, from which they took off the peel, which served as fastenings for the several parts. This boat, when finished, was incapable of holding more than five men, and every one was ambitious to be one of the number. The commander, however, made his choice of five men, being those whom he judged most capable of the expedition. By his orders, they were to coast along the isle till they

came to the point, where they were, and then suffer themselves to be guided by the side, which would carry them between two islands, above which they might find firm land, which he supposed to be above eight or nine leagues distant from the point they stood upon. Besides these instructions he gave them a compass to steer by; and having taken some leaves along with them for sustenance, they parted the thirteenth day after their arrival in this island, solemnly promising their companions, that if successful in their undertaking, they would not fail to return with necessities for their relief. Each of these five men had an oar, but no anchor, or anything else to stop their boat in a contrary tide.

As soon as they were gone, the rest of these unhappy men betook themselves to the woods, where in vain they searched for food. They then sought the corpse of their chaplain, whom they suspected to be dead, and which, if they found, they intended to feed upon. Disappointed in their hope of finding it, some secretly proposed to kill one of the boys who were with them; but others rejected the cruel proposal. From this hour they lived in fear of each other, every man dreading when he lay down that he would be murdered by his companions.

About evening, they understood that two of their companions, that followed by land the five men who went by water in the morning, had overtaken them at night at the island's point, where they begged so earnestly to be taken along with them, that they could not deny them.

In the meantime one of the men came and informed the rest, that he saw a serpent of a prodigious size, which he was afraid to attack, being then alone, but he thought it would be no difficult task for them altogether to conquer him. Elate with this intelligence, they immediately hastened to the place with sticks in their hands. By the way they killed a legane, which fell off a tree at their feet, but they had the misfortune to lose the serpent, who, by the time they reached the place which the man described, was gone. On their return they divided the legane among them in equal shares, which afforded them a scanty supper.

Another time when they were very weak with hunger, the carpenter, who had been upon the look out, returned with his cap full of snails. These little insects had neither horns nor shells, yet as they looked like snails, they called them by that name. They immediately went with the carpenter to the place where he found them, and took all that remained. They appeared of a blueish colour, which at first made them believe they were venomous and dangerous to eat. Hunger, however, overcame all scruples; and having made a great fire to roast them, they put them under the cinders. When ready they began to eat them, and found them very palatable. They then drank some salt water, and prepared for reposing themselves. An hour or two after, the carpenter found himself ill, and fell immediately into fits. The rest were all alarmed, and in half an hour after were affected in the same manner as the carpenter. They felt such acute pains, accompanied with shortness of breath, that they thought their dissolution near. The pains however, gradually ceased, but their weakness continued.

They now began to despair of the return of their companions; those who observed them, declared they were carried off from the coast by the force of the tide, and therefore thought they must have perished with hunger before they could come to land. This opinion having prevailed, they began to think it expedient to build another boat, but the undertaking was difficult, and upon trying their strength, they found themselves incapable of doing it. Thus were they obliged to yield to necessity, and remain patient for some time longer.

It having been observed by the captain, that fires at night were beheld at a great distance, they judged it necessary to make one on shore that could be seen ten or twelve leagues off. They chose for this purpose a convenient place surrounded with dry trees, whereon they heaped others, and set them on fire. These fires they continued for four days, at the expiration of which time their strength failed them, and they could no longer carry on the laborious task. The captain, who was a very robust, strong man, and who measured their strength by his own, made them still continue to bring wood, though

it was with great difficulty and pain. He encouraged them by several accounts of advantages derived from fires by shipwrecked men; but as they experienced none of those advantages, their hopes as well as their strength failed them, and they soon ceased their work entirely.

Innumerable were the calamities which our unhappy sufferers now endured, a faithful relation of which would tend to disgust as well as shock our readers. Suffice it to say, that through the pressing calls of hunger they devoured a toad of an immense size, which they boiled in a pot, and which was productive of no sickness whatever. Another time they fed on the carcase of a putrid buffalo, and on the remains of two serpents which they found. In short, they were driven to that necessitous condition that even filth was accounted a dainty; and notwithstanding the corruption and badness of their food, it had the desired effect of appeasing their hunger, and increasing their strength.

Having finished their boat, the captain pointed out to them the extreme danger of their undertaking, seeing they could not get to land without sails, nor resist the tides without an anchor. They answered, however, that they could not encounter worse calamities than they at present experienced, and though destitute of anchor or sails, they were determined to prosecute their intentions in hopes of meeting some vessel which would receive them on board. The captain, finding them thus resolute, wished them a good voyage, and gave them leave to take with them a young man who spoke the Portuguese language, which was much used in Bengal and Aracan.

In the meantime one of their men who offered to make a wooden anchor, observed, that for this purpose he only wanted four crooked pieces of wood, which he should so fasten together with the rinds of young trees, as should answer their occasions. As there was no stone in the island to make it sink to the bottom, they filled two or three of their shirt sleeves with sand, which they fastened to the wood, and thus contrived a new kind of anchor. They now wanted twenty fathoms of ground tackle, which they knew not where to get. While considering what they should do, they saw two of their crew coming towards them, laden with ivy, and the rind of young trees; they twisted one with the other, and of these made such a rope as they wanted.

The next morning, eight of the crew, who were determined to embark in the new made boat, took leave of their companions, assuring them, that if they met with success they should return to their assistance with all possible speed. They soon gained the isle's point, which lies directly over the main land. Here they stood still, kindled a fire, and took their repast, which consisted chiefly of the leaves of trees, they then weighed anchor, and with much rowing found themselves far enough from the island. Fortunately the weather was calm, which gave them an opportunity to use a bag of sand instead of a plummet. By these means, having found the tide against them, they cast anchor on a bank where their boat could take no harm.

They now agreed, that the provisions which they had with them should be equally shared, and that every man might manage his own share as he liked best, if the voyage should prove longer than they expected. This, however, was attended with bad consequences, for several having no providence or economy, made an end of all their share at once.

A storm now rose, which broke their cable; the waves washed away the remainder of their provisions, and they were driven back to the same place which they had left in the morning. Having committed their boat to the care of the two youngest in their company, the rest went on shore. They immediately ran to the fire they had left at parting, where they found one of the negroes' wives (whom they had met when they first came to the island) by it. This woman, as soon as she saw them, threw herself at their feet; her body was grievously battered and wounded, and they understood by her signs, that it was her own people that had thus used her.

They were now so grievously pressed with hunger, that one of the crew (Charles Dobbel) secretly proposed the murder of this unhappy woman, though a mere skeleton to appearance, for the gratification of their appetite. This cruel intention was

happily overruled by the rest, who observed, that if they once began to feed on human flesh they might still be hungry for more, and consequently no man among them could be safe.

They determined now to make another anchor, to serve instead of that which they lost; and for this purpose despatched two of their men to borrow of the master his hatchet, which he immediately sent them. Having finished the new anchor, they resolved to return the hatchet to the captain, and thank him for the use of it. When about half-way, one of those that borrowed the hatchet observed, that he had seen the captain's linen lying to dry under the trees, and that both himself and his companions (who were half naked) were tempted to take each of them a shirt and a waistcoat. The absolute necessity they were in for linen overcame all scruples of conscience, and they were resolved to avail themselves of this opportunity of taking them. For this purpose they waited till night, when, having come to their quarters, the captain and his friends were fast asleep. Those that needed linen now took what they wanted; after which they seized part of their companions' provisions, and hastily withdrew. Such were the thanks which the captain received for the use of his hatchet.

Having rested themselves some time, they hastened to their other companions, whom they found where they had left them; viz., on the other side of the river. The water was then so high that they were forced to swim over it with their booty on their backs.

They had left behind four companions, three of whom had eaten nothing since the others had left them, and were so faint that they were not able to stand. The fourth, who had made a reserve, feasted in their presence, and was so hard-hearted as to refuse them a morsel of his dinner. He was severely rebuked for his unkindness, and every man received a due portion of what there was to eat. The woman, it seems, who had been left behind with these four men, when told of the departure of the others, slipped away, and was never afterwards seen.

It was judged expedient to watch by turns, for fear of any sudden attack from enemies. When, therefore, it was night, one set upon the watch while the other seven went to sleep. Scarcely had they rested two hours, when the sentinel perceived a negro stealing softly towards him with a cudgel. As soon as he came within reach of his oar he broke it on his head, and the negro fell down as dead. The alarm being given, those who were asleep immediately arose and pursued the other negroes, who, seeing their companion fall, fled into the thickest part of the wood. As soon as they found themselves pursued, they set up a hideous cry, which sounded as if there were about twenty, though in fact there were only seven or eight. After a fruitless pursuit, they returned to the place where their companion fell, and who, they supposed, lay dead; but it seems he had only been stunned by the blow, or had counterfeited death; for during their absence he had contrived to make his escape.

It was imagined, that the woman who had been with them, and who had taken particular notice of what had passed, had been the chief instigator of this attack. At the time of her secret departure, she knew there were only four, whom she probably thought might have been easily subdued. These negroes undoubtedly came with this view; but instead of four men, to their great disappointment, they found they had eight to encounter with, one of whom watched for the security of the rest.

As soon as it was day, they made a rope for their anchor like the first; but when ready to depart, they found that their boat was not in a condition to carry more than six. They were therefore forced to cast lots for two to remain behind, which fell upon the youngest, whom they endeavoured to console with the promise of returning for them, if successful in their enterprise. These two excluded men accordingly went in search of their commander and his party.

Our six adventurers now placed themselves round a little fire, in order to wait for the tide being for them. In about an hour's time they heard a lamentable cry, and they soon saw the two young men returning whom they had lately dismissed. They

said they could neither find the captain nor any of his companions; that besides where they had left them, they sought them in several other places, and they supposed that some vessel in passing by had seen them, and received them on board. The others, surprised at this intelligence, resolved to postpone their expedition till next day, and go themselves in search of their commander.

About midnight (the flood then favouring their design) they weighed anchor to approach the dry trees, some of which they wanted to repair their boat. In about half an hour the tide carried them with great swiftness towards an immense tree, with large extensive branches, which notwithstanding all their endeavours, they were not able to avoid, and the boat ran against it with such violence that some of them fell into the water; others were left hanging in the branches, and only one person retained his seat in the boat. So sudden and fierce was the shock, that each man thought his companions were drowned. At last, to their great joy, they all found out one another. Being extremely cold and very wet, they now endeavoured to make a fire to dry themselves.

Through this unfortunate accident they lost their anchor and half of the rope, and had no means of repairing this double loss. They were also uncertain whether they could make to the shore, as the force of the streams carried them off with great violence. Two of them therefore took the rest of the rope, and swam to shore, whereby they drew the boat after them without any difficulty.

It was now night, and they were near half a league off the place where they had warmed themselves the day before; yet so far were they obliged to go, otherwise they could have no fire. Accordingly, Charles Dobbel (who was the most lively and courageous of all the crew) took with him the two youngest of the party, and went in search of the fire, with which they soon returned, and which was of great utility: for it not only dispersed the darkness, which was exceedingly terrific, but likewise drove away the cold, which was immensely sharp. Charles Dobbel reported, that during this journey they trod all along upon briars and thorns; that they had lost their way, but having at length found the fire they were in search of, they fell with it into bogs and ditches full of water, which put it out, and obliged them to return for more. Their feet were covered with blood, and their bodies very much lacerated.

The next morning they sent two of their party to the captain's quarters and the adjoining places in order to certify if they were really gone. The rest, in the meantime, sought materials to make another anchor and cord. Towards evening the two men returned, and reported that the captain and his companions were not to be found in any part of the island, and that they could only meet with a piece of stinking fish, a small piece of a buffalo's skin, and four heads of garlic in a pot.

Having boiled this piece of fish with some leaves, they regaled themselves, and then began to consider what they should do. Some were of opinion that it was better to remain in the island in hopes that the captain's party would return to their relief; others thought there was no certainty of such assistance, and judged that it was better to venture out again. This last resolution having been adopted, the rest of the day was spent in fitting out the boat, and the next morning, having broken their fast on the remains of the skin of the buffalo, and provided a good store of leaves, they embarked.

[To be continued.]

THE BARGE'S CREW.

WHY aye, Mr. What's-your-name, we were the pride of the ship—all picked men; and if you had seen us in those days, when hope and enterprise spread our white canvass to the breeze, and we either luffed up to get to windward of the enemy, or sailed large to run down to the succour of a friend in distress, it would have done good to your heart, man. Then there was our barge, so neat and trim, with her gratings in the bow, and stern sheets as white as the drifted snow, and every oar a perfect picture. But to see her under sail, with three lugs and a jib, set, and the sheets trimmed aft—my

eyes! how she'd smack through the breeze, skimming the billow tops like a flying fish as he dips to wet his wings, and refresh him in his flight! Oh, how sweetly she'd walk over the curling wave, and climb the rolling swell. Why she could do anything but speak, and every one of the crew loved her as his own, and tended her with the same affection that a fond mother would her darling child—But then, what's the use of speechifying about it now?—she's broke up by this time (though I'm glad I didn't see it, for every stroke of the axe would have gone to my heart); and of the jovial lads that once manned her, some are cast like weather-beaten, shattered hulks, adrift upon the ocean of distress, exposed to the windy storm and tempest, without a port in view, or friendly barque to hail them in adversity. Ah! they think of the barge now, and, on these times they will never see again, when they were called "the jolly coach horses," that never flinched from their duty. Every soul was first captain of a gun; and our coxswain, Joe Snatchblock, was one of the finest fellows in the fleet, be the other where he would—six feet two inches without his shoes—a heart like a prince, and the spirit of a lion—generous and brave. Why, lord love you, Mr. What's-your-name, he was the very man as nailed the colours to the mast, on board the — in Duncan's action. I think I sees him now. Up went the helm, and away we bore down right into the thick of it: slap comes a shot athwart the halliards, and down rattles the ensign. "Hurrah!" shouted Mynheer, in exultation. "Dunder de bloxham," roared Joe from the gangway; and, shaking his fist at the enemy, "Dunde bloxham, but we'll give it you presently!" and then he ran aft, and, rolling up the flag, tucked it under his arm and skimmed away aloft like a sky-rocket, while the musket balls came pouring round him in leaden showers. "Grape and canister to the five aftmost guns," cried the first lieutenant; "point them: well at the enemy's poop—watch the roll and be steady, my men!" "Ay, ay, sir," and we clapped the grapes into the still, and pressed them down with canister, ramming all home with a vengeance. Rattle went a volley at Joe again, but we matched 'em for it in prime style; we smoked their manoeuvres, and powdered their wigs. Yes, yes, our grape was squeezed in Win-de-grave for a good many—it damaged their upper-works, and knocked away their understandings. Well, d'ye see by this time Joe had got to the main-topmast head, with the ensign under his arm, the hammer betwixt his teeth, and the nails in his pocket; so he shoves one through the head of the flag, just below the toggle, and drives it into the mast above the cross trees. Down he comes about half-a-dozen ratlines, and in went another nail, and so on till he descends to the main-cap, where he took a severe turn with the tack, and hammered all fast. At this moment all hands at their quarters were casting one eye aloft, and the other at the gun, like a crow peeping into a pitcher, or a goose at a thunder-cloud. "Huzza!" roared Joe, as he threw out the fly of the ensign, which, catching the breeze, waved majestically above us, floating in grandeur, like the Genius of Britain soaring on the wings of Victory—"Huzza!" shouted Joe again, sluing his starn to the Dutchmen, and slapping his hand in an inexpressible attitude, while they returned the salute with a round of musketry, that, had he not been bumb-proof, must have knocked him off his perch. "Huzza!" responded the main and quarter-decks; the lower deck caught the soul-enlivening strain, and three hearty cheers resounded from all hands. At it we went again, like fighting-cocks, for, d'ye see, we expected some of the right sort in the prizes—real right earnest Scheidam Ginevar. At it we went, while Joe came sliding down the topmast back-stay like a cat. "Weel behaved, my mon, weel behaved," said the captain—he was a Scotchman, though his name was English. "Troth ye've the spirit of a Highlander. Bring the warthy soul a glass of grog; or mayhap you would like it pure and uncontaminated." Joe preferred the stuff stark naked, with the jacket off—and standing on the break of the poop, he held it up to mortify the Dutchmen; but fearing an envious shot might crack the heart of his darling, he turned his back by way of protection, and stowed it away in his spirit-room in an instant. Well, d'ye see, we lay close alongside, locked yard-arm and yard-arm, and ham-

mered away round and grape, great guns and small arms, till Mynheer Van Scatterbrauckens dropped the tackle falls, mounted their pipes, and, thrusting their hands into the breeches-pockets of their small-clothes, showed they had surrendered. Ah, Duncan was the boy! he was none of your butterfly-gentry—only fit for a summer's cruise. He outwitted the whole of 'em, conquered Winter, and hoisted his ensign as the flag of liberty. Mayhap, Mr. What's-your-name, you never saw him, with his open, manly countenance, expressive of true courage and benevolence, and his curling locks flowing gracefully over his head:

"A furious lion in battle—so let him;

But, duty appeased, in mercy a lamb."

Yes, he'd a heart that could feel for another; and there's not a tar in Greenwich moorings but reverences his name, for he was their father and their friend; but he's gone, as the chaplain used to tell us, he's gone the way of all flesh.

SHIP STRUCK BY LIGHTNING.

THE following is an extract from the log of the *Ville de Lyon*, American packet-ship, which put into Plymouth in June, 1837, having been struck by lightning.

"At ten, p.m., Barfleur Light bearing S.S.W., distant about fifteen miles, they experienced a heavy squall from W.S.W., with rain. Whilst in the act of taking in sail, the ship was struck by lightning. The electric fluid descended by the main-top-sail-sheets, passed through the bolt into the passage-way leading to the cabin, thence ran along the bell-wires in the steward's pantry, melting those connected with the larboard state-rooms, and passed through the side into the water, starting several of the treenails, and ripping the copper. Two men engaged in hauling taut the main-top-sail-sheet were instantly killed, and two others were hurt. Within a minute after, another shock, still more severe, struck the ship in the same manner as the first, and escaped in the same direction. A passenger, who was in the steward's pantry, examining the effects of the first stroke, was slightly injured in the head by the second. Notwithstanding the appalling scene, perfect order was observed. Captain Stoddard immediately sounded the pumps, and examined the vessel in every part. The appearance of the lightning was most remarkable. When the fluid struck the ship, the explosion resembled that of a bomb. The vessel, both above and below deck, appeared to be filled with fire. At twelve, p.m., the wind moderated."

The *Ville de Lyon* is a new vessel of 800 tons burden, and had on board a large number of cabin and steerage passengers.

THE RED ROVER'S SONG.

A MERRY life is ours, I trow,
While o'er the billow's surge we go;
Our birthright joy to care unknown,
For time and pleasure are our own:
O'er bounding main we boldly dash,
'Mid thunder's peal and lightning's flash.

The skies may frown, or be they fair,
We seldom look, and never care:
But gaily sail, our track to keep,
Upon the proud and peerless deep.
The land we loathe—the sea we love,
For joys it hath all joys above.

We joy to see the dolphins play
Beneath the sun-lit sparkling spray;
To mark, while on the course we run,
The splendour of the setting sun:
But oh! our greatest joy must be
To feel—to know we're brave and free!

THE DISCOVERY OF AMERICA.

THE discovery of America forms one of the most remarkable events in modern history. Till the close of the fifteenth century, this vast continent was unknown to the inhabitants of Europe. The celebrated Christopher Columbus, in attempting to explore a western passage to India, discovered St. Salvador, one of the Bahama Islands, in the year 1492. In a second voyage, he discovered several large Islands which he supposed to belong to India, and which he therefore called the West Indies. In his third voyage, in 1498 he reached the American Continent, which had been discovered the year preceding, by John Cabot, a Venetian mariner, in the service of Henry VII. of England. Amerigo Vespucci, a Florentine navigator, sailed thither in 1599, the year after Columbus; and drawing up an interesting account of the country, of which he pretended to be the discoverer, gave to the whole Continent, his own name, America, which it has ever since retained.

The discovery of such a vast continent as America, interested in a very high degree, the curiosity of Europe. America became the grand object of commercial adventure and scientific research. In magnitude, it seemed far to exceed any of the great continents hitherto known; while the unusual aspect which nature here assumed, led the beholders to regard it as a new world, which had risen but recently under the Creator's hand. Forests of new species of trees, surpassing in extent and magnificence all that they had ever seen; vast mountain ranges, in comparison with whose elevation even the loftiest of the Alps dwindled into insignificance; and rivers, which rolled to the ocean with the majesty of seas, were the sublime features of the new world. Its animals differed no less from those with which Europeans were familiar, and it appeared inhabited by a peculiar race of human beings, who soon had reason to deplore the arrival of these strangers on their shores. Its soil, of exhaustless fertility, abounded with the richest productions; and mines of the precious metals, in the mountainous regions, offered the tempting prospect of immediate and incalculable wealth to the fortunate discoverers.

The names of the three ships which formed the expedition, when St. Salvador was discovered, were the Santa Maria, on board of which Columbus was; the Pinta, and the Nina. These vessels sailed from Palos, in Spain, on the 3rd of August, 1492, on this the greatest voyage of discovery that ever was undertaken.

It was on the morning of the 7th of October, at sunrise, that several of the admiral's crew thought they beheld land in the west, but so indistinctly, that no one ventured to proclaim it, lest he should be mistaken. The Nina, however, being a good sailer, pressed forward to ascertain the fact. In a short time the flag was hoisted at her mast head, and a gun discharged,

being the preconcerted signals for land. New joy was awakened throughout the little squadron, and every eye was turned towards the west. As they advanced, however, their cloud-built hopes faded away, and before evening the promised land again melted into air. The crews now sank into a degree of dejection proportioned to their recent excitement, when new circumstances occurred to arouse them. Columbus having observed great flights of small field-birds going towards the south-west, concluded they must be secure of some neighbouring land, where they would find food and a resting place. He knew the importance which the Portuguese voyagers attached to the flight of birds, by following which they had discovered most of their islands. He had now come 750 leagues, the distance at which he had computed to find the island of Cipango; as there was no appearance of it, he might have missed it, through some mistake in the latitude. He determined, therefore, on the evening of the 7th of October, to alter his course to the south-west, the direction in which the birds generally flew, and continue in that direction for at least three days. The farther they went, the more frequent and encouraging were the signs of land. Numbers of small birds, of various colours,

some of them such as sing in the fields, came flying about the ships, and then continued their flight towards the south-west. Tunny-fish played about the smooth sea; and a heron, a pelican, and a duck, were seen, all bound in the same direction. The herbage, which floated by the ships, was fresh and green as if recently from land; and the air, Columbus observed, was sweet and fragrant as April breezes in Seville. All these, however, were regarded by the crew as so many delusions, beguiling them on to destruction; and when, on the evening of the third day, they beheld the sun go down upon a shoreless horizon, they

[COLUMBUS TAKING POSSESSION.]

broke forth into clamorous turbulence. They exclaimed against this obstinacy in their commander, in tempting fate, by continuing on into a boundless sea. They insisted upon turning backward, and abandoning the voyage as hopeless. Columbus endeavoured to pacify them by gentle words, and promises of large rewards; but finding that they only increased in clamour, he assumed a decided tone. He told them it was useless to murmur; the expedition had been sent by the sovereigns of Spain, to seek the Indies, and happen what might, he was determined to persevere, until, by the blessing of God, he should accomplish the enterprise.

Columbus was now at open defiance with his crew, and his situation became desperate. Fortunately, however, the manifestations of neighbouring land were such, on the following day, as no longer to admit a doubt. Besides a quantity of fresh weeds, such as grow in rivers, they saw a green fish, of a kind which keeps about rocks; then, a branch of thorn, with berries on it, appearing as if recently separated from the tree, floated by them; they then picked up a reed, a small board, and, above all, a staff, artificially carved. All gloom and mutiny now gave way to sanguine expectation; and

throughout the day, each one was eagerly on the watch, in hopes of being the first to discover the long-sought-for land. In the evening, when, according to invariable custom on board of the admiral's ship, the mariners had sung the Vesper Hymn to the Virgin, Columbus made an impressive address to his crew. He pointed out the goodness of God in thus conducting them by such soft and favouring breezes, across a tranquil ocean, cheering their hopes continually with fresh signs, increasing as their fears augmented, and thus leading and guiding them to a promised land. He now reminded them of the orders he had given on leaving the Canaries, that after sailing westward 700 leagues, they should not make sail after midnight. Present appearances authorised such a precaution. He thought it probable they would make land that very night; he ordered, therefore, a vigilant look-out to be kept from the fore-castle, promising to whomsoever should make the discovery, a doublet of velvet, in addition to the pension to be given by the sovereigns.

The breeze had been fresh all day, with more sea than usual, and they had made great progress. At sun set, they stood again to the west, and were ploughing the waves at a rapid rate, the *Pinta* keeping the lead, from her superior sailing. The greatest animation prevailed throughout the ships; not an eye was closed that night. As the evening darkened, Columbus took his station on the top of the castle or cabin, on the high poop of his vessel. However he might carry a cheerful and confident countenance during the day, it was to him a time of the most painful anxiety; and now when he was wrapped from observation by the shades of night, he maintained an intense and unremitting watch, ranging his eye along the dusky horizon, in search of the most vague indications of land.

Suddenly, about ten o'clock, he thought he beheld a light glimmering at a distance. Fearing that his eager hopes might deceive him, he called to Pedro Gutierrez, gentleman of the king's bedchamber, and inquired whether he saw a light in that direction. The latter replied that he did. Columbus, yet doubtful whether it might not be some delusion of the fancy, called Rodrigo Sanchez, of Segovia, and made the same inquiry. By the time the latter had ascended the round house, the light had disappeared. They saw it once or twice afterwards, in sudden and passing gleams, as if it were a torch in the barque of a fisherman, rising and sinking with the waves, or in the hand of some person on shore borne up and down as he walked from house to house. So transient and uncertain were these gleams, that few attached any importance to them. Columbus, however, considered them as certain signs of land, and, moreover, that the land was inhabited. They continued their course until two in the morning, when a gun from the *Pinta* gave the joyful signal of land. It was first discovered by a mariner named Rodrigo de Iriana; but the reward was afterwards adjudged to the admiral, for having previously perceived the light. The land was now clearly seen, about two leagues distant; whereupon they took in sail, and laid to, waiting impatiently for the dawn. The thoughts and feelings of Columbus, in this little space of time, must have been tumultuous and intense. At length, in spite of every difficulty and danger, he had accomplished his object. The great mystery of the ocean was revealed. His theory, which had been the sneer of fools, and the scoff of sages, was triumphantly established. He had secured to himself a glory which must be as durable as the world itself. It is difficult, even for the imagination to conceive the feelings of such a man at the moment of so sublime a discovery. Had he come upon some wild island far in the Indian sea? or, was this the famed Cipango itself, the object of his golden fancies? A thousand speculations of the kind must have swarmed upon him, as with his anxious crews he waited for the morning, wondering whether the dawn would reveal a savage wilderness, or lead them to spicy groves and glittering fane, and gilded cities, and all the splendour of oriental civilization.

It was on the morning of Friday, the 12th of October, 1492, that Columbus first beheld the new world. When the day dawned, he saw before him a level and beautiful island, several leagues in extent, of great freshness and verdure,

and covered with trees, like a continual orchard. Though everything appeared in the wild luxuriance of untamed nature, yet the island was populous, for the inhabitants were seen issuing from the woods, and running from all parts to the shore, where they stood gazing at the ships. They were perfectly naked, and from their attitudes and gestures, appeared to be lost in astonishment.

Columbus made a signal for the ships to cast anchor, and the boats to be manned and armed. He entered his own boat, richly attired in scarlet, bearing the royal standard of Spain; whilst Martin Alonzo Pinzou, and Vincent Janez, his brother, put off in company in their boats; each bearing the banner of the enterprise, emblazoned with a green cross, having on each side the letters F and I, the initials of the Castilian monarchs, Fernando, and Isabel, surmounted by crowns.

As they approached the shore, they were refreshed by the sight of the ample forests, which, in those climates, have extraordinary beauty of vegetation. They beheld fruits of tempting hue, but of unknown kind, growing among the trees, which overhung the shores. The purity and suavity of the atmosphere must have had its effect upon the susceptible feelings of Columbus. No sooner did he land, than he threw himself upon his knees, kissed the earth, and returned thanks to God, with tears of joy. His example was followed by the rest, whose hearts, indeed, overflowed with the same feelings of gratitude.

Columbus, then rising, drew his sword, displayed the royal standard, and took solemn possession in the name of the Castilian sovereign, giving the island the name of San Salvador. He called upon all present to take the oath of obedience to him as admiral and viceroy. The feelings of the crew now burst forth in the most extravagant transports. They thronged round the admiral in their overflowing zeal; some embraced him, others kissed his hands. Those who had been most mutinous and turbulent during the voyage, were now most devoted and enthusiastic.

The natives of the island, when, at the dawn of day, they beheld the ships, with their sails set, hovering on their coasts, had supposed them some monsters which had issued from the deep. They had crowded to the beach, and watched their movements with intense anxiety. Their veering about, apparently without effort, the shifting and furling of their sails, resembling huge wings, filled them with astonishment. When they beheld their boats approach the shore, and a number of strange beings clad in glittering steel, or raiment of various colours, landing upon the beach, they fled in affright to their woods. Finding, however, that there was no attempt to pursue, nor to molest them, they gradually recovered from their terror, and approached the Spaniards with great awe, frequently prostrating themselves on the earth, and making signs of adoration.

The admiral particularly attracted their attention, from his commanding height, his air of authority, his dress of scarlet, and the deference which was paid him by his companions. When they had still farther recovered from their fears, they approached the Spaniards, touched their beads, and examined their hands and faces, admiring their whiteness. Columbus, pleased with their simplicity, their gentleness, and the confidence they reposed in beings who must have appeared to them so strange and formidable, allowed their scrutiny with perfect acquiescence. The wondering savages were won by this benignity; they now supposed that the ships had sailed out of the chrysal firmament which bounded their horizon; or that they had descended from above on their ample wings, that these marvellous beings were inhabitants of the skies.

NARRATIVE OF THE VOYAGE, DETENTION IN THE ICE, SUFFERINGS OF THE CREW, AND ULTIMATE LIBERATION OF THE SWAN.

THE above vessel which had been given up as lost; and so strong a belief was entertained that both the ship and crew had perished, that an appeal was made to the public, on behalf of the widows and families of the crew of the Swan.

Hopes, however, were held out by the captain of the ship *Advice*, (which vessel had also been given up as lost) that the *Swan* would yet make its appearance.

On Monday, July the 3rd, 1837, in consequence of intelligence having been received, that the *Swan* had been seen off the coast of Holderness, many thousands of persons were assembled at Southend, to greet the long lost vessel.

We subjoin below a narrative of the adventures of this ship.

(Written from the Ship's Log, with other authentic information by Capt. Dring and the surviving officers.)

On the 14th of April, 1836, at four in the morning, the *Swan* weighed anchor in White Booth Roads, and ran out to sea; the same evening was off Flamborough, from which she took her departure at 9 p.m., with light wind from S. by E., and did not return until the 3rd of July, 1837; she had consequently been absent one year, two months, and nineteen days. On the 19th of April, 1836, arrived at Lerwick, and found there H. M. Stm. *Rhadamanthus*, the *Comet*, *Truelove*, *Venerable*, *Sisters*, *Zephyr*, of Hull; *St. Andrew*, of Aberdeen; and *Hannibal*, of Peterhead; and next day were joined by the *Harmony* and *Abram*, of Hull. Sailed from Lerwick on the 23rd, and reached the ice on the 9th of May, in lat. 60 N. On the 23rd could get no further north, the ice being close. On the 24th no water to be seen to the north. From this time, the journal contains a series of notes respecting the state of the country, the course of the ship, the bearings of the land, &c. The season appears to have been very inauspicious on account of the fastness of the ice. In the early part of August, the ship received some tremendous blows from large masses of floating ice, which it was impossible to avoid, and some of which appeared to be about eighteen feet thick. On the 12th two fish were caught; which filled 68 butts with neat blubber. On the 25th saw a wreck, which proved to be the *Margaret*, of London, which was crushed between two floes, at 6 a.m.; during the forenoon received from the wreck a boat and crew, consisting of David Stoddart, the mate, and five seamen. On the 27th, in lat. 72, the ship was made fast to the land, abreast of an Esquimaux village, and several of the inhabitants came on board. Next day another fish, a dead one, was taken, and filled 23 butts of neat blubber, which proved to be the close of their fishing success. On the 3rd of September could get no further south, in consequence of an immense body of ice, in which not the least alteration had taken place since they left it in company with the *Neptune*, on the 22nd of August, except that the floes had become cemented together with bay ice.

In consequence of this state of things the *Swan* bore away to the north; on the 4th was in lat. 71 48, and on the 14th, in 74 30; another fish had been seen in the interval; at this date, Sept. 14th, we find the following note.—“Fresh breezes from the northward; great appearance of water to the southward. Our chance of getting through this body of ice for some time is very little: the captain has, therefore, prudently ordered the bread casks to be headed up, and every man to receive $4\frac{1}{2}$ lbs. of bread weekly. Our situation and our prospects are very gloomy, completely beset in such high latitude as 74 30, at this period of the year, a solitary ship: every heart forebodes the danger and privations we shall experience, and many an earnest prayer is offered up to Him who has so often delivered us in the time of peril.” From this date to the 6th of October, there were, at intervals, partial openings of the ice which lasted for an hour or two, and then closed for one, two, or three days; every favourable opportunity was seized for sawing through the ice, but the progress made was very small. The hair-breadth escapes which they experienced from the heavy presses of the ice, are, from this time, almost innumerable, and a spirit of great thankfulness appears to have been manifested on these occasions. On the 9th of October, the thermometer being at nine below zero, the men could scarcely stay on the ice, and sawing was given up. This day a bear, nearly full grown, was shot by Thomas Phillips, surgeon, and James Dring, second mate, in the act

of springing on its pursuers. From this time the ship appears to have become more firmly fixed in the floe, by the increasing breadth and strength of the ice; no sooner did a lane break out than it was froze up again. On the 12th October, all hope of getting out of the ice that winter being given up, everything was done for the comfort of the crew that their humane commander could suggest. Awnings were spread to cover the deck from the fore-castle to the quarter-deck, so that the men might be enabled to take sufficient exercise to preserve their health, and not run the risk of being frost-bitten by the severity of the season; at the same time they were cautioned not to neglect cleanliness between decks, and for that object, the captain ordered holes to be cut through the decks, and long tubes to be fixed over the lamps to carry away the smoke which was considerable. The sun declined very fast, not rising till eight, and setting about four in the afternoon. About this time, too, the coals ran short, and the crew were obliged to have recourse to a spare topsail-yard, for fuel. Every subsequent day witnessed the destruction of spare masts, yards, planks, and everything that could be burnt, and a considerable number of casks and shakes were thus sacrificed during the imprisonment. The log-book, at this date, (kept by the surgeon), states that great economy was used in the fires, there being no more kept than were barely sufficient to keep up a proper temperature. The half-deck stove was not allowed to be lighted when the thermometer was higher than 13 deg. below zero. Thermometer this day 16 deg. below zero, followed by a succession of bitterly cold nights and days, with wind from N.E. to E.N.E. Sunday, October 23rd: at eleven a.m., all hands assembled in the twist-decks for the purpose of divine worship, beginning by singing a hymn, and the reading of an appropriate sermon; after which, an extempore prayer was offered up, by a truly pious individual which seemed to make a deep impression on the men. From this time public worship appears to have been attended to, with great regularity and devotion, by the whole ship's company, twice every Sabbath day, and in subsequent parts of their captivity, appears to have afforded them great consolation.

On the 26th October, being in the midst of forty bergs, one of which (about a mile distant) was calculated to draw 200 fathoms water, every thing was packed up ready for leaving the ship. On the 27th land was again seen. The devotions of the following Sabbath were marked with peculiar fervour. On the 29th, stock was taken; they had 48 cwt. of bread, which would allow 3 lb. 12 oz. weekly to each individual for six months, the crew consisting of 51 persons, including boys and officers; they were, however, continued at 4 lb. per week for some time after this. On the 15th of November, the ink in the table drawer, opposite the cabin stove, required to be thawed before it could be used; and the ice had formed nearly an inch thick on the dead lights. Next day, the mate and surgeon left the ship, and walked about six miles over the ice to a large berg, which proved, according to the captain's opinion, to be aground, and against which the floe was tearing up in the form of a water-spout, with awful force, and a noise which it is impossible to describe. Land seen same day, which proved to be *Saunderson's Hope*, bearing S.S.W., distant twenty to twenty-five miles. On the 23rd November, the moon never set, but was seen the whole 24 hours; the nights at this time were much lighter than the day. Men employed in sawing round the ship. The 29th was colder than they had ever experienced, the quicksilver in the thermometer sank within the bowl and froze; it was oftener in this condition than otherwise during the remainder of the winter. Capt. Dring supposes the extreme degree of frost which they experienced would be about 70 degrees below zero, but they could only calculate to 38 by the thermometer; it would never be less than that when the mercury froze in the cabin, which was only six degrees warmer than the open air. On the 10th of this month, the sun went below the horizon, and did not re-appear for 74 days. At noon, on the 5th December, the fears of the whole ship's company were realized by finding themselves in the midst of a great number of bergs, which they had been observing for several days; seventeen were counted from the deck, laying to the southward, right in the drift of the

ship. The day closed with dark weather. "On the 7th," says the log, "we had a wonderful preservation from shipwreck. About 7 a.m., the floe, in which we were froze up, came in contact with two bergs aground. The concussion was tremendous, and our ship trembled like a leaf, but providentially the floe split about forty yards from the ship, and we experienced not the least damage." It is impossible to conceive a more miraculous escape; had the ship drove in any other direction to the east, it would have been impossible to save her, the bergs lying on the reef very close to each other. 8th. The aurora borealis playing about the heavens with great splendour. 10th. At noon, the stars as clear as our winter nights at home. At this time all the crew were in perfect health, and possessed of a buoyancy of spirits which was surprising. On the 14th, the ice measured twenty yards from the ship, and found to be twenty-three inches thick—allowance of bread reduced to three and a half pounds per week, lat. 72 1 N. On the 16th, no day-light had been perceived for a long time; about three hours twilight was all they enjoyed, and all hands anxiously looked forward to that period when they should once more behold the light of the sun, if preserved. Oil cask replenished, twenty two gallons, and oak tiller cut up for the cabin fire. The 19th was exceedingly cold, thermometer 32 below zero. On the 22nd, at noon it came on a heavy gale, which at three p.m. had considerably increased, and owing to the great drift of snow, it was impossible to see only a few yards distant. At four p.m. the floe broke into pieces, and at five p.m. the dock, which is always cut round a piece beset, if possible, for her safety, broke up; a warp was got out, and the ship made fast to the ice, the wind blowing a hurricane. The night ended with dark, gloomy weather, but rather more moderate. The thermometer this day was as high as 25 above zero, being a change of 51 degrees in twenty-four hours. This sudden change produced a great effect on the poor fellows below; their bed-cabins, which a few hours before were encrusted with ice, in some places two inches thick, were reduced to a miserable condition, some of the bedding being as wet as if thrown overboard. On the following day, there was a great swell. On Saturday, the 24th December, at one a.m., the watch on deck saw a berg, to leeward of the ship, driving down upon it very fast. Destruction seemed inevitable; called all hands, cleared away the awnings, and got a couple of bread casks on deck; everything ready for the worst, and every man waiting for his fate. Very shortly the berg was seen at a distance of two hundred yards, when the gale shifted, and in a few minutes they had the happiness to find themselves to leeward of it. What is very remarkable, it proved to be the same berg which had given them so much uneasiness on the 7th of the same month. The day closed more moderate, the ship driving south. On Sunday, 25th, (Christmas day) with light airy winds, and the thermometer at 10 degrees below zero, the ice was all cemented together again, and the prospect was, that in a few days it would be as firm as ever. All hands assembled in the 'tween decks in the evening, when an appropriate sermon, expressive of their thanks to the Almighty for their late deliverance, was preached; from the 30th verse of the 107th Psalm—"Oh, that men would praise the Lord for his goodness, and for his wonderful works to the children of men." On the 25th, during heavy gales, another narrow escape from bergs, precisely similar to that just recorded; indeed, they were daily exposed to them.

January 9, 1837.—Land twenty miles distant at the nearest point. At two, p.m. the above mentioned bergs (which had caused much anxiety for several days) rent our floe into several pieces; one of the cracks was only eight feet from our stern; called all hands, and got the remainder of the provisions on deck,—the bergs at the same time tearing up the floe with such violence that our ship trembled exceedingly, the ice breaking with an awful noise resembled one continuous roar of thunder. At six, p.m. the press abated, and the ice began to slack, and the wind having got round to the N. E. the ship drifted to the southward. January 11th. Strong breezes from the westward, with thick hazy weather, the ship driving in shore, in the direction of a reef of bergs; got the bread started into the bags, and all our provisions and

clothes on deck. At two, p.m. the floe caught one of the bergs, broke the dock up, and the pressure of the ice threw the ship on her broadside, everything at the time being thrown out of her on the ice, and some of the men in jumping out of the ship bruised themselves very much. At four, p.m. the floe cracked astern, when the ship righted, and we once more beheld the goodness of the Almighty. Covered with snow, and benumbed with cold, we ventured on board, after having been on the ice three hours, expecting every moment to see our home laid in ruins, and ourselves exposed to the fury of the raging storm. At ten, p.m. the wind abated, and on trying the current, found that the ship was brought up, when, tired with fatigue and cold, some of us lay down and slept. The damage the ship has sustained unknown at present. On the 12th, the captain ordered two pounds of bread extra to be served out to each man, and on the following day, all hands were engaged in getting the provisions out of the boats, and covering the deck over with awnings, the weather being very severe. The plan of rigging the boats, in expectation of losing the ship, was devised and executed by the carpenter, and is much admired by Captain Dring. It was so contrived that each boat should possess a flat floor, for sleeping upon, the holds being well stowed with provisions, while all was covered in securely with sails, in the form of carriers' covered carts. The method of covering in the ship, is equally admired by nautical men; the whole of this was under the direction of the master: the awnings were secure but lofty, so as to admit plenty of air, while at each end of the ship and in several places on each side, small curtains were left, to be opened or shut at pleasure. On the 23rd January, the sun partially showed himself above the horizon, "being," adds the log, "seventy-four days since we beheld him in the same situation. None but those who have been placed in similar circumstances, can describe with what eagerness we gazed upon that blessed luminary, after so long an absence, and which to us has been full of dangers and privations. The mercury in the thermometer is frozen, and we are unable to ascertain with accuracy the degree of cold, but it is very severe. After walking under the awnings a few minutes, the eyebrows or the least hair exposed, is immediately covered with frost." On the 24th, the thermometer was frozen, but on being placed within twelve inches of the cabin stove, rose to 26 above zero, being 6 below the frozen point. This intensity of cold lasted several days. Captain Dring informs us, that on the same day on being taken into the half-deck, where there was always a great number of men, and many lamps burning, the thermometer rose to 20 degrees above the freezing point. The low temperature of the cabin compelled him to take exercise for warmth, while the greater heat of the half-deck incapacitated the men from that wholesome exertion which was of such benefit to him. On being exposed to the frost on deck a few moments, they were obliged to retire, and to this, with the neglect of a due regard to cleanliness, he attributes the loss of many of his men; indeed he is of opinion all might have been saved, by a rigid adherence to those rules of health, which he scrupulously followed, and endeavoured to enforce, as far as possible. The surgeon, on the contrary, in the log book, under date of February 13th, attributes the declining health, and increasing scurvy, to want of sufficient nourishment, and regrets that some, through neglect, had suffered themselves to be frost-bitten.

We must, of necessity, pass over numerous interesting incidents from the above dates, until the unfortunately memorable

EXPEDITION TO HARE ISLAND.

Under date of the 31st March, 1837, we find the following statement in the log-book:—Light winds, with fine clear weather, the ship having drifted north since yesterday several miles. One whole cask full of bread is now left, twenty-seven hands having been served out of the other, so that, in four weeks time, it will be impossible to stay by the ship, and abandon her we must, for there is not the least hope of being liberated *being fixed in the very centre of an immense field of ice.* A reduction in our allowance, would be attended with serious results, four of our crew being laid in the last stage of scurvy, while the majority of the remainder are suffering from the same

disease. At noon the following men voluntarily came forward, and offered (for the safety of the ship) to launch a boat ashore, and attempt to reach the Danish settlement of Four Island Point, or Lievly, as the opportunity offered; lat. by obs. 70 30. April 1: at five a.m., the following men left the ship with a whale-boat, 7 pounds of bread each, two pieces of beef and pork, and one cheese and other necessities, accompanied by two watches, (about twenty men in each watch) who assisted them in launching as far as possible, being prevented from proceeding further by lanes of water and bay ice: David Stoddart, William Harper, William Bernson, Alexander Anderson, James Jameson, belonging to the Margaret of London; and the following part of our crew, namely, Daniel Knight, Thomas Halley, William Walker, Robert Darby, R. Collier, John Nuttal, Bruce Nelson, Magnus Harrison, John Moira. Fine clear weather to the end of the day, with light wind from the north. At seven, p.m. our travellers were just perceptible from the mast-head, apparently making great progress. Thermometer standing at 14 degrees. On the 2nd April, the thermometer sunk to 10 degrees: on the 3rd was down to zero, and the sun obscured. On the 4th, the thermometer was useless, the mercury having sunk down into the bowl. The ship drove a few miles in shore, but made no southing. Same day a circumstance of importance is recorded. One pound of flour was weighed out yesterday to each man, being an increase of four ounces, to the usual weekly allowance; some of them still lie in a very deplorable state of scurvy. Our little stock of antiscorbutics is expended, and what the result will be, God only knows. Our time is getting very short, and a few more weeks will decide all. To Him who has preserved us thus far, we still trust and pray for a continuance of his divine protection. Thursday, 6th, 1 p.m. the ship began to drive to the southward. At 4 30 p.m., while walking the quarter-deck, observed two men about four miles from the ship, standing on a hummock of ice, and wafting a handkerchief, another being seen by the mate, from the mast-head, a few miles astern of them; called all hands, and launched a boat towards them, for the purpose of getting over a lane of water, when what was our astonishment to find that we beheld the only surviving part of the unfortunate boat's crew, Mr. Stoddart and Daniel Knight. A party proceeded further, and fell in with Robert Darby, prostrate and dying on the floe, and before he could be conveyed to the boat, the vital spark had fled. Such was the severity of the frost, that out of the sixteen persons who launched the boat to their assistance, only two escaped being frost-bitten; the thermometer at 28 below zero, at sun-set. The sudden and severe change in the weather was the cause of the dreadful loss in this unfortunate expedition.

The following affecting details of the expedition are from the mouth of Mr. Stoddart, who is now the only survivor. The boat having been launched on the preceding night, and conveyed as far as was practicable, by the ship's crew the company retired to rest, and early next morning set off, and made considerable progress, considering the difficulty of the way; they pursued their course until they were overtaken by the night, when they lay down in the boat, covered themselves with the sails, and thus endeavoured to sleep through the night, but were only able to do so partially, owing to the frost. In the morning, one of their companions, William Harper, was found dead. Having read the funeral service over his remains, and committed them to the deep, through a hole in the ice, they again proceeded as fast as their strength and the increasing severity of the weather would permit. The second night, they canted the boat on her side, and sat under her lee till morning, screening their front with the sails which on the first night had served them for covering. This night they slept warmer, and suffered no calamity. In the morning they again set out, pursuing their journey by compass, as usual, towards Hare Island. At three in the afternoon, Robert Collier fell into the water, through an aperture in the ice, and did not get shifted. The third night was exceedingly severe; Magnus Harrison grew delirious, and died towards morning; when the morning dawned, Robert Collier, after exhibiting the same symptoms, expired also, and shortly afterwards the survivors had the distress to wit-

ness the last breath go out of William Bernson, whose approaching end had been precisely similar to his predecessors. Their number being now reduced to ten, they found themselves unable to launch the boat. They knew not what to do; fifteen miles they had travelled from the ship, and the land was not yet in sight; however, after offering up prayers to God, and consulting one with another, they resolved to make the best of their way for the land, which was supposed to be about five miles distant, and only obscured from their sight by the thickness of the weather. They accordingly set out, carrying what provisions and clothing they deemed barely necessary for their sustenance, having first buried the bodies of their late companions under the snow behind the boat. They proceeded forward until noon, when they came to a lane of water, which they could not cross, and here, after again falling on their knees, and supplicating the direction and preservation of the Almighty, they held another consultation, when it was resolved to return towards the ship. They reached the boat about dusk, and there remained the fourth night. In the morning, another of the party, Alexander Anderson died, and was buried with the others. The survivors had not proceeded more than a mile, when John Nuttal became unable to walk, lay down, and expired. The fifth evening they came to a large hummock of ice, under the lee of which they travelled all night, but in the morning were appalled to witness the last moments of another of their company—James Jameson, of the Margaret. The remainder resumed their journey; at eleven o'clock, Mr. Stoddart got sight of the ship, and proceeded with the chief part of the company towards her, but Bruce Nelson and John Moira, not crediting his eyesight, took a more northerly direction towards the place where they had left, and expected to find her. They were both at that time considerably exhausted, were soon out of sight, and seen no more. Thomas Halley, soon after fell into a hole; William Walker, the cooper's mate, was left with him, to assist in shifting his stockings, and follow in company, but they never overtook their shipmates, and were not afterwards seen. Darby also grew feeble, and about a mile and a half from the ship, Mr. Stoddart and the cook found their way intercepted by a lane of water. They got upon a hummock of ice, and waved a signal, which was seen from the ship; the remainder of the story has been told in the log. Mr. Stoddart attributes the preservation of so many lives in the Swan, to the excellent quality of her provisions.

We forbear to enter more fully into the dreadful feelings and forebodings of the crew, from this period to the time of their ultimate release. Suffice it to say, that they were intense and oppressive, and daily grew worse, as they saw their shipmates drop off, one by one, and sometimes two on a day. The story of their release has been faithfully given by Captain Thoms.

The following is an alphabetical list of the sufferers.—Englishmen, belonging to the Swan—Brady, R., of Grimsby, April, 21, of scurvy—was the support of his mother; Collier, Robert, April 3, frozen; Darby, Robert, April 6, frozen; Halley, Thomas, same day, frozen; Judge, Henry, harpooner, April 30, scurvy; Knight, D., cook, same day, after having both feet amputated, in consequence of being frost-bitten in the expedition. Nuttal, John, of Grimsby, April 4, frozen—left a widow, to whom he was married three months before his departure; Stocks, John, of Newcastle, April 27, scurvy; Walker, W., cooper's mate, April 6, frozen. Shetlanders belonging to the Swan—Duncan, Lawrence, April 18, scurvy—had been fifteen years in the Swan, and has left a large family; Harrison, Magnus, April 3, frozen; Hunter, Peter, May 9, scurvy—had been twelve years in the Swan, has left a large family; Jameson James, April 19, scurvy; Johnson, John, May 27, at Whale Island, of scurvy; Moira, John, April 7, frozen—had been seven years in the Swan, has left a family; Moor, James, May 17, scurvy; Nelson, Bruce, April 6, frozen; Tomlinson, Thomas, in June, of scurvy, had been five years on board, has left a family; Wenwick, Gifford, in June, scurvy. Shetlanders, belonging to the Margaret—Anderson, Alexander, April 4; Bernson, William, April 3; Harper, W., April 2; all in the expedition. Hewson, Thomas, May 2, of scurvy.

The readiness and extent of the relief afforded by our Scotch friends, particularly James Hutchinson, Esq., of Peterhead, and also, the owners of the Lord Gambier, of Newcastle, was almost beyond conception, and ought not to be passed over in silence. The profusion of every thing calculated to relieve the condition in which beset whalers were expected to be found, reflects honour on their respective ports, and their countries.

THE BATTLE OF NAVARINO.

WE shall dispense with a detail of the circumstances connected with this celebrated battle, previously to the arrival of the Egyptian fleet in the Morea. This fleet consisted of ninety-two sail, including forty-one transports, eleven of which were armed. It contained two ships of the line, of 84 guns; twelve frigates, four of which carried 64 guns, besides corvettes, schooners and fire-ships. The most formidable part of it was composed entirely of Egyptian vessels, organised on the European system, and manned with newly trained crews. It had on board five thousand troops, a large sum of money for their regular payment, and several French officers to conduct their operations. The fleet sailed from Alexandria in the beginning of August, and after touching at Candia; appeared at Navarino in the end of the month. The British squadron, under Admiral Codrington, was off that harbour, when it approached; but the admiral was ignorant of the refusal of the Porte to accede to the armistice — a refusal which, in fact, had not yet been given; and he had not received the instructions which were to be consequent only on that event. He hailed, however, the Egyptian commander, informed him of the negotiations going on at Constantinople, and offered him safe conduct, if he would order his fleet back to Alexandria. If, on the contrary, he thought proper to enter the harbour of Navarino, he would be permitted to do so without molestation; but, if any of his vessels ventured out, they would be driven back. The Egyptian commander chose the latter alternative, and entered Navarino, where the fleet from Constantinople was previously at anchor.

Ibrahim, having landed his new troops, and re-equipped his old ones, was again ready for active hostilities in the north of the Morea, and determined to order round part of the fleet to the gulph of Patras: but it was impossible for the European admirals, especially after the known refusal of the Porte to accede to the armistice, to allow a single ship to leave the harbour for any such purpose. On the 19th of September, however, Ibrahim, desirous probably to ascertain how the British squadron, the only one that had remained before Navarino, would behave towards him, sent out a division of the Turkish fleet, under the command of the Capitana Bey. The English commander, seeing this movement, sent a frigate to request the Turkish commander to put back, adding, that, in case of resistance, he would compel him by force. The Capitana Bey replied, "That he was surprised at such a threat, and that he had no orders to receive, except from Ibrahim, to whom he would refer." The English admiral, on learning this resolution, sent one of his officers to Ibrahim with a letter, informing him that, in consequence of a treaty between England, France, and Russia, the allied powers had agreed to unite their forces to hinder all conveyance of troops, arms, or ammunition, to any part whatever of the Greek continent and the islands; that, to enforce that treaty, they had used the humane foresight to send a considerable force, to weaken all opposition from the Ottoman commanders, whose resistance would lead not only to their own destruction, but to consequences fatal to the interests of the Sultan: he was, therefore, earnestly requested not to oppose a resolution, the execution of which it would be impossible to hinder; for the allied commanders had such orders, that they must come to extremities rather than give up the object for which their sovereigns had united together; and if, on this occasion, a single

cannot-shot should be fired at them, it would lead to the ruin of the Ottoman flag. Ibrahim answered by his interpreter, whom he sent on board the English admiral, that he would not begin open hostilities against a friendly nation, without the instructions of his sovereign; that he had directed the Capitana Bey to re-enter the port, but that he would sail with his whole fleet, whenever he received orders to do so; and, without regarding the combined forces of the allies, would expose himself to every danger, however great, in doing the duty of a general determined to execute the instructions of his government. The

[EXPLOSION OF THE TURKISH ADMIRAL'S SHIP.]

French squadron having joined on the 22nd, Admiral de Rigny, to convince him that there was no difference of opinion among the allies, sent him a communication in the same terms with that which had been previously transmitted by Sir Edward Codrington; and the two admirals further requested a personal interview with him. The conference took place on the 25th, in the tent of Ibrahim, each of the admirals having been allowed to enter the harbour with his flag-ship and a frigate.

They declared to him, that they had received from their courts the most precise instructions to stop the effusion of blood, and that they would reduce, by force, either of the two belligerent parties that should refuse to accede to it; that the Greeks had already accepted the armistice; and that, if he resolved to continue hostilities, he would expose his fleet, and the most essential interests of his sovereign. After listening with great composure and attention, the Pacha answered, that, as a servant to the Porte, he had received orders to push the war in the Morea, and to finish it by a decisive attack on Hydra; and he would brave every danger to execute these orders. The admirals attempting to represent to him the inefficacy of the means of the Porte, he replied, that he had only to execute the orders of his sovereign, who was the sole judge of the necessity

Ibrahim, having landed his new troops, and re-equipped his old ones, was again ready for active hostilities in the north of the Morea, and determined to order round part of the fleet to the gulph of Patras: but it was impossible for the European admirals, especially after the known refusal of the Porte to accede to the armistice, to allow a single ship to leave the harbour for any such purpose. On the 19th of September, however, Ibrahim, desirous probably to ascertain how the British squadron, the only one that had remained before Navarino, would behave towards him, sent out a division of the Turkish fleet,

of continuing or terminating the contest, and he would consider as enemies all, without distinction, who, under any pretext whatever, should wage an unjust war with his master; that he had no power to listen to the communications made to him, or, of his own authority, to take any part; that, however, the orders of the Porte not having provided for the extraordinary case which now presented itself, he should send couriers to Constantinople and Egypt, and he gave his word, that, till their return, his fleet should not quit Navarino; however hard it was for him to be stopped at the moment when all was finished, since the strength of his expedition, such as they saw it, was evidently irresistible by the Greeks. A sort of armistice for twenty days was accordingly concluded, after a long conference; but it seems to have rested on what then passed between the commanders, and not to have been reduced into a formal document.

Trusting to the engagement which Ibrahim had come under not to quit Navarino till he should have received new instructions from Constantinople, the British and French squadrons had immediately sailed, the former to Zante, the latter to Milo, to obtain a supply of fresh provisions, leaving an English and a French frigate to watch the harbour, and the motions of the Turks. Taking advantage of their absence, Ibrahim, on the 30th of September, before there was time for any answer to have arrived to a request for further instructions, despatched by him on the 25th, ventured out to sea, with the view of sailing to Patras. An armed brig brought intelligence of this violation of the armistice to Admiral Codrington at Zante, on the 2nd of October. The admiral immediately put to sea again with his own ship, one frigate, and two brigs, the only force which he could then dispose of. He soon discovered a part of the Turkish fleet, sailing along the coast of the Morea, composed of seven frigates, nine corvettes, two brigs, and nineteen transports; all the ships of war were Turkish. He sent a message to the Turkish commander, expressing his surprise at such a breach of faith, and telling him, that he was ready to oppose by force the passage of the Ottoman squadron, the British ships, at the same time, clearing for action. The Turks immediately tacked about, escorted by the English vessels. In a short time, a second division appeared, composed of six frigates and eight brigs. The same summons was followed by the same result, and the whole Turkish fleet then returned into the harbour of Navarino.

Disappointed in his attempt at naval operations, Ibrahim proceeded to execute his orders to put down the insurrection on land; and, irritated, perhaps, by his disappointment, he executed them mercilessly with fire and sword. On the 19th of October, he marched a corps of six thousand men to Calamata, another of three thousand men to Arcadia, and prepared to march himself, at the head of a third body into the district of Maina. His footsteps were marked by blood and desolation. He issued orders to put all to the sword who should be found armed; and in the villages of Maina, where some resistance had been shown, these orders had been ruthlessly executed. Continual clouds of fire and smoke rising all round the gulph of Coron, bore frightful testimony to the devastation that was going on. The miserable survivors, who escaped slavery and the sword, sought concealment in caves among the mountains, where women and children were daily dying of absolute starvation; for, even in the plains and around the cities, the war had already produced famine. A morsel of boiled grass, was almost the only food within the reach of these miserable people.

Admiral Codrington, who had re-united the squadrons before Navarino, in the middle of October, having received an official account of these atrocities from an officer whom he had sent into the Gulph of Coron, to learn what was going on, resolved, in conjunction with his colleagues, to put a stop to them, if possible. They had already, by flags of truce, made many unavailing remonstrances to Ibrahim against his violent proceedings; they had urged and advised him to return with his own fleet to Alexandria, and send the Turkish to Constantinople, to which they would present no hindrance; they had exhausted their means of persuasion and conciliation. All these endeavours, however, had, they said, "been treated

as mockeries, and the troops of the Pacha were continuing a species of war, more destructive and exterminating than before, putting women and children to the sword, burning their habitations, and tearing up trees by the roots, in order to complete the devastation of the country." As these proceedings were directly contrary to the object of the treaty of London, the enforcing of an armistice *de facto*, in all events, which object the fleets were intrusted to carry into execution, the three admirals came to be of opinion, that they had only one of three courses to adopt. These courses, they said, were, "first, the continuing throughout the whole of the winter, a blockade, difficult, expensive, and perhaps useless, since a storm might disperse the squadrons, and afford to Ibrahim the facility of conveying his destroying army to different points of the Morea and the islands; secondly, the uniting the allied squadrons in Navarino itself, and securing by this permanent presence the inaction of the Ottoman fleets; but which mode alone would lead to no termination, if the Porte persisted in not changing its system; thirdly, the proceeding to take a position with the squadrons in Navarino, in order to renew to Ibrahim propositions, which, entering into the spirit of the treaty, were evidently to the advantage of the Porte itself." This last proposition seemed just to mean that they would enter the harbour, and renew to Ibrahim their demands, that he should desist from his military enterprises, under the alternative that, if he refused, they would attack and destroy his fleet; for, if they merely "took a position with the squadrons in Navarino," without opening their guns they merely brought themselves into the circumstances of the second alternative. This last mode was the one which they unanimously agreed to adopt, in the hope "that it might produce a determination leading to the desired object, without the effusion of blood, and without hostilities, but simply by the imposing presence of the squadrons." Their entrance, therefore, was to be with a hostile intention; the enemy was to yield to the actual application of force, if he resisted the imposing display of it: and if they entered the harbour, resolved to fire on Ibrahim's ships in the event of his saying no, then was Ibrahim, determined as he probably was to say "no," perfectly justified in keeping them, if he could, out of the harbour, by the same means by which they intended to constrain him, when they should have gotten in. Their first movement towards the harbour was a hostile act.

The admirals having adopted this plan on the 18th October, proceeded to carry it into effect on the 20th. At two o'clock in the afternoon, the combined fleets passed the batteries to take up their anchorage, formed in the order of sailing in two lines; the British and French squadrons forming the weather or starboard line, and the Russian squadron the lee line. The Turkish ships were moored in the form of a crescent; the larger ones presenting their broadsides towards the centre, the smaller ones in succession within them, filling up the intervals. The Asia, which carried Admiral Codrington's flag, led in, followed by the Genoa and Albion, and anchored close alongside a ship of the line, bearing the flag of the Capitana Bey, another ship of the line, and a large double-banked frigate; each of the three British ships having thus her proper opponent in the front line of the Turkish fleet. The four ships to windward, part of the Egyptian squadron, were allotted to the squadron of Rear-Admiral de Rigny; and those to leeward, in the bight of the crescent, were to mark the stations of the whole Russian squadron—the ships of their line closing those of the English line, and being followed up by their own frigates. The French frigate Armide was directed to place herself alongside the outermost frigate, on the left hand entering the harbour; the Cambrian, Glasgow, and Talbot were next to her, and abreast of the Asia, Genoa, and Albion; the Dartmouth and the Musquito, the Rose, the Brisk, and the Philomel, were to look after six fire-vessels at the entrance of the harbour.

As the Admiral's first object was only to have the enemy's fleet within his grasp, and then, before laying hold of it, to make his propositions to Ibrahim, orders were given that not a gun should be fired, unless the Turks should begin;

and these orders were strictly observed. The three English ships were accordingly permitted to pass the batteries, and to moor, without any act of open hostility, although there was evident preparation making for it in all the Turkish ships; but, upon the Dartmouth sending a boat to one of the fire-ships, the Turks, probably imagining that the boat was approaching for the purpose of boarding, fired, and a lieutenant and several of her crew were killed by a discharge of musketry. Upon this the Dartmouth, and the flag-ship of the French admiral, opened with musketry in return. This was followed by the French admiral receiving a cannon-shot from one of the ships, to which the Frenchman answered with his broadside—and thus the battle, apparently without plan or design, became general. Moharem Bey, the commander of the Egyptian ships, appeared anxious to put a stop to the confusion. Though his ship was nearer to the Asia, Admiral Codrington's own ship, than that of the Capitana Bey, with which the admiral was engaged, Moharem did not fire upon the Asia, but sent a message "that he would not fire at all." Admiral Codrington, however, having directed his pilot to go on board of Moharem to explain to him the admiral's wish to avoid bloodshed, the pilot was killed in the boat by a shot from Moharem's ship. Whether it was done with his knowledge or by his orders, was uncertain; but his ship soon afterwards fired into the Asia. The Asia, of course, immediately opened upon her, and reduced her to the state of a mere wreck, as had been done already with the Capitana Bey on the starboard side. All the other ships of the line were in the meantime equally well employed, while the frigates, after silencing the batteries, destroyed the frigates opposed to them. As each ship of the enemy became disabled, such of her crew as could escape from her set her on fire, and the combined fleets had to exercise as much activity in avoiding danger from these frequent explosions, as in continuing the contest. The battle continued with unabated fury during four hours. At the end of that period, the Turkish and Egyptian fleets had disappeared; the bay of Navarino was covered with their wrecks; only a few of the smaller vessels, or some battered and useless hulks, escaped into the inner harbour. The carnage on board the crowded ships of the enemy was destructive. In two of their ships of the line alone, two-thirds of their crews were killed or wounded. The severest loss on the side of the allies was sustained by the British squadron, which had seventy-five men killed, and one hundred and ninety-seven wounded. Among the killed was Captain Bathurst, who commanded the Genoa. The three line of battle-ships, the Asia, Albion, and Genoa, suffered so severely, that the admiral found it necessary to send them home to England, so soon as they had received at Malta the repairs necessary to enable them to undertake the voyage.

The loss of men in the Turko-Egyptian ships was immense, as will be seen by the following statement made by the secretary to the Capitana Bey:—

Three Turkish line of battle ships; 1 Turkish admiral, 84 guns, 650 men, 150 killed; 1 ditto 84 guns, 830 men; 1 ditto 76 guns, 850 men, 400 killed.

4 Egyptian double-banked frigates; 64 guns each, from 450 to 500 men.

15 Turkish frigates; 48 guns, from 450 to 500 men.

18 Turkish corvettes, 8 Egyptian ditto; from 18 to 24 guns, 200 men.

4 Turkish brigs, 8 Egyptian ditto, 19 guns, from 130 to 150 men.

6 Egyptian fire vessels.

40,000 Egyptian troops in the Morea; 4,000 of whom came with the above ships.

Return of the French killed and wounded.—Killed, 3 officers; wounded, 3 officers. Total killed, 43; total wounded, 144.

CAPTURE OF A PORTUGUESE MERCHANTMAN BY PIRATES.

THE sea-breeze had risen in the offing, and was sweeping along the surface to where the pirate schooner was at anchor. The captain ordered a man to the cross-trees, directing him to

keep a good look-out, while he walked the deck in company with his first mate.

"She may not have sailed until a day or two later," said the captain. "I have made allowance for that, and, depend upon it, as she makes the eastern passage we must soon fall in with her; if she does not heave in sight this evening by daylight, I shall stretch out in the offing; I know the Portuguese well. The sea-breeze has caught our craft; let them run up the inner jib, and see that she does not foul her anchor."

It was now late in the afternoon, and dinner had been sent into the cabin, when, "Sail, oh!" was shouted from the mast-head.

"There she is, by G—!" cried the captain. "A large ship, sir; we can see down to the second reef of her top-sails," said Hawkhurst, looking down the sky-light. The captain hastily swallowed some wine from a flagon, cast a look of scorn and anger on Francisco, and rushed on deck.

"Be smart, lads!" cried the captain, after a few seconds' survey of the vessel through his glass: "that's her; furl the awnings, and run the anchor up to the bows: there's more silver in that vessel, my lads, than your chests will hold; and the good saints of the churches at Goa will have to wait a little longer for their gold candlesticks."

The crew were immediately on the alert, the awnings were furled, and all the men, stretching aft the cabin-cable, walked the anchor up to the bows. In two minutes more the Avenger was standing out on the starboard tack, shaping her course so as to cut off the ill-fated vessel. The breeze freshened, and the schooner darted through the smooth water with the impetuosity of a dolphin after its prey. In an hour the hull of the ship was plainly to be distinguished: but the sun was near to the horizon, and before they could ascertain what her force might be the daylight had disappeared. Whether the schooner had been perceived or not it was impossible to say; at all events, the course of the ship had not been altered, and if she had seen the schooner she evidently treated her with contempt. On board the Avenger they were not idle; the long gun in the centre had been cleared from the encumbrances which surrounded it, the other guns had been cast loose, shot handed up, and everything prepared for action, with all the energy and discipline of a man-o'-war. The chase had not been lost sight of, and the eyes of the pirate captain were fixed upon her through a night glass. In about an hour more the schooner was within a mile of the ship, and now altered her course so as to range up within a cable's length of her to leeward. Cain stood upon the gunwale and hailed.

The answer was in Portuguese.

"Heave to, or I'll sink you!" replied he in the same language.

A general discharge from a broadside of carronades, and a heavy volley of muskets from the Portuguese, was the decided answer: the broadside, too much elevated to hit the low hull of the schooner, was still not without effect—the foretop-mast fell, the jaws of the main-gaff was severed, and a large portion of the standing, as well as the running, rigging came rattling down on her decks. The volley of musketry was more fatal: thirteen of the pirates were wounded, some of them severely.

"Well done, John Portuguese!" cried Hawkhurst. "By the holy poker! I never gave you credit for so much pluck."

"Which they shall pay dearly for," was the cool reply of Cain, as he still remained in his exposed situation.

"Blood for blood! if I drink it," observed the second mate, as he looked at the crimson rivulet trickling down the fingers of his left hand from a wound in his arm; "just tie my handkerchief round this, Bill."

In the interim, Cain had desired his crew to elevate their guns, and the broadside was returned. "That will do, my lads: starboard; ease off the boom sheet; let her go right round, Hawkhurst: we cannot afford to lose our men."

The schooner wore round, and ran astern of her opponent. The Portuguese on board the ship, imagining that the schooner, finding she had met with unexpected resistance had sheered off, gave a loud cheer.

"The last you will ever give, my fine fellows!" observed Cain with a sneer.

In a few minutes the schooner had run astern of the ship. "Now, then, Hawkhurst, let her come to and about; man the long gun, and see that every shot is pitched into her, while the rest of them get up a new foretop-mast and knot and splice the rigging."

The schooner's head was again turned towards the ship; her position was right astern, about a mile distant, or rather more; the long thirty-two-pounder gun a mid-ships was now regularly served, every shot passing through the cabin-windows, or some other part of the ship's stern, raking her fore and aft. In vain did the ship alter her course, and present her broadside to the schooner; the latter was immediately checked in her speed, so as to keep the prescribed distance, at which the carronades of the ship were useless, and the execution from the long gun decisive. The ship was at the mercy of the pirate; and, as may be expected, no mercy was shown. For three hours did this murderous attack continue, when the gun which, as before observed, was of brass, became so heated that the pirate captain desired his men to discontinue. Whether the ship had surrendered or not it was impossible to say, as it was too dark to distinguish: while the long gun was served, the foretop-mast and main-gaff had been shifted, and all the standing and running rigging made good; the schooner keeping her distance, and following in the wake of the ship until daylight.

We must now repair on board of the ship: she was an Indian-man; one of the very few that occasionally are sent out by the Portuguese government to a country which once owned their undivided sway, but in which, at present, they hold but a few miles of territory. She was bound to Goa, and had on board a small detachment of troops, a new governor and his two sons, a bishop and his niece, with her attendant. The sailing of a vessel with such a freight was a circumstance of rare occurrence; and was, of course, generally bruited about long before her departure. Cain had, for some months, received all the necessary intelligence relative to her cargo and destination; but, as usual with the Portuguese of the present day, delay upon delay had followed, and it was not until about three weeks previous that he had been assured of her immediate departure. He then ran down the coast to the bay we have mentioned, that he might intercept her; and, as the event has proved, showed his usual judgment and decision. The fire of the schooner had been most destructive: many of the Indianman's crew, as well as of the troops, had been mowed down one after another; until, at last, finding that all their efforts to defend themselves were useless, most of those who were still unhurt had consulted their safety, and hastened down to the lowest recesses of the hold to avoid the raking and destructive shot. At the time that the schooner had discontinued her fire to allow the gun to cool, there was no one on deck but the Portuguese captain and an old weather-beaten seaman, who stood at the helm. Below, in the orlop-deck, the remainder of the crew and the passengers were huddled together in a small space; some were attending to the wounded, who were numerous; others were invoking the saints to their assistance; the bishop, a tall, dignified person, apparently nearly sixty years of age, was kneeling in the centre of the group, which was dimly lighted by two or three lanterns, at one time in fervent prayer, at another interrupted, that he might give absolution to those wounded men whose spirits were departing, and who were brought down and laid before him by their comrades. On one side of him knelt his orphan niece, a young girl of about seventeen years of age, watching his countenance as he prayed, or bending down with a look of pity and tearful eyes on her expiring countrymen, whose last moments were gladdened by his holy offices. On the other side of the bishop stood the governor, Don Philip de Ribiera, and his two sons, youths in their prime, and holding commissions in the king's service. There was melancholy on the brow of Don Ribiera; he was prepared for, and he anticipated, the worst. The eldest son had his eyes fixed upon the sweet countenance of Teresa de Silva—that very evening, as they walked together on the deck, they had exchanged their vows—that very evening had they luxuriated in the present, and had dealt with de-

lightful anticipation on the future. But we must leave them and return on deck.

The captain of the Portuguese ship had walked aft, and now went up to Antonio, the old seaman, who was standing at the wheel. "I still see her with the glass, Antonio, and yet she has not fired for nearly two hours; do you think any accident has happened to her long gun? if so, we may have some chance."

Antonio shook his head. "We have but little chance, I am afraid, my captain; I knew by the ring of the gun, when she first fired it, that it was brass; indeed, no schooner could carry a long iron gun of that calibre. Depend upon it, she only waits for the metal to cool and daylight to return: a long gun or two might have saved us, but now, as she has the advantage of us in heels, we are at her mercy."

"What can she be—a French privateer?"

"I trust it may be so; and I have promised a silver candlestick to Saint Antonio, that it may prove no worse: we then may have some chance of seeing our homes again; but I fear not."

"What, then, do you imagine her to be, Antonio?"

"The pirate which we have heard so much of."

"Jesu protect us! we must then sell our lives as dearly as we can."

"So I intend to do, my captain," replied Antonio, shifting the helm as he spoke.

The lay broke, and showed the schooner continuing her pursuit at the same distance astern, without any apparent movement on board. It was not until the sun was some degrees above the horizon, that the smoke was again seen to envelope her bows, and the shot crashed through the timbers of the Portuguese ship. The reason for this delay was, that the pirate waited till the sun was up to ascertain if there were any other vessel to be seen, previous to his pouncing upon his quarry. The Portuguese captain went aft, and hoisted his ensign, but no flag was shown by the schooner. Again whistled the ball, and again did it tear up the decks of the unfortunate ship: many of those who had re-ascended to ascertain what was going on, now hastily sought their former retreat.

"Mind your helm, Antonio," said the Portuguese captain; "I must go down and consult with the governor."

"Never fear, my captain; as long as these limbs hold together, I will do my duty," replied the old man, exhausted as he was by long watching and fatigue.

The captain descended to the orlop-deck, where he found the major part of the crew and passengers assembled.

"My lord," said he, addressing the governor and bishop, "the schooner has not shown any colours, although our own are hoisted. I am come down to know your pleasure. Defence we can make none; and I fear we are at the mercy of a pirate."

"A pirate!" ejaculated several, beating their breasts, and calling upon their saints.

"Silence, my good people, silence," quietly observed the bishop; "as to what it may be best to do," continued he, turning to the captain, "I cannot advise; I am a man of peace, and unfit to hold a place in the council of war. Don Ribiera, I must refer to you and your sons. Tremble not, my dear Teresa; are we not under the protection of the Almighty?"

"Holy Virgin pity us!" exclaimed Teresa.

"Come my sons," said Don Ribiera, "we will go on deck and consult; let not any of the men follow us; it is useless risking our lives which may yet be valuable." Don Ribiera and his sons followed the captain to the quarter-deck, and with him and Antonio they held a consultation.

"We have but one chance," observed the old man, after a time: "let us haul down our colours as if in submission; they will then range up alongside, and either board us from the schooner, or from their boats; at all events, we shall end out what she is, and if a pirate, we must sell our lives as dearly as we can. If, when we haul down the colours, she ranges up alongside, let all the men be prepared for a struggle."

"You are right, Antonio," replied the governor; "go aft, captain, and haul down the colours; let us see what she does now. Down, my boys! and prepare the men to do their duty."

As Antonio had predicted, as soon as the colours were hauled

down, the schooner ceased firing, and made sail. She ranged up on the quarter of the ship, and up to her peak soared the terrific black flag; her broadside was poured into the Indian, and before the smoke had cleared away, there was a concussion from the meeting sides, and the bearded pirates poured upon her decks. The crew of the Portuguese, with the detachment of troops, still formed a considerable body of men. The sight of the black flag had struck ice into every heart, but the feeling was resolved into one of desperation.

"Knives, men! knives!" roared Antonio, rushing to the attack, followed by the most brave.

"Blood for blood!" cried the second mate, aiming a blow at the old man.

"You have it," replied Antonio, as his knife entered the

pirate's heart, while, at the same moment, he fell, and was himself a corpse.

The struggle was deadly, but the numbers and ferocity of the pirates prevailed. Cain rushed forward, followed by Hawkhurst, bearing down all who opposed them. With one blow from the pirate captain the head of Don Ribiera was severed to the shoulder; a second struck down the eldest son, while the sword of Hawkhurst passed through the body of the other. The Portuguese captain had already fallen, and the men no longer stood their ground. A general massacre ensued, and the bodies were thrown overboard as fast as the men were slaughtered. In less than five minutes there was not a living Portuguese on the bloody deck of the ill-fated ship.

(See page 708.)

LOSS OF THE TER SCHELLING.

(Concluded.)

THIS time they made a little sail of a shirt, by the help of which, and a gentle wind, they got past the false tides in less than half an hour. Awhile after, the wind ceased, and their sail becoming useless, they plied their oars. They then cast anchor in order to take some refreshment, such as it was. When they judged the tide could not incommode them, they weighed, set sail, and thus were carried from the island till they lost sight of it.

The next morning they discovered the two islands which their captain mentioned to them, and profiting by the in-

No. 46.

structions he gave them, they got so far that they passed by them. Six or seven hours after, they believed they saw main land, in which they were not mistaken; but as soon as they discovered it, the tide turned against them. They cast anchor, therefore, with great fear, lest their rope should break, for thereon depended all their hopes. Having no compass, the sun and stars served for a guide, and by their assistance they distinguished whereabouts they lay. The next morning the wind and tide being for them, from morning to night, they drew very near the shore but could not land. They were forced then to cast anchor, and pass over another night in great distress and fear, the currents running very swiftly.

Early the next day they gained the shore, and left the boat

at anchor, meaning to return to it, should the country they were in, be contrary to their expectations. Having walked some time they met with two ways, one along the shore and the other along the river of Sandiep, which two were quite opposite. They were now at a loss which way to take, and after much debate, they proceeded at all hazards towards the river. They were so exceedingly exhausted with hunger, cold, and fatigue, that they could scarcely go six steps without resting themselves, so that they advanced but slowly, and for three hours met with no living creature. They now perceived trees, whose branches seemed to have been lately lopped. At the distance of about twenty paces from thence, they beheld a barque, towards which they drew near, and as soon as those that were in it perceived them, they immedi-

ately made towards them. This readiness of advancing, filled our sufferers with the apprehensions that they meant to do them harm; and their terrors increased when they found that they were six in number, armed each with a long knife in his hand. On their approach, our wretched adventurers held out their wasted arms, in order to show that they were in no condition for engaging in hostilities; they also held up the leaves of the trees and the remains of the skin of the buffalo, endeavouring to make them comprehend by signs that these were their only food. At length they understood them, and expressed their commiseration. The poor wretches finding them satisfied of their sincerity, now signified, as well as they could, the need they had of them to bring them to the next village. The barbarians readily offered

their assistance, provided they were paid for it, notwithstanding they saw that they were victims to famine and nakedness. The eldest in the boat was now deputed to make a bargain with these strangers, who offered them a piece to the value of a crown. The Bengaloises gave them to understand that they must have ten, for less than which, they would not leave their work; another piece, and afterwards a third was offered, but these not satisfying their greediness, the old man showed them his empty pockets, thereby insinuating they had no more. This having the desired effect, they were received on board their barque.

They now solicited by signs to have something to eat; but as they would part with nothing without money, one of the unhappy crew produced another crown, for which they received in a cloth, about a handful of rice and a pisang, the

size of a man's finger. Every one held out his hand with such greediness for this morsel, that the vender became apprehensive that his handful of rice would occasion a disturbance, and withdrawing it, he made himself eight equal divisions, which he distributed among them. He did the same with the pisang, which is a tolerable kind of fruit. This, though a small repast, was highly acceptable.

The negroes perceiving that they had still some money left, took an advantage of our poor men; they suddenly ceased to row, making signs that they had not received enough for their trouble, and that they would not go further without they were paid more pieces. They were now obliged to give them another; on the receipt of which, they rowed about twelve strokes more and then gave over. Another piece was then given, and going at the same rate as before, they stopped.

again. Thus they continued to renew their demands, and oblige our wretched adventurers to give more and more.

They now perceived two other barques, which came and joined them. Their gestures plainly indicated that their whole discourse, which continued for some time, was relative to their visitors. Having landed, these negroes consulted together, and counting the money they had received, they now and then looked at those who had paid it, in such a manner as made them apprehend the result of their conference.

Having stayed about an hour in the barque, full of suspense and fear, two of the crew went out to request the negroes to show them some fresh water. As soon as the barbarians saw them, one of them took the men by the arms, and made them return to the barque again. This ambiguous behaviour confirmed their apprehensions, and they expected every moment to be sacrificed. Having remained in this dreadful state of alarm upwards of two hours, the three barques parted, and the masters of the barque returning, pursued their course; and, for another crown gave them a pot of fresh water. It is impossible to express the satisfaction with which they drank this, it being a month since they tasted any other than salt water. This draught served them as food; their hunger in some measure abated, and they felt a gratification which they had not experienced for several days.

The negroes now informed them that twenty of their companions were in the next village—for this joyful intelligence they gave them another crown. Hereupon, they prepared to bring them to the place where they were; and on entering the village, two of the negroes went with them to the governor, at whose feet they laid down the three crowns that were given for their passage, having thrice touched the earth with their heads and hands, saying *salamabela* (i. e. peace be with you.) The governor gave our adventurers a very kind reception, telling them by signs, to take the money again, that lay at his feet. This, however, they declined; giving him to understand as well as they could, that his men had earned it, and that they could not think of depriving them of their due. He now ordered two or three of his servants to conduct them to their companions, who perceived them at a distance, came to meet them, expressing their satisfaction at this unexpected interview. Those they had left in the island, arrived in this village five days before them; and the five that went off first in the boat which they made, came some days before them, under the guidance of certain fishermen.

Two days after their arrival here, the governor proposed that those who came first should be sent to the factory, in order that the company might be informed, as soon as possible, of the loss of their vessel. He advised them (by means of his interpreter) to stock themselves well with provisions, as they had to go above two hundred leagues; and moreover, would be obliged to travel five days in a barren country; and even that which they would enter afterwards, not being much more fruitful or better inhabited. This intelligence alarmed the poor men, who had not as yet sufficiently refreshed themselves, nor satisfied their eagerness for meat.

Those who came last, having inquired of their captain's party their adventures, and by what means they reached this village, were informed, that on the morning when they found their provisions stolen, they became exceedingly melancholy. Towards evening, two of them strayed to the point of the island, whence they perceived some fishermen. As soon as they imagined they were seen, one of them broke off a bough from a tree, and fastened a piece of linen to it. This he waved in the air, in order to show that there were persons in the island. The fishermen accordingly drew near the shore, and, after, about a quarter of an hour's consultation among themselves, they advanced still nearer, and demanded in the Portuguese language, what they were. They answered in the same language; and being fully satisfied with their replies, they came on shore. They were well armed, some with darts and javelins, and others with bows and arrows. Although they saw plainly that these poor wretches were in no condition to assault them; yet they anxiously demanded their arms.

Having only knives, they immediately threw them on the ground, and one of the negroes gathered them up. They now approached with confidence, and desired to see the rest of their companions; at the same time inquiring how many there were. Lest their number should alarm them, they were told that there were not above seven. These two men, accompanied by the negroes, now ran to their companions, shouting and hallooing for joy. The others hearing these shouts, and supposing that some beast had been wounded, and that their assistance was required, armed themselves each with a good cudgel, and ran to meet them. The negroes seeing them advance with such fierceness, supposed themselves betrayed, and immediately let fly their arrows, which providentially did no harm. The others seeing the negroes, and witnessing this act of hostility, concluded they were the very slaves whom they had seen on the other side, two days after they had landed in the island, and that they had attacked their two unprotected companions. Animated by these suppositions, they prepared for a smart encounter. The two men who were with the negroes, perceiving these mutual mistakes, and dreading the consequences, cried out as loudly as they could to their companions, assuring them they were deceived, and begging them to throw away their cudgels, and boldly advance. They instantly obeyed; and one of the negroes told them in Dutch, that their wants were apparent, and should be supplied, but first they must deliver up their staves and knives, which was done without the least hesitation.

The apprehension of the negroes now subsiding, they gave these suppliants a small quantity of sod rice, which was greedily devoured. They then inquired if they would take them from the island, which the negroes promised they would for a proper remuneration, alleging that they were very poor, and consequently could not afford to do anything for nothing. A price was then agreed upon, which was four crowns a man; and the fishermen spent the next day in repairing their barques. As to provision, they said they were stored with rice sufficient for all, and hoped they should be able to take fish enough to satisfy the most hungry among them. Rejoiced at this intelligence, the men demanded a hat full of rice, which they obtained for half-a-crown. Whilst the negroes were fishing, our shipwrecked adventurers boiled the rice; and before it was ready, the negroes returned with fish, and the proper necessaries for dressing it. At night, when it was time to repose, the captain ordered his men privately to watch by turns, for fear the negroes might act treacherously towards them. The same precaution was also observed, by the negroes; thus each party was apprehensive of the other.

Two days after the negroes gave notice that they should be ready for their departure the night following; when, as soon as they embarked, they rowed so manfully, that they soon came to the village. They were introduced by the negroes to the governor, by whom they were kindly received, and who despatched two or three barques with provisions to those who set out in their boat from the island. He insisted upon the fishermen returning the money which was given for their passage, but this the captain would upon no account accept. The next morning, which was the market day, the governor came to them, and having changed their money into little shells, (which is the coin of that country) he assisted them in buying what they wanted, and prevented their being imposed upon.

Such were the adventures of the captain's party who remained in the island; we shall now briefly state those of the seven men, who had departed in the first boat they had made.

Having no anchor, for the space of five days and as many nights, they struggled against the force of the tides, which cast them upon a bank of sand. This bank was of great extent, and they imagined at first, that they might find something for their refreshment, the provision they took with them having been spent. After a long and fruitless search, they were obliged to live two days upon the moss which the floods from the sea had made on the trees it dashed against. On the third day, they were so very weak that they could not

row, and it was with great difficulty they could stand upright, some of the crew, apprehensive of hunger, secretly planned the destruction of two of their companions. This was happily prevented by Adrian Raas, who apprised the two men of their danger, and leading them to a bye-place, helped them to make two holes, wherein they concealed themselves at night. Missing their intended victims, they now fixed upon another among themselves, a corpulent man, who, perceiving the evil design, stood upon his guard.

Two of these miserable men at last proposed to go in quest of land, promising, if they succeeded in their expedition, to send help to the others. This offer was agreeable to all; and in order to facilitate their undertaking, those that remained behind, gave these two adventurers almost all their money, with which they parted, and arrived unexpectedly at a village in Bengal; but being ignorant of the country, and incapable of making themselves understood, they could not indicate the place where their wretched companions were. Their own wants, however, being apparent, they were well treated for two days, and then put on board a vessel, wherein they sailed three hundred leagues, to be presented to the Great Mogul.

Eight days afterwards they were gone, the five unhappy men, who remained behind in daily expectations of their companions return, happened to perceive some fishermen pass by the place where they were; and coming within call, they endeavoured to communicate their distress by signs. The fishermen, on approaching them, desired they would lay down their knives before they came on board. No sooner were they in the boat, than they perceived a dead fish; and in the scuffle who should have it, one of them unfortunately dropped a bag of money, which being seen by the fishermen, they immediately plundered their wretched passengers, and turned them out again in the same place from whence they took them. Now, destitute of all succour and hope, these five poor sufferers remained in a state of inexpressible agitation for twenty-four hours, when, fortunately, other boats passed by, who, seeing them, made signs of their own accord for them to come on board. They were now unexpectedly treated by a barrel of honey, which was set before them: and the next morning were carried to Sandiep, where the captain and his party had arrived the same day. They met with the same liberal treatment from the governor of the town as their other companions.

Having been here five days they requested the governor permission to go to Bolwa where their other companions, had gone before them. The governor at first scrupled, supposing they were not able to endure so long a journey; but finding them anxious to follow their party, he caused three barques to be made ready, one to carry them, and the other two for their companions.

The night following, they arrived at Assam, a poor despicable place that afforded nothing. Here they sent back the three barques, and hired another as far as Bolwa. At two leagues distance from this village, their guides set them on shore, and made them walk on foot the rest of the way. Whilst these guides went to the governor to give notice of their arrival, our adventurers bought milk and rice, which they dressed in a pot that was lent them by Moors, that spoke the Portuguese language. It was nearly ready when their guides returned, and told them they must come immediately to the prince, who sent for them. This news displeased them, for their appetites were very keen; however, they took the pot and carried it by turns to the prince's palace gate, where they eat what was in it before they entered. They were at length brought to their lodging, and, by the prince's order, served with an excellent kind of meat called brensie, which is only seen here at great men's tables. This was such a nourishing food, that in less three or four days they recovered their full strength.

In a day or two after, the prince sent them word that they might go when they pleased, the barques being ready. This being their desire, they parted an hour after, and happily

arrived at Decca. The factory received them very kindly, to whom our adventurers imparted their whole story.

The governor now caused a barque to be ready to transport them to Ongueli, where the Dutch have also a considerable factory. But an hour before the appointed time of their departure, the governor received a letter from the Great Mogul's general, in which he enjoined him to send them to him. This order they were obliged to obey, though contrary to their inclination; for this general threatened, in case of refusal, to seize upon all the Dutch in his master's kingdom, and make them slaves.

They travelled thirty days together, sometimes by land, and sometimes by sea, passing by several cities made desolate; the inhabitants of the country being wont, in time of war, to leave their houses, in order to follow the army wherever it marched.

On the thirty-fifth day they went on board one of the vessels belonging to Nabah, where they found four Englishmen, some few Portuguese, and two of their own party. From thence they went and cast anchor near the city of Rengue-mati. In a short time they landed, and were entertained in the army of the Great Mogul. The general, whom they saluted in his tent, seemed glad to see them, and immediately ordered a large cup full of arrak, that they might drink his health. The cup was so closed, that it was a difficult matter for them to open it; and therefore the general ordered it on purpose, to divert himself with their embarrassments. Every one endeavoured to open it, but to no purpose; at last one of the party finding that it was made of wood, made a hole in it with the point of his knife, and being brim full, the arrak, sprang out abundantly. By this means they all drank of it; and it being a very strong liquor, they were soon intoxicated.

The next morning the general sent them three hundred roupees, and assigned them certain vessels called gouropes, one of which carried fourteen guns, and about fifty or sixty men. Each gourope was attended with four kosses, which are boats, with oars, to row great vessels. There were also several great flat-bottomed boats which carried no masts, but were well furnished with guns. The greatest part of the officers were Portuguese. There were several other vessels laden only with provision and ammunition.

As soon as they were ordered to march, our adventurers sought the vessel which was assigned them, but, in the great multitude of people, two of them, unfortunately went astray, and were eight days without knowing where to betake themselves. After a long march, these two wanderers entered Kosbia, a country lying between Bengal and Azo.

The Great Mogul's general was at war with the king of Azo, and at this time subdued him. Our two adventurers expected a share of the plunder, but were disappointed. This was exceedingly mortifying to them; their wages, which were no more than ten crowns a month, being insufficient to maintain them, on account of the then dearness of provision. The reason that they had no more was, because they served in the army by constraint, whereas those who served voluntarily, had twenty-five crowns each per month.

Immediately after the overthrow of the king of Azo, the general hastened to attack the countries belonging to the king of Assam; and lest the flood, which every six months overflowed the greatest part of the kingdom, should frustrate his designs, he advanced with great expedition, and arrived before that time at the place he intended.

In the meantime our two adventurers, and the English who belonged to the army, having observed all the signs of an approaching tempest, carefully repaired their vessels. Their precautions, however were unavailing; the vessel in which were our two adventurers, not having been properly ballasted, was overturned by the currents, and four Dutchmen, and twenty four Moors perished. Both our heroes, after swimming several hours towards land, had the good fortune to be assisted by an English vessel, who took them on board.

The next morning they thanked their benefactors, and went to the army, where they sought an occasion of admittance to

the general. As soon as he heard of the loss of the vessel, he fell into a violent passion, and commanded them to withdraw and choose what other vessel they had a mind to.

In two days after their admiral set sail in search of the enemy, attended by the whole fleet. Although the wind was little favourable to them, the vessel which our adventurers entered, followed on the course, and three or four hours after dashed against a rock, which struck off their helm. Not long after they discovered the enemy's fleet, consisting of six hundred sail. As soon as the enemy perceived them, they advanced, and a smart encounter ensued. They took three hundred of the enemy's vessels, the least of which carried seventy men; and of this whole number there did not escape above fifty. The three hundred vessels that escaped, unhappily cast anchor at about a quarter of a league's distance from the general, who advanced up the country with all possible expedition. Having brought near three hundred pieces of cannon, he planted them against them, and sunk the greatest part of them: the rest passed over the other side of the river, and were pursued by the general's vessels with success. After this pursuit, their admiral cast anchor before the city of Lokwa, situated about six leagues from Gueragan. They were obliged to stay here about three months in consequence of the flood: as soon as the waters were sufficiently fallen they quitted their post.

Having been fifteen months in the Great Mogul's army, by the mediation of their consul, our adventurers at length obtained their discharge and prepared for their departure. In fifteen days they came to Decka, and from thence took shipping for Ongueli. Having sailed about one hundred and twenty leagues along the river, they made some stay at Cazimabahr, a place famous for silks. From thence they returned to Ongueli, where each betook himself to different employs, and it was not till 1673, that the last of our adventurers was enabled to return to his native country.

SUFFERINGS OF A BOAT'S CREW.

THE following is a narrative of a most interesting character, being an account of the sufferings of Mr. Clarke (the survivor of a boat's crew of eight persons), who was for six weeks drifting about the Pacific in an open boat:—"I left Tahiti in the schooner *Sophia*, for the Paunertors, or Chain Islands, March 4, 1843, and arrived at the island where I was to be stationed, seeking pearl shells, in the month of May; but previous to my being placed there, I visited, in conjunction with Mr. Samuel Henry, of Tahiti, in the schooner *Sarah Ann*, Captain Dunnett, an island represented to us by the natives as being rich in shell, and not known to others who were visiting islands trading; we discovered it, and stood in with a boat, containing Mr. S. Henry, Mr. J. Dunnett, and myself; there were also ten of the natives of a 'gang' with us, all armed; we saw the natives on shore were making signals by large fires, which the other natives told us was for them to collect together; we pulled within twenty yards of the shore; one of them came down to the beach, and hailed us to come on shore. Mr. Henry told our interpreter to tell him to come off, we were friends; after hesitating some time he did so, but at the same time we perceived him followed by others, who were bringing with them a long line, which reached into the bush, attached to which were about fifty natives, so that when the line was fast, to haul away and get us on shore, the first native had by this time swam to the boat. Our interpreter told him to go aft to the chief, meaning Mr. Henry. Mr. Henry told him to come in, which he no sooner did than he seized Mr. J. Dunnett's musket, and would have wrenched it from him, had not Mr. H. struck his fingers with a cutlass, which compelled him to let go his hold; he immediately jumped overboard and swam to the beach, when he made all manner of gestures, by which, our interpreter told us, he meant to show what he would do to us if he got us on shore; the other natives that had followed the first, swimming and diving to the boat, seeing their chief leap overboard so

quickly, thought something was wrong, and soon followed. Those on shore hauling in the line, which the one who had been entrusted with it had had no time to fasten; after they had all left, we opened fire upon them for their treachery, and delivered about forty rounds; but as we fired so they fell on the ground, to be less exposed; we also saw a large number of females with baskets on their arms, made from the cocoa-nut leaf. Our interpreter told us they were intended to carry our limbs into the bush to be cooked, had they been successful in their foul designs. It being sundown, and not liking the character of the natives, we pulled on board the *Sarah Ann*, which had been lying off and on. We were convinced there were pearl shells there from the ornaments they wore round their necks and arms. We judged there must have been 600 natives on the island. Mr. H. proposed to Captain Dunnett to remain off and on the island that night, and go on shore the following morning to force a landing, having seven good boats, besides fifty natives, sufficient, we supposed, well armed, to effect it; but Captain Dunnett thought it better to proceed on our voyage to the Island of Takumea, one of the same group. After visiting several gangs of divers on the other islands, we arrived at an island called Tahania, where I was landed with five boats and a gang of eighteen divers, with five females to open the shells. The first week we were prevented from commencing operations from bad blowy weather, when, if such is the case, it ruffles the lagoon so that the divers cannot see where to descend. We formed a settlement on the west side of the island, and commenced operations; found the shells very scarce; remained collecting five weeks, and was then visited by the *Sophia* schooner, Captain M'Lean, from Tahiti, who brought a supply of cocoa-nuts; these were soon expended, when the natives refused to work. This somewhat disconcerted me, as our main stay, cocoa-nuts, were now becoming very scarce. The payment usually made to these men for diving was three cocoa-nuts, a portion of sour bread-fruit, and from eight to ten fathoms of navy blue cloth per month. However, I persuaded them to gather the shells and take them in our boat to the small harbour there was in the island, and there leave them. The time for the return of the Countess Wilton or *Sophia* had now expired, and being very short of provisions I began to feel somewhat anxious, and proposed, with a boat's crew, to visit Hanea, an island about 45 miles south-west, to endeavour to obtain information if any vessel had called there from Tahiti; and, supposing such not to have been the case, to proceed direct to Tahiti, about 250 miles distant. We, next day, got our boat ready (one of the Greenland fishing-boats), and put into her for provisions, about 30lb. of biscuit, in a bag, one small sucking-pig, cooked, about four gallons of water, and six young cocoa nuts; the following morning, at day-break, 15th of August, 1844, we left, myself, four grown-up men, and three youths, in all eight persons. I also had my dog with me, besides my chest and bed. After great difficulty we got out of the harbour and directed our course to the westward, with a nice breeze; at noon we were off the west end of the island, and sighted Taitea. I proposed remaining the night, but the natives objected, not being on good terms with them. We then stood to the south-west for Hanea. About four p.m. one of the natives said he saw the haze of the land, but he was mistaken. The breeze had been freshening from noon, and was now blowing pretty stiff. We kept on the same course until 10 p.m. I proposed, that as it was probable we could not get on land that night, to steer for Tahiti, as the wind was fair and strong, to which they all consented. Having no compass, we had to steer by the stars, and bore away as we supposed due west; we kept the boat this course up to 2 a.m., when we shipped a sea which nearly filled her to the thwart. We then rounded her to the sea, lashing the oars to make a raft, which we threw overboard. When she lay comparatively easy, attached to about four fathoms of the native rope, unshipped her mast to ease her; then had something to eat, being the first we had had since the morning previous; but found our bread saturated with salt water. We were in this state 'lying to,' about two hours, when the rope parted, and the boat immediately went broadside to the sea, which was breaking with violence on board her. I offered the natives several fathoms of

cloth if they would leap overboard and secure the raft, but from the sea running they said it was impossible, and the boat drifting so rapidly, they could not overtake it. While we were lying to, we shipped two seas, which completely filled us. I jumped to the stern oar, and put her before the wind, while the natives baled her. We shipped our mast again, and set the fore and aft foresail, without the sprit; this we found sufficient, and with this sail we ran about eight knots an hour; we ran in this way for three days, and on the fourth at noon, I took an observation of the sun, having my sextant and epitome with me, and found ourselves eighty miles south of Tahiti, and supposed about one hundred and fifty miles to the westward. On the fourth day it began to moderate, and I proposed to the natives to haul the boat to the N.W., or as near to that point as the sea would permit; we steered to the N.W. until sundown, when we saw a flock of birds standing from the northward to the southward. The natives wished me to steer in that direction, as they were sure the land was there. On this day, I put all hands on allowance, about half a pound of bread per man; this we ate each day at 4 p.m. I told the natives, when they wished me to alter the course, that I had found my latitude, and knew where we were; that, by steering to the northward, we should probably fall in with some of the islands to the north and west of Tahiti; but they insisted on my giving up the charge, and took the steer oar from me, which it was useless to resist, they being seven to one. On the fourth day all our water was expended, and they kept running the boat about, following birds, until the fifth day; on this day we caught some water, by means of our buckets and cans, about one quart each. On the sixth day, the natives consulted what course to steer, which was determined by a majority; but they kept running her about in so many directions that I asked them to allow me to steer; they said no—that as I had missed Tahiti they would still retain the charge. I had possession of the bread, which was allowed, and with me one bottle of brandy, about a pint and a half; this I mixed with my portion of water, making about two quarts of it; of this I was very careful, impressing also on the natives the necessity of being sparing with theirs. On the seventh day, they killed my poor dog, without my consent; this they cooked in the saucepan, producing fire by rubbing two sticks together, breaking out the sides of the boat for firewood. This they ate, and, with the blood mixed with the salt water, said it made excellent soup; they offered me a portion, but I refused, he having been a great favourite. On the eighth day, at one of their consultations, the majority proposed that we should steer to the westward, which they did for two days, the boat running about five knots, the wind and sea in our favour. All this time our soddened bread was becoming less, and our allowance could only be about the size of a quarter of a common ship biscuit per diem. On the tenth evening we hove to, and on the morning of the eleventh day found the wind had become north west. On this day they consulted me on the best course to steer; I told them, if they thought the wind would continue a week, we might perchance sight some of the islands to the eastward (Society Islands); but as there was a very heavy head sea, and the boat only going two knots an hour, I told them it would be better to steer to the westward, and endeavoured to make the Harvey Group; but they insisted on steering to the eastward, which they did for two days and a half. The water belonging to the natives had been out near two days; but I had still my bottle of brandy and water secreted in my chest, from which I continued to sip at night unknown to the natives; they now slept a great deal, and spread an old mat in the bottom of the boat to lie on, which they could do, she being perfectly tight. On the thirteenth day the wind shifted to the eastward; they then ran the boat about again, not knowing where they steered. They consulted me as to Palmerston Island and Aitutaki, of which they had heard. I had all this time taken the sights to obtain the latitude, but could only guess at the longitude; I told them they were to the eastward of these islands—they had better steer south, for the Harvey Group, but they would not take my advice. From this time they only ran in the day time, and lay to at nights, lest they should run past land. On the eighteenth day we

discovered we had only one day's allowance of biscuit left; but on the morning of the 19th, I found that some of them had come aft and stolen it from the bag whilst I slept. This finished the only remaining portion of that which I had fondly hoped would have certainly kept those with me alive at any rate one day longer. They generally ate their miserable allowance by putting it into a bottle, pouring salt water on it, until it became quite soddened, and then sucking it through the opening. After the bread was expended, the natives gave way to the most piteous lamentations and howlings it is possible to conceive, continually bewailing their fate, and charging me with bringing them to so miserable an end. On this day they consulted together, and gave me charge of the boat, intimating they wished to lie down in the bottom of her, and then die; that to this end the masts should be unshipped, and the boat kept stationary, and not run her in search of land; but I had that hope within me which never forsakes, and I put the boat to the southward, endeavouring to make the Harvey Group. On this day, having a very little coffee, I gave them a few berries each, but it only increased their desire for salt water, of which they continued to drink freely. This day I commenced drinking laudanum, mixed in small quantities with salt water, which produced sleepiness, but lulled my miserable feeling. When I commenced steering to the south, I was in sixteen degrees. Nothing particular happened until the twenty-fourth day, when the natives, having suspected me of stealing the nineteenth day's allowance, perceiving I did not suffer so much as they, searched my case while I was asleep, and discovered my medicine chest, the contents of which they drank, about five ounces of castor oil, a small phial of laudanum, also a bottle of sugar of lead; they were soon overtaken by sleep from the laudanum, and two of them slept forty-eight hours without awakening. The castor oil had not the slightest effect on them. I still kept steering to the southward, and, on the night of the twenty-eighth day, we caught a little rain from a passing squall; the natives roused themselves, and commenced licking the boat and sails, to produce saliva, but not nearly enough; this small quantity only increased their desire for more, and one of the poor fellows became insane. They having two hatchets, I persuaded them to deliver them to me with their knives, telling them the poor fellow might kill some of them and me; but I was more afraid of their retaining it than of him, as they continued threatening that if I ran the boat, and did not keep her still, they would knock out one of her timbers, and go down altogether; after these were delivered up, I felt much more at ease, throwing the knives overboard and securing the hatchets. The absence of reason of my poor cook troubled me a great deal, as he had been one who had kept our spirits from drooping, entirely by his lively conversation, and upbraiding them for finding fault with me, and reproving them for making such horrid lamentations. On the morning of the 29th day my poor fellow died, and was buried in his winding sheet of native cloth and shirt, which was a determination they had previously come to, that when each died, not to eat him, but throw him overboard. On this day the father of one of the boys in the boat, who was very ill, came and demanded the little water I had caught, about half a pint, from the last rain, to give him, which I did; but this did not save his life, for on the morning of the 31st day he died, and was buried by his father. In the afternoon of this day, I had some occasion to go forward to arrange some part of the jib sheet, when the old man who had buried his son in the morning gave me a push, and overboard I went, but fortunately succeeded in catching the gunwale of the boat, and clambered up: I asked him what he meant, and he told me it was the lurch of the boat, and not he who did it. The natives gradually grew worse, and after my laudanum was drunk, I commenced drinking sugar of lead, mixed with salt water, which produced violent sickness. We had had no rain since the 29th day, and on the evening of the 35th day, two more of my crew died in dreadful agonies, gnawing the boat, and beating themselves distractedly; they had eaten all the leather from the rowlocks, as also part of the sails. On the 36th day another died, and was buried by me, as also the two previously, the

others being too weak to assist; thus leaving three, but in the evening another died, and was thrown overboard, reducing our number to two. No one can judge of my feelings when I looked at the last of my unfortunate crew, and wondering whether he should throw me overboard, or I him; but I had not long to wait, for on the morning of the 37th day I found him dead, and had a great deal of trouble to throw him overboard, being an enormously big man; this was the father of the poor lad who died the second. I was now all alone, and found myself getting very weak, and unable to hold the steer oar: this I fixed amidst ships, and allowed the boat to go where the wind wished; I laid myself down in the bottom, with a mat laid on the thwarts as protection from the sun. I was ruminating one evening what my end would probably be, when I heard something leap by the side of the boat, and knew them to be fish, and found they were jumping at a little end of the mat sail trailing in the water; I immediately threw over three pearl hooks which I had brought from the Chain Islands, when they were caught at greedily by a fine albacora, which I thankfully hauled on board, and caught a second and third in the same way; I eagerly drank their blood, and took out their eyes, which I ate, but the flesh I could not manage, as my throat seemed stuck together. I sliced them and laid them on the seat of the boat to dry; I sank down again in my usual place, and fancied what Providence would send next, for something within now began to tell me I was not to die, and I remembered I had brought my violin; this I unstrung and eat all but the fourth string; but what I wanted was something to allay my excessive thirst, under a sun in the tropic. It was now four days since my last native died, and brought me to the fortieth day, and on looking overboard I perceived, right ahead, land! Just imagine my surprise, running steadily along towards it. What land it was I could scarcely imagine, but supposed it must be the Navigator's Islands. Towards mid day it fell calm, leaving me in the same uncertain state, and so continued for two days; but on the forty-second day, at break of day, I missed myself to look over the boat, and saw ten canoes pulling towards me, with five natives in each. I sank down in the bottom of the boat from excitement and exhaustion, thanking Providence for hope of deliverance. I now heard, from their conversation, that they had approached pretty close, and, putting my head over the side of the boat, they raised one cry of horror and surprise at the wretched object I look, and immediately pulled away, crying out, 'O, le Pope! O, le Pope!' (The priests, the priests), meaning the French, for these natives cannot disconnect the idea of there being priests without necessarily being Frenchmen. I beckoned them to approach, and intimated I wanted to drink by the usual sign, when they handed me a cocoa-nut, the only one they had. They now had more confidence, but still alarmed at my appearance, my beard being nearly seven weeks old, and the shadow of a man they saw. After some consultation, one of the chiefs being heathen, proposed that I should be killed (this I understood, from the great similarity the language possesses to that of the Chain Islands); but the majority were Christians, and said, 'No; that it was contrary to their religion; they ought to be good Samaritans.' This being the case, eight of them jumped into my boat with their paddles, and we went on shore. The arrival of a stranger at any time, at the little island of Manua, (the most windward island of the Samoan group) is treated with no little importance, but now, a herald preceded us, in one of the canoes, and raised the whole population, who reside on the sea shore, with the words, 'They are bringing the *papalagi mai le vasa*,' (the white man they had found on the sea); so that consequently, when I was carried on the shoulders of four stout natives, we were followed by all who could walk, to the number of about two or three hundred, crying out, 'Aga, Aral' this being a word expressing astonishment. I was thus borne along to the residence of a Tongateacher, and laid down on the best bed they could find—a few mats laid on the ground. While some were preparing these, others procured some food and cocoa-nuts; but I was exceedingly cautious, lest by eating heartily it might produce that which, providentially, I had just been released from. My thirst continued unquenched for three days, and I was still very weak; in fact, so weak that I kept my bed for

three weeks. During this time an incessant levee was held at the house of my kind host—natives came from far and near to see me, and shake hands, even while I slept; the screen was frequently raised that they might be allowed the pleasure of seeing me. At the end of three weeks I began to move about, and found myself on an island different from most others, there being no outer reef, and the sea breaking with terrific violence on the windward part; so that had I not been becalmed I should have, in all probability, been dashed to pieces, being too weak to steer the boat over the breakers. I now felt a desire to return to Tahiti; but the natives insisted on my not leaving them yet, that they wanted to pay a visit round the island to their friends, and take me with them. I had almost forgotten to mention that just as I was recovering I received a kind visit from the Rev. M. Harbutt, the agent for the London Missionary Society, at Manua; he showed me great attention, and impressed on the natives the necessity of doing likewise. There being no harbour at Manua, and having been there now three months, I proposed to visit Tortirila, an island about seventy miles distant, to see if there was any opportunity of returning to Tahiti. Accordingly I left, and took with me fourteen natives from Manua, and arrived at Tortirila the same evening; we found that at the harbour of Apia, Island Upolu, another of the same group, was the harbour most frequented by shipping; but unfortunately we were detained from proceeding there, from westerly winds, for nearly three weeks. This island is about forty miles from Tortirila. On arriving at Apia, judge my surprise in finding a vessel, the Currency Lass, bound direct to Tahiti, to sail in two or three days. There being no mate on board, I was offered that situation, and eagerly accepted it; we took with us two passengers, the Messrs. Evans, from Apia, and sailed from thence on the 30th of January, 1845, and here again we did not escape privation from exceeding light and contrary winds; our provisions and water were soon expended, so that until we made the island of Atitui we had then lived twelve days on yams alone. After a long passage of forty-three days to accomplish one thousand two hundred miles, we arrived at Tahiti, just twelve months from the day I left to superintend the 'Shelling.' I found on my arrival that the oars and raft from which my boat had parted, were driven on shore on the south end of Tahiti (Tairaboo) and recognised by Mr. Henry, who had consequently given us up as lost. My sorrow was soon turned into joy; on my arrival at Tahiti, I found a letter had long been lying there from England, and on opening it I read that property to a considerable amount had been left me, and was ordered home to secure it."

"HENRY CLARKE."

SEA MISERIES.

BEING anxious to land after a long voyage from India, trust your precious body in an open boat. A hurricane coming on, your little bark is driven out to sea, and you are obliged to seek refuge in an enemy's country. If you escape with life, you are fortunate indeed; but the loss of your long-collected treasures is inevitable.

Being obliged to sit next a person with whom you have quarrelled, and are to settle your little affair of honour on arriving at the first land.

As one of the pleasures of being a sound sleeper, find, when you awake in the morning, that you have been tied in your hammock, with your face towards the deck; in which state you are obliged to hang suspended till some kind friend relieves you.

Sitting, on a passage from India, next to your tailor or shoemaker, to whom you owe a long bill.

So late as 1802, the King of Sweden engaged some British surgeons to serve in his ships of war; their perplexity and mortification may be imagined, on finding that they were expected to shave the whole ship's company, as a duty belonging to their station.

THE DISCOVERY OF THE PACIFIC OCEAN.

AFTER the discovery of America by Columbus, the Spanish Court granted full permission to a variety of adventurers to make what discoveries they could in the new world; and, accordingly, a great variety of expeditions were fitted out, under different commanders. By degrees nearly the whole coast of America, on the side of the Atlantic, was discovered and explored. By the voyage of Ojeda and Pinzon, two of Columbus's companions, the whole of the Atlantic or Eastern coast of the Isthmus of Darien became known to the Spaniards, who began to make settlements on the coast. But as yet they knew nothing of the Pacific or Western coast. In general they behaved with great injustice and cruelty towards the Indians, the natives of the country, and in consequence they obtained very little information from them as to the interior, the extent, or the productions of the great continent which had been so unexpectedly discovered.

In an expedition, commanded by Enciso, which set sail in 1509, in search of Ojeda, and a new colony which he had founded on the eastern side of the gulf of Darien, where he built a fortress called San Sebastian, was a man of the name of Vasca Nunez de Balboa, who, having dissipated his estate in idleness and debauchery, was desirous of proceeding again to America, (for he had been there once before,) in order, if possible, to retrieve his fortunes. But being very much in debt, he was afraid to embark openly, lest he should be arrested, and thrown into prison. To avoid this, he contrived to get on board Enciso's ship, concealed in a cask, which was marked as containing provisions. When the ship was far at sea, Balboa came out from his cask, and Enciso, glad to have a person of his courage and knowledge among his officers, for it was well known that Balboa had already been one voyage to America, readily forgave the trick that had been played him, and allowed him to accompany them. And it was well for mankind that he did so; for, to this man Balboa, it is that we owe the discovery of the Pacific ocean.

By the time the voyage was half over, the settlement at St. Sebastian had been broken up, in consequence of the repeated attacks of the natives, who could no longer submit to the oppressive treatment of the Spaniards. Soon after Enciso had reached Carthagena, he was joined by the famous Pizarro, the conqueror of Peru, with the wretched remains of the colony at St. Sebastian. From him he learned the disastrous fate of that colony; but in spite of this account he determined on pursuing his voyage to that settlement. Upon his arrival there, he found that Pizarro's statement was too true; for, where St. Sebastian had stood, nothing was to be seen but a heap of ruins. At this place, misfortune followed misfortune; first he suffered shipwreck, and then he was attacked by the natives. In despair at these repeated disasters, Enciso was quite at a loss what to do; but Balboa, whose courage and presence of mind

never forsook him, advised him to continue his course along the coast. He stated that he had once before been on an expedition in the same gulf, and he well remembered that on the western side there was an Indian village, on the bank of a river, called by the natives Darien.

This village Enciso resolved to take possession of. Accordingly, as soon as he had reached the river, he landed his men, and without giving the unfortunate Indians any notice, he attacked them, killed several, drove the rest out, and plundered them of every thing. He then named the village Santa Maria del Darien, and made it the chief place of his new government.

The cruelty, however, with which Enciso treated the natives, and the tyranny of his measures towards themselves, soon created in the hearts of the Spaniards under him a desire to get rid of him. Being seized and forced to embark for Spain, Balboa assumed the command, and became governor. Unlike Pizarro, Enciso, and others, he treated the Indians with kindness, and he was one of the few Spaniards in authority whom they were inclined to trust. Balboa, for dignity and real generosity, although in the early part of his career, while under the orders of Enciso, he was not altogether free from the charge

of injustice and oppression, appears to have come the nearest to Columbus of all the Spanish adventurers that at this time hastened to the newly-discovered countries in search of wealth and fame.

In one of the expeditions into the interior parts of the Isthmus, set on foot by Balboa, in search of gold, he first heard of a sea to the west as yet unknown to Europeans. He had received a large quantity of gold from an Indian Cacique or chief, and was weighing it into shares for the purpose of dividing it amongst his men, when a quarrel arose as to the exactness of the weight. One of the sons of the

Indian Cacique was present, and he felt so disgusted at the sordid behaviour of the Spaniards, that he struck the scales with his fist, and scattered the glittering gold about their feet; and, before the Spaniards could recover from their astonishment at this sudden act, he said to them, "Why should you quarrel for such a trifle? If you really esteem gold to be so precious as to abandon your homes, and come and seize the lands and dwellings of others for the sake of it, I can tell you of a land where you may find it in plenty. Beyond those lofty mountains," he continued, pointing towards the south, "lies a mighty sea, which people sail upon, in vessels almost as large as yours. All the streams that flow down the southern side of those mountains, abound in gold, and all the utensils that the people have are made of gold."

This speech excited the avidity of Balboa, who eagerly inquired the best way of penetrating to this sea, and to this land of gold. The young chief warned him of the dangers he would meet with, from the fierce race of Indians scattered about the mountains, who were cannibals or eaters of human flesh. But the curiosity of Balboa, once roused, was not to be quelled by accounts of difficulties and dangers. He was, besides, desirous

[BALBOA'S FIRST SIGHT OF THE PACIFIC.]

of getting possession of the gold, and of obtaining by a discovery, almost equal to that of Columbus, the pardon of the king of Spain, for depriving Enciso of the command of the settlement. He resolved, therefore, to penetrate to this sea, and immediately began the necessary preparations for the journey. It was in the year 1511, that he received this account, and he lost no time in sending to Hispaniola, to request that the governor of that settlement, Don Diego Columbus, the brother of the great discoverer, would send him sufficient assistance to put his design into execution.

His application was not attended with the success which he expected. He had written to request that a company of a thousand soldiers, with proper arms, should be sent to assist him in his perilous adventure. But his messenger, instead of these, brought back intelligence that he would most probably have the command of Darien taken from him, and be punished for aiding in depriving Enciso of the government.

This news induced him to hasten his departure for the discovery of the sea beyond the mountains. Instead of the thousand men that he had thought necessary for the expedition, he found that he could only muster one hundred and ninety. But these hundred and ninety men were hardy and resolute, and much attached to him. He armed them with swords and targets, cross-bows and arquebuses. He also took with him a number of blood-hounds, and a few of the Indians of Darien, whom he had won by kindness, and whose services would be of much use to him, from their knowledge of the wildernesses he was about to enter, and also from their knowledge of the habits of savage life.

On the 1st of September, 1513, Balboa embarked at Darien with his followers, in a brigantine, and nine large canoes. He sailed north-west, and arrived without accident at Coyba, the residence of the Indian Cacique, the father of the young man who had first told them of the sea, of which they were in quest. From this chief he obtained the assistance of guides, and some warriors; and leaving half his men to guard the brigantine and canoes, he prepared to penetrate the wilderness before him with the remainder.

It was on the 6th of September, that he began his march for the mountains which separated him from the great Pacific Ocean. He set out with a resolution to endure patiently all the miseries, and to combat boldly all the difficulties that he might meet with; and he contrived to rouse the same determination in his followers. The heat was excessive, and the Spaniards felt it the more, because they were encumbered with the weight of their armour and weapons. They had to climb rocky precipices, to struggle through close and tangled forests, and to cross marshes which continual rains had rendered almost impassable. Their Indian guides were of essential service to them, by carrying their provisions, and by pointing out the least difficult paths.

On the 8th of September, they approached an Indian village at the foot of the mountains, and the inhabitants fled in alarm into the fastnesses of the forest. Had not Balboa contrived, by kindness, to gain some friends among these alarmed people, he could never have proceeded. In this village he halted several days to refresh his men, many of whom had fallen ill. Having discovered the place to which the chief of the village had retreated, he prevailed upon him to return, and so charmed him by the kindness of his manners, as to make him his friend. From this chief he received all the information he needed, to complete with success his daring enterprise. He informed Balboa that when he reached the summit of a lofty ridge of mountains, which he pointed out, the sea would appear spread out far below him.

The heat of the marshes, and the fatigue of forcing their way through the almost impassable forests, had, in the short space of two days, so impaired the health of some of his men, as to make it impossible for them to proceed. Balboa ordered the sick to return slowly to Coyba, and having persuaded the Cacique to assist him with fresh guides, and taking with him only such men as were fresh and vigorous, on the 20th of September, he again marched forward.

Their journey was through a broken rocky country, covered with forest-trees and underwood, so thick and close as to be

quite matted together, with every here and there deep and foaming streams, some of which they were forced to cross on rafts. So wearisome was the journey that, in four days, they had not advanced more than ten leagues, and they began to suffer much from hunger.

They had now arrived in the territories of a fierce and warlike tribe of Indians, who, instead of being deterred by the character for cruelty which the Spaniards had received, or flying at their approach, were determined to resist their farther progress. They set upon the Spaniards with furious yells, thinking to overpower them at once. They were armed with bows and arrows, and clubs made of palm-wood, almost as hard as iron. But the first shock of the report from the arquebuses of the Spaniards, struck them with terror. When they saw their companions fall bleeding and dead around them, they took to flight, and were closely pursued by the Spaniards with their blood-hounds. The Cacique of this tribe and six hundred of his people were left dead upon the field of battle. After this victory, the Spaniards entered the adjoining village, which was at the foot of the last mountain that remained to be climbed. This village they robbed of every thing valuable. There was much gold and many jewels; and Balboa shared the booty among his band of followers.

Several of the Spaniards had been killed, and some were wounded by the arrows of the Indians. These Balboa was obliged to leave in the village, while he ascended the mountain. Sixty-seven men were all that remained of his party with health and strength sufficient to accompany him.

At daybreak, he assembled his band, and began to climb the height, anxious to reach the top before the heat of noon. The labour was severe, for the road was very rugged. About ten o'clock, they emerged from the thick forest through which they had been struggling ever since the dawn. The soft breeze that blew over the mountain fanned their feverish brows, and brought refreshment to their parched lips, toiled and wearied as they were by their five hours' march in the close and tangled wood. At this moment, one of the Indian guides pointed to the height above them. "From that spot," he exclaimed, "may be seen the great sea of which you are in search." This tended still farther to revive and encourage them.

On learning that they were so near the object of their pursuit, Balboa gave orders that his men should halt, and that none should stir from his place. He was resolved to be the first European who should look upon that sea, as he had been the first to determine upon discovering it. Accordingly he ascended the mountain height alone; and when he reached the summit, he beheld stretching far away beneath him, the vast Pacific glittering in the morning sun. What a sublime moment! Greater and nobler was the adventurer Balboa standing alone upon that lonely eminence, surveying his discovery, than is the blood-stained, though lauded hero, who, looking from afar over the field of his victory, sees nothing but the disfigured bodies and mangled remains of thousands of his fellow creatures, sacrificed to his insatiate ambition and pride.

After surveying the scene for some time in silent admiration, Balboa called to his little troop to ascend the height, and look with him upon the glorious prospect; and they joined him without delay. "Behold, my friends," said he, "the reward of all our toil, a sight upon which the eye of Spaniard never rested before!"

The Spaniards having congratulated their leader, and rent the air with their shouts of triumph, Balboa, according to the usual practice, took formal possession of the sea, and the coast, and the surrounding country, in the name of the king of Spain. He then ordered a tree to be cut down, and fashioned into the form of a cross, and planted it on the spot from which he had first beheld the sea. He also made a mound, by heaping up large stones, upon which he carved the names of the king and queen of Spain. The Indians saw all this done, and while they gave their aid in piling the stones, and setting up the cross, they little thought that they were assisting in depriving themselves of their possessions and their country.

This event took place on the 26th of September, 1513. The Spaniards had been twenty days in performing the journey from Coyba in the province of Careta, where they had left the brigantine and canoes, to the summit of the mountain; a distance which may now be travelled in six days. The Isthmus, at this place, is eighteen leagues in breadth in its widest part, and in some places not more than seven leagues; but it is crossed by high and rugged mountains. Across the difficult country, in spite of every obstacle, did Balboa and his followers force their way on their journey from the shores of the Atlantic. Without roads, or even paths, they followed those tracks which none but Indians knew, and which only Indian guides could have found out.

Balboa was not content with merely beholding this ocean. He determined to descend to it, although the whole distance between him and the sea-coast was filled up with rocks, and thick forests, and green marshes. Being joined by such of his men as had recovered sufficiently, and whom he had left in the village after the battle, he set out on the 29th of September, for the sea shore; and soon arrived at one of the vast bays of that coast, which bay he called St. Michael's bay. The whole coast, as far as the eye could reach, was quite wild, and the sea had not a sail or canoe upon it.

When the Spaniards reached the shore, they found a beach half a league in extent, partly covered with sand and mud, with here and there a pool of water.

"If this is a sea," said Balboa to his men, "like the great Atlantic, this beach will ere long be covered with its waters. Let us wait here—a short time will decide whether there is a tide."

So saying, he seated himself under a tree. He was not long in doubt. The tide began to rise, and the waters rushed in so impetuously, that they soon reached the spot where Balboa and his party had placed themselves.

Balboa then arose and marched into the sea, until the water reached above his knees, and in the same manner as he had claimed a right to the land, he took possession of the sea for the king of Spain.

This ceremony being finished, he and all his followers stooped down and tasted the water, which they found to be salt, like the water of the other seas that they were acquainted with. They could no longer doubt that a new sea was discovered; and both himself and his men cut off branches from the trees, intending to carry them away as precious tokens of their discovery.

Balboa's little band was, after this, engaged in fighting with the Indian tribes that inhabited the sea coast; but he soon subdued them. From them he heard of the rich country of Peru; and one of the Indians, with a moulded figure of clay, described the form of the Llama, the native beast of burden of South America, of which the Spaniards had not as yet heard.

Early in November, Balboa quitted the borders of the Pacific Ocean, on his return across the mountains to Darien. His route homewards was different from that which he had before pursued, and the sufferings of his men were much greater. The heat having dried up the pools and brooks, many died from intolerable thirst, and those who survived, although loaded with gold, were exhausted from want of food; for, the poor Indians, seeing the greediness of the Spaniards for gold, brought gold and jewels, instead of food, as peace-offerings to those whom they had but too much reason to look upon as cruel despoilers.

At length, after much slaughter of the various tribes of Indians that dwelt in the mountains, and burning of their villages, Balboa and his troop reached Coyba, having carried off all the gold and silver that they could find. There they embarked in the brigantine, and arrived the next day in the river of Darien.

By the Spaniards at Darien, Balboa was received with much delight and praise, on account of his great discovery. Only a small part of his followers accompanied him back, and these were half starved, and many of them dangerously ill—the rest had perished in the expedition. He was also ill himself with a fever, brought on by anxiety and toil. He had shared with his followers every privation, and had been the foremost in every danger that they had encountered.

Balboa despatched a ship to Spain, with the intelligence of his discovery, and with part of the gold which he had carried

off from the different tribes of Indians. A few days before this ship reached Spain, a new governor had been sent out, named Pedrarias Davila, with orders to punish Balboa for his misconduct to Enciso.

The new governor arrived in the Gulf of Uraba in June, 1514; but when he reached Darien, and found how much the discoverer of the Pacific was beloved by all the people of the settlement, he hesitated through fear, and finally resolved to defer the execution of the orders with which he was entrusted with regard to Balboa, till a more fitting opportunity.

In 1516, Davila permitted Balboa to depart from Darien to Careta, for the purpose of building brigantines, and transporting them across the mountains, with a view to navigate and explore the Pacific Ocean.

Three years had elapsed since Balboa had discovered this ocean, and as soon as he reached Acla, a town built by the Spaniards in the province of Careta, he lost no time in preparing the materials for four brigantines.

The timber was felled on the Atlantic side of the Isthmus, and was then, with anchors, and cables, and rigging, carried across the mountains to the shores of the Pacific. Spaniards, negroes, and Indians were all employed carrying these materials, through the thick forests, and across the torrents, along the precipices, and up the rugged parts of the mountains; and this under the heat of a burning sun. Many of the unhappy Indians, unused to labour, sunk on the road and died, overcome by the weight of their loads. The Spaniards and negroes, being stronger, suffered less. At last, after descending the mountains, they reached the navigable part of a river which flows into the Pacific Ocean. This river they called the Balsas.

In this manner they had transported sufficient timber and rigging for two brigantines, when they discovered that the ravages of a worm peculiar to those shores had rendered it unfit for ship building, having been cut down near the sea-coast. The men were, therefore, obliged to use for the purpose such timber as grew near the river.

The labour and difficulty of building these ships were very great, and the want of food was also felt; but Balboa, having conquered all his difficulties, had the pleasure of seeing the reward of his perseverance. Two brigantines were finished and floated on the river Balsas. As soon as they had been made ready for sea, he embarked with some of his followers, and sailing down the river, launched into the ocean that he had before discovered. Thus, he was not only the discoverer of the Pacific Ocean, but the first European to spread a sail upon it.

When not marching to conquer, Balboa himself had generally been kind and faithful to his promises to the Indians, but had not been able to make his followers the same. His name, therefore, was loved by the unfortunate natives, who looked upon him as one of the few friends that they had, among the strange people who had come and by force taken possession of their country.

But his death had long been resolved upon, and was now to take place. The new governor Davila was envious of Balboa, on account of the discoveries he had made, and the favour in which he was held, both by the Spaniards and the natives; and the time having, as he thought, arrived which was favourable for his villainous design, he sent for Balboa to return to Acla; and on his obeying the command, had him seized by one of his early friends and followers, Francis Pizarro, and thrown into prison. Balboa, after a mock trial, was publicly beheaded at Acla. He died, as he had lived, a brave man. Spain bestowed chains on Columbus, the discoverer of the new world, which chains Columbus directed should be buried with him, and gave to the courageous Balboa, the headsman's axe, as his reward for the discovery of the Pacific!

This great ocean was at first, and is yet sometimes, called the South Sea. It lies between Asia and America, and is upwards of 10,000 miles in breadth. When Magellan entered this ocean, through the dangerous strait that bears his name, he sailed three months and twenty days in a uniform direction to the N.W. without discovering land, and enjoyed such uninterrupted fair weather, with favourable winds, that he gave the ocean the name of the Pacific; the name by which it is now more generally known.

RATTLIN THE REEFER.

THE crew, to a man, would have done anything for me, because—it was very foolish, certainly—I used, for some months, to cry heartily when any of them were tied up. And afterwards, when I got rid of this weakness, I always begged as many of them off from the infliction of the lash, of Mr. Farmer, the first lieutenant, as I could. With him I could take the liberty if I found him in a good humour, though I dared not with the captain; for, though the latter had some attachment, it was a dreadfully wayward and capricious feeling. The longer I sailed with him the more occasion I had to dread, if not hate, him. The poor man had no resources; it is not, therefore, surprising, that he began to have recourse to habitual ebriety. Then, under the influence of his wine, he would be gay, mischievous, tyrannical, and even cruel, according to the mood of the moment. I was learning to play chess of the purser—the game had already become a passion with me. It was also my turn to dine in the wardroom, and, consequently, I was invited. The anticipated game at chess enhanced the value of the invitation. That same afternoon, the captain and I had been very sociable. He gracious, and I as facetious as I could. I had been giving him a history of my various ushers, and he had been pleased to be wonderfully amused.

I was down in the midshipman's berth: a full hour after I had received the wardroom invitation, the captain's steward shoved his unlucky head within the door, and croaked out, 'Capt. Reud's compliments to Mr. Rattlin, and desires his company to dinner to-day.'

I answered, carelessly, rather flippantly, perhaps, 'Tell the captain I am going to dine in the wardroom.' I meant no disrespect, for I felt none. Perhaps the fellow who took back my answer worded it maliciously. I had totally forgotten, as soon as I had uttered my excusal, whether I had or had not used the word "compliments" or "respects," perhaps, thoughtlessly, neither one nor the other. I dined in the wardroom, enjoyed my chess, and, good easy youth, with all my blushing honours thick upon me, of having given mate with only trifling odds in my favour, the drum beat to even quarters. I was stationed to the four aftermost carronades on the quarter deck. I had run up in a hurry: and at that period, straps to keep down the trousers not having been invented, my white jeans were riddled a good deal up my legs. I passed the captain, touched my hat, and began to muster my men. Unconscious of any offence, I stole a look or two at my commander, but met with no good humoured glance in return. He had screwed up his little yellow physiognomy into the shape of an ill-conditioned and battered face on a brass knocker. He had his usual afternoon wine flush upon him; but a feeling of vindictiveness had placed his feelings of incipient intoxication under complete mastery.

"So, you dined in the wardroom, Mr. Rattlin?"

"Yes, sir," my hat reverently touched, not liking the look of my interrogator.

"And you did not even condescend to return the compliments I sent you, with my misplaced invitation to dinner."

"Don't recollect, sir."

"Mr. Rattlin, in consequence of your ignorance, I can forgive a personal affront—dam me—but, by the living G—, I cannot overlook disrespect to the service. You young misbegotten scoundrel! what do you mean by coming to quarters undressed? Look at your trousers, sir."

"The captain is in a passion, certainly," thought I; as I quietly stooped to pull the offending garment down to my shoes.

"Mr. Farmer, Mr. Farmer, do you see that young black-guard?" said the commander. "Confound me, he is making a dressing-room of my quarter-deck—and at quarters, too—which is the same as parade. Hither, sirrah; ho—ho—my young gentleman. Young gentleman, truly—a conceited little bastard!"

The word burnt deeply into my young heart, and caused a shock upon my brain, as if an explosion of gunpowder had taken place within my skull: but it passed instantaneously, and left behind it an unnatural calm. "Pray, sir," said I,

walking up to him, deliberately and resolutely, "how do you know that I am a bastard?"

"Do you hear the impudent scoundrel? Pray, sir, who is your father?"

"Oh, that I knew," said I, bursting into tears. "I bless God that it is not you."

"To the mast-head! Where's the boatswain? Start him up! start him up!"

The boatswain could not make his way aft till I was some rattlings up the main rigging, and thus his intentional and kind dilatoriness saved me from the indignity of a blow. Twice I gazed upon the clear blue and transparent water, and temptation was strong upon me, for it seemed to woo me to rest; but when I looked in-board and contemplated the diminutive, shrivelled, jaundiced figure beneath me, I said to myself, "Not for such a thing as that." Before I got to the main-top I thought, "This morning he loved me! poor human nature!" and when I had got to the topmast-cross-trees I had actually forgiven him.

"Mast-head there!"

"Sir."

"Up higher, sir—up higher."

I hesitated—the order was repeated with horrid threats and imprecations. There was no rattlings to the top-gallant rigging. It had been tremendously hot all day, and the tar had sweated from the shrouds; and I was very loath to spoil my beautiful white jean trousers by swarming up them. However, as I perceived that he had worked himself into a perfect fury, up I went, and to the top-gallant-mast-head, embracing the royal pole with one arm, and standing on the bights of the rigging. My nether apparel, in performing this feat, appeared as if it had been employed in wiping up a bucket of spilled tar. But I was not long to remain unmolested, in my stance on the high and giddy mast.

My astonishment and dismay were unbounded at hearing Capt. Reud still vociferate—"Up higher, sir."

The royal pole stood naked, with nothing attached to it but the royal and the signal halyards, the latter running through the truck. My lady readers must understand that the truck is that round thing at the top of all the masts, that looks so like a button. I could not have got up the well-greased pole, if I had attempted it. A practised seaman could, certainly, and, indeed, one of those worthies who climb for legs of mutton at a fair might have succeeded to mount a few inches.

"What," said I, half aloud, "does the tyrant mean? He knows this thing I cannot do; and he also knows that if I attempt it, it is probable I shall lose my hold of this slippery stick, and be rolled off into the sea. If he wishes to murder me, he shall do so more directly. Forgive him! never. I'll brave him first, and revenge myself after."

Again that deadly calm came over me, which makes soft dispositions so desperate, and to which light-haired persons are so peculiarly subject. In these temperaments, when the paleness becomes fixed and unnatural, beware of them in their moods. They concentrate the vindictiveness of a life in a few moments, and, though the paroxysm is usually short, it is too often fatal to themselves and to their victims. I coolly commenced descending the rigging, whilst the blackest thoughts crowded in distinct and bloodstained array upon my brain. I bethought me from whence I could the most readily pluck a weapon; but the idea was but instantaneous, and I dismissed it with a mighty effort. At length, I reached the deck, whilst the infuriated captain stood mute with surprise at my outrageously insubordinate conduct. The men were still at their quarters, and partook of their commander's astonishment; but I am convinced of no other feeling. When I found myself on the deck, I walked up to Captain Reud, and between my clenched teeth I said to him, slowly and deliberately, "Tyrant, I scorn you. I come premeditatedly to commit an act of mutiny: I give myself up as a prisoner: I desire to be tried by a court martial. I will undergo anything to escape from you; and I don't think that, with all your malice, you will be able to hang me. I consider myself under an arrest." Then, turning upon heel, I prepared to go down the quarter-deck hatchway. Captain Reud heard me to an end in silence, he even

permitted me go down half the ladder unmolested, when, rousing himself from his utter astonishment, he jumped forward, and spurning me with his foot violently on my back, dashed me on the main deck. I was considerably bruised, and, 'before I got to the midshipman's berth, two marines seized me and dragged me again to the quarter deck. Once more I stood before my angry persecutor, looking hate and defiance.

"To the mast-head, sir, immediately."

"I will not. I consider myself a prisoner."

"You refuse to go?"

"I do."

"Quarter-masters, the signal-halyards. Sling Mr. Rattlin."

Mr. Rattlin was slung.

"Now run the mutinous rascal up to the truck."

In a moment I was attached to a thin white line, waving to and fro in mid air, and soon triced up to the very top of the royal pole, and jammed hard to the truck. Is this believed? Perhaps not; yet no statement was ever more true. At the time when this atrocity was perpetrating not an officer interfered. My sufferings were intense. The sun was still hot; my hat had fallen off in my involuntary ascent, and, as the ship was running before the wind under her topsails, the motion at that high point of elevation was tremendous. I felt horribly sea-sick. The ligature across my chest became every moment more oppressive to my lungs, and more excruciating in torture; my breathing at each respiration more difficult, and, before I had suffered ten minutes, I had fainted. So soon as the captain had seen me run up, he went below, leaving strict orders that I should not be lowered down. Directly that the captain was in his cabin, the first lieutenant, the doctor, purser, and the officers of the watch, held a hurried consultation on my situation. But the good-natured doctor did not stop for the result, but immediately went below, and told Reud if I remained where I was I should die. Those who knew the navy at that time will anticipate the answer—no others can: "Let him die and be damned!" The good doctor came on deck desponding. Mr. Farmer then hailed me once, and again, and again. Of course he received no answer: I heard him, but, at that moment, my senses were fast leaving me. The sea, with its vast horizon, appearing so illimitable from the great height where I was swaying, rocked, to my failing sight, awfully to and fro: the heavens partook of the dizzying motion. I only, of all the creation, seemed standing still: I was sick unto death; and, as far as sensation was concerned, then and there I died. Upon receiving no reply, Mr. Farmer sent one of the top-men up to look at me. No sooner had he reached the topgallant rigging than he reported me dead. A cry of horror escaped from all on deck. The captain rushed up: he needed no report. He was frantic with grief. He wept like a child, and assisted with his own hands to lower me down; they were his arms that received me—himself that bore me to his cabin. Like a wilful boy who had slain his pet lamb, or a passionate girl her dove, he mourned over me. It was a long time before my respiratory organs could be brought into play. My recovery was slow, and it was some time before I could arrange my ideas. A cot was slung for me in the cabin, and, bewildered and exhausted, I fell into a deep sleep. I awoke a little after midnight perfectly composed, and suffering only from the wale that the cord had made across my chest. Before a table, and his countenance lighted by a single lantern, sat the captain. His features expressed a depth of grief and remorse that were genuine. He sat motionless, with his eyes fixed upon my cot: my face he could not see, owing to the depth of the shadow in which I lay. I moved: he advanced to my cot with the gentleness of a woman, and softly uttered, "Ralph, my dear boy, do you sleep?"

The tones of his voice fell soothingly upon my ear, like the music of a mother's prayer.

"No, Captain Reud; but I am very thirsty."

In an instant he was at my side with some weak wine and water. I took it from the hand of him whom but a few hours before, in my animosity, I could have slain.

"Ralph," said he, as he received back the tumbler, "Ralph, are we friends?"

"Oh! Captain Reud, how could you treat a poor lad thus, who respected, who loved you so much?"

"I was mad—do you forgive me, Ralph?" and he took my not unwilling hand.

"To be sure, to be sure; but do me one little favour in return."

"Anything, anything, Ralph—I'll never mast-head you again."

"Oh, I was not thinking of that; I ought not to have put you in a passion. Punish me—mast-head me—do anything Captain Reud, but call me not bastard."

He made no reply; he pressed my hand fervently; he put it to his lips and kissed it—on my soul, he did: then, after a pause, gently murmured, "Good night!" and, as he passed into the after-cabin to his bed, I distinctly heard him exclaim, "God forgive me—how I have wronged that boy!"

NAUTICAL SUPERSTITION: THE FLYING DUTCHMAN.

"I REMEMBERS once being off the Cape in a fresh gale o' wind, for the Devil had spread his dirty cloth over the Table Land, and so the hands were turned up, reef topsels. I warn't in a man-o'-war, then, shipmates, I was in an Ingeen-man, bound to Madras and Bengal. Well, as I was a-saying, the hands was turned up, reef topsels; it was the middle watch, somewhere about five bells, and it looked squally and sneezing away to the nor-west, with the scud flying over our heads like a shoal of black spirits riding on the wind, and chasing each other for sport. Well, shipmates, I was then on only a youngster, doing duty in the mizen-top; and so I got the clew-lines stretched along, and the topsel-sheets all clear for letting go, and then I waits for the other watch to come up afore we went aloft. All at once, I see'd a large ship away upon the weather-beam, coming down upon us under every stitch of canvass as a craft can set; studd'n sels a both sides a-low and aloft, though it was blowing very hard at the time; and we'd as much as we could hang on, with double-reefed topsels and top-gall'n't masts struck. So when I see'd her, I sings out 'Sail O!' though, shipmates, I'll swear, point blank, she warn't in sight two minutes afore. So, as I was a-saying, I sings out, 'Sail O, to windward! Port your helm!' for the larboard side was the weather side; 'Port your helm! port! or she'll be aboard of us!' Well, the captain jumps up upon the poop alongside o' me, and he see'd the craft, and halloos through his speaking-trumpet to the man at the weather-wheel, 'Port, lad! hard up with the helm! square away the after yards?' But before she could be got to answer her helm, I'm blessed if the stranger's flying jib-boom warn't right over us, just abaft the mizen-rigging; and so, expecting that we should get our quarter stove in, and mayhap, obliged to swim for it, I claps my arms round a loose hen-coop, by way of a Noah's ark, and holds on like grim death agen the doctor. So I waits and waits for the crush; but, to my wonderment, I didn't never feel not nothing whatsoever touch us. There was no shock, no noise, and so I looked up to windward, and I couldn't get the smallest blink of her; but when I looked to looard, there she was, close to us on our lee-quarter, going steadily afore it, without a yaw of a quarter point either way, and carrying on as taut a press as ever. We never see'd a single creature aboard of her, nor heard the creaking of a spar, nor the rattle of a block. She had a high Dutch starn, and steady she went, rolling along like the white shrouded ghost of a giant, seemingly without straining a ropeyarn. And well she might go steady, shipmates," added the seaman, in a voice of solemnity; "well she might go steady, seeing she was steered by a dead man's hand." Here he paused for a minute or two, and then resumed. "Well! what was the upshot of it? Why, shipmates, if it didn't come on to blow great guns directly arterwards, then I never seed it blow great guns in my life. In less than an hour, we were hove-to, under a close-reefed main-topsel, in a sea running as high as a church steeple. One o' the fleet was missing next morning, and never heard on arterwards."

RODNEY'S ACTION WITH DE GRASSE.

On the 19th of February, 1782, Admiral Rodney arrived in the West Indies with a strong reinforcement of ships from England, and resumed the command. Great preparations were now making, both by the French and Spaniards, for the invasion of Jamaica. Sir George Rodney's first object was to intercept a large convoy of troops, provisions, &c., expected from Europe, but in this he was disappointed; the enemy found means to escape his vigilance. It was the intention of the French admiral, De Grasse, to proceed to Hispaniola, and join the Spanish admiral, Don Solano, who was awaiting his arrival, to make, in conjunction, the pre-concerted attack on Jamaica. On the 8th of April, at day-break, the French fleet left the harbour of Fort Royal. Admiral Rodney instantly made the signal for a general chase; and, early the next morning, he came up with the enemy under Dominique, where the van of the English engaged the rear of the French: the continued calms, however, prevented a general or close action. In the morning of the 11th, a fresh gale sprang up; the chase was renewed; and, towards evening, the headmost ships of the van gained so much on one or two of the enemy's ships, damaged in a late action, that De Grasse thought it necessary to bear down for the purpose of protecting them. Sir George Rodney, who had eagerly watched and waited for this opportunity, now manœuvred the fleet with such skill as to gain the windward of the enemy during the night, and entirely to prevent their retreat.

At seven in the morning of the 12th, the two fleets ranged in lines directly opposite, engaged with the greatest fury. Rodney's whole fleet amounted to thirty-six sail of the line:

that of De Grasse only to thirty-four, but higher rates, with superior weight of metal. The French ships being crowded with men, the carnage was prodigious; but no visible impression was made, or material advantage gained, till about noon, when Sir George Rodney, in the *Formidable*, followed by his seconds, the *Namur* and the *Duke*, successfully broke through the enemy's line, about three ships short of the centre, where the Count de Grasse commanded in the *Ville de Paris*. Promptly supported by the remainder of his division, Sir George wore round close upon the enemy, and actually separated their line, placing the central ships of the French between two fires. This manœuvre proved decisive. The French, however, continued to fight with the utmost bravery, and the battle lasted till sun-set. The *César* was the first ship which struck her colours, having lost her captain, and being reduced to a wreck by her adversary's fire. Soon afterwards she blew up, and all her crew perished. The *Glorieux*, the *Hector*, the *Ardent*, followed the example of the *César*; and the *Diadem* went down by a single broadside. The *Ville de Paris* still held out, though reduced to a perfect wreck, till having three men

only left alive and unhurt on the upper deck, she struck to Admiral Hood, in the *Barfleur*, just at sun-set. Night only closed the action; the shattered remains of the French fleet crowded all the sail they could make for Cape François, and in the morning were out of sight. Sir Samuel Hood being detached to pursue them, came up with five sail off Porto Rico, and captured the *Jason* and *Caton* ships of the line, and two frigates; the third with difficulty clearing the Mona passage. — This was justly considered as one of the most glorious and decisive victories ever obtained by the naval prowess of Britain. The number of men slain in this action, and in that of the 9th, on the part of the French, is estimated at 3000 men, and the wounded were nearly double; so that, taking the prisoners on board the captured ships also into the computation, the French must have sustained a loss of 10,000 or 12,000 men.

Their fleet had on board the land forces intended for the Jamaica expedition; and the whole train of artillery, with thirty-six chests of money, destined for the use and subsistence of the troops, were found on board the *Ville de Paris*, and the other captured ships. The designs of the confederated powers

were thus completely frustrated, whilst the loss of men, including killed and wounded, on the part of the English, did not exceed 1100. Sir George Bridges Rodney was created a peer of Great Britain, by the title of Baron Rodney, of Rodney Stoke, in the county of Somersetshire, and a perpetual annuity of £2,000 was annexed to the title.

In this memorable but very decisive engagement, Lord Robert Manners, son of the great Marquis of Granby, received so dangerous a wound, that he died on his passage to England, in the twenty-fifth year of his age; he was

a young officer of distinguished abilities, and universally lamented in the navy.

[LORD MANNERS SEVERELY WOUNDED.]

A TALE OF THE PRESS-GANG.

BY THE EDITOR.

DURING the last war, I held an appointment on board the *N—*, then fitting out at Chatham. We received orders from the Admiralty to join the fleet, lying at Spithead, under the command of the noble Nelson. As we were deficient some fifty men of our complement, the boat was manned and sent ashore, with orders to catch all likely "birds," and that if our eloquence proved unavailing, to have recourse to the more striking, though undoubtedly less fascinating inducement—force. We were on the cruise one dark night, when we fell in with a fine strapping, handsome fellow, dressed half-seaman and half landsman fashion; and who looked as though engaged on some small craft on the river. We instantly surrounded him, and he was seized by more than

one hand. But throwing us from him, as though we were mere children, he struck out right and left, with a vigour and force, that lay more than one of our brave fellows on the ground. We had an old man with us, tough as the oak, and as merciless as death itself. He raised the thick oaken cudgel, with which he was armed, and with an oath, too appalling to be recorded here, struck the young fellow, who was so gallantly defending himself against such fearful odds, a terrific blow on the head. We heard shouts, and the approach of footsteps; and seeing the young man, who had fallen, we hastened to the boat; for the inhabitants had an unconquerable hatred to a system, which, without a moment's warning, rendered families wretched from the loss of a father or a brother. While we pulling towards the ship, one of the crew, who held our victim's head, cried suddenly, "God, how he bleeds!" "Ah!" cried the old man, in a tone of such fierce joy, that it sounded like the voice of a demon. "Who knew Billy's hand to fail?" We lifted him on board, and the form felt as motionless and heavy as a dead man's. He was carried below and laid on a couch, while I proceeded to wash his head and divest him of his clothes; which were saturated with the poor fellow's blood. When this was done, the stark, staring, glassy eyes, the relaxed jaw, and the silent heart, told me he was dead. I covered his face, contorted and hideous from the agony of a violent death, with a sheet, and then wept like a child. The old man entered: I had neither sense, power, nor wish to stop him; advanced to the bed, and with the same laugh on his lips, drew the sheet from the face of the corpse. The action had scarce been done, ere a cry of heart-breaking anguish came from his lips; as he rather shrieked than said, "Oh, God! oh, God! I've murder'd my son. Oh, Tom! dear Tom! do speak; only one word—Tom, Tom!" He rolled on the bed in his agony, and imprinted burning kisses on the face of his son, whom he had murder'd. I went to him to drag him from the corpse. The agony of the last few moments had turned his brain. He was mad—raving mad.

"Who said he was dead?" he cried, "why he's alive and kicking, ha! ha! Look how he laughs! Isn't he handsome? His mother's eyes and mouth to a line!" He went on in this way, rambling from subject to subject, with all a madman's incoherence. I covered the face of the dead man over again, to hide it from his sight, and then coaxed his father from the cabin. When I retired to my hammock, the frightful catastrophe I had seen, was acted over and over again, with fearful precision. I shook (though no coward) with fear. I was alarmed by the report of a pistol, and sprang hastily into the cabin where the corpse lay. The cause was apparent, the old man, with all a madman's artfulness, had secreted a pistol; had shot himself; and, writhing with anguish, had crept to the corpse of his son, and entwining his arms about his neck, had shed his heart's blood on his bosom.

They were buried in one grave ashore, in the church-yard adjoining the cathedral at Rochester.

BILL BUCKLE'S YARN.

THE Ariadne was as fine a barkey as ever seaman set foot aboard on. Her masts tapered away like a lady's sigh, every rope taut as harp-string, sails furl'd smooth in the bunt as the padding of a maiden's bustle. She mounted eight-and-twenty long eighteens on her main-deck, 'sides two Long Toms; bow chasers, in her bridles. She was none o' your round-starn, galloo, goose-rump craft, like the new-fangle fiddle-cases as 'em launches now-a-days. Her quarter-galleries glittered with red coopids and golden flower-pots, 'sted o' being shav'd off like a hen's transtum, with all the feather's blown away. Then, eyes-an'-limbs, what a glorious figger-head! Talk o' your goddesses, your duchesses, an' your Wenusses! The best on 'em couldn't show a candle to the bootiful busk of Ariadne, with a crown on her head fit for a queen to wear, an' a coral necklace hanging over a pair o' cat-heads, that might have tempted a Methodist parson, or an angel itself. Three hundred prime fellers danced on the decks. None

o' your sour-grout, tee-total, bible-society skilly-gallees, but honest lads, fit to rob a church, who stuck to the grog while they could see a hole in the main-hatchway gratin! Oh! it was a grand sight, messmates, to see her sailin' out of Porchmouth harbour, rigg'd all a tanto, stern sails low an' aloft, captain 'pon the hammock cloth, band playin' "off she goes," and the ramparts covered with petticoats, all wishing good luck to the saucy Ariadne. God bless their pretty eyes! Many on 'em were water-logg'd with briny tears. Sally Rose waved a new bandana at Joe Sims, while our swingin' boom swept over Bocker's Pint, an' my Bet, with her two young 'uns stood sniv'lin' under Jack, the painter. Well, I looks at 'em agin and agin, till a drop or two roll'd over my starboard cheek, but that might a bin' from a puff of wind gettin' into my eye through the bow-port. If not, what signifies? Away we goes for St. Helen's, and Joe Sims never saw his Sally, or the Sally-port agin; but avast heavin' there, I'm runnin' my story starn foremast, like a Lowestoff life-boat, an' have almost slipt out the end of my yarn before I've properly untwisted the beginnin'.

Howsoever, no sooner we gets outside o' Scilly, than one precious dark night, when nobody could tell the purser's red nose from the copper cross-piece on the cabin funnel, a thunderin' long craft shoots athaut our bows, goin' away large with the wind on her starboard quarter. "Up with the helm," cries our skipper; "pipe to quarters." Eyes-an'-limbs, what a sheave! Well, in course Joe Sims bein' stationed aloft, goes up to stopper the topsail sheets, while I clears away the foremost gun on the quarter-deck, as it was my 'pinted duty so to do. "Ho! Ho! la Bartimong, ho!" sung out a stranger, which you must know, messmates, is the French lingo for "Ship a-hoy!" "We Mounseer," cried our skipper; "send a broadside into the b——y Crappo," says he, no better, no wuss. Upon this we make no more parley-voo, but goes to work with a will, ding-dong, hammer and tongs. There was sponge and load, prick an' prime, handle your matches, and blaze away! Presently I feels an infernal whack on the top o' my truck. Who should that be but Joe Sims, as had bin shot through both legs with a musket-ball, which dropt from the outside o' the top rim plump into the top o' my timsy brim! "All well it's no wuss, Joey," says I; "it's broke your fall, an' giv'n my sow-wester a cable-tier pinch, but it's quite a marcy you hadn't split my cocoon-tun comin' down with a singe after that fashion." "Stopper over all upon your jaw-tackle," said poor Joe, "an' give us a lift down to the doctor." With that we carries him below into the gun-room, an' I'm blow'd if there wasn't pritty cuttin' up of beef goin' on in that latitude. Mayhap some o' ye 'members Tom Jenkins, captain o' the afterguard? He was my tie-mate in the Ariadne, and not a feller in the barkey had a thicker or a longer head o' hair. Well, our doctor's mate, bein' blind o' one eye, an' scarce able to see out o' the other, goes up to 'Tom, who lay stretch'd like a corpse upon the imputation table, "An' what's the matter with you, my man?" says Bolus. "A grape-shot in my starboard counter," says Tom. "Let me feel your pulse," said the doctor, takin' hold of Tom's pigtail, which hung over the edge o' the table as thick an' as long as my arm. Then clappin' his flipper on the club end of it, an' winkin' his purblind eye, the doctor shook his head, (but there wasn't much in that,) and says he to Tom, "My man," says he, "you're much weaken'd by demurrage or loss of blood, your pulse is down to fifty." "It's the first time," says Tom, "as ever I heard of a pulse in the pigtail." "Pigtail, you vagabone," screamed the doctor, "I thought as how I'd got hold o' your wrist."

Leavin' Joey to have the bullet distracted, in course I goes back to my station. Presently a double-headed shot hits our skipper amidships, an' chops him asunder like a carrot. Howsoever, it's an ill wind that blows nobody good: what's one man's pies'n's another man's broth; an' sartinly for promotion there's nothing better than bloody war an' a sickly season. So Abel Harvey, the first lieftenant, he takes command; an' well they might christen him Abel, for a smarter officer never walk'd into the naval sarvis through the cabin window. Why, he'd an eye like a hawk, a voice like a nightingale, an' a heart like a lion! What more would you have of a British sailor?

By-and-by Johnny Crappo's mainmast went by the board,

an' he paid round off, turnin' his tail to us, as if he meant to say we might kiss it if we liked; but Harvey sends a young aid-de-camp of a reefer along the main-deck, with orders to double shot, the guns, we gives Mounseer such a dose through his starn-post as made fine work for the glaziers. "Up wi' the helm, an' all hands for boarders!" roared the gallant Harvey, when crash went our bo'sprit through the inimy's waist hammocks. Every Jack handled his cutlash an' tommyhawk, an' away we goes like a pack of bull-dogs over the Frenchman's taffrell. Here was cut an' come again, sarvin' out slops, toko for yam, slash right an' left, hurrah! and, "Weave L'Umpey-roar!" Give the devil his due, the soup-meagres fit as well as could be expected of sich warmint; but it was only like tryin' to scrub the black cook white, all labour in vain. What chance o' they again the Ariadne's, led on by Abel Harvey? Poor beggars! why I'd settled to buy Bet a new silk police out of my share o' the head-money afore the action begun; and no man could ever say as how Bill Buckle broke his word, come what might, six dozen at the gang-way, or a five-pun note a pay-day.

But I'm yawnin' out o' the course, lads, so let's bring her to a small helm agin. No sooner was the prize secured, and all the misery-ordres stow'd down the hold, then away I goes in search o' Joe Sims. "Tip us your flipper, bo," says Joey; "it's true they've rather mistlied my dancin' in this here scrimmage; but what o' that? I'm worth two dead men yet, an', damme, but I'll be even wi' the French rascals one o' these blessed days!"

"You shan't want for wollunteers to lend a hand in that sort o' bisness, Joey," said I, "seein' as how I haven't forgot the cable-tier pinch they put in my tarpoling hat, sendin' you down by the run-on the top of it like the heel of a maintop-mast."

Howsoever, I got better fast, an' he was out o' the doctor's list afore you could say Jack Robisson; when one day we spies a schooner on the lee-bow. First, we thought as how she were one o' your riglar Yankey clippers, or Warejinny pilot-boats; but we soon comes up wi' her, hand over fist, an' upon sendin' Long Tom across her forefoot, she jist diskiver'd the tail of a Spanish insine, an' struck demedutly to the go-along Ariadne. I sees great argufyin' among the quarter-deckers as to how we shou'd get pursion o' the prize. The sea run awkurdly high, breakin' in cauliflower heads, so that ev'n the jolly war'n't to be trusted; even Harvey swore he wou'd a devilish syht sooner let the Dons and her dirty dollars escape altogether, than risk the life of a single Ariadne. Twice we tries to drop a man aboard from the end of the jib-boom, but that ere was impossible, the Spaniard pitchin' like a pile-driver. In the second dog-watch, howsoever, we gets a bit of a lull, when Joe Sims an' I, Tom Jenkins, an' Bill Jones, steer'd by a clever reefer, shoves off in the jolly, to try our luck, whether or no Tom Collins. We jist reaches the schooner's quarter, when I sees a curly-headed topper comin' roarin' down upon us, with a ridge o' surf upon his back, rampin' an' bellowin' wuss nor Madrass beach in a tifoön. "It's all dickey with us," said I, jist as the schooner gives a send aft, splashin' her boom-end into the water alongside the boat, like the tail of a grampus. In a moment Sims an' I catches hold of a reef-earn, clingin' to it like grim death; an' as her starn rize, it swung us both into the air,—the sea burst underneath with a voice o' thunder, an' neither boat, reefer, Jenkins, or Jones ever saw the light o' heaven agin.

"Well, there we hangs danglin' at the end of the boom, like a couple of golding fleeces over an ale house upon Common Hard; but we soon shines in aboard like lamp-lighters, an' takes away the Dons' toasin-forks in a jiffey. Then I shoves Johnny Spanyole away from the tiller, an' took his trick at the helm myself. In course, as there was but Joe an' I agin two an' twenty signors, we was forced to keep watch an' watch, one eye open an' t'other shut, according to sarcumstances. About two bells in the middle watch, my whiskers! there comes a squall, sharp enough to blow the devil's horns off. The strongest fellar aboard cou'dn't a' held the edge of a knife to the wind, an' if a man had a' open'd his mouth to wind'ard he must a' turned it round to loo'ard to shut it agin. Why, it blow'd all the anchors off the officers' buttons, so you'll allow there was a fresh hand at the belluss. "Lower away the main-

sail signor," said I; but not a soul seem'd to understand plain English. "Arevo! casteelo! otrabando! killer the butcher," roared Joey, jokin' the lubberly Spaniards, "rowse up my hearties, an' give us a pull o' the peak downhall." "Non intendez," whin'd the frighten'd frickasees, an' droppin' on their knees, begins a crossin' themselves, an' a bellowin' out, "O Santo Francisco! O Sant Antony!" But Joey seein' the jaw-rope o' the gaff wou'dn't travil for want o' grease, "Damn your Sant Antony's," said he, "give us a lump o' santum smearum; an' as for crossin', get across the gaff and ride it down, 'sted o' catterwaulin' like a tea-party o' harlots at a chris'nin." All, howsoever, wou'dn't do; over she went upon her beam-ends, the poor lousy Spaniards givin' a univarsal schreech as the sea rolled her under, the whole kit goin' down to Davy Jones' locker like a dip-sey lead, all 'cept Joe, I, an' the Spanish skipper, who lashed ourselves fast to the upper rough-tree.

For a week a'ter this capsize there we three struck upon high starvation—nothin' a-day, an' find yourselves—everlasting banyan-day, an' no grog—ship under water, black sky overhead, ragin' ocean all round, hunger squatted at the bow, and thirst upon the starn-post! Truly might our chaplain say—"Them as goes down to the sea in ships, and does their bisness in great waters, these men see the wonders o' the Lord, an' his works upon the mighty deep!"

The Ariadne parted company that same night, as the schooner turn'd the turtle, an' not a sail cou'd we dissarn in any quarter. For seven weary nights an' days, each on 'um a year long, we strainin' our eye-balls a lookin' for help, but found none. I shares my backey-box with Joey an' the Spanyole till there war'n't a chaw left. Then we pull'd all the hide off the lower riggin' and knar'd that; an' a'terwards we cut up the Spaniard's leather breeches, which kept life and soul together, tho' mayhap many wou'd a thought the meat rather unsavoury. Joe's hairy cap went next, an' that warnt much more palatable, 'sides it could scarcely be spared, being our only tank for catchin' rain water. Then a'ter all was gone, we squeezed one another's hands, an' blubber'd like babies.

However, sniv'ling was no use, an' the worst was yet to come. We star'd upon one another till our eyes dried, our hearts harden'd, an' we begins to think on the Lots! What won't hunger and thirst drive men to do? Them's hard times when human creeturs feel like wolves, an' change natur with sharks and halligaiturs. "We're two to one," said Joe, "but fair play's a jewel: we'll take no advantage o' the Signor, though he is but a furriner." So we put three bits o' rope-yarn in my tarpoling hat, gave Don Spanyole the fust chance, drewed our own lots, an' the shortest fell upon Joey! Werrily! I thought as how this wou'd a broke my heart asunder, for in course Joe was dearer to me than my own flesh—far more than a lousy Spaniard, what didn't savey one word of our lingo, nor we of his. I offered Joe to take his chance—I even wanted to skiver the Signor—but all was like whistlin' jigs to a millstone. "Never," said Joey, "you has a wife an' young uns, Buckle, an' so, mayhap, has the poor Spanish skipper; 'sides, the lot was fairly draw'd, an' damn the dog that finches. I defies a man, woman, or child, to say black's the white o' Joe Sim's eye. I've always done a seaman's duty, and so I will even here, messmate, clingin' to a few slippery planks upon a roarin' ocean. I will die, Bill, as I've lived, true blue to the back-bone." Kneelin' then as well as he was able, athaut the gunnell, he seemed to pray earnestly; then untwisting his pigtail, he cut off a long lock of his brown hair, an' tied it up with the 'dential bit o' yarn what sealed his doom. This he put into my hand, an' gripin' my fist, exclaimed, "God bless you, Bill, give this token with my last love to dear Sally Rose!" Havin' said this, he lifted the knife, cool as a cucumber, an' wou'd at once have settled the job by drawin' it athaut his throat; but I grappled him, an' made him promise to wait until another daybreak, thinkin' as how summit might heave in sight to pick us up. Joe, howsoever, as he said, was no fincher; in the middle of the night he suddenly stabbed the knife into his heart, crying out, "Good bye, Bill, mind you 'members Sally!"

Now, I 'spose as how you thinks I've gone to overhaul what followed a'ter Joe's death; but avast heavin' lads, I can hardly bear to think, far less to speak, of what that

Spaniard an' I did to presarve our lives for eight dismal days an' dreary nights. Life is sweet to all men, 'specially to him as has a wife an' helpless babes at home. If there was sinfulness in what we did, there is a commander-in-chief above who is able and willing to weigh the temptation agin the crime. It was his goodness what sent a merchantman to pick us up at last, an' it was his bounty what gave me the means to purwidge a home for poor Sally. So now let's pull the capstan for a full dew, since no purchase ever invented by mortal man shall drag another word upon this here matter out o' the jaw-tackle o' Bill Buckle.

INTERESTING NARRATIVE.

On the 12th of March, 1822, the ship *Wear*, Thomas Thomson, master, carrying eleven men, sailed from London for a cargo of ice. Nothing particular occurred till the 28th, when she was struck with a large flaw piece of ice, about 11 a.m., upon the larboard bow. The men immediately tried the pumps, but she filled so rapidly, that they were found to be of no use. Finding themselves thus situated, they proceeded to fix the ice-anchor, which they accomplished. They then began to collect provisions; they got out four bags of bread, each containing one hundredweight; several pieces of beef and pork, amounting to nearly a hundred pounds; a box of candles, about eighteen inches square; and six-and-thirty yards of new canvass, together with all the ship's stock of nails. Very fortunately, they had a sextant; they also saved nine blankets. John Williams, the carpenter, saved a few of his tools, consisting of one axe, a tenant saw, a spoke-shave, a mallet, and a small chisel. The wind blowing rather brisk, the ship broke loose from the ice, leaving six, who were receiving the stores, on the ice. The remaining five on board immediately endeavoured to get out the boat, but whilst thus engaged, the ship went down, about five minutes after twelve, leaving the long-boat floating upside-down in the water. The captain, mate, and cook, rising again, got on the top of the boat, and by the help of two studding-sail-booms, and two oars, they reached the ice; and by laying the oars from one piece of ice to another, they reached the other part of the crew.

With the canvass and oars they erected a tent to screen themselves from the wind, and night coming on, they collected what clothes they had saved to sleep on, and cover them with. In the night, the weather becoming much more cold, they were obliged to run about every half hour, to keep themselves warm. On the 29th, some, finding themselves stronger than the others, proceeded to lay the booms and oars, in order to reach the place where the ship sunk, and collect whatever they could find floating. They recovered a boat-hook, a rough oar, three main hatches, and the slide of the half-deck hatch; but no remains of the boat were to be seen. They then returned to the others, having been away about four hours: in returning, they found a coil of rope, which the captain had fortunately thrown upon the ice, when on deck.

The following day, the ice was so open that they found it impossible to get more than fifty yards in any direction. Being thus situated, and thinking that some other vessel might be going on the same errand, for ice, they formed a triangle with the oars, and tied four handkerchiefs on the top for a signal. They then began to collect what materials they had to build a boat with, which consisted chiefly of the booms and three hatches. They began by placing the booms parallel to each other, at the distances of two feet four inches, then knocked off the boards from the carlings, and, nailing them to the booms, thus formed the bottom. With the carlings they formed the sides of the boat, and the slide of the half-deck hatch, formed the stern; the wood remaining of the booms, served for the head or bow; the rough oar was split into two, which formed the gunwale: the canvass was extended twice round the outside, being nailed to the booms at the bottom, and lashed to the gunwale at the top with spun yarn, made from the rope. This occupied them until the 8th of April. About twelve, p.m., of this day, when they were all fast asleep on the ice,

they were driven out to sea, and were nearly covered with water, before they were aware of their increased danger. Most of their provisions were washed away, chiefly their bread; whatever continued to float they saved.

On the 9th, being provided with a flint and steel, they made a fire of rope, in order that they might melt the candles to grease the outside of the boat, and keep out the water. On the 10th, having finished their boat, which in breadth was two feet four inches, and in length twelve feet six inches, they launched it, and, delighted with the result, they gave three hearty cheers. They all immediately got in, and proceeded through the ice, by the help of their oars, towards Iceland, from which place they were distant about a hundred leagues. They had not been gone long when they were obliged, by the exceedingly thick weather, to get upon another piece of ice; they slept there all night, and on the 11th, proceeded on. Their provisions being nearly gone, they caught as many seals as they could. Towards eleven, p.m., they again got upon the ice, and in this manner proceeded until the 13th, about four, p.m., when, finding it impossible to get any further, the ice being so thick and close, they were obliged to stop. They collected what drift wood they could on the ice, to make a fire of, and cooked two seals.

On the 14th, they steered their course towards the Faro Islands, and proceeded, much as usual, till the 17th, when they got into clear water. On the 18th, they cooked four seals, filled the candle-box with fresh water, obtained by melting ice, and three bags with ice, with the intent of putting out to sea, should the wind be favourable on the 19th. On this day, the wind blew strong, and the boat being very narrow, they were obliged to throw out a bag of ice to keep it from upsetting. They continued steering for the Faro Isles until the 22nd, when the wind changed to the eastward, on which account, not being able to proceed, the water in the box being used, and the ice in the bags having been melted, they judged it better to steer towards Iceland.

On the 29th, three men died for want of water. At eleven o'clock they reached the shore, and remained there two days, creeping on their hands and knees, having lost the use of their legs from cold, and their confined posture in the boat, when they were accidentally taken up by some of the inhabitants who were passing in a small boat, and were treated very well. They remained there till the 1st of June, and embarked for Port Rush.

FALSE ALARM.

DURING the late siege of Gibraltar, in the absence of the fleet, when an attack was daily expected, one dark night, a sentry whose post was near the Devil's Tower, and facing the Spanish lines, was standing at the end of his walk, whistling, looking towards them, his head filled with nothing but fire and sword, miners, breaches, storming, and bloodshed! By the side of his box stood a deep narrow-necked, earthen jug, in which was the remainder of his supper, consisting of boiled peas. A large monkey, encouraged by the man's silence, and allured by the smell of the peas, ventured to the jug, and in endeavouring to get at its contents, thrust his head so far into the neck, as to be unable to withdraw it. At this instant, the soldier turning round, came whistling towards his box; the monkey, unable to get clear of it, started up to run off with the jug sticking on his head. This terrible apparition no sooner saluted the eyes of the sentry, than his frantic imagination converted poor pug into a fine, blood-thirsty Spanish grenadier, with a most tremendous cap on his head. Full of this dreadful idea, he instantly fired his piece, roaring out that the enemy had scaled the walls. The guard took the alarm, the drums were beat, signal guns fired, and in less than ten minutes the governor and his whole garrison were under arms. The supposed grenadier, being very much incommoded by his cap, and almost blinded by the peas, was soon overtaken and seized, and by his capture, the tranquillity of the garrison was restored, without that slaughter and bloodshed which every man prognosticated in the beginning of the direful alarm.

SHIPWRECK OF THE AMAZON FRIGATE,

During an Engagement with a French Ship.

On December the 21st, 1796, the Amazon sailed from Falmouth, in company with the Indefatigable frigate of forty four guns, Sir Edward Pellew, commander, after bringing intelligence of the French fleet being at sea by some of which they had a few days ago been chased. They stretched, however, to the westward, off Ushant, with an intention to watch their motions more narrowly; but the weather turning so very thick and foggy, and coming on at the same time to blow a heavy gale from the westward, they thought it necessary to give the enemy's coast a wide berth. This gale continued for a considerable time, and drove

them a long way to the southward; but when the weather cleared, and the gale abated, they thought it proper to pay the coast of Spain a visit, and hovering awhile off Corunna, they fell in with one of their Havannah men, which they despatched for England, and soon after they fortunately captured two more Spanish vessels, which they sent home likewise.

They now scoured the coast along to the southward, as far as Cape Finisterre, but met with nothing that was worth notice. Hearing, however, from a neutral vessel, that the French fleet was out, consisting of nineteen sail of the line, besides transports, having troops, ammunition, and other implements of war. They imagined they were on some great expedition; and as their two frigates were remarkable for sailing, they thought it most expedient to endeavour to get

SHIPWRECK OF THE AMAZON FRIGATE.

sight of them, to watch their motions, and carry the intelligence to the British fleet. With this intention they made sail to the northward with all expedition; and getting about the latitude of 46 N., it blowing a fresh gale from the westward, they thought it necessary to go under easy sail, and keep a good look out, as they were in the track of vessels coming out of Brest. On the 13th of January, 1797, the morning being thick and foggy, it still blew very hard from the westward, but at noon it cleared up a little. The commander despatched a sail to the eastward, and making sail towards her, they found she made for them; the weather still clearing up more they found she could not answer their private signals. This plainly discovered her to be an enemy; then getting their top-gallant masts and top-gallant yards up with all expedition, and giving chase under a heavy press of sail, they found they

came up with her, for they still kept her in sight, though it began to grow dark. Finding then there was no danger of her getting away from them, they made preparations to give her battle.

About six o'clock, the Commodore, being the headmost ship came along side of her, and after exchanging a few broadsides with her, steered off to give the Amazon his place, which she soon took; and giving her some heavy salutes, they could not keep their vessel from running a-head, therefore they thought it necessary to steer off to windward, and take a reef in their top-sails, to adjust their sails to keep due company with their antagonist. Being thus refitted, they saw the enemy was much disabled by the loss of all his topmasts. However, by eight o'clock they got their wreck pretty clear. They undauntedly laid the adverse vessel right along side, with the

intention of bringing down her flag, or sending her to the bottom; this being the first time they discovered her to be a line of battle ship; for finding her metal to be very heavy from both decks, with continued volleys of small arms, Captain Reynolds thought it proper to take the advantage, and rake her every opportunity; accordingly they did, working round her sometimes on the bow, and other times on the quarter, in a very judicious manner. The seamen kept up a continual fire the whole time; and about ten o'clock they perceived her mizen mast go by the board, which certainly must have occasioned great confusion on board to the enemy; notwithstanding all this, they still kept up a continued fire, and drifted towards the shore with what sail they could set.

At this time the enemy would doubtless have struck to the

English frigates; but it blowing fresh and dead on the shore, and they knowing, by what distance they had run, they could not be far from the land, they were resolutely determined to run her on shore, and run all hazards of their lives, for then she could be compared to nothing but a mere wreck. This was about twelve o'clock, the enemy being then in a deplorable situation, with scarce a mast or yard standing that they could depend on, and consequently there must be a great deal of water in her hold; so, as there was no signal made for the Amazon to steer off, she still kept working round the French ship as before, sometimes raking her forward, and sometimes aft, and other times alongside; in this manner they kept her in constant play.

About three o'clock in the morning the Amazon's main-top-sail yard and mizen-top-mast was shot away; this being the

only considerable damage they could perceive they had received at this time, and that being but trifling to what the enemy had suffered, they began afresh on her again, and fired in her with such heat and violence that they silenced the guns entirely; but being so very close to them they made several attempts to board the Amazon, but the officers having always sufficient command of the ship, found little difficulty to prevent their intentions.

About four o'clock in the morning, the weather still remaining very thick, they observed the water turn rather smooth, and Captain Reynolds conjecturing they were too nigh the land, immediately ordered a cast of the lead; which being done, they found there was thirteen fathoms of water, and at the same time, through the fog, saw the land under their lee, the enemy being dismasted and wrecked.

Every exertion that was expedient was now made to get the ship on the other tack; but finding their braces, halyards, &c. all shot away, and by the loss of their main-top-sail-yard and mizen-top-masts they could get no after-sails on their ship, they found they inevitably must be wrecked; and, accordingly as they expected, on the 14th, about five in the morning, she struck the ground, and for ten minutes beat very hard. The officers considered that she would lay much easier if they cut away her masts, which immediately was done, and as it happened to be on the ebb tide, in a short time their wreck lay pretty easy.

Now their fate was in an equal poize, death or imprisonment, which choice was indifferant, for they would as soon embrace one as the other. But however, they endeavoured to keep their spirits as cheerful as possible, until day-light, to see what

might turn out in their favour; but while they were thus waiting for the approach of day, eight of their crew consulted together, and stole away one of their boats from the stern. But not inspecting the boat to see what damage she had received from the engagement, soon after they left the ship, she swamped: six of them were drowned, and the others with much difficulty reached the shore.

When day-light appeared, they saw the tide was ebbing very fast; so that they were under no apprehension of getting safe on shore, and they saw the enemy's ship in a more dangerous situation, and crowds of people flocking from all parts of the adjacent country, and placing themselves on the beach, right opposite to them. They no sooner got their feet on the beach than their hands were in their pockets, robbing and plundering them of everything. Regardless of these ungenerous wretches, they got all their wounded shipmates on shore, that were not able to assist themselves, leaving only two on board (Ralph Smith and Moses Roach), who died of their wounds. William March was so dangerously wounded, that they could see but little hopes of his surviving; but his messmates tenderly carried him on shore, and took him up to the first inhabited place, leaving him in care of the woman of the house, giving her clothes and necessaries to shift him, and money to supply him with any refreshment that might be found requisite. They were then driven away by the French soldiers, to join the rest of their crew, who were altogether at a small distance from where they landed; where they mustered and found only the before-mentioned two killed, six drowned, and thirty-six wounded, some very slightly.

Whilst they were here they were joined by some Englishmen who had been taken prisoners on board the enemy's ship, who informed them that she was a French seventy-four, the *Droits de l'Homme*; she sailed from Brest with the rest of the French fleet, with the intention to land troops in Ireland; but by a gale of wind had parted the fleet, and was driven to where they fell in with her. They likewise gave them an account of the dreadful slaughter they had made on board of her. Their crew consisted of one thousand five hundred and seventy-four men, seamen and troops; and by the lowest calculation, five hundred of them were killed in the action, and what were drowned they could not tell; but they positively affirmed, that out of the whole ship's company, there were not above two hundred reached the shore alive; they declared that in the time of the engagement, the blood ran from the deck on them in the hold where they lay; they likewise said, had she not run on shore when she did, it would have been impossible to keep her long above water.

The crew of the *Amazon* were now rudely marched away by a strong guard of soldiers, about three miles up the country to a fort, near which is a small borough town called Hodiernne, where, when they arrived, they were mustered, and all strictly searched for knives or any other edged tools. But their real intention was for the sake of plunder; and in that they did not fail, for some they left without the second change of anything. After this they were all put into an old church; and the remaining part of this day they passed in a deplorable situation, without either victuals or drink, until near eight o'clock in the evening, when they had every man a small glass of brandy and a biscuit; with this they composed themselves to rest, as well as their different habitations would permit them, and being every one harassed out with fatigue, they found but little difficulty to sleep, although their lodging was hard.

The next day, in the afternoon, they were paid a visit by their captain and officers, who gave them every applause for their courage and behaviour in the action. Captain Reynolds promised faithfully to exert his interest as far as lay in his power, to get them released as soon as possible, so they gave him three huzzas, which he and the officers returned, and took their leave of them. After this they were served out with about two ounces of beef a man; and with an equivalent quantity of brown bread, with orders to prepare for marching next morning to Brest.

On the 16th, before they proceeded on their journey, they were treated with a breakfast, which consisted of nothing

better than brown bread, and water. After this poor regale, they were mustered together in a yard; and as they were thus standing in readiness for marching, they were again visited by their captain and officers, who still promised to do the best of their endeavours to get them over to England as soon as possible. This done, they cheered them all singly as they went out, and then by the beat of the drum proceeded on their journey.

The bay they were wrecked in was called Hodiernne, about one league and a half from the town, and about two leagues from the French ship. After a fatiguing march they arrived, about seven o'clock, at a place called Douline, distance from Hodiernne about twenty-five miles, where they were to remain all night, and were accordingly put into an old church as before, but with this addition, that they were allowed straw, which, however, had to serve them for victuals, drink, and lodging.

In the morning they were alarmed by the officers of the guard, with an order to prepare for another day's march; accordingly on the 17th, about eight o'clock, with as good spirits as could be expected, they proceeded on their journey, though very unfit for it, through the want of proper sustenance. However, they bore all with good spirits, and about four o'clock in the afternoon arrived at the place appointed, which was called Quimper, distance from Douline twenty miles. This seemed to be a very extensive and populous town, but they were not permitted to have any great view of it, for they were soon shown their place of confinement, which was no other than the common town jail; and which was worse than any of their former prisons, for here they were ranked with thieves, murderers, and traitors to their country. They found that this dismal place differed from their former one for the worse in every respect, but especially one, and that was in diet; for to their sorrow they got no victuals, nor did they see hopes of getting any this night. They then considered the money and clothes the only friends they could apply to for relief; so with the help of these, they purchased such refreshments as were necessary.

When day-light appeared they arose, and made application to the commissary for some subsistence; after some hesitation he complied with their request, and sent in beef and bread, and wood to dress it with; about one cwt. of beef amongst two hundred and thirty men; but the butcher that dressed this bullock, artfully contrived to put the head, shin, sticking-pieces, liver and lights, in their lot.

Early on the 20th, they were ordered to prepare for marching; and by the beat of drum they proceeded on their journey. About six o'clock in the evening they arrived at Chatolin, distance from Quimper about twenty-six miles. Each man having got his small property under his arm out of the carts, they were shown their night's quarters, which was an old church, which the good natives were pleased to convert into their head rendezvous. About eight o'clock they had the pleasure of seeing some beef and bread sent in to them, and thrown down in the middle of the prison; when every man immediately seized his loaf and share of the meat. The next day they marched to Aurfur, distance from Chatolin about twenty-two miles. This place is a small borough town, seemingly of no great business, its buildings low and mean, and the inhabitants did not appear to have any show of grandeur, but rather of a low class; they consequently began to be very apprehensive of having but an indifferent night's lodging, and indeed they were not at all mistaken, for when they were shown into their place of confinement, they had to ascend up a broken pair of stairs to a place much resembling a cock-loft, with windows without glass, and indeed the whole fabric seemed so much on the decay that they could not rest with safety under the roof. About seven o'clock their beef and bread were sent in, but the disagreeable smell of the place deprived them of all appetite, and taking up only their bread, they converted their clothes into brandy, and by this means confused their brain without filling their bellies; then getting a good quantity of straw to cover themselves, they all sunk down to rest.

On the 22nd, they marched to a place called Landenor, dis-

tance from Aufour about twenty-five miles; where, after much fatigue and weakness, they arrived about five in the evening. Here they were lodged in stables, with hay and straw, and soon after their usual quantity of beef and bread was sent in. On inspecting their place of confinement, they found a back door that led to an adjacent house; the people of which were remarkably civil, and as they procured their livelihood by disposing of spirituous liquors, they gave the prisoners to understand, that if they kept themselves sober, and behaved with any degree of decorum, they might have their victuals dressed to perfection, gratis; and likewise be supplied with anything they wanted, at a reasonable profit. These promises were accordingly made good, and having finished their supper, they spent the evening in a very agreeable and social manner; drinking pretty freely for the benefit of the house, as a recompense for their kindness.

About nine in the morning they set out on their last march, and about four o'clock in the evening arrived at their place of destination, which was called Pontenezen, about three miles from Brest, and about twenty-two from Landenor; when they came to the gates of this prison, they made a general halt, to let the carts with the baggage come up, and in about half an hour's time joined them, and every man taking his small remnant, that he had left, the gates opened wide, and in they passed. Here they saw the bounds of their confinement, which was a square piece of ground about a mile in circuit, and encompassed round with a strong plain stone wall about twenty-eight feet high, and on each side of this square were placed pieces of cannon. Here they found above eight hundred of our countrymen and fellow sufferers; particularly the crew of his Majesty's frigate *Huzzar*, which was wrecked by the misconduct of the master, on the North coast of France; and about thirty of the crew of his Majesty's sloop, *Arab*, wrecked on some part of France a considerable time ago.

The ward of the prison in which they were confined was near four hundred and fifty feet in length, and about thirty feet in breadth, with three rows of cradles that were very indifferently furnished with beds; for being all filled with straw, and lying such a considerable time without being cleaned or shifted, they abounded in vermin, which occasioned considerable scratching, and groaning throughout the prison.

On the first of February their non-commissioned and warrant officers arrived here from Quimper, who informed them that their captain and lieutenants were in good spirits, and that the sick and wounded they left behind in the hospital were all in a fair way of recovery; also that his Britannic majesty's minister, Mr. Swinburn, was then at Paris on a treaty of exchange, which they were all in good hopes would take place early in the spring. On the 26th of March they were again agreeably surprised by a visit from their commissary and others, who informed them that a general exchange had taken place, and that they only waited an answer from Paris to prepare cartels to take them home.

Accordingly on the 27th, about three o'clock in the afternoon, the petty officers of the *Amazon* and *Huzzar*, and several others, to complete the complement of two hundred and thirty, were mustered and marched off under a strong guard towards Brest. They arrived at the gates of the town about half-past five o'clock, where they halted, and having been drawn up three abreast, were marched through the town by the beat of the drum, amidst thousands of spectators. When they came to the water side, they found several large launches waiting to receive them. They immediately entered on board the launches; and were told that they were going on board a cartel lying in the Roads; but when they came near the ship, they were to go in, they found she had no rudder hung, no sails bent, nor running rigging. They then saw two others in the same situation, and intended for the same purpose, which gave them every reason to believe they should not see England so soon as they imagined. When they arrived on board this ship they were informed orders had not yet been received from Paris for their going to England. Here, however, they had the benefit of breathing the fresh air, and likewise a view of their fleet, which consisted of seventeen sail of the line, besides a number of frigates and small vessels. The ship they were on board of was

a Swedish built vessel, about 300 tons burden, called the *Pallas*.

On the 5th of May, the commissary for the cartels came on board, and distributed clothing among them. Each man received one jacket, one pair of trousers, one shirt, one pair of stockings, and one pair of shoes.

May 7th, in the morning they hoisted the cartel colours, a union-jack at the fore-top-gallant-mast-head; and each captain of merchantmen, likewise masters and naval officers, were presented with a piece of cloth to make them a coat.

About twelve o'clock on the 21st, the captain of the cartel came on board, and told them they were certainly going home in a very short time; that all the officers that were upon parole were sent for to go with them, and as soon as they arrived they were to sail the first fair wind, which happy tidings gave general satisfaction.

On the morning of the first of June, there was an alarm of fire, which occasioned great confusion; after a strict search, it was found to have proceeded out of the pump-well, and in a short time it was put out.

June 5th, they were favoured with a fine breeze from the eastward, and about nine o'clock the captain came on board, and gave orders to unmoor the ship, and to put to sea with all expedition. As they passed the guard-ship they were ordered to heave to, that the French might overhaul their passport, and their boat came on board the cartel. They were then just upon a poize, whether they should go to sea or not, for their captain had left his passport on shore; but he going on board, the Admiral in the morning had got an order to carry them out, so with a little hesitation, they were permitted to proceed on their passage.

They were resolved, when out of the sight of the French ships, to take the cartel to themselves, and carry her into the port or bay, which was most convenient for them to land at in safety from press-gangs, and not for that alone, but in regard to having more provisions served. They chose two of their people to act as stewards. They thought of steering betwixt Ushant and the main, but the wind coming a-head obliged them to steer another course. They were scarce two hours out before they desiered two sail on their weather bow, which proved to be the *Indefatigable* and *Cleopatra*, which kept their course, not seeming to mind them; but they saw two more sail coming down to them, one of which very soon brought them to, by firing shot at them; she hailed them, and ordered them to lay to until she spoke the *Snow* astern; but when she was out of gunshot, they made sail again in hopes of jogging on until night and then steering a different course; but in this they were disappointed, for they were soon brought up again by the *Melpomene* frigate; and in the morning the officer and a boat's crew came on board, and called for the *Amazon's* and *Huzzar's* men, wishing them to enter on board their vessel, telling them they should be sure to be distributed amongst the fleet in the morning. But none of them would enter. As soon as day-light appeared, they saw our fleet to windward of them, and the *Jason* frigate came and relieved their fears by telling them that Captain Colnett, of the *Huzzar*, had been on board the admiral's ship, and informed Lord Bridport of their situation, and what they had suffered in prison, which occasioned his lordship not to suffer one of them to be taken but those who were agreeable.

Having the wind in their favour, they made the best of their way; at four o'clock they desiered land, and were in with it about twelve; they now lay to, not knowing how far they had now run; about two o'clock a convoy of coasters passed them, steering to the westward. Having discerned some lights a considerable time, they conjectured them to be those on Start Point, which they proved to be; and accordingly, as soon as they weathered the point, they ran into the bay, and came to an anchor. As soon as she was brought to, they hoisted their boat out and it was soon full; they then shoved off, and saluted those on board with three cheers, which they returned, and landed on a fine gravelly beach at Tor Cross, a few miles to the westward of Torbay.

The people of the place were very much alarmed, as they

had French colours flying, and there being at this time some apprehensions of an invasion. There being plenty of boats on the beach, they soon launched them, and sent them to the ship; so by their help all who wanted were soon on shore. When all who were on shore that wished, or were under fear of being pressed, the officers and those who were left, proceeded with the cartel for Portsmouth.

CONQUEST OF BUENOS AYRES.

"The invasion of the Spanish settlements on the Rio de la Plata, in the year 1806, may be considered as a new era in the continent of South America; and the capture of the rich colony of Buenos Ayres and its dependencies, seemed to open a new source of commerce to the merchants of Great Britain.

No sooner had the force sent out to the Cape of Good Hope effected the complete reduction of that settlement, than Sir Home Popham formed a plan for employing the vessels under his command on a beneficial expedition to the opposite shores of the American continent. It obtained the approbation of General Baird; who, having received some reinforcements from England, assigned what troops he could spare for its execution, and gave the command of them to Major-general Beresford.

The armament sailed from the Cape, and arrived towards the latter end of April at St. Helena, where the commanders, on application to the governor, obtained permission to embark a detachment of troops belonging to that island. Notwithstanding this recruit, their whole force, including the marines and seamen, destined to act on shore, did not exceed 1635 men, officers included.

On the 2nd of May, they sailed from St. Helena, and, after a passage of unexpected length, made Cape St. Mary. Sir Home Popham considering it an object of material consequence to obtain the earliest local information in the river, placed the squadron under the direction of Captain Rowley, on the 27th of May, and preceded it in the *Narcissus* for that purpose. He was accompanied by Captain Kennett of the engineers, who was directed by the general to reconnoitre the enemy's places on the river, in the best manner circumstances would permit, and to collect every possible intelligence concerning them. On the 8th of June, the *Narcissus* anchored near the island of Flores; on the 11th the commodore had the satisfaction to fall in with the *Encounter*, and the *Ocean* transport, which had parted from the fleet previous to its arrival at St. Helena. Owing to fogs and baffling winds, it was not till six days after the armament entered the river, that it joined the *Narcissus*.

The commanders immediately consulted whether it would be most prudent first to attack the town of St. Philip, Monte Video, or Buenos Ayres, the capital of the province. They determined to proceed against the latter, on which no time

was lost in removing from the line-of-battle ships the troops, marines, and such seamen as were incorporated with them, and others who had been regularly exercised to arms during the passage, into the *Narcissus*, the *Encounter*, and the transports; while the *Diadem* blockaded the port of Monte Video, and the *Raisonné* and *Diomède*, by way of demonstration, cruised near Maldonado and other assailable points. This was accomplished on the 16th of June, at which time the armament was about ninety miles distant from the place of its destination. Its progress up the river was very much retarded by the shoaly state of the water, adverse winds and currents, continual fogs, and the great inaccuracy of the charts; but by the skill and assiduity of Sir Home Popham, and the unremitting and laborious exertions of the officers and men under his command, these difficulties were surmounted, and the squadron anchored on the afternoon of the 25th off Point Quilmes a Pouichin, about twelve miles from Buenos Ayres.

Here General Beresford proposed to land, having been informed by an Englishman who was pilot for the river, and was taken by the *Narcissus* out of a Portuguese vessel, that it was an excellent place for that purpose, and there was an easy access from it into the country. As it was impossible for the *Narcissus* to approach the shore on account of the shoalness of the water, the *Encounter* was run in so close as to take the ground, the more effectually to cover the debarkation of the army in case of necessity. The whole, however, was landed in the course of the evening, without the least opposition, consisting of the detachment of his Majesty's troops from the Cape, and that from St. Helena, with the marine battalion, under the orders of Captain King of the *Diadem*, which was composed of the marines of the squadron, augmented by the incorporation of some seamen, and three companies of royal blues.

The enemy was posted at the village of Reduccion, which was on an eminence, about two miles from the beach, with the appearance of a fine plain between the two armies, which, however, proved, on the following morning, to be only a morass in a high state of verdure. General Beresford was informed by his guide, that, though in winter this place was impassable, it was then very practicable and easy for guns to pass.

It was eleven o'clock on the morning of the 26th before General Beresford could move off his ground, and the enemy, from their position, might have counted every man of the British force. They were drawn up along the brow of the hill, on which was situated the village of Reduccion, which covered their right flank, and their force consisted principally of cavalry, to the number of two thousand, with eight field-pieces. The nature of the ground was such, that General Beresford was under the necessity of going directly to their front; and to make his line as nearly as possible equal to theirs, he formed all the troops into one line, except the St. Helena infantry of 150 men, which he formed 120 yards

EMBARKATION OF THE TROOPS.

in the rear, with two field-pieces, and orders to face to the right or left, as either of the flanks should be threatened by the cavalry. He had two six-pounders on each flank, and two howitzers in the centre of the first line. In this order the troops advanced against the enemy, and General Beresford having arrived within range of their guns, a tongue of swamp crossed his front, and obliged him to halt, whilst the guns took a small circuit to cross. This was scarcely performed, when the enemy opened their field-pieces, at first well pointed; but as the English advanced at a very quick rate, in spite of the boggy ground, very soon obliged them to leave all their guns behind, and the fire did them but little injury. The 71st regiment reaching the bottom of the heights in a pretty good line, seconded by the marine battalion, the enemy would not wait the nearer approach, but retired from the brow of the hill, which our troops ascended, with that coolness and courage which has on every occasion marked the character of the British soldier. The Spaniards now fled with precipitation, leaving behind their artillery, consisting of four field-pieces and one tumbrel.

General Beresford halted two hours on the field to rest the troops, and to make arrangements for taking with him the enemy's guns and his own, which had now been extricated from the bog by the exertions of Captain Donnelly of the Narcissus, who had accidentally landed, and accompanied the troops on seeing them advance to meet the enemy.

The general then marched, in hopes of preventing the destruction of the bridge over the Rio Chuelo, a river at that season of the year not fordable, and which lay between him and the city, distant from it about three miles, and eight from his then situation; and though he used the utmost diligence, he had the mortification to see it in flames long before he could reach it. He therefore halted the troops for the night, a mile from it, and pushed on three companies of the 71st, under Lieutenant-colonel Pack, with two howitzers, to the bridge, to endeavour to prevent its total destruction. He accompanied this detachment himself; but on reaching the bridge, found it entirely consumed; and as the enemy, during the night, was heard bringing down guns, he withdrew the detachment before light, as their position was thought too open and exposed to the enemy's fire.

On the 27th, as soon as it was light, General Beresford sent Captain Kennett of the engineers, to reconnoitre the sides of the river, and found that his troops had little or no cover to protect them, whilst the enemy were drawn up behind hedges, houses, and in the shipping on the opposite bank of the river, which was not thirty yards wide. As his situation and circumstances could not admit of the least delay, he determined to force the passage; and for that purpose ordered down the field-pieces to the water's edge, and direct the infantry to remain in the rear, under cover, except the light company and grenadiers of the 71st. As the guns approached, the enemy opened a very ill-directed fire from great guns and musketry. The former, however, soon ceased, after the British fire opened; but the latter was kept up for some time, though, so ill was it directed, that it did little or no injury. By the exertions and activity of Captain King, who commanded the battalion of marines, rafts, boats, &c., were prepared, and the troops crossed the river. Perceiving no signs of further opposition, and learning that the troops had deserted the city, General Beresford was induced by motives of humanity to send his aid-de-camp, the Hon. Ensign Gordon, with a summons to the governor to deliver up the city and fortress, representing that the excesses and calamities which would most probably occur should the troops enter in a hostile manner, might thus be avoided; and informing him that the English would ensure to the inhabitants the exercise of their religion, and protection for their persons and for all private property.

The governor sent back an officer to request a few hours to draw up conditions, but the general refused to delay his march, which he re-commenced as soon as his whole force had crossed the river; and on approaching the city, he was met by an officer from the governor, with a number of conditions. He informed the latter that he could not then attend to them, but would confirm by writing what he had pro-

mised, when in possession of the city, which he immediately entered. Thus fell the capital of the extensive province of Paraguay, where the conquerors found eighty-eight pieces of cannon, five hundred and fifty barrels of powder, and a quantity of small arms. Their loss in achieving its reduction was one killed, and twelve wounded, and one missing.

On the 2nd of July, the terms granted by the commanders of his Majesty's land and sea forces to the inhabitants of Buenos Ayres and its dependencies, were signed by General Beresford, Sir Home Popham, and the Spanish governor Quintana. By these the garrison were declared prisoners of war, protection was promised to private property, and to the exercise of the Catholic religion, and the privileges before enjoyed by the inhabitants were confirmed to them. The captors, though entitled by the laws of war to all the vessels of every description, yet, feeling the distress which the privation of them must occasion the owners, generously relinquished their right to those vessels and their cargoes, though they were supposed to amount in number to 180, and in value, to a million and a half of dollars. Proclamations to the above effect were likewise issued by the British commanders.

The viceroy had retired from Buenos Ayres on the approach of the English, and a great quantity of treasure had also been conveyed from the city. The first care, therefore, of General Beresford, after he found himself perfectly settled in his new conquest, was to send a small detachment to Luxan, about fifty miles distant from the capital, with the avowed object of escorting back some of the treasure which had been removed, and was reported to be private property; but principally to reconnoitre the country, and to learn the disposition of the inhabitants. A considerable quantity of treasure, actually on its way to Cordova, was fortunately preserved by this detachment for the gallant captors, and the commanding officer, Captain Arbuthnot, reported favourably of the general disposition of the people.

The total amount of the specie which, as public property, fell into the hands of the conquerors, exceeded 1,290,000 dollars. Of this sum 1,086,000 dollars were sent home to England in the Narcissus; the commanders reserving the remainder for the exigencies of the army and navy. It was estimated that, exclusive of the above, the value of the merchandise in the King's stores, and in the Philippine Company's stores, together with the floating property retained, could not amount to less than between two and three millions of dollars.

The intelligence of this capture was received in England with the exultation due to its importance, and numerous commercial speculations were the consequence. An order in council was issued by his majesty for opening a trade with Buenos Ayres and its dependencies, conformably to the regulations in force between Great Britain and her colonial possessions.

The treasure brought home in the Narcissus was conveyed to London in eight waggons, each drawn by six horses, and after parading the streets of the metropolis, decorated with the colours taken at Buenos Ayres, it was deposited at the Bank.

SHIPS OF WAR.

Ye sacred arks of liberty, that float
Where Tamar's waters spread their bosom wide,
That seem, with towering stern and rampart-side,
Like antique castles girt with shining moat.

Should war the signal give with brazen throat,
No more recumbent here in idle pride,
Your rapid prows would cleave the foaming tide,
And to the nations speak with thundering note.

Thus, in the firmament serene and deep,
When summer clouds the earth are hanging o'er,
And all their mighty masses seem asleep.

To execute heaven's wrath and judgments sore,
From their dark wombs the sudden lightnings leap,
And vengeful thunders peal from shore to shore.

A VISIT TO THE ISLAND OF ROCKALL.

It was a fine Autumnal morning, just a week after we had sailed from Lough Swilly, to cruise off the north of Ireland, when a sail was reported on the lee-beam. We bore up instantly, but no one could make out what the chase was, nor which way she was standing—at least, no two of the knowing ones could be found to agree upon these matters. These various opinions, however, presently settled into one, or nearly so—for there were still some of the high-spyers who had honestly confessed they were puzzled.

The general opinion was, that it must be a brig with very white sails aloft, while those below were quite dark—as if the royals were made of cotton, and the courses of tarpawling—a strange anomaly in seamanship, it is true, but still the best theory we could form to explain appearances. A short time served to dispel these fancies, for we discovered, on running close to our mysterious vessel, that we had been actually chasing a rock—not a ship of oak and iron, but a solid block of granite, growing as it were out of the sea, at a greater distance from the main land than I believe any other island or inlet, or rock, of the same diminutive size, is to be found in the world. This mere speck on the surface of the waters—for it seems to float on the sea—is only seventy feet high, and not more than a hundred yards in circumference. The smallest point of a pencil could scarcely give it a place on any map which would not exaggerate its proportion to the rest of the islands in that stormy ocean.

It lies at the distance of no less than one hundred and eighty-four miles, very nearly due west of St. Kilda, the remotest part of the Hebrides, two hundred and ninety from the nearest part of the main coast of Scotland, and two hundred and sixty from the north of Ireland. Its name is Rockall, and is well known to those Baltic traders which go north about.

The stone of which this curious peak is composed, is a dark coloured granite, but the top being covered with a coating as white as snow, from having been for ages the resting-place of myriads of sea-fowl, it is constantly mistaken for a vessel under all sail.

We were deceived by it several times during the same cruise, even after we had been put on our guard, and knew its place well. I remember boarding three vessels in one day, each of which, in reckoning the number of vessels in sight, counted Rockall as one, without detecting their mistake till I pointed their glasses to the spot.

As we had nothing better on our hands, it was resolved to make an exploring expedition to visit this little islet. Two boats were accordingly manned for the purpose; and while the ship stood down to the leeward of it, the artists prepared their sketch-books, and the geologists their hammers, for a grand scientific field-day.

When we left the ship, the sea appeared so unusually smooth, that we anticipated no difficulty in landing; but on reaching the spot, we found a swell rising and falling many feet, which made it exceedingly troublesome to accomplish our purpose. One side of the rock was perpendicular and smooth as a wall. The others, though steep and slippery, were sufficiently varied in their surface to admit of our crawling up when once out of the boat.

But it required no small confidence in our footing, and a dash of that kind of faith which carries a hunter over a five-barred gate, to render the leap at all secure. A false step, or a faltering carriage, after the spring was resolved on, might have sent the explorer to investigate the secrets of the deep, in those fathomless regions where the roots of this mysterious rock connect it with the solid earth. In time, however, we all got up, hammers, sketch-books, and chronometers inclusive.

As it was considered a point of some moment to determine not only the position, but the size of the rock by actual observations made upon it, all hands were set busily at work—some to chip off specimens—others to measure the girt by means of a cord—while one of the boats was sent to take soundings in those directions where the bottom could be reached.

After we had been employed for some time in this manner, we observed a current sweeping past us, at a considerable rate, and rather wondered that the ship, which was fast drifting away from us, did not fill and make a stretch, so as to preserve her distance. But as the day was quite clear, we cared less about this addition to the pull, and went on with our operations. I forgot exactly at what hour a slight trace of haze first came across the field of view. This soon thickened into a fog, which felt like a drizzle, and put some awkward apprehensions into our heads. It was immediately decided to get into the boats and return to the *Endymion*; for, by this time, we had finished all our real work, and were only amusing ourselves by scrambling about the rocks.

The swell had silently increased in the interval to such a height, that the operation of returning to the boats was rendered twice as difficult as that of disembarking: and what was a great deal worse, occupied twice as much time. It required the greater part of half an hour to tumble our whole party back again. This proceeding, difficult at any season, I suppose, was now reduced to a sort of somersault or flying leap; for the adventurer, whose turn it was to spring, had to dash off the rock towards the boat, trusting more to the chance of being caught by his companions, than to any skill of his own. Some of our Dutch-built gentry came floundering amongst the thwarts and oars with such a crash, that we half expected they would make a clear breach through the boat's bottom.

As none of these minor accidents occurred, we pushed off, with our complement entire, towards the ship; but, to our astonishment and dismay, no *Endymion* could now be seen. Some said, "only a minute ago she was there!" others asserted, as positively, that they had seen her in a totally different direction. In short, no two of us agreed as to where the frigate had last been seen, though all, unhappily, were of one mind as to the disagreeable fact of her being invisible. She had evidently drifted off to a considerable distance; and as the first thickening of the air had destroyed its transparency, we could see nothing in the slightest degree even like what is called the loom of a vessel. The horizon was visible—indistinctly indeed; but it was certainly not the same horizon along which we had seen the ship sailing but half an hour before. The atmosphere had something of that troubled look which is given to a glass of water by dropping a little milk into it. So that, although there was no fog as yet, properly so called, there was quite enough of moisture to serve the unpleasant purpose of hiding the object of our search, and we remained quite at a loss what to do. We rowed to some distance from the rock, supposing it possible that some condensation of vapour, incident to the spot, might have cast a veil over our eyes. But nothing was to be seen all round.

It then occurred to some of our philosophers that as dense air, by its very definition (as they gravely put it), is heavier than light air, it might so happen that the humid vapours had settled down upon the surface of the sea, and that, in fact, we were groping about in a shallow stratum of untransparent matter. The top of the rock, which was seventy feet higher, it was thought, might be in the clear region, and the ship's mast heads, if not her hull, be visible from thence. There was a sort of pedantic plausibility about the technology of these young savans, which induced the commanding officer of the party—a bit of a dabbler himself in these scientific mysteries—to decide upon trying the experiment. At all events, he thought it might amuse and occupy the party. So one of the men was landed, the most alert of our number, who skipped up the rock like a goat.

All eyes were now turned on our look-out man, who no sooner reached the summit, than he was asked what he saw, with an impatience that betrayed more anxiety on the part of the officers than they probably wished should be perceived by the boats' crews.

"I can see nothing all round," cried the man, "except something out thereabouts"—pointing with his hand.

"What does it look like?"

"I am afraid, sir, it is a fog bank coming down upon us." And so it proved.

The experienced eye of the sailor, who in his youth had been

a fisherman on the banks of Newfoundland, detected a strip of extended cloud, hanging along the verge of the horizon, like the first appearance of a low coast. This gradually swept down to leeward, and at length enveloped rocks, boats, and all, in a mantle of fog, so dense that we could not see ten yards in any direction.

Although our predicament may now be supposed as hopeless as need be, it was curious to observe the ebbs and flows in human thought as circumstances changed. Half an hour before, we had been provoked at our folly in not having left the rock sooner; but it was now a matter of rejoicing that we possessed such a fixed point to stick by, in place of throwing ourselves adrift altogether. We reckoned with certainty upon the frigate's manning, sooner or later, to regain the rock; and as that was the only mark at which she could aim, it was evidently the best for us to keep near.

We had been cruising for some time off the north of Ireland, during which we observed that these fogs sometimes lasted a couple of days or even longer; and as we had not a drop of water in the boats, nor a morsel of provisions, the most unpleasant forebodings began to beset us. The wind was gradually rising, and the waves, when driven against the rock, were divided into two parts, which, after sweeping round the sides, met again to leeward, near the spot where we lay, and dashed themselves into such a bubble of a sea, that the boats were pitched about like bits of cork in a mill-lead. Their motion was disagreeable enough, but our apprehension was, that we should be dislodged altogether from our place of refuge; while the gulls and sea-mews, as if in contempt of our helpless condition, or offended at our intrusion, wheeled about and screamed close to us, in notes most grating to our ears.

While we were waiting in this state of anxiety in the boats below, our faithful watchman perched on the peak of the rock, suddenly called out, "I see the ship." This announcement was answered by a simultaneous shout from the two boats' crews, which sent the flocks of gannets and sea-mews screaming to the right and left, far into the bosom of the fog.

An opening or lane in the mist had occurred, along which we could now see the frigate, far off, but crowding all sail, and evidently beating to windward. We lost as little time, as possible in picking our shivering scout off the rock, an operation which cost nearly a quarter of an hour. This accomplished, away we rowed, at the utmost stretch of our oars, towards the ship.

We had hardly proceeded a quarter of a mile before the fog began to close behind our track, so as to shut out Rockall from our view. This we cared little about, as we not only still saw the ship, but trusted, from her movements, that she likewise saw the boats. Just at the moment, however, she tacked, thereby proving that she had seen neither boats nor rock, but was merely groping about in search of her lost sheep. Had she continued on the course she was steering when we first saw her, she might have picked us up long before the fog came on again; but when she went about, this hope was destroyed. In a few minutes more, we of course lost sight of the frigate in the fog; and there we were, in a pretty mess, with no ship to receive us, and no island to hang on by!

It now became necessary to take an immediate part, and we decided at once to turn back in search of the rock. It was certainly a moment of bitter disappointment when we pulled round; and the interval between doing so and our regaining a resting-place was one of great anxiety. Nevertheless we made a good land-fall, and there was a wonderful degree of happiness attendant even upon this piece of success. Having again got hold of Rockall, we determined to abide by our firm friend till circumstances should render our return to the ship certain.

In the meantime we amused ourselves in forming plans for a future residence on this desolate abode, in the event of the ship being blown away during the night.

If the weather should become more stormy, and that our position to leeward was rendered unsafe, in consequence of the divided waves running round and meeting, it was resolved that

we should abandon the heaviest of the two boats, and drag the other up to the brow of the rock, so as to form, when turned keel upwards, a sort of hurricane house.

These and various other Robinson Crusoe kind of resources, helped to occupy our thoughts, half in jest, half in earnest, till, by the increased gloom, we knew that the sun had gone down. It now became indispensable to adopt some definite line of operations, for the angry looking night was setting in fast.

Fortunately we were saved from further trials of patience or ingenuity by the fog suddenly rising, as it is called—or dissipating itself in the air, so completely, that, to our great joy, we gained sight of the ship once again.

It appeared afterwards that they had not seen our little island from the *Endymion* nearly so soon as we discovered her; and she was, in consequence, standing almost directly away from us, evidently not knowing exactly whereabouts Rockall lay. This, I think, was the most anxious moment during the whole adventure; nor shall I soon forget the sensation caused by seeing the jib-sheet let fly, accompanied by other indications that the frigate was coming about.

I need not spin out this story any longer. It was almost dark when we got on board. Our first question was the reproachful one, "Why did you fire no guns to give us notice of your position?"

"Fire guns!" said they: "why, we have done nothing but blaze away every ten minutes for these last five or six hours."

Yet, strange to say, we had not heard a single discharge.

THE MOTHER WHO HATH A CHILD AT SEA.

There's an eye that looks on the swelling cloud,
Folding the moon in a funereal shroud,
That watches the stars dying one by one,
Till the whole of Heaven's calm light hath gone.
There's an ear that lists to the hissing surge;
As the mourner turns to the anthem dirge;
That eye! that ear!—oh, whose can they be,
But a mother's who hath a child at sea?

There's a cheek that is getting ashy white,
As the tokens of a storm come on with night;
There's a form that's fixed at the lattice frame,
To mark how the gloom gathers o'er the main;
Whilst the yeasty billows lash the shore
With loftier sweep and hoarser roar.
That cheek! that form!—oh, whose can they be,
But a mother's who hath a child at sea?

The rushing whistle chills her blood,
As the north wind hurries to scourge the flood,
And the icy shiver spreads to her heart
As the first red lines of lightning start.
The ocean boils! all mute she stands,
With parted lips and tight-clasp'd hands:
Oh, marvel not at her fear, for she
Is a mother who hath a child at sea.

She conjures up the fearful scene
Of yawning waves, where the ship between
With striking keel and splinter'd mast,
Is plunging hard and foundering fast.
She sees her boy, with lank drench'd hair,
Clinging on to the wreck with a cry of despair,
Oh, the vision is madd'ning! No grief can be
Like a mother's, who hath a child at sea.

She presses her brow—she sinks and kneels,
Whilst the blast howls on and the thunder peals;
She breathes not a word, for her passionate prayer
Is too fervent and deep for the lips to bear.
It is pour'd in the long convulsive sigh,
In the straining glance of an upturn'd eye,
And a holier offering cannot be,
Than the mother's prayer for her child at sea.

ELIZA COOK.

A VISIT TO THE CATACOMBS.

In exploring the catacombs of Egypt, travellers are often exposed to great danger from the foul air, of mephitic vapour of the subterranean caves or galleries, in which many of the mummies are deposited. Curiosity generally urges them too far, and prompts them to disregard all risk. Even the guides frequently loose themselves among the narrow and intricate passages of these singular repositories of the dead; when they are almost sure to fall victims to the thick, confined atmosphere of the place.

An adventure of this kind happened to a party who visited the catacombs, in the year 1813, and who were in consequence, afterwards led into great danger. The party consisted of a Mr. Lee, his friend Mr. Smart, an American of the name of Berthold, and three of the crew belonging to the boat in which the travellers were descending the river Nile. While they were at Thebes, they were told by a Greek, that he had seen some fragments of the mummies of crocodiles, at the bottom of a pit to which he had descended; and he had no doubt, he said, that this pit communicated with subterranean galleries or passages which extended to an unknown distance.

The statement of the Greek excited their curiosity to such a degree, that they were induced to stop at Manfalout, a town on the left bank of the Nile, on purpose to make a journey to Amabdi, a village in the desert, in the neighbourhood of which the pit was situated. Having provided themselves with asses and torches, they proceeded to the village, near which about nine in the morning, they found four Arabs employed in cutting wood. The latter appeared, at first, unwilling to give any information respecting the pit of which the travellers were in search.

They observed the Arabs consulting together, and muttering something about danger; and thought they heard the expression, "If one must die, all must die." Mr. Berthold had traded for many years on the Red Sea, and spoke Arabic very well. Therefore he could put his companions on their guard. The remark excited some suspicion of treachery, but as the party were seven in number, they believed themselves strong enough to resist, in case of attack. The Arabs at length undertook to be their guides, for a sum of money agreed upon; and after an hour's march in the desert, they arrived at the spot, which they found to be a pit, ten feet across, and almost eighteen feet deep. They descended to the bottom without any difficulty. The Arabs began to strip off their clothes, and advised the travellers to do the same. The party followed their advice, but kept on their shirts and trousers. Mr. Lee had a pair of pistols with him, which he concealed about him, to be prepared against any treacherous attempt of the guides.

It was proposed that three out of the four Arabs should descend into the cavern, while the other remained at the mouth of the pit. The three sailors were left with him to take charge of the clothes. This being arranged, an Arab

preceded each of the adventurers into the subterranean passage. They crept for seven or eight yards through an opening at the bottom of the pit, which was partly choked up with the drifting sand of the desert, and found themselves in a large chamber, fifteen feet high.

Here they observed the fragments of the mummies of crocodiles. They also saw a great number of bats flying about, and hanging to the roof of the cavern. All this agreed with the statement of the Greek. What they had seen, however, only encouraged the wish for seeing more, and they were now desirous of exploring the galleries which communicated with this chamber. Each of them had a torch, and the Arabs insisted on placing themselves in such a way that each of the travellers might have an Arab immediately before him. In this manner they entered a low gallery, in which they continued for more than an hour, stooping or creeping as the height of the roof rendered it necessary. At last, the gallery opened into a large chamber, which, after viewing it closely, they recognised to be the same they had first entered. So that, instead of penetrating farther into the cavern, they had, by some unperceived winding, returned to the very spot from

which they had set out. The Arabs, however, denied that this was the same chamber, and confessed that they had missed their way. But they declared that if the travellers would make another attempt, they would conduct them to the mummies in the recesses of the cavern.

With this promise, they were easily induced to persevere. They were very anxious to find mummies of crocodiles, in a complete state, and though they were much fatigued, by the tiresome stooping posture in which they had been obliged to move, and by the heat of the torches in those low, narrow galleries,

they determined to make one more attempt. They found the opening of a chamber, which they now approached, guarded by a trench of a depth unknown, and wide enough to require a good leap to clear it. The first Arab jumped across the trench unhesitatingly, and they all followed him, one by one. The passage which they then entered was extremely small, and so low that they were obliged to creep along on their hands and knees; and in some places even to crawl flat on the ground.

There were so many turnings and windings in this passage, that it resembled a labyrinth. At length it ended in a chamber much smaller than that which they had left; but it contained nothing to repay them for the fatigue they had been put to in reaching it, or to gratify their curiosity in the least. Hitherto their search had been fruitless, but they did not despair. They thought it probable that the mummies were not far off, and that if they made another effort, they might still be successful. The idea of men crawling about on their bellies in noxious places underground, in search of the mummies of crocodiles and other monstrosities of Egyptian superstition!

The Arab who led the way, now entered another gallery. Mr. Lee followed him, and they all continued to move on, in the same manner, each of the travellers preceded by a guide. They

[INTERIOR OF THE CATACOMBS.]

had not gone far before the heat became excessive. The foremost of the travellers found his breathing extremely difficult. His head began to ache violently, and he had a distressing sensation of fulness about his heart, occasioned by the bad, pent-up air. They now felt that they had gone too far, yet they were almost deprived of the power of returning.

At this critical moment, the torch of the first Arab went out. Mr. Lee was close to him, and, to his horror, saw him fall on his side. He uttered a stifled groan; his legs were strongly convulsed; a rattling noise was heard in his throat, one minute more, and he was dead. The Arab who was behind Mr. Lee, advanced to the assistance of his companion, and stooped for the purpose of raising him. In an instant, this second Arab staggered, tottered, and fell. He also had expired. The third Arab came forward, and tried to approach the bodies of his friends, but stopped short. The survivors looked at each other in silent horror. The danger increased every moment. The torches burnt fainter, their breathing became more difficult, their knees tottered under them, and their strength was nearly exhausted. The air in this gallery was very unwholesome; it was death to inhale it; and as the two Arabs had advanced a little farther than the rest of the party, they were the first to fall victims.

The travellers now felt that there was no time to be lost. The American called out to them to "take courage," and they began to move back as fast as they could. They heard the remaining Arab shouting after them, imploring their help, and upbraiding them with deserting him. But they were so much alarmed for themselves that they continued their way back, without paying attention to him.

The winding of the passages by which they entered this terrible place, increased the difficulty of their escape. They feared taking a wrong turn, or that their strength would fail them. They had each attentively observed the shapes of the remarkable stones which projected into the galleries through which they had passed. These assisted them greatly on their return.

Exhausted with fatigue and terror, they reached the edge of the deep trench, which remained to be crossed before they could get into the great chamber. Mustering all their strength, Mr. Lee and the American, succeeded in jumping across! but their companion stood upon the brink, ready to drop with fatigue. He called to his friends, and entreated them to help him over, or at least, to stop till he had recovered sufficiently to attempt it himself. But the fear of dying in the catacomb, overcame every consideration of humanity, or friendship. They would not wait for him, but desired him to exert all his remaining strength. He did so, and happily leaped across. When they reached the open air, it was one o'clock. The sailors who were waiting for them, luckily had a jar full of water, which they sprinkled upon these poor exhausted men; but though this refreshed them a little, they were still too weak to be able to climb the sides of the pit. The sailors unrolled the turbans which they wore, and slinging them round their bodies, drew them to the top.

The appearance of the travellers without their guides, naturally astonished the Arab, who had remained at the entrance of the cavern, and he anxiously inquired for his friends. They thought that if they confessed that the guides were dead, the Arab would suspect that they had murdered them, and that he would summon the inhabitants of Amabdi to pursue them, and revenge the death of their companions. The travellers therefore answered the earnest inquiries of the Arab, by saying that the guides were coming, and were employed in bringing out the mummies they had found, which was the cause of their delay.

The travellers lost no time in mounting their asses, recrossed the desert, and passed, hastily by the village. They got safely on board their own vessel by five o'clock. It happened to be the birth-day of one of the party, and they intended to have regaled themselves on that occasion; but they had no appetite after the adventures of the day, it was of more consequence to consult what was to be done in their present circumstances. That the Arabs of Amabdi would pursue them, to revenge the supposed murder of their friends, there was no doubt; and as it was very unlikely they would be able

to persuade the Arabs that they had no hand in the death of their guides, they all agreed that there was no prospect of safety but in flight. They resolved to wait till night, and then sail down the Nile to Miniet, the first garrisoned town belonging to the Turks. It was, however, five in the morning, before they weighed anchor. The wind was then contrary, blowing strong from the north, and they had sailed only two leagues by seven o'clock.

Four Turks on horseback now made their appearance, galloping towards the river. They were followed by two Arabs on foot, and, as the contrary wind compelled the boat to sail very slowly, they were soon near enough to fire a pistol, and to order the boat to bring to. The travellers were, accordingly, obliged to stop their boat; and the Turks called to them from the shore, saying, they were sent by the Cacheff to bring them to Manfalot, to answer for the murder of the Arab guides. The two Arabs on foot were violent in their threats, declaring they would have "blood for blood," and that they were resolved on the death of the travellers, though it might cost the lives of twenty more of their countrymen.

The travellers inquired whether the Turks would answer for their safety on the way to Manfalot, and they agreed to go on condition of being permitted to carry their arms with them. The Turks promised that they should not be molested on their way to the town, and after some hesitation, permitted them to take their swords, pistols, and double-barrelled guns.

They accordingly went on shore, and walked to Manfalot, under the escort of the Turks. When they arrived at the house of the Cacheff, they found him smoking in an outer court, attended by a few Arnaut guards, and surrounded by almost forty of the inhabitants of Amabdi. The Arabs received them with a shout of exultation. The Cacheff, in a stern and haughty manner, informed them of what they were accused by the people who surrounded them. The American, who acted as interpreter, related the story of their adventure in the catacombs, and produced the *firman*, or passport, which they had received from Mahommed Ali, Pacha of Cairo. This passport was written in the usual form, enjoining all the governors in the different towns through which the travellers might pass, to afford them every protection and assistance. A secretary was ordered to read the *firman* aloud; when he had done so, the Cacheff took it into his own hand, and looking sternly on the prisoners, said, "I do not see that this *firman* allows you either to maltreat or kill the Arabs." He then poured out a torrent of abuse against them, in Arabic, to the great satisfaction of the accusers; after which he retired into an inner court. The Arabs, who were most of them armed with swords and spears, now surrounded the prisoners with threatening gestures. Happily, the travellers were shortly sent for by the Cacheff, and conducted by some of his soldiers into his presence. He now received them in a much more friendly manner than when he was observed by the Arabs, and laid aside his angry tone. "My good friends," said he, putting his hand on the shoulder of the interpreter, "I know I am, by virtue of your *firman*, bound to protect you, and my head must answer for your safety. I believe your story, but I have a guard of only fifty soldiers, and the village of Amabdi is seven hundred muskets strong. Should all the inhabitants take a part in this affair, and come over, the consequences must be fatal to you and myself. You must make your escape secretly, and in the meantime I will amuse and detain the Arabs."

The travellers thanked the Cacheff for his friendly conduct and advice, and lost no time in making their retreat through a gate, at the back of his house. When they quitted their boat to accompany the Turks to Manfalot, they gave orders that the boat should follow them; and they found it waiting close to the town.

Rejoicing in their freedom, they again set sail; but as the wind still blew strongly from the north, they had little prospect of escaping altogether from their enemies. The Nile, in that part, is about two musket-shots broad, and they were continually obliged to tack. Though they rowed with all their might, they made very little progress, and were scarcely out of sight of the town, before they observed a party of horsemen, at a considerable distance, in the desert, on the right bank of

the Nile, whom they took for Bedouin Arabs. Soon afterwards they perceived a number of heads peeping over the sand hillocks on the same side of the river. At this moment they were nearly in the middle of the stream, and consequently not quite within musket-shot. Suddenly, several Arabs jumped up, and shouted to them to come over, or they would fire.

They rowed as quickly as possible to the other bank, and consulted among themselves what scheme to adopt for their safety. The danger was imminent; they were surrounded by enemies. The Cacheff at Manfalont was unable to protect them, and the distance to Miniet was seventy miles. If the wind had been favourable, by fast sailing and keeping close to the left bank of the river, they might have escaped from their pursuers; but, under the present circumstances, they thought it would be madness to continue their course.

They resolved, therefore, to return to Manfalont, again claim the assistance of the Cacheff, or endeavour to persuade the Arabs of their innocence. They had no sooner stepped on shore, than they were assailed by three women and five or six children, who they were informed were the wives and children of the men who had perished. As they were armed, they reached the house of the Cacheff without much difficulty, and found him surrounded by more than four hundred Arabs, and amongst them, the Sheik of Amabdi. In the crowd, to their surprise, they observed the Arab whom they had left in the catacomb, and whom they supposed to have died there with his companions. The appearance of this man was most wretched. He was not able to stand, and was supported by two of his friends. He had escaped by the light of a torch which had been left behind. The American related their story again, and called upon the surviving Arab to confirm the truth of it, but in vain. Incensed, no doubt, at their going away without assisting him, he declared they had by force compelled himself and his companions to conduct them to the place where they met their death. In this falsehood, he was supported by the Arab who had remained on the outside of the cavern, and who also was present.

After some further discussion, the Cacheff proposed that the travellers should accommodate the affair by a present of money. This was finally agreed to, on both sides, and the travellers gladly gave two Spanish dollars to each of the women, and the same sum to the sheik of the village. All animosity appeared now to cease; and they were permitted quietly to return to their vessel, and proceed on their journey.

ANECDOTES OF THE SAILOR KING, WILLIAM IV.

FREDILECTION FOR THE NAVY.

AMONGST the anecdotes that are told of the prince's boyhood, there is one peculiarly expressive of his character, and his early attachment to the sea.

The three brothers received from the hands of the queen a weekly stipend, which they were at liberty to expend agreeably to their several tastes—an admirable mode of discovering the tendency of individual genius. At four years of age Prince William purchased a ship—the first act of free-will, perhaps, he exercised, and for some time he scrupulously dedicated his weekly allowance to the necessary completion of the embellishment, rigging, and furnishing of his vessel. When the gallant craft was deemed sea-worthy, the prince's maiden experiment in navigation was appointed to take place in a large swimming bath at Kew Palace, and the Prince of Wales and the Duke of York (whose title then was Bishop of Osnaburg), were invited to be present. When the ship was fairly launched on the miniature waters, the Prince William, with an enthusiasm natural to his zest for the exhibition, expatiated with childish fondness upon certain parts of the nautical arrangements, and a slight contention, originating in some slight difference of opinion, gradually arose between the brothers. As the dispute increased, the Prince of Wales haughtily reminded his younger brother that,

however assured he was of the correctness of his assertions he should at least utter them with more temperance before his future Sovereign.

"Well, George," retorted the young sailor, the royal blood mounting to his cheeks, "who knows but I may be a king as well as you; I'm sure I look as like a king as Frederick does a bishop. And if ever I shall become a king, I'll have a house full of ships, and no other king shall dare to take them from me."

A MIDSHIPMAN.

In the year 1779, while yet but fourteen years of age, Prince William Henry swung his first hammock on board the Prince George, a ninety-eight gun-ship under the command of Admiral Digby. This vessel had been only lately built, and was named in honour of the Prince of Wales. A description with which we are favoured of the royal middy, by one who had the honour of a berth on board the same ship, and who was then of the same rank, confirms the popular confidence in the affability, kindness of heart, and unostentatious simplicity of the sovereign. He was furnished in all respects as scantily as any youngster of the mess; and the only particulars in which it appears he derived, or desired, any special advantages from his rank were, the privilege of dining at the admiral's table, and the use of a separate cabin, with some other trifling distinctions, which were more cheerfully offered than willingly accepted.

The prince's manners and personal appearance were much in his favour. He was of a very athletic make, well proportioned, and with an agreeable countenance; his humour was rich and pleasant, his temper equal, and his general demeanour plain and affectionate; there was not the least indication about him of the pride of birth or of prospects; and on all occasions he exhibited the determination to act like a sailor, and to maintain that character as the distinctive mark of his life. As Admiral Digby was personally responsible for the care and well-being of his royal pupil, he of course restrained his conversational intercourse within a certain limit; not so much as to curtail his freedom, but sufficient to preserve him from the moral dangers that frequently assail a young officer on shipboard. Some few escapades were unavoidable, and perhaps acted with a wholesale influence upon the mind of the prince. On one occasion, he and a brother middy happening to quarrel upon deck, the latter boldly exclaimed that "only he was a prince he would give him a good threshing." The former instantly tore off his jacket, which was distinguished by some little ornament of lace on its collar, and replied, "You will give me a threshing!" at the same time, flinging away his jacket, he continued, "there goes the prince—now try!" The juvenile combatants immediately closed, and some blows had been already exchanged when they were separated by the officers, who did not approve of that mode of settling the argument. Some blood was lost, but no honour on either side, and the prince and his opponent became greater friends than ever. At a later period, a duel between his royal highness and a brother officer was prevented by the discovery that the cause of the supposed offence given by the prince was in reality an act of generous interference with the admiralty to save the gentleman who challenged him from the consequences of youthful error.

Still more characteristic is the following.—"By the way, as anecdotes of this king have multiplied with a rapidity that promises to leave his historians very little to say, we may as well relate one, which is both singular and true, particularly as it represents the subject of its remembering the time when his title of Prince was insufficient to protect him from the penalties of transgression, and that when the future monarch had no influence upon the fate of the midshipman. What we have to tell happened after dinner, when some of the company near the King were speculating upon the age of one of the oldest admirals on the list who was seated at the other end of the table. One of the party guessing him at a certain age, "Oh!" said his Majesty, "he must be more

than that;" and then glancing down the table at the subject of the conversation, "let me see," he continued, "it is now two-and-forty years ago, since he mast-headed me one cold winter's night in the Channel; and I recollect," he added, "that I richly deserved it."

His Royal Highness was allowed a thousand a-year for his table; and, by that singular obliquity of judgment in many matters for which George III. was known, he only allowed him two hundred more when he commanded a ship of his own. The prince did not suffer the poorest midshipman of the mess to feel he was differently circumstanced from the rest. His kindness to all was uniformly the same, and the consequence was, that all exhibited that esteem and regard towards him which result from right conduct and urbane bearing. Every one of his messmates regarded him with the strongest attachment, which was won by the personal conduct of his Royal Highness in the intercourse of duty and companionship. The private seamen were wonderfully charmed with his affability, and he was naturally a prime favourite with them. His Royal Highness being free from pride, and forgetting in good humour the accidental circumstances of his birth and more than all, being given to the humour and frolic which the commonest seaman knows how to feel from sharing it himself, were bonds of strong attachment on their part to any officer, though he might not be one of so elevated a rank in society, but with such an one they told still more effectively.

The prince was fond of playing tricks to his messmates, which was certain to be repaid. One of these having been played off by the prince nearly ended in a battle with the fists. The antagonist of the prince was named Sturt, the son of a gentleman of property in Dorsetshire. "I'd teach you better manners, sir, if you were not the king's son," said young Sturt. "That shan't stand in the way," replied the prince; "I'll fight you over a chest." Sturt, declined the contest, because he was very much the prince's superior in age and strength. On this a reconciliation took place immediately, and they shook each other by the hand.

One day, or rather night, the prince stole in the dark to the hammock of a tough young sailor boy, and cut it down by the head, so that the slumbering inmate fell caput foremost. The lad sprung up in a moment, and, attacking the prince before he could make his escape, a regular battle ensued in the dark, his Royal Highness making obstinate resistance. The boy at length found out who his antagonist was, and the prince the next day made him a present of some money for his alacrity in attacking him, and as a compensation for the mischief he had done.

ATTEMPT BY THE AMERICANS TO KIDNAP THE PRINCE.

On reaching New York, his Royal Highness landed, and was well received by the inhabitants. The loyalists presented a congratulatory address to the prince on his arrival, for which he returned them thanks. His Royal Highness took up his residence with the Commander-in-chief, and rambled about unattended very frequently, in order to become acquainted with the city, and notice all worthy of being seen.

A plan was laid while the Prince was in New York to carry him off—a fair attempt, under the circumstances of existing warfare. The scheme was well devised, and had it been attempted before some inkling of its existence got abroad, it would no doubt have succeeded. Colonel Ogden, a gallant American officer, then employed near New York, under General Washington, had found that the prince was very slightly guarded, and the possibility of his Royal Highness being in danger of a surprise did not seem to enter the heads of the officers on duty in New York. Ogden had planned to effect a secret landing from four whale boats during a stormy night, to capture the prince, and carry him off to the

Jersey side. General Washington gave his consent to the scheme, in a letter to Colonel Ogden still extant. New York is separated from Long Island by a creek of the sea while it is in like manner cut off from New Jersey by the Hudson river, the bank of which on the opposite side was in possession of the Americans, whose army lay at no great distance. Colonel Ogden proposed to take a captain, subaltern, three sergeants, and 36 men, and consulted the state of the tide, to time it so as to be in the city by half-past nine the first wet night.

The quarters of Prince William Henry were then in Hanover-square, and two sentinels of the 40th Regiment were, it appears, always placed as a guard of honour at his door. The whole 40th Regiment was within 200 yards of the spot where the Prince lived. The main guard of forty men was at the City Hall, and two serjeant's guards of twelve men each were at no great distance from the spot where the landing was projected; in fact the landing place was between them. The party was to be in sailor's dresses, and the attack was to commence by two men with bayonets, only seizing the sentinels at the door. Eight more, following close upon the heels of the first two, provided with crow-bars for forcing the doors, were to enter and seize the prince, admiral, and others, while a captain and eighteen men were to act according to circumstances and cover the retreat; the rest of the party was to guard the boats. The order of retreat with the prisoners was also carefully defined. Washington, however, received intelligence that the British in New York had got a crude hint of some such designs. The guards were increased, the sentinels doubled, and precautionary measures taken so well in time, that Colonel Ogden did not deem it prudent to carry his plan into effect. The blow would have been an advantageous one to the Americans, there is no doubt; but the hazard run would have been very considerable. General Washington had instructed Ogden, if he succeeded, to treat his prisoner with respect.

LOSS OF HIS MAJESTY'S SHIP BOREAS, NOV. 28, 1807.

His Majesty's ship Boreas, in standing towards the Island of Guernsey, November 28, 1807, had the misfortune to run upon the Hannonis Rocks, about six o'clock in the evening, the wind blowing very hard at N.E.

Captain Saumarez, of the Inconstant, having received information of this unfortunate event, about two o'clock in the morning of November 29, immediately sent orders to the Brilliant and Jamaica, which had arrived from Spithead the preceding day, with the Rebuff gun-brig, the Britannia cutter, and one of the government scouts, to proceed off the Hannonis, and afford the Boreas every assistance; but on the tide flowing, the ship over-set, and became a complete wreck at about two o'clock.

Captain Scott, who had long been upon this station, and always shown the greatest zeal and attachment for his Majesty's service, with several of the officers and men, was lost with the ship. The steadiness and good conduct of Captain Scott, his officers and men, under such perilous circumstances, in a dark and tempestuous night, in the midst of the most dangerous rocks that can be conceived, were exceedingly meritorious, and the loss of those brave officers and men, must be sincerely lamented by every lover of his country.

Through the great exertions of Lieutenant-Colonel Sir Thomas Saumarez, in collecting the pilots and boatmen in the vicinity of Rorgains, about thirty seamen and marines were taken off the rock of Hannonis at daylight.

Lieutenant Bewick (second lieutenant) with Lieutenant Wilson of the Royal Marines and six men, were sent off in the gig, and landed in the western part of the island; and about thirty others in the launch and large cutter were also landed, and the boats returned to the ship, but have not been heard of; it is supposed they were lost on nearing her.

ACCOUNT OF AN INDIAN WOMAN.

Found on the South Side of Athapuscow Lake, West of Hudson's Bay, in January, 1772. Related in Hearne's Journey from Hudson's Bay to the Northern Ocean.

On the eleventh of January, as some of my companions were hunting, they saw the track of a strange snow-shoe, which they followed; and, at a considerable distance, came to a little hut, where they discovered a young woman sitting alone. As they found that she understood their language, they brought her with them to the tents. On examination, she proved to be one of the western-dog-ribbed Indians, who had been taken prisoner by the Athapuscow Indians in the summer of 1770; and in the following summer, when the Indians that took her prisoner were near this part, she had eloped from them, with an intent to return to her own country; but the distance being so great, and having, after she was taken prisoner, been carried in a canoe the whole way, the turnings and windings of the rivers and lakes were so numerous, that she forgot the track; so she built the hut, in which we found her, to protect her from the weather during the winter, and here she had resided from the first setting in of the fall.

From her account of the moons past since her elopement, it appeared that she had been near seven months without seeing a human face; during all which time she had supported herself very well by snaring partridges, rabbits, and squirrels; she had also killed two or three beavers, and some porcupines. That she did not seem to have been in want is evident, as she had a small stock of provisions by her, when she was discovered; and was in good health and condition, and, I think, one of the finest women, of a real Indian, that I have seen in any part of North America.

The methods practised by this poor creature to procure a livelihood were truly admirable, and are great proofs that necessity is the real mother of invention. When the few deer-skins that she had an opportunity of taking with her were all expended in making snares, and sewing her clothing, she had nothing to supply their place but the sinews of the rabbits' legs and feet; these she twisted together for that purpose, with great dexterity and success. The rabbits, &c. which she had caught in those snares, not only furnished her a comfortable subsistence, but of the skins she made a suit of neat and warm clothing for the winter. It is scarcely possible to conceive that a person in her forlorn situation, could be so composed as to be capable of contriving or executing anything that was not absolutely necessary to her existence; but there were sufficient proofs that she had extended her care much farther, as all her clothing, besides being calculated for real service, showed great taste, and exhibited no little variety of ornament. The materials though rude, were curiously wrought, and so judiciously placed, as to make the whole of her garb have a very pleasing, though romantic, appearance.

Her leisure hours from hunting had been employed in twisting the inner rind or bark of willows, small lines, like net twine, of which she had some hundred fathoms by her: with this she intended to make a fishing-net, as soon as the spring advanced. It is of the inner bark of willows, twisted in this manner, that the dog-ribbed Indians make their fishing-nets; and they are much preferable to those made by the northern Indians.

Five or six inches of an iron hoop, made into a knife, and the shank of an arrow-head of iron, which served her as an awl, were all the metals this poor woman had with her when she eloped: and with these implements she had made herself complete snow-shoes, and several other useful articles.

Her method of making fire was equally singular and curious, having no other materials for that purpose than two hard sulphurous stones. These, by long friction and hard knocking, produced a few sparks, which at length communicated to some touchwood; but, as this method was attended with great trouble, and not always with success, she did not suffer her fire to go out all the winter. Hence we may conclude that she had

no idea of producing fire by friction, in the manner practised by the Esquimaux, and many other uncivilized nations; because, if she had, the before-mentioned precaution would have been unnecessary.

The singularity of the circumstance, the comeliness of her person, and her approved accomplishments, occasioned a strong contest between several of the Indians of my party, who should have her for a wife; and the poor girl was actually won and lost at wrestling, by near half-a-score of different men the same evening. My guide, Matonabee, who, at that time, had no less than seven wives, all women grown, besides a young girl of eleven or twelve years old, would have put in for the prize also, had not one of his wives made him ashamed of it, by telling him that he had more wives than he could properly attend. This piece of satire, however true, proved fatal to the poor girl who dared to make so open a declaration; for the great man, Matonabee, who would willingly have been thought equal to eight or ten men in every respect, took it as such an affront, that he fell on her, with both hands and feet, and bruised her to such a degree, that, after lingering some time she died.

When the Athapuscow Indians took the above dog-ribbed Indian woman prisoner, they, according to the universal custom of those savages, surprised her and her party in the night, and killed every soul in the tent, except herself and three other young women. Among those who they killed, were her father, mother and husband. Her young child, four or five months old, she concealed in a bundle of clothing, and took with her, undiscovered, in the night; but when she arrived at the place where the Athapuscow Indians had left their wives (which was not far distant), they began to examine her bundle, and, finding the child, one of the women took it from her, and killed it on the spot.

This last piece of barbarity gave her such a disgust to those Indians, that, notwithstanding the man who took care of her, treated her in every respect as his wife, and was, she said, remarkably kind to, and even fond of her; so far was she from being able to reconcile herself to any of the tribe, that she rather chose to expose herself to misery and want, than live in ease and affluence among persons who had so cruelly murdered her infant. The poor woman's relation of this shocking story, which she delivered in a very affecting manner, only excited laughter among the savages of my party.

In a conversation with this woman, soon afterwards, she told us that her country lies so far to the westward, that she had never seen iron, or any other kind of metal, till she was taken prisoner. All her tribe, she observed, made their hatchets and ice chisels, of deer's horn; and their knives of stones and bones; that their arrows were shod with a kind of slate, bones, and deer's horns; and the instruments which they employed to make their woodwork were nothing but beaver's teeth. Though they frequently heard of the useful materials which the nations or tribes to the east of them were supplied with from the English, so far were they from drawing nearer, to be in the way of trading for iron-work, &c., that they were obliged to retreat farther back, to avoid the Athapuscow Indians, who made surprising slaughter among them, both in winter and summer.

SUPERSTITION.

CAPTAIN STUART, when cruising off the Italian Coast, had passed several days without seeing a ship. The men ascribed this inauspicious circumstance to the captain's having taken a black cat on board from the last port they touched at. He immediately called the men aft, and asked them if it really were so? They, without hesitation, confirmed the report; "Overboard with the black cat." "That," exclaimed an old seaman, "is worse still—she must be landed." "Then lower away the jolly-boat," said the captain. The cat was safely landed, with much formality, on an island in sight; and that same night they took the best prize which they had captured in the mediterranean.

LOSS OF THE GENERAL BARKER,

East Indiaman, Captain James Todd, February 17, 1781.

THE General Barker, commanded by Captain James Todd, was chartered by the Hon. the East India Company, and sailed from Madras the latter end of February, 1780, in company with three sail of the line, and several East India ships, having on board Sir Thomas Rumbold, governor of Madras, his lady and family, and other passengers for Europe. About the middle of the following April, they arrived at St. Augustine's Bay, in Madagascar, and having stayed six weeks there, were joined by some ships from China.

In the beginning of July, they anchored in Table Bay, Cape of Good Hope, where they remained about six weeks, and then shaped their course for St. Helena; from whence they sailed in company with three sail of the line, a sixty-gun ship, a fifty-gun ship, and thirteen East Indiamen, for England.

About Christmas, they entered Crookhaven, in the south of Ireland, where they landed Sir Thomas Rumbold, and the rest of the passengers; and after staying some time proceeded up the Channel, and arrived in the Downs with some other ships, on February 10, 1781, and the wind blowing hard from S.W. and W.S.W.; when the captain went on shore, to procure some stores that they were in want of, and the ship was waiting to receive them.

On February 12, the wind continuing to blow very hard from the S. W., they struck lower-yards and top-masts, and soon after let go the small bower under foot. About nine, a small vessel near them having drove, came athwart their hawse, and carried away the larboard bumpkin and bobstays, but they cleared her without any further damage; the gale still increasing, and blowing violently from S.W. to W.S.W., another ship drove, and brought up in their hawse, chafing their best bower cable with her keel, which, being new, and their best dependance, they brought a slight strain on the small bower, and endeavoured to strike their mizen-topmast, but could not get the fid out.

About half-past ten, the thunder and lightning was tremendous, with continual flashes from several ships firing guns of distress. At this awful moment, they parted their best bower, occasioned by the ship that had chafed her cable: upon which they immediately let go the sheet anchor, and wore away on the sheet and small bower together; attempting several times to stop the sheet cable, but to no purpose. They then endeavoured to snub her, by hauling taut the ring-rope and stoppers together; but on feeling the first strain, the small bower parted, the sheet cable running out at the same time. They then got two stoppers passed abaft the main-bits, but both lanyards broke, and the cable ran out to the clench round the mast, and parted likewise.

Being now at the mercy of the wind, which blew a hurricane, they drove, stern foremost, athwart a brig of about one hundred and twenty tons, with such force, that she went down under their bottom, and every soul on board of her perished—

"No reckoning made, but sent to their account,
With all their imperfections on their heads."

The blow being chiefly on the back of their rudder, it broke the tiller short in the rudder-head. They immediately endeavoured to veer the ship, by loosing the fore-topsail, which blew to pieces; they then run up the fore-staysail, which shared the same fate, and finding it impossible to veer by those means, they cut away the mizen-mast, when, at that instant, she struck on a sand-bank, called the Break. They immediately passed a hawser out of the aftermost on the quarter-deck, bent it to the kedge anchor, and let it go; by which means they wore the ship and cleared the Break.

The next day, February 13, they cut away the ends of the cables at the foremost-bits, and at about half-past one, swayed up the fore-yard, knocked down the bulk heads, and cleared away the great cabin, to ship a tiller in the rudder-head.

All the valuable effects of Sir Thomas and Lady Rumbold, which were stowed there with the furniture, were beaten to pieces with mallets, crow's, and axes, and thrown out of the cabin windows, with chests of plate, money, valuable curiosities, and about forty cages of oriental birds, &c.; and it is computed, that not less than ten thousand pounds' worth of property was thus sacrificed, there being no passage to pass them along.

About two o'clock they got the spare tiller shipped, and set the foresail, and in half an hour afterwards, they swayed the main-yard, and set the main-sail; and till about half-past eight in the morning, she made about two knots an hour on the starboard tack when they saw the Kentish Knock on the larboard bow; a high sea running, and blowing a strong gale at the time. This caused a debate on the quarter-deck, as to the most advisable course to pursue; the opinion of the two pilots who were on board, was to veer the ship, and stand off on the other tack; but the officers were of opinion, that being so near, they could not weather it on the other tack, but that if they were to ease her off a foot or two on the fore and main sheets to give her more way, they could weather it on the tack they were on. The pilots, however, prevailed, and all hands were ordered to veer ship. The helm was put a-weather, the main-yard braced to, and the fore-staysail, which they had bent that morning, run up to help her; the four lower shrouds were manned, and as many hammocks as possible stowed there, but all to no purpose; for the instant they got her before the wind, she struck on a bank fore and aft; the fore-staysail slipped, and the sea, which was running very high, made a fair breach over her, from stem to stern.

About ten, the ship began to have a heel to port, upon which they cut away the mainmast, but not having cut the main-stay, soon enough, it fell across their six-oared yawl, which was the only good boat they had, and cut it in two. As yet, they had made but little water, the vessel being strong, and her first voyage; but by continual beating on the bank, she began to make it very fast, which made it necessary to keep the pumps going; and, on observing on the lee-side of the bank, a sloop-rigged vessel, under her fore-sail, they made signals of distress, by firing guns, and hoisting the ensign union downwards; but to their extreme mortification, they saw her bear away under a close reefed main-sail and fore-sail.

At eleven, they lowered down the fore-yard, and hove the broken yawl overboard, unstowed the booms, and began to construct a raft with spars lashed across each other, which they completed by one o'clock, and launched it over the side. They then cut away the timber-heads in the waist, and launched the long-boat; but she leaked so fast, that in twenty minutes after, she sunk alongside, with several men in her, and nearly carried away the raft that was towed alongside. They were obliged to cut her away, but the men were saved by ropes thrown to them. As the ship was striking very hard abaft, they started some casks of water in the lazaretto, to ease her forward, when the ship struck violently, which tore the rudder from the stern-post and shook the whole stern frame.

As the flood-tide continued to make, there were great hopes that she would beat clear over the bank, which they did, by about twenty minutes past three in the afternoon, when they got into seven fathoms water, and soon after, into thirteen, and then into twenty fathoms; upon which, being in deep water, they cleared the gun-deck. In the pens amidships, they had a fine Arabian horse, a tiger, a hyana, two Madagascar cows, two calves, with sheep, goats, &c. which they were obliged to despatch with half-pikes, and then heave them overboard, together with chests, hammocks, bedding, and every kind of lumber, leaving a clear deck, the guns only excepted. The yard was now swayed up, the fore-sail unbent, and another brought to the yard, and the spritsail bent; and by five o'clock in the afternoon, they saw the buoy of the Longsand-head; the ship continuing to make about three feet water per hour.

The raft that was being stowed astern by the cat-fall, broke the tow rope, and went adrift. They got a piece of old junk,

and making fast both ends of it, veered it out of the great cabin windows, with a guy to it, from each aftermost port but one, so as to keep the ship as near the wind as possible; and about nine in the evening, began to heave the guns overboard, which proved a work of great difficulty and danger, as the ship was running gunwale-to, in the trough of a very high sea, without a rudder, the foremost only standing, and the water pouring in as fast as they could free it; but by eleven o'clock, they had hove overboard, eighteen nine and two four-pounders, retaining two nine and four four-pounders, to make signals of distress, in case they should see any vessels. Mr. Gibson the acting officer, Mr. Gore, the gunner, and fourteen seamen, took the starboard side, and Mr. Wellwood the second officer, with the same number of seamen, took the larboard side; as each gun was sent out of the port, it deluged the gun-deck with water, and the port being hauled up as it rolled over, it took some time to discharge the water. After this was done, it was thought necessary to give the people some rest, and at midnight the watches were set, who kept the pumps going without intermission, officers and men, working without distinction.

On the fourteenth, at daylight, they discovered a sail in the S.W., upon which they hoisted the ensign union downwards, and fired several guns as signals of distress, when they observed the sail to stand towards them. To keep the ship to, they got a spare top-gallant mast, lashed another spar abaft, and set the maintop-gallant-royal, and the carpenter stocked the stream anchor, that lay on the deck unstocked. In the afternoon, they spoke the vessel, which proved to be a brig of about one hundred and twenty tons burthen, under Danish colours, from Christiana, and bound to Ostend, who sent their boat on board, and agreed to give them all the assistance in their power, provided they would indemnify the owners for the loss of time, and any damage the cargo might sustain, and £100 sterling for their trouble. This was assented to, and an agreement drawn up, and signed by four officers of the ship. As the wind was now more moderate, and the sea much fallen, they cut away the remains of the foresail from the yard, got the stream anchor into its berth, and bent the thirty fathoms of cable to it which they had previously spliced together from the old pieces cleared away in the gun-room, and got out a new lower shroud-hawser, and bent it to the piece of cable; the ship continuing to make about the same quantity of water.

About half-past eleven, they descried a large ship a point afore the lee-beam when they again hoisted the ensign union downwards, and fired signal guns for about an hour: she appeared to stand towards them, hoisted Swedish colours at her foretop-gallantmast head, fired a gun to windward, and made several tacks; but as they had no command of the ship, they could not bear down to her. It came on to blow soon after, when she lowered her topsails, reefed them, and bore away.

About two, they sent three seamen on board the brig, in her boat, taking with them the hawser, to assist in doing any thing for them, and if requisite, to veer, or stay the General Barker. The wind freshening, they hailed them from on board the brig, that as near as they could judge, they were far to leeward of Ostend, and that if they drifted much longer on the tack they were then on, they would soon be on the Flemish Shoals; and as it looked likely to blow a hard gale, they desired them to bring the hawser to the brig's bow, while they made the other end fast abaft, to endeavour to stay the ship, which was done, and the foreyard braced to, to help her; but those on board the brig, by straining the hawser too taut, broke it, and consequently the General Barker could not stay.

The wind blowing strong, and accompanied with rain, the brig hailed them, and said, that unless they wore the ship, and stood on the other tack, the brig would not stay with them; they answered, that they could not veer, or do anything with the ship, as she was unmanageable, and that as the sea was breaking over them to a fearful height, it would be impossible to save the ship, unless they were assisted: they were answered, that the master of the brig would go no longer on

that tack, and they instantly wore the brig; upon which they hailed again, and implored them for God's sake not to leave them, as every soul on board must inevitably perish. The chief mate desired them all to shout together; many were down on their knees, in places where they could be seen, and upwards of a hundred people on the decks, waving their hats, and making every possible sign of their distress, but all to no effect; for the brig stood from them without returning any answer, when at that time she could have lain about eight or ten yards to leeward of the ship, in almost smooth water.

Death now seemed painted in colours the most gloomy; the wind blew so strong, that it split the foresail to pieces, which was the only sail they could carry, and they had no other foresail in the ship; a heavy sea was running, with rainy weather, and night was coming on; the Flemish shoals were right ahead, and the sea breaking over them; the ship was driving on very fast, the lead showing quarter less seven, and they were confident, when she struck, that she must soon go to pieces, and every one on board perish with her; no land or vessels in sight but the brig, who was by this time at a great distance, and standing from them; the ship making the water as fast as they could free it by pumping; no mast except the foremast, no sails or rudder, no anchor except the stream anchor, and no cable to bend to that, except the spliced one before mentioned; and on board were officers, seamen, passengers, and servants, one hundred and twenty-six men, two women, and two children, who were all on deck, with the exception of those who were working the pumps.

Under such dreadful circumstances, a general consultation of officers and seamen was held, when it was agreed to try by means of the stream anchor to veer the ship, and if that failed, they had only to trust to Almighty Providence. They immediately got up the lower shroud hawser, and passed it through the aftermost larboard port on the quarter-deck, cut the junk from the stream anchor, and bent the hawser; pulled the capstan, took three turns with the inner end, and stood by to veer away when the ship brought up, and snub her gently, till they brought the wind on the larboard beam; they let go the anchor, and as they brought the ship's stern to the wind, they squared the foreyard, and with the swing, brought the wind on the larboard beam, and consequently the ship on the other tack; upon which they cut the hawser, and left the anchor behind, which was their last, and the fifth they had lost.

This success cheered their spirits, and they now indulged a hope, that while they could keep her above water, they had plenty of room to drift, and might meet with assistance; they fired several guns, that those on board the brig might see them on the other tack; but night coming on, they never saw or heard more of her. As soon as the people were a little refreshed with a dram, &c. they got up a fore-topsail, unbent the ragged foresail, brought it to the fore-yard, and as the wind was blowing strong, close reefed it, and set it for a foresail; their soundings were from seven, when they wore the ship to ten, thirteen, seventeen and sometimes to twenty fathoms; the ship's head lay from N.N.E. to N.E., and her driftage about one and a half to two knots an hour. They settled every thing upon deck as well as they could, set the watches at six in the evening, and kept the pumps going without intermission.

On the fifteenth, at six in the morning, they called all hands, got the fish, which is a spar aft on the poop, and made a machine to keep the ship nearer the wind, by unreaving the fore-topsail ties, which they fixed as guys on each quarter; the bight they made fast to the end of the fish, and lashed gratings, bar iron, shot, &c. to it, for the purpose of sinking the end, that it might have more hold in the water. They then launched it, and by noon had it fixed, one end in the great cabin window, and the other sunk by the weight, and by this means the ship's head came up to N. by E. They had soundings from thirteen to twenty fathoms, and saw a steeple or spire, bearing about S., but could not see land; and at noon, they had a good observation which gave latitude 52 degs. 1 min. N.

In the afternoon they would have raised a jury-mast, with a spare topmast they had on deck, but had no rigging, nor a rope in the ship to make it; they, however, raised a small spar on the taffrail, and set the yawl's mainsail, and the main-topgallant staysail, for a mizen staysail. About four o'clock they hauled up a mainsail, unbent the fore topsail which had been set up for a foresail, brought the mainsail to the foreyard, took in one reef and set it for a foresail, the weather beginning to clear up and grow moderate; but towards the evening, the ship fell off to N.E., and N.E. by E.

About seven o'clock, they saw two lights on the lee-bow. The ship still laboured very much, lying in the trough of the sea; towards night, therefore, they lashed everything on the decks, and as the ship was falling off so much, they endeavoured to make her veer, by means of the machine they had made to steer her by, instead of a rudder; but they could not succeed in getting her about, till twelve o'clock at night, having fired signal guns every five minutes during the evening; the watches were set all this night, as before; the pumps kept regularly going, and soundings taken, which showed from thirteen to fifteen, and down to ten fathoms.

On the sixteenth, at daylight, they saw land very near them, the ship nearing it apace, and shoaling the water to seven, and then to five fathoms; they instantly hove overboard two nine and two four-pounders, leaving themselves only two guns to fire signals of distress. At about half past ten in the morning, the ship struck about two miles and a half from the shore; and for some time lay with her starboard side towards the land, the sea making a fair breach over her. They still continued to fire the guns every five or ten minutes, and hoisted a union jack, which was the only colour they had left. The ship beat and swung with her stern to the shore, when being of no further use, they left off pumping, and all hands began to make a raft of what few planks, or anything else they could find, as there was a heavy sea tumbling in upon the beach, and they saw no assistance coming from the shore. In about two hours they had completed the raft, when the gunner's mate, the caulker, the joiner, a midshipman, and sixteen seamen embarked on it, and drove with the wind and sea towards the shore; but sad to relate, those who remained on the wreck had the misfortune to see them washed off one by one, and as the ship began to go to pieces, forward, they expected very soon to share the same fate.

About three o'clock in the afternoon, the water had filled the hold, and flowed over the gun-deck, and the sea made a breach over her from stem to stern. In this situation, Mr. Gibson, the acting officer, the gunner, and carpenter's mate, got staples, nails, &c., drove them in the poop, and with whatever lashings, lines, and gaskets they could get, lashed a great number of invalids, old seamen, two women, and two children thereto, with the hope that when the ship went to pieces, the poop would float on shore, and save them. About six, they fired the last gun, which was nearly covered with water; the upper deck forward, being at this time under water, and all the people on the quarter-deck and poop. It still blew a hard gale, and the sea frequently washed over them; but as night approached, they sheltered themselves on the after-part of the quarter-deck, as well as they could; but their situation during this dismal night may be better imagined than described.

On the 17th, about daylight, the ship parted about the main-hatchway; the after-part remained fast for a short time, but, soon after, that also gave way. At this time they observed two schuyts making towards them from the land. The wreck now parted in several places, but the poop remained entire, with those before-mentioned lashed upon it, which was the means of saving many lives.

On a large piece of the wreck, were a midshipman, the gunner, boatswain, the ship's steward, some servants, and French seamen, who were prisoners of war; but the ship's steward and some others were washed off and perished. The second officer, Mr. Welwood, and Mr. James Hay, a midshipman, were on another piece of the wreck, but had not drifted far before it turned over; the officer, having a cork jacket on, rose again with the youth holding fast to his leg, and they got on the piece of wreck again; but soon after, it again upset, and both went

down to rise no more. Near to them, on another piece of the wreck, were Mr. Gibson and another midshipman, hand in hand, who in this manner reached the shore, almost lifeless. On another piece of the wreck were several seamen, who were repeatedly washed off; but being good swimmers, and assisting one another, they reached the shore in safety. One seaman was quite naked, got two pump-dills, and lashed them together; and though he was often off, and as often got on again, he reached the shore, but expired in a few minutes afterwards. On another piece of the wreck, were two persons, who, after contending a long time with the surf and heavy seas, at last reached the shore in almost an exhausted state.

The two schuyts before mentioned, had by this time reached the poop, and by means of ropes thrown to the people who were upon it, hauled them from their perilous situation, safe on board.

The beach was lined with armed Dutch boors, who made them prisoners of war as they came on shore, either from the schuyts, or from the pieces of the wreck, and guarded them on the beach till every one had landed, when their situation was deplorable in the extreme; the country was frozen up, while some were lying, and others sitting on the beach; but strange to say, those who had no clothes on, appeared the warmest.

The place where they came on shore, was near Schevelling; from whence they were conducted by some Swiss troops and the boors, to a place like a brewery, where they were obliged to pig together for the night, as well as they could.

On the 18th, after a breakfast of bread, cheese, and small beer—at least for those who could struggle most to get it—they were closely stowed together, without distinction, in nine or ten carts, that had been used to convey manure, for, in some of them, a great deal, hard frozen, already adhered, and in this manner they were leisurely driven through some poor fishing villages, and, as they passed along, were pelted by women and children with hard clods of frozen earth. The wind blew fresh, few of them had any clothes on, and they were attended by a brutal mob, who were huzzaing, to drown their complaints of the insults they met with; and had it not been for the Swiss soldiers, it is more than probable they would have been dragged from the carts. Thus escorted, they reached the town of Noordwyk, where they were put into a place like vaults, under ground, strewn with straw, with no provisions, even for those who had money; but some gin was smuggled in at a rupee per bottle, with which they made themselves as comfortable as they could in such a cold damp place, till some Dutchmen came in with large wooden platters, piled up with boiled pearl barley, smoking hot, with treacle on the top; but the sight of such uncouth victuals, even from an enemy, made the seamen so indignant, that without consulting their officers, they instantly seized the Dutchmen, and rubbed their noses in the hot viands, till they roared out fire and murder, when a number of Swiss soldiers entered with muskets and bayonets fixed; but the seamen, still irritated, and nothing daunted, bared their breasts to the pointed bayonets, and dared them to fire; till the officer, convinced that there must be some misunderstanding, procured an interpreter and learned the real cause, when he told them he really pitied their misfortunes, and would see what he could do for them. He turned out the Dutchmen, and in less than an hour his own troops entered, with baskets of broken victuals, which they had collected from the houses by force or persuasion. There was plenty for all, and very good, and officers and all hands had a savoury and comfortable meal, the best they had had for a long time, as from the time they were driven from the Downs, their only food had been raw salt meat, with biscuits full of maggots and weevils, and raw rice. The night was passed in the dungeon, nothing occurring but quarrelling for the straw.

On the 20th, in the forenoon, they were marched for the city of Leyden, where eleven officers were allowed to reside within the gates upon their signing an engagement not to attempt to escape: the remainder of the crew being confined in a place outside the gates, called the pest-house. Among them were a number of invalid soldiers and French prisoners, who had assisted to work the ship home from India, some of whom were saved. The total number lost was twenty-five.

SHIPWRECK OF THE GREAT BRITAIN PACKET SHIP.

The annexed engraving represents the wreck of the splendid packet-ship, Great Britain, Captain Shaxsin master, which took place some time ago on her outward passage to New York, when the vessel and cargo were entirely lost. She was frigate-rigged, of 404 tons burthen, and was built at Quebec in the year 1839. The preservation of her crew and passengers was truly miraculous, as will be observed in the particulars subjoined—a narrative written by Captain Shaxsin to the owners of the ill-fated vessel:—

“Painful as my task now is, in writing the present, it must be communicated, and, under the distressing events, my heart is lifted up with thankfulness that my life and those of my people,

sufferers with me, have been spared. The Great Britain is no more—her career has been short and trying. After leaving the Channel we proceeded to the westward, where we encountered a succession of gales, but without any bad result until the 5th of March. We were then in latitude 47.20, and longitude 34.40, and experienced one of those terrific hurricanes which sweep destruction in its ravages. It commenced at three o'clock in the morning, and continued without intermission until the 28th, with an awful sea. The ship fought nobly against the storm until the morning of the 27th, when the foremast was carried away, it breaking off 18 inches above the deck. She had previously laboured hard, but made little or no water—not more in four hours than we could have pumped out in five minutes at one pump. We were now a complete wreck, the darkness of the morning and the fury of the hurricane preventing our getting at it to cut away anything. Sea after sea washed over us in rapid succession, sweeping everything off

SHIPWRECK OF THE GREAT BRITAIN.

the deck, and the hurricane preventing almost all communication with the crew without bawling as loud as we possibly could. The surging of the ship was truly frightful: the pumps were now constantly going. At 8 a.m., a sea again struck the vessel forward, and turned the cutwater for and aft on the left or larboard side, tearing with it the main stem down to six or eight feet under water. The leaks now increased, the water rushing in through the bows like a river, the wood-ends laying all open. After considerable difficulty we got a sail and threw it over the bows, filled with oakum and ends of rope, which eased the rush there, and the carpenter cut the ceiling where it was to be got at inside, forcing oakum outward any where, but the water had gained in height under the fore-castle deck, and the ship settled well in the water. Nothing now appeared before us but death—we toiled at the pumps, but three of the crew gave up to despair, and could not by threats or entreaties be brought to exert themselves. The cries of the women and

children, of whom you know there were many, sometimes fell on our ear, but this I need not describe. Towards the afternoon the gale abated, and the sea fell very much. Our long-boat was left uninjured. The crew rushed into her and all resistance was in vain. I threatened to disable her if more than half left the pumps to get her ready for the last extremity. She was easily got across the deck, and I put 1 cwt. of pork, a box of bread, compass, sextant and quadrant, and a sail in her, in short, everything I thought necessary to keep such a number from starvation for a certain time. All being in her, nothing would satisfy the crew but to launch her; I endeavoured to persist against it; but the pumps were left, and in an instant she floated over the ship's deck. The next moment she filled, and all would have gone to the bottom but for the pieces of wreck hanging round about the vessel, which they laid hold of, and held on until extricated by myself and others. One seaman, however, named Webb, sunk, and was never seen

afterwards. During the whole of that night, the following day, the 28th, 29th, and part of the 30th, the horrors we endured were dreadful. We were all worn out through excessive exertions at the pumps, for that was our only means of preservation. Boils appeared on all the seamen's legs and arms, and they were benumbed by being continually buried in water, and were exhausted for want of food. On the evening of the 29th violent gales again commenced, with almost equal severity as the former; the only sail left was shivered to atoms, the sea boarded us abaft, washed away the binnacle and compasses, broke the wheel, and split the port-head. I cannot go further to describe the wreck, my heart sickens. These last scenes scarcely excited a feeling; my heart was bound to exertion, and if all failed then death was certain, and to meet that event the most calmly appeared to me the only relief to our sufferings. Daylight, 30th—Nothing in sight; noon the same; at two p.m. a sail coming right towards us; at four, close to us under close-reefed top-

sails. After a great deal of manœuvring we got a buoy from them, and two of their crew attached a line to their boats. They returned to their ship, and we hauled the empty boat back to the wreck. I must tell you that only two at a time and two to row could go. The first trip nearly closed all—the sailors, so frightened and anxious to get on board of the vessel, nearly filled the boat, and the mate and the seamen declared, if I did not take charge of the boat to conduct her, they would not return again. I was obliged to comply, and after three trips, those whom I intrusted for rowing became tired out. The vessels were nearly a mile apart, and only eight taken off. Night came on very dark, and a light sea. Drew lots for other two to row the boat. I had yet fourteen souls to take off, and seven of them were small children. Two trips I made, three of them each time. The third, four children and mother, the youngest child only 14 months old, which I placed in a pocket, and safely brought to the ship, and lastly, at 11 o'clock, I

brought off the father and three boys; all of them, thank God, were saved. The ship proved to be the Philadelphia, bound to Boston, to which place we were conveyed, the utmost kindness being shown to us by those on board. I have no doubt the Great Britain foundered soon after we left her. None of the passengers or myself were able to save any property whatsoever—all was lost. The ship and cargo were insured to the extent of £25,000.

CAPTURING A CLIPPER.

Lox's long had the superior qualities of the Saucy Ind, and the high nautical tactics of her commander, baffled the manœuvres, and eluded the vigilance of the revenue cruisers from the Lizard Point to Cape Wrath, from the Stour of

Assynt to the chops of the Shannon. She was a cutter of the first order, clench built, pliant as an osier, and sharp, fore and aft, as a wedge. Her spars were out of all proportion square, and consequently, she could spread a cloud of canvass beyond any other vessel of her tonnage on the British coasts. Her crew consisted of thirty crack hands, who had been bred in the moonlight from boyhood. She mounted ten nine-pound carronades, with a proportionable quantity of small arms, and a well stored magazine. Betts (for that was the name of her daring commander) had prosecuted the "fair trade" from the time he was the height of a serving mallet, knew every creek and landing place in the island where "business" could be done; was up to all the strategy practised by the "Philistines," and having never been taken, swore he never should. When the ports of the Continent were shut out to every other vessel, Betts contrived to load his "hooker," with the same facility as ever, dashed through every obstacle by sea and land, and

emboldened by uninterrupted success, threatened to sink certain small vessels, who impeded his future prospects. On the 3rd of July, 1820, Betts, along with his consort, the "Matchless," a large vessel which mounted eighteen guns—was quietly discharging an illicit cargo of brandy and tobacco, in the mouth of Loch Bodnall, an obscure bay on the north-west of Sutherland. The brig to which I belonged, mounted twelve long sixes, and was manned with a complement of forty men. At day-break, we descried the two vessels in question, and, from the cut of their canvass, knew them at once to be smugglers. Every inch of cloth was crammed on our barges, the decks were cleared for action, guns loaded with round, grape, canister, pikes cut away from the main-boom, tops barricaded with spare studding sails, and half-a-dozen picked men, stationed in each top to act as marksmen. Towards ten, a.m., the wind fell, and as all was anxiety, the "sweeps" were resorted to. In an hour it became quite calm; but as the sea was smooth, we swept the brig from two-and-a-half to three knots an hour through the water. Every nerve was strained, and every face brightened; for, though the chase were sweeping and towing with might and main, yet being considerably embayed, we ranged up with them hand over hand.

It may not be generally known, that revenue ensigns have a crown and star in the fly, to distinguish them from those worn by vessels under the orders of the Admiralty. As a deception, our commander directed this to be sewed up, ranged the hammocks along the bulwarks, and placed six men with red shirts on the poop in order that they might be taken for marines. We now swung the brig between both vessels, and opened our fire; but the "Matchless," by strenuous exertion, managed to get out of our range, swept away to the northward, and catching a light air in her sails, contrived to escape. We had now to do with the "Ino" alone. We poured a broadside into her; but it was not returned, and the smoke clearing away a little, we saw the smuggler's crew had deserted their quarters. Betts ran fore and aft among his crew, beseeching, exhorting, swearing, and threatening, but in vain—the crew jumped into the boats. The exasperated Betts took off his hat, and jumping on it, was the last man that followed them. They pulled with rapidity towards the shore; while I, with an armed and picked crew, gave chase to them, and kept blazing away at them with musketry, for three or four miles. The desperadoes, however, landed; and, with the celerity of thought, formed behind a rock, and levelled their pieces, awaiting until our boat drew so near them, that every shot might tell. At this critical moment, the recall signal was made for the boat, which, in all probability, saved every individual of us from destruction. In fact, nothing could have preserved us from the deadly effect of their fire-arms, but the signal above alluded to. When we boarded the prize, such a scene of confusion presented itself as baffles description—brandy running out at the scuppers; stove casks lying about the decks in every direction; bales of tobacco, wearing apparel, chests, hammocks, staves, &c. while the guns were run out, loaded to muzzle and primed, lighted matches in the match-tubs, and every symptom of a most determined resistance; and, but for our precautions, I am convinced we should have "caught a Tartar." I afterwards learnt that the "Matchless" run her cargo in safety on the coast of North Wales; but poor Betts died soon after, and as it was thought, of a broken heart.

TOTAL WRECK OF THE JAMES M'INROY

Extract of a letter detailing the total loss of this fine vessel, belonging to Glasgow.

"The ship left Bombay on the 14th of April, bound for Port Glasgow. We had light winds for ten or twelve days afterwards. The breeze increased, and on the 18th sighted the Maldiv Islands, and on the night of the 19th, about half-past nine o'clock, the ship struck upon a sunk coral reef, going at the rate of eight and a half miles an hour. The captain had

gone below only a short time before, having given orders that a good look out should be kept. On the first alarm being given, he came on deck, and did everything that human means could suggest to get the vessel off, but all was of no avail. We had the assistance of the moon for the first five hours after we struck, which time was taken advantage of by the captain in getting out the boats, two in all, anchor and warp, to try and heave the vessel off. Being deserted by the moon, very little could be done until day-light, the vessel striking very heavy all night so much so, as made it impossible to keep our feet. The first or second time she struck, carried away the rudder, ship on her beam-ends. We did not know how far we were from any land. Daybreak was a happy sight for us all; a number of islands in sight; the highest to us distant about seventeen miles; the water gaining on the pumps; at ten a.m., as much water inside as out; opened the hatches, started. A number of cotton and pepper bags were thrown overboard. The captain, seeing all was of no avail, ordered the men to get some of their clothes put into bags, and put some provisions in the boats, and try and make to the highest island. The men left about eleven, the ship driving still further on the reef; the boat returned in the afternoon, took the captain and the remainder of us on shore, where the others had got a tent rigged. The island was very small, about a quarter of a mile in circumference, no inhabitants, but we generally had a visit from the inhabitants of the other islands every day. They appeared very inoffensive people, all Mussulmans; they supplied us with two boats to carry us to the island where the Sultan remained. We left the little island on the 28th. The captain and part of the crew in one country boat; the rest of the men divided amongst the others; we went on sailing by day and anchoring at night, either at an island or reef, bagging fowl and catching turtle as we went along. We came to an island where we lay seven days; here we got ten turtles. We arrived at the Sultan's on the 19th; out of provisions, only one barrel of pork, but only having this, we wished to retain it for the remainder of our journey. The captain's boat arriving first, we were obliged to put ourselves on the Sultan for the necessities of life; being out when we arrived, the captain despatched one of the boatmen to try and get near two fowls. Now, for an instance of what we got to eat. The man went to one of the Sultan's big men and stated our case; he sent us down a few pounds of rice and a few pieces of dried fish, just what the natives use. Next day they set about getting a house built for us, which the men got; the captain, boys, and I went to another, and ate away at fish or dry rice the best way we could till the 10th of June, when we left the Maldives for Cochin, in one of the Sultan's boats, all sick with fever, sailing through as usual, sailing by day, and anchoring by night, till the 17th, the day we got to the head of those islands; lay there three days; got five very large turtle; out of one we killed we took about 300 eggs; buried the steward on a small island; left this on the 21st for Cochin on the afternoon of the same; committed the body of the cook to the deep; on the 24th came to an anchor on the Malabar coast, but owing to the boisterous state of the weather, and unshipping of the rudder, which took place, we were driven a long way to leeward of our port. Next day we tried to beat to windward, but got always to leeward, so that we were obliged to come to an anchor to deliberate on what was best to be done. There was no possibility of us landing here, owing to the heavy swell that sets in during the monsoons, so the captain advised them to go to Ceylon; so on the 26th we got under weigh for Point de Galle, where we came to an anchor on the night of the 29th. Next morning the mate died—could not get the corpse on shore—in the evening committed the body to the deep. Being a little to leeward of Galle, we were as badly off as what we were at Cochin, for owing to the wind and current we could not get up, so we got a pilot, and went to another small place about sixteen miles further leeward. We got all our things on shore, and when I got on shore myself, I never was so glad to get my foot on dry land, as I was at that time to get out of the boat. When our things were landed, we got men to carry them to the government out-house. The captain got bullock carts to carry the sickest of the men that night to Galle hospital, the remainder stopped

there till next day. We got nine bullock carts to carry the men and luggage; so we went along like a caravan. This was all at government expense. The captain has thrown himself and all hands on government. The men having got a house at Point de Galle, and, through the captain's kindness in interceding, we are now in lodgings; he has been very kind all along to us, more than we will be ever able to recompense him for. There are now a few ships for England at Columbia, a place seventy three miles distant from this, where we expect government will shortly send us a passage. Should things go right, I expect to be at Glasgow in about six weeks or two months after you receive this. I could not write you any sooner; the mail was made up only a few days before we arrived, so that is like a month I have lost, or a month longer before you get it." In the P. S. the writer says—"I am getting this sent away sooner than I expected; the overland mail leaves Columbia on the 18th, to catch the steamer at Bombay. A vessel leaves for London, another for Liverpool, in a few days; whether we may get in any of these or not, I cannot say, but the captain expects an answer from government every day."

THE DESTRUCTION OF HIS MAJESTY'S SHIP, QUEEN CHARLOTTE,

OF 110 GUNS, CAPTAIN TODD, WHICH TOOK FIRE OFF THE HARBOUR OF LEGHORN, ON THE 17TH OF MARCH, 1800.

THE Queen Charlotte was, perhaps, one of the finest ships in the British navy. She was launched in 1790, and her first cruise was with the fleet fitted out against Spain, in consequence of the dispute respecting Nootka Sound. Lord Howe who was commander-in-chief of that fleet, was then on board of her; and she also bore his lordship's flag on the 1st of June. After which, she was sent to the Mediterranean, and was the flag-ship of the commander-in-chief on that station. In March, 1800, she was despatched by that nobleman to reconnoitre the island of Cabrera, about thirty leagues from Leghorn, then in the possession of the French, and which it was his lordship's intention to attack. On the morning of the 17th, the ship was discovered to be on fire, at the distance of three or four leagues from Leghorn. Every assistance was promptly forwarded from the shore, but a number of boats, it appears, were deterred from approaching the wreck, in consequence of the firing of the guns, which were shotted, and which when heated by the fire, discharged their contents in any direction.

The only consolation that presents itself under the pressure of so calamitous a disaster is, that it was neither the effect of treachery or wilful neglect, as appears by the following official statement of the carpenter:—

Mr. John Braid, carpenter of the Queen Charlotte, reports, "that about twenty minutes after six o'clock in the morning, as he was dressing himself, he heard throughout the ship a general cry of 'fire,' on which he immediately ran up the after-ladder, to get upon deck, and found the whole half-deck, the front bulk-head of the admiral's cabin, the main-mast's coat, and boats covering on the booms, all in flames; which, from every report and probability, he apprehends, was occasioned by some hay, which was lying under the half-deck, having been set on fire by a match in a tub, which was usually kept there for signal guns. The main-sail at this time was set, and almost entirely caught fire; the people not being able to come to the clue garnets on account of the flames.

"He immediately went to the fore-castle, and found Lieutenant Dundas and the boatswain encouraging the people to get water to extinguish the fire. He applied to Mr. Dundas, seeing no other officer in the fore-part of the ship (and being unable to see any on the quarter-deck, from the flames and smoke between them), to give him assistance to drown the lower-decks, and secure the hatches, to prevent the fire falling down. Lieutenant Dundas accordingly went down himself with as many people as he could prevail upon to follow him,

and the lower-deck ports were opened, the scuppers plugged, the main and fore-hatches secured, the cocks turned, and water turned, and water drawn in at the ports, and the pumps kept going by the people who came down, as long as they could stand at them.

"He thinks that by these exertions the lower-deck was kept free from fire, and the magazines preserved for a long time from danger; nor did Lieutenant Dundas, or he, quit this station, but remained there with all the people who could be prevailed upon to stay, till several of the middle-deck guns came through that deck.

"About nine o'clock, Lieutenant Dundas, finding it impossible to remain any longer below, went out at the fore-mast lower-deck port, and got upon the fore-castle; on which he apprehends there were then about one hundred and fifty of the people drawing water, and throwing it as far aft as possible upon the fire.

"He continued about an hour on the fore-castle; and finding all efforts to extinguish the flames unavailing, he jumped from the jibboom, and swam to an American boat approaching the ship, by which he was picked up and put into a tartan, then in charge of Lieutenant Stewart, who had come off to the assistance of the ship.

(Signed) JOHN BRAID."

"Leghorn, March 18, 1800."

Captain Todd remained upon deck, with his first lieutenant, to the last moment, giving orders for saving the crew, without thinking of his own safety. Before he fell a sacrifice to the flames, he had time and courage to write down the particulars of this melancholy event for the information of Lord Keith, of which he gave copies to different sailors, entreating them, that whoever should escape might deliver it to the admiral.

Thus fell victims to, perhaps, too severe a duty, the captain and his first lieutenant, at a time when they still had it in their power to save themselves; but self-preservation is never a matter of consideration in the exalted mind of a British naval officer, when the safety of his crew is at stake.

Lord Keith and some of the officers were providentially on shore, at Leghorn, when the dreadful accident occurred. Twenty commissioned and warrant officers, two servants, and one hundred and forty-two seamen, are the whole of the crew that escaped destruction out of nearly nine hundred souls on board, that for nearly four hours exerted every nerve to avoid that dreadful termination which too surely awaited them.

THE MENAI BRIDGE.

Who could ever have thought of calling a bridge sublime! And yet that is actually the impression made by the Menai bridge. It is very different, to be sure, from the sublimity of castles or cathedrals; it never perhaps, can have the sublime of association—a battle, indeed, might give it, but this structure has a grandeur of its own. It bestrides an arm of the sea, connecting Anglesea with the main land. It is a hundred feet from the water. The part suspended is five hundred and fifty feet in length. The arches and towers are masses of masonry as stupendous as the Roman aqueducts.

The sole material of the part suspended is iron. As I approached it (it was towards evening) I could see nothing but the towers. And when you distinguish the fine delicate tracery of the iron chains and supporters, it seems as if it were nothing but gauze or cobweb, compared with the mighty masses of masonry on which it rests. The vehicles travelling over it, look as if they were suspended in the air. I went down to the shore below, and as I looked up, it seemed to span a whole third part of the heavens. The late Mrs. Hemans, in speaking of this stupendous work, said that she first saw it from the Isle of Anglesea, so that it was relieved against the lofty mountains of North Wales; and she added, in a strain of eloquent and poetical comparison familiar to her, that "Snowdon seemed to her a fit background for the Menai bridge."

THE EXPEDITION TO MINORCA.

EARLY in 1756, active preparations for war were made between England and France, but it was not formally declared till the 18th of May. A formidable fleet had been equipped at Toulon, and a large body of French troops, under M. de Richelieu, had landed on the island of Minorca, and laid siege to Mahon. A fleet was therefore ordered to be got ready with the utmost expedition, for the relief of that place, and the command of it was given to Admiral Byng. Many unforeseen delays and difficulties prevented the sailing of this squadron, consisted of only ten sail of the line, till the 6th of April, and even then most of the ships were deficient in their complement of men. Being detained in his passage by calms and contrary winds, it was the 2nd of May before the admiral arrived at Gibraltar, where he was joined by Commodore Edgecumbe, who had escaped from Mahon, with the ships under his command.

The admiral lost no time in getting the fleet ready for sea, in order, if possible, to relieve the garrison of Fort St. Philip. The French force in the Mediterranean at this time was about equal in point of number to the English, but in condition and equipment it possessed very great advantages.

The events subsequent to the departure of the British admiral from Gibraltar, will be best described in his own letter, which we have inserted at length, and many of the passages of which were suppressed in the official publication of the British Government.

"Ramillies,
"25th May, 1756.
"SIR,—I have the pleasure to desire you will acquaint their lordships, that, having sailed from Gibraltar on the 8th, I got off Mahon on the 19th, having been joined by his

majesty's ship *Phoenix*, off Majorca, two days before, by whom I had confirmed the intelligence I received at Gibraltar of the strength of the French fleet, and of their being off Mahon. His majesty's colours were still flying at the castle of St. Philip, and I could perceive several bomb-batteries playing upon it from different parts. French colours we saw flying on the west part of St. Philip. I despatched the *Phoenix*, *Dolphin*, and *Chesterfield* a-head to reconnoitre the harbour's mouth, and ordered Captain Hervey to endeavour to land a letter for General Blakeney, to let him know the fleet was here to his assistance, though every one was of opinion we could be of no use to him, as by all accounts no place was secured for covering a landing could we have spared any people. The *Phoenix* was also to make the private signal between Captain Hervey and Captain Scrope, as this latter would undoubtedly come off if it were practicable, having kept the *Dolphin's* barge with him. But the enemy's fleet appearing to the south-east, and the wind at the same time coming strong off the land, obliged me to call in the ships before they could get quite so near the entrance of the harbour as to ascertain what batteries or guns might be placed to prevent our having any communication

with the castle. Falling little wind, it was five before I could form my line, or distinguish any of the enemy's motions, and was quite unable to judge of their force excepting by their numbers, which were seventeen, and of these thirteen appeared to be large. They at first stood towards us in a regular line, and tacked about seven, which I judged was to endeavour to gain the wind of us during the night; so that, being late, I tacked in order to keep the weather-gage of them, as well as to make sure of the land-wind in the morning. Being very hazy, and not above five leagues off Cape Mola, we tacked off towards the enemy at eleven, and at day-light had no sight of them; but two tartans, with the French private signal, being close in with the rear of our fleet, I sent the *Princess Louisa* to chase one, and made the signal for the rear-admiral, who was nearest the other, to send ships to chase her. The *Princess Louisa*, *Defiance*, and *Captain*, stood off to a great distance; the *Defiance*, however, took the vessel she was in chase of, on board of which were two captains, two lieutenants, and 192 private soldiers, who were sent out the day before with 600 men, on board tartans, to reinforce the French fleet.

"On our appearing off the place, the *Phoenix*, upon Captain Hervey's offer, prepared to serve as a fire-ship, but without

damaging her as a frigate till the signal was made to prime, when she was to scuttle her decks, every thing else being prepared that the time and place allowed of. The enemy now began to appear from the mast-head. I called in the cruisers, and when they had joined me, I tacked towards the enemy and formed the line a-head. I found the French were preparing theirs to leeward, having unsuccessfully endeavoured to weather me. They were twelve large ships of the line and five frigates. As soon as I judged the rear of our fleet to be the length of their van, we tacked all together, and I immediately

[THE EXECUTION OF ADMIRAL BYNG.]

ately made the signal for the ships that led to lead large, directing the *Deptford* to quit the line, that ours might be equal in number to theirs.

"At two I made the signal to engage, as I found it was the surest method of ordering every ship to close down on the one that fell to her lot. And here I must express my great satisfaction at the very gallant manner in which the rear-admiral set the van the example, by instantly bearing down on the ship he was to engage with his second, and thus causing the French ships to begin the engagement, which they did by raking ours as they went down. I bore down on the ship that lay opposite to me, and began to engage her, after having received the fire for some time in going down. The *Intrepid*, unfortunately, in the very beginning had her fore-top mast shot away; and as it hung on the fore-sail and backed it, the crew lost all command of the ship, her fore-tack and braces being cut at the same time, so that she drove on the next ship, obliging that and the ships a-head of me to throw all a-back. This compelled me to do the same for some minutes, to avoid their falling on board of me, but not before we had driven our adversary out of the line, who put before the wind, and had several shot fired at him by

his own admiral. This not only caused the enemy's centre to remain unattacked, but left the rear-admiral's division rather uncovered for some time. I sent and called to the ships ahead of me to make sail and go down on the enemy: and ordered the Chesterfield to lie by the Intrepid, and the Deptford to supply the place of the latter. I found the enemy edged away constantly, and as they went three feet to our one, they would never permit our closing with them, but took the advantage of destroying our rigging: for though I closed the rear-admiral fast, I found I could not again overtake the enemy, whose van were fairly driven from their line; but their admiral was joining them by bearing away.

"By this time it was past six, and the enemy's van and ours were at too great a distance to engage. I perceived some of their ships stretching to the northward, and imagined they were going to form a new line. I made the signal for the headmost ships to tack, and those that lead before with larboard tacks to lead with the starboard, that I might, by the first, keep the wind if possible of the enemy; and by the second be between the enemy and the rear admiral's division, which had suffered most; as also to cover the Intrepid, which I perceived to be in a very bad condition, and whose loss would produce a great balance against us, if, as I expected, they should attack us the next morning. I brought to about eight that night, to join the Intrepid, and to refit our ships as fast as possible, and continued so all night.

"The next morning we saw nothing of the enemy, though we were still lying to. Mahon was N.N.W. about ten or eleven leagues. I sent out cruizers to look for the Intrepid and Chesterfield, which joined me the next day; and finding, from a statement of the condition of the squadron delivered to me, that the Captain, Intrepid, and Defiance, which latter had lost her captain, were much damaged in their masts, so that they were in danger of not being able to secure their masts properly at sea; and also that the squadron in general were very sickly, having many wounded, and no place to put one-third of their number, if I even made an hospital ship of the Chesterfield, which would be no easy matter at sea: I thought proper, in this situation, to call a council of war before I again went to look for the enemy. I desired the attendance of General Stuart, Lord Effingham, Lord Robert Bertie, and Colonel Cornwallis, that I might collect their opinions on the present situation of Minorca and Gibraltar, and make sure of protecting the latter, since it was found impracticable either to succour or relieve the former with the force we had; for though we may justly claim the victory, yet we are much inferior to the enemy in the weight of ships, though the numbers are equal; and they have the advantage of sending their wounded to Minorca, and receiving reinforcements of seamen from their transports, and soldiers from their camp; all which has undoubtedly been done, in the time that we have been lying-to, in order to refit, and often in sight of Minorca; and their ships have more than once appeared in a line from our mast-heads.

"I send their lordships the resolution of the council of war, in which not the least contention or doubt arose. I hope indeed we shall find stores to refit our ships at Gibraltar, and if I have any reinforcement, will not lose a moment's time to seek the enemy again, and once more give them battle, though they have a great advantage in being clean ships, that go three feet to our one, and, therefore, have the choice how they will engage us, or whether they will engage us at all, and will never let us close with them, as their sole view is to disable our ships, in which they have but too well succeeded, though we obliged them to bear up. I do not send their lordships the particulars of our losses and damages by this, as it would take much time, and that I am willing none should be lost in letting them know an event of such consequence. I cannot help urging their lordships for a reinforcement, if none has yet sailed, on their knowledge of the enemy's strength in those seas; and which, according to very good intelligence, will, in a few more days be strengthened by four more large ships from Toulon, almost ready to sail, if they have not already sailed, to join them. I despatch this by Sir Benjamin Keene, by way of Barcelona, and am making

the best of my way to cover Gibraltar, from which place I purpose sending their lordships a more particular account.

"I am, Sir, &c., JOHN BYNG."

"To the Hon. John Cleveland."

"P.S. I must desire you will acquaint their lordships, that I have appointed Captain Hervey to the command of the Defiance, in the room of Captain Andrews, slain in the action."

To the extract from the above letter, was added, in the account published by the English ministry, a statement of the killed and wounded on board both squadrons, but without mentioning from what quarter the information was received. By this list it appeared that in the British fleet forty-two men were killed and 168 wounded; while the enemy had only twenty-one men killed and 133 wounded: and, likewise, that on board Admiral Byng's ship, the Ramillies, not a single individual had received any injury. This circumstance contributed greatly to injure his character at home, and was probably one cause of the fate which afterwards attended him. It furnished occasion to conclude that he had not attacked the enemy with that vigour and resolution which he ought to have done. A general clamour was immediately raised against him; the derogation which the national consequence was supposed to have suffered, threw the minds of the people into the highest state of fermentation, which was artfully and industriously aggravated by those whose neglect and misconduct were the causes of the unfortunate admiral's disgrace.

The remissness of administration had been indirectly impeached in Mr. Byng's first letter, written immediately after his arrival at Gibraltar, on the 8th of May. He there says:—"If I had been so happy as to have arrived at Minorca before the enemy had effected a landing, I flatter myself I should have had it in my power to have hindered them from establishing a footing there." The negligence of government, notwithstanding the various intimations they had received, in equipping a fleet for the defence of Minorca, was notorious; the distant allusion of the admiral to that subject irritated the minds of his employers: he had been weak enough to speak the truth, to say that he was sent out too late, to declare that the island was lost through the remissness of administration—and from that moment his ruin was determined.

The letter of Mr. Byng containing the account of the engagement, is supposed to have been received on, or before, the 16th of June; but it was not published till the 26th, so that his enemies had sufficient time to prejudice the public mind, and to propagate any accounts they pleased relative to that affair. Even when it appeared, it was mingled in a most unjustifiable manner, and with a view, as the admiral's friends very plausibly insisted, to prevent the people from forming a right judgment of his conduct, or knowing the disadvantages under which he laboured.

On the 16th of June, the Antelope sailed from Portsmouth, having on board Sir Edward Hawke, Rear-admiral Saunders, and several naval officers, with orders to supersede the Admirals Byng and West, and such captains as were ordered by the admiralty bound to return home.

In pursuance of the resolution mentioned in his letter of the 25th of May, Admiral Byng proceeded to Gibraltar, where he arrived on the 19th of June. He there found Commodore Broderick, with a reinforcement of five ships of the line, and began without loss of time to refit his ships, with the determination of returning to Minorca, in the hope of still relieving the garrison of Fort St. Philip, by the defeat of the French fleet. In the midst of his preparations for carrying this design into effect, Sir Edward Hawke arrived at Gibraltar with his letters of recall.

Mr. Byng, in obedience to the order for his supersedure, sailed from Gibraltar in the Antelope, on the 9th of July, together with Admiral West, and such officers as it had been thought necessary to send for home. On the arrival of the vessel at Portsmouth, Admiral Byng was put under arrest, and conveyed to Greenwich Hospital, the place appointed for his confinement previous to his trial. He not only received by the way all the insults and indignities which the malice of narrow minds could suggest, but was afterwards guarded with all the studied caution ever bestowed on criminals charged with

the blackest offences. This circumstance was industriously made known, as if to insinuate that the utmost care was necessary to prevent his escape from justice; while the unfortunate victim, conscious of no criminality, anxiously looked forward to the day of trial, as that which was to retrieve his reputation, and to deliver him from the malice of his enemies.

In December, he was carried back to Portsmouth, and on the 27th of that month, the court-martial which was ordered to inquire into his conduct, assembled on board the *St. George*. The court continued sitting till the 28th of January, when, after a full investigation of the evidence, they came to the following resolution:—"That the prisoner fell under part of the 12th article of the act passed in the reign of George II., which runs thus: 'Every person in the fleet, who, through cowardice, negligence, or disaffection, shall, in time of action, withdraw, or keep back, or not come into the fight, or engagement, or shall not do his utmost to take or destroy every ship, which it shall be his duty to engage, and to assist and relieve all and every of his majesty's ships, or those of his allies, which it shall be his duty to assist or relieve; every person so offending, and being convicted thereof by the sentence of a court-martial, shall suffer death.' As that article positively prescribes death without any alternative left to the discretion of the court, under any variation of circumstances, the court did therefore unanimously adjudge the said Admiral Byng to be shot to death, at such time and on board such ship as the lords commissioners of the admiralty should direct. But as it appeared by the evidence of Lord Robert Bertie, Lieutenant-colonel Smith, Captain Gardiner, and other officers of the ship, who were near the person of the admiral, that they did not perceive any backwardness in him during the action, or any marks of fear or confusion, either from his countenance or behaviour, but that he seemed to give his orders coolly and distinctly, and did not seem wanting in personal courage; and from other circumstances the court did not believe that his misconduct arose either from cowardice or disaffection, and did therefore unanimously think it their duty most earnestly to recommend him as a proper object of mercy."

When the sentence of the court was transmitted to the board of admiralty, it was accompanied with a letter, which concludes in the following manner:—"We cannot help laying the distresses of our minds before your lordships, on this occasion, in finding ourselves under the necessity of condemning a man to death, from the great severity of the 12th article of war, part of which he falls under, and which admits of no mitigation, even if the crime should be committed by an error in judgment only; and, therefore, for our own consciences' sake, as well as in justice to the prisoner, we pray your lordships in the most earnest manner to recommend him to his majesty's clemency."

In consequence of this representation, the lords of the Admiralty petitioned the king for the opinion of the twelve judges, relative to the legality of the sentence; which they having considered, together with the 12th article, to which it referred, were unanimously of opinion that it was legal. This report being transmitted by the privy-council to the Admiralty, their lordships issued a warrant for executing the sentence on the 28th of February. Admiral Forbes, however, being at that time a lord of the Admiralty, refused, with manly independence, to sign the warrant; and expressed his sentiments on the subject in the following memorial:—

"It may be thought great presumption in me to differ from such great authority as that of the twelve judges; but when a man is called upon to sign his name to an act which is to give authority to the shedding of blood, he ought to be guided by his own conscience, and not the opinions of other men.

"In the case before us, it is not the merit of Admiral Byng that I consider; whether he deserves death or not, is not a question for me to decide; but, whether or not his life can be taken away by the sentence pronounced on him by the court-martial, and after their having so clearly pronounced their motive for such a sentence, is the point which alone has employed my most serious consideration.

"The 12th article of war, on which Admiral Byng's sentence is grounded, says, according to my understanding of its meaning, 'That every person, who, in time of action, shall withdraw, keep back, or not come into fight, or not do

his utmost, &c. through motives of cowardice, negligence, or disaffection, shall suffer death.' The court-martial does in express words, acquit Admiral Byng of cowardice or disaffection, and does not name the word negligence. Admiral Byng does not, as I conceive, fall under the letter and description of the 12th article of war. It may be said that negligence is implied, though the word is not mentioned, otherwise the court-martial would not have brought his offence under the 12th article, having acquitted him of cowardice and disaffection. But it must be acknowledged that the negligence implied, cannot be wilful negligence; for wilful negligence in Admiral Byng's situation, must have proceeded either from cowardice or disaffection; and he is expressly acquitted of both these crimes; besides, crimes which are implied only and not named may indeed justify suspicion and private opinion, but cannot satisfy the conscience in a case of blood.

"Admiral Byng's fate was referred to a court-martial. His life and death were left to their opinion. The court-martial condemn him to death because, as they expressly say, they were under the necessity of doing so, by reason of the letter of the law, the severity of which they complain of, because it admits of no mitigation. The court-martial expressly say that, for the sake of their own consciences, as well as in justice to the prisoner, they must earnestly recommend him to his majesty for mercy. It is evident then, that, in the opinion and consciences of his judges, he was not deserving of death.

"The question then is, shall the opinions or the necessities of the court-martial determine Admiral Byng's fate? If it should be the latter, he will be executed contrary to the intentions and meaning of the judges; if the former, his life is not forfeited. His judges declare him not deserving death; but mistaking either the meaning of the law, or the nature of his offence, they bring him under an article of war, which, according to their own description of his offence, he does not, I conceive, fall under; and then they condemn him to death, because, as they say, the law admits of no mitigation. Can a man's life be taken away by such a sentence? I would not willingly be misunderstood, and have it believed that I judge of Admiral Byng's deserts; that was the business of the court-martial, and it was my duty only to act according to my conscience; which, after deliberate consideration, assisted by the best light a poor understanding can afford if, remains still in doubt; and therefore I cannot consent to sign a warrant, whereby the sentence of the court-martial may be carried into execution; for I cannot help thinking that, however criminal Admiral Byng may be, his life is not forfeited by that sentence. I do not mean to find fault with others men's opinions; all I aim at is to give reasons for my own; and all I desire or wish is, that I may not be misunderstood. I do not pretend to judge Admiral Byng's deserts, or to give any opinion on the propriety of the act.

"Signed, Feb. 16th, 1757 at the Admiralty.

"J. FORBES."

A further attempt was made to save Admiral Byng. A member of the court-martial, in behalf of himself and several others, petitioned parliament to be released from their oath of secrecy, having something to disclose relative to the sentence, which in justice to the admiral they ought not to withhold. A bill to that effect was accordingly brought in, and passed the commons, but the lords conceiving it unnecessary, it was almost unanimously rejected in that house. His sentence was accordingly ordered to be put into execution on the 14th of March, on board the *Monarque*, at Portsmouth.

The unfortunate admiral finding himself now abandoned to his fate, prepared himself for death with great resignation and tranquillity. He preserved the utmost cheerfulness to the last, and not the least sign of impatience or apprehension ever escaped him. On the morning of the day appointed for his execution, he wrote the following paper, which he delivered to the marshal of the admiralty, a few moments before he suffered:—

"Sir,—These are my thoughts on this occasion; I give them to you that you may authenticate them, and prevent

anything spurious from being published that might tend to defame me.

A few moments will now deliver me from the virulent persecution, and frustrate the malice of my enemies. Nor need I envy them a life subject to the sensations my injuries and the injustice done me must create. Persuaded I am, justice will be done to my reputation hereafter. The manner and cause, of raising and keeping up the popular clamour against me, will be seen through. I shall be considered (as I now conceive myself) a victim, destined to divert the indignation of an injured and deluded people from the proper objects. My enemies themselves must now think me innocent. Happy for me, that at this, my last moment, I know my innocence, and that no part of my country's misfortunes can be owing to me. I heartily wish that the shedding of my blood may contribute to the happiness and service of my country; but cannot resign a just claim to a faithful discharge of my duty, according to the best of my judgment, and the utmost exertion of my ability for his majesty's honour and my country's service. I am sorry that my endeavours were not attended with more success, and that the armament under my command, proved too weak to succeed, in an expedition of such moment.

"Truth has prevailed over calumny, and falsehood, and justice has wiped off the ignominious stain of my supposed want of personal courage and disaffection. My heart acquits me of these crimes. But who can be presumptuously sure of his own judgment? If my crime be an error of judgment, or differing in opinion from my judges; and if yet the error of judgment should be on their side, God forgive them, as I do; and may the distress of their minds, and uneasiness of their consciences, which injustice to me they have represented, be relieved and subside, as my resentment has done. The supreme judge sees all hearts and motives, and to him I submit the justice of my cause.

"J. BYNG.

"On board his majesty's ship, *Monarque*, in Portsmouth harbour March 14, 1757."

About noon, the admiral having taken leave of a clergyman and some friends by whom he was accompanied, advanced from the great cabin to the quarter-deck, where a party of mariners was drawn up, in readiness to execute the sentence. He proceeded with a firm, deliberate step, and at first resolved to suffer with his face uncovered. His friends, however, represented to him that his looks would probably intimidate the soldiers, and prevent them from taking proper aim, upon which he threw his hat on the deck, kneeled down on a cushion, and having tied a handkerchief over his eyes, he dropped the other as a signal to his executioners to fire. Five balls passed through his body, and he instantly fell dead. The time between his leaving the cabin and being placed in the coffin did not exceed three minutes.

Such was the fate of the unfortunate Admiral Byng, in whose death was exhibited a spectacle unparalleled in the English annals, and which will ever be a source of regret to every unprejudiced mind.

The following anecdote of this devoted hero, has been communicated by the person who attended him and took his orders, who, had, for the fortnight previous to the mortal catastrophe, scarcely been permitted to sleep, being constantly on horseback carrying despatches, so that on the fatal morning he was waked by his master, with "Come, sleeper, 'tis the last morning I shall trouble you." In the course of dressing, he exchanged his gold sleeve buttons for those of his faithful domestic, and was careful, in giving him his wardrobe and other things, to do it in the presence of a relative, that no dispute might arise. The coat in which he was shot, was a favourite; two or three had been consigned to his valet before this fell into his hands, and was selected for the occasion. It is of a drab colour, and shows the marks of long service, as well as the perforations of the balls which had passed through it. It is now in the possession of Sarah Hutchins, daughter of the person already alluded to.

The gallant admiral gave to each of the marines appointed

to the task of putting the sentence of the law into execution, a half-guinea each; then speaking to his valet for the last time, said, "Hutchins, when I fall, throw my morning gown over me; I should be sorry if they saw my blood." This was accordingly done, and it is reported he bled inwardly, so that no blood did appear.

LOSS OF THE *BLANCHE* FRIGATE, ON THE FRENCH COAST, MARCH 9, 1807.

THE *Blanche* frigate sailed from Portsmouth, March 3, 1807, under command of Sir T. Lavie. The next morning, at two o'clock, they made Portland Lights, distant about four leagues. Afterwards they steered a west course, till eight o'clock, then west by south half south.

At this time it began to blow very hard; and, from being under all sail, they reduced to close-reefed fore and main topsails, and got down top-gallant yards. Ushant, by their reckoning, now bore S.S.W. half W. sixteen leagues.

The captain left orders in writing to haul to the northward, the wind being E.N.E. when the ship had run ten leagues, which Sir Thomas Lavie thought a good position to join Admiral Sir James Saumarez in the morning.

At eleven o'clock, Lieutenant Aprece awoke the captain to say that it blew harder; on which he ordered the ship to be brought to the wind on the starboard tack, and the fore-top-sail to be taken in. The lieutenant had scarcely got out of the cabin before the vessel struck. Every body was on deck in an instant; sails were clewed up, and the anchors were let go; they rode a little until she parted from her anchors, and was driven upon the rocks.

The night was dreadfully dark and cold, and there was no possibility of discriminating whether the rocks were distant from the land or connected with the shore; happily, however, it proved the latter. The captain immediately ordered the masts to be cut away, and recommended the officers and men to stay by him and the ship to the last; a few hands got into the quarter-boats, and they were no sooner on the water than they were dashed to pieces; it was about high water, and while the tide flowed the ship lay tolerably easy, until it began to fall, when tremendous breakers covered them.

The captain remained by the wheel, until the vessel divided amid-ship, when he fell over seaward. The crew were all on the side, and hauled him up immediately. It was highly gratifying to his feeling the attention which they paid him to the last; and now they caressed him as their father.

In this state they lay about three hours, when the water left the wreck sufficient for them to attempt a landing; and with the exception of a few, they got safe on shore, and assembled under a rock, when three cheers were given to the remains of the unfortunate *Blanche*. At daylight not two pieces of wood were left together, and the masts were shattered into shivers.

The crew, who had saved nothing, made a most shabby appearance. A cask of rum was the only thing found on the shore, which, after the captain was carried to a cottage, some were so imprudent as to broach, by which about fifteen died.

They landed on a shocking coast, but every attention possible was paid to them. Having been marched about thirty miles, they arrived at Brest, where they were very comfortably lodged and fed in the Navy Hospital. Sir Thomas Lavie was accommodated at the house of the commander-in-chief, M. Cefforelli, who behaved to him with all the manners of a gentleman.

All the officers were saved: viz. Sir Thomas Lavie, captain; Robert Basten, first lieutenant; W. Aprece, second ditto; James Alton, third ditto; Roger Taylor, master; J. T. Wilcock, purser; James Brenan, surgeon; James Campbell, lieutenant of marines; T. J. P. Muters, James Ryall, John Rookes, Henry Stanhope, W. J. Williams, Robert Hay, Geo. Gorden, J. T. Secretan, Thomas Gregg, Chas. Street, and F. E. S. Vincent,

midshipmen; Joseph Slingsby, master's mate; John Moissey, ditto; J. C. G. Moreatt, clerk; John Patterson, assistant surgeon; John Carr, gunner; William Loverin, boatswain; and John Pario, carpenter.—Also, one hundred and eighty-seamen, and twenty-five marines. About forty-five were lost, twenty of whom were marines.

LIFE OF MARY READ *alias* JAMES MORRIS.

THE father of the following singular person, was born in the West Indies, and brought up to sea under his father, who was master of a sloop that traded between Boston and the Leeward islands, in which station he got a pretty deal of money, and had several children, the eldest whereof was John Read, who coming over to England, with more money than brains, was soon led into all the follies and vices of the town, and was as well known in the Hundreds of Drury, as if he had been Swabber at the Horse-Shoe and Rummer all his life.

Getting acquainted with one Rachel Robinson, a young fireship, well equipped and rigged, he was married to her by Dr. Colson, to whom

he gave but six-pence wet, and six-pence dry; she proving a dear bargain too—making him stand pimp to her vices, and to her cullices, till she had made the most of them.

Read took to drinking pale ale, thinking to drown his sorrows by keeping up his spirits by that heady liquor—gin then not being in use. Here he got into a quarrel, over his cups, with one Captain Smart, whom he killed; for which he was forced to fly—leaving his wife, big with child, to take care of herself.

He shipped himself immediately on board the *Nonsuch*, for Virginia.

His father being informed of his marriage in England, gave him but a cold reception; however his mother, whose darling he always was, equipped him out, and sent him aboard the *Defiance*, for Guinea, as second mate; where he, with part of the crew, killed the captain, seized the ship, and turned pirate. A little while after careening here at an inlet in North Carolina, he met with Avery, whom he joined with till they settled in Madagascar.

In the meantime, his father died at Virginia; and the mother hearing nothing of her son, sent for her daughter to come over with her child to Virginia, and she would take care of them; which the daughter readily agreed to, as her son was heir to a small estate which the grandfather left behind him. There she lived three or four years, till she was got with child by a young gentleman of that country, who promised her marriage; but not doing it, she, to hide her shame, resolved to return to England. Although the mother begged of her to leave the child behind, she would not consent, but brought him along with her. He dying at sea, and she being brought to bed of a girl as soon as she landed—when it grew up, she dressed it in boy's clothes, to deceive her mother, and make it pass for her son's boy; but her

mother upon the return of the ship, hearing of the death of the child, would not send her any remittances; and she being ashamed to own the cheat amongst her acquaintance, continued the girl in boy's clothes till she came to be about thirteen years of age, when she put her out for a foot-boy to a French lady, with whom she did not live long, before she entered herself aboard a ship, bound for the East Indies; and upon her return, quitted the sea service, and went over to Flanders, where she carried arms as a cadet, showing a great deal of courage upon all occasions, but yet was never able to get a commission; so she quitted the foot service, and went into a regiment of horse, where, by her bravery and valour, she got the esteem of all her officers. Her comrade happening to be a handsome young fellow, she fell in love with him, and grew more negligent of her duty, so that she was soon taken notice of by her commanders. Whenever her comrade was ordered out upon duty, she would be with him, and very often do the duty for him, running herself into danger when she had no business, only to be near him; which made the troopers believe she was mad, and her comrade thought her little better—not dreaming what was the matter; till one night she found out a way of letting him discover her sex, without any appearance that it was done with a design. This

surprised him greatly at first, but recollecting himself, he was overjoyed that he should have a mistress to himself: it being not usual in a camp, because the women that follow them are generally as common as the highway; but he soon found his mistake, she proving very modest and reserved, and resisted all his temptations, assuring him, that the cause of her disguise was out of pure love to him, and not with any intent of being unchaste. This modest behaviour of her's, quite changed his passion of lust, to pure love and respect; it being what she desired.

[CAPTAIN ROGERS THROWN OVERBOARD.]

At length, finding him sincere, they gave mutual promises to each other, in token whereof they broke a shilling, agreeing to be married as soon as the campaign was over, and they marched into winter quarters. This caused a great noise, not only in the army, but also in the newspapers, of two troopers being married, most of the officers in the garrison being at the wedding; amongst whom they made a very handsome collection for the bride, towards house-keeping—every body giving something, which made them desire their discharges out of the service, that they might put themselves into some way of living, having got above a hundred pounds collected for them. Their discharge being readily granted, they set up an eating-house at the sign of the Valiant Trooper, near the Castle of Breda, where they had a very good trade—every body frequenting their house out of curiosity.

But this they held not long; for the husband drinking too hard threw himself into a fever, and died. The war being over, the army was dispersed into other countries, so that the widow's trade began visibly to decline; and rent being great, and other charges answerable, she let her house, and for a time, lived upon what she had; but being out of business, her money began to grow short, which made her think of putting

on man's apparel again, and to go into Holland, where she enlisted herself into a regiment of foot, quartered in one of the frontier towns; but not liking that service, there being no probability of getting anything by it, she resolved to seek her fortune another way; so watching a proper opportunity, she deserted from the regiment, and shipped herself on board a vessel bound for the West Indies, under the name of James Morris.

In their voyage this ship was taken by the pirates, and Mary Read being the only English person aboard, they kept her, and after plundering the ship, allowed it to depart quietly, they being all Englishmen, and followed the trade of piracy for above a year, till the king's proclamation came out, and was published in all the colonies in the West Indies, for pardoning all pirates that should surrender by a certain time appointed. This was no sooner made known to the crew that Mary Read belonged to, but they all submitted, and took the benefit of the king's mercy.

Afterwards they lived quietly till their money was nearly spent, at which time hearing that Captain Wood Rogers, who was then Governor of the island of Providence was fitting out a privateer to cruise against the Spaniards, they most of them embarked for that island, amongst whom was Mary Read, she being resolved to make her fortune one way or other, let the event be what it would.

They had not been long at sea, but they rebelled upon some pretence or other, against their Captain, and flung him overboard, and then fell to their old trade of pirating again, with whom Mary Read joined, although she had often before declared that she thought the life of a pirate the worst life in the world. So prone is our nature to wickedness, that we often act against our own inclinations as well as reason. She pretended, as indeed most of them do upon their trials, that what she did was by compulsion, and to save her life. Notwithstanding, the evidence against her, who were forced men, they positively swore, that in the time of action, nobody on board was more bold and resolute than Mary Read and Anne Bonny, to attack any ship; and particularly at the time they were taken, when they came to close quarters, Mary Read called to the men under deck, and bid them come up and fight like men, swearing, 'What! would they suffer themselves to be taken, and hanged like thieves!' which some of them not minding, she fired her arms down into the hold amongst them, and killed one, and wounded another.

This is the substance of what was sworn against her; but she denied it with a great deal of art and skill, saying,—it was impossible for a woman to be guilty of what was sworn against her,—and that she entered the privateer purely upon account of Anne Bonny, who was her lover; being well aware, if she had not disguised herself, she could not have been admitted on board the ship.

This had some weight with the jury, as well as the judge; for it plainly appeared by all the witnesses, that she had always behaved herself very modestly and discreetly among the men; though, indeed, they could not say, but she was as brave and bold as any one of the crew, and had at all times behaved herself as such.

Before I proceed any further, it may not be amiss to give a narrative of the singular courtship between Anne Bonny and Mary Read. They were both deeply in love with each other, but did not know how to discover their sex, till Anne Bonny at length not being able to hold out any longer, discovered herself, saying,—she was a woman; had long observed the bravery and courage of Mary Read, and that she could no longer conceal her passion; therefore she hoped that her forwardness in addressing her would not be looked upon as impudence, because she had no other way of discovering her sex, or making herself known to her;—so clinging affectionately round her neck, she stole two or three kisses, and fainted away.

Mary Read was not a little surprised at this discovery and confession; being herself exactly in the same condition. After a minute or two's reflection on her own hapless love, she recovered Anne Bonny, and speaking kindly to her, gave her to understand, that she was also a woman herself, and had

always borne the same deep-rooted love and affection for her that she seemed to express.

They both appeared very uneasy at their disappointment, however, they established a friendship that continued between them to the last.

This gave some uneasiness to Captain Rackam, he being a lover of Anne Bonny's, and not able to endure a rival with him in the same ship, especially where women were so scarce; for Anne Bonny was not one of the most virtuous women in the world, though Mary Read bore quite a different character:—so Rackam stormed and threatened what he would do to Mary Read, if ever he caught her speaking to Anne Bonny.

To pacify this son of Belial's fury, she let him into the secret; who was as much surprised as any of them. By this discovery, Anne Bonny had like to have lost her captain, had not Mary Read's virtue been greater than her cunning; for the captain like most sons of Mrs. was for a new face, presently beginning to neglect his old mistress Anne. This gave great uneasiness to her, till Mary Read assured her she should have no occasion upon that account. However, the captain furiously attacked her with oaths and curses of his sincerity, as fast as he was in the habit of shooting balls from his cannon; but all would not do, the captain could not gain her, and so was compelled to lay by, and keep it a secret for his own reputation.

But to return to the ship's crew.—They took a great many ships belonging to the West Indies, Virginia, &c. in one of which was a young gentleman with whom Mary Read fell in love; being so smitten with him that she could not rest night nor day. But all the difficulty was to let him know it; therefore, first she insinuated herself into his good opinion, by exclaiming against the life of a pirate, saying she abhorred it above all things in the world, but was forced into it; this very much pleased her gallant and made him put great confidence in her,—so that they became messmates, being always together. It was next to impossible that she could remain long concealed from him, and when he challenged her with being a female, she freely confessed—and said, that being among such a set, she kept on her disguise in order to preserve her virtue, which the pirates would have made no scruple in taking, accompanied with brutality and inhumanity. She was, however, so very happy as to escape, and this young man now had imbibed a sincere regard for her—which the peculiarity of her situation was calculated to inspire, even if she happened not to be a pretty woman, which she really was, and had a tolerable spice of coquetry about her, which she could not divest herself of, though disguised in men's clothes, and in so very dangerous a place, where every moment she ran a risk of discovery; and if one had sagacity to find her out, it is very probable that others should do the same, who would not treat her with so much delicacy. She had a truly masculine spirit, and was enthusiastic in her friendships and hatreds, which she now gave a proof of in an extraordinary nature to her new friend and lover.

There happening a dispute between this young gentleman and one of the pirates, they had agreed to go ashore and decide it with sword and pistols. This gave great uneasiness to Mary Read, who would not think of having him branded with being a coward, and yet she dreaded the event; under this dilemma she demonstrated that she was more in fear of his safety than her own; for taking an opportunity to quarrel with the pirate, she challenged him immediately ashore, it being an hour sooner than he was to meet her sweetheart, where she fought him, and killed him on the spot.

This had such an effect upon the young gentleman, that they gave mutual promises to each other of marrying; which Mary Read frankly told him, she looked upon to be as good a marriage as any minister could make in a church, especially since no parson could be had at that place. To him she owed her life afterwards; for, he getting her with child, she pleaded her pregnancy and saved herself thereby.

The court had great compassion on her; but one of the evidence swearing that he once asked her what she could propose in that course of life, wherein she was continually in

danger, either of being killed at sea, or an ignominious death if taken; she answered, 'That as for hanging she did not matter it; and if it were not for some danger, every cowardly fellow would turn pirate, and so men of courage must starve; that many of those dastardly rogues that are now cheating the widows and orphans, would rob at sea, and then the seas would be crowded with rogues like the land.'

But being found quick with child, her execution was respited till after her delivery; during which time, she behaved with so much modesty and devotion, that it is probable she would have obtained a pardon, had she not been seized with a violent fever, which put an end to all her troubles.

LOSS OF THE SHIP FAME, FEBRUARY, 1824.

The following is Sir Thomas Stamford Raffles' (late governor of Bencoolen) account of this dreadful accident:—

"We embarked on the 2nd instant, in the *Fame*, and sailed at daylight for England, with a fair wind and every prospect of a quick and comfortable passage. The ship was every thing we could wish, and having closed my charge here much to my satisfaction, it was one of the happiest days of my life. We were, perhaps, too happy, for in the evening came a sad reverse. Sophia had just gone to bed, and I had thrown off half my clothes, when a cry of *Fire! Fire!* roused us from our calm content, and in five minutes the whole ship was in flames. I ran to examine whence the flames principally issued, and found that the fire had its origin immediately under our cabin. Down with the boats! where is Sophia? Here! The children? Here! A rope to the side; lower Lady Raffles—give her to me, says one—I'll take her, says the captain. Throw the gunpowder overboard; it cannot be got at; it is in the magazine, close to the fire! Stand clear of the powder. Skuttle the water-casks. Water! Water! Where's Sir Stamford? Come into the boat. Nelson, Nelson! come into the boat. Push off; push off; stand clear of the after-part of the ship.

"All this passed much quicker than I can write it; we pushed off, and as we did so, the flames were issuing from our cabins, and the whole of the after-part of the ship was in flames. The masts and sails now taking fire, we moved to a distance sufficient to avoid the immediate explosion; but the flames were now coming out of the main-hatchway, and seeing the rest of the crew with the captain, &c. still on board, we pulled back to her under the bows, so as to be most distant from the powder. As we approached, we perceived that the people from on board were getting into another boat on the opposite side; she pushed off, we hailed her. 'Have you all on board?' 'Yes, all save one.' 'Who is he?' 'Johnson, sick in his cot.' 'Can we save him?' 'No, impossible.' The flames were then issuing from the hatchway. At this moment the poor fellow, scorched, I imagined, by the flames, roared out most lustily, having run up on the deck. 'I will go for him,' says the captain. The two boats then came together, and we took out some of the persons from the captain's boat which was overlaid. He then pulled under the bowsprit of the ship, and picked the poor fellow up. 'Are you all safe?' 'Yes, we've got the man: all lives safe, thank God, pull off from the ship; keep your eye on a star, Sir Stamford; there's one barely visible.'

"We then hauled close to each other, and found the captain fortunately had a compass, but we had no light, but from the ship. Our distance from Bencoolen we estimated to be from twenty to thirty miles in a S.W. direction; there being no landing-place to the southward of Bencoolen, our only chance was to regain that port. The captain then undertook to lead, and we to follow in a N.N.E. course, as well as we could. No chance, no possibility being left, that we could again approach the ship, for she was now one splendid flame, fore and aft and aloft, her masts and sails in a blaze, and rocking to and fro, threatening to fall in instantly. 'There goes her mizen-mast! pull away, my boys; there goes the gunpowder, thank God!'

"You may judge of our situation without further particulars: the alarm was given at about twenty minutes past eight, and

in less than ten minutes she was in flames; there was not a soul on board at half-past eight, and in less than ten minutes afterwards, she was one grand mass of fire.

"My only apprehension was, the want of boats to hold the people, as there was not time to have got out the long boat, or make a raft: all we had to rely upon were two small open boats, which fortunately were lowered without accident; and in these two small open boats, without a drop of water or grain of food, or a rag of covering, except what we happened at the moment to have on our backs, we embarked on the wide ocean, thankful to God for his mercies. Poor Sophia, having been taken out of her bed, had nothing on but a wrapper, neither shoes nor stockings; the children were just as taken out of a bed, whence one had been snatched after the flames had attacked it. In short, there was not time for any one to think of more than two things—'Can the ship be saved?' 'No.' 'Let us save ourselves, then.' All else was swallowed up in one great ruin.

"To make the best of our misfortune, we availed ourselves of the light from the ship to steer a tolerable good course towards the shore. She continued to burn till about midnight, when the saltpetre, of which she had two hundred and fifty tons on board, took fire, and sent up one of the most splendid and brilliant flames that was ever seen, illuminating the horizon in every direction, to an extent of not less than fifty miles, and casting that kind of blue light over us, which is of all others, most luridly horrible. She burnt, and continued to flame in this style for about an hour or two, when we lost sight of the object in a cloud of smoke.

"Neither Nelson, nor Mr. Bell, our medical friend, who accompanied us, had saved their coats: the skirt of mine, with a pocket-handkerchief, served to keep Sophia's feet warm; and we made breeches for the children with our neckcloths. Rain now came on, but fortunately it was not of long continuance, and we got dry again; the night became serene and starlight. We were now certain of our course, and the men behaved manfully; they rowed incessantly, and with good heart and spirit, and never did poor mortals look out more for day-light and for land than we did. Not that our sufferings or ground of complaint were anything to what has often befallen others; but from Sophia's delicate health, as well as my own, and the stormy nature of the coast, I felt perfectly convinced we were *unfit* to undergo starvation, or exposure to the currents. I feared we might fall to the southward of the port.

"At day-light we recognized the coast and Rat Island, which gave us great spirits, and though we found ourselves much to the southward of the port, we considered ourselves almost at home. Sophia had gone through the night better than could have been expected, and we continued to pull on with all our strength. About eight or nine o'clock we saw a ship standing to us from the roads. They had seen the flame on shore, and sent out vessels in all directions to our relief; and here certainly came a minister of Providence, in the character of a minister of the gospel; for the first person I recognized was one of our missionaries. They gave us a bucket of water, and we took the captain on board as a pilot. The wind, however, was adverse, and we could not reach the shore, and took to the ship, where we got some refreshment and shelter from the sun. By this time Sophia was quite exhausted, fainting continually. About two o'clock we landed safe and sound, and no words of mine can do justice to the expression of feeling, sympathy, and kindness, with which we were hailed by every one. If any proof had been wanting that my administration had been satisfactory, here we had it unequivocally from all; there was not a dry eye, and as we drove back to our former home, loud was the cry of 'God be praised!'

"But enough: and I will only add, that we are now greatly recovered, in good spirits, and busy at work in getting ready-made clothes for present use. We went to bed at three in the afternoon, and I did not awake till six this morning. Sophia had nearly as sound a sleep, and with the exception of a bruise or two, and a little pain in the bones from fatigue, we have nothing to complain of.

"The property which I have lost, on the most moderate

estimate, cannot be less than twenty thousand pounds,—I might almost say thirty thousand. But the loss which I have to regret beyond all, is my papers and drawings; all my papers of every description, including, my notes and observations, with memoirs and collections, sufficient for a full and ample history, not only of Sumatra, but of Borneo, and every other island in these seas; my intended account of the establishment of Singapore, the history of my own administration, grammars, dictionaries, and vocabularies; and last, not least, a grand map of Sumatra, on which I had been employed since my first arrival here, and on which for the last six months I had bestowed almost my whole undivided attention. This, however, was not all: all my collections in natural history, and my splendid collections of drawings, upwards of a thousand in number, with all the valuable papers and notes of my friends Arnold and Jack; and, to conclude, I will merely notice, that there was scarce an unknown animal, bird, beast, or fish, or an interesting plant, which we had not on board. A living sapir, a new species of tiger, splendid pheasants, &c. &c. all domesticated for the purpose. We were, in short, in this respect, a perfect Noah's Ark. All—all have perished; but, thank God, our lives have been spared, and we do not repine."

THE LOSS OF THE EARL OF ELTON BY FIRE.

On the 24th of August, 1834, I embarked on board the ship, Earl of Eldon (of London, 600 tons, Captain Theaker), at Bombay, with a view of returning to my native land, on furlough. She was the finest and strongest ship in the trade, and any insurance might have been had on the chances of her successfully resisting the winds and the waves; but who can foresee their fate, even for a day? She was cotton loaded; and as the number of passengers was small, the space between decks was filled chock up with cotton-bales, screwed in as compact and tight as possible, so as to render it a matter of more difficulty to take them out than it had been to put them in. It unfortunately happened that the cotton had been brought on board damp, during heavy rain, and had not been dried in the warehouses previous to its being screwed: as this operation is performed by a very powerful compression, it is not unlikely that fire-damp might be generated in the same manner as in a hay-stack, when it has been stacked damp. The number of individuals on board was forty-five, including three ladies and an infant, and the captain and his crew. On the 26th of September, after a series of baffling winds and calms, and heavy rains with squalls of wind, we got into 9 deg. 27 sec. S. lat., and between 70 and 80 deg. E. long., and the trade-wind appeared to have fairly caught hold of our sails. We began now to anticipate our arrival at the Cape. On the morning of the 27th I rose early, about half-past five, and went on deck; I found one of my fellow-passengers there: we perceived a steam apparently arising from the fore-hatchway; I remarked to H. that I thought it might be caused by fire-damp, and, if not immediately checked, might become fire. The captain came on deck, and I asked him what it was? He answered, steam; and that it was common enough in cotton-loaded ships, when the hatches were opened. I said nothing: but the smoke became more dense, and beginning to assume a different colour, I began to think that all was not right, and also that he had some idea of the kind, as the carpenter was cutting holes in the deck, just above the place whence the smoke appeared to come. I went down to dress, and about half-past six the captain knocked at my door, and told me that part of the cotton was on fire, and he wished to see all the gentlemen passengers on the deck.

We accordingly assembled, and he then stated the case to be thus.—That some part of the cargo appeared to have spontaneously ignited, and that he purposed removing the bales until they should discover the ignited ones, and have them thrown overboard, as also those which appeared to be in the same damaged condition; and that it being necessary, in his

opinion, to do this, he deemed it his duty to lay the matter before us. We, of course, submitted everything to his judgment, and he ordered the hands to breakfast as quick as possible, and to work to discover the source of the fire. This having been done, he said that there did not appear to be immediate danger, and that he hoped we might be able to avert it altogether. However, at eight o'clock, the smoke became much thicker, and began to roll through the after-hatchway—the draught having been admitted forward, in order to enable the men to work. Several bales were removed; but the heat began to be intolerable below, the smoke rolled out in suffocating volumes, and before nine o'clock we discovered that part of the deck had caught fire; in short, the men were obliged to knock off work.

The captain then ordered the hatches to be battened down, with a view to keep the fire from bursting out, and to hoist out all the boats, and stock them in case of necessity; this was done, and about half-past one the three ladies, two sick passengers, an infant, and a female servant, were put into the long-boat, with 216 gallons of water, twenty gallons of brandy, and biscuit for a month's consumption, together with such pots of jam and preserved meats as we could get at, and the day's provisions of fresh and salt meat.

Had the captain ventured to pump water into the ship, to extinguish the fire, the bales would have swelled so much as to burst open the deck, and have increased so much in weight as to sink the ship; so that either way destruction would have been the issue. Under these circumstances, perceiving the case to be utterly hopeless, the captain requested the gentlemen to get into the boats, told off and embarked his men, and at three o'clock he himself left the ship, the last man, just as the flames were bursting through the quarter-deck.

We then put off, the two boats towing the long-boat; the ship's way had been previously stopped by backing her yards. When we were about a mile from the ship she was in one blaze, and her masts began to fall in. The sight was grand, though awful. Between eight and nine o'clock all her masts had fallen, and she had burned to the water's edge; suddenly there was a flash, followed by a dull, heavy explosion—her powder had caught, for a few seconds her splinters and flaming fragments were glittering in the air, and then all was darkness, and the waters had closed over the Earl of Eldon!

Sad was the prospect now before us! There were in the long-boat, the captain and twenty-five persons, including an infant four months old; the size of the boat, 23 feet long by 7 feet broad; in each of the others ten individuals, including the officer in charge; one of the boats had some bags of biscuit, but the chief provision was in the long-boat. We were, by rough calculation, above 1000 miles from Rodrigue, and 450 from Diego Garcias, the largest of the Chagos islands; but to get there we must have passed through the squally latitudes we had just left, and being subject to variable winds and heavy weather, or calms, neither of which we were prepared to resist.

Seeing then that our stock was sufficient, we determined on trying for Rodrigue. About eleven o'clock, having humbly committed ourselves to the guidance of that Providence in which alone we had hope, we accomplished rigging the boats, and were under sail. We carried a lantern lashed to our mast in the long-boat, to prevent the others from losing us during the night; and when day broke, sent them sailing in all directions around, to look out for ships; while the wind was light they could outsail us, but when it became strong, and the sea very high, the difference of speed was rather in our favour as the weight and size of the long-boat enabled her to lay hold of the water better.

On the third day of our boat navigation, the change of the moon approaching, the weather began to wear a threatening aspect; but as we were in the trade, we did not apprehend foul or contrary winds. In the course of the night it blew fresh, with rain; we were totally without shelter, and the sea dashing its spray over us, drenched us and spoilt a great part of our biscuit though we happily did not discover this until we were nearly out of the want of it.

The discomfort and misery of our situation may be more

easily imagined than described. There was a large water-puncher in the boat, on the top of which I slept nearly all the time we were in the boats. The ladies were in the stern of the boat; and H., myself, and the doctor, together with a Bombay lieutenant, in the body of it with the men.

In the course of the next day the weather grew worse and one of our small boats, in which was Mr. Simpson, the second mate, and nine others, was split by the sea. She came alongside, and we put the carpenter into her, who made what repairs he could, but with little hope of their answering. We then proceeded to fasten a spray-cloth of canvass along our weather gunwale, having lashed a bamboo four feet up the mast, and fixed it on the intersection of two stanchions at the same height above the stern. The spray-cloth was firmly lashed along this, so as to form a kind of a half-pent roof; and had it not been for this imperfect defence we must have been swamped, and we still shipped sea to so great an extent, that four men were obliged to be kept constantly employed in baling to keep her clear of water. Towards evening it blew hard, with a tremendous sea; and not thinking the other damaged boat safe, we took in her crew and abandoned her.

We were now thirty-six persons, stowed as thick as we could hold and obliged to throw overallsuperfluities. Wet, crushed, and miserable, the night passed away, and the day broke at last, and, though the weather was still very bad, I again felt that hope, which had never entirely deserted me. A tremendous sea came roaring down, and I held in my breath with horror; it broke right over our stern, wetted the poor women to their throats, and carried away the steersman's hat. The captain then cried out in a tone calculated to inspire us with a confidence he afterwards told me his heart did not re-echo—"That's nothing, it's all right, bale away, my boys." He never expected us to live out that night, but harassed as he was in mind and body, he gallantly stood up, and never, by word or deed, betrayed a feeling that might tend to make us despair; he stood on the bench that livelong night, nor did he ever attempt to sleep for nearly forty-eight hours.

The morning broke and passed away, and after the change of the moon the weather began to be moderate, and we enjoyed a comparative degree of comfort. We had three small meals of biscuit, and some jam, &c., and three half-pints of water per day; with brandy, if we liked it. The men had one gill of spirits allowed them daily; thus we had merely enough for necessity, to which I am inclined to attribute our having the state of good bodily health we enjoyed. We had plenty of cigars, and whenever we could strike a light we had a smoke, and I never found tobacco so great a luxury.

The ladies were most wretched, for they could not move, and any little alteration in their dress was only to be made by spreading a curtain before them. Yet they never uttered a repining word. On the thirteenth evening, we began to look out for Rodrigue. The captain told us not to be too sanguine, and his chronometer was not to be depended upon after its late rough treatment.

The night fell, and I went forward to sleep, and about twelve was awake by the cry that land was right ahead. I looked, and saw a strong loom of land through the mist. The captain had the boat brought to, for an hour; then made sail towards it, and at half-past two it appeared still more strongly. We then lay-to, until day-light. I attempted to compose myself to sleep, but my feelings were too strong, and after some useless attempts, I sat down and smoked with a sensation I had long been a stranger to. With the first light of dawn, Rodrigue appeared right ahead, distant about six miles, and by eight o'clock, we were all safely landed.

A fisherman, who came off to show us the way through the reefs, received us in his house, and proceeded to feed us, and in the meantime sent to tell the gentlemen of the island of our arrival. Two of them came down immediately, and having heard of our story, said that we had been miraculously preserved, and told us off in two parties, the married men to one, and the single to the other; the crew were taken inland and encamped. They then gave our bundles to their negroes, and took us to their houses, where every thing they had was

set before us—cleanlinen and a plentiful dinner; and it was ludicrous to see the manner in which fish, fowl, pork, biscuit, and wine, and brandy disappeared before us; at length, however, we came to a general conclusion, that eat any more we could not. They shook us down four or five beds in an out-house, and we tumbled into them, and enjoyed what we had not known for the last fortnight—a sound sleep.

T. T. ASHTON, Madras Artillery.

A DANGEROUS DESCENT.

It was somewhere near this part of the day that the noise of falling waters, which we had faintly caught in the early morning, became more distinct; and it was not long before we were arrested by a rocky precipice of nearly a hundred feet in depth, that extended all across the channel, and over which the wild stream poured in an unbroken leap. On either hand the walls of the ravine presented their overhanging sides both above and below the fall, affording no means whatever of avoiding the cataract by taking a circuit round it. Toby, having gone to reconnoitre, conceived a plan of getting down. He conducted me to the verge of the cataract, and pointed along the side of the ravine to a number of curious-looking roots, some three or four inches in thickness and several feet long, which after twisting among the fissures of rock shot perpendicularly from it and ran tapering to a point in the air, hanging over the gulf like so many dark icicles. They covered nearly the entire surface of one side of the gorge, the lowest of them reaching even to the water. Many were moss-grown and decayed, with their extremities snapped short off, and those in the vicinity of the fall were slippery with moisture. Toby's scheme—and it was a desperate one—was to intrust ourselves to these treacherous-looking roots, and by slipping down from one to another to gain the bottom. "Are you ready to venture it?" asked Toby, looking at me earnestly but without saying a word as to the practicability of the plan. "I am," was my reply, for I saw it was our only resource if we wished to advance, and, as for retreating, all thoughts of that sort had been long abandoned. After I had signified my assent, Toby, without uttering a single word, crawled along the dripping ledge until he gained a point from whence he could just reach one of the largest of the pendent roots; he shook it—it quivered in his grasp, and when he let it go, it twanged in the air like a strong wire sharply struck. Satisfied by his scrutiny, my light-limbed companion swung himself nimbly upon it, and twisting his legs round it in sailor fashion, slipped down eight or ten feet, where his weight gave it a motion not unlike that of a pendulum. He could not venture to descend any further, so holding on with one hand, he with the other shook, one by one, all the slender roots around him, and at last finding one which he thought trustworthily, shifted himself to it, and continued his downward progress. So far, so well; but I could not avoid comparing my heavier frame and disabled condition with his light figure and remarkable activity: but there was no help for it, and in less than a minute's time I was swinging directly over his head. As soon as his upturned eyes caught a glimpse of me, he exclaimed, in his usual dry tone, for the danger did not seem to daunt him in the least, "Mate, do me the kindness not to fall until I get out of your way!" and then, swinging himself more on one side, he continued his descent. In the meantime, I cautiously transferred myself from the limb down which I had been slipping, to a couple of others that were near it, deeming two strings to my bow better than one, and taking care to test their strength before I trusted my weight to them.—On arriving towards the end of the second stage in this vertical journey, and shaking the long roots which were round me, to my consternation they snapped off one after another like so many pipe-stems, and fell in fragments against the side of the gulf, splashing at last into the waters beneath. As one after another the treacherous roots yielded to my grasp, and fell into the torrent, my heart sunk within me. The branches on which I was suspended over the yawning chasm swung to and fro in the air, and I expected them every moment

to snap in twain. Appalled at the dreadful fate that menaced me, I clutched frantically at the only large root which remained near me; but in vain; I could not reach it; though my fingers were within a few inches of it. Again and again I tried to reach it; until at length, maddened with the thought of my situation, I swayed myself violently by striking my foot against the side of the rock, and at the instant that I approached the large root caught desperately at it, and transferred myself to it. It vibrated violently under the sudden weight, but fortunately did not give way. My brain grew dizzy with the idea of the frightful risk I had just run, and I involuntarily closed my eyes to shut out the view of the depth beneath me. For the instant I was safe, and I uttered a devout ejaculation of thanksgiving for my escape. "Pretty well done!" shouted Toby underneath me: "you are nimbler than I thought you to be, hopping about up there from root to root like any young squirrel. As soon as you have diverted yourself sufficiently, I would advise you to proceed." "Ay, ay, Toby, all in good time: two or three more such famous roots as this, and I shall be with you." The residue of my downward progress was comparatively easy; the roots were in greater abundance, and in one or two places jutting out points of rock assisted me greatly. In a few moments I was standing by the side of my companion.

SHIPWRECK OF CARL EHRLICH, A PRUSSIAN SAILOR, IN THE SNOW HOPE, OF LIVERPOOL.

EARLY in the year 1715, Carl Ehrlich sailed from Hull in the snow Hope, of Liverpool, destined on a voyage from Riga to Lisbon, and laden with hemp and iron (which had a short time before put in there for repair).

She proceeded southward till three o'clock the next morning, when the wind blew a hard gale from the south east, which increased to such a degree that they were driven furiously to the northward. The gale continuing its force with heavy snow and almost total darkness, they could not perceive any object, and as a pilot could not be obtained, they continued driving to northward at the mercy of the wind and waves. About midnight, on the first of February, the ship unfortunately struck on the ground, the sea at the same time running so tremendously high as to make an entire passage over her. At this instant the cabin-boy was washed from the deck: the captain and crew finding every exertion in vain, were obliged to abandon their quarters, and attend to the imperious call of self preservation, declaring at the same time, they would not quit the ship while the least chance of hope remained. The snow was now descending in the clouds, and the darkness was so great that they could not see the length of the vessel. The mate, however, was of opinion that they were near the land, and was determined to attempt to make for it. The captain and Ehrlich accordingly delivered him their watches and money, and he instantly jumped into the boat, which still remained upon deck; but a heavy sea at the moment breaking over her, swept away the boat, and he preserved himself by catching the mainstay; the next tremendous wave, alas! overwhelmed him in the deep, never more to be seen. The rest of the crew now sought shelter in the rigging, one man in the fore-top, and the rest in the main-top. Ehrlich, feeling pity for a boy of the name of Swain, twelve years old, had taken him in his arms, and ascended the main-top, in defiance of the heavy sea which continued to break over them. The captain, in despair, ascended the rigging, and placed himself on the main-yard, from whence he was heard to lament their hard fate, and the consequent distress of his wife and children. In this dreadful state they remained a considerable time; but, from the extreme severity of the night, and their benumbed and exposed situation, the captain was seen to drop down, supposed to be nearly or quite dead, from the cold, and two men at the same time were washed from the main-top. The vessel had now been driven near the shore, and a heavy sea soon after breaking over her, carried away the main-mast, with Ehrlich, another seaman, and Swain, the boy, upon it. Ehrlich again laid hold of the boy, who earnestly exhorted him by crying, "Oh Charles! hold me

fast;" but finding it indispensable for his own preservation, he was obliged to quit his hold, and the poor boy was drowned.

The main-mast being entangled with the ropes of the fore-mast, Ehrlich remained in his perilous situation a long time; at last with difficulty he got to the fore-top-mast head, where he found the man before mentioned still alive. The vessel had by this time drifted to Dimlington Highland, about eight miles to the north of Spurn Point. Ehrlich, perceiving the cliff, prepared to ascend it, exhorting a shipmate to follow, as the only means left of preservation, but he was frozen so stiff and cold, that he was unable to stir a single joint. This poor fellow was never afterwards seen, and is thought to have shared the same fate as the rest of the crew. Ehrlich, watching a favourable opportunity, dropped upon the side of the cliff, which, from being so hard frozen, was very slippery, and it was exceedingly difficult for him to prevent himself from falling into the breakers; he at last, however, got safe to the top of the cliff, at three o'clock in the morning, where he wandered about till break of day, a solitary survivor of the whole ship's crew, lamenting their melancholy fate. He at length reached Hull in a very miserable condition, being worn out with hunger and fatigue, and his limbs nearly frozen, and just able to relate the particulars of his unfortunate situation.

HEARNE'S RELATION OF THE SHIPWRECK OF CAPTAINS KNIGHT, BARLOW, AND VAUGHAN,

With several of their Men, on Marble Island, Hudson's Bay, in the Year 1719.

THE natives who range over, rather than inhabit the large track of land which lies to the north of Churchill river, having repeatedly brought samples of copper to the Company's factory, many of our people conjectured that it was found not far from our settlements; and, as the Indians informed them that the mines were not very distant from a large river, it was generally supposed that this river must empty itself into Hudson's Bay, as they could by no means think, that any set of people, however wandering their manner of life might be, could ever traverse so large a track of country, as to pass the northern boundary of that bay, and particularly without the assistance of water carriage. The following journal, however, will show how much those people have been mistaken: and prove also the impossibility of putting their favourite scheme of mining into practice.

The accounts of this grand river, which some have turned into a strait, together with the samples of copper, were brought to the Company's factory at Churchill river immediately after its first establishment, in the year 1705; and it does not appear that any attempts were made to discover either the river or mines, till the year 1719, when the Company fitted out a ship, called the Albany frigate, Captain George Barlow, (Captain Barlow was governor of Albany Fort, when the French went over land to besiege it, in 1704), and a sloop called the Discovery, Captain David Vaughan. The sole command of this expedition, however, was given to Mr. James Knight, a man of great experience in the Company's service, who had been many years governor at the different factories in the Bay, and who had made the first settlement at Churchill river. Notwithstanding the experience Mr. Knight might have had of the Company's business and his knowledge of those parts of the Bay where he had resided, it cannot be supposed he was well acquainted with the nature of the business in which he then engaged; having nothing to direct him but the slender and imperfect accounts which he had received from the Indians, who, at that time, were little known and less understood.

These disadvantages, added to his advanced age, he being then near eighty, by no means discouraged this bold adventurer, who was so prepossessed of his success, and of the great advantage that would arise from his discoveries, that he procured and took with him some large iron-bound chests to hold gold dust, and other valuables, which he fondly flattered himself were to be found in those parts.

The first paragraph of the company's orders to Mr. Knight, on this occasion, appears to be as follows:—

"Sir,
"4th June, 1719.
"From the experience we have had of your abilities, in the management of our affairs, we have, upon your application to us, fitted out the Albany frigate, Captain George Barlow, and the Discovery, Captain David Vaughan, commander, upon a discovery to the northward; and, to that end, have given you power and authority to act, and do all things relating to the said voyage; the navigation of the said ship, and sloop only excepted; and have given orders and instructions to our said commanders for that purpose.

"You are, with the first opportunity of wind and weather, to depart from Gravesend on your intended voyage: and, by God's permission, to find out the Straits of Anian, in order to discover gold, and other valuable commodities, to the northward." &c. &c.

To Captain James Knight.

Mr. Knight soon left Gravesend, and proceeded on his voyage; but the ship not returning to England that year, as was expected, it was judged that she had wintered in Hudson's Bay; and having on board a good stock of provisions, a house in frame, together with all necessary mechanics, and a great assortment of trading goods, little or no thoughts were entertained of their not being in safety; but as neither ship nor sloop returned to England in the following year, 1720, the Company were much alarmed for their welfare; and by their ship, which went to Churchill in the year 1721, they sent orders for a sloop called the Whalebone, J. Scraggs, master, to go in search of them; but the ship not arriving in Churchill, till late in the year, those orders could not be put in execution till the summer following, 1722.

The north-west coast of Hudson's Bay being little known in those days, and Mr. Scraggs finding himself greatly embarrassed with shoals and rocks, returned to Prince of Wales' Fort, without making any certain discovery respecting the above ship or sloop; for all the marks he saw among the Esquimaux, at Whale Cove, scarcely amounted to the spoils which might have been made from a trifling accident, and consequently could not be considered as signs of a total shipwreck.

The strong opinion which then prevailed in Europe, respecting the probability of a N.W. passage by the way of Hudson's Bay, made many conjecture that Messrs. Knight and Barlow, had found that passage, and had gone through it into the South Sea, by the way of California. Many years had now elapsed without any other convincing proof occurring to the contrary, except that Middleton, Ellis, Beau, Christopher, and Johnson, had not been able to find any passage; and notwithstanding a sloop was annually sent to the northward on discovery, and to trade with the Esquimaux, it was the summer of 1767, before we had positive proofs that poor Mr. Knight, and Captain Barlow, had been lost in Hudson's Bay.

The Company were now carrying on a Black Whale Fishery, and Marble Island was made the place of rendezvous, not only on account of the commodiousness of the harbour, but because the whales were more plentiful about that island than any other part of the coast. This being the case, the boats, when on the look-out for fish, had frequent occasion to row close to the island, by which means they discovered a new harbour near the east end of it, at the head of which they found guns, anchors, cables, bricks, a smith's anvil, and many other articles, which the hand of time had not defaced; and which being of no use to the natives, or too heavy to be removed by them, had not been taken from the place in which they were originally laid. The remains of the house, though pulled to pieces by the Esquimaux, for the wood and iron, are yet very plain to be seen; as also the hulls, or, more properly speaking, the bottoms of the ship and sloop, which lie sunk in about five fathoms water towards the head of the harbour. The figure-head of the ship, and also the guns, &c. were sent home to the company; and are certain proofs that Messrs. Knight and Barlow (the name of Captain Vaughan is not once repeated after his appointment) had been lost on that inhospitable

land, where neither stick nor stump was to be seen, and which lies near sixteen miles from the main land. Indeed the main is little better, being a jumble of barren hills and rocks, destitute of every kind of herbage, except moss and grass; and at that part the woods are several hundreds of miles from the sea side.

In the summer of 1796, while we were prosecuting the fishery, we saw several Esquimaux at this new harbour, and perceiving that one or two of them were greatly advanced in years, our curiosity was excited to ask them some questions concerning the above ship and sloop; which we were enabled to do by the assistance of an Esquimaux, who was then in the Company's service as a linguist, and annually sailed in one of their vessels in that character. The account which we received from them was full, clear, and unreserved; and the sum of it was to the following purport:—

"When the vessel arrived at this place, (Marble Island), it was very late in the fall, and in getting them into the harbour, the largest received much damage; but, on being fairly in, the English began to build the house, their number at that time seeming to be about fifty. As soon as the ice permitted, in the following summer, 1720, the Esquimaux paid another visit, by which time the number of the English was greatly reduced, and those that were living seemed very unhealthy. According to the account given by the Esquimaux, they were then very busily employed, but about what, they could not easily describe; probably in lengthening the long-boat; for at a little distance from the house, there is now lying a great quantity of oak chips, which have been most assuredly made by carpenters.

"Sickness and famine occasioned such havock among the English, that, by the setting in of the second winter, their number was reduced to twenty. That winter, 1720, some of the Esquimaux took up their abode on the opposite side of the harbour to that on which the English had built their houses; and frequently supplied them with such provisions as they had, which chiefly consisted of whale's blubber, and seal's flesh, and train oil. When the spring advanced, the Esquimaux went to the lee continent; and, on their visiting Marble Island again, in the summer of 1721, they only found five of the English alive; and these were in such distress for provisions, that they eagerly ate the seal's flesh and whale's blubber quite raw; as they purchased it from the natives. This disordered them so much, that three of them died in a few days; and the other two, though very weak, made a shift to bury them. Those two survived many days after the rest, and often went to the top of an adjacent rock, and earnestly looked to the south and east, as if in expectation of some vessels coming to their relief. After continuing there a considerable time, and nothing appearing in sight, they sat down close together, and wept bitterly. At length, one of the two died; and the other's strength was so exhausted, that he fell down and died also, in attempting to dig a grave for his companion. The skulls, and other large bones of those two men, are now lying above ground, close to the house. The longest liver was, according to the Esquimaux account, always employed in working of iron into implements for them. Probably he was the armourer or smith."

LOSS OF THE AJAX BY FIRE.

HON. CAPTAIN BLACKWOOD.

AT nine o'clock, p.m., on the 14th of February, 1807, being St. Valentine's day (a sad one indeed for the unfortunate Ajax) the vessel was at anchor off the Dardanelles, in company with the squadron under Vice Admiral Sir J. Duckworth, K.B., when, just as Captain Blackwood had gone to bed, the officer of the watch ran into his cabin and acquainted him, that there was a great alarm of fire in the after-part of the ship.

The captain immediately ordered the drummer to beat to quarters, which was effected; and instantly, as he came out of his cabin, he directed the signal, No. 12, to be made, which was accordingly done and repeated, enforced by guns at intervals. He then called some of the senior officers of the

ship, who went down with him to the after-cock-pit, and the lower-deck, from whence the smoke issued. He immediately ordered as much water as possible to be thrown down, and the cock to be turned, which he found had been previously done.

When the captain had directed the signal, No. 12, to be made, he also ordered a boat, with Lieut. Wood, a midshipman, and a boat's crew, to go and inform all the ships near them of the unfortunate situation of the Ajax. He had scarcely been three minutes on the lower-deck, when he found the impossibility of any officer or man remaining in the cock-pit, to endeavour to extinguish the fire; perceiving from the quantity and thickness of the smoke, that several men fell down with buckets in their hands from suffocation.

To obviate this, Captain Blackwood desired the lower-deck ports to be hauled up to give air; but on finding the harm it produced, he soon directed them to be lowered down, and the after-hatchway to be covered up, in order to gain time, by stopping the vent of the smoke, for the boats to be hoisted; which measure he was induced to adopt, finding that the fire was of that nature, that the ship must soon be in flames. Owing to there not being any cock leading to the after-magazine, the captain ordered the carpenter with his screw to scuttle the after-part of the ship; but by this time (a period, from the commencement, of not more than ten minutes) the smoke, though endeavoured to be stifled, had gained so much, that though it was bright moonlight they could only distinguish each other, even on deck, by speaking or feeling; consequently all attempts to hoist the boats out were ineffectual, except in the case of the jolly-boat, which began to take up the men who had jumped overboard. Immediately as the flames burst up the main-hatchway, which divided the fore from the after-part of the ship, the captain called to every body to go to the foremost part of the ship, as all hopes were at an end of saving her; he desired every one to save himself as soon as possible.

Captain Blackwood had scarcely reached the fore-castle when he saw all parts, from the centre of the booms-aft, in a raging flame. When the fire had reached the other part of the fore-castle, after exhorting the officers and ship's company (to the amount of four hundred) who were on the fore-castle, and about the bowsprit, to be cool and depend on the boats; and also seeing all hopes of saving the ship were in vain, the captain jumped overboard from the sprit-sail-yard, and, being about half an hour in the water, was picked up by one of the boats of the Canopus, and taken on board that ship much exhausted.

Captain Blackwood acknowledges, that in the execution of the duty which devolved on him as commander of the vessel, he derived much assistance from all the officers, but particularly from Lieuts. Proctor, Brown, Mitchell, and Sibthorp, and also the master and captain of marines; and with respect to the ship's company, under such circumstances of fire (more rapid than was ever before known), with hammocks below—under the impression of terror which fire at any time creates, but particularly when men are just out of their beds—no people could have behaved with more coolness or perseverance than they did.

In pursuance of the standing orders, Captain Blackwood had received the report from the first lieutenant, of his having visited all parts of the ship, with the warrant officers and master-at-arms, which he had found clear and safe; he had also received the particular report of the master-at-arms, but not that of the lieutenant of marine-guard, who was accustomed to visit all below, and report to him at nine o'clock, at which hour this unfortunate event took place.

Such is the substance of the captain's account of this unfortunate catastrophe. We shall now subjoin the observations of a spectator in one of the other vessels.

"The Ajax took fire in the bread room, and in ten minutes she was in a general blaze from stem to stern; the wind blew fresh from the N.E. which prevented the boats of the ships to the leeward from rendering any assistance; but from those to windward and near her, she was well enough supplied to save upwards of four hundred of her people; and those may consider themselves as most providentially preserved, as it had blown a

gale all the day, and for two or three days before, and fell moderate towards the evening; a continuance of the gale would probably have rendered all assistance impossible.

"The fire, it appears, had been for some time (comparatively speaking) alight in the bread room before the alarm was given; for, when the first lieutenant and many others broke open the door of the surgeon's cabin, the after-bulk-head was burst down by the accumulated flames and smoke abait it; and so rapidly made its progress through the cock-pit, that it was with difficulty he could regain the ladder, and most of those who accompanied him were suffocated in the attempt. On reaching the quarter-deck, he found the fire had out-rid him; and Captain Blackwood agreeing with him that she was past all remedy, they both ran forward where the majority of the people were assembled, calling on their God for that help they despaired of getting, although many boats were approaching them, so rapidly did the fire work its way forward, and leapt from the sprit-sail-yard, when the Canopus's boat fortunately picked them up.

"At this time the boats were assembling under the ship's bows, and saved most who still clung to them; though many, naked, benumbed with cold, and pressed on by others, let go their hold and perished, as did every one who imprudently, on the first alarm, jumped overboard. The boats, however, cleared her bows, though many of them were in imminent danger of swamping, from the number of poor creatures who were clinging to the gunwales, and who were obliged to be forced off, and left to perish for the safety of the rest. The ship burnt all night, and drifted on the island of Tenedos, where she blew up at five next morning with a most awful explosion.

"The unhappy sufferers of her ward-room are, Lieutenant Rowe, Lieut. Sibthorp, Captain Boyd, of the royal marines, Mr. Owen, surgeon, and Mr. Donaldson, master. The gunner—unhappy father! had thrown one child overboard, which was saved; but, going down for another perished in the flames! Of forty-five midshipmen, of every description, twenty-five were lost. Three merchants of Constantinople were on board; two perished, also a Greek pilot. The purser's steward, his mate, and the cooper, were, according to supposition, lost.

"The occasion of the accident cannot indeed be exactly ascertained; but that there was a light in the bread-room, when there ought not to have been one, is certain. Several of the people died after they got on board the different ships; the rest were distributed among the squadron."

The following is an official list of the commissioned, warrant, and petty officers, with the number of seamen and marines, who were saved.—

Captain, the Hon. H. Blackwood; Peter Procter, the first lieutenant; Jeremiah Brown, second—C. Wood, fourth—Henry Rowe, fifth—Arthur J. Hamilton, seventh—Mr. J. Buller, purser—Samuel Ellis, lieutenant of marines—Joseph Cinnamon, ditto—John Turner, boatswain—Benjamin Rowe, carpenter—Launcelot Armstrong, surgeon's mate—Wm. Dalrymple, school-master—Saml. Armstrong, clerk—Francisco Michello, pilot—John Callam, master's mate—Norwich Duff, Thomas Duff (son and nephew of the late Captain Duff, and who were with him in the Mars, when he gloriously fell in the action off Trafalgar), Robt. Muckworth, Theobald Jones, T. Rawlins, Peter Slark, Benjamin J. Rundell, James Waring, Philip Phips, John Gordon, T. Smith, John Moore, William Walpole, William H. Bruce, Charles Green, and William Trotter, midshipmen; John Dunford, acting boatswain; the Rev. Mr. Palmer and Co. of the royal marines including Sergeant William Bellman, and two hundred and eighty-nine seamen.

One woman out of three saved herself, by following her husband, with a child in his arms, down a rope from the jib-boom-end.

A court-martial was held on board his majesty's ship Canopus, by order of Vice-Admiral Sir J. T. Duckworth, K.B., for inquiring into the cause, and strictly investigating the circumstances by which his majesty's ship, Ajax, was entirely destroyed, which unanimously acquitted Captain Blackwood, his officers, and crew. A similar honourable acquittal was also pronounced by the members of a court-martial held off Cadiz, by order of Lord Collingwood.

GALLANT CAPTURE OF A SLAVER.

THE Lords Commissioners of the Admiralty have received from Commodore Jones, the Senior Officer of Her Majesty's squadron on the west coast of Africa, a letter, inclosing one from Commander Scott, of the Hyacinth, detailing the follow-

ing account of the gallant and dashing behaviour of Mr. John Francis Tottenham, mate of the Hyacinth. On the 12th of August, 1844, in or about lat. 15 deg. south, long. 11 deg. 30 min. east, when off Fish-bay, Commander Scott sent Mr. Tottenham, in a four-oared gig, with one spare hand, to communicate with the Portuguese Governor.

The weather became thick, and he missed his port, but know-

GALLANT CAPTURE OF A SLAVER, OFF FISH BAY, WEST COAST OF AFRICA.

ing that this ship was working along the coast, anchored for the night, and pulled to the southward. On the morning of the 13th, he discovered a brig at anchor, without colours, and saw her slip and make sail, on which he gave chase; being to windward, and the breeze light, he was enabled to approach her weather beam, and fire a musket a-head to induce her to heave to and show her colours; this and a second were dis-

No. 49.

regarded, but a port was opened and a gun run out and brought to bear on the boat, which caused the officer to pull into her wake, when part of the crew of the brig commenced firing musketry, while the others got the gun on the poop, and pointed it at the boat. Mr. Tottenham now commenced firing, as fast as the spare hand could load for him, being just able to keep way with the brig; having hit four of the

men on board, they left the gun, and, after firing muskets for 20 minutes, finding they were unable to weather the land or tack without being boarded by the boat, they ran the brig on shore, and abandoned her to the number of 18, including 3 wounded men, bearing another mortally wounded (since dead), on board.

In the course of the afternoon the brig was discovered on

shore from the mast-head of the Hyacinth, which stood in and anchored, and hove her off, when she proved to be of 200 tons, without papers, a Brazilian ensign in the cabin, fully equipped for conveying about 1000 slaves, two guns of four pounds calibre loaded, a barrel of powder, and a quantity of langridge shot, a number of muskets, swords, and bayonets on the deck. Almost every bullet expended in the gig was

traced to the gun-carriage, or its immediate vicinity on the poop.

The lords Commissioners of the Admiralty have, we are happy to add, promoted Mr. John Francis Tottenham, mate of the Hyacinth, to the rank of lieutenant.

A correspondent has favoured us with the following *Impromptu*, on reading an account of the single-handed attack upon a slave-ship:—

Oh! ne'er had Honour in the cause of Glory,
 A brighter wreath of evergreen to twine—
 Oh! ne'er had Muse to consecrate in story
 A worthier name, brave Tottenham, than thine!
 With single-handed bravery,
 Against a host of Slavery,
 Thou stood'st the fight
 In dauntless might.

To prove how nerv'd the arm can be
That's rais'd in cause of Liberty!
The Hero of a Hundred Fights
Can never taste the pure delights
Of thy good generous heart—
His calling is to make untimely graves—
Thine to emancipate, not make men slaves,—
Which takes the better part?

SHIPWRECK OF THE *ÆNEAS* TRANSPORT, OFF NEWFOUNDLAND, IN THE YEAR 1805,

*From which, out of Three Hundred and Forty-seven souls, only
Seven were saved.*

THE following dreadful details, from which every sensitive heart must shrink with horror, were transmitted in a letter from an officer at Quebec, to his friend in England. The letter is dated July 6, 1806.

"Yesterday five soldiers, of the 100th regiment, embarked on board a transport, which was supposed to have been lost, from the length of time she had been missing, arrived in a brig from Pool, that touched at Newfoundland, and brought the above men from that island. They give a more melancholy account of a shipwreck, and the circumstances that followed it, than I ever heard, either in real or fictitious story; from one of them I collect the following particulars.

"He says, that about four o'clock in the morning of the 23rd of October last, the vessel, the *Æneas* transport, struck on a rock with such force, that they saw she must soon become a wreck. For the few first minutes all the women and children clung to their husbands and fathers; but in a short time a wave came with such violence, as swept, he supposes, two hundred and fifty of their people from the deck, out of three hundred and forty-seven, which was the number on board before. The rock soon forced its way through all the decks; and thirty-five of the survivors were, before eight o'clock, driven on a small island, about a quarter of a mile from where the vessel struck; at that time she was gone entirely to pieces. He cannot positively say how they got on shore, but he supposes they were floated on part of the wreck. He remembers to have seen one of the boys endeavouring to save Major Bertram, who, having his arm broken by some timber, was on the point of sinking: he held him up as long as his strength permitted, but, to save his own life, was at length obliged to let go his hold, and, the major perished. The thirty-five who landed on the island consisted of seven sailors, and part of the 100th regiment, two of whom were officers, Lieutenant Dawson and Ensign Faulkner. They had the mortification to find the wind change instantly as they landed, and drive everything out to sea, so that not an implement of any kind was saved from the wreck. Mr. Faulkner was correct in his idea of the situation; he knew that the main land which they saw about a mile distant was Newfoundland, and that they were about three hundred miles from St. John's.

"After passing one night on the little island, they formed a raft, and thirty of them arrived safely on the main land; four had previously died, one of whom was the poor fellow who had tried to save the major, and another was missing who had crawled from his comrades, that he might die in quietness, having had both his legs broken; but he was found about eight days after in a shocking state, with his feet frozen off; he still miraculously survives, and is one of the five who arrived here. The greater part directed their course to where the sun rose, leaving behind them the above man and two others, who were unable to walk from their bruises. Lieutenant Dawson was not able to keep up with the party after the first day, and two of the soldiers stayed back to attend him; one of whom is the person who gave me these particulars.

"After toiling on for fourteen days, without eating anything but berries, poor Dawson was unable to stand without support, and on their reaching the banks of a river, he (the informant) attempted to carry him over on his back; but having waded in as high as his neck, he was obliged to return and lay him

on the bank, where he entreated the faithful fellows to make the best of their way, and leave him to his fate, at the same time squeezing them affectionately by the hands, and entreating them to inform his father of his melancholy end. [Here the honest Hibernian (the 100th regiment was raised entirely in that kingdom) burst into a flood of tears before he could proceed.] 'We stayed with him,' he resumed, 'until we knew not whether he was alive or dead.' He described Mr. Dawson not to be above seventeen years of age, upwards of six feet high, and very thin—all circumstances unfavourable for a person to undergo fatigue and abstinence.

"After leaving poor Dawson, they travelled, or rather wandered, in a weak, feeble state for twelve days more, making in the whole twenty-six days; subsisting upon what nature presented to them in a cold barren land; but after the first four or five days they never felt hunger, and, in fact, their misfortunes were so great as (to use his own expression) to kill hunger, and deprive them of feeling; and the snow for the last two days was so deep as to prevent their getting the accustomed berries.

"These two poor fellows were at last found by a man belonging to a hunting party, who, not expecting to meet any human beings in that desolate region, and taking them at a distance for deer, had concealed himself behind a fallen tree, with his gun pointed at one of them, when his dog jumping towards them began to bark, and convinced him of his error. When they related their shipwreck and sufferings to the huntsman, the tears stole down his cheeks, and taking his mankasins from his feet, he gave them to the poor fellows, and invited them to his hunting cabin, which he said was only one mile off (but the real distance was at least twelve), to which by degrees he enticed them to proceed. When they approached the hut, four or five men came out with long bloody knives in their hands, and they said, 'after all we have escaped, are we brought here to be butchered and eat up?' But we soon found our mistake; the men had been cutting up some deer, the fruit of their chase, and our appearance soon drew the pity of these bloody-handed men; and when they produced a bottle of rum, we were convinced they were real Christians.

It appears that they received every possible comfort from these hunters, who, from the description they had received, set out in search of the others; they succeeded in finding the man who remained the first day on the island, and the other two who were unable to leave the shore. The two who accompanied Mr. Dawson, had not made any great progress in the twenty-six days they were travelling; the place they were found at was not at any considerable distance from the spot whence they set off, so that in the woody labyrinth they must have nearly trod over the same ground again.

"I asked my informant if they had given any direction to the hunters, where they might probably meet with the remains of poor Dawson, or Faulkner and his party. He said they had, but it was almost folly to have followed any direction they could have given, for they knew not where they had been.

"Of the thirty-five who survived the wreck, only these five have been heard of, excepting two sailors of Faulkner's party, who were picked up by a man on another hunting excursion, about ninety miles distant, apparently lifeless; but they were taken to an adjacent settlement, where they recovered. They were almost certain Mr. Faulkner and the rest of his companions must have perished in the woods.

"They all describe Faulkner to have been strong, active, and enterprising; and could any thing possibly have been effected for their preservation, he would have accomplished it. The other officers of the 100th expected much aid from these unfortunate young men. Each was proud of exerting himself; whilst the transports were lying about three miles from Portsmouth, they both swam to the ship—Mr. Faulkner climbed up the side very little fatigued, but Mr. Dawson was nearly exhausted.

"When the surviving five arrived at the barrack-square, at Quebec, how affecting was the scene! Men and women flocking round them with an eagerness mingled with despair, anxiously inquiring for some friend or brother that was on board the unfortunate *Æneas*. Their answer was, 'If you do not see him here, be sure he is dead; for of three hundred and forty-seven

souls, we five Irish lads and two sailors are the whole that remain alive.' The tears and exclamations that followed are too mournful to describe, although I could go on with minuter particulars of these disastrous occurrences until I had swollen this letter to a folio volume, which, if either of the poor fellows live to reach home, will probably be the case."

LIBERTY OF THE PRESS, OR A PROOF IMPRESSION.

"GENTLEMEN, I assure you I never was a friend to the

'Liberty of the Press.' I am a Tory all over, and no more fit to fight the battles of my country than Lyndhurst is to turn the Whigs out of office."

VOYAGE &c. of WILLIAM BELSHAW.

CHAPTER I.

I WAS born in the year 1802, on the 27th day of May, of honest and industrious parents. About the age of eleven years, I engaged myself on board a vessel upon trial, as an apprentice. We put to sea, but our ship springing a dangerous leak, we were obliged to put back to Liverpool, the port from which we started, where we got a thorough repair. My parents were soon aware of my disposition, and though my mother objected to my following such a dangerous life, yet my father seemed determined that I should go, and though the brig was only destined for Dublin, he believed this short trip would give me enough of the disasters of a sea-faring life. Indeed, I was not anxious to venture again in this vessel, she was old and cranky, and a new ship was then about to sail to the West Indies.—I was determined to run away from the former, and join the latter. I did so, but fearing to return to my parents, I absented myself from home for two days, at the end of which hunger compelled me to return; and gladly did my poor mother receive me with open arms, as she had just heard that the ship was lost, and all hands on board perished.

Both my father and mother thought, from the dangers I had encountered, that I should think no more of going to sea, still I was determined. My mother, kind hearted soul, persuaded me to go to some trade. I was first put to a watchmaker, and successively to a shoemaker and trunkmaker. Her care for me was in vain, for to sea I would go, and as she found it would be useless to stop me, interceded with a captain, who was boarding with my aunt, and bound me to him for five years, thinking, as he was paying his addresses to my aunt's daughter, he would treat me more kindly. The vessel was a fine built brig, bound for Leghorn, and I soon found out to my sorrow, that the captain was a sharp and very austere man. In 1817, we set sail, and after being two days out, a violent storm arose which lasted several days; during this time, my thoughts recurred to the comfortable home I had left, my heart grew sad at the danger that threatened us; and the vessel being new, and every part of her working very stiff, most of the men's hands got so extremely sore, that the captain, mate, and one man, were the only persons able to work her. Owing to contrary winds, and very bad weather, we were obliged to put into the port of Milford Haven, in South Wales; and while there, I saw the disposition of our cruel captain.

As it pleased God, the cook was taken ill of a fever and ague, and not able to perform his duties. When the captain was informed of it, he went to him and began cursing, and calling him "a lazy lubber," he, (the captain) then went down below, put a rope round the sick man's waist, and lugged him out of his hammock; the poor fellow managed to crawl upon the deck, and rest himself against the coppers, when his unfeeling master got a rope two inches and a quarter thick, and struck him with it several times; after which, he proceeded, with the assistance of the first and second mates, to strip him of his clothes, and the chief mate who was as great a tyrant as his master, threw several buckets of salt water over him, while the second mate scrubbed him with a hard brush. Though commanded to assist in performing this hardened cruelty, the men refused to have any hand in the affair, and retired below to see how they could get away from such a commander: and while so doing, a boat came alongside of our ship, in which was four men, and a gentleman; the latter demanding to know if there was a man going to be murdered on board, the captain replied no, that this black b— of a cook was pretending to be ill, but he would soon cure him! The gentleman, on such a base reply, immediately cried shame, and told the cook to keep his spirits up, and he would shortly see justice done him. He then ordered the boat to be rowed on shore, during which time the three cruel tyrants laid the cook across the windlass, and there struck him as before, using the most abusive language. Soon after this, the captain came below to where I was at work, washed his hands, and after giving me two or three violent kicks, ordered the long-boat to be got ready, that he might go on shore to satisfy the authorities. Scarcely had the boat been got ready, when the same boat which came alongside before, was near close upon us, with six men in her; they were speedily on board, and having shown their warrants, told the captain he must come with them, he swore he would not quit his vessel and leave her in the hands of common seamen. One of the constables made reply, "it must be left to the black man," meaning the cook, "whether he wished them to be taken or not;" the latter was asked, who granted leave for the first mate to remain, and the captain and second mate to be secured. Accordingly, after much parley, the captain, cook, and second mate, were taken into the boat, to appear before the magistrates, but the result of the inquiry I am not in possession of, only that the captain was compelled to pay sixty pounds for the support of the cook and a doctor.

After lying about a fortnight in the haven, one morning early we received orders from the captain to get under weigh, but to our surprise, the same boat, and two constables, came for the first and second mate, to go again before the magistrates, who ordered them to pay fifty pounds each before they could be set at liberty, as the black man was very ill; the first mate said he would see the cook d—d before he would give him any thing. On the magistrates hearing this impertinent language, they committed them both to Pembroke

Castle to take their trial. The captain used all the means he could to get them released, but in vain; he was forced to ship another mate, and two seamen.

The reader may imagine the consternation I was in, on seeing such cruelty practised on board the ship by the master, and heartily did I wish myself home again with my affectionate parents. I was ruminating on my hard fate one day, when a thought came into my head, that I would try and make my escape by stealing the long-boat in the night. That very night being my watch upon deck, when all hands were asleep on board, I stole into the fore-castle, packed up part of my apparel in a bag, went aft on the poop, hauled the boat under the stern and threw my bag into it. I then endeavoured to haul the boat alongside, close to the gangway, but the wind being rough, and the tide running a strong current, caused the boat to bound violently against the side of the ship, the noise awoke the chief mate, who coming on deck, inquired what was the matter, I made an excuse by saying that "I was giving the boat more painter." He ordered me to make less noise, and then went below to his hammock. I began now to have but poor hopes of making my escape, so I went and sat down for about an hour, thinking that the mate might go to sleep again. Supposing all was right, I tried to get the boat to the gangway on the other side of the vessel; after doing so, I put an oar into the boat, and finding it fastened in the main sheet, I was obliged to cut it away.

Just as I was preparing to start, the mate came on deck again, and demanded to know what I was doing? I stammered and said, that "I was making the boat more secure, and giving it more painter." He then belaboured me most unmercifully, and swore he would give it me worse if he caught me on the poop again that night, yet he was ignorant of my intentions.

I now saw the hopelessness of my case: I went below in the fore-castle and awoke one of the men, and told him the trouble I was in, this man told the mate, and on the captain's return on board the following morning, I was summoned into his presence. The captain finding I had hid myself, came on deck with a rope's-end in his hand, stamping and roaring like a mad bull, and ordered an immediate search to be made, this was commenced by all hands, but in vain. Upon this, the captain observed, "I hope the b— has not fallen overboard." "More likely," said one of the crew, "you have frightened him so he has jumped overboard himself." "I hope not," said the captain, "as I have had bother enough with that black nigger of a cook, and I don't know how I shall be able to get out of that scrape." So you perceive, kind reader, how conscience troubled his guilty mind, and so it is with all who rule tyrannically.

The night came and still I kept my hiding-place. At length the new cook came below for coals, I called him by his name, he started back, thinking (like the rest of the ship's company) that I had thrown myself overboard. I begged him to make intercession with the captain for me, as I was afraid he would murder me; he then went to the captain and told him I was living, and the latter smiled to hear it, promising if I would return to my duty he would forgive me; he returned and acquainted me of what the captain said, and persuaded me to come on deck. On coming on deck and hearing the cabin bell ring, I went and answered it, and when I came before the captain he stamped and swore, gave me a severe kick, and told me to light a candle, after I had done so, I fell upon my knees and begged for mercy, and said that I would do every thing in my power to please him, he cursed me, and ordered me upon deck.

Some short time after our ship's owner (Mr. Taylor, of Liverpool) came, and having heard all the particulars, asked me the reason of my attempting to run away, I gave him but little satisfaction, but told him I wished myself at home again.

Mr. Taylor got the first and second mates their liberty by paying twenty pounds each for them. I was sorry to see them come on board any more, as I thought they richly deserved to suffer the punishment of the law; but money will do great things in this world, yet they will have to answer for it in the next, without they repent; but I will leave that to them, and

hope they will repent of their sins before they leave this world. I will acquaint my readers with what became of the black cook hereafter.

We now set sail with a favourable wind, bound for Leghorn. We had not been long at sea, before I found that the captain had not forgiven me; for one day as it was blowing a smart breeze, the cook having hid a tea cup of fat under the coppers, it rolled from under and broke. The captain seeing this, called me upon deck, and inquired how that came there; I told him the truth, saying I did not know. Upon hearing this, he went into a most dreadful passion, laid hold of my jacket with one hand, and my trousers with the other, lifted me up and threw me with great violence against the side of the long-boat. I fell on one of the ring bolts and cut my ankle dreadfully, which left a mark for life; he then kicked and flogged me with a rope's-end till I could scarcely walk. After he had left me, I was assisted by one of the men to go below in the fore-castle, where I remained for about eight or nine days, and was obliged to crawl up and down on my hands and knees; as I had nothing to apply to my ankle, it swelled much, and the wound became dreadful and corrupted, discharging with an offensive smell. The cook advised me to wash it with salt beef brine, which I found very painful, but thanks be to God, it soon gave me relief, and I was able to crawl upon deck at needful times. But one day I was upon deck, and the captain seeing me there for the first time, asked me how I was, and whether I was able to work, saying, if I could come on deck, I must be able to work, and must make myself useful: I then followed him on my hands and knees. My trousers by this time were worn out, and my knees were very sore; but thanks to God, I at last got so well that I could walk on my feet again. I was then ordered to attend the cabin, I did not like it, for I could not bear the captain to look at me. For a few days things went on very well, and I did not receive one blow, but not missing plenty of oaths and curses, which was his common practice. I hope God will forgive him as I do, though at that time I thought I could never forgive him, but now I do all in the hope that the Lord will forgive me my own sins.

The captain soon got tired of being quiet, for he ordered that the men in the fore-castle should have no light at night, saying that they must do without it, for he had not too much oil for the binnacle lamp, let alone the fore-castle one; so the men to please him did as well as they could without it. The weather becoming rather stormy, and the cook knowing the captain had plenty of candles in store, made free to secrete two of them in the fore-castle, which he unfortunately missed; he instantly sent for me, and asked me if I knew anything about them. Upon declaring my innocence, he knocked me down, and threatened what he would do if he found I had taken them. The first mate went forward to the fore-castle, made a strict search and found them; he asked the men concerning the candles, and they said they knew nothing about them. The captain hearing this, grasped me by the hair of my head, and said, "you d—d rascal you are found out." I still declared my innocence. The cook seeing the anger of the captain, immediately came forward and said, "Sir, the boy is innocent, for I took the candles—as there were plenty of them in store, I thought it was hard that the men should be confined in darkness during the rough weather, candles being plentiful on board." But the other cowardly rascals sneaked away, being afraid of the captain's anger, instead of coming forward like men. After the captain heard this, he called the first and second mates, and ordered them to seize him. They did as the captain ordered them, and dragged him to the cat head, stripped his trousers down, and bound him with a rope; then the captain flogged him on the back severely, as though he had only been a boy; and though only but a boy myself, I wondered how the men could stand such treatment, and not turn against the captain and mate. But I must inform the reader that there was not a spirited man on board, except one, and that was the second mate, but the captain had got him to do as he liked for the sake of a glass of grog.

Our captain was a stout young man and very proud, he would walk the quarter-deck as if he were some great monarch,

so that every one was afraid of him. After he had satisfied himself in his cruelty to this poor man he had been flogging, I perceived him coming towards the cabin with a piece of rope in his hand. As soon as he came up to me, he laid hold of me and threw me down on one of the seats and flogged me in a most dreadful manner, and then went upon deck. I was in a most shocking condition, and could scarcely rise. I thought if he returned and found me there he might finish me, so I got to the companion ladder and sat me down, and it was a long time before I could get over the flogging I had received. Indeed I was never without black flesh and wounds while I was on board that vessel.

When we came about two or three days sail from the Gulf of Gibraltar, our captain espied a large brig, on which he said to the chief mate that he did not like the appearance of that vessel, there being so many on board. The captain and mate consulted together, and ordered the men to put the vessel before the wind, or nearly so. We then got out of sight of her, the captain believing her to be an Algerine pirate.

About five or six hours after, which was about nine o'clock at night, we altered our course again, and to our surprise, about one in the morning, she made her appearance under our stern before we perceived her, it being so dark; she then put about, and steered the same course as ourselves, until she came alongside, so near that we expected they would entangle themselves with us and board us.

The captain ordered the mate to call the men aft, and swore we must fight if they offered to board us. The second mate said to the captain, "would it not be better to put the vessel again before the wind, as we should soon leave her astern." The captain replied, "no, no," and snatching up a speaking trumpet he hailed her "brig a ho!" which they did not answer, but went a little ahead of us, hove to, and waited till we came up to her. Our captain again hailed her, but received no answer. He then swore he would make them answer—he ordered the second mate to load one of the guns, as he expected she was a pirate, and waiting till we came up. He hailed her again, but receiving no reply, ordered the mate to fire, which was answered by loud cheers and hooting, and immediately they hoisted a lighted lantern at the peak, but sheered off and pulled it down. The captain and mate with a speaking trumpet each, demanded where she was bound for, and at the same time all the crew shouted as loud as possible, in order to deceive them as to our numbers: luckily we did so, for she sheered off not daring to attack us, although had she done so, the captain had made up his mind to defend the vessel, though we had but few fire arms on board. At daybreak we discovered her at a distance, and fortunately for us, the Spanish coast at the same time, so that we were shortly in the gut of Gibraltar.

Even here, the captain did not forget to exercise his cruelty. As one of the men was about half a minute behind the rest upon deck, after being called, he ordered him to receive seventeen lashes, which the men carefully entered in the log-book, (several of the men keeping one) as they said to keep tally with the captain; for my own part, I considered myself fortunate if I escaped with a few kicks and curses each day. After a fair wind we were close upon Leghorn, took a pilot on board, and entered the Mole where we were put in quarantine for seven days. Here we discharged part of our cargo, the rest being left at Genoa. But sickened at the treatment I had received, I determined to make my escape, so beckoning to a boatman, who was close by, and unseen by any of the ship's crew, I threw my bundle which contained my clothes into the boat, and then got in myself. The man not understanding English, nor I the Italian language I pointed towards the shore and got hold of one of the oars, and began to pull away very hard myself to let him know that I was in great haste to get on shore. When we got into the slip, as I had no money in my pocket to pay him for his trouble, I opened my bag, and took out a new linen shirt, and gave it to him, at the same time giving him to understand that I wanted some money, for it; he gave me two poles, which is worth about one shilling of our money, and a noggin of rum, which I drank and then left him and went on shore, at the same time not knowing where I was going.

"Better to bear the ills we have,
Than fly to others we know not of."

Yet when sailors of any kind experience such treatment as I did from their captain, they will no doubt agree with me in thinking that it was better to run the risk of chance than serve like a slave to be kicked and buffeted about like a dog, and that too by one of the same mould and fashion as yourself, one who ought to protect the unfortunate apprentice in danger, and who was in justice bound to treat him like a Christian, and instruct him in that duty which would make him a good seaman, and a worthy member of society.

"In darkness was shrouded the moon's silver form,
Obscured was each glimmering speck,
When the sea-boy jump'd out of his hammock so warm,
Roused up by the crew in the midst of a storm,
To attend to his duty on deck.

Hoarse bawl'd the stern captain, as orders he gave,
The mainsail to furl with all haste;
The wind it blew cold, and he feared that each wave,
Would plunge him headlong in a watery grave,
As his footing unsteady he placed.

The storm raged with fury on every side,
The sailors were harsh and unkind;
And when it was over he sat down and cried,
'Oh! why did I roam o'er the ocean so wide,
And leave my enjoyments behind.'

But through my own folly came sorrow and woe,
For I discontented became;
And out for a sailor determin'd to go—
How little, alas! did I fancy or know
How foolish I was and to blame.

If our ship to old England return any more,
I'll try to obtain my release;
For I'm weary and faint with the toil I endure,
O, I wish I had stayed at home safe and secure,
Nor embark'd on the perilous seas."

[To be continued.]

LOSS OF THE BRIG ROBERTS.

On the 16th of May, about half-past eight, the vessel was under a heavy press of sail, and bearing on the Manks coast. The captain was not aware of being near the land, for in reply to a question, he said there was no danger, as the vessel was between twenty and thirty miles from any coast. A few minutes afterwards, the captain, and a Mr. Nixon, being in the cabin, the vessel struck on the rock at Langles Point with a dreadful crash. The captain and Mr. Nixon instantly rushed on deck, where a scene of the most horrifying description presented itself. The terrific shrieks of the women and children, and the distraction of the men may be imagined, but cannot be described. At this awful perilous moment, the sea running mountains high, and the waves dashing over the vessel, and on an unknown coast, there was not an instant for deliberation. Those who could swim, immediately jumped into the sea, and gained the rocks, while a few others also succeeded by passing over the bowsprit and descending on a jutting point of the rock. Several who had gained the rock were unfortunately washed off by the overwhelming waves, and it was only by the utmost human exertions that any of them escaped destruction. Those who succeeded in retaining their hold, clambered from rock to rock, during the short interval that succeeded each wave, until they attained the land. Of the entire number not more than nineteen persons (including

the captain and crew) were saved—the remainder found a watery grave. One woman was among the number saved, but she was much injured, and not expected to survive. The captain had a narrow escape, and was much bruised. From the darkness of the night, the unfortunate people had considerable difficulty in finding a habitation; on the following morning they went to Castletown, where a collection was raised for their relief, and a vessel prepared to convey them to their destination.

THE SPIRIT OF THE GALE.

[By HAWKINS A. D'ALTON.]

"'Mongst horrid shapes, and shrieks, and sights unholy——"

L'ALLEGRO MILTON.

I AM free,—I'm free,—where I list, I roam,
And I scud along on the ocean's foam;
The billows I wake with a warrior's shout,
And scatter their surges in spray about;
To the storm's dark spirit I call aloud,
While he mutters a growl from the thunder-cloud.
Where the lightning dances in scathing wrath,
O'er the water's waste, is my ruthless path;
And the mariner lists to my fearful shriek
With a trembling heart, and a pallid cheek.

I am come,—I come from destruction's fripp,
Where I've howl'd a dirge o'er the sinking ship;
On the flapping sail and the tow'ring mast
With a giant's strength was my fury cast.
And away they whirl'd like a slender reed
As I merrily laughed at the fiendish deed;
And I bear on my wings the struggling cry,
Of a drowning swimmer's last agony.

An hour since, I hailed on a crazy raft,
The remaining crew of a shipwrecked craft,
Hunger depicted on visages grim,
With skeleton bodies, and stiffen'd limb:
They were casting lots for the doomed to die,
And I mocked their grief as I whistl'd by.
I will go—I go—ere another sun
Awakes from its sleep, will rare work be done.

Where mountains of ice on the ocean ride,
I'll lash up the waves in my reckless pride
The frozen pinnacles playfully rock,
Like an aged man 'neath the palsy's shock;
As my whizzing hiss and their splitting crash,
Doth mingle along with the billows' splash.

A ship lies at anchor since ev'ning's down
A speck 'neath the shade of an iceberg's frown;
With a fearful scream like a madman's shriek,
As light brittle glass the hard-frost I'll break,
And revel aloft 'mid the echoing rout,
Whilst I toss its masses in air about:
To me are such fragments like flakes of snow,
And I'll hurl them in sport at that barque below.

March, 1846.

LOSS OF THE REGULAR EAST INDIAMAN.

MORE than one inaccurate account of this melancholy affair, having been published, we prefer the following narrative, by Captain Carter. The noble conduct of the crew, of the French frigate *La Cléopâtre*, in rescuing all hands con-

nected with the Regular, from total destruction, has been acknowledged in a letter from Captain Carter to the commander of the French frigate; also, by Sir William Gomm, governor of the Cape of Good Hope; and this praiseworthy conduct has very properly been brought under the notice of the Lords Commissioners of the Admiralty:—

"The ship Regular, W. R. Carter commander, 550 tons, left London on the 22nd of February, bound to Bombay and China, with a valuable cargo of specie, iron, steel, copper, &c. The passage was an ordinary one until the 8th of May, when, scudding in a heavy gale from the N.W. off the Cape of Good Hope, she suddenly sprung a leak, which, in spite of the continued exertions of the crew for the four subsequent days and nights, gained considerably upon them. On the second day the water gained upon both pumps three inches. The gale continuing with unabated fury, and a tremendous sea running, it was deemed expedient to lighten her, and about eighty tons of copper, &c., were thrown overboard without any good resulting. The crew was then divided into parties, and the pumps assisted by baling at the fore hatchway. For the two subsequent days, the weather continued nearly the same, blowing furiously with a tremendous sea. There was no alternative but to scud before the blast, which was done under a reefed foresail, and close-reefed main-topsail. On the 13th, all hands became completely exhausted, the pumps never having been left for four days and nights. The ship at noon on this day, was in lat. 37 deg. 30 min. S., and in long. 36 deg. 30 min. E., when the immense quantity of water in the hold, affected her steerage, and it was evident to all, she was nearly water-logged. At three p.m. the water in the hold, being nearly up to the beams, and the crew despairing of keeping her afloat by their exertions much longer, they were compelled to take to their boats. At eight p.m., they left her to her sad fate. In the launch were placed eighteen persons, including the chief and second officer and two female passengers; in the pinnace were the third officer and ten persons; and in the gig Captain Carter, and four persons. Several days' provisions and water was placed in each boat. They were now nine hundred miles from the nearest land, scudding, in three small boats, (the largest of which was only twenty-three feet six inches in length, and six feet six inches broad,) before a furious Cape gale, direct from the land. About ten, in a heavy squall of wind, each boat shipped a tremendous sea; from the larger one, everything was obliged to be thrown overboard, to lighten her—water, food, compass, charts, &c. The gig cleared herself as she filled over the stern. So, on the top of a mountainous sea, the whole of her contents, save the crew, were washed over her bows. The pinnace shared the same fate as the launch; the gig was then pulled towards the launch, and reached her at midnight. The crew was then removed into her, and she cut adrift; the launch was now too crowded almost to move in, and had lost sight of the pinnace. Thus in despair, they drove the wretched night through, without chart, or compass, to direct them, or a single necessary to sustain life; the sea birds (such as albatros, and Cape pigeons,) hovering close over them, as if only waiting the moment, when the frail boat should be engulfed. At dawn, to their inexpressible joy, the Almighty directed two vessels to their relief, which were despatched directly to windward, running immediately towards them. A signal of distress was made, by hoisting a shawl belonging to one of the lady passengers, which was providentially not unobserved. The vessels proved to be the French frigate *La Cléopâtre*, 52 guns, and corvette *Alicmene*, 20 guns, proceeding to China via Bourbon. The commodore, on being made acquainted with the discovery of the signal, immediately rounded the frigate towards the boat, and at eight those in the launch, were received in safety on board her. On reaching the frigate's deck, Captain Carter instantly implored the commodore to go in search of his missing men and officers in the pinnace. This request was immediately complied with, and in less than an hour the missing boat was discovered by the corvette, and by her, miraculously preserved, all parties thanking God and the French officers with tears in their eyes, who, through his mercy, had been the means, of rescuing them from a watery grave. The appearance of these

vessels seemed the more miraculously on this day, as for forty-two days previously they had not sighted a single sail, nor did they fall in with any other after, on their passage to the Mauritius. It was also afterwards learned that on the previous day, the commodore had determined to alter his course, but had not eventually done so; if he had he would have passed eighty or ninety miles to the eastward of the unfortunate crew.

"The preparations made by those on board the frigate for removing the poor wrecked people from the boats could never be surpassed. It displayed the skill of a seaman, and at

the same time showed that every head and heart on board the *Cléopâtre* seconded the exertions of the excellent commander; and, when they had been safely taken on board, they found that every arrangement had been made for their reception which either humanity or medical skill could devise, and, from that moment, until the arrival of the frigate at the Mauritius, the crew of the *Regular* received such generous treatment from their deliverers, as will never be effaced from their memory. The whole of the officers, passengers, and crew were saved."

ACTION BETWEEN THE MARS AND HERCULES.

In 1798, Lord Bridport had the command of the Channel fleet; and on the 21st of April, he threw out a signal for Captain Hood in the *Mars* to give chase to a strange ship, which was evidently keeping near the French coast, for the purpose of endeavouring to escape through the passage Du Raz; it is probable she would have completely and speedily succeeded in this attempt, had not the wind been directly against her, and the tide at the same time setting in from the shore; she was, therefore, obliged to come to an anchor. Captain Hood took immediate and effectual advantage of this circumstance; and it is difficult to decide, whether the skill which he manifested in laying the *Mars* alongside of the enemy, or the bravery with which he afterwards fought her, is most to be celebrated and commended. The British captain was resolved to do the business so effectually as to put it entirely out of the power of the French ship to escape, or even to resist for any length of time; and besides, it was to encourage and accommodate his brave crew by coming to close quarters, that he laid the *Mars* so near, that several of the lower deck ports were unshipped. The enemy on his part was not dismayed by having a British man-of-war so near him; he fought his ship with great gallantry and coolness; and a most bloody conflict commenced, and continued for upwards of an hour-and-a-half; when British bravery received its due and just reward in the surrender of the French ship. The prize was a valuable one; proving to be a quite new and well-finished seventy-four gun ship—the *Hercules* of seventy-four guns, and seven hundred men. She had sailed but a very short time

before from L'Orient to join the Brest fleet. Her loss was dreadful: upwards of four hundred men were killed or wounded; and on the side, where, from being at anchor, she was exposed to the fire of the *Mars*, her hull was burnt, and almost torn to pieces.

The loss on board the *Mars* was trifling, if the mere number of men killed and wounded is taken into account; but heavy and lamentable indeed, from the circumstance that the gallant Captain Hood fell in this well fought action; just before it terminated, he received a wound in the thigh, that proved mortal; he lived long enough, however, to be gratified in the hour of his dissolution, with the joyful news of the enemy's surrender,

[ACTION BETWEEN THE MARS AND HERCULES.]

which he received with a smile, and expired as a Briton ought to die, whose life is devoted to his country, in the arms of that victory which had been won by his courage. He had previously called for pen, ink, and paper, and made a short will. Besides her captain, the *Mars* had seventeen killed, sixty-five wounded, five of whom died of their wounds, and eight missing. It is probable that the last had fallen overboard during the heat and bustle of this dreadful engagement.

This, though a single action, was one of great importance. The meeting of two ships of the line is a circumstance of rare occurrence, and its decision in our favour a brilliant ornament to our naval history. The *Bellona* and *Courageux*, the *Foudroyant* and *Pégasse*, the *Mars* and *Hercules*, the *Victorious* and the *Rivoli*, will be recorded in the annals of history, as the finest memorials of naval prowess, and a decided proof of our superiority on the ocean.

The loss on board the *Hercules* amounted to upwards of 400 while on board the *Mars* only 17 were killed.

THE NUBIAN SLAVE.

From "Evenings at Haddon Hall." Published by Colburn, 1846.

OVER a parched and arid desert a train of captives painfully pursued their way. The air was heavy with intense heat. Around, below, above, heat was present, as if it were concen-

trated into a palpable substance, resting heavily on the head, weighing down the limbs, oppressing and suffocating respiration. To rest was to perish. The captives, with languid steps and throbbing temples, moved on, animated by the prospect of moistening their parched lips, as the guide indicated that wells were at hand. "Water, water!" was repeated in many dialects

of Africa—one desire in a dozen languages, and by hundreds of voices—"Water, water, or we die!" Old Haloo, the chief of the band, whose life had been passed in the traffic of slaves, looked on the fainting throng as if to calculate how much longer nature could support existence.

The train was numerous. Most of the captives were young—some mere children, others rising into youth, others approaching lusty maturity. In this band there were almost as many girls as lads and men. With few exceptions, all were unconfined. There was no fear of their attempting to escape upon the desert. Their homes were hundreds of miles away. Around the neck of each was a bag containing roasted maize. This was the sole provision for their journey. Each carried a supply for several days. They received water only at the appointed resting-places, which were often at the distance of a long and weary day's travel. They were driven forward like a herd of cattle, kept from straying by natural instinct. When they approached a habitable country, they were bound together in gangs, to prevent any from deserting. In this mode they were hurried to the sea-shore, to be borne across the Atlantic, and commence their life of slavery. But now they thought not of the future. They had but one wish: they believed they should be happy if they could but satisfy the thirst which consumed them.

The horrors of that day drew to a close at last. In the distance, the guides who had advanced were seen filling skins and vessels from the well. A cry of joy resounded through the train. The single camel of the expedition stretched forth his long neck and quickened his pace, while his large lips trembled with desire. As the resting-place was reached, the sun went down, and water and shade were attained together. The younger captives forgot everything in the exquisite sense of relief and delight they experienced. When their wants were relieved they were careless of the future, and sank to rest beneath the large palms, which, at the edge of the desert, gave promise of a more fruitful country.

One man alone had performed that day's march with fetters to his wrists, and a thick rope attached to his ankles. He had been brought from a province of Nubia, where the White River watered the sultry plains, and tall mountains cast on them a grateful shade. A tribe of the Desert had invaded his village, burnt the dwellings to the ground, and made him prisoner. He had struggled desperately, but in vain; though well had he maintained his reputation for courage, and justified the confidence reposed in him. Three of the savages fell by his hand; at last, he was only overpowered by numbers. Bound hand and foot, he had been transferred from one tribe to another, till he formed part of the band destined for the sea-coast. This man was prized by Old Haloo for his youth, large frame, and prodigious strength. No labour seemed to tire him, no punishment to subdue his spirit. He never complained. He took food and water when offered him, but he never asked for either, and, unlike the other captives, he disdained to carry provision for his journey. He was considered of too much value to be neglected, and so was supplied with sufficient nourishment to support life. He had more than once endeavoured to escape, and was now so fettered that no struggles could avail him. At night he was securely tied to several of the other prisoners.

When the well was reached, this man had thrown himself to the ground and closed his eyes. Water was paraded before him, but he did not heed it. He did not stretch forth his hand for one draught of that precious fluid which the herd of captives sought so eagerly. All were first served, and then was taken to him a few drops of water, sufficient to support life but not to quench thirst. This was gratuitous torture, for the element was now abundant. When the vessel was offered to him, he struck it to the ground, and dealt a heavy blow to the slave who bore it. His outcries brought Old Haloo to the spot. He was enraged, but did not wish to lose the 100 dollars which he knew he should receive for so valuable a prize on the coast, and a larger supply was brought. The Nubian drank it, and ate some grains of maize. He next received the punishment of the scourge, ordered him for his disobedience, without a word, and appeared easily to fall asleep.

No one could pierce into the thoughts of the Nubian that

night, or tell the pains of his body, the misery of his spirit. He lay still, but he did not rest. Sometimes a low groan escaped him, which he sought to suppress, as unworthy his fortitude. His bonds had fretted him, and now he could gain no relief from their pressure. To him, of all the band, that brought no relief. He longed for the dawning of day, though with it his sufferings would recommence; the rest and silence of night he found more intolerable than the toils and action of the day.

In his village home some scattered light of Christian truth had reached him. He had gathered that one God reigned in Heaven, and that love and justice were his attributes. Often were his fettered hands raised to the sky. Was his muttered prayer for deliverance or for vengeance? He must have thought the answer long delayed. Yet it did not seem that hope deserted him. His fellow-captives sometimes saw him on his knees, and they attributed his surprising resolution and untiring strength to the supernatural aid he received in those moments from the Deity he worshipped.

Twelve days more of privation and of fatigue to fainting, brought that band in diminished numbers to the shore. The discipline that tames the lion and the tiger—hunger and weariness—had made them obedient to the slightest gesture of their drivers. They were weaker in body, but yet weaker in spirit. They humbly entered the boats, though the raging surf threatened their destruction, and were conveyed on board the vessel anchored in the distance. The Nubian went with the rest, for he was now incapable of resistance. If these poor creatures had any thought, they must have wondered for what end irons were rivetted to their limbs, when they of themselves were almost incapable of moving them. They were stowed thickly in the hold, without light and without air. The slave-decks were ready, the schooner sank deep in the water with her cargo of flesh and blood, and the anchor was raised.

Fair but roughly blew the breeze. The vessel rose to the swell, and gallantly flew over the waters to the west. Night and day the ship rolled onwards, no pause in her motion for an instant, no abatement of the heaving of the waters. Frightful were the groans and shrieks of the captives. "Tis no matter," said the captain; "they are safe. No escape here." He was wrong. The escapes were numerous. Each morning the dead were separated from the living—not before. Those who were not on the watch, yet heard in their berths below the sullen splash in the waters which sounded the funeral knell of the victims.

It was horrible to see the shoal of sharks which followed that ship. They seemed, like the rolling waters, to know no rest. They knew their prey was in that vessel, and they never forsook it. Often, in the day, they were not seen. They knew their time, and they observed it regularly. Long before the sun rose, these monsters, in the earliest dawn of light, were observed moving on the surface of the water, opening their huge jaws, springing over each other, touching the sides of the ship, as if they smelt their prey, through the planks, and manifesting the most furious eagerness to obtain it.

The captain was naturally more careless than cruel. When matters went well, he was good-humoured enough; but when crossed, he lost all control over himself, and his bad passions blazed forth with irrestrainable fury. In his wrath he was a perfect fiend. The slave-trade brought him wealth, and he was indifferent about the rest. There are many characters like his in the world, though not all are exposed to the same temptation, who suffer themselves to be guided by events, without a thought for the consequences. He had no interest in his cargo, but he felt a pride, as he expressed it, in landing it in good order. He had amassed wealth, for his schooner was a smart thing, and had distanced many an English cruiser. She had so good a look about her, too, that she was not often suspected; and besides the traffic in slaves, the captain did something in ivory and other commodities. He was British born, and had been bred to the sea, but had lived a free life in the West Indies. For the last ten years he had said, "A few more trips, and I will give over this trade: 'but

the temptation was too strong for him. The profits of a run from Africa to the Brazils or Cuba were enormous, and he was so well known, and had so great a reputation for dexterity and success, that he had abundance of commissions offered him. No one, it was found, made the passage so quick, or brought home so full a cargo. As for the guilt of his occupation, that troubled not him. When his wife remonstrated, he shook a bag of gold in her ear. "Negroes, hey," said he, after a successful voyage, "pooh, pooh! My trade is in gold dust, nothing else." This man was as fond of his family as one of his rugged nature could be, and for his sole child, a girl, he hoarded the wealth made by his perilous and criminal voyages.

His present cargo had been reduced in strength beyond safe limit. Their wretched confinement, coming immediately after their dreadful journey, had produced a malignant fever among them, and the mortality was so great that it seemed likely the captain would have but a scanty complement to land. This soured his temper; and when some of the crew fell sick, and he had scarcely hands enough to work the vessel, he fretted like an enraged brute. He had but one consolation. The voyage promised to be unusually rapid. He was bound for the Havannah; and though he had lost a third of the slaves on board, he congratulated himself on being within three or four days' sail of port. A new mortification awaited him.

The wind changed, and with the change his glass fell. He saw certain indications of stormy weather, and prepared to meet it, cursing the mischance which deprived him of half-a-dozen stout hands. Thick clouds gathered, but at night the wind went down with the sun. In the morning it increased to a gale, and, as if to complete his ill-luck, a fine brig was seen in the distance with the union-jack flying at her mast-head. She was an English cruiser, that was quite clear; and it was soon evident that she had suspicions of the schooner, and was crowding all sail the gale would allow her to carry in pursuit. The captain's mind was made up to run for it. He hoisted canvass till the schooner's masts groaned with the press, and adopted every resource of experienced seamanship to baffle his pursuer. He resolutely disregarded all signals. He believed that he could hold his distance till night, and in the darkness he did not doubt he could escape. But it soon appeared that the cruiser was the better sailer, and that her commander, heavy as the gale was, did not fear to put her sailing qualities to the proof. By noon, the distance was greatly lessened, and the captain saw that the guns of the enemy would be brought to bear upon him long before night.

His position was desperate, and he determined to try an expedient which he had more than once before found successful. A raft was rudely constructed of some spare spars; to this were lashed half a dozen of the captives. Their entreaties were no more regarded than the whistling of the wind. As a wave advanced, the raft was lowered to its surface. The result was watched by the crew of the slaver with breathless suspense. The captain calculated rightly on the humanity of the English commander. The height of the sea was disregarded—a boat was lowered from the brig; the chase was for the moment slighted, in anxiety to save the wretched beings whom the waves threatened each instant to engulf. They were safely got on board, but not until the distance between the two vessels was perceptibly increased. Three several times was the same plan tried with the like success. At evening the schooner was still beyond range of her pursuer's guns.

Still the gale increased; the sky was obscured by pitchy clouds, and the schooner plunged madly through the darkness. Tremendous squalls of wind and hail swept the decks; one fearful sea, breaking over the bows, carried away part of her bulwarks. Every inch of canvass was taken in, but not before two seamen had been carried from the yards with the sail they were reefing. The long swollen waves strained the vessel fearfully, as she scudded under bare poles. At one moment she rose on the crest of a mountain of water, and at the next plunged down into the black gulph which seemed yawning to swallow her up.

Suddenly a wild uproar rose from below, a clanking of chains, and a rush against the slave-decks and bulk-headings, which made the stout timbers of the schooner quiver. The captives, feeble as they were, had become possessed with the strength of madness, as they felt the waters rising round them. The ship had sprung a leak, and the sea rushed in through the gaping seam. The desperate slaves, banded together, rushed against the partitions which confined them, or trampling down the weakest, made a platform of their bodies, and beat their fetters against the decks above them.

The seamen, worn out at the pumps, left them. The ship, they said, wanted lightening.

The captain laughed fiendishly as he caught their words. "Ha, ha!" he raved, "we'll lighten the ship and quiet those noisy fellows down here together. Now run out a plank there; so, so. There shall be a clean ship, if we're caught at last."

The slaves were ordered up on deck by half-dozens. They complied with alacrity, believing they should be saved from the waters that rose around them, reaching now almost to the necks of those who were stowed lowest. They came, to meet a more certain and speedy death. The captain's hoarse voice was heard above the howling of the storm. "If they resist, kill them, and throw their bodies overboard." All shared the same fate; there was no distinction of sex or age. Most fled from the gleaming steel to the raging waters. That wild scene of massacre is too horrid for mortal view.

* * * * *

With the last batch came the Nubian, worn almost to a skeleton, yet with some portion of his vigour remaining. He obeyed the order, and came on deck. He had heard the screams of those who ascended before him, and at a glance saw his intended fate. A plank stretched to the sea; he must tread it, or be cut down by the cutlasses of the merciless men around him. He advanced firmly and unresistingly to the plank. As his foot touched it, and the armed men were off their guard, he turned, and his eyes met those of the captain, glaring with the fury of a tiger about to spring upon his prey. The glance exchanged was momentary, but of terrible import. It spoke the mortal hatred and defiance of deadly foes. The captain raised his arm to strike. The Nubian sprang aside, struck with his fettered arm a sailor who opposed him into the sea, and leaping forward, agilely ascended the foremast, clinging to portions of the rigging. With a fierce oath, the captain called for a musket; he raised it to fire. At that instant the clouds opened, and his aim was dazzled by a stream of lightning, which, illuminating for an instant all the scene, showed the Nubian clinging to the mast, yet shaking his chains in defiance at his enemy—the blood-stained deck, the dimmed cutlasses, the black waves, and here and there a human form, tossing up its hands in wild despair above its head, ere it sank for ever in the depths of ocean. The rage of the element was hushed for a moment, as in awe, but as the thunder rolled away, a terrific storm-gust made the ship groan fearfully; another, and the foremast, snapping near the waist, fell with a tremendous crash into the boiling sea.

In the morning, the schooner lay like a log upon the water. But her pursuer was nowhere to be seen, and she reached port in safety. Of her captives, not one remained. When the blood-stains were scraped from the deck, all trace of the massacre was lost.

Through the night the Nubian clung to the mast. Despite of his chained hands, he lashed part of the rigging around him, and kept himself above the sea. When day broke, he raised his head, but he could see only the mountainous waters rising on every side. As the long waves swept by, he could discern the heads of the sunken rocks above the trough in which he rolled. A few sea-birds flew above him, as if awaiting the moment when life should be extinct, to dart upon his body. These signs assured him that land was near, though he despaired of reaching it. He was saved beyond hope.

A maiden, in the first blush of youth, and bright and beautiful as morning, looked from the topmost window of her dwelling on the northern shore of Jamaica. She was watchful, for her

father was at sea, and she had been taught to dread the fatal fury of the tempest, as she dreaded the hurricane which sometimes swept the shore of produce and of life. She perceived a speck on the distant waters, though hardly could she discern a living form. Issuing from her dwelling, she hastened to the beach, and offered a reward to the fishers who would venture forth and make for that fragment of a wreck—"a father," she said, "might be clinging to it in agony." A stout boat was manned; it returned with the senseless Nubian. He had fainted when taken from the mast. The young girl had him conveyed to her house; there he was tended during a delirious fever. His language was not understood; but the visions that distracted his mind could be gathered from his gestures. He shrank appalled from the frightful images terror had stamped upon his brain, or with raised hands seemed to call down maledictions from Heaven upon the authors of the guilty scenes that were ever present to his fancy.

His treatment was kind and merciful. A great reproach had just been removed from the English name. The truth, long since recognised, that all men were brothers of one great family, was now practically acted on. Property in man was abolished in all our possessions; a coloured skin was no longer thought unfit for freedom, or deemed a bar to the immortality of Heaven.

In the gentle breast of this young maiden a peculiar interest had been awakened for the African race. She had been taught that a long arrears of justice and benevolence was due to them for the wrongs they had suffered, and her heart, filled with pure and kindly feeling, gladly received lessons which made the exercise of its gracious tendencies a duty. A minister of the English church had settled in the neighbourhood of her dwelling. He had left home, ambitious hopes, the pleasures of society, the chance of distinction and wealth, to take up his abode in this retired district, that he might gather the despised negroes into a church, and prepare them for freedom. In the long intervals of her father's absence, the sweet girl found in this good man a friend and instructor. Delighted with the child-like and artless simplicity of her nature, he watched over her education, and taught her the graces of polished life. He was glad that she had rescued the shipwrecked Nubian, and now attended to him; for he believed that all the virtues required exercise, and that they flourish best when their blossom is left to ripen into fruit.

The name of this young girl was Mary Langley. She was a child when her mother died, and as she saw her father so seldom, her disposition had been much left to the guidance of nature. She grew up with the untrained beauty of the plants that made her home a garden. In her heart, the love and charities of her faith had flourished in the wilder luxuriance for being untrained. When her father saw her, he was satisfied with her lovely and blooming appearance. Though now rising into womanhood, he would still treat her as a child, would take her up in his rough arms as he did in her infancy, and let her silky brown tresses flow on his breast, while her graceful arms embraced his neck, and he decked her out with trinkets. He could not understand all the tenderness of her character, nor make out why she was sometimes sad when he was boisterous in mirth. He saw in her only the innocence and endearments of childhood. Sometimes she would laughingly try to make him share her feelings. He listened as men do who hear mysteries of which they can make nothing, so he interrupted her by telling her what a fortune she would have when she was a woman. Yet these two beings, so opposite in sentiment and disposition, loved each other fondly. Nature had linked them together with those mysterious bonds of affection which triumph over time, separation, and death. If her father did not soon return, the maiden was to join him at a port in South America.

The Nubian recovered, but it was evident that he had suffered much; his manner was dejected and reserved, and sometimes it seemed that the visions of his delirium returned, for a convulsive movement, momentary but frightful, passed over his usually rigid features. He appeared not wholly ignorant of Christianity, for he recognised a gold cross which Mary wore about her neck, and devoutly kissed it as the emblem of salvation. On the past he was silent; a nurse, who had recog-

nised some words he had spoken in his fever, addressed him in the same tongue, but he remained mute. He made rapid progress, however, in acquiring some knowledge of English. When he spoke in that language, he said he had been dragged from his home, and wrecked on his passage. He would say no more.

His gratitude to the girl who had saved him seemed boundless; he recognised her as the preserver of his life, and was willing to devote himself to her service. Her care in his recovery, her kind tones, her beaming smile when she met him, penetrated his heart with a sense of her goodness. His large frame remained motionless while she addressed him, his full and expressive eyes alone spoke his emotion, and betrayed the eagerness with which he sought to comprehend her meaning, when he only partially understood her words. He seemed to know her wishes by intuition, and to take delight in studying and gratifying her tastes. Her garden, under his care, was beautifully kept. The spot was richly favoured by nature, it was open to the cool winds, and shaded from the fierce heats by hills and plantations of cocoas and tamarinds. All the choice and varied vegetation of the fertile soil assumed under his hands, the most luxuriant growth and beautiful arrangement. There was no toil to which he seemed unequal. Once Mary expressed a wish for a shaded walk, the Nubian knew no rest until the appointed space was planted with young trees of the choicest kinds.

When abroad, an antelope and an elephant could scarcely have presented a greater contrast than these two beings. Mary was only just rising into womanhood, though in that ardent climate nature brings the human form, as she does all other things, to maturity earlier than in colder regions. For her height, her shape was exquisitely delicate—only beginning to acquire that smooth roundness which indicates the ripening of the child into the maiden. All her motions were full of airy joyousness; she had been subjected to none of the discipline of schools, and loved to let the evening air sweep her tresses from her face, and to play amid the wild luxuriance and beautiful solitudes of her home, with the delights that nature presented to her. The Nubian's massive frame was firmly knit; he had just entered into the period of vigorous manhood; his motions were grave, slow, and measured. When the young girl was revelling in the soft cool air, that blew from the ocean at evening, he remained standing motionless, like a colossal statue, with his hands crossed upon his breast, and his eyes to the earth. They seemed personifications of grace and power met in amity. Hers was the will to devise, his the strength to execute.

The Nubian was attentive to the offices of the church, and had been formally baptised by the name of Christian. The good minister, regretting to see his time passed in a way that could be little useful to him, mentioned in his hearing that labour was greatly wanted at a neighbouring plantation, and that, in the present scarcity of hands, strength and industry were equal to a fortune. He had not calculated wrongly on the Nubian's quickness—the next morning he was gone. The young girl pouted a little for his loss, but the minister showed her how much better a life of toil would be for Christian, by which he might realise an independence, than a life of profitless servitude. She was convinced and yielded.

The Nubian's proffered service was readily accepted. He toiled with unremitting energy, and was speedily noticed as a prosperous man. His savings were large, and were prudently invested. He soon saw that in this country wealth was power, and power he coveted, to realize the projects which now began to shape themselves in his soul.

He saw the gentle Mary but once in the week—he knelt with her in the house of prayer. When the service was ended, he stood beyond the church porch, tranquil and motionless, to wait her words. His answers to her questions were brief, yet, it seemed, nothing of what she said was lost to him. He appeared impassible and motionless, but each accent of her tongue was treasured up in his heart. For her he often obtained the choicest fruit, the finest mangoes, the largest cocoas; sometimes, too, rare shells and beautiful plants. These offerings were delivered to her attendants without a word. He departed as swiftly and as silently as he came.

A sorrow, which no care could remove, clouded the brow of the sweet girl. Her father wrote to her of crosses and misfortunes, which rendered it impossible for him to come to the island. Months after those notices of disaster came word that she should quit her home in a vessel which would call for her, and join him at Rio Janeiro. He intended, he said, finally to settle at Jamaica, but he had arrangements to make first, and he could not bear longer to be deprived of the delight of seeing his dear daughter. She who had been born on this spot was loth to leave the flowers she had tended with so much care—the domestics who had grown so fond of her—the dear minister who had been her friend from childhood; she loved them all, yet her heart told her the faithful Christian would suffer from her absence the most. When she took leave of him, he remained mute and still, as though he had no power of motion; but he lost not a word of her parting instructions. She would write often, she said, to the good minister. His eye glistened with delight as she added, "And sometimes to you too, Christian, for I shall never cease to take an interest in your welfare." He made no answer, but kneeling, raised her hand to his lips. His gesture was full of devotion and love; he seemed to be performing an act of adoration; when he rose, he bent his head upon his breast and left her.

Four years passed by, and then a letter was received from Mary, announcing her speedy arrival. Her father would follow; she came first to prepare his reception.

In this interval the Nubian prospered beyond all expectation. By his unceasing labour he had amassed wealth, which the diminished value of land enabled him to lay out to excellent advantage. When the foundation of his fortune was thus laid, his progress was rapid, for on himself he spent nothing. A fortunate speculation proved his shrewdness. He foresaw the failure of the next year's sugar-crop, and bought extensively at a low price; the result justified his expectations. He cleared an enormous profit by the transaction, and at once established himself both as a merchant and a planter. His estates were thenceforth prudently managed. He was a kind but vigilant master, and soon acquired all the details of commerce. He still maintained his reserve of manner, but with that few persons troubled themselves; they were content to know that he was prosperous and wealthy.

When Miss Langley arrived, he was the first to welcome her. To her his fortunes had made no change in his manner; he was still humble and submissive in her presence as when he first devoted himself to her service. She found her home more beautiful than she left it, for the Nubian had been unceasing in his care to heighten the charms of the spot; nothing had been omitted that could gratify her taste, or minister to her convenience. He had made that sheltered dell a paradise of nature, having collected in it whatever was most rare and beautiful in that beautiful clime. When, after her first burst of pleasure at the improvement she saw around, she remonstrated at the expense that must have been incurred, the Nubian intimated, in a quiet, though sufficiently expressive manner, that he regarded her as his mistress still, and held himself indebted to her for all that he possessed. Mary was touched by gratitude so fervent and unusual; she allowed the Nubian to pursue that course from which he seemed to derive most pleasure, and he was thankful to her for this compliance with his wishes. Each morning he sent to her some token of his remembrance, trifling, but sufficient as a tribute of homage. To him this seemed an acknowledgment that his life was due to her, as a single prayer in the morning consecrates us to the service of Heaven through the day. He saw her but once a week, on the Sabbath, as before; and he still waited, with crossed arms, beyond the porch, for her to address him. Sometimes he escorted her home, and walked with her through the beautifully shaded paths he had helped to form. Custom easily reconciles us to outward appearance. Mary no longer thought of the colour of his skin; she conversed with him as she did with the minister, and regarded him as almost a dear friend. She was pleased with his penetrating remarks; and on his side he was never wearied of hearing Mary's descriptions of the various lands she had visited. Her voice was, in

his ear, sweeter harmony than music could ever form. He never ventured to speak of her personal appearance, yet he thought, and with truth, that she had become more lovely during her absence.

Mary was at this time one-and-twenty. Born of English parents, her skin had been purely fair, but it had been tinged by the sun, so that it had now always that shade of beautiful and healthy red which we observe with admiration colours the face and bust of a blonde when exertion or excitement makes the blood dance with quicker motion through the veins. From contrast with this hue of her complexion, her eye appeared of a deeper and purer blue, and to float in more brilliant lustre. Her bright hair hung in curling masses down her face, framing the sweet profile, which looked forth in gay playfulness. She had become more thoughtful but not less innocent. Her travel had taught her more of the world's crimes, but had not fixed one stain upon her heart.

The morning was bright, when a ship was perceived in the distance. Langley had at length arrived to commence his life of calm tranquillity. The news ran over the neighbourhood, and the surrounding residents came down to the beach to welcome the voyager—the Nubian with the rest. Mary was caught in her father's embrace as he stepped on to the beach. Her companionship had smoothed the natural roughness of his disposition. He returned kind greetings to all who met him, clapping the good minister warmly by the hand. Mary turned to introduce the Nubian, but he was nowhere to be seen. She was vexed at this, for she wished to present him to her father at a favourable moment, when he would perceive the estimation in which the fortunate Christian was held. She knew his general dislike and contempt of coloured people, and for that reason had not said a word to him of Christian's rescue from the sea by her means. She preferred that her father should first view him prosperous, before he was told of his destitution some years previously.

From that day the Nubian was absent for weeks. At his dwelling it was told that he had been called by urgent business to Kingston, the capital of the island.

In his calmer and secluded hours, with Mary as his guardian angel always near him, the conversion of Langley went on. He experienced a felicity he never knew before. He had been used to consider the clergyman a fanatic; he now regarded him as a sober and a sensible man. People having only a partial acquaintance with the world are apt to mistake sentiment for character. The two are wholly apart from each other. Langley was as bold, as adventurous, as active, as ever he was, but his energies were now turned into a new channel. He became an ardent experimentalist on the qualities of soils; he invented improvements in crushing-mills; and, in short, brought into the life and occupations of a planter all the industry and resources which had distinguished him in another career. He learned to take an interest in Mary's flowers and her schools for poor children, and talked of building a church after his own design. But in the midst of this new and happy life he never looked back.

He sat one evening, in company with the good minister, engaged in cheerful chat. Mary had just finished an exquisite little air. The wax-lights brightly illuminated the large and lofty apartment, rendered cool by the evening air stealing in through the closed jalousies. The minister was not one of those austere spirits who dislike whatever savours of gaiety and enjoyment. The soul, he held, resembled wax in this—that an impression, was often most surely and lastingly stamped on it when it was relaxed. He sometimes quietly told that he had done more with the planters in a few words over a game of chess, or a hand at picquet, than he could effect by his best sermons. He sat now keeping Langley company with an excellent Havannah.

The turn of conversation is often singular. A moment before, they were discussing the flavour of cigars; now they spoke of the consequences of sin. The captain was curious to know if, with a new course of life, all past crimes and errors were truly forgiven. Mary listened with more anxiety than marked the tone in which the question was put; for the past

had so little the captain liked to look back on, that he contrived to banish it from his remembrance altogether. The minister replied, undoubtedly; that to the repentant, sin was forgiven; but he remarked that, in some way or other, a punishment was attached to the original crime, from which it could not escape. "Sin is pardoned, without doubt," he said; "but believe this, that not one guilty action can be committed which will not meet with a strict reckoning, and for which a full and severe penalty will not be exacted in this world or the next; sometimes by mental, sometimes by bodily agony. To no man is it permitted to greatly offend with impunity."

The captain thought this doctrine carried a great deal too far. He was for a scheme of general amnesty, such as is granted by tottering states, which confound weakness with mercy, giving out that it fails to punish, not from impotence, but from an excess of charity and good nature.

The scene and conversation had hitherto been common place enough, though the changes which passed over Mary's face as she listened to the argument, threw in that touch of poetic feeling which is often found in the most ordinary occurrences. She knew herself deeply interested in the topic; for there were passages in her father's life, darkly hinted at sometimes by him, which chilled her blood when she thought of them.

The captain grew warm, and applied the argument, as heated persons will do, to himself. "Look here, now," said he; "suppose that I, when I wasn't so wise as I am at present, had a cargo of slaves on board? Well, we'll say the ship leaked, that she wanted lightening, that, no matter how, it was necessary to turn them out; do you mean to say now, that I should be punished for that when I took up with better notions?"

"I should say," replied the minister, regarding the case quite hypothetically, "that in this world or the next would a fearful punishment be awarded you."

The captain grew a little paler. As for Mary, she gave a faint scream; it was not without great difficulty that she could further suppress her feelings.

"Tush, man!" said Langley, roughly, "I have done such things in my time, yet what am I the worse for it now; where's my accuser?"

A voice that filled the room with terror, said, distinctly, "Here!"

All eyes were instantly turned to the spot whence that voice issued.

The Nubian stood in the door-way, his figure dilated beyond the grand proportions of nature. For the second time the glance of these two men met, and the captain, though his accuser was unarmed, felt that he was a lost man.

His courage did not desert him, though horror almost froze his blood and deprived him of sense. He rose to meet the Nubian's gaze. "With what," he said, "do you charge me?"

The black said, simply, "With murder!"

Langley advanced to grapple with his accuser; but Mary, quick as light, threw herself on the Nubian, beseeching him to withdraw at once, telling him that he had accused her father—that he was in error—that he knew not what he was about.

Never had the Nubian seemed more calm as he said—"Almost I would to God I did not. Gentle girl, you speak to me in vain, I am but an agent of Heaven. The cry of the blood that wretched man has wantonly spilt has risen to the Almighty throne. The hour of retribution has come!"

Four men entered the room at these words. The Nubian said to them, "Behold your prisoner!"

His terrible calmness carried conviction to Mary's heart. She tried to struggle with her dread—to address the Nubian. In vain, her faculties were paralyzed; she sank senseless at his feet.

Langley fiercely grappled with the men who held him. "Villains!" he shouted, "let me go; that fiend would kill father and daughter at one blow!"

The Nubian had laid the fainting form on a couch, and knelt beside it. He raised his eyes, and said, in tones of deep pathos, "Thou hearest, gracious God—thou hearest! still am I doomed to suffer!"

"Detested monster!" exclaimed Langley, "why didst thou come here to destroy our peace?"

The Nubian answered him not. He saw in the brightening colour of Mary's lips signs of returning life. "Guard well your prisoner," he said to the men. Then grasping the hand of the minister, who, during the few minutes of this dreadful scene, had been motionless with astonishment, he bade him watch over her. "I will not shock her by my presence. It may be, I shall never see her more." He bent down to imprint one kiss on her yet cold hand, and left the room, answering not one word to the fierce reproaches of his enemy.

The Nubian had recognised the captain of the slaver the instant Langley set his foot upon the shore. His mind was torn by the storm of contending passions. The horrors of that night of massacre, setting the seal of blood to the long career of desperate cruelty and wickedness he had witnessed, was never absent from his mind. He made no vow of vengeance, but he prayed Heaven to make him the human instrument of its justice. For this end he conceived that in his labour he was gifted with supernatural strength. Accident, or, as it seemed to him, Providence, had thrown in his way two of the seamen of the slave-ship. These men, as less guilty than their principal, he had constantly kept in the island, in the full belief that at no distant time would the captain be delivered into his hands, that their testimony might be joined to his own against him. If he came not to that island within five years, the Nubian resolved to wander over the earth in search of him. That time was within three days of its accomplishment when he saw Langley land.

The struggle of his soul ended in the conquest of the sterner passion. A voice within him cried out for ever—"Justice—justice!" With all haste he departed for Kingston. For the event that had arrived he had long been prepared. His own testimony, express and clear, was supported by that, equally decided, of his witnesses. When the depositions were taken, he felt secure that no mortal power could deprive justice of its victim. "This day," he exclaimed, as he left the court, "have I built up the scaffold on which that man shall die!"

As the intelligence of Langley's crime became known, it excited the greatest horror and detestation. He was examined and committed for murder. By the advice of his counsel he reserved his defence; his advisers frankly told him they saw no chance of his escape, if the Nubian pressed the prosecution against him with the same vigilance, and the witnesses all appeared on the trial. Mary had never left her father since his capture. Those words filled her with hope. She believed she had the power to save him, and that belief filled her with courage.

Christian now resided in the capital. He still persevered in his business with all his former regularity, though he felt the time was at hand when he should no longer continue it. Mary proceeded to his dwelling, and was directed to his private room. She entered it unannounced. He was standing at a desk, apparently wrapped in profound thought, with his face shaded by his hand. Before him was a small miniature, which Mary instantly recognised as one of herself, that, at the earnest request of the minister, she had sent Christian in return for his continued course of kindness and benevolence during her absence. From beneath his hand large scalding tears fell on the glass of the miniature. He presented no other trace of emotion. His large form was as rigid as if it had been carved of stone.

Mary seized the moment as most favourable to her wishes. The life of her father was at stake; with that thought what had she to do with scruples? She laid her hand softly on the Nubian's shoulder. He started back for an instant, then gazed upon her with a look of indescribable love, admiration, and reverence. Mary, who knew the usual reserve of his manner, and had prepared herself for opening the interview, was surprised and affected when he threw himself at her feet, and raised his hands to her in an attitude of supplication.

"Pure and beautiful being!" he said, in tones of the deepest feeling, "how can I ever hope for thy forgiveness? yet how can I live, how can I die, without it?"

Mary felt that the barrier of reserve she dreaded to encounter was broken down by the Nubian's action in an instant. She addressed him with the simplicity of times past.

"My forgiveness, Christian! Oh, you may obtain more than that! Save my father, as you yet may easily, and you shall have my regard and gratitude for ever."

Anguish was written in every line of his face, as he replied—"This is not my act, but God's. I am but the instrument he wields in his hand."

"Christian, Christian! beware how you mistake the impulse of revenge for the dictate of Heaven! Vengeance is not yours. Come, you have been deceived by bad spirits. Hear what it is I ask of you—only this, that you take no part against my father. Fly! leave this island at once. I—I, who saved your life—Christian, I speak not this boastfully, but as a claim to your gratitude—I beseech, I implore this of you, as the greatest boon that one creature can ask of another!"

He groaned as if his spirit were racked by mortal agony. "This is torture!" he said; "but it cannot conquer me. Lady, if you had seen what I have seen, the long train of fainting captives, the horrors of that hold, dark, suffocating, filthy, in which fever raged, and the dead and living lay together, the massacre of that night, which even now turns my brain as I speak of it, you could no longer doubt that the justice of Heaven cries aloud for atonement." He sprang to his feet, having his mind filled only at that instant with all the crimes he had witnessed, and the sense that he was the chosen agent to avenge them. "He must die!" he said, firmly—"die, that the awful warning may be carried through all lands—die, that human justice may be vindicated—die, that the cry of innocent blood may be silenced—die, that the oppressor over all the earth may know God reigneth in Heaven!"

The hope of Mary fainted in her breast as those awful words, delivered with the vehemence and fire of inspiration, fell upon her ear. Yet she made one effort more to turn the Nubian from his purpose. She raised her eyes to his, and waited till she saw them melting with tenderness and affection.

"Christian," she said, "though I have never breathed my thought into mortal ear, nor hardly looked on it myself, yet I now know well with what feeling you have regarded me. I have your love, such love as men feel for a chosen bride." She saw him start, and fix on her a gaze of passionate love. "My hand, my faith pledged on the altar, shall be yours, if you consent that we fly together. Think! will not a life of wedded love, my father's years of penitence, be more dear to you than a moment of vengeance?"

The Nubian turned from her for the space of an instant. When he looked on her again his face was more tranquil. "Angelical creature!" he exclaimed, "worthy, not of love, but of worship, thou art more beautiful than my dreams ever painted thee. Never did I adore thee as in this hour. No mortal heart can ever conceive the temptation thou hast offered to my soul. To save thee from an uneasy thought I would have died—I would have deemed all the torture to which man could put me, repaid by one kind word from thy lips. Yet we part now, and for ever. Wretched that I am, I dare not ask thy pardon!"

He led her out unresistingly, but his keen sense saw that she shrank from the pressure of his hand. This alone was wanting to complete his agony. As she passed from his dwelling, his strong frame fell heavily to the ground.

A gibbet stood long on a promontory of the Jamaica coast. The chains clanked dismally as the sea-breeze caught them. In that case of iron swung the bones of the murderer Langley.

The Nubian, true to his purpose, stayed to see his victim die. He had previously settled his affairs as one who was about to quit the world, giving his last instructions to a trusty agent. A ship waited for him till the execution was over. His parting words were only that, "His mission earth was accomplished." No one knew whither he went.

The pure and gentle Mary parted from her father only at

the foot of the scaffold, when his spirit seemed wholly Heaven's. With the good minister she quitted that island, which now presented to her only images of terror. Her heart was too confiding to live long without an object. When time had softened her grief, a lieutenant, poor, but high minded, gained her affections. He had previously been unfortunate, but now all things prospered with him. He rose rapidly in rank; his promotion was secured by purchase; he could never learn whose was the wealth that advanced him, that cleared off his incumbrances, and that made him a happy and a prosperous man. His sweet wife, though ignorant of the agent, suspected the source; but the thought was too full of painful recollections to be willingly indulged in.

A few years since, there came reports of a deadly conflict between a party of Africans in a province of Nubia, and a band of savage slave-dealers. The Nubians were victorious, but their leader received his death-wound in the struggle. One of those who survived him, and who, it seems, had his confidence, took from his breast a miniature, and transmitted it by a safe hand to England. It reached Mary, then a fond wife and mother, with a few words from the seaman, to whose care it was consigned, telling how he who wore it fell. It was the miniature she had given to the unfortunate Nubian, and was now stained with his heart's blood.

If in spirit he ever hovered over earth, he must have rejoiced as he saw that that picture, so dearly prized in life, was sometimes dimmed by Mary's tears.

THE MIDSHIPMAN'S STEP-MOTHER.

THE Hornet had dropped down to Hampton Roads, and awaited orders for sea. In the same watch with me was a young midshipman of delicate figure, and interesting features, who had just entered the service. In making some report to me, I noticed that his cap was drawn so much over his face, as nearly to conceal it. Suspecting that something was the matter, for he was anything but disrespectful, I watched him closely. He retired to the taffrail, and leaning his head upon his hand, remained for a long time immovable. I approached and inquired if he were ill. As he raised his head to reply, I perceived that his eyes were filled with tears.

After a short time, I learned the cause of his distress. His home was but one day's journey, where his father lay dangerously ill, and the captain had refused him permission to visit him. Confiding in the sympathy I evinced, he further told me, that he had engaged a shore boat, in which, at a late hour of the night, he was determined to make his escape, and abandon the service rather than not see his father. Persuaded that the captain could not have understood the circumstances, I entreated him to abandon his purpose, and offered my services to procure the leave he desired. He promised to wait until three in the morning.

As it was yet early, I followed the example of my superior; and, leaving the deck in the charge of the next senior midshipman of the watch, I proceeded to the room of one of the lieutenants, in whose good nature and good sense I had equal and perfect reliance. I related the circumstance to him—and as I expected, he became interested, and repaired without delay to the cabin. He returned successful; and young Nelson took his leave of me that night, with a grateful pressure of the hand, and fervent "God bless you."

Can it be believed that the affection of this youth, like the camomile plant, more fragrant from being trampled on, was repulsed by his estranged and tyrannical father? A second marriage—that bane of domestic peace—and its fruit, a second family of children—and its usual consequences, partiality on the one side, and injustice on the other—had driven Nelson from the shelter of his father's roof; and at his early age, with a feeble constitution, and education incomplete, had thrown him into the navy for a livelihood. All this I learned after Nelson's return, when, with a downcast and moistened eye, he gave me an account of his journey.

A little before sunset the next day, Nelson was put ashore by the steamboat about three miles from his father's residence. With a heavy heart the poor boy trudged slowly along, in order to reach the plantation before nightfall. Concealing himself behind the corner of the fence, he waited until he saw the ploughman retire from the field, and heard the last tinkle of the bell, as the kine gathered to the nightly fold. Skirting the edge of the field, he then made for the negro quarter, and unobserved entered the hut of old Charlotte, the nurse, and the favourite servant of his mother.

"O, Master Harry!" she exclaimed, "thank gracious for the sight of you!" but added, in a sadder tone, as she proceeded to close the door, "Your poor father is mighty bad, but he don't know it—and he's so cross!"

"I must see him to-night, Goody, for to-morrow morning I am obliged to return."

"It can't be, Master Harry!" and she proceeded to tell him how fretted his father had become by a long and wasting sickness. She told him, too, that his step-mother possessed unlimited control, and debarred from the presence of her husband all but her immediate dependents and herself.

Although with all the old domestics the nurse was excluded from the great house, (as the family residence was termed), at the earnest solicitation of Nelson, she promised to contrive an interview between his sister and himself. Tearing a slip containing the words "My only brother" from his sister's last letter, Nelson sent it to her, inserted in a time-worn pocket-comb, which he knew she would immediately recognize, should the nurse not have an opportunity of speaking to her. He then concealed himself in the loft, while the old woman hobbled forth on her errand.

In a short time he heard the pattering of footsteps along the path, and immediately after, the door was pushed open, and himself anxiously called. The next moment, he clasped his panting sister to his breast; and, locked in each other's arms, those forlorn children wept, as each clung to the other with frantic joy.

Seated side by side on a low bench, Nelson listened with suppressed emotion, while his sister told of the petty vexations and the ignominious trials to which she was subjected. Sometimes, as she related some over-bearing act of her step-mother's unfeeling son, forgetful of the delicate hand which he held within his own, he grasped it until she nearly screamed, while he vowed vengeance on her persecutor.

His sister told him too, how much their father was neglected in his illness; how he was left entirely to the care of servants who were the creatures of their step-mother; and how she nightly stole to his chamber, and watched him while he slept, or tended him in his delirium, when the fever was at its height, until frightened away by approaching footsteps. She promised to admit her brother into the house when all was still, and if possible admit him to the sick chamber. After a short interview they parted, the girl sadly apprehensive that her absence had been noticed.

A little after midnight, Nelson approached the rear of the house, under cover of the outbuildings; and gaining the back porch, stood before the door, beside which his mother during life was wont to sit, while his sister and himself gambolled before her. While he stood here, anxious for the present, and not unmindful of the past, he was alarmed by the deep bay of the old house-dog. The house was built on piles, and beneath it the dog had been sleeping. As he came forth, his first loud bark exchanged for a fierce growl, Nelson's heart sunk within him, for detection seemed inevitable. But one hope remained. He turned to the dog, and in a low tone called him by name. Hector was no ingrate; at the sound of the once familiar voice, he leaped upon his young master, and nearly overwhelmed him with caresses. Here was another cause for apprehension. The dog, in his joy, whined so loudly, and floundered about so heavily, that there was great danger of the family being aroused. The apprehension was realized; and through the sash over the door, Nelson saw that a light was approaching. He had barely time to spring over the rail, and conceal himself under a corner of the porch, when the door was unbarred, and the step-brother of whose persecution his sister had complained, came

forth with a heavy stick in his hand. He gave the dog a blow, and bade him begone. Hector ran down and laid beside his master. The young man followed, and reaching under, beat him severely—the dog snarling, while he crouched more closely, refused to stir. Nelson, concealed by the shadow in which he lay, could have placed his hand upon the arm of the assailant. At last the dog, provoked beyond endurance, sprang out to seize his tormentor; but a heavy blow, which seemed to crush his skull, felled him to the earth. Spurning him with his foot, with a bitter curse, the young man re-entered the house. Nelson, who had with the greatest difficulty restrained himself, now approached the dog. The poor animal was in its last agony—but yet

"He knew his lord; he knew and strove to meet:
In vain he strove to crawl and kiss his feet.
Yet (all he could), his ears, his eyes,
Salute his master.—He quivers and he dies."

Nelson waited a long time, and began to be seriously apprehensive that his sister was prevented keeping her appointment. At last, she gently unbarred the door, and reaching her hand, drew him in, and as softly closed it after him.

Hand-in-hand, the rightful heirs of that house, trembling with the fear of detection, groped their way through the dark hall, and up the creaking staircase. Whispering him to wait at the head of the stairs, the girl left her brother for a few minutes. Taking him again by the hand on her return, she led him towards a door on the left, beneath which could be seen the faint glimmer of a light. With the cautious dexterity of an expert burglar, she then opened the door of the sick chamber.

The light on the table, rising and sinking in fitful flashes, was nearly extinguished. The unattended brands had fallen upon the hearth, and their father breathed short and inaudibly; while, seated on an arm-chair, with his head leaning against one of the foot-posts of the bedstead, a negro boy snored loud and sonorously.

After some time gazing in sorrow upon the wan and wasted features before him, Nelson placed his hand upon his father's brow. The gentle touch, more effectual than the loud noise made by the negro, roused the sick man from his feverish slumber. At first, he gazed wildly upon them; but, to their astonishment and delight, as he recovered his consciousness, there was more of sadness than indignation visible in his countenance.

"Harry! Ellen! how is this? Why have you not come to see me before?"

"Indeed, dear father, Harry never heard that you were sick until yesterday, and I was told that you were so angry with me, that I dared not come, except when you were asleep."

"Is it so, Harry! And did you not receive my letter, and send it back unopened?"

"I never did, father! God knows I never did."

"And you, Ellen! have you not been living with your aunt?"

"No, indeed, father! Before to-night I have not left the house for months."

"It is strange! and yet I cannot but believe you, for your tears are natural. There has been dreadful foul play."

As he spoke he fell back exhausted, but continued to gaze earnestly upon them. Presently a lethargy seemed to creep over him; and his eyes were fast closing when a noise at the other end of the passage aroused him. Again starting up, he pointed to a portfolio, which lay upon the bureau, and said, "Hand it to me, quick, quick! Open it," he said, as it was brought to him. Nelson tried, but it proved to be locked. The sick man's countenance fell, assuming a ghastly hue, as he perceived it. Too agitated to speak, he still made signs to open it. Nelson took up the snuffers, which lay upon the table, and with some difficulty prized it open. His father then eagerly looked over the papers; and selecting one, was motioning Nelson to throw it into the fire, when the door burst open, and a woman in dishabille, followed by a young

man, rushed into the apartment. It was the step-mother and her son.

Ellen, when she saw her, ran round to the inside of the bed, and her brother followed to protect her. "It is the will, Cornelius, it is the will!" exclaimed the woman, as soon as she saw the paper in the hands of her husband. "Take it from him! Take it quick, or we are beggars!" The young man sprang forward, but was arrested by the voice of Nelson, who, drawing a pistol from his breast, said, "Advance one step nearer, and I fire."

The young man stood aghast. There was consternation in the apartment, and the girl sobbed heavily as she clung to her brother. But when Nelson looked to his father, and saw the dreadful change that had taken place in his features, he was struck with remorse, and throwing the pistol down sank on his knees beside the bed. The young man now eagerly approached, and began drawing the paper from the hand of his step-father. At this instant the thought of the destitute condition of his sister changed the purpose of Nelson, and he sprang up to prevent him.

It was unnecessary. The fingers of the dying man clutched the papers so closely, that the neglected nails cut through it—and it was torn, leaving a part of the signature in his grasp. While the young men struggled, one to reach the bed, the other to protect his father from molestation; the latter, with his last act of consciousness, gathered the fragment into his mouth, and strove to chew it. In the act, his eye glazed, his jaw dropped, and his spirit took its departure.

Placing his sister in the family of a friend, and employing a lawyer to look out for his interest, Nelson, true to his promise, returned to the ship at the appointed time. But our commander, than whom one more truly humane never trimmed his canvass to the gale, permitted him to wait on shore, by the acceptance of the resignation he had tendered.

MY BARK'S MY HOME!

By T. H. BAKER.

My bark's my home, my bark's my bride,
She bravely cuts the ebbing tide;
Her gallant sails that swell on high,
But mock yon angry low'ring sky.

My bark's, &c.

My bark's my home, she's light and free,
And bravely tempts the ebbing sea,
With Tars as brave, as free and gay,
We pace the howling ocean's way.

My bark's, &c.

While freely at her dauntless head,
The flag of Britons' proudly spread;
The world defies with courage brave,
A Queen upon the boundless wave.

My bark's, &c.

JONATHAN'S REVENGE.

"It being customary for the male inhabitants of the States to assemble occasionally for the purpose of 'training,' or being taught the military exercise, my new acquaintance was called upon to join the militia of the county or district in which he resided. Although 'training' might be naturally considered quite the thing for a hunter, so much accustomed to fire-arms, yet, for some reason or other, my acquaintance but seldom saw fit to attend. In consequence of this non-attendance a fine was levied upon him, and not being provided with the means of paying it, some of his goods were seized and sold by the proper authorities. This he was determined to revenge. The commandant of the district was the person who had caused the penalty of the law to be inflicted on him, and this individual

he was determined to punish. Another year brought with the day set apart for the militia to meet and 'train.' Acres then made his appearance amongst the men of his section, and had to encounter sundry gibes and jeers among his acquaintances, for having been 'scared into attendance,' as they asserted. These were gall and wormwood to him, and he only waited an opportunity of proving to them that he set all law at defiance. When the militiamen of the backwoods assemble on those occasions, they are not provided with muskets by the government, but each person that possesses anything in the shape of a rifle, a fowling-piece or a rusty carbine, brings it with him.

"Such being the case, on the day appointed, Acres proceeded to the ground with his rifle, the companion of his laborious and frequent hunting excursions; and when the men fell in with their respective companies, he took his proper and appointed place. On those occasions the firearms are seldom examined as to their being loaded or unloaded; for amongst a parcel of old and rusty firelocks, it would be a work of some difficulty. The men, before they fall into their respective places, are generally desired to fire such of their pieces as are loaded, and no further notice is taken of the matter. Acres, whose rifle had been loaded with more than ordinary care, paid no regard to this injunction, but took his station in the ranks, resolved on his purpose if an opportunity should offer. As they were performing their evolutions, marching and counter-marching, &c., it was remarked that he appeared far more than usually awkward and obstinate; and when the whole regiment formed into a line, he took care by his apparent stupidity to break it, by thrusting himself some feet in advance of the rest, which so provoked his superior officer, that without calculating on the consequences, he came up to where Acres was, and applied some severe epithet to him, at the same time striking him with the flat of his sabre. As soon as he turned from him, Acres stepped boldly forward in front of the line, levelled his murderous rifle, and shot the officer dead on the spot. In spite of this cold-blooded murder he was suffered to escape, although from his own confession he found it convenient to leave his native Virginia."

THE POETICAL SAILOR.

THE captain of a certain British frigate, a man of undaunted bravery, had a natural antipathy to a cat. A sailor, who for some misconduct had been ordered a flogging, saved his back by presenting to his captain the following petition—

"By your honour's command
A culprit I stand—
An example to all the ship's crew;
I am pinion'd and stript,
And condemned to be whipt;
And if I am flogg'd—'tis my due!

"A cat, I am told,
In abhorrence you hold;
Your honour's aversion is mine,
If a cat with one tail
Makes your stout heart to fail,
Oh, save me from one that has nine."

THE FIFTY-SECOND AND SEVENTY-FIRST REGIMENTS AT THE BATTLE OF WATERLOO.

It fell to the fifty-second and seventy-first light infantry regiments to meet the young guard of the French, when numbers were more than ever out of the question; but, weakened as they were, they rushed forward and routed that guard in an instant, with the spirit and equipment of which Napoleon had so lately before made all Europe resound. A most admirable manoeuvre was here performed by the two victorious regiments: they separated, and running on two sides of an oval for a considerable way, met again, and thus cut off several thousand prisoners.

THE EMIGRANT SHIP TOWING OUT.

THE FRIGATE "SARATOGA" OFF

THE EMIGRANT SHIP.

[BY THE EDITOR.]

'Twas a majestic vessel, in good truth, was that self-same Emigrant Ship, and yet within its timbers so tight and strong, beat many a heavy heart.

A few of the relatives of the emigrants were gathered in a little knot on the quay, taking a last look at those they loved, and whom they felt they had parted from for ever.

The uplifted arm—the waving kerchief, were answered from the ship; it was the last signal; the last mark of recognition that passed between mother and child, brother and sister. The signal given—the paddles of the steamer were soon in motion; the rope that bound them together tightened, and the ship moved on. There were some stout hearts aboard, that tried to raise a cheer (such a cheer it was!) to testify that they left their Fatherland without regret; that they had hopes of finding in the distant strange land that prosperity which had been promised them, and which they had never tasted in their own.

But many, and by far the greater number, as they gazed upon the fast receding land, felt they were leaving their home, their friends and all, and they knew not for what! watching the land of their fathers they were, as it fast disappeared to the gaze, with feelings akin to the sensation of bending over the couch of a dying friend, and seeing the life's breath each moment growing weaker, expire. At last all sight of land was lost, and the knowledge of it, was like death to their hearts—so wretched, so deserted, so solitary they felt on that waste of water.

There was here and there a happy face, though—one fine handsome young woman, whose rich cashmere shawl gathered tightly around, showed to advantage her graceful form, was administering all the comfort her kind generous soul could suggest to a man and his wife, who had three or four children clustering about them, and whose faces bore marks of the strong veneration they had for the land that gave them birth—cheering words they must have been, of hope and happiness yet in store, to have chased away the heavy marks of care, and called forth in their stead the smile of true light-heartedness. It took but very few hours to alter the aspect of things: they felt they had embarked in a speculation whose proof would award them either good or ill. All their faith had been exhausted on the old land, and so they laid in a new stock for the one to which they were bound,—well foreseeing that if hope and contentment would not avail them, despair and apathy would act worse still.

'Tis the place of all others for a thoroughly selfish man, is an Emigrant Ship. If the failing was not cured before the journey was completed, he must be incorrigible indeed. It is astonishing how ready all become to assist the other. There was one poor woman, who had set out to join her husband abroad, suffered so excessively from sea-sickness, as to be utterly incapable of taking care of herself; and what made the matter far worse, was, that she had two children, so young, that the only evidence of life they gave, was the opening of the mouth to admit the pap-spoon, or to give vent to their pent up injured feelings, in one ear-splitting scream. A great, sturdy Irishman, had sympathisingly caught one of the little urchins in his arms, and set to work with right good will, to calm the little fellow's agitation. A very awkward nurse he was in truth, but a very kind one nevertheless. All seemed inclined, heart and hand, to assist and afford all the comfort they could to each other; and that this exertion served to render pleasant many an hour, that would otherwise have been found tedious and cheerless, we think our readers will readily grant.

The greater part of their journey had been accomplished triumphantly, and whilst many a smiling eye told how joyously they would greet the coming land, others were busy at work, getting their goods together, that no delay might be occasioned when they reached it. But though all bore so prosperous a look, there was lurking in the fair sky, the black cloud of dismay and death.

The breeze rose to a hurricane. Dark clouds that lay curled round the extremest edge of the horizon, now met and formed one dark mass over head. The rain fell in heavy drops—the thunder echoed through the dark vault of Heaven, lit up occa-

sionally with the lightning's fearful electric fire. And yet the gallant bark rode bravely on through the hissing, roaring sea; her bare poles pointing towards, and seemingly bidding defiance, to the elements over head. Toiling, struggling, on she went, as furious and as mad as the wind that drove her. "Land a-head!" shouted the man on the look out, and the purport of his words had scarcely been heard and understood, when the vessel struck with terrific force upon the rocks. The loud cry of agonised despair burst from many a lip, and many rushed frantically on deck to meet their death. The vessel was now struggling hard to get clear, like a whale that has received its death wound, and makes one last futile struggle for life. Futile indeed it was, as the parting timbers soon gave evidence.

The few poor wretches that yet remained clinging to the bark, could discern lights moving on the land, as though persons were running to and fro—gazing on the sad catastrophe, though none seemed inclined to put forth a hand to save the poor drowning creatures. They thought, that if one half the tales were true of the inhuman, worse than brutal, conduct of many that live around the coast of England, and call a wreck "a godsend," if such actions could be committed by a civilized country, that bore a high fame for Christianity, what could be expected of those, Nature's rough children, without guidance or tutelage, that followed the course of their own inclinations? They judged wrong. A boat, manned by a noble crew, whose only stimulant was humanity (though common sense would fancy the word inherent, yet too few human beings inherit it), came out to the rescue. They had black faces, but noble hearts: and one by one, the remnant of the tenants of that once beautiful ship, were handed into the boat, and soon all were safely conveyed ashore.

The kindness of the natives did not rest here. Those that survived were furnished with food and raiment, and those that were washed ashore were borne to a cave, to give their relatives (if any survived) the opportunity of taking one last look of them.

The bodies were ranged along in ghastly row, and the survivors walked in to gaze upon the rigid features of those they had known and loved in life. The cloth that was spread over the face was withdrawn: it was the corpse of a boy. There was a universal shudder through the assembly, though none showed that they had any remembrance of him, until one little fellow stepped forward, and wringing his hands with agony, cried, "Poor Tom!" and he fell back insensible.

They passed on to the second corpse, a woman having an infant firmly clasped to her breast. It was evident, from no strong emotion of sorrow being made, that all that belonged to her had perished; though their bodies had not as yet come ashore. The next exhibited the form and features of their captain. So they passed on. Mother weeping over child. The husband over his wife. The brother over his sister.

This is but a slight sketch of the miseries caused by the glaring name of emigration—a name that has seduced thousands from their (can we say happy!) home, to meet with, perhaps, a worse fate still. That there is real suffering in England none can doubt, and yet we fancy a better remedy could be found for it than emigration. Though many, we grant, have succeeded and gained a competence, yet place in the scale the number of lives that have been lost—the privations and wretchedness undergone; and, we fancy, however so homely—home is the best after all.

"Thou semblance of the Angel Death,
With thy dark dismal shrouding wings,
Whose fluttering seems to catch the breath,
The very latest breath that wrings
The soul from body, thou art there
Like Hope half-soothing wild Despair!

In thee is promise that thou'lt bring
A change of season to the mind
Of those who chance a distant spring
For the dull wintry waste behind!
Yet—what's the wintry waste they leave?
Alas! all hearts with theirs must grieve!

They quit their Native Land for life;
A land they'll weep for when away,
Sister and Brother—Husband—Wife
May never meet another day!
The living Death of absence, quite
Obscures the gloom of endless night!

Perchance to some hope will be true
And lead them on to riches—fame—
But all they lov'd, and all they knew
In early days, just like a name
Upon a tombstone will appear,
And mem'ry vainly wish them near.

Some may return with pow'r to bless
The weeping wretches left behind—
And see that home all loneliness
Where they expected them to find;
The son for mother look in vain,
Then seek the wide—wide world again.

The signal's given—away to shore—
Break ties of every dearest kind!—
One parting kiss—one look—one more
Farewell to those now left behind!
Divorcer Ocean! thou dost make
Many a gentle heart to ache.

Oh! Emigration! thou'rt the curse
Of our once happy nation's race!
Cannot our Fatherland still nurse
Its offspring without taking place
Of dislocated men to make
More cause for thy disturbing sake?

Thou art an enemy to peace,
Thy restless hope but ends in grief—
When comforts in the mother cease
How can we hope step-dame's relief?—
Better to bear the ills we have
Than seek in foreign climes a grave!"

VOYAGE &c., OF WILLIAM BELSHAW.

(Concluded.)

CHAPTER II.

BEING left alone in a strange country, and having but the small pittance which the boatmen gave me, be assured, kind friends, I was truly miserable, and well might I ponder on those I had left in happy England and sigh for the comfort of my parents' fireside; but Providence orders all for the best, and is ever ready to make the best of the burden. After rambling about the city, I sold part of my clothes for a small sum, and strolled into a street infested with women of bad character; here I was beset with them, knowing that I was a stranger, but I took no notice of them, till one more impudent than the rest, actually pushed me into a house, thrust me into a chair, and was going to pick my pocket, though she very generously offered me some wine. It happened, however, as she was in the act of completing her roguery, a loud rap was heard at the door, and watching the opportunity to see it opened, I immediately rushed out, followed by a herd of as debauched looking beings as are to be met with in Dawson-street, in Liverpool. Some of my readers in Liverpool may say—why this was naught but a spree!—I wish every man may enjoy his spree, when locked up in one of those filthy hells, with as many myrmidons at his back, with their stiletos, as would send half a dozen fellows to answer for themselves in another world.

"Misfortunes never come alone," so says the adage. I had

* "Dulcor mater quam noverea!" is a maxim which it ought to be our native land's endeavour to instil into the minds of those discontented with home.

scarcely time to congratulate myself on my escape from the bad women, when I found myself in another scrape; for on going to a cook-shop to get some meat, I was accosted by a bad character, who begged of me in broken English. Being glad to meet with one who could speak my own language, I asked him to eat, as well as to direct me to some English house. He soon devoured what was brought him, and I accompanied him to look for my countrymen, but the ungrateful rascal, while we were walking, arm in arm, contrived to put his hand in my pocket, and was in the act of rifling me of my money, when I struggled hard with him, but being the strongest, he threw me down and ran off; I immediately got up and ran after him, crying, "stop thief! stop thief!" but no one understanding me they did not attempt to stop him. On his turning sharp up a passage, I lost him, and to my surprise found myself in the same street where I was attacked by the bad women.

I quickly left this part of the city, and rambled about until it was dark, without any money in my pockets, not knowing where I should lodge. Considering what I should do, I perceived a man coming towards me, whom I recognised to be one of the men who was helping to discharge our cargo. Speaking in good English, he inquired what brought me there. I told him my misfortune; he had compassion on me, took me to his lodgings, and gave me a good supper and a bed. The next morning he asked me to go to work with him, and I consented; but my troubles were never to end; going with him to his work I unluckily missed him, and was not able to find his house again. Not knowing where to go, I strolled about until night, and at last went up a passage and rested myself on the top of some stairs. I was disturbed about three o'clock in the morning, by a man who came out of the apartments adjoining, with a savage looking dog, which no sooner saw me than he seized me by the shoulder; I shouted out, and the dog loosed from me at his master's call, yet the man caught me by the collar, gave me a violent kick, and muttering to himself some foreign words, left me.

Left again a stranger without money or friends, I roved about until I came to a large square, where I saw great numbers of people (among whom were four priests) going to mass. I joined the number, followed them into the chapel, kneeled down, and both cried and prayed at the thought of my desolate condition. I stopped here about three hours; then I rambled towards the shipping, where as luck would have it, I met with a man whom I knew; he asked me to go home with him—I did so, where I got plenty to eat and drink. He and his wife agreed that I should stop with them till I got another ship, and then pay them for my board, to which I consented.

A few days after, as I was walking about my lodgings I saw one of the English merchants who was an owner of our vessel. I attempted to run away from him, but he quickly caught me. I soon found him a very kind-hearted man. On his asking me the reason of my running away from the vessel, I began to cry, and told him it was on account of the cruelty of the captain, and showed him where I was lodging. He gave me a dollar, and asked me to come to his lodgings, giving me directions where to find him, and said what time he should be in, having other business to do. I went and acquainted my landlady, and at the appointed time attended the merchant's lodgings, where I got a very good dinner; after which he gave me a shirt, waistcoat, handkerchief, and a pair of boots, and shoes, which made me very comfortable. He also agreed to pay for my board until the vessel returned from Genoa. I promised him that I would do all in my power to please the captain if he would speak to him in my behalf, as I wished to get to my mother's fireside once more.

After I had been three weeks and five days on shore, our vessel returned from Genoa. As soon as I heard of it my spirits sunk, and I was full of trouble at the thought of the captain and first mate's cruelty. The day that I should have gone on board, I ran into the city, and it being a day of merriment, went along the streets watching the masqueraders, when I perceived the captain looking out of a window, and when I saw him looking at me, I was so terrified that I had not the power to run away. He quickly came into the street and collared me, cursed and swore, but to my surprise, did not kick nor strike me. He

then took me to a boatman that he knew, and strictly charged him not to let me run away, but to take me on board of his vessel. There I received a very unkind reception from the mate; I told him I would do all in my power to please him if he would forgive me; but he seemed to have no feeling. We discharged our bales. A few days after, our captain was invited to sup with another captain on board an English schooner that was laying alongside of us. After supper the steward of the schooner came on board our vessel, called me on deck, and said that the captain was swearing vengeance against me to their captain, telling him that he would tie me down to the ring-bolts of the deck, and there let the sea wash over me, with other threats of his intended cruelty. Upon hearing this I burst into tears, and thanked him for coming to tell me; he had not time to say any more, as his cabin bell rang, and he had to answer it.

The next morning I got up early, took my big jacket, with flint and steel, and a little tobacco; I then got into a boat, and reached the shore once more, giving the boatman my flint, steel, and tinder-box, for payment. I now went to a French town, part of the suburbs of the city, where I thought I should not be discovered, sold my jacket, and after spending the day there, ventured into the city.

Just as I was going through the gates, I caught sight of the captain, who no sooner saw me than he gave chase, and in running from him I fell down; he coming up gave me a violent kick, got hold of me, and dragged me to the boat he had just left. I was taken on board. When the first mate saw me he began to laugh, and asked me the reason of my running away again! Upon my not answering, he struck me several times with a rope's-end. I then told him I was afraid of the captain punishing me when he got out to sea. He gave me a scornful look and said, "Ah, my lad, you think the captain has forgiven you, but he will let you know whether he has or not." I began to cry. He went into a passion, got the chains that are used to fasten the coppers down to the deck, and wrapped them round my neck, body, and legs, which almost doubled me in two; he then forced me to creep along the deck, backwards and forwards, flogging me at the same time with a small piece of ratline. When he was tired of this cruelty, he asked me if I should like to go home with those chains round me. I spoke boldly to him, and said, "Yes sir, I wish I was going into my father and mother's presence now, they would make you pay dearly for this." I was stopped from saying more by a blow on the mouth, which caused it to bleed dreadfully, at the same time he cursed me for my impertinence, and ordered me to sweep the deck. I strove to obey him, but the weight of the chains and the cruel treatment I had received, made it difficult to stand, he laughing and cursing as he went below. After I had been two hours in punishment he came and took the chains off me, saying, "Now, my lad, you must not expect the least chance of running away again, for I will keep a sharp look out while we remain here; you think that the captain has forgiven you, but you will find it out when you get to sea."

The next morning I went upon deck to see if there was a chance of running away, when I perceived the first mate watching me. I pretended not to see him, and went to my hammock again, thinking to make my escape in the day time, as there was so much suspicion of my running away in the morning. I had not been long in my hammock before the first mate came and called, ordering me to rise and come upon deck. I obeyed him. He told me, he thought I was for running away: I told him I did not intend running away any more, as I had made up my mind to bear with my suffering as well as I could, until I got once more to England.

After giving me a blow with his fist, he ordered me to make a fire, and told me, I must serve in the place of a cook. I managed to get breakfast over without much fault being found; after which, he told me to broil some beef, and make some broth for the men's dinner, and to bake a piece of beef in the oven. While I was busy with my cooking, I kept a sharp look out after him, in order to make my escape the first opportunity. At last I thought there was a good chance, as I heard the first mate telling the men in the hold to make haste and get the

empty casks stowed before dinner; and the second mate answered him, saying, "Yes, if you will come and help us we will do so;" he said he would, and gave strict orders to have dinner ready by the time they had done. Pretending to be cheerful, I made a bow, and went bustling about the deck "like Satan in a gale of wind." But no sooner had the mate gone below, than I thought, "sink or swim," I will try again to make my escape, and was thinking of jumping overboard, and swimming by a hawser that we had made fast on the Mole, when I saw a man in a boat astern of the next vessel. I hailed him, shaking my fist, signifying to make as little noise as possible. He was soon alongside, and having no money, I ran to the cabin, took out the beef that was for the mate's dinner, gave it to the man in the boat, who gladly received it. I now jumped in, made my escape, and went to the English boarding house, where I was welcomed, as I promised to pay them when I got another ship. I left the house to stroll out for a short time, and on returning, found that the captain, accompanied by some gentlemen, had been there, and offered ten dollars to the man if he would take me on board. He informed me he could keep me no longer, as the captain would inquire for me again, I told him I knew not where to go, dreading the result of being taken. I sought for shelter in the French town, but was speedily stopped by an Italian, who collared me, saying, the captain had been hunting for me, and that I must go on board with him. I said I would go with him willingly, if he would ask the captain to pardon me. The deceitful fellow tried to flatter me, by saying that the captain would not abuse me, but be glad to see me. Pretending to believe him, I calmly asked him to loose me, and he did so. I pretended to go willingly till we got opposite the provision shop; I then stopped, saying, that I was hungry; and no doubt thinking of the ten dollars he should get, he let me go in, when watching an opportunity, I darted out of the shop, and never looked behind me until I was convinced I was out of the reach of my pursuer.

I then went through the city many miles into the country, without being interrupted by any person. At night I slept by the road, and early in the morning I was disturbed by a quantity of lizards, which frightened me very much, as at that time I did not know what they were, but I have learned since. I revenged myself by killing some of them, and looking round which way to steer, and seeing a road across some grounds, I wandered about until night, when I came in sight of the city again. I then laid down until morning; and for four days continued wandering, and slept five nights by the road-side, having no other refreshment than water. On the fifth morning I felt very weak, with violent pains in my stomach, and went to a brook to get some water and wash myself. Going along the road, I met a man driving a flock of sheep, and he spoke to me, but I pretended not to hear him, and kept going on. He then came up to me, and spoke in a very loud voice. I pointed to my ear, signifying that I was deaf, but he seemed not satisfied. I then pointed to my mouth and ears, signifying that I was both deaf and dumb, and then kept walking on. He then went after his sheep, and was soon out of sight. I got to the brook, washed my face, and drank a little water, which made me sick, followed by a sharp pain at my stomach. When the pain abated, a deep thought struck me about my poor mother. I imagined that if she knew what I was suffering, how she would grieve; but, no, thought I, perhaps she may never see me again. I burst into a loud fit of crying, when I was suddenly startled by a young woman standing on the bridge, who shouted to me, I was ashamed; and wiping my tears, I looked round, but not understanding her I made no reply. She rose her hand and beckoned me to go to her; I did so, when, with motions and signs, and a little broken Italian which I had learned, gave her to understand that I had been four days and five nights without food, and likewise, that I was an English boy.

She was a kind soul, and gave me all the money (about the value of three-pence in English money) she had in her pocket. I made her understand I could not eat that, and mentioned that I did not dare go to Leghorn, as my vessel was lying there, and if the captain caught me, he would use me unmercifully.

She understood my meaning, shed tears, and taking me by

the hand, pointed to a farm-house that was close by, showing me by signs, if I went there I should get plenty to eat and drink. I have reason to believe she was a servant belonging to a large house or castle which I saw at a distance, as she had three elegantly dressed children with her.

I went to the house in question, knocked at the door, but was answered only by a dog barking inside. Thinking the house was unoccupied, I was going off, when I heard a woman's voice, and on looking to find from whence the sound proceeded, I saw a small hut, and three women standing at the door; one of them asked me in Italian what I wanted; I motioned that I wanted something to eat; whereupon she brought me a piece of bread, which I had no sooner got into my hand than a dog, stole it from me. The dog went into the hut with it, and I followed him. The woman saved me from the dog who was going to fly at me; and she gave me a large piece, which I put in my breast, and bent my way towards Leghorn.

After eating my bread, which I found rather increased than abated my hunger, I walked several miles, and then I thought I would venture towards the city; but being a great number of miles from it, I began to walk very fast, and in three or four hours got into the city again, where I once more sought the English boarding house.

Here I was glad to learn from the landlord, who received me very kindly, that our vessel had just sailed; and that he should be able to find me another ship.

I am now, kind reader, about to enter on chapter third, and doubt not you will agree with me in the prospects of my new undertaking, and serving another master.

CHAPTER III.

"For dear happy England I sigh'd,

For my parents, my home, and each friend,

But 'twas long ere my troubles were o'er,

Or my sorrows were brought to an end."

I ENGAGED and entered on board an English ship that was lying in quarantine, imagining that I should see England and my dear parents once more; but to my disappointment, when I went on board, I was informed she was bound for Alexandria, in Egypt, which made me very low spirited; but finding the captain a kind master, I was proud to serve him. We put to sea, about nine or ten days after I went on board, and I did not perceive anything particular until one day land was discovered on our larboard bow; on inquiry I was informed it was the great burning mountain Stromboli; we bore down towards it, and to my great astonishment, perceived at night tremendous eruptions from the top of the mountain; next morning we ran our ship much nearer, and sailed past some adjoining rocks, leaving the mountain astern. We had a very favourable passage, till we came to Alexandria, when we took a pilot on board, and entered the harbour.

The appearance of the natives attracted my attention, they being of a copper colour, and all Mahometans. On Sunday I went on shore to look at the city, as they called it, where every thing appeared strange to me. We discharged our cargo, and took in another, put to sea, and returned to Leghorn, trading from one port to another, and again to Alexandria, where we lay three or four months. During this time, our captain thought proper to go out on pleasure: accordingly, he, with the captain and an agent of a transport ship that was lying there, agreed to take their long-boat and a supply of provisions, and go up the Nile, that they might view Grand Cairo, and shoot wild fowl, which is very abundant in those parts. After staying away a fortnight they returned, having had a very pleasant excursion.

I remember one time in particular, the captain took a trip into the country on a shooting excursion. He took a guide and me with him, and on beating a bush, something started up, which I at first thought was a snake, but it had four legs. I called to the guide to know what it was, and he could not say what they called it in England, but telling the captain it was quite harmless, he caught it in his hands, and it proved to be a chameleon.

"A lizard's body lean and long,
A fish's head, a serpent's tongue;
It's foot with triple claw disjoined,
And what a length of tail behind."

Having seen this singular creature for the first time, I took it on board and claimed it as my own, but the captain wished it himself. I readily gave it him, as he had made me several presents, and gave me some clothes which I stood in need of.

The animal was about twenty inches from the nose to the end of his tail; but what was most surprising, we never saw it eat, although we observed it lie down, with its mouth open, as if imbibing the dew. There are many wiseacres who profess that the chameleon changes colour when it likes, but I think I can explain their mistake. The coat of this animal is tinged with various colours, and when the light is shining on it, it then reflects to the beholder different hues. Hence arose the dispute in the "Speaker"; one said it was blue, the other green, and the umpire declared it was black, until the animal was produced, and at candle light it was found to be perfectly white.

Finding that we wanted fresh water, the first mate and part of the crew, taking me with them, took the long-boat and some empty casks, and went in search of water. We went out many miles along the coast, before we found any; at last we found plenty, but rather brackish. The mate having a good fowling piece, and plenty of powder and shot, took me with him, and went in search of game, whilst the others got the water. He killed several very fine birds. Just after he had shot a very large one, which fell upon the beach, and I was running to pick it up, I was suddenly surprised by a large wolf making its appearance from a small point of land; on seeing me it made a full stop, pricked up its ears, and began to walk very fast towards me. I ran back to the mate, shouting, that there was some kind of savage beast coming near us; when he saw it he immediately loaded his gun, and prepared to receive it, as it was running with open mouth towards him; when it came within six or seven yards of him, he fired right into its breast; it still ran towards him, when he gave it a severe blow on the head with the butt end of his gun, which laid it groaning on the ground. I was ordered to drag it to the boat, which was two or three miles off. We put it into the boat, and took it on board. The next day the captain invited several of the natives to come and see it, who declared they never saw one so large before. For curiosity the captain had it weighed, (but I forget the weight,) after which he ordered me to throw it overboard. I took the skin off first, which made several caps for the ship's company.

Before we left Alexandria, our captain, with several other English captains, got leave of the Bashaw of Alexandria, to visit Pompey's Pillar, which is one of the greatest wonders of the world. We erected a tent at its base, and managed to get to the top of it by flying a kite over it and dropping the string we managed to get two ropes over it, so as to form a kind of rigging, when with little difficulty, we all got to the top. After we had drank a glass of grog each, we all came down except the captains, who stopped some time amusing themselves with shooting pigeons. After spending most of two nights and a day, we all returned to the vessel, when the carpenter and I got quarrelling, concerning the carrying of a load on board. I must acknowledge I began the quarrel, by telling him that he was as able to carry as heavy a load as I, and he ought to do so, having men's wages, and myself little more than boy's. He then called me an impertinent puppy, and gave me a slap in the face; I returned it by giving him a severe blow in the throat, which felled him to the ground. When he got up, the first mate asked him if he would stand that; upon which I said, "If he does not like to stand to it he may lie down to it; and, sir, if you will allow me, I will beat him." We then stripped and set-to, when I gave him a severe beating. He was ashamed of himself, as he had always been bragging that he was a don fighter. The men laughed to see him turn out so great a coward. When the captain heard of it, he inquired of the carpenter the reason of our fighting, who told him many false tales, which I thought a very poor way of revenge, and it caused great uneasiness in my mind.

As there was a ship bound for England wanting five hands, I took the opportunity (when our captain was on shore) of going to ask the captain if he would ship me. He asked me the reason of my wanting to leave the vessel I belonged to. I told him that I wished to return to England, and how many years I had been from home. He said he would ship me, but not without a regular discharge from my captain. I returned to the vessel, and in the evening I told the captain of my wish. He at first refused and ordered me on deck, but soon rang the bell, and said he did not wish to part with me, and said he did not wish to part with me, and told me he would increase my wages if I would stop with him. I still pressed him to give me my discharge, saying, that I wanted to see my father and mother again, if they were alive, as I was sure they would be uneasy about my being so long absent from them. His heart relented, and he gave me my discharge and an excellent character; he then paid me my wages, and gave me a dollar extra, telling me to take care and put it into my other captain's hands till I got to England. The next day I took leave of the ship's company, and went on board the other vessel, which was called the "Avon," of Bristol.

I agreed for able seaman's wages with my new captain, who I found to be a good man, and kind to the ship's company, and they were a very agreeable set of men. The Sunday following, I asked the captain for leave to go on shore, for a little pleasure, which was granted; but finding that none of the crew were going on shore until the next Sunday, (it being the last we expected to lie there,) I felt rather disappointed, but having prepared myself, I was determined to go, and procuring one of the native's boats, I went on shore, and rambled up and down the city, and bought a bottle of Madeira wine and drank it. I then hired an ass to ride, which is a common thing for sailors to do in that country. I ventured a little way out of the city, but I soon returned for fear of the treachery of the natives. After giving up the ass, I went intending to have more wine, but just on entering the house I was met by a man who spoke to me in French. I told him I was no Frenchman, and went on; he followed me, saying, "You are an Englishman—me like Englishman." "Do you?" "says I"; "Yes, John, me like Englishman better than my own country," and many other words passed between us as we walked side by side.

He asked me if I wanted to buy some good blue linen shirts, or any other wearing apparel: I said I would buy some shirts if we could agree about the price. He asked me if I had a knife, which I thought rather a droll question. I said yes, but why ask such a question? Oh! nothing, only I sell them—do you want to buy one? showing me a common pocket knife. I said I had one, and that was plenty for me. He asked me to let him see it; I told him it was on board, as I never carried it with me. I did not know what to make of him, as he inquired so particularly about my knife. Little did he know that I had a famous stab knife in the sheath under my waistcoat. He took me to his house to show me what sort of shirts he had to sell, and as soon as we got in, he locked the door, showed me two wet shirts which he took out of some water and offered me one for nothing, as he pretended, but I soon found out that he was after no good, and intended some ill towards me. I put myself on my guard, and seemed ignorant of anything that I suspected. He showed me a large stab knife; I asked him to let me have it in my own hand, but he refused, and said, "No, no, I never let another man take my stab knife in his hand." He then asked me a very indecent question, which I think proper not to mention. I was obliged to draw my knife, and in a moment, pierced him in the side, and tried to make my escape, but finding the door locked, my heart trembled within me. On seeing the key in the door, I unlocked it, and in my hurry to get out, I fell down about thirty steps into the street, and cut my eyebrow very bad, so as to leave a mark for life. It was a great mercy that I did not kill myself, as I had my stab knife in my hand when I fell. I got up immediately, hid my knife, and made the best of my way to get a boat to take me on board.

On my way to the vessel I met with our captain, who asked me what was amiss. He said, "Say no more, but follow me down to the boat;" I did so, and we soon got on board our

ship. I then told the captain all the particulars what the man attempted to do to me. He said I had done right by so doing, at the same time cautioned me not to go on shore, any more while we remained there. The next Sunday all the ship's company went on shore, except the captain, the mate and myself. They were met by the man that I thought must have been dead, from the stab that I gave him; he inquired for me, and said he wished to see me. They told him I was on board, and that if he wanted me, he knew where to find me. He said, "Oh! he only owes me a trifle of money." So they parted from him.

At night when they came on board, they were all very tipsy, which vexed the captain very much. The fire in the caboose had gone out, and the cook could neither find his tinder-box or matches; and when he saw that the captain was angry, he pulled off his jacket and stamped two or three times upon the deck with his feet, then looking steadfastly at the captain, began to swear, and said, "Never mind, sir, I will have some fire from some place, if it comes from h—l." He then jumped overboard and swam to a Greek ship that was lying by us and ascended upon deck by a rope ladder, that hung by the gangway. The men all gathered round him, saying something that he did not understand, and all in a bustle pointed to the fire; cried "fire! fire! fire!" till he got close to it, then snatching a lighted piece of wood, jumped overboard, and swam back to our ship with one hand, and the fire he held out of water with the other. He got the kettle boiled for the captain, who could not help smiling when he told how he got the light.

I dare say the men belonging to the other vessel were much surprised to see the cook act in such a manner. He was a powerful man, with surprising courage, and stood about six feet high. He was one of the best swimmers that I ever saw or heard of. A few days after this, it came on very rough and squally weather. In one of the squalls it capsized a new English vessel, that had just prepared to take in her cargo; having nothing in her hold to balance her, and the main hatch being off, she filled with water and sunk. Some of the English vessels came to her assistance, to try to raise her, but all their labour was in vain. The captain of her sold her to the Great Bashaw, with the privilege of allowing him to take anything out of her without injury to the vessel.

Our captain asked the black cook what he thought of her, as there was a great deal of money in a desk in the cabin. The cook said, "I'll work this way; if I have no success, I shall expect no pay; if I succeed, I shall expect to be well paid for my trouble." "Very good," said the captain belonging to her. We all went (except two) to assist the cook, who drank about half a pint of rum, then stripped himself naked, and dived under the water, came up, bringing with him the sky-light of the cabin. "Now," said he, "what is the next thing for me to do, and what do you mean to give me if I succeed, as I understand there is something of great value in the cabin?" "Yes, there is," said the captain, "and if you bring up the desk I will give you twenty dollars." "Very good," said the cook, and down he went into the cabin, where he remained so long, that we never expected to see him come up again; at last he came up, bringing with him the desk on his head, which was taken of him, and got into the boat. He said "It was tight work with him, as it had shifted from where the captain had told him it was; but never mind if it is safe, and give me another glass of grog." He asked the captain to pay him the twenty dollars; he replied, "I will pay you ten, and the remainder when you have done all your work."

The black cook, not liking this, told the captain he might go and fetch the rest himself, and said, "You made your own bargain; twenty dollars for the first load, ten for the second; and if you had said only five, I am sure I should have been satisfied; but if you are as honourable as your word, pay me before I do any more."

The captain finding the cook inflexible, paid down the money, and asked him to go on with his work; but he refused, unless he put it into his own captain's hands; whereupon he did so; and the cook dived five times more, requesting a quart of grog for each of the sailors. No sooner had they each got

a glass filled, than they drank the cook's health, "wishing him long wind, and that he might never sink while there is grog afloat."

This remarkable swimmer dived eight times, bringing up at each time valuable articles; and as he went off in our boat, many of the inhabitants joined us in horrid yells and shouts, cheering the black man. Soon after this we put to sea, bound for London, and in about four or five days one of the men was taken ill with that afflicting disorder, the plague (the poor fellow was a foreigner), and after struggling for four or five hours he expired; we soon threw him overboard, fearing to catch the infection. In about an hour after another man fell sick, who got better; the next day I fell sick, and was compelled to lie in the long boat for three days, when I got better and regained my strength.

When about two days' sail from Gibraltar, our ship was struck by lightning, which shivered the main-top in a dreadful manner; the carpenter and some of the men repaired it, and we ran into Gibraltar, where we remained only a few hours, when we hove anchor again and put to sea. After a very rough passage we reached Stangate Creek, above Sheerness, where we lay in quarantine for fifty days, yet all of us in good health. I then wrote to my poor father and mother, for the first time in six years, which much surprised them, having heard by a gentleman from Leghorn, who said he had been told by the English consul there, that I was dead. My letter was answered by the return of post; and when I read my mother's letter, and found they were in comfortable circumstances, I went immediately to the captain and showed it to him. When he had read it, he called me to him, and said, "Bill, my lad, I perceive by this letter, that you have good and kind parents, and if it is agreeable to you, I will answer this letter myself, and promise to see you safe on the coach, as your mother wishes you to leave London as soon as possible." I consented; and as early as it could be made convenient, the captain and the owner of the ship went with me to the Saracen's Head coach office; and I was soon at my parent's residence, where no one was more welcome.

As I promised to inform my readers what become of the black cook that I left at Milford Haven, I will do so.—One night as I was relating to my parents and a few friends the dreadful dangers I had met with, and the cruelty of the captain during the time at sea, my poor mother, with tears in her eyes, told me that she had heard that the cook was dead.

I have now, kind readers, come to the end of my tale, and I hope you will forgive any illiterate remarks therein, being but an indifferent scholar.

TOTAL LOSS OF THE BARQUE, FRANCIS SPAIGHT, OF LIVERPOOL, AND TWENTY-ONE PERSONS.

The ship *England's Queen* arrived in the Mersey on Wednesday afternoon, from Bombay and the Cape of Good Hope, which latter port she left on the 19th January, 1846. During the night, between Tuesday and Wednesday, January 6th & 7th, it blew a violent gale from the northward, and at six a.m. on Wednesday the squalls were very severe. At 8.30, the wind came more to the westward in a hard squall, accompanied with torrents of rain, when the barque *Francis Spaight*, of 336 tons, from Manilla to London, was observed driving towards the strand, and an attempt was unfortunately made to set the mainsail, which brought the vessel broadside to the shore; and in this position, with the mainsail aback, she continued to drive until she struck the ground near the Slave Lodge, about a mile from the village of Papendorp, when, in consequence of being broadside to the beach, she rolled heavily, the sea occasionally breaking over her decks. A whale-boat and a surf-boat were sent from Cape Town; the whale-boat succeeded in getting alongside the barque, and a line was thrown over the vessel by the rocket apparatus. The moment the boat touched the side, the crew of the barque, who appeared to have lost all presence

of mind, rushed into her, when she was filled and capsized, and, sad to relate, the captain and fourteen men of the crew were drowned, together with four men of the boat's crew. A surf-boat and another boat were also sent from the North-wharf, but both capsized, and two men were drowned. The following are the names of the crew saved, viz. James Robertson, carpenter, and John McLeod, seamen. Captain Patterson and the following men were drowned:—viz. Thomas Haydn, mate; Magnus Smith, second-mate; Henry Hiatt, steward; David Evans, Edward McDonald, George Hutchings, John Smith (of Leith), John Smith (of Edinburgh), and William Widder, seamen; William Rymes, cook; John Mittin, Thomas Beddoe, William Hall, and Richard Parker, apprentices. The vessel is broken in midships, and is a total wreck, and very little of the cargo will be saved uninjured. The manifest and mail have not yet been found, but so far as it has been ascertained, the cargo consisted of sugar, hemp, tobacco, cigars, rattans, and sundry other articles.

THE FEVER-STRICKEN SHIP.

BY HAWKINS A. D'ALTON.

—"She has lost sixty-eight hands. At the last report from her, yesterday, only eighteen white men were well on board. Twenty-three were lying sick of the deadly malady. The *Eclair* should be destroyed by being either scuttled or blown to pieces."—*Morning Paper*, October 6th, 1845.

'Tis the hour of ev'n, the sunbeams declining,
In dalliance are kissing the crest of each wave;
Like little mounds rising, their white froth entwining,
To mark as mementos the mariner's grave.

From yonder dark hull sweep the tones of emotion,
A splash—a gurgle—all is hush'd in a breath;
She lies like the phantom-ship, scourge of the ocean,
That warneth the sailor of tempest and death.

How free, like the sea-bird, its joyous flight winging,
How swift, like the stag, springing over the lea,
With buoyant hearts rife, and with gay voices ringing,
She walked like a being of life o'er the sea.

How noiseless,—how calm,—for the pest-wing is spreading
Its loom o'er that once busy life-teeming deck,
And health her last ray on the living is shedding,
For contagion has marked them its victims and wreck.

The once hardy seaman the ocean careering,
Unflinching in battle,—defying the storm,
As an infant is bow'd 'neath the hot fever's searing,
With cheek hollow, sunken, and grim wasted form.

The thought of his far distant home, which so often
Could buoy up his spirit in peril's dark hour,—
The tones of his lov'd-ones by memory wafted,
Like a summer-night's dew to the lone drooping flow'r.

All, all, that the heart in its fervour hath cherish'd,
Their fancied endearments bring anguish and pain;
His joys 'neath the simoom of fever have perish'd,
He feels that he never shall see them again.

To the captive who pines in donjon-keep prison,
How dear is the sunbeam that peeps through its grate;
To his heart 'tis the star of sweet hope that has risen,
Heav'n's mercy that gleams 'mid the gloom of his fate.

But the hearts in that fever-struck ship that are yearning
For life's brightest blessings must linger in vain;
Like the dove to the ark from her mission returning,
No resting place, Hope, in its flight can obtain.

SIEGE OF GIBRALTAR.

The most glorious event connected with our naval history during the year 1782, is the siege of Gibraltar. As soon as Spain united with France, in the war against Great Britain, she seemed most particularly anxious to regain possession of Gibraltar. Minorca, also, as being an island so close to the coast of Spain, and having always, till its capture by Great Britain, formed part of that monarchy, was another though an inferior object of her plans and attack. The siege of Fort St. Philip in this island was carried on with great vigour, and a force of 16,000 regular troops, with 109 pieces of heavy battering cannon, and 36 large mortars, under the command of the Duke De Crillon, was employed for that purpose. To oppose this immense force, General Murray, who commanded the fort, had a very feeble and inadequate garrison. He made a determined and long resistance, and did not surrender till the number of his men was reduced by a dreadful and inveterate scurvy to not more than 660 (out of 2692) fit for duty, and even of these 560 were actually tainted with the disorder. The joy of the king of Spain at the conquest of Minorca was excessive; he determined now to direct his whole efforts to the reduction of Gibraltar, before which he had long kept a numerous army; all the attempts of which, however, had been completely baffled by the intrepidity of General Elliot, who had the command of that fortress. The Duke De Crillon was appointed captain-general of the Spanish armies; and the conqueror of Minorca was looked forward to and depended upon for the recovery of Gibraltar. Forty thousand land forces, including twelve thousand French troops, forty-seven sail of the line, besides floating batteries, frigates, and other vessels of war, formed the force employed for this great enterprise.

Many plans were proposed for bringing this immense force to act with the greatest effect against the fortress. One of these was, that the whole fleet should be brought to the direct attack of the place, on all sides, by sea, while the land forces carried on a furious assault: and it was reckoned that by this plan, the fortress might be captured with the loss perhaps of ten or twenty ships of war, and a proportional number of troops.

There can be little doubt that the Spanish monarch, in his extreme eagerness to obtain possession of Gibraltar, would not have hesitated to have made this enormous sacrifice, provided there was a reasonable chance of success; but to all who knew the strength of the fortress, both naturally and by art, and the skill and bravery of its defenders, the scheme was regarded as wild and impracticable. Another, therefore, was proposed, which, though it was avowedly and openly the plan of the Chevalier D'Arcon, a French engineer of great and deserved reputation, is said to have been, in reality, modified and arranged, if not formed, by the Spanish monarch himself. Accord-

ing to this plan, floating batteries were to be constructed on such a principle, that it should be impossible for any effort or means of the besieged either to sink or set fire to them. In order to render it impossible to sink them, their keels and bottoms were to be fortified with an extraordinary thickness of timber: to secure them against fire, the sides of the floating batteries were to be lined with timber and cork, a long time soaked in water, with a large quantity of wet sand between: it was supposed that by this means no cannon-shot would penetrate; or if it did, that the wet sand would not only impede its progress, but prevent it from setting fire to the vessels.

But the most extraordinary part of their construction remains to be noticed. "In imitation of the circulation of the blood in the living body, a great variety of pipes and canals perforated all the solid workmanship, in such a manner, that a continual succession of water was to be conveyed to every part of the vessel: a number of pumps being adapted to the purpose of an unlimited supply. By this means it was expected that the red-hot shot would operate to the remedy of its own mischief, as the very action of cutting through those pipes would procure its immediate extinction. So that these terrible machines, teeming with every source of outward destruction,

seemed to be themselves invulnerable and entirely secure from all danger."

In order to construct these singular and terrible machines, ten great ships, from six hundred to fourteen hundred tons burthen, were cut down to the state required by the plan of the engineer; and two hundred thousand cubic feet of timber were employed in their construction. There was still, however, some things to be guarded against: they were not yet bomb-proof; in order to render them so, and at the same time to protect the men at the batteries from grape-shot, a hanging-roof was erected, and contrived in

DESTRUCTION OF THE SPANISH BATTERING SHIPS.]

such a manner, that it could be raised or let down with the greatest facility, at the pleasure of those on board the vessels: this roof was formed of a strong netting, covered and protected by wet hides of great strength and thickness; such a slope was given it, as it was supposed would effectually serve to throw off the shells that might fall on it, before they could burst or do any mischief. On board these batteries were placed brass cannon of a large calibre, and in each ship a supply was kept in case of accident. The ingenuity and skill of the Chevalier D'Arcon was not yet exhausted: as the effect of these batteries must depend, in a great measure, on the rapidity and constancy with which they fired off the cannon that were placed on them, he had contrived a kind of match, "to be placed on the lights of the guns, of such a nature, as to emulate lightning in the quickness of its consumption, and the rapidity of its action; and by which all the guns of the battery were to go off together, as it had been by a single shot."

The Spanish commander, however, did not trust entirely to these means, formidable as they were; no less than twelve hundred pieces of heavy ordnance were collected for the siege, and the quantity of gunpowder only, was said to exceed eighty-

three thousand barrels. As not the smallest doubt was entertained that the fate of Gibraltar was sealed, two princes of the royal blood of France, the Count D'Artois, the French king's brother, and the Duke De Bourbon, his cousin, arrived at the camp about the middle of August, in order to witness the triumph of the united arms of France and Spain. Scarcely a single person, except the Duke De Crillon himself, thought it possible that the fortress could hold out twenty-four hours after the attack began; and he was thought extremely and unnecessarily cautious and distrustful, when he gave it as his opinion, that it might require fourteen days.

General Elliot, in the meantime, was not idle, or unprepared; he knew very well the measures that were about to be employed against him, and the force that was to support and carry into execution those measures. So far from appearing daunted, he determined to provoke his opponents to the attack; this he resolved upon, in consequence of observing that their works on the land side were nearly completed, and of the hope he entertained that he should be able to interrupt, if not to destroy them. About seven o'clock in the morning of the 8th of September, therefore, he commenced a powerful and well-directed fire, by which, about ten o'clock, the Mahon battery and another adjoining it were set in flames, and by fire in the evening they were entirely consumed. By this measure of General Elliot's, the enemy were exceedingly mortified and provoked; and resolving, if possible, to wipe off the stain, they hastened their preparations for the grand, and as they hoped the final and decisive attack. On the morning of the 9th, by break of day, a new battery of sixty-four heavy cannon was opened, which poured its shot into the garrison without intermission. The enemy, during this and several succeeding days, fired at the rate of six thousand five hundred cannon-shot, and one thousand and eighty shells in every twenty-four hours; while their ships made continual attacks on Europa Point, the defence of which was solely entrusted to Captain Curtis and the marine brigade under his command. In order that the attention of the garrison might be completely distracted, by the various and multitudinous forms of attack going on at the same time, the gun and mortar-boats were added to the other instruments of war, and continued their assaults, both by day and night, without the smallest intermission, on the works of the fortress.

At this time the combined fleets of France and Spain, amounting to forty-eight sail of the line, arrived at Algeiras from Cadiz; and everything was also complete in the battering ships. These were covered with one hundred and fifty-four pieces of heavy cannon; and to the service of each gun, thirty-six artillery-men were appointed; besides these, there were a sufficient number of officers to direct the operations, and of seamen to work and manage the vessels, so that the whole number on board of these battering ships could not be less than six or seven thousand men. The plan was, that the fire of these vessels should be steadily directed to one object, while the gun and mortar-boats, with the floating-battery and the bomb-ketches, should carry on their attack in every possible direction. It was calculated that every part of the fortress would at one and the same time be exposed to a most dreadful and destructive fire; and as it would be impossible for the garrison to be every where present and upon the alert, it was hoped that some point would be so far injured as to present a favourable place for assault, if the governor still determined to hold out.

About eight o'clock in the morning, on the 13th of September, the ten battering ships of the enemy weighed anchor and stood over towards Gibraltar, where they occupied the stations allotted for them, about nine hundred yards from the works. The ship on board of which the Spanish admiral was, was stationed near the King's Bastion, while the other vessels extended, three to the southward of the flag, as far as the Church Battery; five to the northward, near the Old Mole; and one a little to the westward of the admiral. As soon as they had reached their stations, they began a heavy cannonade, in which they were seconded and supported by the cannon and mortars in the lines, while the batteries from the garrison opened with hot and cold shot from the guns, and with shells from the howitzers and mortars.

It is absolutely impossible to conceive, much less to describe,

the horrid grandeur of this scene; the imagination, even though it were of the most fertile and vigorous kind, could not form a picture, in any respect, equal to what this day witnessed. Although General Elliot made no pompous display of the measures he had adopted to defend himself, yet on trial they were found to be completely adequate, not only for the purposes of defence, but of destruction; and even his enemies admitted that skill and bravery such as his, they had never before encountered or witnessed. "The prodigious showers of red-hot balls, of bombs, and of carcasses, which filled the air, and were without intermission thrown to every point of the various attacks, both by sea and by land, from the garrison, astonished the commanders of the allied forces, who could not conceive the possibility that General Elliot, straitened, as he was, within the narrow limits of a garrison, should have been, by any means, able to construct or to manage such a multitude of furnaces as they deemed necessary to the heating of the infinite quantity of shot then thrown. The number of red-hot balls which the battering ships only received in the course of the day, was estimated, in their own accounts, at not less than four thousand. Nor were the mortar-batteries in the fortress worse supported; and while the battering ships appeared to be the principal objects of vengeance, as they were of apprehension to the garrison, the whole extent of the Peninsula seemed at the same time to be overwhelmed in the torrents of fire which were incessantly poured upon it."

For a long time it seemed as if the battering ships were completely invulnerable to all the attempts made by the garrison to destroy them; while they continued through the greatest part of the day to maintain a heavy and destructive cannonade, they resisted the combined powers of fire and artillery to such a degree, that the incessant showers of shells, and the red-hot shot, with which they were assailed, made no visible impression upon them. About two o'clock, however, there were evident symptoms of their approaching destruction: smoke was seen to rise from the upper part of the admiral's deck; and that this proceeded from some serious and alarming cause was evident from the men being observed using fire-engines, and pouring water into the holes that were made by the red-hot shot. This circumstance served to stimulate the efforts of the garrison; it was now beyond a doubt, that though these battering ships were constructed with so much art and ingenuity, and though they were capable, at the same time, of inflicting and of suffering so much, yet there were in the garrison means amply sufficient to silence and destroy them. In the course of the night it could not be accurately ascertained whether the fire on board of them increased; that it was not got under, was evident from the continued efforts of the men to work the fire-engines, and to pour water down the shot-holes; the fire from the garrison was therefore continued without intermission throughout the whole of the night; and by one o'clock in the morning the admiral's ship and another were more visibly on fire. Every thing on board them indicated the utmost confusion and alarm; rockets were thrown up, to announce their distress and danger to the other ships, and the fleet immediately sent out all the assistance in their power; but to afford assistance, under the circumstances in which the battering ships were placed, was neither very safe nor very easy. It was impossible to remove the battering ships, or to save them where they were: the grand, and indeed the only object, therefore, was to take out the men; but the very means which had been employed to render these ships formidable to the garrison, made it extremely dangerous to approach them; they were filled, and made up as it were, with combustible matter, which, now that they were on fire, was continually exploding; while the fire from the garrison, directed with more vigour against these ships, as they were seen to be on flames, added greatly to the risk of those who attempted to save their unfortunate comrades.

While these operations were going on, Brigadier Curtis, with his squadron of gun-boats, lay under the New Mole, ready to take advantage of any favourable opportunity which might present itself: this opportunity was now at hand; accordingly, about three o'clock, when the enemy had suffered most dreadfully, and were thrown into the utmost confusion by their battering ships having taken fire, he began his attack upon their

flank, in a most masterly style and with great effect. His gun-boats were drawn up in such a manner as to rake the entire line of the battering ships, and thus to repel all attempts which the Spaniards were making to relieve and succour those who were in them: no hope or chance of safety now remained for these unfortunate men, unless in the humanity of their conquerors; and this humanity was in a great measure successfully exercised, notwithstanding to save them was still attended with great and imminent danger. It was not, however, till the morning of the 14th that the whole compass and extent of the defeat of the Spaniards was discovered, or that the efforts of Brigadier Curtis in the cause of humanity could be successfully exerted: when daylight appeared, the scene was most dreadful. In the midst of the flames great numbers of the enemy were discovered crying out for assistance; while others were seen floating on pieces of timber, liable every moment either to be washed off, or to be destroyed by the shot from the garrison. As soon as the effects of the fire from Gibraltar were clearly seen, and it was put beyond a doubt that the enemy were completely conquered, the firing ceased entirely: every thought, which but a few minutes before had been directed to the destruction of the Spaniards was now turned to their relief and succour. In a moment it was forgotten that they were enemies, and only remembered by the British that they were suffering fellow-creatures. In a moment, those vessels which had been employed to deal destruction among them, were used for the purpose of saving them; and it would be impossible to determine, whether the British displayed more intrepidity in their endeavours to save, or to destroy. In this sacred and honourable employment, Brigadier Curtis and his marine brigade were almost exclusively engaged. It is impossible to describe the exertions they made, the dangers to which they exposed themselves, or the skill which they displayed on this occasion. One instance may, however, be given: they succeeded in dragging out from the holds of the burning ships, an officer and seventy-nine men, most dreadfully scorched. It may indeed be said that none but Britons could have defended Gibraltar, as it was defended; and none but Britons could have saved their enemies in such a dreadful situation.

At one time, the most dreadful apprehension was entertained that Brigadier Curtis had fallen a sacrifice to his noble and generous humanity: the boat in which he was employed in saving the unfortunate Spaniards, lay close to one of the largest of the battering ships, at the very moment that she exploded; for a short period, every thing was involved in the utmost darkness: this was a time of dreadful suspense. General Elliot and all the garrison kept their eyes fixed on the spot, and soon had the happiness to perceive the commodore's pinnace safe, when the smoke was dispelled; the escape, however, was most miraculous; a large piece of timber struck the boat and made a hole in her bottom, and she was only preserved from instantly sinking, by the seamen stuffing their jackets into the hole. Nearly four hundred of the enemy were saved from instant and inevitable destruction by means of Commodore Curtis and his brigade of marines; while their loss in the battering vessels alone was estimated at one thousand five hundred.

It is impossible to ascertain the whole loss of the Spaniards on this memorable day: that it was very enormous is certain, both from the nature and effect of the fire from the garrison, and from the very circumstances, that they published only a vague and contradictory account respecting it. How the whole scene impressed one, probably not very callous, as having been accustomed to the carnage of war, may be inferred from the following passage in a letter from a French officer, dated the evening of the 8th, which was published in the foreign gazettes: if the occurrences and disasters of that day called forth such feelings and such language, certainly those of the 13th must have produced a similar effect: "The eye is fatigued, and the heart rent with the sight and the groans of the dying and wounded, whom the soldiers are this moment carrying away; the number makes one shudder; and I am told, that in other parts of the lines, which are not within view of my post, the numbers are still greater." Fortunately for my feelings, I have not, at this instant, leisure to reflect much on the state and condition of mankind."

Such admirable measures had been taken by the governor for the protection and security of the garrison, while they were employed in defending the fortress and in annoying the enemy, that their loss was comparatively light, and it was chiefly confined to the artillery corps; the marine brigade, of course, being much more exposed, suffered more severely; yet not nearly to such a degree as might have been anticipated. In the course of about nine weeks, the whole number slain amounted only to sixty-five; and the wounded to three hundred and eighty-eight. How little chance the Spaniards had of succeeding in their attack, even if their battering ships had not taken fire, may be judged from this circumstance, that the works of the fortress were scarcely damaged, and afforded indubitable proofs of the skill and ingenuity with which they had been constructed.

As the enemy now had most melancholy proof that Gibraltar could not be taken by any means that human power could bring against it, the only chance that remained to them of reducing it was by famine: for this purpose, it was necessary to prevent supplies being brought to it, as they knew it was nearly destitute. Lord Howe, however, was approaching with a powerful fleet, and a numerous convoy laden with every kind of stores and provisions: to oppose him, the enemy trusted to their combined fleet. It seems at first to have been the plan and intention of the enemy to cruise off Cape St. Mary, in order to meet the British fleet; but this measure was abandoned, and they took their station in the Bay of Gibraltar. On the 10th of October, while lying in the bay, a dreadful gale of wind came on, which threw them into great disorder, exposed them all to imminent danger, and actually caused the loss of the St. Michael, of seventy-four guns, which being driven under the works of Gibraltar, was taken possession of, and her crew, consisting of six hundred and fifty men, made prisoners. On the 11th, signals were made on board the enemy's fleet, which proved to the garrison that the British fleet were in sight; in the afternoon of that day, the Latona frigate arrived in the bay; and in the evening she was followed by the whole fleet. It was easy to conceive what must have been the anxiety of the garrison, till the convoy, which was to bring them succours so greatly needed, should get beyond the reach of the enemy; and this anxiety was greatly increased, when they discovered, that though the wind and weather were by no means unfavourable, yet by the carelessness and inattention of the masters of the transports, only four out of thirty-one reached their destined anchorage, the rest being driven past the bay into the Mediterranean. This provoking and unfortunate accident obliged Lord Howe to enter the Mediterranean also, for the purpose of collecting and bringing back the convoy. The enemy took advantage of this to attempt to recover two of their line of battle ships, which in the storm of the 10th had been driven from Algeiras out of the Straits: they also entertained hopes, that while employed in bringing back these vessels, they might either capture some of the store-ships, or at least prevent them from entering the bay. The force, however, was considerably lessened; they were obliged to leave behind three of their ships, which were disabled; the St. Michael had been taken, and two others were absent.

Lord Howe was soon apprized of the movements and the apparent intention of the combined fleet, by the Latona frigate, and he immediately made the signal for his ships to collect around him. At sunset on the 13th, forty-two ships of the line, and other vessels, amounting in the whole to sixty-four sail, were seen six leagues to the windward of him, on the larboard tack. At first they seemed disposed to bear down on the British, but afterwards they hauled their wind and stood off. Lord Howe, in the meantime, had formed his plan of action; he arranged his fleet in three lines, sending off his convoy where they might safely wait the issue of the battle, on the coast of Barbary, under the protection and guidance of the Buffalo man-of-war. His fleet consisted only of thirty-two sail of the line, whereas that of the enemy had been strengthened by the junction of the two ships that had been driven from Algeiras.

As the enemy did not seem disposed to fight, the Buffalo, with the transports, rejoined Lord Howe, and was despatched

towards the bay; on the 18th he succeeded in landing two regiments, and in sending in a supply of fifteen hundred barrels of gunpowder from the fleet. While performing these operations, the combined fleet not only offered no impediment, but they did not even come in sight. On the 19th, however, while the British fleet were in the mouth of the Straits, between Europa Point and Ceuta, they were seen in the north-east quarter. As a battle in the Gut appeared in every point of view by no means prudent, Lord Howe repassed the Straits into the Atlantic, the enemy following him at a few leagues distance. As soon as the British admiral got clear of the Straits, he formed in order of battle to the leeward, but the combined fleet, though the time of action, as well as the distance, lay entirely in their power, contented themselves, towards the evening, with a cannonade on the van and rear of the British, which produced little or no effect. Lord Howe's own ship, the *Victory*, not returning a single shot, and the others only firing occasionally.

During the manoeuvres on this occasion, three ships of the rear of the British fleet, the *Union*, *Buffalo*, and *Vengeance*, being considerably astern of the rest, *Don Louis de Cordova*, in the *Santissima Trinidad* of one hundred and twenty guns, and a French admiral, supported by three large ships, and seven ships of two decks, bore down upon them, with the intention and expectation of cutting them off. These vessels, not daunted by the approach of such a superior force, reserved their fire till the enemy came within musket shot, when they commenced it in such a masterly and efficient manner, that their opponents were quickly thrown into great disorder and confusion. The ship of the Spanish admiral, unwieldy and unmanageable from her great size, was thrown completely aback, and obliged to haul her wind, and withdraw from the action. As night came on, they seemed disposed to renew the attack, but were again so well received, that after a distant cannonade, which lasted about an hour, they sheered off.

Different opinions were formed respecting the conduct of Lord Howe on this occasion: all parties gave him credit for having accomplished the great and paramount object of his voyage—the relief of Gibraltar, with great skill and seamanship; but many contended, that when he had done this service, he ought to have shown more earnestness, and used more strenuous and zealous endeavours to come up and engage the combined fleets; while others maintained, that no good object could have been accomplished by an engagement with them, while in case of a disastrous issue, much evil might have resulted. The following observations on this disputed point seem deserving of attention and respect.

"The distant fire of the enemy's fleet on the 20th, as usual; and, as all that was intended by it, excepting merely to save appearances, did a good deal of damage to the yards and rigging of several of the English shipping, so that if Lord Howe had even been disposed to pursue the enemy on the following morning, he could not have so done; but that undoubtedly neither was, nor ought to have been, any part of his object. The measure of mere fighting, without any adequate object in view, can never be adopted by any wise commander, either by sea or by land. The great service of relieving Gibraltar, was, in the face of all Europe, most happily and gloriously performed, under such circumstances, of inferiority of force, as not only fully to support, but highly to exalt our naval renown, and the honour of the British flag. It was evident through the whole course of the proceedings, that the combined enemy, with so great a superiority as they possessed, had not at any time the smallest intention of hazarding a general action, however willing they might be to risk some loss in order to maintain that appearance, and however watchful they were to prove of any advantage that might be afforded. The British commander, besides, had other important services still to provide for; he detached eight ships of the line to the West Indies, and six to the coasts of Ireland, on his way home; neither of which or at least the former, could probably have been done, if a forced action had taken place."

AN ATTACK BY SAVAGES.

As soon as certain that their prisoners were safe, the savages came and loosened the ropes of my arms sufficiently to put me more at my ease. They removed those which bound my feet entirely, and, at the same instant, the gag was taken from my mouth. I was then led to the companion-way and by a sign, given to understand I might communicate with my friends below. In the management of all this, I found that Smudge, the semi-human, dull, animal-seeming Smudge, was at the head. I also came to the conclusion my life was to be spared, for a time at least, and for some purpose that, as yet, baffled my conjectures. I did not call out immediately, but waited until I heard a movement on the ladder, when I complied with the orders of my captors and masters.

"Mr. Marble," I cried, loud enough to be heard below; "is that you?"

"Ay, ay—and is that you, Master Miles?"

"This is I. Be cautious how you act, Mr. Marble. The savages are in possession of the upper deck, and I am their prisoner. The people are all below, with a strong watch at the fore-scuttle."

I heard a long, low whistle within the companion-way doors, which it was easy enough to interpret into an expression of the chief-mate's concern and wonder. For myself, I saw no use in attempting concealment, but was resolved to speak out fully, even though it might be at the risk of betraying some of my feelings to my captors, among whom I thought it probable there might be more than one who understood something of English.

"We miss Captain Williams below here," Marble resumed after a short delay. "Do you know anything of his movements?"

"Alas! Mr. Marble, poor Captain Williams can be of no service to any of us now."

"What of him?" was demanded in a clear, full voice, and as quick as lightning. "Let me know, at once."

"He has been killed by a blow from a club, and is thrown overboard."

A dead silence followed, and it lasted near a minute.

"Then it has fallen to my duty to decide what is to be done!" Marble at length exclaimed. "Miles, are you at liberty:—dare you say what you think?"

"I am held here by two of the savages, whose prisoner I certainly am. Still, Mr. Marble, they encourage me to speak; but I fear some among them understand what we say."

There was another pause, during which the mate was doubtless reflecting on the best course to pursue.

"Harkee, Miles," Marble continued, "we know each other, and can tell what is meant without blabbing. How old are you, out there, on deck?"

"Quite thirty years, Mr. Marble, and good stout years they are too."

"Well provided for, with sulphur and the pills, or only with Indian tools, such as our boys sometimes play with?"

"A little of the first—half a dozen, perhaps; with some of the last, and a plenty of carvers."

An impatient push from the Dipper warned me to speak plainer, and satisfied me that the fellow could comprehend what passed, so long as we confined ourselves to a straightforward discourse. This discovery had the effect to put me still more on my guard.

"I understand you, Miles," Marble answered in a thoughtful manner; "we must be on our guard. Do you think they mean to come below?"

"I see no signs at present—but *understanding*," emphasising the word, "is more general than you imagine, and no secrets must be told. My advice is, 'millions for defence and not a cent for tribute.'"

As this last expression was common in the mouths of the Americans of the day, having been used on the occasion of the existing war with France, I felt confident it would be understood. Marble made no answer, and I was permitted to move from the companion-way, and to take a seat on the hencoops. My situation was sufficiently remarkable. It was still dark;

but enough light fell from the stars to permit me to see all the swartly and savage forms that were gliding about the decks, and even to observe something of the expression of the countenances of those who, from time to time, came near to stare me in the face. The last seemed ferociously disposed; but it was evident that a master-spirit held all these wild beings in strict subjection, quelling the turbulence of their humours, restraining their fierce disposition to violence, and giving concert and design to all their proceedings. This master-spirit was Smudge! Of the fact I could not doubt; his gestures, his voice, his commands, giving movement and method to everything that was done. I observed that he spoke with authority and confidence, though he spoke calmly. He was obeyed, without any particular marks of deference, but he was obeyed implicitly. I could also see that the savages considered themselves as conquerors, caring very little for the men under hatches. Nothing material occurred until day dawned. Smudge—for so I must continue to call this revolting-looking chief for want of his true name—would permit nothing to be attempted until the light became sufficiently strong to enable him to note the proceedings of his followers. I subsequently ascertained, too, that he waited for reinforcements; a yell being raised in the ship just as the sun appeared, which was answered from the forest. The last seemed fairly alive with savages; nor was it long before canoes issued from the creek, and I counted one hundred and seven of these wretches on board the ship: this was their whole force, however, no more ever appearing. All this time, or for three hours, I had no more communication with our own people. I was certain, however, that they were all together, a junction being easy enough by means of the middle-deck, which had no other cargo than the light articles intended for the north-west trade, by knocking down the forecable bulk-head. There was a sliding board in the last, indeed, that would admit of one man's passing at a time without having recourse to this last expedient. I entertained no doubt Marble had collected all hands below; and being in possession of plenty of arms, the men having carried their muskets and pistols below with them, with all the ammunition, he was still extremely formidable. What course he would pursue I was obliged to conjecture. A sortie would have been very hazardous, if practicable at all; and it was scarcely practicable, after the means taken by Smudge and the Dipper to secure the passages. Everything, so far as I was concerned, was left to conjecture. The manner in which my captors treated me excited my surprise. As soon as it was light, my limbs were released, and I was permitted to walk up and down the quarter-deck to restore the circulation of the blood. A clot of blood, with some fragments of hair, marked the spot where poor Captain Williams had fallen; and I was allowed to dash a bucket of water over the place, in order to wash away the revolting signs of the murder. For myself, a strange recklessness had taken the place of concern, and I became momentarily indifferent to my fate. I expected to die, and I am now ashamed to confess that my feelings took a direction towards revenge, rather than towards penitence for my past sins. At times I even envied Marble, and those below, who might destroy their enemies at a swoop by throwing a match into the magazine. I felt persuaded, indeed, it would come to that before the mate and men would submit to be the captives of such wretches as were then in possession of the deck. Smudge and his associates, however, appeared to be perfectly indifferent to this danger, of the character of which they were probably ignorant. Their scheme had been very cunningly laid; and, thus far, it was perfectly successful. The sun was fairly up, and the savages began to think seriously of securing their prize, when the two leaders, Smudge and the Dipper, approached me in a manner to show they were on the point of commencing operations. The last of these men, I now discovered, had a trifling knowledge of English, which he had obtained from different ships. Still he was a savage, to all intents and purposes; the little information thus gleaned serving to render his worst propensities more dangerous, rather than in any manner tempering them. He now took the lead, parading all his men in two lines on the deck, making a significant gesture towards his fingers, and uttering with emphasis the word "count." I did count the

wretches, making this time one hundred and six, exclusive of the two leaders.

"Tell him, down there," growled the Dipper, pointing below.

I called for Mr. Marble, and when he had reached the companion-way, the following conversation took place between us:—

"What is it now, Miles, my hearty?" demanded the chief-mate.

"I am ordered to tell you, sir, that the Indians number one hundred and eight, having just counted them, for this purpose."

"I wish there were a thousand, as we are about to lift the deck from the ship, and send them all into the air. Do you think they can understand what I say, Miles?"

"The Dipper does, sir, when you speak slow and plain. He has only half a notion of what you now mean, as I can see by his countenance."

"Does the rascal hear me now?—is he anywhere near the companion-way?"

"He does, and is—he is standing, at this moment, on the larboard side of the companion-way, kneeling one knee on the forward end of the hencoop."

"Miles"—said Marble, in a doubting sort of a voice.

"Mr. Marble—I hear what you say."

"Suppose—eh—lead through the companion-way—eh—what would happen to you?"

"I should care little for that, sir, as I've made up my mind to be murdered. But it would do no good, just now, and might do harm. I will tell them, however, of your intention to blow them up, if you please; perhaps that may make them a little shy."

Marble assented, and I set about the office as well as I could. Most of my communications had to be made by means of signs; but, in the end, I succeeded in making the Dipper understand my meaning. By this man the purport was told to Smudge in terms. The old man listened with grave attention, but the idea of being blown up produced no more effect on him, than would have been produced by a message from home to tell him that his chimney was on fire, supposing him to have possessed such a civilised instrument of comfort. That he fully comprehended his friend, I could see by the expression of his orang-outang-looking countenance. But fear was a passion that troubled him very little; and, sooth to say, a man whose time was passed in a condition as miserable as that in which he habitually dwelt, had no great reason to set a very high value on his life. Yet these miserable wretches never commit suicide! That is a relief reserved rather for those who have become satiated with human enjoyments, nine pampered sensualists dying in this mode for one poor wretch whose miseries have driven him to despair. I was astonished at seeing the intelligence that gleamed in the baboon-like face of Smudge, as he listened to his friend's words. Incredulity was the intellectual meaning in his eyes, while indifference seemed seated in his whole visage. It was evident the threat had made no impression, and I managed to let Marble understand as much, and that in terms which the Dipper could not very well comprehend. I got no answer, a death-like stillness reigning below decks, in lieu of the bustle that had so lately been heard there. Smudge seemed struck with the change, and I observed he was giving orders to two or three of the elder savages, apparently to direct a greater degree of watchfulness. I confess to some uneasiness myself, for expectation is an unpleasant guest in a scene like that, and more especially when accompanied by uncertainty. Smudge now seemed to think it time to commence his operations in earnest. Under the direction of the Dipper a quantity of line was thrown into the yawl, studding-halyards, and such other rope of convenient size as could be found in the launch, and the boat was towed by two or three canoes to the island. Here the fellows made what seamen call a "guess-warp" of their rope; fastening one end to a tree, and paying out line, as the yawl was towed back again to the ship. The Dipper's calculation proved to be sufficiently accurate, the rope reaching from the vessel to the tree. As soon as this feat was accomplished, and it was done with sufficient readiness, though somewhat lubberly,

twenty or thirty of the savages clapped on the warp, until they had tautened it to as great a strain as it would bear. After this they ceased pulling, and I observed a search around the galley in quest of the cook's axe, evidently with a design to cut the cables. I thought this a fact worth communicating to Marble, and I resolved to do so at the risk of my life.

"The Indians have run a line to the island, and are about to cut the cables, no doubt intending to warp the ship ashore; and that, too, at the very spot where they once had the Sea-Otter."

"Ay, ay—let them go on; we'll be ready for them in time," was the only answer I received.

I never knew whether to ascribe the apathy the savages manifested to this communication, to a wish that the fact might be known to the people below, or to indifference. They certainly proceeded in their movements with just as much coolness as if they had the ship all to themselves. They had six or eight canoes, and parties of them began to move round the vessel, with precisely the same confidence as men would do it in a friendly port. What most surprised me were the quiet and submission to orders they observed. At length the axe was found secreted in the bows of the launch, and Marble was apprised of the use to which it was immediately applied, by the heavy blows that fell upon the cables.

"Miles," said the chief-mate, "these blows go to my heart. Are the blackguards really in earnest?"

"The larboard bower is gone, sir, and the blows you now hear are on the starboard, which is already half in two—that finishes it; the ship now hangs only by the warp."

"Is there any wind, boy?"

"Not a breath of it in the bay, though I can see a little ripple on the water outside."

"Is it rising or falling water, Miles?"

"The ebb is nearly done—they'll never be able to get the ship up on the shelving rock where they had the Sea-Otter, until the water rises ten or twelve feet."

"Thank God for that! I was afraid they might get her on that accursed bed, and break her back at once."

"Is it of any importance to us, Mr. Marble? What hope can we have of doing anything against such odds, and in our circumstances?"

"The odds I care nothing for, boy. My lads are screwed up so tight, they'd lick the whole north-west coast, if they could only get on deck without having their fashion-pieces stove in. The circumstances, I allow, must count for a great deal."

"The ship is moving fast towards the island—I see no hope for us, Mr. Marble."

"I say, Miles, it is worth some risk to try and save the craft—were it not for fear of you, I would have played the rascals a trick half an hour since."

"Never mind me, sir; it was my fault it has happened, and I ought to suffer for it; do what duty and discretion tell you is best."

I waited a minute after this in intense expectation, not knowing what was to follow, when a report made me fancy for an instant some attempt was making to blow up the deck. The wails and cries that succeeded, however, soon let me into the real state of the case. A volley of muskets had been fired from the cabin-windows, and every individual in two canoes that were passing at the time, to the number of eleven, were shot down like bullocks. Three were killed dead, and the remainder received wounds that promised to be mortal. My life would have been the instant sacrifice of this act, had it not been for the stern authority of Smudge, who ordered my assailants off, with a manner and tone that produced immediate compliance. It was clear I was reserved for some peculiar fate. Every man who could, rushed into the remaining canoes and the ship's yawl, in order to pick up the killed and wounded, as soon as the nature of the calamity was known. I watched them from the taffrail, and soon ascertained that Marble was doing the same from the windows below me. But the savages did not dare to venture in a line with a fire that had proved so fatal, and were compelled to wait until the ship had moved sufficiently a head to enable

them to succour their friends, without exposing their own lives. As this required some distance, as well as time, the ship was not only left without a canoe, or boat of any sort, in the water, but with only half her assailants on board of her. Those who did remain, for want of means to attack any other enemy, vented their spite on the ship, expending all their strength in frantic efforts on the warp. The result was, that while they gave great way to the vessel, they finally broke the line. I was leaning on the wheel, with Smudge near me, when this accident occurred. The tide was still running ebb, and with some strength; and the ship was just entering the narrow passage between the island and the point that formed one termination of the bay, heading, of course, towards the tree to which the warp had been secured. It was an impulsive feeling, rather than any reason, that made me give the vessel a sheer with the helm, so as to send her directly through the passage, instead of letting her strike the rocks. I had no eventual hope in so doing, nor any other motive than the strong reluctance I felt to have the good craft hit the bottom. Luckily, the Dipper was in the canoes, and it was not an easy matter to follow the ship, under the fire from her cabin-windows, had he understood the case, and been disposed to do so. But, like all the rest in the canoes, he was busy with his wounded friends, who were all carried off towards the creek. This left me master of the ship's movements for five minutes, and by that time she had drawn through the passage, and was actually shooting out into the open ocean. This was a novel, and in some respects an embarrassing situation. It left a gleam of hope, but it was a hope without a direction, and almost without an object. I could perceive that none of the savages on board had any knowledge of the cause of our movement, unless they might understand the action of the tide. They had expected the ship to be run ashore at the tree; and here she was gliding into the ocean, and was already clear of the passage. The effect was to produce a panic, and fully one-half of those who had remained in the ship jumped overboard and began to swim for the island. I was momentarily in hope all would take this course; but quite five-and-twenty remained, more from necessity than choice, as I afterwards discovered, for they did not know how to swim. Of this number was Smudge, who probably still remained to secure his conquest. It struck me the moment was favourable, and I went to the companion-way, and was about to remove its fastenings, thinking the ship might be recovered during the prevalence of the panic. But a severe blow, and a knife gleaming in the hands of Smudge, admonished me of the necessity of greater caution. The affair was not yet ended, nor was my captor a man as easily disconcerted as I had incautiously supposed. Unpromising as he seemed, this fellow had a spirit that fitted him for great achievements, and which, under other circumstances, might have made him a hero. He taught me the useful lesson of not judging of men merely by their exteriors.

The ship did not lose her steerage-way. As soon as past the point of the island, a gentle southerly breeze was felt; and, acting on the spars and hull, it enabled me, by putting the helm a little up, to keep her head off shore, and thus increase her distance from the bay. The set of the tide did more for her than the wind, it is true; but the two, acting in unison, carried her away from the coast at a rate that nearly equalled two knots in the hour. This was slow moving certainly, for a vessel in such a strait; but it would require fifteen or twenty minutes for the canoes to return from the creek, and make the circuit of the island by the other channel. By that time we should be near half a mile at sea. Smudge, beyond a question, understood that he was in a dilemma, though totally ignorant of some of the leading difficulties of his case. It was plain to me he could not comprehend why the ship took the direction of the offing, for he had no conception of the power of the rudder. Our tiller worked below, and it is possible this circumstance mystified him, more small vessels in that day manuvring their helms without the aid of the wheel than with it. At length the movement of the vessel became too palpable to admit of further delay; and this savage approached me with a drawn knife, and a manner that proved natural affection had not been the motive of his

previous moderation. After flourishing his weapon fiercely before my eyes, and pressing it most significantly, once or twice, against my breast, he made signs for me to cause the ship to turn round, and re-enter the port. I thought my last moment had come, but naturally enough pointed to the spars, giving my master to understand that the vessel was not in her usual trim. I believe I was understood as to this part of my excuses, it being too apparent that our masts and yards were not in their usual places, for the fact to be overlooked even by a savage. Smudge, however, saw that several of the sails were bent, and he pointed to those, growling out his threats, should I refuse to set them. The spanker, in particular, being near him, he took hold of it, shook it, and ordered me to loosen it forthwith. It is scarcely necessary to say, I obeyed this order with secret joy. Casting loose the brails, I put the out-hauler in the hands of a dozen of the savages, and set the example of pulling. In a minute we had this sail spread, with the sheet a little eased off. I then led a party forward, and got the fore and main stay-sails on the ship. To these were added the mizen stay-sail, the only other pieces of canvass we could show, until the top-masts were fiddled. The effect of these four sails, however, was to add at least another knot to the way of the ship, and to carry her out sooner to a point where she felt the full force of the light breeze that was blowing from the south-east. By the time the four sails were set, we were fully a quarter of a mile from the island, every instant getting more fairly into the true currents of the air. Smudge watched me with the eyes of a hawk. As I had obeyed his own orders in making sail, he could not complain of that; but the result evidently disappointed him. He saw we were still moving in the wrong direction, and, as yet, not a canoe was visible. As for these last, now the vessel had way on her, I was not without hopes of being able to keep them exposed to the fire from the cabin windows, and finally, of getting rid of them by drawing off the land, to a distance they would not be likely to follow. The Dipper, however, I was aware, was a bold fellow—knew something of vessels—and I was determined to give a hint to Marble to pick him off should he come within range of his muskets; in the meantime the alarm and impatience of Smudge and his companions very sensibly increased. Five minutes were an age, in the circumstances in which they were placed, and I saw that it would soon be necessary to adopt some new expedient, or I might expect to be sacrificed to the resentment of these savages. Necessity sharpens the wits, and I hit upon a scheme which was not entirely without the merit of ingenuity. As it was, I suppose I owed my life to the consciousness of the savages, that they could do nothing without me. Smudge, with three or four of the fiercest of his companions, had begun again to menace me with a knife, making signs at the same time, for me to turn the ship's head towards the land. I asked for a little room, and then describing a long circle on the deck, pointing to the four sails we had set, and this in a way to tell them that under the canvass we carried, it would be necessary to go a great distance in order to turn round. When I had succeeded in communicating this idea, I forthwith set about giving them to understand that by getting up the top-masts, and making more sail, we might return immediately. The savages understood me, and the explanation appearing reasonable to them, they went aside and consulted together. As time pressed, it was not long before Smudge came to me with signs to show him and his party how to get the remainder of the sails set. Of course, I was not backward in giving the desired information. In a few minutes, I had a string of the savages hold of the mast rope forward, a luff-tackle being applied. As everything was ready aloft, all we had to do was to pull, until, judging by the eye, I thought the spar was high enough, when I ran up the rigging, and clapped in the fid. Having the top-mast out of the way, without touching any of its rigging, I went down on the fore-yard, and loosened the sail. This appeared so much like business, that the savages gave sundry exclamations of delight; and, by the time I got on deck, they were all ready to applaud me as a good fellow. Even Smudge was completely mystified; and when I set the others at work at the jeer-fall to sway up the

fore-yard, he was as active as any of them. We soon had the yard in its place, and I went aloft to secure it, touching the braces first so as to fill the sail. The reader may rest assured I did not hurry myself, now I had things in so fair a way. I could perceive that my power and importance increased with every foot we went from the land; and the ship steering herself under such canvass, the wheel being a trifle up, there was no occasion for extraordinary exertion on my part. I determined now to stay aloft as long as possible. The yard was soon secured, and then I went up into the top, where I began to set up the weather rigging. Of course, nothing was very thoroughly done, though sufficiently so for the weather we had. From the top I had a good view of the offing, and of the coast for leagues. We were now quite a mile at sea, and though the tide was no longer of any use to us, we were drawing through the water quite at the rate of two knots. I thought that the flood had made, and that it took us a little on our lee-bow, hawsing us up to windward. Just as I had got the last lanyard fastened, the canoes began to appear, coming round the island by the farther passage, and promising to overtake us in the course of the next twenty minutes. The crisis demanded decision, and I determined to get the jib on the ship. Accordingly, I was soon on deck. Having so much the confidence of the savages, who now fancied their return depended on me, I soon had them at work, and we had the stay set up in two or three minutes. I then ran out and cast off the gaskets, when my boys began to hoist at a signal from me. I have seldom been so happy as when I saw that large sheet of canvass open to the air. The sheet was hauled in and belayed as fast as possible, and then it struck me I should not have time to do any more before the canoes would overtake us. It was my wish to communicate with Marble.

While passing aft, to effect this object, I paused a moment to examine the movement of the canoes; old Smudge, the whole time, expressing his impatience that the ship did not turn round. I make no doubt I should have been murdered a dozen times, had I lives enough, were it not that the savages felt how dependent they were on me for the government of the vessel. I began to see my importance, and grew bold in proportion. As for the canoes, I took a look at them through a glass. They were about half-a-mile distant, had ceased paddling, and were lying close together, seemingly in consultation. I fancied the appearance of the ship, under canvass, had alarmed them, and that they began to think we had regained the vessel, and were getting her in sailing condition again, and that it might not be prudent to come too near. Could I confirm this impression, a great point would be gained. Under the pretence of making more sail, in order to get the ship's head round, a difficulty I had to explain to Smudge by means of signs some six or eight times, I placed the savages at the main-topmast mast-rope, and told them to drag. This was a task likely to keep them occupied, and what was more, it kept them all looking forward, leaving me affecting to be busied aft. I had given Smudge a cigar too, to put him in good humour, and I had also taken the liberty to light one for myself. Our guns had all been primed, levelled, and had their tompons taken out the night before, in readiness to repel any assault that might be made. I had only to remove the apron from the after-gun, and it was ready to be discharged. Going to the wheel, I put the helm hard up, until our broadside bore on the canoes. Then glancing along my gun, until I saw it had a tolerable range, I clapped the cigar to the priming, springing back to the wheel, and putting the helm down. The explosion produced a general yell among the savages, several of whom actually leaped into the chains ready to go overboard, while Smudge rushed towards me, fiercely brandishing his knife. I thought my time had come; but perceiving that the ship was luffing fast, I motioned eagerly forward, to draw the attention of my assailant in that quarter. The vessel was coming-to, and Smudge was easily induced to believe it was the commencement of turning round. The breathing time allowed me to mystify him with a few more signs; after which, he rejoined his people, showed them exultingly the ship still luffing, and I make no doubt he thought himself, and induced the rest to think, that the gun had a material agency in producing all these apparent changes. As

for the canoes, the grape had whistled so near them, that they began to paddle back, doubtless under the impression, that we were again masters of the ship, and had sent them this hint to keep aloof. Thus far I had succeeded beyond my most sanguine expectations! and I began to entertain lively hopes of not only saving my life, but of recovering the command of the vessel. Could I manage to get her out of sight of land, my services would be so indispensable, as almost to insure success. The coast was very low, and a run of six or eight hours would do this, provided the vessel's head could be kept in the right direction. The wind, moreover, was freshening, and I judged that the Crisis had already four knots' way on her. Less than twenty miles would put all the visible coast under water. But it was time to say something to Marble. With a view to lull distrust, I called Smudge to the companion-way, in order that he might hear what passed, though I felt satisfied, now that the Dipper was out of the ship, not a soul remained among the savages who could understand a syllable of English, or knew anything of vessels. The first call brought the mate to the door. "Well, Miles, what is it?" he asked; "what meant the gun, and who fired it?"

"All right, Mr. Marble. I fired the gun to keep off the canoes, and it has had the effect I wished."

"Yes; my head was out of the cabin-window at the time, for I believed the ship was waring, and thought you had given up, and were going back into port. I saw the round shot strike within twenty fathoms of the canoes, and as for the grape, some of it flew beyond them. Why, we are more than half a league from the land, boy!—Will Smudge stand that much longer?"

I then told Marble precisely how we were situated on deck, the sail we were under, the number of savages we had on board, and the notion the savages entertained on the subject of turning the ship round. It is not easy to say which listened with the most attention, Marble or Smudge. The latter made frequent gestures for me to turn the ship towards the coast, for by this time she had the wind abeam again, and was once more running in a straight line. It was necessary, on more accounts than one, to adopt some immediate remedy for the danger that began to press on me anew. Not only must Smudge and his associates be pacified, but, as the ship got into the offing, she began to feel the ground-swell, and her spars, aloft, were anything but secure. The main-top-mast was about half up, and it was beginning to surge and move in the cap, in a way I did not like. It is true, there was not much danger yet; but the wind was rising, and what was to be done, ought to be done at once. I was not sorry, however, to perceive that five or six of the savages, Smudge among the number, began to betray signs of sea-sickness. I would have given Clawbonny, at the moment, to have had all the rascals in rough water! I now endeavoured to make Smudge understand the necessity of my having assistance from below, both to assist in turning the vessel, and in getting the yards and masts into their places. The old fellow shook his head, and looked grave at this. I saw he was not sick enough yet, to be indifferent about his life. After a time, however, he pronounced the name of Neb and Yo, the blacks having attracted the attentions of the savages, the last being the cook. I understood him; he would suffer these two to come to my assistance, provided it could be done without endangering his own ascendancy. Three unarmed men could hardly be dangerous to twenty-five who were armed; and then I suspected that he fancied the negroes would prove allies to himself, in the event of a struggle, rather than foes. As for Neb, he made a fatal mistake; nor was he much nearer the truth with regard to Joe—or Yo, as he called him—the cook feeling quite as much for the honour of the American flag, as the fairest-skinned seaman in the country. It is generally found, that the loyalty of the negroes is of proof. I found means to make Smudge understand the manner in which these two blacks could be got on deck, without letting up the rest. As soon as he fairly comprehended the means to be used, he cheerfully acquiesced, and I made the necessary communication to Marble. A rope was sent down, over the stern-boat, to the cabin windows, and Neb took a turn round

his body; when he was hauled up to the gunwale of the boat, into which he was dragged by the assistance of the savages. The same process was used with Joe. Before the negroes were permitted to go aloft, however, Smudge made them a brief oration, in which oracular sentences were blended with significant gestures, and indications of what they were to expect in the event of bad behaviour. After this, I sent the blacks into the main-top, and glad enough I thought they were both to get there. Thus reinforced, we had the main-top-mast fiddled in a very few minutes. Neb was then directed to set up the rigging, and to clear away the yard, so it might be got into its place. In a word, an hour passed in active exertions, at the end of which we had everything rove, bent, and in its place, on the main-mast, from the top-mast-head to the deck. The top-gallant-mast was lying fore and aft in the waist, and could not be touched; nor was it necessary. I ordered the men to loosen both sails, and to overhaul down their rigging. In the eyes of Smudge, this looked highly promising; and the savages gave a yell of delight when they saw the top-sail fairly filled and drawing. I added the main-sail to the pressure, and then the ship began to walk off the coast, at a rate that promised all I hoped for. It was now necessary for me to stick by the wheel, of the uses of which Smudge began to obtain some notions. At this time, the vessel was more than two leagues from the island, and objects began to look dim along the coast. As for the canoes, they could no longer be seen, and chasing us any farther was quite out of the question. I felt that the crisis was approaching. Smudge and his companions now became more and more earnest on the subject of turning the ship round. The indistinctness of the land began seriously to alarm them, and sea-sickness had actually placed four of their number flat on the deck. I could see that the old fellow himself was a good deal affected, though his spirit, and the risks he ran, kept him in motion, and vigilantly on the watch. It was necessary to seem to do something; and I sent the negroes up into the fore-top, to get the top-sail-yard in its place, and the sail set. This occupied another hour, before we were entirely through, when the land was getting nearly *awash*. As soon as the mizen-top-sail was set, I braced sharp up, and brought the ship close upon the wind. This caused the Indians to wilt down like flowers under a burning sun, just as I expected: there being, by this time, a seven-knot breeze, and a smart head sea on. Old Smudge felt that his forces were fast deserting him, and he now came to me, in a manner that would not be denied, and I felt the necessity of doing something to appease him. I got the savages stationed as well as I could, hauled up the main-sail, and put the ship in stays. We tacked better than I could have believed possible, and when my wild captors saw that we were actually moving in the direction of the land again, their delight was infinite. Their leader was ready to hug me; but I avoided this pleasure in the best manner I could. As for the consequences, I had no apprehensions, knowing we were too far off to have any reason to dread the canoes, and being certain it was easy enough to avoid them in such a breeze. Smudge and his companions were less on the alert, as soon as they perceived the ship was going in the proper direction. They probably believed the danger in a measure over, and they began to yield a little to their physical sufferings. I called Neb to the wheel, and leaning over the taffrail, I succeeded in getting Marble to a cabin window, without alarming Smudge. I then told the mate to get all his forces in the fore-castle, having observed that the Indians avoided that part of the vessel, on account of the heavy plunges she occasionally made, and possibly because they fancied our people were all aft. As soon as the plan was understood, I strolled forward, looking up at the sails, and touching a rope, here and there, like one bent on his ordinary duty. The savage stationed at the fore-scuttle was as sick as a dog, and with streaming eyes he was paying the landsmen's tribute to the sea. The hatch was very strong, and it was secured simply by its hasp and a bit of iron thrust through it. I had only to slip my hand down, remove the iron, throw open the hatch, when the ship's company streamed up on deck, Marble leading.

[To be continued.]

SEIZURE OF A BRITISH VESSEL, AND SUFFERINGS OF THOMAS LINDLEY AND OTHERS, AFTER A VOYAGE TO BRAZIL IN 1802.

On the peace of 1802, Mr. Lindley embarked, among other adventurers, on a trading voyage. He left the Cape of Good Hope on the 25th of February, and arrived at St. Helena, the beginning of March. On leaving that place his vessel encountered a severe squall of wind, which obliged them to bear away for the nearest port in Brazil, and they arrived at Bahia, or St. Salvadore, towards the middle of April. In that city no foreign vessels are allowed to trade under any pretence whatever, or even to enter the port, unless in distress for repairs, or provi-

sions. Notwithstanding this apparent rigour, a considerable contraband trade used to be carried on, frequently by the very officers appointed to prevent it.

After a month's stay, however, Mr. Lindley obviated every difficulty, repaired his vessel, and sailed from the bay of All Saints about the middle of May, intending to steer his course for Rio Janerio, and thence to return to the Cape: but meeting with blowing weather and a dangerous coast, he was obliged to seek shelter in Porto Seguro. The day after his arrival, the governor's son, Senior Gaspar, offered to barter Brazil wood for goods, which was accepted, and a certain quantity was selected by him. In about a week Gaspar, however, came with the intelligence that the barter must be given up, from its being too generally known that they, the guardians of the trade, were going to engage in an illicit commerce.

INTERIOR OF THE DUNGEON.

Both the father and son seemed hurt at this disappointment, and after some equivocation, Mr. Lindley declined the business altogether, and determined to continue his voyage. Finding his vessel, however, not so sound as he had hoped, and that she made much water, he came to an anchor, June 26th, in the river of Carevellos, where, on the 2nd of July, when the repairs were nearly finished, Mr. Lindley was surrounded by an officer and soldiers, who came on board with orders to take possession of the brig, and conduct her to Porto Seguro, and send the crew by land to the same place. This arrest was owing to an information given by an inhabitant of Porto Seguro, who went to Bahia for the purpose, in revenge for the non-payment of a debt by the civil governor, whom he accused of trading with our author for Brazil wood, and he declared that the brig was laden with that article. On his arrival into Porto Seguro, Mr.

Lindley, his wife, and crew, were made prisoners, and the two sons of the governor, the captain mor, or military captain, and a number of inferior agents, were also arrested.

They ordered Mr. Lindley his keys, and any private or other papers he might have, informing him, an attempt to conceal them would be punished with the utmost severity: at the same time a bed and a small trunk of clothes, which they permitted him to take, were searched with the most scrupulous exactness; their persons examined, and a pocket-book taken from Mr. Lindley. In consequence, he was obliged to give up several valuable papers which it was his wish to retain. This occupied till near evening, when they were ordered into the boat, and conducted along the beach and up the hill to the common prison. They showed them to an upper room, in the floor of which a small trap-door was

opened, a ladder put down, and they were ordered to descend. This they did to some depth (about 40 feet), and entered a dungeon below the ground, from which arose a miserable stench. It was totally dark; but the prison-keeper indulging him with a light, they saw at last their dreadful situation. In three corners were accumulated heaps of dirt, rubbish, orange-peel, vegetables, &c., the whole in a state of putrid decay. The other corner was rendered horribly loathsome by the different miserable inhabitants whom this dungeon had enclosed, and the whole apparently never cleaned since its erection. Four of Mr. Lindley's sailors had been confined here for the preceding eight days, and were just removed to the next dungeon for their admittance. A solitary bench of two planks formed the bed, and was the only furniture

The next morning opened very melancholy. Sleep had been a stranger to their eyes. The dungeon was miserably hot; and inhaling the unwholesome putrid air in so close a situation, made them quite ill. Mr. Lindley was particularly so, having just recovered from a severe malignant fever, and in an extremely weak state. Their mental accorded with their bodily feelings. The massy barred window, the immensity of cobwebs and large spiders on the roof and around the dismal black walls, the damp earth—all conspired to fill them with the most gloomy apprehensions.

A large jar of water was placed outside the window through a vacancy of which they took it for use. Their food was conveyed through the same hole; but the providing it was left to their own care and cost, having no allowance whatever.

As a particular favour, they granted a fire on the ground to fumigate the dungeon, which they kept constantly during the day (notwithstanding the heat), as the only means of amending the bad air, and enduring it at any rate.

A positive order had been given that Mr. Lindley should not be allowed a pen and ink; but he managed to elude this by secreting a pencil, and part of a quire of paper he contrived to purchase. The first use he put it to was, petitioning for a small medicine chest he had on board, which they had humanity sufficient to grant; but even with its assistance, Mr. Lindley found himself extremely ill, his weakness daily increasing.—Mrs. Lindley was differently affected, her complaint consisting of violent pains and swellings in every part of her body.

Finding themselves apparently forgotten, and the suspense continuing miserable, Mr. Lindley wrote to the minister Claudio,

on the 19th of July, for a hearing, to which he had an insulting answer returned, that when wanted he should send for him. On the three following days he saw his crew pass the window for examination, which led him to hope that his was near. At length, on the 24th, he had the satisfaction to see the ladder once again lowered, having been summoned to the regions above; and conducted under a guard, to the house of commission. They interrogated him from three to eight o'clock, merely respecting the Brazil wood transaction, when they informed him he should soon be called again; and he was then taken to his prison, where he found his wife very much alarmed by his long absence.

After his examination, which concluded on the 27th, Mr. Lindley strongly represented their horrid situation, and was promised a removal from the dungeon. At four in the after-

noon they were accordingly conducted above to a small deal-partitioned apartment, with liberty of walking in a larger one adjoining; each had a window without bars, and a free circulation of that invaluable blessing—fresh air. An armed sentinel was stationed over them; and as the door was kept all night partly open, in order that the soldier might have an eye on their window (which was accommodated with a shutter to keep out the night air, but had no other fastening than a button to it), the prisoners slept very ill. They found the air as superfluous here as it was deficient below, their apartment having been simply a square plank work, about eleven feet high, open to the roof, which was supported with massy beams: many of the tiles were wanting, and the chill wind, penetrating through, whistled over them very disagreeably. A number of bats, who found refuge in the building, also darted along, and added to the disagreeableness of their new abode. Strict orders had been given that Mr. Lindley should converse with no one, send no letter or receive any. They were also much disturbed at nights with officers at play, change of sentinels &c. In short, the constant noise and confusion were intolerable. At the time of seizure, the commission found in Mr. Lindley's writing-desk, a paper, containing a small quantity of grain-gold, intermixed with gold-coloured sand, which had been brought to him by an inhabitant of Porto Seguro, as a sample. This strangely attracted their curiosity, and Mr. Lindley was very closely questioned respecting it. He made no secret of whence he had obtained the article, but declared he was ignorant of the name or residence of the individual from whom he had it, although he believed that he belonged to a distant settlement. The commissioners declared they were resolved to discover the man, and insisted on Mr. Lindley taking a journey with them for that purpose. He made no objections (knowing these to be useless), but predetermined it should avail them nothing, had they met the poor fellow, which fortunately was not the case.

On the evening, therefore, of August 1, the linguist came to inform Mr. Lindley he must accompany the minister, &c. in the morning, and be ready at five o'clock. On the 3rd, late in the evening, he arrived at Porto Seguro, and was remanded to prison, completely exhausted. The treatment which he and his crew had received, was not ameliorated by the change. The commissioners exerted their authority to the utmost to distress them and augment their sufferings. Mr. Lindley repeatedly petitioned, but in vain, for the restoration of his and his wife's trunks, containing only their linen and clothes.

On the 7th, Mr. Lindley was called out to visit a sick person, and on his return he passed the dungeon where his unfortunate sailors were confined. He went to speak and console with them, when the soldier who stood on guard over the gate, rudely denied him, and declared he had an express order for that purpose. At a distance he saw the linguist, to whom he went to make his complaint on the subject, but the sentinel who attended him said, that all farther intercourse with him was also prohibited, except in presence of the commissioners.

The lot of the sailors was equally severe. Their allowance was exceedingly scanty; and had not Mr. Lindley secretly contrived (at some risk) to convey them a little assistance in provisions and liquor, they never could have endured their horrid situation. One of them was cruelly beaten for remonstrating on his being half-starved; and through some trifling dispute, their knives and razors were taken from them; a poor fellow was put into the stocks belonging to the dungeon, and a musket pointed down the trap-door while this was transacting.

The weather having been remarkably tempestuous, a vessel entered in consequence for shelter, the owner of which passed Mr. Lindley's window, and he recognised him for a Portuguese, whom he had known before on the coast. He instantly resolved on writing a packet for Europe, and sending it by this stranger, in preference to those around him, which design he with some difficulty completed.

The morning of departure at length arrived, when a soldier brought them a bundle containing some of Mrs. Lindley's linen, which had been taken out of her trunk (which

was petitioned for by her husband), and was sent her for the voyage without apology or explanation.

About ten o'clock on the 23rd of September, Senr. Germane, a clerk of the commission, assembled the chief prisoners in the council-hall, twenty-five in number; the lieutenant and troops were formed in front of the prison, where our captives joined them, and were escorted to the house of the minister, Claudio, who, with the officers of the country militia and principal inhabitants, waited to form a procession, and embark them. The minister and militia officers took the lead, in the midst of whom the state prisoners indiscriminately marched, followed by the clerks and other officers of justice, and after these followed Mr. Lindley's crew, loaded with baggage, under the eyes of a file of soldiers; other prisoners, then came, guarded by another file, while the rear was brought up by inferior prisoners, other troops, and an immense rabble.

On the 26th, after a fine run, they anchored in the bay of All Saints; and about four o'clock, on the 28th, a serjeant with a covered barge came to conduct them to another imprisonment in the Fort de Mar, situated in the middle of the bay. His order was so precipitate, that he hardly gave them time to get their few trifles into the barge. During their passage, he told them that their situation would now be far more tolerable, not only as they should enjoy the fine air of such an open situation, but as Mrs. Lindley, being no longer a prisoner, could have opportunities of going into the city whenever she chose. This pleasing representation raised their drooping spirits. They passed the sea-port with alacrity, and walked to the captain's house. They were, however, a little struck with the coldness with which he received them; but inconceivably more so, when he showed them the dungeon of the fort, and ordered their baggage to be brought there. Having seen the small rooms adjoining his house occupied by officers and others confined here, Mr. Lindley thought it was perhaps a momentary arrangement, and he suffered the serjeant to depart under that idea; but their baggage was no sooner deposited, than the captain ordered them in, and a soldier awaited at the door with an immense key to lock it. Mr. Lindley, surprised at these appearances, requested that his wife might pass to the main, and remonstrate as early as possible respecting such usage; but the captain replied that she was likewise included in his orders for strict confinement. Hereupon his courage forsook him, and Mrs. Lindley felt the most agonizing distress. They stood at the entrance of a dark vault, to which they could see no end; but the idea that the doors were to be closed on them in such a place, drowned Mrs. Lindley in tears. She supplicated a better fate, but to no avail. She begged the trivial favour of the door remaining open only for the evening, and condescended to follow the captain with this entreaty, but all was in vain.

Gloomy images filled Mr. Lindley's mind. During this scene he remained silent, in a state of stupefaction, and thought they were now doomed to a miserable, if not a worse confinement. From this stupor he was aroused by the captain's return, who, having produced the governor's peremptory order, began harshly to insist on their entrance. Mr. Lindley now entreated his wife to exert some fortitude, and calm her agitation, which by this time was so violent, that it was with difficulty he supported her trembling frame down the steps, which they had no sooner descended than the door was closed upon them, and the massy bolt turned.

Mr. Lindley's first endeavours were to console his wife, and reconcile her as much as possible to their present afflictions.

Having in some degree tranquillized her mind by soothing arguments, he left her to explore their new prison.—Through some apertures in the door a glimmering light was admitted, by which this prison appeared to consist of a long arched vault, with a plank work on one side for the repose of its inhabitants, on which their baggage was loosely thrown. As he passed to the farther end, so damp were the walls, the atmosphere there being exceedingly dense and humid, he could scarcely breathe, and he hastened to regain the better air near the door.

Notwithstanding the apparent harshness of the captain of the fort (Senior Joaquin Jose Villoze), Mr. Lindley thought that he seemed concerned even at the moment that he turned

a deaf ear to his wife's supplications, and this was confirmed by his returning immediately, and advising Mr. Lindley to write a remonstrating letter to the governor, offering him materials for doing it, and promising that it should be forwarded in the morning. Mr. Lindley took his advice, and, expatiating on the miserable condition of himself, and particularly his wife, to whom, as a female, it was doubly severe, requested a decent apartment, liberty of air and exercise, and the attendance of his own servant. This was accompanied by another letter, on the same subject, to the commandant, Bras Cardozo, appealing to his feelings as a man and a husband!

Having finished these letters, as night was now approaching, they prepared to make their bed, and arrange their few movable in the best manner possible. While thus employed, they had the satisfaction of seeing a servant approach with a lamp, oil, and a large jar of water; and the door was scarcely closed, before Mr. Lindley was again summoned to the grated hole, by an officer from the governor, with money for his weekly allowance, at the rate of a crusado each, per day, and another entire new lamp, with cotton for supplying it. Such proceeding served only to increase their despondency, and banish all the hopes they had indulged from their written petitions.

While preparing to take their rest, they discovered, by the light of their lamp, a new source of annoyance, which chilled them to the very heart. Several centipedes were crawling on the walls, and a number of spiders came out of their holes, which were apparently venomous, while an immense quantity of brown locusts, similar to the common ones in India, but of a larger size, swarmed over the vault, flying against the wretched prisoners in every direction, and dropping from the roof on their bodies. The plank work and bedding were covered; but having no remedy, they were obliged to lie down in the midst of them. Numerous rats also, that chased each other, and were exceedingly noisy, rendered it almost impossible for these sufferers to sleep. The cares and troubles of the day, however, bore Mr. Lindley down, and towards midnight, he closed his weary eyelids. His wife, having passed the night in half slumbers and frightful dreams, arose in a slight fever.

Notwithstanding, Mr. Lindley found his spirits better, yet he felt a headache and dizziness, and his breast was severely oppressed by breathing the foul air. After a slight refreshment, the rays of the light becoming now more strong, he was tempted to a more accurate survey of the dungeon. It was far below the level of the fort. The door was composed of heavy timber, plated inside and outside with iron bars strongly bolted through the whole; and adjoining the door, the wall, in front of the arch, was six feet in thickness. Entering the door, three steps led to the vault, which was about fifty feet long, nine broad, and the same in height. The plank work extended thirty feet, a narrow passage running along one side to the end of this work, where the vault was left to its full space for some yards, terminating apparently in the centre of the tower. Beyond its termination was a dark arched recess, in which a large hole led to the sea beneath; a door closed the entrance to this recess, on opening of which such a variety of vermin appeared, that Mr. Lindley soon closed it again with fear. So damp was the dungeon in every part, that they felt it already on their clothes and bedding.

About eleven o'clock this day, the serjeant who had carried Mr. Lindley's petitions, returned with information that the governor had sent his letter for translation, but that the commandant, Bras Cardozo, was not at home. Scarcely had he finished this report, when our captives were most agreeably surprised by seeing the commandant himself enter, with two orderly serjeants, and pass to Captain Velozo's house. He almost instantly returned, when the door flew open, and he led them out of the horrid vault.

Mr. Lindley, after going through a farce of justice, and a mock valuation of a cargo of his brig, still continued a prisoner, with a partial liberty, until the 3rd of December, though his crew were released and turned adrift, November 15. His papers, however, were detained long afterwards.—Wearied out and alarmed by the news that war had recommenced

between England and France, he was at length induced to make his escape, which he effected at considerable risk and difficulty on the 5th of August, 1803.

AN ATTACK BY SAVAGES.

(Concluded.)

It was not a moment for explanations. I saw, at a glance, that the mate and his followers regarded the situation of the ship very differently from what I did myself. I had now been hours with the savages, had attained a little of their confidence, and knew how dependent they were on myself for their final safety; all of which, in a small degree, disposed me to treat them with some of the lenity I fancied I had received from them, in my own person. But Marble and the crew had been chafing below, like caged lions the whole time, and, as I afterwards learned, had actually taken an unanimous vote to blow themselves up before they would permit the Indians to retain the control of the vessel. Then poor Captain Williams was much beloved forward, and his death remained to be avenged. I would have said a word in favour of my captors, but the first glance I got at the flushed face of the mate, told me it would be useless. I turned, therefore, to the sick savage who had been left as a sentinel over the fore-scuttle, to prevent his interference. This man was armed with the pistols that had been taken from me, and he showed a disposition to use them. I was too quick in my motions however, falling upon him so soon as to prevent one who was not expert with the weapons from using them. We clenched, and fell on the deck together, the Indian letting the pistols fall to meet my grasp. As this occurred, I heard the cheers of the seamen; and Marble, shouting out to "revenge Captain Williams," gave the orders to charge. I soon had my own fellow perfectly at my mercy, and got him so near the end of the jib down-haul, as to secure him with a turn or two of that rope. The man made little resistance after the first onset; and, catching up the pistols, I left him, to join in what was doing aft. As I lay on the deck, I heard several plunges into the water, and then half-a-dozen of most cruelly crushing blows succeeded. Not a shot was fired by either party, though some of our people, who had carried all their arms below the night the ship was seized, used their pikes with savage freedom. By the time I got as far aft as the main-mast, the vessel was our own. Nearly half the Indians had thrown themselves into the sea; the remaining dozen had either been knocked on the head like bees, or were stuck like so many porkers. The dead bodies followed the living into the sea. Old Smudge alone remained, at the moment of which I have spoken. The leader of the savages was examining the movements of Neb at the moment the shout was raised; and the black, abandoning the wheel, threw his arms round those of the old man, holding him like a vice. In this situation he was found by Marble and myself, who approached at the same instant, one on each side of the quarter-deck.

"Overboard with the blackguard!" called out the excited mate; "overboard with him, Neb, like a trooper's horse!"

"Hold!" I interrupted; "spare the old wretch, Mr. Marble; he spared me."

A request from me would, at any moment, outweigh an order from the captain himself, so far as the black was concerned, else Smudge would certainly have gone into the ocean like a bundle of straw. Marble had in him a good deal of the indifference to bodily suffering that is generated by habit, and, aroused, he was a dangerous and sometimes a hard man; but, in the main, he was not cruel; and then he was always manly. In the short struggle which he had passed, he had actually dropped his pike to knock an Indian down with his fist, bundling the fellow through a port without ceremony, ere he had time to help himself. But he disdained striking Smudge, with such odds against him; and he went to the helm himself, bidding Neb secure the prisoner. Glad of this little relief to a scene so horrible, I ran forward, intending to bring my own prisoner aft,

and to have the two confined together below. But I was too late. One of the Philadelphians had just got the poor wretch's head and shoulders through the bow-port, and I was barely in time to see his feet disappear. Not a cheer was given for our success. When all was over, the men stood gazing at each other, stern, frowning, and yet with the aspects of those who felt they had been, in a manner, disgraced by the circumstances which led them to the necessity of thus regaining the command of their own vessel. As for myself, I ran and sprang upon the taffrail, to look into the ship's wake. A painful sight met me there! During the minute or two passed in the brief struggle, the Crisis had gone steadily ahead, like the earth moving in its orbit, indifferent to the struggles of the nations that are contending on its bosom. I could see heads and arms tossing in our track for a hundred fathoms, those who could not swim struggling to the last to preserve their existence. Marble, Smudge, and Neb, were all looking in the same direction at that instant. Under an impulse I could not control, I ventured to suggest that we might, yet tack and save several of the wretches.

"Let them drown, and be d—d!" was the chief-mate's sententious answer.

"No—no—Masser Mile," Neb ventured to add, with a remonstrating shake of the head—"dat will nebbber do—no good ebbber come of Injin. If you don't drown him, he sartain drown you."

I saw it was idle to remonstrate; and by this time one dark spot, after another, began to disappear, as the victims sank in the ocean. As for Smudge, his eye was rivetted on the struggling forms of his followers, in a manner to show that traces of human feeling are to be found, in some aspect or other, in every condition of life. I thought I could detect workings of the countenance of this being, indurated as his heart had become by a long life of savage ferocity, which denoted how keenly he felt the sudden destruction that had alighted on his tribe. He might have had sons and grandsons among those struggling wretches, on whom he was now gazing for the last time. If so, his self-command was almost miraculous; for, while I could see that he felt, and felt intensely, not a sign of weakness escaped him. As the last head sunk from view, I could see him shudder; a suppressed groan escaped him; then he turned his face towards the bulwarks, and stood immovable as one of the pines of his own forests, for a long time. I asked Marble's permission to release the old man's arms, and the mate granted it, though not without growling a few curses on him, and on all who had been concerned in the late occurrences on board the ship. There was too much duty to be done, to render all secure, to suffer us to waste much time in mere sympathy. All the top-mast rigging, backstays, &c., had to be set up afresh, and gangs were sent about this duty, forward and aft. The blood was washed from the decks, and a portion of the crew got along the top-gallant-masts, and pointed them. The top-sails were all close-reefed, the courses hauled up, the spanker and jib taken in, and the ship hove-to. It wanted but two hours of sunset when Mr. Marble had got things to his mind. We had crossed royal-yards, and had everything set that would draw, from the trucks down. The launch was in the water towing astern; the ship was then about a mile from the southern passage into the bay, towards which she was steering with the wind very much as it had been since an hour after sunrise, though slightly falling. Our guns were loose, and the crew were at quarters. Even I did not know what the new captain intended to do, for he had given his orders in the manner of one whose mind was too immovably made up to admit of consultation. The larboard battery was manned, and orders had been given to see the guns on that side levelled and ready for firing. As the ship brushed past the island, on entering the bay, the whole of this broadside was delivered in among its bushes and trees. We heard a few yells in reply, that satisfied us the grape had told, and that Marble had not miscalculated the position of some of his enemies at least. When the ship entered the little bay, it was with a moderate and steady movement, the breeze being greatly broken by the forests. The main-yard was thrown aback, and I was ordered into the launch with its crew armed. A swivel was in the bows of the boat, and I pulled into the creek, in order to ascertain if there were any signs of the savages. On

entering the creek, the swivel was discharged, according to orders, and we soon detected proofs that we disturbed a bivouac. I now kept loading and firing this little piece into the bushes, supporting it with occasional volleys of musketry, until pretty well satisfied that we had swept the shore effectually. At the bivouac I found the canoes and our own yawl, and what was some little revenge for what had happened, I also found a pile of no less than six hundred skins, which had doubtless been brought to trade with us, if necessary, in order to blind our eyes until the favourable moment for the execution of the conspiracy should offer. I made no scruple about confiscating these skins, which were taken on board the ship. I next went to the island, on which I found one man dying with a grape-shot wound, and evidence that a considerable party had left it, as soon as they felt our fire. This party had probably gone outside the island, but it was getting too late to follow. On my return, I met the ship coming out, Captain Marble being determined not to trust her inside another night. The wind was getting light, and the tides running fiercely in that high latitude, we were glad to make an offing again while there was still day. The success with the skins greatly mollified the new captain, who declared to me that, after he had hanged Smudge in sight of his own shores, he should "feel something like himself again." We passed the night under our top-sails, standing off and on, with the wind steady but light, at the southward. Next morning, the duty of the ship went on as usual, until the men had breakfasted, when we stood again into the bay. This time we hove-to so as to get one of the buoys, when we dropped the stream, leaving the topsails set. We then hove up the anchor, securing the range of cable that was bent to it. Both of the anchors, and their ranges of cable, were thus recovered; the ends of the last being entered at the hawse-holes, and the pieces spliced. This work may have occupied us four hours; after which, the stream-anchor was hove up, catted, and fished. Marble then ordered a whip rove at the fore-yard-arm. I was on the quarter-deck when this command was suddenly given. I wished to remonstrate, for I had some tolerably accurate notions of legality, and the rights of persons. Still I did not like to say anything, for Captain Marble's eye and manner were not the least in the trifling mood at that instant. The whip was soon rove, and the men stood looking aft in silent expectation.

"Take that murdering blackguard forward, fasten his arms behind his back, place him on the third gun, and wait for orders," added our new captain, sternly.

No one dared hesitate about obeying these orders, though I could see that one or two of the lads disliked the business.

"Surely," I ventured to say, in a low voice, "you are not in earnest, Mr. Marble!"

"Captain Marble, if you please, Mr. Wallingford. I am now master of this vessel, and you are her chief-mate. I intend to hang your friend Smudge, as an example to the rest of the coast. These woods are full of eyes at this moment; and the sight they'll presently see will do more good than forty missionaries and threescore and ten years of preaching. Set the fellow up on the gun, men, as I ordered. This is the way to generalise with an Indian."

In a moment there stood the hapless wretch, looking about him with an expression that denoted the consciousness of danger, though it was not possible he could comprehend the precise mode of his execution. I went to him, and pressed his hand, pointing upward, as much as to say his whole trust was now in the Great Spirit. The Indian understood me, for from that instant he assumed an air of dignified composure, like one every way prepared to meet his fate. It is not probable, with his habits, that he saw any peculiar hardship in his own case; for he had, doubtless, sacrificed many a prisoner under circumstances of less exasperation than that which his own conduct had provoked.

"Let two of the 'niggers' take a turn with the end of the whip round the chap's neck," said Marble, too dignified to turn Jack Ketch in person, and unwilling to set any of the white seamen at so ungracious an office. The cook, Joe, and another black, soon performed this revolting duty, from the odium of which a sailor seldom altogether escapes. I now perceived

Smudge looking upward, seeming to comprehend the nature of the fate that awaited him. The deeply-seated principle within him caused a dark shadow to pass over a countenance already so gloomy and wrinkled by suffering and exposure; and he turned his look wistfully towards Marble, at whose command each order in succession had been obeyed. Our new captain caught that gaze, and I was, for a single moment, in hope he would relent, and let the wretch go. But Marble had persuaded himself he was performing a great act of nautical justice; nor was he aware, himself, how much he was influenced by a feeling allied to vengeance.

"Sway away!" he called out, and Smudge was dangling at the yard-arm in a few seconds. A block of wood could not have been more motionless than the body of this savage, after one quivering shudder of suffering had escaped it. There it hung, like a jewel-block, and every sign of life was soon taken away. In a quarter of an hour a man was sent up, and cutting the rope, the body fell with a sharp plunge into the water, and disappeared. At a later day, the account of this affair found its way into the newspapers at home. A few moralists endeavoured to throw some doubts over the legality and necessity of the proceedings, pretending that more evil than good was done to the cause of sacred justice by such disregard of law and principles; but the feeling of trade, and the security of ships when far from home, were motives too powerful to be put down by the still, quiet remonstrances of reason and right. The abuses to which such practices would be likely to lead, in cases in which one of the parties constituted himself the law, the judge, and the executioner, were urged in vain against the active and ever-stimulating incentive of a love of gold. Still, I knew that Marble wished the thing undone when it was too late, it being idle to think of quieting the suggestions of that monitor God has implanted within us, by the meretricious and selfish approbation of those who judge of right and wrong by their own narrow standard of interest.—*From "Afloat and Ashore."*

LOSS OF HIS MAJESTY'S SHIP PEMBROKE,

Near Fort St. David, in the East Indies, April 13th, 1749.

THE melancholy fate of the Pembroke, of sixty guns; in which, out of her whole crew, only twelve were saved, and 330 drowned, including her commander, Captain Fincher, and all the officers, excepting a captain of marines, is truly deplorable. The following particulars are given by an eyewitness, Mr. Cambridge, the master.

About ten o'clock in the morning of the 13th of April, it blew fresh, the wind at N.E. by E., and a great sea began to come in; we having then a cable out, the captain ordered half a cable more to be veered away. At one in the afternoon it blew very hard, the wind at N.E.

At three o'clock I went to the captain, who was sick in his cabin, and asked him to go to sea. He seemed angry, and said he could not, nor would he suffer any more cable to be veered away. At the same time the ship rode hard, strained much, and made water.

At five, the sea increasing, our cable parted, and we cast her head off to sea. We immediately set the fore and mizen sails, got on board the main-tack, and set our main-sail, fore and mizen stay-sails; at the same time some of our people were heaving in the cable, for the captain would not have it cut. This took up some time. It blew so hard that the ship could not bear any more sail.

At six, there being a great head sea, we made very little way, the ship labouring and straining so much that we were obliged to set both pumps to work. At half-past six our main-sail split in pieces: we got down the yard, in order to bend a new sail; but it blowing hard, the ship lay down so much that we could not get the sail to the yard. At eight, the carpenter sent word to the captain, that the ship gained upon them much, and had four feet of water in the hold.

At half-past eight our tiller broke short off at the rudder-head, and we likewise found one of the rudder chains broken; the sails we had now set were our fore-sail, mizen, and fore stay-sails. The sea made a free passage over us, and the

ship being water-logged, we hauled up her fore-sail to ease her, but expected to go down every minute. In hauling down our fore stay-sail, it split; and as I looked aft from the fore-castle, I saw the main and mizen masts gone, though I never heard them go. By this time the ship righted much, and, in about seven minutes the foremast went by the board, but the bowsprit held fast. Our pumps were kept continually working. The third lieutenant being on the quarter-deck, sent forward to me to clear and let go the small bower anchor, which was immediately done. We found the ship drove towards the shore very fast.

At half-past ten, we had eight feet water in the hold, and kept all the pumps working. About eleven we found the ship settle; the depth of water twelve or fourteen fathoms. The anchor then brought the ship up, but the cable parted in a few minutes; then we let go the sheet-anchor, which was all we had. The sea now making a free passage over us again, broke and tore away our boats and booms. The sheet cable tore out with such violence, that no person could venture near it till the clench brought up the ship; but the sea came with such force, and was so very high, that in the hollow of the sea the ship struck, and the cable immediately parted.

It was now near twelve o'clock; the ship struck fore and aft, but abaft very hard. The third lieutenant was near me when the ship first struck, but I saw him no more afterwards. I kept the fore-castle, accompanied by the boatswain, cook, and about eight men more. I got myself lashed to the bitts before the ship took heel, but shifted myself over to windward when she began to heel, and lashed myself as before; the sea continually beating over us. About two I saw the captain's cabin washed away, and the ship almost on her broadside.

When day-light came, we were sixteen men on the fore-castle, and four hanging abaft to the timber heads; but three of the latter got on a piece of the wreck which was loose, and drove away; the other was drowned. All this time the sea came over us in a dreadful manner, so that we could scarcely take breath.

About eight o'clock, nine men were washed off the fore-castle. We could now see the trees on shore between the seas. At nine the boatswain and cook were washed away from each side of me, on which I removed to the cat-head, as did likewise another man. About ten all our men were washed away, excepting those who were lashed to the cat-head. We judged that we were about two miles off the shore; we continued there all the day, the sea beating over us incessantly, so that we had little time to fetch breath, or to speak to one another. At noon we found the sea come every way upon us, and could perceive that the wind having shifted was the cause of it. This part of the wreck kept together, but night coming on, we had a dismal prospect before us, without any hopes of relief. About midnight, the sea abated, so that we could speak to one another, for the space of two or three minutes together.

At day-light next morning I found myself much weaker and very thirsty. The sea at this time came over us once in a quarter of an hour. We found the wreck much nearer the shore than yesterday. About two or three o'clock we saw two paddy-boats coming along shore, about a mile without us. We spread out a handkerchief, which I had about my neck, that the boats might see us. One of them seemed to edge towards us for some minutes, and hauled off again. We then saw several catamarans near the shore, which we judged to be fishing. We spread abroad the handkerchief again, but none of them approached us. Soon afterwards we saw several persons gather together on the shore; the sun began to grow low, so that we judged it to be about 5 o'clock. At last, we saw two of the catamarans above mentioned coming towards us, with three black men on each, who took us off the wreck, and carried us on shore.

As soon as we were landed, we found ourselves surrounded by about three hundred armed men. My companion told me we had fallen into the hands of the Mahrattas, who were at this time at war with the English. They ordered us to come off the catamarans. I strove to rise, but I found myself so

weak; and my legs so terribly bruised, that I could not get up, on which some of them came and lifted me off, and laid me upon the sand, for I was unable to stand. I made a signal to them that I wanted some water to drink, but they gave me none, and only laughed at our condition. Their commander ordered them to strip us, which they did quite naked.

As I was not able to walk, they led us part of the way to Davecotta, a fort belonging to them, and there put us into a canoe, and carried us up a river to the walls of the fort. About ten that night they put us within the walls, and laid us on the ground, where we had nothing to cover us but the heavens; and, about eleven, brought us a little rice, with some water. Great numbers of people gathered round us, laughed at us, and expressed great contempt and derision.

The country people flocked daily to the fort to see us, but none of them showed us the least pity; on the contrary, they laughed, and threatened us with death. We slept very little the first night on account of the cold, and the risk we ran of our lives, these barbarians having signified that they would cut us in pieces with their sabres. When day-light appeared, and the gates were opened, I was very ill. I had a dysentery, and my legs swelled so much, that I concluded I had not long to live, at least if I did not receive some relief. I acquainted my comrade with my situation: and begged him, if he should ever be so fortunate as to return to England, to inform my friends in what manner I had terminated my career. Some days we received rice, and others we had none. On the seventh day they gave me some lamp-oil, with which I fomented my legs, and this simple application afforded me considerable relief.

About four o'clock on the fifteenth day, they carried us about twelve miles to their king, who was encamped against our company's troops. That prince examined us a long time, and inquired whether we were officers; I replied in the negative, conceiving that acknowledgement of that kind would render our escape much more difficult. He was desirous that we should enter into his service, but we told him, by means of the interpreters, who were three Dutchmen, that we could not consent to it. He promised we should want for nothing if we would accept his offers, but we persisted in replying that we were too ill to be capable of serving. He ordered refreshment to be given us, of which we stood in great need, having scarcely taken any nourishment since the day we fell into the hands of his subjects. The interpreters asked us whether we chose to enter into the king's service, or to go to prison; to which we answered, that we could not resolve to fight against our countrymen.

At sun-set we departed. Our conductors having halted till three o'clock in the morning, we again set out, and continued our march till noon, when they again stopped two hours to take some refreshment, and afterwards directed their course to the south-west. We arrived that night at a fort, and were immediately put into a dungeon. There we found two other prisoners, one of them our shipmate, and the other a deserter from the company's troops.

The next morning they opened the gates, and made signs to us to come out. My companions complied, but I chose rather to stay where I was, as I found myself extremely weak, and my legs were covered with ulcers. I begged them to give me a little lamp oil to foment them, which they did. Our only nourishment was water and a quart of rice a day, though there were four of us, and a small pot of grease instead of butter. I rubbed my legs with the oil and grease, and on the fourth day found myself much better, which gave me fresh spirits. We were permitted to walk morning and evening before the dungeon.

In about three weeks my legs were almost well, so that I was able to walk. We now began to entertain some hopes of making our escape, and taking an opportunity, I, with some difficulty, got high enough upon the wall to look over it, and found it was very lofty, and surrounded with a wide moat or ditch; but there was a path between the wall and the ditch, so that we might choose our place to swim over, if it proved deep. We got, at several times, some strands of rope, off the dooleys which they had carried us in, as they happened to be

left within the bounds of our liberty; and in a few days, collected so many pieces, that when knotted together made seven fathoms and a half.

After some consultation, we resolved to undermine the foundation of the dungeon, at the farthest part from the guards; and on the 27th of May began to work. On the 1st of June, we came to the foundation, being six feet deep, and the wall thirty inches through. In two days' time, we had worked upwards on the other side so far, that the light began to appear through the surface, so that we let everything remain till night. At seven, it beginning to grow dark, they put us into the dungeon as usual, and soon afterwards we worked ourselves quite out. Without being discovered, we got over the wall by the help of our rope, and, in less than half an hour, had crossed the moat, though very wide and deep. We travelled all night, we judged about sixteen miles, and in the day hid ourselves among the bushes. The second night we travelled as before, to the S. E., and day coming on, we concealed ourselves among the bushes. About three in the afternoon, we were discovered, which obliged us to go on, but we were not molested. We proceeded till about midnight, and then lay down till day-break. I had a fever, and was extremely weak for want of food. This day, which was the third, we resolved to travel till noon, and to plunder the first house we might chance to meet with. But Providence was more favourable to us than we could have expected; for about ten o'clock, we met a cooley, who told us he would show us the way to Caracal. About noon, we arrived there, and were received with the greatest humanity: but my fever was not at all abated. The next morning, the governor sent Mr. Boscawen, to let him know we were there, and by the return of the messenger, the admiral desired we might be furnished with what money we wanted. In twelve days we found ourselves well recovered, went to Tranquebar, a place belonging to the Danes, where we stayed three days, and got a passage for Fort St. David, where we arrived on the 23rd of June.

DEATH OF VILLENEUVE.

This French admiral, when taken prisoner and brought to England, was so much grieved at his defeat, that he studied anatomy on purpose to destroy himself. For this purpose, he bought some anatomical plates of the heart, and compared them with his own body, in order to ascertain the exact situation of that organ. On his arrival in France, he was ordered to remain at Rennes, and not proceed to Paris. Villeneuve, afraid of being tried by a court-martial for disobedience of orders, and consequently losing the command of the fleet, determined to destroy himself; and, accordingly, took his plates of the heart, and compared them with his breast. Exactly in the centre of the plate, he made a mark with a large pin, then fixed the pin as near as he could judge in the same spot in his own breast, shoved it in to the head, penetrated his heart, and expired. When the room was opened he was found dead; the pin in his breast, and a mark in the plate corresponding with the wound in his breast.

ANIMATED DESCRIPTION OF HOISTING THE SAILS.

LAY her before the wind, up with your canvass,
And let her work; the wind begins to whistle;
Clap all her streamers on, and let her dance,
As if she were the minion of the ocean.
Let her bstride the billows, till they roar,
And curl their wanton heads.
The day grows fair and clear, and the wind courts us.
Oh! for a lusty sail now, to give chase to;
A stubborn bark, that would but bear up to us,
And change a broadside bravely!

THE BATTLE OF MALAGA

SCARCELY had the loud thunderings of destructive bombs, united with incessant volleys poured from guns of the heaviest metal and mortars of the largest size, ceased—whose terrible and combined explosion sounded like the dreadful bel- lowing of departing nature, by which means, possession was obtained of that important key to the whole of the Mediter- ranean—Gibraltar, as well as the undisputed sovereignty of the seas in that quarter of the world, was ceded to the Eng- lish, during the reign of the great and mighty princess ANNE, as she is called—when fresh scenes of conflict, called the heroes of our country forth, and supplied fresh opportu- nities to display the prowess of the British forces, as well as gave occasion for the entwining of new laurels about the brows of our naval champions, while increasing honour re- dounded to the nation at large.

On the 9th of August, 1704, early in the morning, the English fleet, under the command of the intrepid Admiral Sir George Rooke, was returning under easy sail, from the coast of Barbary—where the ships had been taking in fresh water—to the Gut of Gibraltar. A soft and favourable breeze, filled the big-bel- lied sails, and waft- ed the noble ar- mament in stately and majestic bear- ing, over the rip- pling waters to- wards the haven at which the steers- men aimed; when many large vessels which had been cruising to the windward, for the purpose of recon- noitring the coast, threw out the joy- ously-beheld signal which conveyed the information through the fleet, that an enemy's force was disco- vered.

Such intelligence spread a great bustle through every ship, and sent a thrill of pleasure through every Brit- ish sailor's breast. The account fur- nished, so far as

the cruising ves- sels ascertained, was, that the numbers of the foe amounted to not less than sixty-six sail, of various sized ships, and that their present position was to the windward of the British fleet, and at about from eight to ten leagues distance.

Orders were instantly issued by the admiral that a council of flag-officers should at once be held, to consult upon the occasion, which order was promptly attended to. The result of their deliberations was, that the English force should lay- to a few points to the eastward of Gibraltar, and then receive the approaching foe with due naval honours in the shape of a warm and sincere salute.

Daylight waned, and the gloom of midnight approached, still no hostile force made its appearance, and fears were en- tertained that they had received information of their being nearer the neighbourhood of the English fleet than they thought desirable, and that, therefore, they had changed their course in order to avoid it.

After being held in suspense some time, their growing re- grets were suddenly terminated by the sound of their signal

guns, which they heard, and by which they ascertained that, although their suspicions in reference to the foe having changed their course were correct, and were fleeing away with all possible speed, they nevertheless were not beyond the probability of being overtaken.

To allow such a force to pass from the ground, without mak- ing an attempt, at least, to reward them as their temerity de- served, accorded neither with the valour of the admirals in the fleet, nor with the heroic spirit of the men they commanded. From the gallant commander-in-chief, to the urchin whose duty it was to serve out the powder from the magazine, all felt in- fluenced by one spirit, and that was to follow the foe.

The hours of the night appeared to the fevered minds of the anxious sailors, to have been multiplied in number or increased in length, as they watched the return of day. As soon, there- fore, as the daylight of the following morning permitted, they crowded all possible sail upon every ship, and followed the French and Spanish fleet.

During the whole of the 10th, the chase was kept up with unslackened spirit; but as the wind continued light, they made but slow advance, compared with the ardent desires of the sea- men to come up with the enemy.

Just at the break of day on the 11th, the object of strong solicitude was per- ceived: the com- bined fleets of France and Spain, having foolishly supposed that they had completely es- caped those from whom they ran, had cast anchor be- fore Velez Malaga, and within three leagues to the east of Malaga, for the purpose of taking in water.

It was soon per- ceived that their scouts had con- veyed the informa- tion, that the Eng- lish fleet was ap- proaching them. Busy preparations, it could be seen, were making on board of the French and Spanish ships. The whole fleet speedily got under weigh, while a light breeze which blew from the land, toge- ther with the cur-

[DESTRUCTION OF THE MARQUIS VILLETTE'S SHIP.]

rents which the irregularity of the coast had occasioned, enabled them to stand out with the apparent purpose of meeting the heroes of England.

In a short time, however, the illusion died away, and abundant evidence was furnished that they experienced no disposition for a nearer acquaintance than uncontrollable necessity put upon them; for as a freshening breeze filled the sails, they made the best possible use of it, by striving to run from such unpleasant connexion. The chase was renewed with fresh vigour, and became interesting in a peculiar degree.

One important object had been kept in view by Sir George Rooke from the first moment that he discovered them, and that was, to scatter and disunite the fleet of the enemy; and in this, in a small degree, he succeeded. One of their large ships was driven on shore near Fuengorolo, in sight of the French admiral; all attempts to get her off were found to be useless, and hence the crew resorted to the only alternative they possessed, which was to set her on fire and leave her, which they accordingly did; and in a short time after they had

quitted her in their boats, she blew up with a tremendous explosion.

Still the pursuit was continued, and still the foe continued to flee during the whole of the night of the 11th; and when the broad daylight of the 12th came, no traces of them could be discovered. No signal-guns had been fired by them during the night, in order that their course might not be ascertained, while their lighter vessels, which had been employed by them as spies, had been artfully recalled, so that neither the fleet or any of their scouts appeared as the light of day advanced.

It at once occurred to the English admiral, that as the sea was calm as a fish-pond, and the wind had nearly died away, the enemy might, by the assistance of their galleys, contrive to evade his vigilance, by getting between him and the shore to the westward, and so escape. Influenced by such suspicion, he summoned another council of war, to deliberate with his officers upon the most prudent course of procedure to be adopted. After a variety of suggestions had been mooted, and different opinions gravely argued, the final and unanimous opinion of the court was, that if, before night closed in, the enemy's fleet was not discovered, they should make all the sail they were able, and steer direct for Gibraltar.

Having thus determined, a sharp look out was maintained on board each ship; every individual appeared as much interested in the affair as if he alone were to be advantaged or injured by the result. About noon, as the British force stood towards the shore, the combined fleet, with their attendant galleys, were discovered to the westward, near Malaga, sneaking away with as much speed as light winds and a strong current enabled them, evidently anxious to avoid a rencontre with English valour.

The sight was as exhilarating as the most vivid imagination can well conceive. Every eye turned, as it were, instinctively and with pleasure to the animating object, and every heart beat with fresh pulsations of strong delight.

The alertness of our brave tars, which on ordinary occasions is frequently astonishing, now seemed to have assumed a miraculous character as they climbed the ratlines, covered the yards, and set fresh sail, in order to recommence the pursuit of the fugitive in good earnest. The chase was continued, with a small portion of success, during the whole of the night.

On Sunday, the 14th, at day-break, it was ascertained, beyond a doubt, that the English ships were the fleetest sailers; for before four bells had sounded, they were within three leagues of the enemy, and still continued to near them.

It now became pretty certain that something decisive would soon take place. Signals were thrown out by the French admiral, the Count de Thoulouse, which were answered by the various ships of the fleet under his command; and after shortening sail one after another, the whole brought to, with their heads to the southward, while the wind, which had freshened, blew from the eastward. In this position they hastily formed into line of battle, and lay to to receive the still approaching British force.

The sight which was now presented was as magnificent as the eye of man ever beheld. Two of the finest fleets which then existed in the world, composed of the ships of four different powers, and each managed by skilful commanders, were manœuvred on an extensive expanse, in the highest style of nautical skill.

The sky above was lighted up with glowing splendour, athwart which not a cloud so big as a man's hand floated to darken its glory. One wide, wide canopy of soft ethereal blue above met the eye, excepting only, as the sight approached the glorious sun, which gave the scene its richness; and then fantastic combinations of various beautiful lines, or brilliant streaks like pencillings of burnished gold, met the delighted vision, which, softening down as they diverged to a greater distance from the orb which occasioned them, seemed to melt imperceptibly away, until they were entirely absorbed in other and different shades, or were launched into the ocean of living blue.

The breeze which, although variable, had somewhat increased, so as to fill the white sails which continued set, and stretched to their utmost extent, the various colours and pennons of each ship, as if to display the different nations to which they belonged, or to exhibit the rank of the persons by whom they were commanded.

The sea, the boundless sea, was an imposing feature in this grand picture of nature. Its gentle undulations caught the sun's beams as they fell upon them, and threw back the most brilliant, coruscations, as if they had been the natural reflections of a thousand mirrors. All nature appeared attired in a garb of richest loveliness, and seemed to sport in the dignity and sublimity of its own unbounded vastness.

The sight, as we have observed, was a magnificent one. The enemy's fleet consisted of fifty-two ships of the line, and twenty-four galleys, while that of the English amounted to fifty-three ships of war, with a few small vessels and fire-ships. The centre of the combined fleet of France and Spain was formed of considerable strength, while its van and rear were defective and weak. To make up the deficiency in these quarters, their numerous galleys were equally divided to render them assistance.

As consequences of the most important nature were expected to result from the engagement, which was on the eve of commencing, the honour of bearing distinguished posts in the affray, was felt by each of the commanders, and the disposition of official arrangements were made accordingly.

In the enemy's fleet, the Marquis de Villette, Lieutenant-General, commanded the van with the white squadron, having on his second line the Duke of Tursis, with the seven galleys of his squadron, and five Spanish. The Count de Thoulouse, commanded the centre, having behind him the Marquis of Roze with four galleys. The Marquis of Langeron, led the rear with the blue squadron, to whom was attached eight French galleys, under the command of the Marquis de Ferville.

To meet this distinguished armament in a manner suited to the high dignity and naval ability of those who led it, in its several sections, the fleet under the English Admiral was divided as follows:—The famous Sir Cloudesley Shovel with Sir John Leake had charge of the van; Admiral Sir George Rooke, supported by the Rear-Admirals Byng and Dilke, commanded the centre; while the Dutch ships brought up the rear, directed by Vice-Admiral Calembergh.

The two lines having thus formed, Admiral Rooke directed that the Swallow and Panther, in company with the Lark and Newport and two fire ships, should be to the windward of the fleet, in order, that should the enemy's van make a successful attempt to push through the English line, they might be prepared to meet, and supply them with some little diversion.

Sir Cloudesley Shovel, whose ship was still under full sail, bore down with eagerness towards the opponents in his division of the line, and, by so doing, separated himself from the rest of the fleet. The French Admiral, Villette, perceived his approach, and prepared to receive him, but in such a way as would have placed Sir Cloudesley Shovel in an extremely awkward dilemma. His purpose was to surround him by his force, and then complete his plan, by doing with him as he pleased. The English admiral, however, was too well acquainted with the foe with whom he had to engage, to allow the manœuvre to take effect. He had attentively watched the movements of Villette, and having succeeded in keeping to windward of him, sheered off before they had taken him in the toils; while Sir George Rooke, who had noticed the danger in which his ally in the fight and bosom friend had incautiously placed himself, in order to divert the attention of the foe, and so prevent the consequences which he feared might ensue, if Sir Cloudesley had been secured, bore down in gallant style, with the ships under his command, upon the French fleet.

At ten, a.m., the battle commenced with terrible fury, the fleets being at the time at about half-a-gun shot distant from each other, and lying eight or ten leagues north and south of of Malaga.

At this moment, the centre of the foe set all their sails suddenly, apparently with the intention of shooting a-head,

and gaining the weather of the English. The admiral, Sir George Rooke, perceived the crafty design of de Thoulouse, and fired a chase gun after the French admiral, as if to request him to display the usual politeness of his nation by staying a short time for him; but now, everything like etiquette appeared forgotten; no further compliments were passed; nothing preliminary after this took place, but with a fatal destruction, such as the state of the weather and the approximation of the fleets gave favour to, the fight proceeded.

One favourable and important circumstance on the side of the English existed, in their having obtained and kept possession of the windward-side of the enemy, which, while it cleared away the smoke from their ships, completely enveloped their opponents. The Count de Thoulouse appeared deeply sensible of the advantage, and made repeated attempts to change positions, but in vain; balls, bombs and smoke, were still poured thick and fast upon him.

With unmitigated fury the fight continued until two in the afternoon, without any considerable advantage having been gained on either side, although the slaughter on both was terrible and immense, when a bomb fell on the fore-castle of the Marquis Vilette's ship, and set it on fire. Disorder and wild confusion instantly ensued; destruction threatened not only the vessel, but the lives of all who manned her. Their companions looked on as the flames became stronger, and ascended like a pillar of fire towards Heaven, without possessing the power to render them assistance, and fearing, too, that if she should blow up, they should themselves share in the ruinous consequences. Unable any longer to continue the contest, Vilette quitted the line, and the entire attention of his men was turned to the best means of quenching or stopping the progress of the flames.

While the scene was witnessed with feelings of high excitement by the French commander-in-chief, another of the same destructive missiles fell on board the ship of the *Sieur de Belle Isle*, who also left the line to refit. This was followed by a similar course of conduct by those of the *Sieurs de Grancey*, *Osmont*, *Reeroy*, *Pontac*, and *la Rochet Allard*; the latter of whom had, since the commencement of the engagement, fought with the ship commanded by Sir Cloudesley Shovel.

With determined bravery the enemy continued to contend for victory, and as if maddened by the untoward circumstances which had already befallen them, the *Sieur Chammeslin*, ran alongside the *Royal Catherine*, and thrice attempted to board her, but each time met with not only a severe repulse, but considerable loss.

The whole day had nearly passed, during the hours of which the conflict had not merely been maintained, but seemed at each passing period to have gained fresh strength. The destruction which was dealt on board the enemy's ships was incalculable. Famous as they ever have been for overstocking their ships with men, the slaughter was terrible, the loss of life immense.

The *Baillie of Lorrain* was killed with a cannon-shot while cheering his men in an attempt to board; while the *Sieur de Relingue* had one of his legs shot off, and in that state was carried below, to the no small loss of the Count de Thoulouse, to whom, with Lorrain, he was considered a valuable second.

The shades of night continued to fall upon our world, and gradually it enveloped the hostile fleets; slowly and by degrees the different parts of the French line discontinued to fire, excepting as occasionally a solitary booming gun was heard from first one and then another ship.

The enemy's van at length gave way, so that by five, p.m., the fight in that quarter had ceased. The centre continued until about seven, and then it closed the struggle, while the rear maintained, with inflexible stubbornness, the contest, until all remains of light had departed from the horizon: at which time, and aided by the galleys, such of the ships as had been greatly damaged sheered off to the leeward, while those that had the ability in themselves, from the comparative soundness of their hulls, sails, and rigging, made the best of their power by following their more disabled companions.

During the night, the wind chopped round to the northward, and afterwards, as morning approached, it again veered to the west, by which circumstance, the enemy obtained without their own efforts, that which they had made several fruitless attempts to obtain, the windward of the English force.

One simple circumstance proves as fully, as volumes of mere speculative theory could do, the amazing destruction and terrible havoc which must have taken place on both sides of these rival fleets, in the fact, that during the whole of the fourteenth instant, that is the day immediately following that on which the action had been fought, the fleets lay within three leagues of each other, repairing their damages, and gazing upon each other without either being disposed to renew the conflict. As, however, night came on, the French and Spanish admirals, availing themselves of the wind which then blew briskly, filled, and stood away to the northward.

On the 15th, at early dawn, it was discovered that the enemy had succeeded in getting between four and five leagues to the windward of the English fleet, by which means the advantage was evidently turned to their side, and nothing could possibly be expected but an almost immediate, and severe set-to, on the part of the French.

"Look to your guns again, my brave boys," said Sir George Rooke, while addressing his crew, "what we have so well begun, I hope this day to finish. There are the ships we have to meet," he continued, "and there," he added, pointing to the English force, "there are your companions in arms; they are your countrymen and friends: remember you are English sailors, and must never cry, 'enough,' so long as a shot remains in the lockers, or a cartridge in the magazine. The eyes of the world are fixed upon you; your deeds to-day will live in your country's history for ever; the British flag must be nailed to the mast, and none but a coward will allow it to be torn down."

"It shall not be, it shall not be," rose from a host of voices; "we'll spend the last drop of our blood in defending the Union Jack."

"I am satisfied, my brave fellows," rejoined the admiral, while strong feelings almost choked utterance. "I am satisfied you will never desert the cause of old England. Those of your shipmates who fell yesterday, nobly defending their country's rights, died the death of heroes; but their fall must be avenged. Be steady, cool, and collected in the fight: be merciful and kind after victory."

A loud and hearty huzza, repeated again and again, on board the admiral's ship, was heard and responded to by those that were near, while others more distant, catching the echo, joined in the inspiring shout, until the whole fleet, influenced by one enthusiastic emotion, seemed to a man to emulate the spirit of the heroes of the ancient world, of whom it said they were

"Contemners both of indolence and gain,
But still for love of country, and of arms,
Prone to encounter peril, and to lift
Against each strong antagonist the spear."

The winds of Heaven appeared propitious, as if to further their designs and wishes; for short period before noon, the wind chopped round to the east, and blew briskly. Aided by so favourable an event, they bore down upon the foe, and continued to approach them, until past four in the afternoon, while they, in the meantime, continued to retreat. As however, it was considered too late to commence an engagement at that hour, the English Admiral gave orders to lay-to, which was accordingly attended to, with their heads lying northward all night, expecting, and determining on the morrow to renew the conflict.

That night was a night of peculiar anxiety, thought turned in upon itself and friends and home, which might never again be seen, pressed upon the heart of many a brave man, and throbblings of strong affection towards wives and children, parents and relatives, gave birth to deep and involuntary sighs. Messmates called upon messmates, then, to fulfil certain commissions in case either should fall—while the distribution of certain little properties, such as sailor's posse, was, by such wills as sailor's make, distributed before they turned in, for what, as many supposed the last time. These were

not the feelings of cowards, but of brave men—for cowards love to put thought away from them by every and any means, while the truly brave, ponder on probable future consequences, and make such arrangements as circumstances may call for, or as their means may enable them.

As soon as daylight broke forth on the 16th, evidence was supplied, past all doubt, that the confederate force of France and Spain had been amply satisfied with the warm reception they had already received from the English men-of-war, and determining, as it would seem, not to venture another engagement, although with a force so nearly equal as regards numbers, they had availed themselves of a thick haze which came on, and shaking out their sails, which a stiff breeze filled, had run!

After cruising about for some time, in hopes of meeting with part of the fleet, or with some of their small vessels without being successful in either case, Sir George Rooke issued orders that the fleet should wear away to the westward, which was accordingly done. The admiral's design in so acting, was to intercept the enemy, whom he supposed had borne away for Cadiz: as, however, information was shortly afterwards received by him from Gibraltar and the coast of Barbary, that they had not passed the Straits, it was finally ascertained that they had been so far disabled in the recent contest, as to have been obliged to return to Toulon.

It is a fact which need not be disguised, that the English fleet was not in a proper condition to have recommenced the action, from the circumstance of their having expended nearly all their ammunition at Gibraltar, and in the action of the 13th. If however, they had fallen in with them, it is certain that they would have attempted, sword, or pike or boarding-axe in hand, to have accomplished that, which, from want of powder, they might not have been able to have achieved any other way.

Sir George Rooke made directly for Gibraltar with his fleet, where he remained eight days, repairing and refitting; and then, having furnished the fort with men and provisions, he set sail for England with the largest of the men-of-war, leaving Sir John Leake with eighteen ships, to cruise about and protect the coast of Portugal.

THE LOST ONE RESTORED.

[BY W. ANDERSON, ESQ.]

'After the storms and perils of the main,
How sweet to reach our native land again.'

I WAS taking a leisurely walk one fine forenoon, along the sands at F——, enjoying the freshness of the sea air, and listening to the low melody of the gentle billows, as they came slowly beachward; when suddenly, a loud shout of surprise and joyfulness sounded in mine ears, and presently crowds of people were seen running in all directions towards the quay, which projects its crescent form, like a small black snail into the sea. All were on the alert—the aged man who had come out, like myself, to enjoy a quiet forenoon stroll upon the beach—the old woman, and the young and timid girl, who had brought their work with them to the sea-side, and were knitting in the sun—the merry urchins wading in the sea, and the elder boys idling indolently in the old weather-beaten boat, half gone to wreck, and half sunken in the sand—every one was up and away towards the pier. At first I was inclined to think that some accident had occurred; but the shouts could not be mistaken—they were manifestations of joy, rather than of grief. My curiosity was powerfully excited. I hastened to the spot with the others; and when I reached the pier, I became witness to a scene which might have afforded a fine subject for a painter or a poet. For the former, from the striking and even picturesque spectacle that was presented to the view; and for the latter, from the deep under-current of feeling, of joy, and of hope, with which the subject was, as it were, invested; but which conceived perhaps by both, the poet only could express with appropriate impression and effect.

About half a mile from the shore, a boat was observed coming towards the pier with all speed. It was crowded with sailors, neatly attired in their white trousers and blue jackets, their little round hats gaily decorated with ribbons; and ever and anon, as they waved their handkerchiefs in the air, a shout arose from the multitude on the pier, which was responded to by those merry ones on the waters, as if the sea and shore were saluting in reciprocal affection. As they came nearer, there was an eager pressing forward—a stretching forth of necks, and an anxious looking towards the boat, which was wafted swiftly and proudly towards them, as if each person were longing to descry and to embrace some valued and long-lost friend among those joyous mariners, who on approaching the landing place, were heard chaunting that wild and pleasant melody which is peculiar to seamen, when they

“————— in chorus gather

All their deep voices, as they pull their oars.”

At length the boat touched the pier—it reached the stepping stones—there was a rush towards it by those on the quay—a leap and a cry of gladness by those in the boat—and each had singled out his own. Then were there lockings in each other's arms, and many graspings by the hand; and tears were shed not of sorrow, but of joy; and kisses given and received, not quietly and stolenly, like the salute of lovers beneath the silent moon; but loudly and gladly, like the embrace of friends long parted!

And wives had met kind husbands, sisters with brothers, sons with fathers, and, dearest of all, sweethearts with their lovers. All had met again their kindred and their kind. No! not all. There was one, who stood alone amid the happy, like a lightning-scathed pine in a forest of blossom. He looked around; but alas! for him there was no “old familiar face,” no kind recognition, no warm embrace or friendly greeting. With a sorrowful eye and bursting heart, he leapt clean upon the shore, and quietly but quickly making his way through the happy crowd, he hastened on towards the village.

Perhaps, because I could obtain no information from any of the parties on the pier, who were too busy with themselves to attend to me; perhaps, because I took compassion on the apparently desolate situation of the lonely mariner, I felt myself impelled to follow his footsteps, and hold some communion with him, regarding the extraordinary scene I had just beheld. As soon, therefore, as I had overtaken him, I inquired the cause of all the bustle on the quay.

“Why, master,” said the poor fellow, slightly touching his hat, and half wiping away a tear, “it's nothin', but the return of a whaler, which was supposed to have been lost; and as nearly all our hands were obtained from this village, a whole boat's crew of us have come here to see our friends, that's all!”

“And the meeting, I observe, has been very affectionate.”

“Why, as to that, sir,” he replied, assuming a cheerful look and tone. “I believe they are all glad to see each other again, especially after so long an absence: and sailors always bear a kindly heart to their relations.”

“Have you been long absent then?”

“Ay, sir, many months after other ships had come home; and it was reported, and believed, that the Royal Bounty—that's the name of our ship, sir, and a tight vessel she is—was lost among the ice. Locked up indeed, we were, sir, between two icebergs, with little chance of ever again getting into the open sea; but Providence is kind, sir, especially to sailors—and even in our uttermost need, our deliverance was nigh; and so, after great hardships and fatigues, we have been enabled to revisit our native home at last.”

“Poor fellows, what dangers you must have encountered!”

“None knows what we oftentimes suffer but ourselves; but our perils are all forgotten when we see our old mother and sisters, and get a smack from our own sweethearts again. Them chaps at the pier have been luckier than I, for their friends and lasses came down to meet them, and to bid them welcome, and that's what comforts the heart of the poor sailor after a long voyage; but mine, I suppose, have not heard the

news, or mayhap my good old mother is ill, and not able to walk down to the pier to welcome home again her sailor-boy, whom, perhaps, she supposes buried deep beneath the ice."

A tear, which he could not repress, started into his eye, and I turned away my head to enable him to give it vent. We had reached the irregular row of houses which forms the main street of the little fishing village of F—, and were proceeding along the causeway together, when an old woman, her shawl thrown hastily and carelessly across her shoulders, and an expression of surprise, incredulity, and joy, on her careworn countenance, followed by a good-looking girl, who appeared to be her daughter, suddenly and hurriedly appeared on one of the turnpike wooden staircases, which are peculiar to all similar old-fashioned towns. The effect was instantaneous, and affecting in the extreme. She beheld her long-lost boy,—the great deep had given up its dead,—and she fainted in her daughter's arms. The sailor's tears could no longer be controlled, and he blubbered like a child. I felt my own eyes, on a sudden, become watery. If the truth must be told, I fairly wept. Who is there, with a heart, that could have done otherwise?

Oh! then I felt and acknowledged the truth and mastery of nature. Could all the power and perfection of all the stimulated pathos of the stage equal this little scene—this unexpected meeting? Never was I more convinced of the littleness of art, the less than nothingness of stage representation and effect.

When I looked again, the old woman was in the arms of her son, while the young one, bending forward, welcomed her brother with a kiss. Primitive race! Happy people! How I then envied your feelings, and longed to share the full fruition of your joy!

A few years afterwards I was very much affected on reading in the public papers—those officious records of all that is good and all that is bad—that the *Royal Bounty*, as if a doom hung over her from which she could not escape, was lost, while on a whaling expedition, and that all her crew had perished. I trust that my feeling-hearted friend, the sailor-boy of F—, was not among the number.

SHIPWRECK OF THE SPARROW-HAWK.

A Dutch East Indiaman, on the coast of the Island of Quelpaert, in the Sea of Corea, the 15th of September, 1653.

The following interesting details of the loss of the Sparrow-hawk, and the extraordinary captivity of the crew, are given by the purser, Henry Hamel, in an account which he published immediately after his return to Holland. The authenticity of the facts related by him cannot reasonably be doubted, because they correspond with the declarations of the seven Dutchmen, who returned with him, and likewise agree with what we find in Palafox, and other historians, relative to the invasion of China by the Tartars.

On the 10th of January, 1653, the ship Sparrow-hawk, with a crew of sixty-four men, laden on account of the Dutch East-India Company, sailed from the Texel under the command of Captain Eybertz, of Amsterdam. After encountering several storms and other accidents on the voyage, she arrived on the 1st of June, in the road of Batavia.

On the 14th of the same month having taken in provisions, they, by order of the governor-general, set sail for Tay-wan, in the island of Formosa, where they came to an anchor on the 16th of July. The ship had on board Cornelius Lessen, who was going to assume the government of that place and island instead of Nicholas Verbuge. On the 30th, an order of council obliged them to depart for Japan. In the evening of the ensuing day, as they left the Channel of Formosa, they were overtaken by a storm, which continued with increased violence all night.

In the morning of the 1st of August they were very near a small island, where they cast anchor with great difficulty, because in almost every part of the sea no bottom can be found. When the fog dispersed, they were surprised to find them-

selves so near the coast of China, that they could easily distinguish on the shore armed men, who appeared to be waiting in order to make prize of the wreck of the ship; but though the storm continued to increase, they passed all that night and the next day in the same place within sight of the people who were watching them. On the third, they found that the tempest had driven them twenty leagues out of their course, and they were still in sight of Formosa. They passed between that island and the continent. The weather was very cold. They had the mortification of being detained in that channel till the 11th of the same month, by a succession of contrary winds and calms. At length, a south-east wind, which blew a fresh tempest with violent rain, obliged them to stand to N.E. $\frac{1}{4}$ N. The weather became still more tempestuous during the three following days, and the wind shifted so often, that they were continually employed in setting and taking in the sails.

In this situation, the continual rolling of the sea had greatly injured the ship, and the rain, which had never ceased, preventing them from making observations; they were obliged to strike all their sails, and resign themselves to the impulse of the winds and waves. On the 15th, the ship made so much water that she became unmanageable. The following night, the shallow, and the greatest part of the gallery, were carried away by the fury of the waves, which shattered her bowsprit, and damaged the head of the ship. The squalls were so violent, and followed so close upon each other, that it was impossible to repair these injuries. At length, a sea which broke on board had well nigh swept away all the seamen that were upon deck, and filled the vessel in such a manner that the captain ordered the mast to be cut away, telling the men, at the same time, to implore the assistance of Heaven, as one or two more such seas would infallibly overwhelm the ship into destruction.

They were reduced to this extremity, when, in the second watch, the man looking out at the head of the ship, cried "Land! land!" declaring that they were within musket-shot of the shore. The rain and excessive darkness had prevented him from seeing it sooner. It was impossible to come to an anchor, because they could find no bottom, and while they were in vain endeavouring to effect this, such a prodigious sea broke over the ship, that all those who were in the hold were drowned before they could make their escape. Some of those who were on deck, leaped overboard, and others were carried away by the waves; fifteen reached the shore together, most of them naked and dreadfully bruised. They at first supposed that all the rest had perished; but, having climbed the rocks, they heard the voices of several who were uttering doleful cries. The next morning, by shouting and seeking along the shore, they picked up several who were dispersed on the sands. Out of sixty-four, they found that thirty-six had escaped, most of whom were dangerously wounded.

On surveying the fragments of the wreck, they discovered one of their companions caught between two planks, which had jammed him in such a manner, that he lived only three hours after he was disengaged. Of all those who had the misfortune to perish, they found only Captain Eybertz, extended on the sand, ten or twelve fathoms from the water, with his head resting on his arm. They interred him. Out of all their provisions, the sea had cast on shore only a sack of flour, a cask of salt meat, a small quantity of bacon, and a barrel of red wine. They had no small embarrassment how to make a fire; for supposing themselves in a desert island, they had no other resource than their own industry. The wind and rain having abated towards evening, they collected sufficient wood to form a covering with the sails which they had been able to save from the wreck.

On the 17th, they were deploring their situation, sometimes lamenting that not a single human creature made his appearance, and sometimes flattered themselves that they were not far from Japan, when they discovered, within cannon shot, a man, whom they called by making different signs, but who betook himself to flight as soon as he perceived them. In the afternoon they saw three others, one of whom was armed with a musket, and the two others with arrows. These strangers ap-

proached within gun-shot; but observing that the Dutch advanced towards them, they turned back, notwithstanding the unfortunate seamen endeavoured, by signs, to make them understand that they wanted nothing but fire.

Some of the Dutch having, at length, found means to come up to them, had no difficulty to persuade him, who had the musket, to give it them; and, with its assistance, they soon kindled a fire. These three men, were dressed in the Chinese fashion, excepting their caps, which were made of horse-hair, and the Dutch were apprehensive, lest they might be savage Chinese, or pirates of that nation. Towards evening about one hundred armed men, dressed like the others, made their appearance; and, after counting the unfortunate seamen, they kept them in close confinement during the whole night.

At noon, the next day, about two thousand men, both horse and foot, drew up before their tent or hut, in order of battle. The purser, the two pilots, and a cabin-boy, without hesitation went out to them. They were conducted to the commandant, who ordered a thick iron chain with a small bell to be put round their necks; and then obliged them to prostrate themselves before him. Those who had remained in the hut were treated in the same manner, while the islanders testified their applause by loud shouts. After making them remain for some time prostrate on their faces, they were commanded, by signs, to kneel. Several questions were asked which they could not understand, nor were they more successful in explaining to the islanders that they were bound to Japan. The commandant, at length, despairing of understanding them, ordered a cup of arrack to be brought, which was presented to them in turn, and sent them back to their tent. He inquired what provisions they had left, and soon after a quantity of rice boiled in water was brought them. But as it was supposed that they were perishing of hunger, the strangers, at first, gave them a small portion, fearing lest eating to excess might prove pernicious to them.

In the afternoon the Dutch were surprised to see several of these barbarians coming with cords in their hands, which they concluded were for the purpose of strangling them. But their fears were soon dispelled, when they observed them run towards the wreck of the ship, to draw to shore whatever might be of use to them. The pilot having taken an observation, judged that they were in the island of Quelpaert, situated in the sea of Corea, in latitude 33 deg. 32 min.

The islanders employed themselves on the 19th in hauling on shore all the fragments of the wreck, drying the linen and woollen cloth, and burning the wood, to get at the iron, which is in great request among them. As a familiarity began to take place, the Dutch went out to the commandant of the forces, and to the admiral of the islanders, who had approached the tent, and presented to each of them a telescope and a bottle of red wine. The captain's silver cup having been found among the rocks, they likewise offered that to the two officers. The telescopes and wine were accepted, they even seemed to relish the latter: for they drank so much, that they could by no means conceal its effects; but the cup they returned with many testimonies of friendship.

On the 20th, they finished burning the timber of the ship, and extracting the iron-work. During this operation, the fire having approached two guns loaded with ball, they went off with such a report, that all the islanders betook themselves to flight, and durst not venture to return till the Dutch encouraged them by signs. The same day, the latter received two supplies of rice. The following morning the commandant desired them, by signs, to bring all they had saved from the wreck into their tent, for the purpose of putting a seal upon it, and this formality was performed in their presence. At the same moment, several of the islanders were brought, who had converted to their own use iron, leather, and other things belonging to the vessel. He ordered them to be punished on the spot, to show the strangers that the natives had no design either upon their persons or their property. Each of the culprits received thirty or forty strokes on the soles of the feet, with a stick six feet long, and as thick as a man's arm. This punishment was so severe, that some of the poor wretches lost their toes in consequence of it.

About noon the Dutch were given to understand that they must prepare to depart. Horses were provided for those who were in health, and the sick were carried in hammocks. They set off, attended by a numerous escort of horse and foot. Having proceeded four leagues, they stopped for the night at a small town, called Tadiane, where they made a light supper, and were lodged in a building which had the appearance of a stable. The 22nd, at day break, having set off in the same order as on the preceding day, they reached a small fort, near which they observed two galliots. They dined there, and in the evening arrived at Maggan or Mokso, the town in which the governor of the island resides. Here they were conducted to a square, opposite the town-house, in which they found about three thousand men under arms. Some of the natives came and offered them water; but seeing them armed in a terrible manner, the Dutch imagined that they had a design to murder them. The clothing of these barbarian soldiers was calculated to aggravate their apprehensions, having in it something terrific, which is not seen either in China or Japan.

The purser was conducted to the governor, together with some of his companions. They prostrated themselves for some time near a kind of balcony, where he was greeted like a sovereign prince. The others were then directed, by signs, to pay him the same honours. He then asked, by different signs, whence they came, and what was the object of their voyage. They replied that they were Dutchmen, and were bound to Nangazaki, in Japan. The governor, by a sign with his head, testified that he understood something of their answer, after which he passed them in review, four at a time, and having put the same question to them successively, he ordered them to be carried to a building in which the king's uncle, accused of a design to deprive his nephew of the crown, had been confined till his death.

As soon as they had all entered this prison, it was surrounded by armed men. They each received, daily, twelve ounces of rice, and the same quantity of wheat flour, but scarcely anything more; and whatever was offered them was so badly prepared, that they could scarcely touch it. They were thus reduced to live on rice, flour, and salt, and had nothing but water to drink. The governor, who appeared to be about seventy years old, was a very sensible man, and highly esteemed at court. On dismissing them he signified that he would write to the king, to know his intentions respecting them, but that it would, probably, be some time before the answer arrived, because the court was eighty leagues distant. They requested him to allow them, sometimes, a little meat, and other kinds of food, and to permit them to go out daily, six at a time, to take the air and wash their linen. He not only granted this favour, but even did them the honour to send frequently for some of them whom he desired to write before him, either in Dutch or in his own language; so that they began to understand some of the expressions of the country. The satisfaction which the worthy governor appeared to take in conversing with them, and even in procuring them little amusements, produced a hope that they might sooner or later get to Japan. He bestowed so much attention on the sick, that, as Hamel declares, they were better treated by these idolaters than they would have been by Christians.

The 29th of October, the purser, pilot, and surgeon's boy, were conducted to the governor. They found a man seated with him, who had a thick red beard. "What do you take that man to be?" asked the governor. They replied that they thought he was a Dutchman. "You are mistaken," replied he, laughing, "he is a Corean." After some farther conversation, this man, who, till then had been silent, asked, in Dutch, "who, and of what country they were?" They satisfied his curiosity; at the same time giving a brief account of their misfortune. They, in their turn, asked him the same questions, upon which he informed them "That his name was John Wettevri; that he was a native of Zyp, in Holland, which he left in 1626, in quality of a volunteer; that the year following, in a voyage he was making to Japan, in the frigate *Ouverkerk*, he had been driven on the coast of Corea; that the ship being in want of water, he and some others had been

sent on shore to procure a supply, when he was taken prisoner by the natives, together with two of his companions, Theodore Gerard and John Pieters, who had been killed in battle in an invasion of Corea, by the Tartars, seventeen or eighteen years before; that he was fifty-eight years old, and residing in the capital of the kingdom, the king had commissioned him to go and inquire who they were, and what had brought them into his dominions." He added "That he had frequently requested permission of the king to go to Japan;" but all the answer he could get from that prince, was an assurance "That he never should go excepting he had wings to fly thither; that it was the custom of the country to detain all strangers, but not to suffer them to want anything: and that they would be supplied with clothing and food during their lives."

This intelligence could not be very agreeable to the Dutch; but their joy at meeting with such a good interpreter dispelled their melancholy. Wettevri had, however, so far forgotten his native language, that they had at first considerable difficulty to understand him; and it took him a whole month to collect his ideas. The governor directed all their depositions to be formally taken down, and sent them to the king; desiring the Dutch not to be discouraged, as a speedy answer would be returned. Besides this, he granted them every day new favours; Wettevri, and the officers who accompanied him, had liberty, at all times to see him, and to inform him of their wants.

In the beginning of December the three years of their benefactor's administration being expired, a new governor arrived. Here the author is at a loss for expressions to convey his sentiments. It can scarcely be imagined, he says, what testimonies of kindness the Dutch received from their generous protector previous to his departure. Seeing them but ill provided for the winter, he made for each of them two pairs of shoes, a suit of clothes, well lined, and a pair of stockings of skin. These favours he accompanied with the most affectionate caresses, declaring he was extremely sorry he could not send them to Japan, or take them with him to the continent. He told them not to be alarmed at his departure; for, on his arrival at court, he would employ all his influence to obtain their liberty, or at least permission for them to follow him. He restored to them the books which they had saved from the wreck, and many of their things, to which he added a bottle of very valuable oil. He likewise prevailed on the new governor, who had already reduced them to rice, salt, and water, to allow them rather better food.

After his departure, which happened in the month of January, 1654, they were treated with greater severity than ever. Barley was given them instead of rice, and barley meal instead of wheat flour. They were obliged to sell their barley in order to purchase other food. This rigour, and their mortification at seeing that no order arrived from the king for their removal to the capital, caused them to form a plan for their escape the ensuing spring. After having long deliberated on the means of seizing a bark under the cover of night, six of them formed the resolution of executing this design about the end of the month of April. But the boldness of them having ascended a wall, to ascertain the place where the vessel lay, was perceived by some dogs, which, by their barking, gave the alarm to the guard.

At the beginning of May, the pilot having been permitted to go abroad with six of his companions, discovered, as they were passing through a little village near the town, a bark tolerably well equipped, without any person to take care of her. He immediately despatched one of the number to take a small boat and a few short planks which he saw on the shore. Then, having each taken a glass of water they went on board the bark, without any further precaution. While they were endeavouring to get the vessel over a small sand bank, which lay across the passage, some of the natives perceived their design, and one of them ran into the water, with a musket, to oblige them to return. They were little terrified by his menaces, excepting one, who, being unable to get on board as soon as the rest, was obliged to go back

to the shore. The five others endeavoured to set the sail, when both the masts and sail fell into the water. They recovered them with considerable difficulty; but when they again attempted to set the sail the mast broke off short at the bottom. These delays gave the natives time to put off in another bark; they soon overtook the fugitives, who, undaunted either by their numbers or their arms, boldly leaped into the enemy's vessel, which they flattered themselves they should be able to seize; but finding it full of water, and in an unserviceable state, they at length submitted.

They were taken before the governor, who ordered them first to be laid flat on the ground, and their hands tied to a thick log of wood. He then directed the others, likewise bound and ironed, to be brought before him, and inquired of the six fugitives if their companions had any knowledge of their flight, to which they replied in a firm tone in the negative. Wettevri was ordered to find out what was their design. They protested they had no other intention than to go to Japan. "What," said the governor, "durst you have ventured upon such a voyage without bread or water?" They naturally told him "That they would rather run the risk of dying once for all, than die every moment." Upon this, each of the unfortunate men received twenty-five strokes on the bare posteriors with a stick six feet long, four inches broad, and one thick, flat on the side with which the stroke is applied, and round on the other. The blows were given with such violence that they kept their beds above a month afterwards. The governor ordered the others to be unbound; but they were more closely confined, and guarded night and day.

The island of Quelpaert, called by the natives Chesure, is situated twelve or thirteen leagues south of Corea, and is twelve or thirteen leagues in circumference. On the north side there is a bay, where several barks are always to be met with, and from this place they sailed for the continent. The coast of Corea is dangerous of access to those who are not acquainted with it, because it has only one harbour where ships lie in security. In all the others they frequently run the risk of being driven on the coast of Japan. Quelpaert is surrounded by rocks. It produces horses and other cattle in abundance; but as it pays the king considerable imposts, which keep it very poor, it is despised by the Coreans of the continent. It contains one very lofty mountain, covered with wood, and numerous hills, quite naked, and interspersed with valleys abounding in rice.

At the end of May, the governor received an order to send the Dutch to the royal residence. Six or seven days afterwards they were put on board four barks, with their legs in irons, and their right hands fastened to blocks of wood. It was apprehended they would throw themselves overboard, as they might easily have done, all the soldiers who guarded them being so ill from sea sickness.

After struggling two days with contrary winds, they were driven back to the island of Quelpaert, where the governor took off their irons, and remanded them to prison. Four or five days afterwards, having re-embarked very early, they reached the continent towards evening, and were obliged to pass the night in the road. They landed the next day, and their chains were taken off though not without the precaution of jangling their guard. They were provided with horses, on which they were conducted to the town of Haynam. There they had all the pleasure of meeting together; for, having been separated by the wind, they had landed in different places.

On the morning of the following day, they arrived at the town of Seham, where the gunner, who had not been in good health since the shipwreck, expired, and was interred by the order of the governor. After travelling several days, and passing through a great number of towns, they crossed a river which appeared to be as broad as the Meuse at Dort; and a league beyond it they arrived at Sior, the capital of the kingdom. From their landing till they reached that place they reckoned 74 leagues, their route being always northward, but inclining a little to the west. During the first two or three days, they were lodged in the same house. They were afterwards separated, and placed three or four together in small

huts, in that quarter of Sior inhabited by the Chinese. They were conducted in a body to the king, who having interrogated them through the medium of Wettrevi, they humbly implored him to transport them to Japan; whence, with the assistance of the Dutch, settled there for the purposes of commerce, they hoped one day to be able to return to their native land. The king replied, that the laws of Corea prohibited him to permit strangers to depart; but that care would be taken to supply all their wants. He then ordered them to perform in his presence those exercises at which they were most expert, such as dancing, leaping, and singing; after which he directed some refreshment to be brought, and presented each with two pieces of cloth, that they might dress themselves in the manner of the Coreans.

The next day they were conducted to the general of the forces, who informed them, through Wettrevi, that the king had admitted them into the number of his body guard, and in that quality they would be furnished monthly with 70 measures of rice. Each received a paper containing his name, his age, his country, the profession he had till then exercised, and that which he had adopted in the service of the king of Corea. This patent was in Corean characters, and was sealed with the king's seal, and likewise that of the general, which were nothing more than the impression of a hot iron. With their commission, they each received a musket, powder, and ball. They were ordered to fire a discharge with their arms, the first and fourth day of every month, in the presence of the general, and hold themselves in constant readiness to march with him, both to accompany the king, and on other occasions. The general has three reviews a month, and the soldiers are exercised by themselves. The Dutch were still thirty-five in number. A Chinese and Wettrevi were appointed to command them the first in quality of serjeant, and the other to keep an eye upon their conduct, and to teach them the customs of the Coreans.

Curiosity induced most of the great men belonging to the court to invite them to dinner, that they might enjoy the satisfaction of seeing them perform the military exercise, and dance in the Dutch manner. The women and children were still more impatient to see them: a report having been propagated that they were monsters of deformity, and that, in order to drink, they were obliged to fasten their noses behind their ears. Their astonishment, however, was so much the greater when they saw they were handsomer than the natives of the country. The whiteness of their complexion was particularly admired. The crowd that flocked about them was so great, that during the first days they could scarcely pass through the streets, or enjoy a moment's rest, in their huts. At length, the general was obliged to check this curiosity by forbidding any one to approach their lodging without his permission. This regulation was the more necessary, as even the slaves of the nobility had the audacity to make them leave their huts for their amusement.

In the month of August a Tartar ambassador came to demand the tribute. The author, without explaining the motives of the king, says, that he was obliged to send the Dutch to a large fortress, six or seven leagues from Sior, and to keep them till the departure of the minister which took place the following month.

Towards the conclusion of November, the cold became so intense that the river was frozen, and three hundred loaded horses passed over on the ice at one time. The general being alarmed for the Dutch, mentioned his fears to the king. Some half-rotten leather which they had saved from their shipwreck was distributed among them that they might sell it and buy clothes with its produce. Two or three laid out the money they obtained in this manner in the purchase of a small hut, which cost them nine or ten crowns. They chose rather to endure cold than to be continually tormented by their hosts, who sent them to collect wood in the mountains, three or four leagues distant from the town. The others having procured the best clothes they were able, passed the rest of the winter as they had done many others.

The Tartarian envoy having returned to Sior in March, 1665, they were forbidden, under pain of very severe punishment, to set foot out of their habitations. Nevertheless on the

day of his departure, Henry Jans and Henry John Bos resolved to present themselves before him on the way, under the pretext of going out for wood. As soon as they saw him appear at the head of his retinue, they approached his horse, and taking the reins in one hand they drew aside their Corean habits, showing him their European dress underneath them. This incident at first caused great confusion in the troop. The ambassador was very inquisitive to know who they were: but being unable to understand them, he ordered them by signs to follow him. At night, having inquired for an interpreter, Wettrevi was mentioned, and he immediately sent for him. Wettrevi did not fail to apprise the king of the circumstance. A council was held, in which it was resolved to make a present to the envoy to prevent the affair from reaching the ears of the Khan. The two Dutchmen were brought to Sior, and confined in a close prison where they did not live long. Their companions, who never saw them again, were ignorant whether they died a natural or a violent death. After the return of these two poor wretches, all the others were carried before the council of war to be examined. They were asked whether they had any knowledge of the flight of their companions, their disavowal of which did not prevent their being condemned each to receive fifty strokes on the soles of the feet. The king, however, pardoned them, declaring, at the same time, that they ought rather to be considered as vagabonds, ill-disposed towards the country, than as unfortunate strangers whom tempests had cast on the shore of his kingdom. They were sent back to their huts, with the prohibition not to leave them without the king's permission.

In the month of June, the general informed them, by their interpreter, that a vessel having been wrecked on the island of Quelpaert, and Wettrevi being too old to undertake a voyage thither, three of them who best understood the Corean language must prepare to set off for Quelpaert, where they were to observe the circumstances of the shipwreck, and give an account of it to the court. On receiving this order, the mate, the second pilot, and a gunner, set off two days afterwards. The Tartar ambassador returned in the month of August, and the Dutch were again ordered not to leave their quarters till three days after his departure, on pain of the severest punishment. The day before his arrival they received a letter from their companions, who informed them that instead of being conducted to the island of Quelpaert, they were closely confined on the southern frontier of the kingdom, that if the Khan should hear of the death of the two others, and demand the remainder to be delivered up to him, the Coreans might be able to reply, that three had perished in the voyage to Quelpaert.

The same ambassador returned towards the conclusion of the year. Though he had come twice on the part of the great Khan, since the unfortunate adventure of the two Dutchmen, without having mentioned that circumstance, yet most of the Corean lords endeavoured to persuade the king to make away with the others. On this subject a council was held which lasted three days. But the king, the prince his brother, the general, and some others, opposed such an atrocious design, which sooner or later might come to the knowledge of the great Khan. The general proposed to make them fight each with two Coreans, with the same arms. By that method, he said the king might get rid of them, without being liable to the accusation of having murdered these poor strangers. They were secretly informed by some charitable persons, what was in agitation. The king's brother passing by their quarter, on his way to the council, at which he presided, they threw themselves at his knees, imploring his favour, and inspired him with such compassion that he became their protector. Thus they owed their lives only to his solicitations and the humanity of the king. Many, however, seeming offended at their indulgence; it was resolved, in order to protect them from the malice of their enemies, and to conceal them from the Tartars, to banish them to the province of Thillado, with a monthly allowance of fifty pounds of rice.

In consequence of this resolution they left Sior on horseback, in the month of March, 1667, under the conduct of a serjeant. Wettrevi accompanied them about a league, as far

as the river which they had crossed in coming from Quelapaert. They re-visited most of the towns through which they had passed in the same journey. They at length arrived at a considerable town called Dia-siong or Thillapening, which is commanded by a large citadel, the residence of an officer who possesses the supreme authority in the governor's absence, and is styled the colonel of the province. The serjeant who accompanied them, delivered them up to this officer, together with the king's letters. He was then ordered to go and fetch their three companions who had left Sior the preceding year, and who were not above twelve leagues from Dia-siong, in a town where the admiral had the command. They were lodged together to the number of thirty-three, in a public edifice.

(To be continued.)

ANECDOTES OF NELSON.

On the morning of the 3rd of April, (the day after the battle of Copenhagen,) when it was scarcely light, Nelson repaired in his gig, his usual conveyance, on board the Elephant, which he supposed to be still aground. The cold and fatigue of a long row at that early hour, in a northern sea, had not the effect of either causing this extraordinary man to indulge in rest, or to forget those for whose fate he was concerned. His delight and praises on finding the ship afloat were unbounded. He took a hasty breakfast, and then rowed to such prizes as were not yet removed from the shore. Here he gave another proof of the eccentricity as well as boldness of his character. Learning that one of the Danish line-of-battle ships, the Seeland, the last that struck, and which was under the immediate protection of the Three Crowns' Battery, had refused to acknowledge herself to be captured, and made some quibble about the colours, and the pennant not having been hauled down, he ordered one of our brigs to approach her, and proceeded in his gig to one of the enemy's ships which were within that battery, in order to communicate with Commodore Fisker, whose flag was flying on board the Elephant. He went on board, and claimed the Seeland. The Danish officers denied that she had struck.

Nelson declared upon his honour that she had, adding that, unless she were immediately given up, he would haul down the flag of truce.

The Danes said that they wished to treat with Lord Nelson in person.

"I am Lord Nelson," he cried; "see, here's my fin." at the same time throwing aside his green dreadnought, showing the stump of his right arm, and exposing his three stars. The ship was given up without further altercation.

That Nelson should have been beloved, nay, almost adored by all under his command, is not surprising, when his attention to their comforts, and his treatment of them are considered. On these points some interesting details are supplied by an eye-witness during his service in the Baltic.

"The keeping his fleet continually on the alert, and thus amply furnishing it with provisions, were the objects of his lordship's unremitting care; and to this may, in a great measure, be ascribed the uniform good health and discipline which prevailed. Another point to which he gave nearly equal attention was his economy of the resources of his fleet in regard to stores; their consumption was as remarkable for its smallness as it was in the fleet that was afterwards under his command in the Mediterranean. His hour for rising was four or five o'clock, and of going to rest about ten. Breakfast was never later than six, and generally nearer to five o'clock. A midshipman or two were always of the party; and I have known him send during the middle watch to invite the little fellows to breakfast with him, when relieved. At table with them, he would enter into their boyish jokes and be the most youthful of the party. At dinner, he invariably had every officer of his ship in their turn, and was both a polite and hospitable host. The whole ordinary business of the fleet was invariably despatched, as it had been by Earl St. Vincent, before eight o'clock. The great command of time which Lord Nelson thus gave himself, and the alertness which this ex-

ample imparted throughout the fleet, could only be understood by those who witnessed it, or who knew the value of early hours."

"He was a decided enemy to any severe system of discipline, and never would inflict any corporal punishment on a man if it were possible to avoid it; when he was actually driven to it, he was more miserable during the execution of the sentence than the culprit himself. He understood mankind, and could lead them as he pleased. No man was ever more faithfully obeyed, yet he knew not the use of terror. His hold was on the affection and reason of man, aided by example: and such a hold that he could by it inspire cowardice itself with courage and enthusiasm. He never was known to do an unfriendly act to any officer about him; if they behaved ill, and he was asked to prosecute them, he used to answer, 'There was no occasion for him to ruin a poor devil, who was sufficiently his own enemy to ruin himself.' Expulsion from the ship was the severest punishment he inflicted. He was literally what I have heard his sailors, in their plain expressive language, say of him, 'Our Nel is as brave as a lion, and as gentle as a lamb.'"

Nelson had not passed many months at Merton before his mind received a grievous shock, by the decease of his excellent father at Bath, on the 26th of April, 1802, in the seventy-ninth year of his age. In order to recruit his health and spirits, he accepted, in the month of July, the pressing invitation of Sir William Hamilton, to accompany him to Wales, for the purpose of viewing Milford Haven, and the improvements made on Sir William's estate at Milford, where, in compliment to his heroic friend, he had determined to establish a fair, or annual festival, on the 1st of August. Lady Hamilton, and his lordship's brother, the Rev. Dr. Nelson, with his wife and son, were of the party. The enthusiasm with which they were everywhere greeted, excepting in one single instance, rendered this tour a continued triumphal procession.

At Oxford his lordship was presented with the freedom of the city, and the university complimented him and Sir William Hamilton with the degree of L.L.D. The party then proceeded to Woodstock, for the purpose of inspecting Blenheim, the magnificent palace raised by the nation for the great Duke of Marlborough. It might have been expected that the descendant of that military commander would have felt proud to entertain one who had rivalled his deeds, if not surpassed them, upon the ocean. The duke, though at home, never made his appearance, but a servant was ordered to offer refreshments, which Nelson proudly refused. Sir William Hamilton indignantly observed, that if the great Marlborough could have risen from the tomb, he would have been eager to do the honours of his house to the victor of Aboukir, a greater victor than himself. Lady Hamilton, with a spirit, energy, and shrewdness of observation characteristic of her superior mind, remarked, that if Marlborough's services obtained so splendid a reward, it was because a woman reigned and women have great souls. "And I," she continued—for these are her words—"told Nelson, that if I had been a queen, after the battle of Aboukir he should have had such a principality, that Blenheim Park should have been only as a kitchen-garden to it." The tears came into his eyes; and he shook Sir William and me by the hand, saying "that he was content to have done his duty by the country and the people that he loved; but that he had not yet half done, for there were two or three beds of laurels in the Mediterranean to be gathered."

Contrast this reception at the ducal Blenheim, with the homely, but affecting tribute paid to the hero by a deputation of the farmers of Brecon. "My Lord," said they, "you have saved us. While you were losing your limbs, and shedding your blood for us, we slept soundly with our wives; and our lands, and our children, were protected by your brave vigilance. Accept our thanks—these tears will tell you what we feel!" And the men wept like children. One of them exclaimed:—"Now I could die in peace; I have seen our saviour and brave defender."

LOSS OF THE GREAT LIVERPOOL STEAMER, OFF CAPE FINISTERRE, FEBRUARY 24TH, 1846.

THE SHIP WAS SEEN BY THE CAPTAIN OF THE BRIG "ALBATROSS" ON THE 10TH OF MARCH 1854

LOSS OF THE GREAT LIVERPOOL.

INTELLIGENCE reached town on Saturday, March 7th, 1846, of the total loss of the Great Liverpool steamer, which took place on the 24th of February, at four in the morning, off Cape Finisterre, by getting on shoals. The catastrophe appears to have been wholly the result of accident. It is said that no blame whatever attaches to Captain M'Leod, the commander. Only three lives were lost, although it is stated that there were about 150 souls on board. Mrs. Archer, from Bombay, a Miss Morris, aged 7, and an Indian female servant, were the three that perished by the swamping of the boat, while attempting to escape. 79 of the passengers and 21 of the crew have arrived at Southampton by the Pacha, which also had a narrow escape of being wrecked, having run on shore off Oporto. In the letter which follows, addressed by the Captain to Mr. Allan, secretary of the Peninsular and Oriental Steam Navigation Company, there will be found a full account of the circumstances under which the catastrophe took place:—

"Vice Consulat-office, District of Corcubion,

"Feb. 28, 1846.

"To James Allan, Esq., Secretary, Peninsular and Oriental Steam Navigation Company.

"Dear Sir,—It is with feelings of the most painful grief that I have to acquaint you, for the information of the managing directors and all whom it may concern, that at 4 o'clock on the morning of the 24th inst., whilst steering N.N.E., with a strong wind from the S.S.W., and a heavy sea running, and about seven to ten miles from Cape Finisterre, the weather thick, dark, and hazy, the ship going about ten knots an hour, we struck upon a shoal or rock, and made so much water in the engine-room that she soon became unmanageable from the fires being put out, and consequently drifting towards the land, and grounded in a small sandy shoal, called 'Guros,' about one league and a half to the southward of Corcubion, where she lay with her head to the southward broadside on the beach, at the distance of 300 yards, on which a heavy surf was breaking. The boats were all got ready for lowering, to land the passengers and crew, and the larboard life-boat was sent with a party of seamen and a line to haul a rope on shore, which they with difficulty reached in safety, and we soon after got a hawser on shore, and the end of it made fast and hove taut from the ship. Mr. Hamilton, chief officer, was sent in the launch with a party of passengers and crew, amongst whom were several ladies and children; all were safely landed except Mrs. Archer, a child belonging to Mrs. Morris, 7 years old, and a native female Indian servant, who were lost in the surf on the beach by the swamping of the launch, though every exertion was made, both by those on the beach, and in the launch, to save them. After this the launch, which was with great difficulty hauled alongside by us on board, and baled out, made several successful trips, and all on board were safely landed. By 11 a.m., going myself in the last trip, having previously ascertained that every person was out of the ship, the sea at that period was breaking heavily over her, and she was fast breaking up on the starboard side, amidships. The pinnace was stove in lowering, and the starboard quarter boat by the sea striking her violently. On getting on shore I found several articles of different kinds had already floated there, and a number of the people of the coast had come down and were plundering all they could get away, though all means were taken to prevent it. In fact we have been most shamefully plundered and robbed in every possible way.

"Considering it necessary to communicate with the nearest English Consul or agent, I despatched Mr. Lane (purser) to Corcubion, where I learned a consular agent resided, to claim protection for ourselves and property that might come on shore. On his arrival there he found the consular agent (a Spaniard and not speaking English) to be a person of no influence; indeed apparently incapable of rendering assistance of any sort. He, therefore, deemed it indispensable to proceed at once to Corunna, distance 45 miles, and communicate with Mr.

Santos, the Consul-General for Galicia, and was promised by the consular agent that passports, horses, and guides for himself and three passengers, should be ready at half-past 5 o'clock on the following morning. Instead of this, neither horses nor passports were ready, but finally, a refusal to allow him to proceed. He afterwards found that the Consul had sent a messenger to Corunna that morning, without even allowing Mr. Lane to know he was going to do so. The passengers, I fear, have suffered much from the Vice-Consul not having sought or selected any place for them to go to, and also from the scarcity and difficulty of getting provisions of almost any sort, and the accommodation they have been enabled to get being of the most miserable description.

"I am happy to say that every officer and man under my command, behaved themselves under these most trying circumstances to my most entire satisfaction, and I cannot omit mentioning to you the great assistance I received, and the praiseworthy exertions that were made in our critical situation by Captain Bowen, of the ship Hindostan, passenger on board, from Ceylon.

"Wednesday, 25th.

"The weather having moderated for a few hours, I went on board at low water with the officers and crew, and succeeded in getting up and landing a great portion of the mails, a few packages of cargo, and some passengers' baggage, all in a most damaged state. On the afternoon of this day, I came up to this place to note a protest, being the earliest time I could get away from the beach, but did not succeed in doing so, until the following morning.

"Thursday, 26th.

"Being unable to make the protest in Spanish, I wrote it in English, and presented it to the Vice-Consul, a copy of which I inclose herewith. After this, I made an application to him as to whether we could not get up from the beach (a distance of five miles, and over high hills) the mails and such articles as had already been saved. He applied to the alcalde, or mayor, for twelve bullock carts, which were granted, and proceeded at noon to the beach; but on arrival there, the officer in charge from the customs, or Guardia Costa, would not permit a single thing to be removed, although he acknowledged his inability to protect all the property from the ladrones or thieves, saying no order for their removal had been received. The carts, therefore, returned empty, and immediately came back to the Vice-Consul's to know how it was that he had not procured an order, if it were necessary. He said it must come from the Minister of Customs, who just then came up, and on applying to him for an order to bring the mails, &c., to the Vice-Consul's house, he said they must all go to the Custom-house at Corcubion, which is on the opposite side of the bay, to be under his custody. However, on reasoning with him, I believe he determined on allowing the things to be put in the Vice-Consul's house—at least until the arrival of Mr. Santos from Corunna, and was to leave himself at seven o'clock next morning, for the purpose of removing them. During this time, the officers and crew have been living under temporary tents on the beach, subsisting on such food as could be got from the ship, with a supply of bread from this village (Cee). They are, of course, affording every protection in their power to their property, but the barefaced plundering that goes on is incredible. The soldiery, or caraboneros, having even gone so far as to present the bayonet at the officers and men while saving property, which they (the soldiers) took in charge, and sold afterwards themselves.

"Friday, 27th.

"During last night, blowing hard, the ship went entirely to pieces. The carts went to the beach; but from the state of the weather, did not arrive in time to load; they were in charge of the Minister of Customs. I deemed it proper to remain all night on the beach, to facilitate the loading in the morning. During the night a great concourse of people assembled, and lighted thirteen fires around us from the wreck and the most determined system of pillaging was carried on without the possibility of preventing it. I sent Mr. Lane

back to the village to push things forward for the morning, and on his arrival at 5 o'clock, Mr. Santos, Vice-Consul from Corunna, just then came in. The whole circumstances were laid before him, and he was fully convinced of the badness of the Vice-Consul or agent here: in fact, when he called him before Mr. Lane, he seemed quite incapable of giving any explanation of his conduct. Mr. Santos considered it best not to dismiss him from his office at once, thinking it better to avail himself of his services until the settlement of the affair.

"Saturday, 28th.

"Mr. Santos arrived at the beach at 7 o'clock this morning, and through the authority with which he came prepared, and his own unremitting exertions, sufficient carts and oxen were engaged to remove the whole of the mails and property saved to the Vice-Consul's house by 3 p.m., accompanied by the whole of the officers and crew, who for the present occupy a large store-room of the Vice-Consul's.

"Arrangements have been made for starting the first batch of passengers to-morrow morning, and on the following morning another party will start for Corunna. The ladies and children cannot possibly proceed until side-saddles arrive from Corunna, which will be on Tuesday next.

"The Admiralty agent and myself conjointly have written by express to the Admiralty Agent and Commander of the Pacha, requesting them to detain her at Corunna 24 hours, in case the mails, &c., which proceed hence by a felucca to-morrow, do not arrive in the ordinary time, to embark by her. I have deemed it prudent, after consulting with Mr. Santos, to remain here until I see everybody on their way to England, and I have therefore sent Mr. Lane with the first batch of passengers, and instructions to proceed with the despatches by the speediest opportunity to St. Mary-axe.

"The passengers have all been more comfortably housed lately, and both them and the ship's company are all well, with the exception of Lieutenant Williamson, Admiralty agent, who has been very poorly since he left Malta.

"I am, dear sir, your very obedient servant,

"A. McLEOD."

Of the Great Liverpool's passengers, the following have arrived at Southampton by the Peninsular and Oriental Steam Navigation Company's steamer Pacha:—

Mr. Storm, Mrs. Dicey, Mr. Dicey, Mr. McDougal, Miss Row, Mr. Grace, two Masters Turton, Mr. Lushington, Mr. Prinsep, Mrs. Goad, Mrs. Morris, two children, and a servant; Mr. MacKenzie, Mr. Campbell, 84th Regiment; Mr. Gibson, Rev. Mr. and Mrs. Panting, child and servant; Dr. Boyrenson, Sir G. Ballingall, Master Sinclair, Dr. Hinton, Mr. Tuve, Mr. Fitzpatrick, and Dr. Duncan. In all, 29.

The remainder arrived per Peninsular and Oriental steamer Queen, from Corunna:—Mrs. Hampton, Mrs. Dunbar, Mrs. Dick, child and servant, two Misses Bell and servant, Mrs. Bradford, Mr. Pugh, Master Morrison, Master Doyle, Mr. and Mrs. Laforgue and child, Mr. Arrow, Captain Wright, Captain Bowen, Mr. Ganston, Captain and Mrs. Fearon, child and servant, Mrs. Edmond, three children and servant, Mrs. Prole, two children and servant.

Captain McLeod is a lieutenant in the Royal Navy, and has been ten years in the Peninsular and Oriental Company's service, and was considered one of its most able commanders.

(FROM A PASSENGER.)

"The Great Liverpool, after her passage from Alexandria to Southampton, became a total wreck on the coast of Spain, a few miles to the southward of Cape Finisterre. All lives were saved, but three—viz., Mrs. Archer, Miss Morris, and an Indian female servant. Our property is totally lost, save what we came on shore in.

"We were steaming before a strong breeze, but fair, running at the rate of nearly 11 knots an hour, on the night of the 23d of February; a little before 4 a.m. on the following morning the vessel struck on a rock. She hung a little while on the reef, and getting clear drifted towards other rocks,

where we lost our rudder, and then eventually struck the shore. The engines soon ceased to act, for the water poured in and rapidly extinguished the fires. It was very dark, and oh! how long the period seemed ere day dawned; minutes appeared as hours, and an hour an age, as we stood helplessly awaiting for the light of day; and, when at length it came, it showed us rocks and breakers all around, where no boat could live; and no soul could land, save on one little spot of sandy beach, from 200 to 300 yards in extent, and on which the ship had settled, little more than a sling's throw from the shore; but, between us and that shore, the surge was strong and the breakers terrific. A boat was at length lowered, and chiefly laden with ladies and children; long did they sit in it by the vessel's side, waiting the chance that the surge might abate, even but a little: at last it set out—every heart beat high, and every eye was strained to see it as it slowly advanced on its perilous way. It reached the beach—the breakers dashed full on it—it was swamped—we saw the ladies and children struggling and dragged through the foaming waters by the sailors. One lady, however, was carried out by the retiring wave and disappeared; another, a child, was carried away, and a female Indian servant swam long, but she, too, sank at last. One woman and a child were recovered and carried back to the ship by another ship's boat nearly lifeless. The boat floated out and turned keel up, and as there was no other that could live in such a sea, we had no hope but the feeble one that the wind might lull, and the sea become a little calmer, before the ship broke up. For a while, however, the gale increased, and the sea too, and we were drenched with rain and spray, the ship's timbers ever and anon yielding with a crashing sound, whilst the water kept rising higher and higher within her, and our eyes kept continually straining towards the shore. Thus were we in awful uncertainty for hours, yet, hope still lived on feebly. At length the voice of Captain Bowen, of the merchant service, a passenger, was heard. The boat was righted, baled out, and another cargo of living beings was seated in it. Bowen accompanied them; and we cheered loudly as we saw her return to the beach. She was hauled back by the hands on board the ship; and three times did Bowen safely, by his able directions and exertions, take a boat-load of his fellow-creatures to land. He slackened not until exhausted, and the last boat brought off the few remaining, including the captain. All now were safe, save the unfortunate three lost from the first boat.

"I have not sat down to write panegyrics on any one; but it would be unjust to omit the name of Dr. Boyrenson, of the Bombay army, who was most conspicuous and active in giving every aid. To him the ladies, children, and female attendants in particular are greatly indebted. Standing on a frail footing on the outer side of the ship, from which he was twice precipitated into the water, he on each occasion unflinchingly resumed his laborious and perilous position, handing woman after woman and child after child, in their descent. He behaved right well and may every good attend him. Others exerted themselves as best they could. Thanks to a merciful God, we were all landed by about noon. Order and tranquillity reigned throughout during the whole of their anxious and appalling time. We proceeded to a small village of poor huts, and got a little warmed by their furze fire, and then set out for the village of Cee, about five or six miles distant, where we arrived, but wet, wearied and hungry. All our property is gone; few have but what they had on landing.

"On the 1st of March a party of our passengers, consisting of gentlemen, set out for Corunna, for the purpose of meeting with a steamer to carry us on to England. Our first day's journey (accompanied by Mr. Lane, purser of the Great Liverpool, to whom we owe our best thanks) was upwards of 36 miles, over mountains, through swamps, and excessively rugged roads. Our horses were bad, with wretched saddles.

"Next day we arrived at Corunna. Boyrenson started two days later, and brought on some of the ladies and children with him. How the latter were able to ride such a distance on such horrid roads I know not, but manage it they did, within the two days.

"I cannot conclude this hastily written sketch without noticing

the extreme kindness and hospitality of the Spaniards towards us; they did all in their power to relieve our wants even supplying us with clothes gratis.

"To the Consul and Vice-Consul at Corunna we are much and deeply indebted. Everything which could be done for us in our forlorn situation was cheerfully attended to.

"Twenty-four of our number of passengers have arrived by the Pacha from Corunna, little more than half our number remain behind, who will, please God, reach England in safety, as it has pleased the Almighty to enable us to do.

"Southampton, March 7, 1846."

The following additional particulars have been furnished in a letter written by Mr. Lane (the purser) to Mr. Allan:—

"March 7, 1846.

"Dear Sir,—It may be satisfactory to the relatives and friends of those passengers from the Great Liverpool who did not arrive by the Pacha, to know that when I left, they were all tolerably well; and, I have no doubt, on Friday evening, or by the latest, Saturday morning (this day), they will all have arrived in Corunna, under the escort of Captain M'Leod, Mr. Santos (her Majesty's Vice-Consul), and the remaining officers of the ship; for, as we came into Corunna, on Monday the 2nd, we met 18 donkeys, with side-saddles, going out to the village of Cee, for them. We also met a squadron of Lancers, whom the Captain-General of the province, on the application of Mr. Baker, her Majesty's Consul for Galicia, had sent to patrol the road, in order to protect those who were coming, from insult or injury; and I think it only right to inform you, that when the authorities at Corunna were made acquainted with the circumstances, and the robberies that were being committed, they immediately offered to place at the disposal of her Majesty's Consul some troops and officers, who, with one of the Captain-General's aids-de-camp, were to proceed with the Consul to scour the country, and search every house, with the understanding that if they proved a theft against any carabiniere or soldier in arms, he was to be shot on the beach. I fear, however, that from the wildness of the country, and the immense concourse of people who were down, the recovery of much of the property is a matter of great uncertainty. There is no doubt but that all the remaining passengers of the Great Liverpool will arrive at Southampton in the company's steamer Queen, about the 17th inst., arrangements having been made at Corunna, on her outward passage, that accommodation sufficient should be kept vacant on her return from Gibraltar.

"I am, dear Sir, your obedient servant,

"EDWARD LANE,

"Purser, late Great Liverpool."

Some time after the passengers of the unfortunate steamer, the Great Liverpool, had been safely landed, it occurred to Captain M'Leod that it was possible to save from the wreck a box which had been specially consigned to his care, containing a present to her Majesty from a wealthy native merchant of Bombay. Captain M'Leod, accompanied by the chief officer, Mr. Hamilton, and two of the crew, got on board the steamer, and cut through the deck to the place where the box was deposited, and with great danger and difficulty got it on shore, and from thence it was conveyed with the mail boxes to Corunna, and consigned to the care of the consul, who, fearing it might have been damaged by being so long under water, unpacked the box in the presence of the captain and officers. Although it was inclosed in many cases, the water had penetrated through them to the morocco case, which was richly ornamented with the royal arms of England. The present consisted of a large sized and richly wrought gold box, an exquisite specimen of Eastern workmanship, worthy of Benvenuto Cellini; the box was supported by four stands in the form of snakes, and it contained several dresses of the most elegant and costly fabric, worked by the needle, and of cobweb texture; but the salt water had penetrated, and the consul's wife had them carefully washed and repacked, and they were transmitted with the mails to Southampton by the

steam ship Queen, which also brought the crew and passengers of the Great Liverpool, in a distressed condition for want of clothing and other necessities.

Immediately after the last of the passengers departed for Corunna, Captain M'Leod committed suicide by cutting his throat with a razor. He had been in a most desponding state of mind ever since the loss of the vessel, and it is supposed could not bear up against the misfortune. He was a man universally beloved and respected. He has left a large young family, with prospects of an early increase. There is nothing further saved from the wreck of the Great Liverpool. The ship is entirely gone to pieces, and what valuables floated ashore were principally purloined by the rascally natives. It was fortunate that the box escaped the clutches of the Spanish brigands.

Just before Captain M'Leod committed suicide, he gave into the charge of the consul a handkerchief containing gold, with which he had been entrusted, to deliver to a merchant in London, with a special recommendation that it should be forwarded to its destination.

The escape of one child was miraculous. The first boat was upset in the raging surf, when three persons lost their lives, and a second child was supposed to have been drowned, but when the boat righted, the infant was found floating at the bottom, and was taken on board the vessel as it was going to pieces; restoratives were applied, and the child was saved.

EVERY INCH A SAILOR.

THE wind blew hard, the sea ran high,
The dinky scud drove 'cross the sky;
All was safe lash'd the bowl was slung,
When, careless, thus Ned Haulyard sung:—

A sailor's life's the life for me,
He takes his duty merrily:
If wind can whistle he can sing,
Still faithful to his friend and king,
He gets beloved by all the ship,
And toasts his girl and drinks his flip.

"Down top-sails! boys, the gale comes on,"
To strike top-gallant yards they run;
And now to hand the sail prepared,
Ned cheerful sings upon the yard,—
A sailor's life, &c.

"A leak! a leak! come, lads, be bold,
There's five feet water in the hold."
Eager on deck see Haulyard jump!
And hark! while working at the pump,—
A sailor's life, &c.

And see! the vessel nought can save!
She strikes and finds a wat'ry grave:
Yet Ned, preserved, with a few more,
Sings as he treads a foreign shore,—
A sailor's life, &c.

And now—unnumber'd perils past,
On land as well as sea—at last,
In tatters, to his Poll and home,
See honest Haulyard singing come,—
A sailor's life, &c.

Yet, for poor Haulyard what disgrace,
Poll swears she never saw his face;
He d—s her for a faithless she,
And, singing, goes again to sea!
A sailor's life, &c.

SHIPWRECK OF THE SPARROW-HAWK.

(Concluded.)

In the month of April some leather was brought them, which had till then remained at Quelpaert, from which they were only eighteen leagues distant. The only labour required of them was twice a month to pull up the grass that grew in the square of the castle. The governor, who treated them with great kindness, as did all the inhabitants of the town, was sent for to court to reply to some accusations which endangered his life. But being beloved by the people and supported by most of the great men, he was sent back with honour. His successor treated the Dutch with less humanity. He obliged them to go and fetch wood from a mountain three leagues from the town, after being accustomed to have it brought for them. An apoplexy delivered them from this odious master in the month of September following.

They were, however, not much better off under his successor. When they asked him for cloth, at the same time showing him their clothes worn out with their laborious occupations, he informed them that he had received no orders from the king on that head; that he was not obliged to furnish them with anything but rice, and that all their other wants they themselves must supply. They then requested permission to go out alternately to ask charity, representing to him that naked as they were, and their labour producing only a little salt and rice, it was impossible for them to procure a subsistence. This favour was granted, and they soon had sufficient to protect themselves from the cold.

At the beginning of the year 1658, they experienced fresh mortifications on the arrival of a new governor. They were deprived of the liberty of going out of the town. The governor told them that if they would work for him he would give each of them three pieces of cotton; but this proposal they humbly rejected, knowing that his work would wear out more clothes than the stuff he offered them would make. In this situation some of them being attacked with a fever, the terror of the inhabitants at the name of that disorder procured them permission to beg, on condition that they should never be absent from the town above a fortnight or three weeks, and that they should neither go towards the capital nor towards Japan. As only half their number were allowed this indulgence, those who remained in the town were ordered to take care of the sick, and to pull up the grass in the public square.

The king dying in the month of April, his son, with the consent of the great Khan, ascended the throne. The Dutch continued to beg, especially among the priests and monks of the country, who were extremely charitable, and were never weary of hearing them relate their adventures, and describe the customs of their native land. The governor, who arrived in 1660, showed them great kindness, frequently regretting that he could not send them to Holland, or at least to some place frequented by the Dutch. The drought was so great this year, that provisions became extremely scarce. This calamity increasing in the following year, great numbers of robbers infested all the high roads, notwithstanding the vigour with which they were pursued by the king's command, and hundreds of the people perished of hunger. The famine became so pressing that several villages were plundered, and even the royal stores were not spared. These disorders, however, remained unpunished, because the offenders were slaves of the court. This scarcity continued till 1662: and it was even felt in the following year. The town of Dia-siong, where the Dutch still resided, was no longer capable of furnishing provisions for them; upon which an order arrived from the king to distribute part of them between two other towns. Twelve were therefore sent to Saysiane, five to Siunchien, and five to Nam-man, sixteen leagues farther off. This separation was at first very afflicting, but it afforded them an opportunity for their escape, as we shall find in the sequel.

They set off on foot, the sick only and their baggage being carried by horses, with which they were gratuitously furnished. The first and second night they lodged together in the same

town. The third day they arrived at Siunchien, where the five, who were destined to remain there, were left. The fifth day at noon the others arrived at Saysiane. Their guides delivered them to the governor or admiral of the province of Thilado, who resided in that town. This officer appeared to possess distinguished merit; but he was soon succeeded by another, who treated them with great harshness. The highest favour he granted them was, the permission to cut wood, with which they made arrows for his people. The servants of the Corean lords have no other occupation than shooting with bows and arrows, because their masters are proud of having in their service excellent archers.

At the beginning of winter, the Dutch requested of the new governor, permission to beg, in order to procure clothes; and he allowed half their number to be absent three days at a time. This permission was of the greater advantage to them as the principal inhabitants of the town, through motives of compassion, were favourable to their rambles, which were prolonged sometimes to a whole month. All that they collected was divided in common. This kind of life they continued to lead, till the recall of the governor, who was appointed general of the royal troops, which is the second dignity in the kingdom. His successor greatly alleviated the situation of the Dutch at Saysiane, giving orders that they should be treated in the same manner as their countrymen at the other towns. They were relieved from all laborious occupation, and were obliged only to appear in review twice a month, to stay at home alternately, or at least to acquaint the secretary whither they were going, when they had permission to go abroad.

Among many other favours, this governor sometimes sent them victuals from his table; and, touched by their misfortunes, he asked them why, being so near the sea, they did not attempt to get to Japan. They replied, that they durst not run the risk of incurring the king's displeasure: adding, they were unacquainted with the way, and had not any vessel.—"What," replied he, "are there not barks enough on the coast?" The Dutch answered, with affected honesty, "that they did not belong to them, and that if they failed in the enterprise, they would be treated as robbers and deserters." The governor laughed at their scruples, little imagining that they held this language only to silence his suspicions, and that they were day and night contriving the means of procuring a bark. The author here observes "that the Dutch were revenged of the preceding governor. He held his dignity only four months, and being accused of having condemned to death several persons of different rank on insufficient grounds, he was sentenced by the king to receive ninety strokes on the shin bones, and to be banished for life."

Towards the end of this year a comet appeared; it was followed by two others which were both seen at once for the space of two months; one in the south-east and the other in the south-west, but with their tails opposite to each other. The court was so alarmed by this phenomenon, that the king ordered the guard at all the ports and over all the ships to be doubled. He likewise directed that all his fortresses should be well supplied with warlike stores and provisions, and that his troops should be exercised every day. Such were his apprehensions of being attacked by some neighbour, that he prohibited a fire to be made during the night in any house that could be perceived from the sea. The same phenomena had been seen when the Tartars ravaged the country; and it was recollected that similar signs had been observed previous to the war carried on by the Japanese against Corea. The inhabitants never met the Dutch without asking them what people thought of comets in their country. Conformably to the idea prevalent in Europe about that time, they replied, "that comets prognosticated some terrible disaster, as pestilence, war, or famine."

As they lived in tranquillity during the years 1664 and 1665, they turned all their attention towards making themselves masters of a bark; but, to their mortification, without success. They sometimes rowed along the shore in a boat which assisted them in procuring a subsistence. Sometimes they took a turn round some small islands to make such observations as might be of service to their escape. Their companions in the

two other towns came at times to see them, and they returned their visits when they could obtain the governor's permission. They preserved their patience amidst the greatest difficulties, being satisfied with the enjoyment of good health, and not wanting necessaries in the course of such a protracted slavery.

In 1666 they lost their worthy governor, who, as a recompence for his virtues, was elevated to the highest dignities of the state. During two years of a fortunate administration he had bestowed favours indiscriminately on all ranks, by which he acquired universal affection, the esteem of his master, and the respect of the nobles. He had repaired the public edifices, improved the ports, augmented the maritime forces, and performed other services tending to the general welfare of the kingdom.

After his departure, the town was three days without a governor, because custom allows that interval to the successor, to choose, with the assistance of a priest, a favourable moment for his inauguration. The Dutch were soon sensible of the change. Among other harsh treatment, their new master wanted to keep them constantly employed in throwing up earth. This they refused to comply with, asserting, that when they had finished the work which had hitherto been required of them, they were obliged to employ the rest of their time in procuring clothes and supplying their other necessities, that the king had not sent them to be engaged in such laborious occupations, and that if they were to be treated with such rigour, it would be much better to renounce the subsistence which was allowed them, and demand to be sent to Japan, or some other place frequented by their countrymen.

The governor replied with a threat, that he would force them to obey; but he had not time to execute his intentions, for a few days afterwards, being on board a very fine vessel, the powder-room accidentally took fire, and blew up the fore-part of the ship, by which accident five men lost their lives. He neglected to give information of this circumstance to the king, hoping the disaster would remain a secret. Unfortunately for him, the fire had been perceived by one of the spies, kept by the court, on the coast, as well as in the interior of the kingdom. The sovereign soon received the intelligence, the governor was immediately recalled, and, after receiving ninety strokes on his shin-bones, was condemned to perpetual banishment.

A new governor arrived in the month of July, but the Dutch did not experience that change in their situation which they had hoped. He required of them one hundred fathoms of matting a day. When they represented the impossibility of obeying this order, he threatened to find them some more suitable occupation. A disorder with which he was attacked prevented him from putting his design into execution; but, in addition to their ordinary occupations, they were obliged to keep the public square clear of grass, and to fetch wood fit for making arrows. Their wretched situation caused them to resolve to take advantage of their tyrant's illness, and at all hazards to procure a bark. They employed a Corean, who was under considerable obligations to them, to execute this commission. They desired him to buy them a bark, pretending they wanted it to beg cotton in the adjacent islands, promising him a large share of the alms which they hoped to collect. The bark was purchased, but the fisherman who had sold it, being informed that it was for the use of the Dutch, wished to annul the bargain, fearing lest he should be punished with death, if they made use of it to effect their escape. His apprehensions were, however, silenced by offering to double the price, and the bargain was concluded, to the great satisfaction of the Dutch.

As soon as they were at liberty, they provided the vessel with a sail, an anchor, cordage, oars, and many other necessary articles, resolving to set off in the first quarter of the moon, which was the favourable time. Meanwhile two of their countrymen, who had come to visit them, were detained, and they likewise sent to Nam-man, for John Peters, a skilful seaman, to serve as their pilot. Though the natives were not wholly without mistrust, yet the Dutch set off on the night of the 4th of September, as soon as the moon had set, and creeping along by the side of the city wall with their provisions,

which consisted of rice, a few jars of water, and an iron pot; they all, eight in number, reached the shore without being discovered. Out of the thirty-six Dutchmen who had escaped from the wreck of the ship, only sixteen remained alive; the eight who were left behind in Corea probably died there; at least, they were never afterwards heard of.

The first step taken by the fugitives was to fill a cask with fresh water, in a small island which lay within cannon shot. They then had the boldness to pass the ships of the town, and even the royal frigates, standing out into the channel as much as possible. On the morning of the 5th, when they had almost got out into the open sea, they were hailed by a fisherman, but returned no answer, fearful lest it might be the advanced guard of the ships of war, which lay at anchor at no great distance. At sun-rise, the wind dying away, they made use of their oars, but about noon a breeze springing up, they steered to the south-east, guided only by their conjectures. Having doubled the point of Corea in the course of the following night, they were relieved from all apprehensions of being pursued.

On the morning of the 6th, they were very near the first of the Japanese islands; and the wind continuing favourable, they arrived off that of Firando, where they durst not come to an anchor, being unacquainted with the road; and they had likewise heard the Coreans say that there was no island on the way to Nangazaki. Continuing their course with a brisk gale, they on the 7th coasted along a cluster of small islands, which appeared innumerable. At night they intended to cast anchor near a small island, but perceiving indications of an approaching storm, they determined to continue their course.

On the morning of the 8th, they found themselves at the place they had left the preceding evening, which they attributed to the violence of some current. This observation induced them to stand out to sea, but a strong contrary wind soon obliged them to return towards the land. After crossing a bay they came to an anchor, about noon, without knowing what country it was. While they were preparing their repast, some of the natives passed to and fro near them, but without speaking to them. Towards evening, the wind having lulled, they saw a bark with six men, each of whom had two knives suspended from his girdle rowing towards them. Upon this they weighed anchor with all possible expedition, and employed both their sails and oars in order to get out of the bay; but they were pursued, and soon overtaken by the bark. With their long bamboo canes they might have prevented the strangers from coming on board them, but perceiving several other vessels filled with Japanese, leaving the shore, they resolved to wait quietly for them.

The people in the first bark inquired, by signs, whither they were bound? in reply to which they showed a yellow flag, with the arms of Orange, crying "Holland! Nangazaki!" The Japanese directed them, by signs, to take in their sails, which they did. Two men then went on board, and asked several questions, which they could not understand. Their arrival had occasioned such an alarm on the coast that no person appeared without being armed with two daggers. At night a bark brought on board an officer who held the third rank in the island. When he had ascertained that they were Dutch, he informed them by signs, that there were six ships of their nation at Nangazaki, and that the island they saw was Goto, and belonged to the emperor. In this place they stayed three days, during which they were guarded with great care. They were supplied with wood and meat, and likewise a mat to shelter themselves from the rain, which fell in great abundance.

On the 12th, being furnished with plenty of provisions, they set sail for Nangazaki, under the conduct of the same officer who had come on board them, and who was charged with letters for the emperor. He was attended by two large and two small vessels. In the evening of the next day, they discovered the bay in which that town is situated, and at midnight came to an anchor there. Five Dutch ships were then lying in the bay. Many of the inhabitants of Goto, and other persons of distinction had shown them much kindness, and had refused to accept of any return. On the 14th they went on shore, and were received by the company's Japanese interpreters, who asked them

several questions, and took down their answers in writing. They were then conducted to the governor's palace, where they arrived about noon. When they had gratified his curiosity by a recital of their adventures, he greatly commended the courage which had induced them to brave so many dangers in order to obtain their liberty, after upwards of twelve years' slavery. He then ordered the interpreters to take them to the Dutch commandant, by whom, as well as by all the rest of their countrymen, they were very kindly received.

About the end of October, they left Nangazaki, and on the 30th of the following month arrived at Batavia. They presented their journal to the governor-general, who treated them with great kindness, and promised them a passage in some vessels which were then returning to Europe. They embarked on the 28th of December; and on the 20th of July, 1688, arrived at Amsterdam.

MELANCHOLY SHIPWRECKS OF THE IDA, AND THE JOHN MINTURN — EIGHTY LIVES LOST.

THE following are the particulars of the loss of two vessels, the *Ida* 550 tons (British barque), and the *John Minturn* (American vessel), the wrecks of which were reported at Lloyd's on Monday, March 16, 1846.

The *Ida* was commissioned by Government for the conveyance of stores to Canada, and left the river on the 15th of last December, for Portsmouth, where she took in the stores, and finally sailed for St. John's, New Brunswick, on the 4th of January. There were on board, besides the crew, (eighteen in number, including the master, Captain William Chamber), thirty eight passengers, male and female. After her departure nothing was heard of her until Monday last, when the intelligence of her fate was received. A letter stated to be written by Mr. Sherwood, the British Consul at Portland, thus describes her loss:—

"On the 26th of January, being in lat. 44 N., long. 52 30 W., the barque broached to, while scudding before a severe gale from S.S.E., and was thrown on her beam-ends. Orders were given to cut away the foremast, but before they had time to do so, the barque righted, full of water. The captain then ordered the long-boat to be got under the lee, the other boat having been lost. The passengers immediately rushed into her promiscuously, followed by the captain and crew; to the number of forty-five. The painter parted and the boat dropped astern. The land bore N.N.E., distant about thirty leagues by observation. The boat got about two cables length from the vessel, when she shipped a sea, filled, and all in her perished. The mate, nine men, and one young woman remained on the wreck, in the tops, from Monday morning until Friday morning, when they were taken off by the schooner *Three Sisters*, of Eden, when they were landed much frozen and in destitute circumstances, the mate being the only one able to travel."

The *Ida* was not registered at Lloyd's, and the inquiries made to ascertain who were her owners, and to know the names of the passengers, have not been successful.

The fate of the *John Minturn* and her crew and passengers, amounting to fifty in number, was of a most deplorable character. The ill-fated ship, a newly-built vessel, more than 500 tons burden, was bound to New York, having, besides a number of cabin and steerage passengers several shipwrecked seamen, who had been picked up on the voyage. Up to Saturday, the 14th ult., the weather was most favourable for the voyage, and they were within three days' sail of her destination. Soon after sun-set on that day, however, there came on a stiff breeze from the eastward, which, as the evening advanced, greatly increased. The ship stood N.N.E. till 12 o'clock, by which period the wind had increased to a gale. Her course was then altered to the south, and was kept till daybreak. When the shore was discovered, it appeared to the leeward, about two miles distant. The

tempestuous weather in the meantime had increased considerably. Every sail was torn almost to ribands by the violence of the wind, and the ship rendered unmanageable.—On the land being perceived, every nerve was exerted to keep her off, but unfortunately it was impracticable, as the gale blew direct on the coast, and gradually drifted her inwards, and at half-past nine o'clock she struck with tremendous force. The succeeding wave raised her, and dashed her with violence on the rocks, when she broke, but did not separate. The horror and confusion at the moment of her striking were terrific, and when the worst was known every effort (says one of the survivors, a seaman named King) was made to preserve the lives of those on board, numbering fifty-one, including passengers. The masts were cut away to ease her, but with little effect, as she continued to strike fearfully. The yawl was then cut loose from the stern davits, but the surf ran so high that before she could be got round she unfortunately swamped, and became useless. The captain, with his wife, son, daughter, servant, and cabin passengers, took refuge in the poop cabin, the only place where they could be sheltered from the violence of the sea, which was pouring over them in all directions. By great exertion the long-boat was cast adrift, and launched over the bows. Five of the crew and a steerage passenger, a Portuguese, jumped into her, and a long coil of line was stowed in her stern-sheets, by which it was intended to carry a hawser ashore, and she was then shoved off. On approaching the land, the men found that it was impossible to tow the line through the breakers, in consequence of the great pressure on the boat. They resolved on cutting it away, that being the only chance of reaching the shore. All hope was now lost of saving those on the wreck. Their sufferings are described as being truly frightful. Being exposed to the full violence of the sea, and a piercing cold wind, ice soon formed over the surface of their drenched clothing. In this state they remained until noon, when those who were alive—for some had already sunk from their awful suffering—went forward to the fore-castle, when they lashed themselves to prevent the sea washing them from the wreck. It is supposed that the captain, his mate, and the pilot, remained in the poop, for they were not seen afterwards; and in the course of an hour the ship parted amidships, and the afterpart drifted away into the sea. The remaining portion of the wreck then floated considerably in shore. In the latter part of the day another portion of the wreck separated, which carried away the half of those who were lashed to the fore-castle, all of whom instantly perished. The rest lived a few hours afterwards, till by the combined effects of the intense frost, and the surf beating over them, they gradually sunk and expired. Between eleven and twelve o'clock at night a boat was put off to rescue those who were clinging to the other pieces of the wreck, consisting of two mates, two of the crew, and four of the steerage passengers; and, after almost insurmountable difficulties, they were preserved, although, as may be readily conceived, reduced to the last stage of exhaustion. In the wreck of the fore-castle sixteen bodies were found lying in a cluster round the stump of the foremast, and it seemed as if the unfortunate creatures had huddled themselves together for warmth. Among them could be recognized the captain's wife, his children, and a female steerage passenger, with an infant at her breast, and so firmly grasped that they could not be separated. Owing to the quantity of ice that covered the wreck, the task of removing the bodies that night was given up, in consequence of the extreme danger attending it. On the following morning at daybreak they were brought ashore, when the beach was lined by the inhabitants of the neighbouring villages. Amongst them were a desperate gang of wreckers, who plundered every body that was washed up from the other pieces of the wreck. Several of the passengers were known to have had a large amount of money about them. Up to the last accounts, thirty-two bodies were found. The ship had entirely gone to pieces, a portion of her bottom only remaining, which was embedded in the sand by the weight of the pig-iron which formed part of her cargo. She was only partially insured.

THE BATTLE OFF LA HOGUE.

THE year 1692 was signalised by some very important events, both by land and sea. The reduction of Ireland made the French sensible, though too late, of their impolitic parsimony in losing a kingdom which had long kept alive their favourite schemes of anarchy and contention. During the last summer, instead of annoying others, as they were accustomed to do, they had been obliged to act merely upon the defensive, both by sea and land. The French saw William relieved from the impediments which the civil war of Ireland had thrown on his continental engagements, and the parliament had voted him large supplies, to enable him to prosecute the war with vigour, and particularly to make France and Europe sensible that the maritime powers of England were still lords of the sea, by fitting out early such a fleet as should keep the enemy in awe, while a descent was made on the coast of Normandy, which invasion the king in his speech to parliament glanced at. The consideration of the intrinsic weight of England in the scale of Europe, and of the dignity which the rank of king bestowed on the Prince of Orange, all concurred to convince Louis XIV. that he could not venture too much upon the chance of dethroning King William, and led him to resolve to make one great effort for an invasion of England, in favour of James. Nor were there wanting favourable circumstances to encourage such an attempt. Dissatisfactions were visible in all parts of the three kingdoms; and to such as live under governments where freedom of speech is prohibited, the clamours of a few factious spirits are considered as expressive of the sentiments of the people at large. Many officers in the army were disgusted, because they thought their services overlooked and unrewarded: in the fleet many of the officers and seamen indulged a partial fondness for their former superintendent, and who, whilst in that situation, had affected to be called "the seaman's friend." Those among the Irish that had supported the principles of the revolution, had taken great offence at the concessions which had been made in favour of the vanquished rebels, who had exercised such acts of cruelty and rapine, by the treaty of Limerick. They complained that they themselves, who had suffered for their loyalty to King William, were neglected, and obliged to sit down with their losses, while their enemies, who had shed so much blood in opposing his government, were indemnified by the articles of capitulation, and even favoured with particular indulgences. The Scotch were not in a better humour, on account of an act of great severity which had been exercised upon a disaffected clan at Glenco. In England the people grew weary of a continental war, which had been carried on at a vast expense; to provide money for which, heavy taxes had been imposed; and these new imposts were rendered perpetual, by large sums having been borrowed on the security of the yearly

produce of these taxes. Although the liberty of England depended eventually on the reduction of the power of the French monarch, yet as the English saw not his dragoons at their doors, they believed themselves exempted from the effects of his power. Such were the discontents which had seized the three kingdoms; nor was there more unanimity and cordiality among those who composed the administration. Halifax, Godolphin, and Marlborough, from different causes, had become disgusted with the king. The latter of these had been deprived of his employments soon after he had done the kingdom such signal service in the reduction of Cork and Kinsale. This displeasure of his prince he was supposed to have incurred from the intrigues and cabals which his wife carried on, who being the favourite and confidant of the princess Anne, had fomented a bitter enmity between that lady and the queen her sister. Admiral Russel was, about the same time, drawn into the cabal, though he seems at no time cordially to have adopted the scheme; the princess Anne, at length, joined herself to the disaffected party. A large fleet, which was to consist of seventy-five ships of the line, was to sail from France, to countenance and support the malcontents in England, and bring over the excluded monarch.

[BOAT ENGAGEMENT.]

When the preparations in France were in great forwardness, James published a declaration, which he found means to have very generally dispersed over the three kingdoms, in which he promised that he would, in case he was restored to his throne, confer all ecclesiastical preferments on members of the Church of England solely; but with respect to the assurances he gave for securing the liberties of the nation, his expressions, though plausible, were vague and indefinite.

With a view to entice all men by hopes of impunity, the declaration contained a general pardon, with a very few ex-

ceptions. Lord Marlborough was, at his own desire, together with the Duke of Ormond, excepted from the pardon, the more effectually to conceal their secret connexions. But the Lords Godolphin, Halifax, Shrewsbury, and Admiral Russel, took not the same precautions, because they had not the same depth of dissimulation.

These designs were not long unknown to King William, and immediately every step was taken to oppose and counteract them. The naval force of England and of Holland was collected in their respective ports, and cruizers sent out to observe every motion made in those of France. All the ships at home were equipped or repaired. Five new ones, of the largest size, were built, and with so much despatch, that one of them, of one hundred and six guns, went to sea the tenth day after she was launched. The command of both navies was committed to Admiral Russel.

Thus, during the spring, the three greatest maritime powers of the world exerted every nerve of naval strength, and the rest of Europe stood amazed, and anxiously expected the event of an expedition, which probably would determine, in

whose hands the dominion of the sea should be afterwards lodged.

Several English regiments were recalled from Flanders, whilst others, that had been ordered there were stopped on their march. The militia was raised all over the kingdom; many suspected persons were secured, proclamations issued against others, and all papists removed ten miles from London: a camp was marked out between Petersfield and Portsmouth: orders were given to drive the cattle fifteen miles up the country, upon the sight of a French fleet: Scotland was put into the best state of defence. Ireland alone was left to its fate, because it was not thought advisable to take any steps for disarming the natives, or give any other signs of doubt about their loyalty.

The conduct of Russel in this season of intrigue, was full of duplicity; nor can it be settled, even at this distance of time, whether he really entered into the views of James, or, by pretending an attachment to him, meant the more effectually to serve the reigning prince, by disclosing the designs that were forming against him; or that, by keeping fair with both parties, he meant to serve himself, whichever should be successful. In the correspondence which he held with James, he entreated him to prevent the two fleets of England and France from meeting, and frankly declared, that as an officer and an Englishman, it behoved him to fire upon the first French ship that came in his way, even though he should see that prince himself upon the quarter-deck.

One circumstance is extremely remarkable in the transactions which we are now relating, which is, that whilst James distrusted the sincerity of the men on whose assurances he proceeded, William employed some, whose insincerity he knew. That the king had intelligence of his father-in-law's affairs is plain, from his behaviour to Lord Godolphin, after the designs of France had been frustrated. He upbraided that nobleman with corresponding with the late king, who peremptorily denied it: the king thereupon put a letter into his hand, which Godolphin had written to James, and which had been stolen from that prince's cabinet; desiring him, at the same time, to reflect upon the treachery of those in whom he confided, and the moderation of him he meant to betray. This generous conduct ought to have attached the minister ever after to his master. Although Marlborough, who had been before dismissed from his employments, was, about this time, sent to the tower, yet, not long after, he was restored to his posts, and entrusted with very important services. There is great reason to believe, that Rear-Admiral Carter received private orders from the queen, to cultivate his connexions with James, in order to discover the designs of that prince, and by betraying, to disconcert them.

Louis, elated with the dissensions which prevailed in England, and which were represented to him as far more favourable to his designs than they really were, sent orders to Count Tourville, who had the command of the grand fleet at Brest, to sail immediately, before he was joined by the Toulon squadron under Count d'Estree, and fight the English fleet, in order to clear the way for the transports which were to follow him. There were then two considerable English squadrons at sea; one under the command of Sir Ralph Delaval, who was employed to escort a fleet of merchantmen home from the Mediterranean; the other, under Rear-Admiral Carter, which lay between the Isle of Jersey and the French coast. The Dutch fleet was still in harbour, and Russel, with the great body of the English fleet, still lay in the river. Tourville made repeated efforts to sail out of Brest, but was as often driven back. Russel was indefatigable in forming a junction of the whole strength of both States. He therefore plied it down through the sands with a very scanty wind, contrary to the opinion of many of his officers, and all the pilots, who were against hazarding so great a fleet in so dangerous an attempt; and yet, to this bold stroke of the admiral, was owing all his following success. On the 8th of May, the fleet anchored safe off Rye; proceeding from thence to St. Helens, he was there joined, on the 13th, by Sir Ralph Delaval and Rear-Admiral Carter, with their squadrons. The Dutch fleet coming up soon after, the important junction was happily effected,

whereupon James's agents in England sent notice of this event to the French court, and orders were despatched from Paris to countermand Tourville's sailing. But these orders came too late, the fleet had already quitted the harbour, and were stretched out to sea.

The combined fleets of England and Holland, formed a naval force greater than had ever covered the ocean; but it was much suspected in England, that several of the officers were disaffected, and meant to betray the cause which they professed to defend. The queen, who was then regent, directed Lord Nottingham to write to the admiral, to assure him that the queen would change none of her officers, and that she imputed the reports that had been raised against them, to the contrivance of her and their enemies. Upon this, the flag-officers and captains signed a very dutiful and loyal address, dated from on board the Britannia, at St. Helens, May 15th, which was presented by the lords of the admiralty to the queen, and inserted in the Gazette, with this judicious and gracious answer: "I always had such an opinion of the commanders, but I am glad this is come to satisfy others." The queen took another prudent step: instead of prohibiting James's declaration being read, she ordered it to be published, with an answer to it, which was drawn up by Lloyd, one of the seven bishops that had been sent to the tower: thereby submitting her title to the reason of her subjects, instead of appearing averse to having the point canvassed.

On the 18th of May, 1692, the combined fleets sailed. The French fleet, of about fifty ships of the line, was at that time at sea in quest of the English, and was descried next day, at three o'clock in the morning, about seven leagues from Barfleur. As the French were many leagues to the windward, they might easily have avoided an engagement; and all the flag-officers advised Tourville to retire, but he rushed on. Russel's motions filled him for some time with hopes, for Russel's fleet was not in order until eight o'clock; he lay by, with his fore-topsail to the mast, until twelve o'clock, and allowed the enemy to come within half a musket-shot of him, before he flung out the bloody flag. During this interval, the bold advance of Tourville, with so unequal a force, together with the tardiness of Russel, raised doubts and anxieties in many of the English captains; they looked around to see when their own officers were to rise up against them, or when the ships next to theirs were to quit the line, and sail over to their enemies.

Tourville, who was in the Royal Sun, carrying one hundred and four guns, the finest ship in Europe, passing all the Dutch and English ships which he found in his way, singled out Russel, and bore down upon him. But, by the reception which he got, he was soon convinced of his mistake, in thinking that an English admiral could, in consideration of any interest upon earth, strike to a French one. Yet, though conscious of the inferiority of his fleet, he was ashamed to abandon a situation which his officers had in vain advised him to avoid. And the rest of the admirals, and the captains, disdaining to abandon their commander, joined in the action as fast as they came up, and maintained it, not so much hoping to gain honour, as striving to lose as little as they could. The engagement between the two admirals ships lasted an hour and a half, and then Tourville was towed off, being obliged to retire, from the damage which he had sustained in his rigging; but five French ships instantly closed in, and saved him. The battle, in the meantime, went on, in different parts, with uncertain success, from the vast number of the ships engaged, which sometimes gave aid to the distressed, and, at other times, snatched victory from those who thought they were sure of it. Alemond, the Dutch admiral, who was in the van, and had received orders to get round the French fleet, in order that no part of it might escape, attempted in vain to obey; and a thick fog, at 4 o'clock in the afternoon, separated the combatants from the view of each other. In about two hours, the fog cleared up. It was then observed, that Tourville, instead of repairing his rigging, had withdrawn to the rear, and that the French line was broken in many other places. Russel, certain that Tourville would not have retired unless it had been resolved that his fleet was to fly, made a signal to chase from all quarters without any regard to order. In one of the engagements during this chase, Rear-

Admiral Carter was killed, giving orders, with his last breath, to the officer next in command, to fight the ship as long as she could swim: a proof either that his correspondence with James had been maintained with a view to deceive him, or that the last passion in an Englishman's breast is the love of his country. The running engagement of the afternoon was, like the regular one of the forenoon, interrupted by a fog, and afterwards by a calm, and in the end it was closed by darkness.

During the night, the two fleets off the shallow coast of France anchored close to each other; yet the impetuosity of some English officers carried their ships through the French fleet, and Sir Cloudesley Shovel, with his division, had got between Tourville's squadron and the rest of the French fleet: so that the ships of the three nations lay intermingled with each other during the night, waiting for the morning with impatience, uncertain whether they were amongst friends or foes, and judging of their distances from other ships, only by the signals of distress which they heard, or the flames of the ships which were on fire.

The arrival of the morning brought a renewal of the chase. But the French fleet was now reduced to thirty four ships; four having taken fire in the engagement, some being blown up during the night, and the rest having escaped. This day was signalled by no engagement, but by a spectacle far more important, that of the English fleet driving the French one along their own coasts, and in the sight of innumerable crowds of their countrymen upon the shores. The French, in their flight, were met by a fresh squadron of sixteen ships, which were coming to join them: but these ships perceiving the fate of their friends, turned to flight, and shared in that disgrace which they could not avert. Fogs, calms, tides, and the veering of winds, saved France from the vengeance of England and Holland for one day.

Upon the third day, Tourville's ship, the *Royal Sun*, with his two seconds, one of ninety, and the other of eighty-four guns, together with some frigates, took refuge upon the coast, near Cherbourg, and eighteen more of the largest ships followed their example, near La Hogue; the rest being more fortunate, drove through the race of Alderney. Russel ordered the main body of the fleet, under Sir John Ashby, to pursue that of the enemy; he left Sir Ralph Delaval, with one squadron, to destroy the ships at Cherbourg; and stationed himself, with another, to confine those which were at La Hogue. As the art of sailing was not so much improved then, as it has been since, Ashby durst not pursue enemies who pointed him the way through a passage, which another admiral, with a squadron, and a great fleet of transports, went through, in our time, with ease, and without the flying sails of an enemy to direct him. But Delaval, next day, burnt the three ships, together with the frigates, at Cherbourg.

And now, upon the fifth day, some of Delaval's ships having advanced, and some of Ashby's having returned to join Russel's squadron, Russel made preparations to destroy the enemy's ships at La Hogue, which were now reduced to thirteen, five of them having, the day before, in the hurry and confusion, made their escape eastward. The French had employed all the interval of time which Russel had left them since their ships had taken refuge, in making provision to defend them. The ships themselves were drawn up as far upon the shallows, as tides and cables could bring them; they were covered with the forts De Lissett and De La Hogue; platforms were raised on shore, and planted with all the artillery of the army: numbers of chaloups, filled with officers and men, lined the shoals; behind stood all the French army ready drawn up; and upon a height between the ships and the army, King James, the Duke of Berwick, Marischal Bellefonde, Tourville, and other great land and sea-officers, placed themselves to behold the action, and to give their orders. All precautions were taken, except one which James had suggested, and which was the best; for when he saw the French seamen disheartened by defeat, flight, pursuit, and the necessity of taking refuge, he foretold that no good could be expected from them; and advised, but in vain, that a number of the regiments, and of artillery-

men, should be put on board the ships, where they could fight with the same steadiness as if they had been in land-castles, because the ships were aground.

Russel gave the charge of the attack to Vice-admiral Rook, who advanced with several men of war, frigates, and fire-ships, together with all the boats of the fleet. But he soon found, that the men of war could not get within reach; that the frigates could only advance so far as to cover the attack; and that the whole service depended upon the boats. In this situation he gave only a general order for the boats to advance, surround the enemy's ships, and board or burn where they best could; leaving all the rest to the spirit of the seamen. The seamen strove with each other, whose barge should be foremost, and singled out the particular ships they were to attack, according to their fancy, and sometimes as a merry mood directed them. They made use of their oars alone as they advanced, without firing upon the platforms, the chaloups, or the vessels aground: so soon as they got to the sides of the ships, throwing away their muskets, they gave three huzzas, and scrambled up the heights above them, with their cutlasses in their hands, and many without any arms at all. Some cut the rigging; others set fire to the vessels; others pointed the guns of the ships against their own chaloups, platforms, and forts. Few assaulted the mariners within, because they accounted the ships to be their only foes. From this circumstance, the French mariners often went off undisturbed in their boats, from one side of a French ship, while the English had entered, and were destroying it, upon the other. But, at last, tired with doing mischief in detail, the assailants all joined together to burn the enemies ships; and having set fire to them, descended, with the same huzzas with which they had boarded. In this way they burnt six the first day. The rest, together with a great number of transports, and ammunition ships, shared the same fate the next morning; the enemy making little resistance, because they saw it was fruitless. Few prisoners were taken; for the officers were possessed with the idea of the seamen, that the destruction of the ships was their only object; and some of them even made apologies to government for having incumbered themselves with prisoners.

Russel ordered solemn prayers and a thanksgiving through all his fleet, for the victory. In England a present of thirty thousand pounds was given by the queen to the seamen, and public funerals were bestowed on those officers whose bodies were brought on shore, particularly Rear-Admiral Carter, and Captain Hastings, of the *Sandwich*. In France, James slowly and sadly returned to bury the remembrance of his greatness in the convent of La Trappe. All his attempts, and those of his family afterwards, to recover the throne of their ancestors, were either disappointed by the insincerity of French friendship, or were the mere efforts of despair.

After a particular account of the first day's engagement, the Marquis de Quincy proceeds thus: "As to the advantage gained in this fight, it must be allowed us, that Count Tourville did not lose so much as a ship, nor had he any that were disabled; while, on the other hand, the enemy lost two, one sunk, and the other disabled. The rest of their ships were as ill-treated as his, besides their spending abundance of fire-ships without any effect. Thus, in spite of the prodigious inequality of the fleets, the success was at least equal in the first day's engagement: it is true, it happened otherwise in the succeeding days, in which, however, there fell out nothing that ought to tarnish the reputation of France at sea, since, while there remained any room for courage to exert itself, they not only acted gallantly in their own defence, but made themselves respected by their enemies. What afterwards followed was the effect of unforeseen accidents and inevitable misfortunes."

Yet, after this fine flourish, the marquis fairly confesses the French flags ran for it, and that their other ships did the best they could to follow them; but partly through the want of safe ports on their own coasts, and partly through the vigorous pursuit of the English, they were burnt and destroyed in the manner before related. Neither doth this writer, or any other of the French historians, pretend to diminish their own loss, or to

say that our admirals did not do their duty. On the contrary, they ascribe the safe retreat of part of their ships into the road of St. Maloe's, to their lucky passage through that dangerous strait.

THE COAST GUARD.

[BY THE EDITOR.]

AT D—, on the coast of Kent, there was, some years since a commodious cave, which that phenomenon nature, had hollowed out and placed in the centre of a rock, which reared its tall, majestic head, on that coast. A company of smugglers were depositing some of their unlawful goods in a hole, which they with much labour and difficulty had been enabled to cut in the self-same rock, when from a peculiar hollow echo, which followed a blow given against the massive wall, the practised ear of one, discovered that they had a cavity, similar to the one they had been so many years at work upon, adjacent to them. His announcement was greeted with a loud roar of laughter; and more than one made assertion, that if there was any want of proper substance near them, it was most certainly and assuredly his head that was deficient.

It needed something stronger and more pungent than either sarcasm or jest, to persuade the old Scotchman, (who had been for many years a mason before he became a free-trader,) that his ear was at fault—so firmly did he persist in the assertion he had made, that the scoffers who had relied on his judgment in the hour of danger, yet refused to listen to him, when he so resolutely expressed his conviction that he was right; at length were induced, though, we must confess, more with the idea of proving the old man wrong, than of making any discovery, to cut still deeper in—to their great astonishment, and somewhat to the chagrin of some who had been unmercifully sarcastic on "Auld Reekie," which was the name he bore among them, they found that both his judgment and words were correct. They had too little spleen—were too free hearted, not to express a joy at a discovery, which removed them from the fear of all, or any, government spies, or preventive officers in the world.

Many a keg of brandy, and many a bale of silk, had found hostel there, and with all the acuteness of the revenue officers, not a single gleam of intelligence had they ever gained, though they had their suspicions that they were lurking about that spot. Their security only served to render them more bold and audacious than ever, and one trespassing too far on the government property, was captured by the coast guard, tried, sentenced, hanged, and gibbeted, as a warning to all evil-disposed persons.

His comrades, as stern as true of heart, assembled at the gibbet's-foot, and after releasing the corpse from its ignominious confinement, swore to have fearful revenge.

One night there stood in the Smuggler's Cave, a man wearing the government dress.

"Answer, I say!" shouted the stern old Scotchman, "if you give death to a man for getting his bread by fair and honest means?"

"Fair and honest means!" sneered the captive.

"You speak truly, man," retorted the other; "by fair and honest means, in good truth; for, if a blasphemous government levy taxes on God's creation, why should they, who, rejecting what's foul, unfair, and unreasonable, and give an honest pennyworth for an honest penny, suffer death for what's only true and just—answer that?"

The man made no reply.

"You cannot!" cried the old man, in stern triumph; "you cannot! For a little filthy lucre, which at the best is poor payment for hard labour; you will play the spy,—the assassin."

The man, who seemed unmoved by the glaring eyes that everywhere met his own, and the fearful fate which the revengeful un pitying faces of his captors told him awaited him, repeated the words "spy, and assassin," in a tone of bitter scorn.

Auld Reekie noted the emphasis, "Did the man whom you

betrayed and murdered, ever do harm to you or yours? Had he washed his hands in the heart's blood of your nearest and dearest loved relatives, could you have treated him worse? Did you not follow him like a blood-hound, as though he was a murderer, and have you not given him a murderer's death? What do you call this?"

"Duty," answered the man, firmly.

"Duty!" repeated the smuggler. "Aye duty—true, that's the word. 'Twas duty was it, that prompted you to take his life? then we'll wash out the register of his death, which has been written on our brain in letters as imperishable as eternity, in your blood; and call it by the self-same fine sounding name, too—what think you of that? what say you to that? my dutiful man?" and as the bitter sneer crossed the old man's lips, it mingled with a no less bitter laugh.

"That I am ready to die."

"Ready to die, are you?" cried one, as he turned his eye, glaring like a wild beast's, towards their chief, and inquired "shall I dash his brains out with my hatchet?"

"No," shouted the old man imperatively, as several advanced, brandishing their weapons towards the coast guard, "back, I say, one and all! he shall die as his victim died—by the cord."

"A handy fellow can turn his hand to anything," cried another, gleefully, jumping upon the rude oaken bench, which served the purpose of table by day, and bed by night; "and if I can't give this dog his quietus, may the devil give me mine!"

A spasm contracted for an instant, the rough face of the prisoner, as the image of his wife and child, flitted before his imagination, 'Twas but an instant, though, ere his eyes met again those of his enemies, and the duty of which he had spoken, and which nerved him in this trying hour, predominated, and the love of a husband and of a father, was cast aside for that.

"I am ready to die," he repeated with more firmness than he had before evinced, "any death you like. If there was a fault in punishing your companion so severely, I am here to atone for it: and on that government, whose servant I am, and whose injunctions I have sworn to obey, the fault must rest. If it be a sin, I cannot charge my soul with it. But take the warning of a man on whom the shadow of death has fallen; and whom it will not benefit to lie now, that your retreat is known; you have been tracked."

"Ha! ha! ha!" laughed Auld Reekie, "let them come—let them come: the more the merrier: we'd have such a funeral pile! Do you see yon barrels that are stacked there—? their contents are gunpowder. A shot from this pistol would—"

Before he could finish his sentence, the weapon was wrenched from his grasp, by the coast-guard, and in a moment the shot had struck the gunpowder, and all perished together.

THE SAILOR.

BY J. BRADSHAW WALKER, AUTHOR OF "SPRING LEAVES OF PROSE AND POETRY," &c.

Ever away on the stormy sea,
And free as the wild winds let me be,
With a flowing sail in every clime,
Thus, thus, let me pass life's glowing prime:
Above or below, like a tar to roam,
For the ocean's a gallant sailor's home!

Where the brave can only find delight,
Gliding away through the starry night;
When dolphins play in the moonbeams clear,
Or morning wakes from an eastern tear;
Still lightly we sweep o'er the snow-white foam,
For the ocean's a gallant sailor's home.

Where the loud winds solemn concert hold,
O'er waves that are dyed in liquid gold,
I love to sail with a dauntless crew,
Come war or peace, to my country true.
Above or below, like a tar to roam,
For the ocean's a gallant sailor's home.

THE LISBONESE.

It is many years ago, yet the recollection is in my mind as fresh as the occurrences of yesterday. I was standing on the terrace in front of Greenwich Hospital, looking at the wrecks of the gallant fellows who had, for so many years, borne their country's flag through "the battle and the breeze," now hobbling about with such limbs as fate had left, or the doctor supplied them; and exercising all my ingenuity to trace, through their quaint sober uniforms and venerable grey hairs, the fiery heroes of a thousand combats. The struggle in the Peninsula was then at its height, and a vessel with the Portuguese colours was passing up the river. I made some remark on the subject to an old pensioner who was standing by me. He was a very old man, with a quiet expression of benevolence in his face, and something in his manner that seemed to stamp him a shade above the common sailor. "Ah, sir!" said he, "I have seen strange things in the country she came from! I was at Lisbon in the great earthquake in fifty-five." "Indeed!" said I. "That was an event not to be forgotten." "It was, sir; but from more causes than the earthquake—to me, that is—" "How so?" I inquired. "Why, you see, sir, it's quite a story; but, poor thing, I like to talk about her; so, if you'll sit down on this bench, you shall have it from first to last."

"As I told you, I was in the city when the earthquake began, and a terrible thing it was to be sure. The houses swayed up and down, just for all the world like a ship at anchor in a heavy swell; and then it got worse and worse till down they came, first one, then another, then a whole street; and the poor creatures ran out by thousands, and the walls fell and buried them, and the earth opened and swallowed them;—and the noise was like that of the last day—crashes of ruin and destruction—shrieks, groans, and prayers, all mixed up in one horrible din, till you could not tell which was the loudest. Many a voice was then lifted to Heaven that never prayed before—and the unfinished prayer was buried with them in the openings of the earth or the ruins of the houses. Some went mad, and stood and laughed, as the roofs nodded about them—and the laugh was stopped as the prayers had been. Some stood still with children in their arms, hugging them to their bosoms with their heads bent over them, till they found a common grave. And then the fire began; for the tapers at the altars, and the lights in the houses, set fire to whatever fell on them, till a thousand flames completed the horrors of that dreadful day. For my own part, staggering along the heavy streets, and at every other step, thrown on the ground, with bricks and stones rattling round me on all sides, I scrambled, I did not know where. It was not exactly fear, for a British sailor, you know, sir, is not used to lose his bearings from such a cause; but the darkness, and the dust, and the smoke made such a confusion, one born in the place, could not have found his way, to say nothing of a stranger. However, as I was saying, scrambling to make my way somewhere—anywhere, indeed, where there was fresh air, and no houses; I ran against a lady with a child in her arms. She was young, and as beautiful a creature as ever I set my eyes on. She hurried past me, and, the next moment, the earth gave a shudder, and I heard a scream louder than all the uproar. I thought it must be she, and turned round; when I found the earth had split in a great chasm between us, even on the very spot where, a moment before, we had both been standing; and there she was, balancing upon the brink of it, with the child held up above her head. The ground was crumbling under her, but where I stood it was still firm. I held out my arms—she said something to me in Portuguese which I did not understand, but I knew she was asking me to take care of the child; and I told her I would—I swore it! Nature, you know, sir, is alike in all languages—so she understood me, and giving one wild kiss to the little one's lips, with desperate strength she threw it across the chasm. She saw the child was caught in my arms, and she clasped her hands, and threw up her beautiful eyes to Heaven, when a fresh shake of the earth tumbled down a large building behind her, and she rolled with it into the

yawning gulf, never to rise again in this world. Perhaps you may imagine what I felt—what I did, I do not know; but, after an hour of wandering and escapes, more than I could count, I found myself in the open country, and, for the present, at least, safe. I went on my knees to thank God, and bade the little creature do the same; but she did not stir, and, as I laid her on the grass. I found a deep wound on her head, and the blood clotting her long beautiful black hair; but still she breathed. To make short of a long story, we got at last on board the ship again, and the doctor, after examining the wound, said there was no harm done, and that she would soon be as well as ever. She was a lovely little girl, of about six years old, and as we were to sail directly, they wanted to send her ashore again, to try if any of her family could be found; but I thought of the vow I had made to her poor mother, which I am sure she understood; and I determined not to part with the sick wounded little thing, that I loved now as if she had been my sister; so I spoke to the captain, who was a very good man, and, moreover, had children of his own, and he agreed to let me take her to England with us. Well, sir, home we got, and it was astonishing how soon the little darling began to speak English. You could see she liked it, bless her! And now, as she was a young lady—for she said her father, who had died about a year before, was Don somebody or other—it was such a long name, we never any of us could speak it, so we told her to call herself Jackson, which is my name; but, somehow, she always liked her long Portuguese name best, so you see, sir, how early prejudices grow—in foreigners, that is to say. Well, as I said, seeing she was a young lady, and we had undertaken her education, I thought we ought to do it as genteelly as we could; so I took her to a cousin of mine, who kept a public-house in Wapping, a very nice motherly woman—poor Sally!—she's dead and gone too, long ago! Well, sir, she treated her as if she had been her own child; and because she thought the company of the house was too rough and rude for her, she sent her to a very genteel boarding-school in Mile-end, and it was wonderful how the little thing took to her learning; so that when I came back from my next voyage, she could not only speak English quite well, but read any book she saw. And there I found that with her little pocket money she had bought Portuguese books, and, at all her spare time, used to be poring over them instead of playing like other children. Poor thing! it was the only tie that was left between her and her native land; for it is a strange thing, sir, but I've often found foreigners, even Frenchmen, love their own country just as well as if it had been old England! Well, sir, years passed on, and she was sixteen, and a sweeter or more beautiful creature you never set eyes on. She was as kind and gentle as an angel, and so fond of me! and I am sure I loved her better than my whole life—not in the way of sweetheating, for though I was a pretty looking fellow enough then, nobody could for a moment forget that she was a young lady. But then I had saved her life, you know, sir—and we used to talk about her poor mother that was gone; and then she made me learn a little Portuguese, that she might speak in her own tongue to me; for her father's land seemed always uppermost in her thoughts. At last I joined a merchant ship that was to sail for Lisbon, and then the long nursed wish of her heart came out, and she begged so hard to go with me, that I could not find courage to refuse her, but got her a passage in the vessel. And oh, sir! the grief that there was among the women, when she went! You know, sir, they are kind, soft-hearted creatures, and I thought they never would have done crying. However, go we did, and a pretty voyage we had. When we came within sight of Lisbon, I shall never forget how the poor dear looked. She was as pale as a ghost, and trembled all over; and while her eyes seemed to devour the shore, her lips were white and quivering, murmuring Portuguese words that I could not catch the meaning of, except now and then her mother's name. Well, sir, to make short of it, we landed, and I got leave to go with her over the town, to see if we could find any body we knew. Poor dear, I thought she would have fainted when she set her foot on the land, she trembled so; for she was a weak delicate little creature. But

oh—what a change we found since we left there! Where the earthquake had been, there was the grand Black Horse-square, and all the straight regular streets that the Marquis of Pomal had built, and we did not know where we were. However, she soon began to ask, and found that her uncle, Don —, confound his long name, I never could think of it, and I am sure it is not worth remembering—but he was living in a grand house they pointed out to us—so there we went. Well, sir, we found him with a parcel of fine servants round him, but we did not care for that, and we told him who we were: and would you think it, sir—he would not believe us! The fact was, it did not suit him to believe us; for, supposing her dead, he had seized on all her property, and was enjoying it. So the old scoundrel called us impostors—called me and his own brother's beautiful child impostors, and threatened to send for a constable! You may guess my blood began to rise, and as for her, poor thing! she stood speechless and trembling; for, in her innocence, she had never dreamt of this, nor, to tell the truth, had I either. Well, just at this moment a great old mastiff dog came into the room. 'Oh! Basto!' cried she, bursting for the first time into a flood of tears, 'I am sure you don't forget me!' Would you believe it, sir?—the old brute looked at her and growled—did not know his old master's child! No English dog would have done that, sir! However, she was so overcome at the sight of her father's old dog, that she threw her beautiful body on the ground, and clasping her white arms round the beast, hugged him to her heart. He bit her, sir! I can hardly speak it—but he bit her! I saw his teeth enter her soft flesh—I saw the blood trickle down! I can't tell you, sir, what I felt at the moment. Even after all these years my blood is in a boil talking about it. I flew at the beast, and before you could count two, dashed his brains out. The old Don swore in Portuguese—I stormed in English. It was well some of the servants got between me and him. I believe I knocked down two or three of them, but I don't know. I caught the darling up in my arms, for she had fainted, and I carried her to the ship. We put her to bed, but nothing would recover her from the shock. There was all her little dream of ten years, gone in a moment—and so cruelly gone to! She was struck to the heart. She lay quite still and noticed nothing. She never cried nor spoke, nor ate, nor slept. I watched her by day and night, and every day she got weaker and weaker—hang it, sir, I can't talk about it—she died! At first I said that the earth of that rascally country never should hold her. But then I thought how she had loved it, and that, perhaps, she would not be happy anywhere else:—as the priests would not let her be buried in consecrated ground, because we had made a regular built Christian of her, I, and some of my shipmates (for they all loved her) clubbed together and bought leave of a farmer to bury her on the side of a hill by his garden. So we laid her in the ground with her face towards England: for I thought she would like, poor thing; to be turned to that land that had been a home to her, and would have been again when her own refused her: and we said a prayer over her—a parson might have said a better, perhaps, but not an honest, I am certain; and we planted the sweetest flowers we could find round her grave; and giving the farmer money, made him swear a solemn oath never to neglect it, or let it go to ruin, and I believe he kept his promise. Talk of consecrated ground, sir!—that girl's body would have consecrated Constantinople!"

JACK IN A LAND STORM.

A PARTY of sailors having landed at Portsmouth, were on a cruise of observation in the town, when they were overtaken by a severe storm; the wind blew a hurricane, and tiles, slates, and chimney pots came rattling down. One of the latter fell down among them, but did no injury. Eyeing the shattered fragments which had threatened them with danger, one of them exclaimed,—"My eyes, brother shipmates, here's a pretty rig; shiver my timbers if ever you catch me ashore again in a gale of wind."

LOSS OF THE CATARAQUI EMIGRANT SHIP.

FOUR HUNDRED AND FOURTEEN LIVES LOST.

THE following particulars are from Mr. Guthrie, the chief-mate, who, with his eight fellow survivors, reached the shore almost in a state of nudity, having, of course, lost everything they possessed.

The Cataraqui, Captain C. W. Finlay, sailed from Liverpool on the 20th of April, 1845, with three hundred and sixty-nine emigrants, and a crew (including two doctors, M. C. Carpenter and Edward Carpenter, brothers) of forty souls. The emigrants were principally from Bedfordshire, Staffordshire, Yorkshire, and Nottinghamshire. About one hundred and twenty of the passengers were married with families, and in all seventy-three children. On the 3rd of August, at seven in the evening, the ship was hoisted to, and continued lying to until three a.m., of the 4th. At half-past four, it being quite dark, and raining hard, blowing a fearful gale, and the sea running mountains high, the ship struck on a reef, situate on the West coast of King's Island, entrance of Bass's Straits. No opportunity had offered for taking an observation to enable the captain to ascertain the ship's course, for four days prior to the ship's striking, and from the dead reckoning kept, it was presumed that the vessel was in 141. 22 E. long., and 39. 17 S. lat., which would make her between sixty and 70 miles from King's Island. Immediately the ship struck she was sounded, and four feet water was in the hold. The scene of confusion and misery that ensued at this awful period, it is impossible to describe. All the passengers attempted to rush on deck, and many succeeded in doing so, until the ladders were knocked down by the working of the vessel, when the shrieks of men, women, and children from below were terrific, calling on the watch on deck to assist them. The crew to a man were on deck the moment the ship struck, and were instantly employed in handing up the passengers. Up to the time the vessel began breaking up it is supposed that between three and four hundred men were got on deck by the extraordinary exertions of the crew. At this time the sea was breaking over the ship on the larboard side, sweeping the decks, every sea taking away more or less of the passengers. About five a.m., the ship careened right over on her larboard side, washing away boats, bulwarks, &c., a part of the cuddy, and literally swept the deck. At this critical period, the captain gave orders to cut away the masts, hoping the vessel would right, to enable the crew to get on deck the passengers left below. Every thing was done that could, under the circumstances, be done to get the vessel upright, but all to no purpose. The passengers below were now all drowned, the ship being full of water, and the captain gave those on deck directions to cling to that part of the wreck above water, until daylight, hoping that the spars would be of some service in making a breakwater under her, and thus enable the survivors to get on shore in the morning. When day broke, we found the stern of the vessel washed in, and numerous dead bodies floating around the ship, some hanging upon the rocks. Several of the passengers and crew, (about two hundred altogether), were still holding on to the vessel, the sea breaking over, and every wave washing somebody away. About four p.m. she parted amidships, at the fore part of the main-rigging, when immediately some seventy or a hundred were launched into the tumultuous and remorseless waves. The survivors ran ridge-lines along the side of the wreck, to enable them to hold on. The remains of the upper deck now began to break up and wash away. A buoy was now made and floated towards the shore, but it could not be got nearer than twenty yards from the shore, owing to its getting entangled in the seaweed on the rocks, and there was no one on shore to catch it and secure it on the sand. The fury of the waves continued unabated, and about five o'clock the wreck parted by the fore-rigging, and so many souls were submerged in the water, that only seventy survivors were left crowded on the fore-castle, who were then lashed to the wreck. The sea continued breaking over them, the winds raging and the rain heavy all night, and thus the poor creatures continued. Numbers died and fell overboard or sank and were drowned.

at the places where they were lashed; when day broke the following morning, it was discovered that only about thirty were left alive. The sea now making a clean breach into the fore-castle, the deck of which was rapidly breaking up. About this time, while numbers were helplessly clinging to the bows, and continued dropping off without the possibility of succour, the captain attempted to reach the shore, but was unable, and with some assistance regained the wreck. The lashings of the survivors were now undone, in order to give them the last chance of life. Mr. Thomas Guthrie, the chief mate, now on the sheetsail-yard, was washed out to the bowsprit; he saw the captain and second mate, and steward, clinging at the bows, with about eighteen or twenty dead bodies on the fragment of the wreck. Mr. Guthrie was now driven to a detached part of the wreck, but soon found it impossible to live with such a sea breaking over, and seizing a piece of plank under his arm, leaped into the water, and was carried over the reef, and got on shore. He found a passenger who had got ashore during the night; and one of the crew, John Robinson, plunged into the water when he saw the mate ashore, and partly swimming, and partly driven, reached the land. Five other seamen followed, and landed, dreadfully exhausted. Almost immediately after, the vessel totally disappeared. Thus, out of 223 souls on board, only nine were saved.

The names of those saved were, Mr. Thomas Guthrie, chief mate; Solomon Brown, emigrant; John Roberts, William Jones, Francis Millar, John Simpson, John Robertson, and Peter Johnson, able seamen; and William Blackstock, apprentice. They had neither food nor drink from the time the vessel struck (Sunday), to Tuesday afternoon, when they found one small tin of preserved fowl, after eating which, they went and laid down in the bush, having got a wet blanket out of the water for their only covering, being almost destitute of clothes. The beach was strewn with pieces of the wreck, and portions of dead bodies in horrible profusion. After a vain search for water, and without finding any other survivor, they slept that night on the beach. The following morning they found a cask of water on shore, but were unable to make a fire. However, about nine or ten o'clock in the forenoon they observed a smoke, which, presuming they were on the mainland, they imagined was a fire of the natives. Shortly after they saw a white man approaching, who turned out to be Mr. David Howie, residing upon the island. It seems Mr. Howie, observing a portion of the wreck, arranged to reconnoitre the whole island. As Mr. Howie's boat was wrecked, there was no possibility of leaving the island. The party therefore constructed a hut, and remained five weeks, during which time they were most hospitably provided for by Mr. Howie and his party, according to their means, the supplies having to be carried forty miles over a most difficult road. On the 7th of September, they saw the Midge beating for the island, which took them off with much difficulty, and by the aid of Mr. Howie, on Tuesday, September 9th, they landed at Hobson Bay, at half-past ten this day (September 13)."

Throughout the whole of these trying events, the survivors gave all praise to the captain and crew for their exertions, and it was not until all hope was utterly extinguished that they left the vessel. Mr. Guthrie, the mate was also warmly commended. They employed themselves in burying the dead bodies they picked up—the mangled condition of many of which it is too painfully horrible to describe; and they spoke in the most gratified manner of the exertions and aid of Mr. Howie and his party of sealers, who reside upon King's Island.

The following is a list of the passengers furnished by Dr. Patterson, the emigration agent, with the exception of eight or nine, whose names it was impossible to make out correctly, the paper from which they were taken being in a mutilated state:—Thomas and Ann Allen, and four children; William and Ann Allen, and two children: R. Appleby, single woman; Ann and Harriet Arnold, single women; James Burke, W. and Mary Bennett, and four children; James Baxter, S. Baxter, Samuel and Eliza Bennett; Page and Charlotte Bennett; Wil-

liam and Hannah Bishop, and two children; Joshua Black single; Patrick and Catherine Black, and five children; Mary Ann Booth, single; John and Mary Brady, Solomon and Hannah Brown, and four children; Patrick Brothers, single; Edward and Elizabeth Burke, and three children; Beecher and Elizabeth Bushby, and six children; Samuel Bushby, single; Margaret Campbell, single; Benjamin and Sarah Couter, and four children; Robert and Mary Chuck, and one child; Susan Chuck, single; Jonathan and Anne Julia Clarke, and one child; Thomas Collins, single; William Condell, single; James Cook and Anne Cook, and three children; William and Anne Cook and six children; Joseph and Martha Cotterell, and two children; John and Rebecca Copeland, and five children; John Cremford, single; George and Ruth Daisely; Gilbert and Ann Daisely, and two children; Thomas and James Dawson; Mary Duffey, single; Bridget Duffy, single; Mary Fitzpatrick, single; George and Ann Findling, and one child; Stephen and Hannah Floyd, and two children; George and Mary Folis, and six children; Emanuel and Mary Anne Franklin, and two children; Edward and Anne Gardener, and seven children; John Gilmore, single man; Elizabeth Gilmore, single woman; Thomas Gray, single; William Green, single; Isabella Anne Houghton, single; Ellen Houghton; William and Ann Hay; Joseph and Ann Herbert, and three children; Robert and Emma Howe, and two children; Joseph and Mary Hodgkins, and five children; Jane Hopkins, single, and Thomas Hopkins, single; George and Elizabeth Watts; Margaret Williams, single; Thomas Whelan, single; Thomas and Ann White and child; John and Eliza J. White; John and Jane Woods, and seven children; Mary Woods, single; W. Woods, single; W. and M. A. Woods; J. and Elizabeth Hignell, and two children; R. and Agnes Woods, and seven children; Elizabeth Woods, single; Ann Irwin, single; William and Sarah Izard, and four children; Patrick Jones, single; Mary King, single; M. A. Loveridge, single; John Loveridge, single; Patrick and C. Maginn, and seven children; Bridget and Michael Maginn, both single; Anthony and Edith Mery, and nine children; John Miller, single; Benjamin and Mary McCaffry, and seven children; Mary and Susan Caffry, both single; Mary and John McQuillen, both single; William, Ann, and Bernard Macdonald, all single; Jacob and Eliza Newell, and one child; James Oliver, single; John and Ann Paterson, and five children; Amos and Fanny Pearce, and seven children; Thomas and Elizabeth Pettigall, and one child; Miles Quin, single; Patrick Reilly, single; William and Mary Rowbottom, and two children; William and Fanny Rutter, and two children; John and Hannah Ryman, and three children; James and Hannah Rollins, and six children; Ephraim and Sarah Stafford, and four children; John and Sarah Savings, and three children; Charles and Rebecca Knott, and seven children; James and Martha Sharby, and two children; Elizabeth Sheridan, single; W. and Deborah Simmons, and seven children; Catherine, Mary, and Rose Smith, all single; Thomas and Susan Smith, and one child; Catherine and Dennis Sullivan, both single; Josiah Smith, single; H. and Mary Tegart, and seven children; Margaret Tegart, single; William and Sarah Toddhill, and four children; William and Mary Walcock, and four children; Emily Watson, single; Charles and Mary Ward.

Most of the ship's papers, and the mail (except thirty-five letters) were lost.

AN ENGAGEMENT WITH PIRATES.

From "Keppel's Expedition to Borneo."

"WHILE at Singapore, Mr. Whitehead had kindly offered to allow his yacht, the Emily, a schooner of about fifty tons, with a native crew, to bring our letters to Borneo, on the arrival at Singapore of the mail from England. About the time she was expected, I thought it advisable to send a boat to cruise in the vicinity of Cape Datu, in case of her falling in with any of these piratical gentry. The Dido's largest boat, the pinnace, being under repair, Mr. Brooke lent a large boat which he had had built by the natives at Sarawak, and called the Jolly Bachelor

Having fitted her with a six-pounder long gun, with a volunteer crew, of a mate, two midshipmen, six marines, and twelve seamen, and a fortnight's provisions, I despatched her under the command of the second lieutenant, Mr. Hunt; Mr. Douglas, speaking the Malayan language, likewise volunteered his services. One evening, after they had been about six days absent, while we were at dinner, young Douglas made his appearance, bearing in his arms the captured colours of an Illanun pirate. It appears that the day after they had got outside, they observed three boats a long way in the offing, to which they gave chase; but soon lost sight of them, owing to their superior sailing. They, however, appeared a second and a third time, after dark, without the Jolly Bachelor being able to get near them; and it now being late, and the crew both fatigued and hungry, they pulled in shore, lighted a fire, cooked their provisions, and then hauled the boat out to her grapple near some rocks for the night; lying down to rest with their arms by their sides, and muskets round the mast ready loaded. Having also placed sentries and look-out men, and appointed an officer of the watch, they one and all (sentries included, I suppose), owing to the fatigues of the day, fell asleep! At about three o'clock the following morning, the moon being just about to rise, Lieut. Hunt happening to awake, observed a savage brandishing a kris, and performing his war-dance on the bit of deck, in an ecstasy of delight, thinking in all probability of the ease with which he had got possession of a fine trading boat, and calculating the cargo of slaves he had to sell, but little dreaming of the hornets' nest into which he had fallen. Lieut. Hunt's round face meeting the light of the rising moon, without a turban surmounting it, was the first notice the pirate had of his mistake. He immediately plunged overboard; and before Lieut. Hunt had sufficiently recovered his astonishment, to know whether he was dreaming or not, or to rouse his crew up, a discharge from three or four cannon within a few yards, and the cutting through the rigging by the various missiles with which the guns were loaded, soon convinced him there was no mistake. It was as well the men were still lying, when this discharge took place, as not one of them was hurt; but on jumping to their legs, they found themselves closely pressed by two large war-prahus, one on each bow. To return the fire, cut the cable, man the oars, and back astern to gain room, was the work of a minute, but now came the tug of war, it was a case of life or death. Our men fought as British sailors ought to do; quarter was not expected on either side, and the quick and deadly aim of the marines, prevented the pirates from reloading their guns. The Illanun prahu are built with strong bulwarks or barricades, grape-shot proof, across the fore part of the boat, through which ports are formed for working the guns; these bulwarks had to be cut away by round shot, from the Jolly Bachelor, before the musketry could bear effectually. This done, their grape and canister told with fearful execution. In the meantime, the prahu had been pressing forward to board, while the Jolly Bachelor backed astern; but as soon as this service was achieved, our men dropped their oars, and seizing their muskets, dashed on: the work was sharp, but short, and the slaughter great. While one pirate boat was sinking, and an effort made to secure her, the other effected her escape by rounding the point of rocks, where a third and larger prahu, hitherto unseen, came to her assistance, and putting fresh hands on board, and taking her in tow, succeeded in getting off, although chased by the Jolly Bachelor, after setting fire to the crippled prize, which blew up, and sunk before the conquerors got back to the scene of action. While there, a man swam off to them from the shore, who proved to be one of the captured slaves, and had made his escape by leaping overboard, during the fight. The three prahus were the same Illanun pirates we had so suddenly came upon off Cape Datu in the Dido; and they belonged to the same fleet that Lieutenant Horton had chased off the island of Murrundum. The slave prisoner had been seized with a companion in a small fishing canoe, off Borneo Proper; his companion suffered in the general slaughter. The sight that presented itself, on our people boarding the captured boat, must indeed have been a frightful one; none of the pirates waited on board for even the chance of receiving either quarter or mercy, but all those capable of

moving had thrown themselves into the water. In addition to the killed, some lying across the thwart with their oars in their hands, at the bottom of the prahu, in which there was about three feet of blood and water, were seen protruding the mangled remains of eighteen or twenty bodies.

"During my last expedition I fell in with a slave belonging to a Malay chief, one of our allies, who informed us that he likewise had been a prisoner, and pulled an oar in one of the two prahus that attacked the Jolly Bachelor; that none of the crew of the captured prahu reached the shore alive; with the exception of the lad that swam off to our people; and that there were so few who survived in the second prahu, that having separated from their consort during the night, the slaves, fifteen in number, rose and put to death the remaining pirates, and then ran the vessel into the first river they reached, which proved to be the Kaleka, where they were seized, and became the property of the governing Datu; and my informant was again sold to my companion, while on a visit to his friend the Datu. Each of the attacking prahus had between fifty and sixty men, including slaves, and the larger one between ninety and a hundred. The result might have been very different to our gallant but dozy Jolly Bachelors. I have already mentioned the slaughter committed by the fire of the pinnace, under Lieutenant Horton, into the largest Malay prahu; and the account given of the scene which presented itself on the deck of the defeated pirate, when taken possession of, affords a striking proof of the character of these fierce rovers; resembling greatly what we read of in the Norsemen and Scandinavians of early ages. Among the mortally wounded, lay the young commander of the prahu—one of the most noble forms of the human race; his countenance handsome as the hero of oriental romance, and his whole bearing wonderfully impressive and touching. He was shot in front and through the lungs, and his last moments were rapidly approaching. He endeavoured to speak, but the blood gushed from his mouth with the voice he vainly essayed to speak in words. Again and again he tried, but, again and again the vital fluid drowned the dying effort. He looked as if he had something of importance which he desired to communicate, and a shade of disappointment and regret passed over his brow, when he felt that every essay was unavailing, and that his manly strength, and daring spirit, were dissolving into the dark night of annihilation. The pitying conquerors raised him gently up, for the welling-out of the blood was less distressing; but the end speedily came: he folded his arms heroically across his wounded breast, fixed his eyes upon the British seamen around, and casting one last glance at the ocean—the theatre of his daring exploits, on which he had so often fought and triumphed—expired without a sigh. The spectators, though not unused to tragical and sanguinary sights, were unanimous in speaking of the death of the pirate chief as the most affecting spectacle they had ever witnessed. A sculptor might have carved him as an Antinous in the mortal agonies of a dying gladiator. The leaders of the piratical prahu, are sometimes poetically addressed by their followers as *Matari*, i. e. the sun, or *Bulan*, the moon, and from his superiority in every respect, physical and intellectual, the chief, whose course was here so fatally closed, seemed to be worthy of either celestial name."

POST-OFFICE PERSEVERANCE.—ADVENTURES OF A NEWSPAPER.

AN apprentice lad, on board an English vessel in Calcutta, had lately a packet presented to him through the Post-office, the postage of which amounted to 20 rupees (or about 2l. sterling). It merely contained a newspaper, which some friend of his in London had inclosed in half a sheet of paper, and addressed to him when his vessel was in London, expecting that it would find him in St. Katherine's Dock. His vessel, however, sailed before the letter could be delivered, and it followed him—first to Hobart Town, next to Sydney; thence to Bombay, Madras, and Calcutta; thence to the Mauritius, and, finally, back again to Calcutta, where it caught him, after having travelled 30,000 miles, and occupied on its tour one year and eight months.

EXPLOSION ON BOARD THE CAMPERDOWN, OFF SHEERNESS, JULY 12TH, 1843.

AND THE CITY OF NEW YORK

1

EXPLOSION ON BOARD THE CAMPERDOWN.

This explosion took place between the hours of two and three o'clock in the afternoon of Wednesday, the 12th of July, 1843, whilst a salute was being fired in honour of the king of the Belgians passing down Sea-reach, when one of the portable magazines blew up, forcing up the upper deck on the starboard side, from the mizenmast as far as the mainmast, and knocking down nearly all the cabinet bulkheads, fore and aft on the upper gun-deck. Scarcely a whole pane of glass was left in the ports on that deck. So great was the force, that the iron horn-knee on the beam-end, at the break of the bulkhead, where the magazine exploded was broken quite asunder.

The most melancholy part is to relate the dreadful calamity which befel the visitors then on board, and a portion of the ship's company who were about that part of the ship.

There were three seamen—namely, Samuel West (since dead), James Duke, gunner's mate, and Alfred Fennel, hurt; the two former very dangerously, the latter slightly. Lieutenant Blackmore, belonging to the Camperdown, was dangerously hurt, a large splinter having fixed itself under his jaw-bone, which cannot be extracted. There were two young ladies who were visiting the ship with their friends, most dangerously wounded and burnt; there were also several others slightly wounded and burnt.

Nearly all the officers present have received slight injuries by splinters, and were more or less burnt by rescuing the ladies from their burning clothes, and the bulkhead boards which were blown upon them.

As soon as the alarm had subsided, a signal was made for the fire-engines, and all boats from the different ships and the dockyard; and in a very short time, the new floating engine from the dockyard, was alongside the Camperdown, and the fire was soon extinguished.

At an early hour on Thursday morning, her majesty's steam vessel African, went alongside her Majesty's ship Camperdown, with her Majesty's tender Ceres, to convey the wounded persons who were in a fit state to be removed to Melville Hospital. At about ten, a.m., Lieutenant John Blackmore, R. N., and James Duke, gunner's mate, were put on board the Ceres, and towed away to Melville Hospital, accompanied by Dr. Bruce, the surgeon of her Majesty's ship Camperdown.

The sufferers left on board were—a Miss Barton, aged about 20, a Miss Yerker, aged about 45, both dangerously hurt by the splints, and severely burnt; and a Mrs. Greenhill, slightly burnt, and struck by some small splints.

Augustus Bullock, son of Captain F. Bullock, of her Majesty's steam vessel Tartarus, who was on board the Camperdown as a first-class volunteer, escaped with a slight scar, upon his head, in a very miraculous way. He was close to the gun on the aft side of the bulkhead, and when the bulkhead was blown down, he was buried under one of the panels, by which the whole force of the explosion passed over him; after the shock had gone off, he crawled out, and escaped the fire that was blazing around him.

Lieutenant Clavell, R. M., was slightly wounded on his right cheek by a splint. The Rev. John Cooper, Chaplain, was severely bruised, and his coat was blown and burnt from his back. Amongst the visitors who were slightly hurt, were Mrs. Gaze, the lady of Mr. John Gaze, master-attendant of her Majesty's dockyard here, and Master Gaze; Miss Yerker, a twin sister of the unfortunate lady so seriously hurt, also received some slight bruises and burns.

The Rev. John Barton, of the parish of Eastchurch, with his lady and daughter, were standing close to the spot where the explosion took place, and so violent was it, that the starboard ends of the deckbeams, from the orlop-deck to the quarter-deck, below and above the spot where the portable magazine, or what is commonly called the "salt-box," was affixed, were broken and badly sprung. The rev. gentleman and his family stood amidst this scene of destruction, and, strange to say, escaped unhurt in person, although some of their clothes were on fire, but soon extinguished by the officers and others who ran to their rescue.

On Saturday, July 15, a coroner's inquest was held on board the Camperdown, on the body of the seaman, Samuel West, who died from the effects of a severe injury through the blowing up of the portable magazine. George Griffiths, the gunner's mate, was examined, and stated that the salt-box was used in all ships for saluting cartridges, to prevent the frequent opening of the powder magazine. It was generally placed, as in this case, three feet from the after gun on the main-deck, near the bulkhead. The box, when it exploded, had in it ten cartridges, of four pounds each. There were also two one-pound rockets, and two of half-a-pound, hanging to the beam right over the salt-box. The case of one of the rockets was forced about midships after the explosion had taken place. The guns were fired with tubes for priming. It has happened, though rarely, that the quill of the tube is thrown from the gun whilst lighted. Some of the tubes are composed of worsted. Several gunners of the navy were examined, who proved that the salt-box was the usual place for keeping a small supply of cartridges, and that no safer place could be found for the box than where this was placed. Mr. William Bruce, surgeon on board the Camperdown, said "that the deceased was much burnt about the face and head. His hands were scorched, and he had a large cut on his left temple. He was perfectly insensible, and remained in that state till he died. The cause of death, was concussion of the brain." The jury returned a verdict of "Accidental Death;" at the same time expressing their opinion "that all proper care and diligence had been taken by the commanding officer of the ship."

On Monday a second inquest was held before Mr. J. Hinde, in the dockyard, Sheerness, on the body of Miss Sarah Yerker, the lady who lost her life in consequence of the explosion on board the Camperdown. Several of the gunners and others belonging to the ship were examined, whose evidence was to the same effect as in the former case. Verdict "Accidental Death."

MELANCHOLY FATE OF MACHIN,

Discoverer of Madeira.

It was in the glorious reign of Edward the Third, of England (says Mr. Clark, in his *Progress of Maritime Discovery*), that Robert Machin, a gentleman of the second degree of nobility, whose genius was only equalled by his gallantry and courage, beheld and loved the beautiful Anna d'Arfet. Their attachment was mutual! but the pleasing indulgence of ardent hope, gratified and betrayed their passion. The pride of the illustrious family of d'Arfet rendered them insensible to the happiness of their daughter; they preferred the indulgence of ambition to the voice of duty and love. The feudal tyranny of the age, was friendly to their cruel design; and a warrant from the king seemed to justify the sanity of a parent. The consolation of an ingenuous mind, supported Machin in confinement; its energy thus compressed, sought only for redress; nor did it yield to despondency, when, on being delivered from prison, he found that the innocent cause of his persecution had been forced to marry a nobleman, who had carried her to his castle near Bristol. The friends of Machin made his misfortune their own; and one of them had the address to be introduced, under the character of a groom, to the service of the afflicted Anna. The prospect of the ocean, which during their rides, extended before them, suggested or matured the plan of escape; and the probability of a secure asylum was opposed to the dangers of a passage to the coast of France. Under pretence of receiving benefit from the sea air, the victim of parental ambition was enabled, without delay, to elude suspicion, whilst Machin, in the successful completion of his anxious design, was equally insensible to the particular season of the year, or the portentous appearance of the weather, which in calmer moments, he would have duly observed.

The gradual rising of a gale of wind rendered the astonished fugitives sensible of their rashness: as the tempest approached the thick darkness of night completed the horror of the scene. In their confusion, the intended port was missed, or could not

be reached: their vessel drove at the mercy of the winds, and in the morning, they found themselves in the midst of an unknown ocean without the skill that could determine their situation, or the experience that could direct their course. The dawn of twelve mornings returned without the sight of land: when, at length, after a night of increased anxiety, as they eagerly watched the earliest streaks of day, an object beamed in the horizon; continual disappointment produced a querulous despondency, whilst they alternately believed and doubted, the thick grey haze was dispersed by the rising sun, and a general burst of joy welcomed the certainty of land. A luxuriance of trees was soon visible, to whose appearance they were utter strangers; and the beautiful plumage of unknown birds, who came in flocks from the island, gave at first the semblance of a dream to their astonished deliverance.

The boat being hoisted out to examine the coast, returned with a favourable account. Machin and his friends accompanied their trembling charge, leaving the rest to secure the vessel. The wildness of the adjacent country possessed additional charms to men escaped from destruction; and the rich scenery of Madeira was again beheld, after a lapse of many centuries, by the eyes of Europeans. An opening in the extensive woods, that was encircled with laurels and flowering shrubs, presented a delightful retreat; a venerable tree, the growth of ages, offered an adjoining eminence by its welcome shade; and the first moments of liberty were employed in forming a romantic residence with the abundant materials supplied by Nature.

Curiosity to explore their new discovery was increased by the novelty of every object that they beheld: this varied occupation continued for three days, until the survey was interrupted by an alarming hurricane, that came on during the night, and rendered them extremely anxious for their companions who were on board. The ensuing morning destroyed every prospect of happiness: they in vain sought for the vessel, which had drove from her mooring, and was wrecked on the coast of Morocco; where, as it afterwards appeared, all on board were immediately seized as slaves, and sent to prison.

The afflicted Machin found this last trial too severe for his disconsolate companion: her tender mind, overcome by the scenes she had endured, needed the conscious sense of a strict discharge of duty to renew its strength. From the moment it was reported that the vessel could not be found, she became dumb with grief, expired after a few days of silent despair, and was soon followed by her inconsolable lover. The companions of Machin, forgetting their own situation, were entirely occupied in watching over their emaciated friend; but all attempts to administer consolation were fruitless: on the fifth day they received his parting breath, with an earnest injunction, "that they would place his body in the same grave, under the same tree, which, amidst an agony of tears, they had so lately made for the unfortunate victim of his temerity; where the altar had been raised to celebrate their deliverance, would now mark their untimely tomb." This painful duty being performed, they fixed a large wooden cross over the grave, with the inscription which Machin had composed to record their melancholy adventures; and to request, that if any Christians should hereafter visit the spot, they would, in the same, place build a church, and dedicate it to Christ.

Having thus obeyed the dictates of friendship, they fitted out the boat, which, from their first landing had been kept ashore. Their intention was to return, if possible to England; but either owing to want of skill, or to the currents, or unfavourable weather, they were driven on the same coast with their shipmates, and joined them in their Moorish prison.

THE ENGAGEMENT.

"POOR TOM! He is gone, and the tongue that could once set the cockpit in a roar is silent now for ever! He died bravely in the service of his country, and has left a memorial in the hearts of all who knew him which time can never efface. The wailings of distress had only to reach his ear, when his hand, his purse, were at the disposal of the suppli-

cant. Poor Tom! I have shed many a tear to thy memory; nor do I consider it a weakness that my eyes are at this moment moistened by the overflowings of affectionate remembrance. We had embarked in the navy on the same day, and in the same ship,—had endured together the many tricks to which all greenhorns are exposed at their first introduction to the midshipmen's berth. We were watch-mates, and shared the secrets of each other's heart. Oh, how often, at the midnight hour, have we gazed at the full round moon pictured on the bosom of the azure wave, and whiled the midwatch in painting scenes of future glory; or looking towards our own home-shore, thinking on those we'd left behind!—Fancy, delusive most where warmest are, would lead us on in a romantic dream of sweet delight, known only to the young mariner. There are some feelings of the human mind so exquisitely delicate in their nature and yet so powerful in their operations, that as soon would the pulse of existence cease to beat, as those feelings cease to actuate the heart of man. The cherished remembrance of 'Auld lang syne' dwells in the breast, and is as dear when only illuminated by the last rays of a declining sun, as when it basked in its meridian beam, and exulted in the glorious splendour. 'Hallo!' you will say, 'where is our Old Sailor bound to now? surely he is getting out of his latitude.' Mayhap I may be. May be? no—I'm a child to this hour; but one word's as good as twenty, let me go on and spin my yarn upon my own winch.

"Our ship was paid off, and all hands were drafted into other men-of-war; consequently a separation took place, and we lost sight of each other for some years. One day I was walking the deck, when the quarter-master of the watch informed me there was a boat coming alongside with a lieutenant in her; and, as our third had applied to be superseded, I made no doubt that this was the new luff-tackle coming to join us. But what was my pleasure on beholding between the white lapelles the smiling face of my old friend. A glow of inexpressible animation warmed my heart; but perhaps, thought I, promotion has altered him. I drew back,—however, he had caught sight of me, and the pressure of friendship told me in an instant Tom was the same honest, generous, open-hearted being I had ever found him. In a few days we sailed with the fleet for the Mediterranean, and were present at the glorious battle of the Nile. Poor Tom and I were stationed on the same deck, and never did mortal display more heroic bravery, more cool intrepidity; yet there was an indefinite expression at times in his look, as if some thought lay struggling in his breast, and could not gain an utterance. Oh, what a day was that for England! The name of Nelson now has lost its charm; yet are there some who can remember its magic influence on the seaman's mind—'twas emblazoned on the standard of Fame, which waved the bright banner of Victory. I look sometimes at his funeral car, and call to remembrance the time when a grateful country paid a just tribute to his memory. Well do I recollect the countenances of the honest tars who passed in succession his last remains when lying in state,—part of the crew of the Victory: they had fought—they had conquered together,—and what can bind the tie of kindred stronger? All around us now was blood and flame,—the shrieks of the wounded, and the groans of the dying came mingled with the deafening roar of guns and hissing balls that struck us through and through. 'This is glorious,' said a little youngster, who had joined us for his first trip, previous to sailing,—'This will be glorious news for home.' He had got a twenty-four pound shot in his left arm, and was chalking on it. 'What are you about?' said I. 'I'm only writing a moving *billet-doux* to one of the enemy's midshipmen, sir. There 'tis done, and now let's put it in the post.' And so he claps it into the muzzle of the gun. 'By my faith,' said a Paddy, bowing at the tackle, 'but that's a lawyer's letter, with a double charge; shoot aisey, and don't be after doing mischief.' 'Hoot, hoot,' replied an old Scotchman, 'it's cannonical law, then, and whoever stops its execution will have death without benefit of clairgy; but I rather dement 'tis an epistol dedicatory to some body. Weel, weel, these French are a ceevil sort o' bodies, and nae doubt you will have une repartie by prime-ier op-port-unity.' Just at this moment a fresh ship of the enemy's

laid us athwart the bows, and opened a most tremendous fire that raked us fore and aft, and made our groaning timbers shiver—the midship guns came in heavily—most of their hands lay stretched upon the deck. Poor Will Ransom fell close to my feet; he had raised himself up by one arm, and with the other supported the little midshipman, who had been struck by a grape-shot. ‘Oh, my mother—my poor mother!’ said the lad; struggled for a moment, and expired. Will gazed upon the youth: ‘He’s gone,’ said he, ‘his cable’s parted, and my anchor’s a-trip;’ laid himself down, and instantly died.

‘I don’t know how it was, but I felt as if something was choking me; my heart was almost bursting; but ’twas momentary—the angel Pity shuns the horrid scene of carnage—and revenge, revenge steels the heart against every feeling of humanity. The dead bodies were launched out at the port to clear the decks; and many a burst of unrestrained grief attended their departure. The blue wave closed over them, and they were seen no more. Another heavy broadside shook us, and poor Tom fell into my arms—a musket ball had pierced his breast. I ordered some men to convey him to the cockpit, for I dared not quit my station, and from that moment I lost every softer sensation of the mind.

‘We were victorious; and as soon as duty would permit, I hastened to my friend. The surgeon’s assistant was just quitting his cabin: ‘Another hour,’ said he in a whisper, ‘and all will be over; or it may be earlier.’ He was sitting up in his cot, with his desk before him, attempting to write. A languid smile beamed on his death-stricken countenance as I entered. ‘See,’ said he, ‘I am performing the last duty to my parents, and to one,—here a convulsive spasm made him pause—to one whom I had fondly hoped to call my own; ’tis past, ’tis over, and this heart will soon cease to beat; even with that feeling it will close the latest.’ I grasped his hand, but could not speak. He continued writing, finished his letters, and directed them, with the calmness and resignation of a Christian. ‘And now,’ said he, ‘my friend, to your charge I commit these papers and my little property; soften the anguish of a parent’s heart, and soothe the sorrows of the tender female. Tell them I have done my duty; and though I die in the hour of victory, yet, ’tis in the service of my country, and I die with resignation. This miniature was designed for—Oh! Father of mercies! spare, spare—’ The surgeon entered. I supported his head upon my arm, while a cordial was administered; he revived for a moment, placed the locket in my hand, uttered the name ‘Matilda,’ breathed short, and in broken whispers, ‘Father, into—into thy hands I—I commit my spirit!’ bowed his head upon my breast, and—he was no more.

‘The tide was setting very strong out of Portsmouth harbour, and, having received urgent orders to use expedition, I directed the coxswain to land me on South Sea beach. The day was unusually fine, the garrison troops were manœuvring on the common, and large parties of ladies and gentlemen, attracted by the beautiful scene which ever presents itself to the view, were strolling on the shore. The boat grounded, and instantly, with my despatches under my arm, my feet pressed the dear land of my nativity. Only those who have been long absent from their native country, can tell the thousand delightful sensations, mingled with anxiety, which pervade the mind at once again treading on British soil. Joy swelled my heart, while tears started from my eyes.

‘There is a degree of selfishness in our richest pleasures—an epicurean delight, which seldom admits of participation; but when this feeling has in some degree subsided, we share our gratification with our friends. At this moment I thought only of myself—the next, parents, brothers, sisters, all rushed upon my memory. I should see them, hear their voices, grasp their hands; oh, there was rapture in the ideal! Pride, too, whispered, the despatches you carry contain certain recommendations to the higher powers for conduct in battle. ‘I have forgot it,’ said I, feeling my pockets; ‘what shall I do!’ for by this time I had walked some distance from the boat. ‘Twas his last dying request, poor fellow, and to neglect it is neither kind

nor honourable: I’ll run back.’ Accordingly I hastened my return, and was much surprised to find a crowd of people assembled near the spot. The coxswain ran to me: ‘Oh, sir, she’s dead, she’s dead! I would willingly have given all my prize-money to have saved her.’ ‘Who’s dead?’ said I, ‘what do you mean? Jump into the boat, and bring the parcels and letters I have left there.’ ‘That’s it, sir,’ replied the poor fellow; ‘she took it up, and, before I could prevent it, burst it open.’ A gentleman now approached. ‘I believe, sir, I am speaking to the officer of the—?’ ‘You are, sir; I hope no accident has happened; but I really cannot wait. Coxswain, fetch the parcels, and follow me to the admiral’s office directly.’ Then turning to the stranger: ‘Will you do me the favour to walk up with me, and explain?’ ‘Most willingly.’ We proceeded onwards, and he began.

‘Previous to your landing, a party of ladies and gentlemen were strolling on the beach, and admiring the many beauties of the surrounding prospect. When you quitted the boat, curiosity drew us towards it. ‘Tis the—’s,’ exclaimed Miss—, springing forward; ‘My brother, my brother!’ Another young lady rushed towards the boat at the moment the coxswain was jumping ashore with several small packages under his arm, and dropped a letter close to her feet. ‘What is the lady’s name!’ said I. ‘E—,’ he replied. Had a thunderbolt struck me at that moment I could not have been more paralyzed. The truth rushed upon my mind with tenfold horror, and from the unknown extent of mischief my negligence had occasioned; and I should have fallen to the ground but for the timely support of my companion. I looked in his face with agony and shame. ‘Do not tell me,’ said I, ‘do not tell me, but run back, if you have pity, gain what information you can, and bring me intelligence at the admiral’s office.’ He shook me by the hand, and instantly returned to the beach. With a spirit almost wrung to madness, I rushed forward, but was spared the agony of a formal introduction, as fortunately the commander-in-chief was absent. I delivered my despatches, and was ordered to wait. Oh what torture, what anguish did I undergo for upwards of an hour! and when released flew to the spot; but all were gone, and solemn stillness reigned around. I now remembered the orders given to the boat’s crew to come for me at Sally-port. Thither I hastened, and, grasping the coxswain’s arms, ‘Where, where are they?’ said I; ‘how came this accident to happen? be quick, and do not trifle with me.’ ‘Oh, sir!’ replied the man, ‘she snatched up the letter, and was going to hand it over, when her eyes caught the direction: ‘It is for me (said she), it is for me!’ ‘Avast, there, young woman,’ says I; but before I could get it away, she made sail, and then broke open the hatches. I gave chase directly; but before I could come alongside, she uttered a piercing shriek, and dropped down dead.’ ‘Dead!’ exclaimed I, my blood curdling with horror. ‘Dead!’ repeated the man, with an involuntary shudder.

‘At that moment I felt some one touch my arm: ’twas the person who had promised to bring me intelligence at the office. He drew me with him, and I followed, almost unconscious of what I did. ‘Does she yet live?’ said I. A convulsive sob was the only answer. We entered a neat but elegant house in—street. Anguish was pictured on every countenance. An elderly gentleman approached, with his hand extended, but speech was denied him: ’twas my poor messmate’s father. My companion motioned me to be seated, but I continued standing; when an opposite door was thrown open—a female rushed in, and threw her arms around my neck. ‘She lives! she lives!’ said I; and pulling Tom’s picture instinctively from my pocket, held it to her view. She raised her head; I saw her features—’twas his sister. ‘Yes (replied she), Matilda still lives; come, come, you shall see her,’ taking me by the arm; and before my companion could prevent it we were in the adjoining room. Oh, what a scene was here! Upon a couch lay the beautiful, the accomplished, the amiable Matilda, a living corpse! There is a certain stupefaction of the intellect, occasioned by a sudden depression from the height of joy to the abyss of sorrow, which can only be compared to death; and such was her case now.

"My conductress, whose senses were much disordered, pushed me towards the couch. I stood—I gazed—alive to feeling, but as it were alive in marble, so fettered was every faculty of the body. She had shown no signs of returning animation, except her breath; her eyes were opened, glazed, and fixed. They were towards me, and unconsciously I raised my hand which held the portrait to my face. A momentary flash of recollection seemed to return; she suddenly sprung up, grasped my arm, snatched the fatal picture, gazed wistfully upon it—"Hark!" said she; then, reclining her head upon her bosom, murmured her lover's name, and breathed her last!"—*Greenwich Hospital.*

STRIKING INCIDENT IN THE LIFE OF A MIDSHIPMAN.

ABOUT the middle of the last war, the Polly, tender, commanded by Lieutenant Watts, came swooping up one evening to the small town of Auchinbreck, in Scotland, and, resolving to pounce, without warning, upon her prey, as soon as she had anchored in the roads, sent on shore the press-gang to pick up as many of the stout boat-builder lads as they could catch. The towns-people, however, were not so unprepared as the captain of the tender imagined; some of those, indeed, who were fit for sea, ran up into the hills, but by far the greater number collected about the corner of a building-shed as you go on to the main street, and, when the signal of hostility was given, by the capture of a man by the press-gang, they rushed down upon them in a body, every one with his axe on his shoulder, like a troop of Indians with their tomahawks. It had now become so dark that the sailors had much to do to keep their footing upon the loose stones of the beach, which was just at this time rendered a still more troublesome passage by the scattered materials of a pier, then beginning to be built; and, besides, their number was so small compared to the towns-people, that, after a few strokes of the cutlass, and as many oaths as would have got a line-of-battle-ship into action and out again, they were fain to retreat to their boat, pursued by the boat-builders, young and old, like furies. A midshipman, sitting in the stern, whose name was William Morrison, a fine lad of fifteen, observed the fate of the action with feelings in which local and professional spirit struggled for the mastery. One moment he would rub his hands with glee, and the next unsheath his dagger in anger, as he saw the axe of a fellow-townsmen descend on the half-guarded head of a brother sailor; but, when the combatants came within ear's length of the boat, and the retreat began to resemble a flight, the *esprit de corps* got the upper hand in the Auchinbrecken midshipman's feelings, and, unsheathing his dagger, he jumped nimbly ashore and joined in the fray. At last the sailors got fairly into their boat without a single man being either missing or killed, although the list of the wounded included the whole party; and the landsmen, apparently pretty much in the same circumstances, although unable, from their number and the darkness, to reckon as instantaneously the amount of the loss or damage; after giving three cheers of triumph, they retired in good order.

William Morrison, after discharging his duty so manfully, was permitted to go on shore the same evening, to visit his friends; and, indeed, the captain could not have known before that he belonged to the place, as he surely would not have confided to the lad so unpopular a task as that of kidnapping his own relations and acquaintances. He was landed at the Point of Scarrough, to prevent the necessity of going through the streets, which might have been dangerous in the excited state of the people's minds; and, stretching across the fields, and along the side of the hill, he steered steadily on in the direction of his paternal home, which was about a mile and a half from the Point, but only one mile from the town. The moon had now risen, but was only visible in short glimpses through the clouds that were hurrying across the sky; and the tall, strange shadows of the willows and yews that skirted the churchyard, appearing and disappearing as he passed, probably by recal-

ling the associations of his earlier years, made William shrink, and almost tremble. His own shadow, however, was a more pleasing thing to look at. The dress, which, grown familiar by usage, he would not have noticed elsewhere, was here brilliantly contrasted in his recollection with the more clownish and common garb of his boyhood—for he already reckoned himself a man; and the dagger, projecting smartly from his belted side, gave, in his opinion a finish, quite melo-dramatic, to his air. He drew out the tiny blade from its sheath, and its sparkle in the moonlight seemed to be reflected in his eyes as he gazed on it from hilt to point; but the expression of those eyes was changed as they discovered that its polish in one place was dimmed by blood. This could easily be accounted for by the affray on the beach—and at any other time and place it would have been thought nothing of;—but at this moment, and on this spot, he was as much startled by the sight, as if his conscience had accused him of a deliberate murder. The impressions his mind had received while passing the churchyard, now returned upon him with added gloom; a kind of misgiving came over him; and a thousand boding thoughts haunted him like spirits, and hanging, as it were, on his heart, dragged it down farther and farther at every step. He bitterly regretted that he had not remained in the boat, as he had at first resolved, a neutral spectator of the strife. How did he know that his hand had not been raised against the life of his own brother? As far as he could see or learn, indeed, no fatal accident had occurred; but there have been instances of people walking cheerily off the field of battle, and dying of their wounds after all. And yet it was not likely—it was hardly possible—that John could have been in the affray, his indentures protecting him from the impress. These cogitations were speedily followed by others of as gloomy a character: for the thoughts breed faster than we can perceive them, and each multiplies after its kind. It was a year since he had heard from his friends, and five years since he had seen them. Who could tell what changes had taken place in that time? Who could tell whether poor John had even lived to be killed by the press-gang? His father, his mother, and his sisters—were they dead, were they living, were they sick, or in health? His sister had been always a delicate girl, one of those gentle and fragile flowers of mortality that are sure not to live till the summer; perhaps consumption, with the deceitful beauty of his smile, had already led his fair partner down the short dance of life.

Tormenting himself with such speculations, he arrived at his father's house. Here he was surprised, bewildered, almost shocked, to observe a new and handsome farm-house in place of the old one. On looking farther on, however, he did detect the ancient habitation of his family, in its original site; but it seemed, from the distance where he stood, to be falling into ruins. His whole race must either be dead or banished, and a new tribe of successors settled in their place; or else uncle William must be deceased, and have left his father money enough to build a new house. He walked up to the door, where he stood trembling for some minutes, without courage to put his hand to the latch, and at last went round to the window, and, with a desperate effort, looked in. How his heart bounded! His father was there, still a stout healthy man of middle life, his hair hardly beginning to be grizzled, by the meddling fingers of the old painter, Time; and his mother, as handsome as ever, and her face relieved by the smile either of habitual happiness, or of some momentary cause of joyful excitation, from the Madonna cast which had distinguished it in less prosperous days; and his sister, with only enough left of her former delicacy of complexion to chasten the luxuriant freshness of health on the ripe cheeks of nineteen. John, indeed, was not there; but a vacant chair stood by the table ready to receive him, and another—a second chair, beside it, only nearer the fire—for whom?—for himself. His heart told him that it was. Some one must have brought the tidings of his arrival; the family circle were at that moment waiting to receive him; he could see his old letters lying on the table before them, and recognised the identical red splash he had dropped, as if accidentally, on the corner of one of the despatches he had written after his first action—although

he had taken the trouble to go to the cock-pit to procure, for the occasion, this valorous token of danger and glory. But John—it was so late for him to be from home!—and, as a new idea passed across his mind, he turned his eyes upon the old house, which was distant about a hundred yards. It was probable, he thought, nay, more than probable, that his father, when circumstances enabled him to build a new house for himself, had given the old one to his eldest son; and John, doubtless, was established there as the master of the family, and perhaps at this moment was waiting anxiously for a message to require his presence on the joyful occasion of his brother's arrival. He did not calculate very curiously time or ages, for his brother was only his senior by two years; he felt that he was himself a man long ago, and thought that John by this time must be almost an old man.

While these reflections were passing through his mind, he observed a light in the window of the old house; but he could not well tell whether it was merely the reflection of a moon-beam on the glass, or a candle in the interior. He walked forward out of curiosity; but the scene, as he approached the building, was so gloomy, and the air so chill, that he wished to turn back; however, he walked on till he reached the door, and there, sure enough, his brother was waiting on the threshold to receive him. They shook hands in silence, for William's heart was too full to speak, and he followed John into the house; and an ill-cared-for house it was. He stumbled among heaps of rubbish in the dark passage; and, as he groped along the wall, his hand brought down patches of old lime, and was caught in spiders' webs almost as strong as if the spinner had meant to go a-fowling. When they had got into the parlour, he saw that the building was indeed a ruin; there was not a whole pane of glass in the window, nor a plank of wood in the damp floor; and the fire-place, without fire, or a grate to hold it, looked like the entrance to a burying-vault. John, however, walked quietly in, and sat down on a heap of rubbish by the ingleside; and William, following his example, sat down over against him. His heart now began to quake, and he was afraid, without knowing what he had to fear. He ran over in his mind the transactions of the evening—his walk, his reflections, his anxieties—embracing the whole, as if in one rapid and yet detailed glance of the soul, and then turned his eyes upon his brother both in fear and curiosity. What fearful secret could John have to communicate in a place like this? Could he not have spoken as well in the open air, where it was so much warmer, and in the blessed light of the moon? No one was dead, or likely to die, that he cared for; his dearest and almost only friends were at this moment talking and laughing round their social table, and near a bright fire, expecting his arrival, and John and he were—here! At length, repressing by a strong effort the undefined and undefinable feelings that were crowding upon him, he broke the silence, which was now beginning to seem strange and embarrassing.

"And how have you been, John?" said he, in the usual form of friendly inquiries; "and how have you got on in the world since we parted?"

"I have been well," replied John; "and I have got on as well as mortal man could desire."

"Yet you cannot be happy; you must have something to say—something I am almost afraid to hear. Out with it, in God's name! and let us go home."

"Yes," said John, "I have something to say; but it will not take long to hear, and then we shall both go home. I was apprenticed to the boat-building four years ago."

"I know it," replied William; "you wrote to me about it yourself, John."

"I was made foreman before my time was out."

"I know that, too," said William; "Fanny gave me the whole particulars in a letter I received at Smyrna;—surely that cannot be all."

"I have more to tell," said John, solemnly; "my apprenticeship is out."

"What in four years!—you are mad, John! What do you mean?"

"The indenture was cancelled this evening."

"How?" cried William, with a gasp, and beginning to tremble all over, without knowing why.

"I was wounded on the beach," said John, rising up and walking backwards towards the window; while the moon, entering into a dense cloud, had scarcely sufficient power to exhibit the outlines of his figure. "It was by the point of a dagger," continued he, his voice sounding distant and indistinct, "and I died of the wound!"

William was alone in the apartment, and he felt the hair rising upon his head, and cold drops of sweat trickling down his brow. His ghastly and bewildered look was hardly noticed by his parents and sister during the first moments of salutation; and, when it was, the excuse was illness and fatigue. He could neither eat nor drink (it seemed as if he had lost altogether the faculty of swallowing), but sat silent and stupefied, turning his head over and anon to the door, till it struck one o'clock. About this time a knocking was heard, and the sister, jumping up, cried it was John come home, and ran to open the door. But it was not John; it was the minister of the parish; and he had scarcely time to break the blow to the parents with the shield of religion, when the dead body of their eldest son was brought into the house.

LORD RODNEY'S HUMANITY.

On the 23rd of November, 1765, Sir George Rodney was appointed Governor of the Royal Hospital at Greenwich, in the room of Admiral Townshend, and took his seat as Director, on the 28th of December following.

During the four years that he presided over that noble establishment, he had no opportunities of displaying that active and enterprising spirit which had hitherto marked his character, but occasions were not wanting to prove that he was still, as he had ever been, the seaman's friend. The anecdote which follows, of the authenticity of which there can be no question, bears more honourable and ample testimony to the goodness of the Admiral's heart than would volumes of laboured panegyric.

At that period few, if any, of the pensioners were allowed great coats, and then only in consequence of a petition approved by the weekly board, or an order from the Governor, who had authority to grant that indulgence. Sir George, the first winter of his government there, had applications made as usual, but required no better pretensions, or greater eloquence, than an old sailor and a cold day, to grant an order. The consequence of this was, that great coats became so general, and the demand increased so much, that the Lieutenant-Governor, Mr. Boys, at the next board, took upon him to represent the Governor's conduct as extremely reprehensible. Sir George, who was present, got up; and after expressing his surprise at the Lieutenant-Governor's conduct, very calmly said to him, "I have the greatest respect for you as a man, who, by the greatest merit, has raised himself from the station of a foremast man to the rank of an Admiral,—a circumstance which not only does you the highest honour, but would have led me to have expected you as an advocate instead of an opposer to such a necessary indulgence. Many of the poor men at the door have been your shipmates, and once your companions. Never hurt a brother sailor; and let me warn you against two things more. The first is, in future not to interfere between me and my duty as Governor; and the second is, not to object to these brave men having great coats, whilst you are so fond of one as to wear it by the side of as good a fire as you are sitting by at present. There are very few young sailors that come to London without paying Greenwich Hospital a visit, and it shall be the rule of my conduct, as far as my authority extends, to render the old men's lives so comfortable, that the younger shall say, when he goes away, 'Who would not be a sailor, to live as happy as a prince in his old days?'" and Sir George kept his word, for from that very time every man was allowed a great coat.

SPIRITED ACTIONS BETWEEN BRITISH AND FRENCH FRIGATES.

AMONGST the naval actions of the memorable year 1780, are to be found some of the most splendid specimens of our superiority at sea. Considering the enormous disparity of force between our old two-and-thirties and the large French frigates of eighteen and twenty-four pounders, it is wonderful that in no instance were the former ever captured by the latter when opposed ship to ship. We shall now proceed to notice two of the most spirited and daring sea fights on record.

On the 29th of June, the Jason, Captain Sterling, the Pique, Captain Milne, and the Mermaid, Captain Newman, were cruising off the Saintes, when a large French frigate was discovered. She was immediately chased by all the frigates; but so well did she sail, that though the chase began at seven in the morning, she was not overtaken and brought to action till eleven o'clock at night; and then only by the Pique: a running fight continued between them till two o'clock in the morning when the Jason came up, and the Pique having lost her main top-mast, fell astern. The Jason had scarcely com-

Although the Mermaid had not an opportunity of joining in the action with La Seine, yet a short time afterwards, she was engaged in a battle still more desperate, and in which Captain Newman, though not victorious to the degree that his courage and skill deserved, had a favourable opportunity of displaying his seamanship and bravery. The Mermaid, on the occasion alluded to, was in company with La Revolutionnaire, and the Kangaroo brig. They were proceeding to Black Cod Bay, when they discovered and chased two large frigates. In order to divide the attention and the force of the British, the enemy's ships steered different courses; and, consequently, the Mermaid and La Revolutionnaire also separated. The Kangaroo brig, for some time accompanied the former; but having come up with the enemy, before she could be seconded by the Mermaid, her fore top-mast was carried away by a ball from one of his stern chasers, and she was obliged to give up the chase. For two nights and one day, the Mermaid continued the pursuit; at last the French frigate hauled her wind, and evidently appeared preparing for action. As her deck was crowded with troops, Captain Newman, concluded from this circumstance, and from her man-

œuvres, that she intended to board the Mermaid; this however, he prevented; and the action commenced at a quarter before seven in the morning, both ships going before the wind. At half-past nine, the Mermaid, having received several shot between wind and water, and several of her guns rendered useless by the falling of the rigging, was obliged to relinquish the contest. The French frigate was by no means disposed to renew, or continue the combat, as she appeared to have suffered even more than the Mermaid in her hull and rigging and to have lost a considerable number of men. The Kangaroo, in

[RUNNING FIGHT BETWEEN THE ANSON AND LA LOIRE.]

men she also ran aground, and was so much damaged, that it was found necessary to destroy her. The enemy's ship, with great labour, and difficulty, was got off; she was La Seine, of forty-two guns, having on board, six hundred and ten seamen and soldiers, one hundred and seventy of whom were killed, and one hundred wounded. The Jason lost seven killed, and had twelve wounded; the Pique one killed, and six wounded. The Mermaid did not come up till the enemy had surrendered. About four months after this action, the Jason was not so fortunate—for being in pursuit of a French convoy, near Brest, she struck so fast upon a rock, that every exertion to get her off proving ineffectual, the crew were glad to escape on shore, and to surrender themselves prisoners of war: six alone excepted, who, having been permitted to take the cutter, arrived safe in her at Plymouth.

the meantime, had fallen in with the Anson, Captain Durham; and shortly after their junction, the same frigate was seen, without her fore and main top-masts. The Anson was also greatly disabled, so that they were nearly on an equality. Captain Durham lost no time in bringing her to action; and after a resistance of an hour and a quarter, she surrendered. She proved to be La Loire, of forty-six guns, though pierced for fifty; having on board six hundred and sixty-four seamen and soldiers; forty-eight of whom were killed, and seventy-five wounded. She proved a valuable and important capture, as she contained complete clothing for three thousand men, besides a great quantity of ammunition and stores. The Anson had two killed and fourteen wounded; the loss of the Mermaid was three killed, and thirteen wounded.

MELANCHOLY SHIPWRECK, AND LOSS OF FIVE LIVES.

THE daily papers of Monday March 23rd, 1846, contained some particulars relative to the loss of a vessel off Brighton,

but they were unable to give particulars, or to say how many lives had been lost. It was expected that the General Steam Navigation Company's packet, the Menai, was instrumental in saving some of the crew, and we find by the return of the packet on Wednesday morning, that they succeeded in res-

cuing one of the crew from a watery grave, but that the remainder, consisting of the captain, an apprentice, and a seaman, together with the captain's wife and child, had perished. The name of the survivor, who was taken to France, by Captain Goodburn, of the Menai, and brought back yesterday morning, is W. Attwood, and he has furnished our correspondent with the particulars attending the loss of the vessel. It appears that the vessel was the Bee, of Goole, bound from Portland to London, with stone for the British Museum; that she left Portland with about ninety-five tons of stone on Wednesday night, and reached Littlehampton, about two o'clock on Saturday last, when a breeze sprang up, which continued to increase in violence till about ten o'clock that night, when the weather was tremendously squally, and the vessel was for a long time in great danger. They continued to shift the stone from one side to the other, and they expected the vessel every moment would be capsized by the sudden gusts. About ten o'clock, when the gale was at its height, they found themselves nearly opposite Newhaven. On again shifting the stone, the vessel stood out to the westward, the captain being fearful of running under Beachy Head. They continued to proceed to the westward till they arrived nearly opposite Shoreham harbour, for which place they made, but, being so long in making the distance, they found that it would be impossible to enter the harbour, for want of sufficient water. It was then about half-past one o'clock on Sunday morning, the wind blowing tremendously, and the sea running very high, in a night almost pitch dark. The captain hereupon resolved to let go the anchor; and, if possible, ride out the gale till morning; but he had scarcely done so, when he discovered, the water, about eight-inches over the keelson, and he had then no other course but to slip the chain, or get the boat out. Before they had time to do either, the vessel began to fill, and, in a very short time, there was every appearance of her sinking. The mate was at the bowsprit clearing the jib; and, hearing the captain's wife scream, and finding the vessel going down, he let go his hold, and, in another moment, a huge wave, lifted him up towards the mast, to which he clung till the vessel touched the bottom, in five fathoms water: The mate got upon the crosstrees, but no other soul on board could find any resting-place. They were either washed off the deck or sunk with the vessel. The mate listened, but could hear nothing save the roaring of the wind and the splashing of waves against the ill-fated vessel. For two hours did he remain upon the crosstrees. This place at last became insecure, by the sea breaking over it, and he got up to the topsail-yard, where he had to remain for another half hour before he was rescued. Capt. Goodburn lowered a boat, took the poor fellow on board in a state of great exhaustion, and treated him with every care. He says the captain's name was Johnson, and the owner of the vessel was the captain's mother, with whom he has left a little girl, four years of age, now an orphan.

LOSS OF THE COMET STEAM-BOAT,

Which was ran down off Kempock Point, October 21, 1825.

It being our aim, to present our readers with as full and accurate an account of all shipwrecks and disasters, as can be obtained, we have, to further this object, extracted the following report, from the various provincial newspapers, whose reporters were upon the spot where this lamentable accident occurred. An authority, we think, that will induce the reader to place every reliance on this statement.

We copy the following from the *Glasgow Courier*, of October 22, 1825.

It is with feelings of deep regret and sorrow, that we have to communicate to our readers the account of an accident of the most melancholy kind. The details are as yet few—the result most fatal! The consternation was greatly heightened by the knowledge of the fact, that another steam-boat was to leave the

same quarter about the same time, and many individuals remained ignorant in which of the boats the friends whom they expected might have taken their passage.

Yesterday morning, the steam-boat, Comet, with passengers from Inverness and Fort William, was run down off Kempock Point, between Gourrock and the Clough Light-house, by the steam boat Ayr, outward bound. In rounding the point, the vessels came in contact with such force and violence, that the Comet went down almost instantaneously, when above seventy persons were, in a moment, precipitated into the deep—into eternity! Ten only are saved, out of above eighty, which were believed to be on board. Amongst those escaped is the master, who was got on shore, but in such an exhausted state, that, at the date of our latest accounts, he was unable to give any account of what had taken place, or of the passengers on board. There is too much reason to dread, that the greater number of those who have perished are persons in the superior ranks of life.

The Ayr, we learn, had a light out upon her bow, but the Comet had none. As the night however was clear, it is obvious that a bad look-out had been kept up, and most reprehensible neglect shown on both sides. The Ayr received such a shock, and was so much damaged, that she reached Greenock with much difficulty and in a sinking state. It was blowing fresh, with a heavy sea. It was also exceedingly cold; and at the moment the accident took place, those on the deck of the Comet were, it is said, engaged in dancing, to which amusement they were probably induced to resort in order to keep themselves warm, there not being sufficient accommodation below for the number of passengers on board.

Much valuable property had floated ashore yesterday morning. Every exertion was making to save and to lodge it in a place of security. Our respectable townsman, Mr. Andrew Rankin, was particularly active on the occasion; and at an early hour in the morning, Mr. Marshall, sheriff, for Greenock, had reached the spot, to give his advice and assistance on this distressing occasion. Twelve dead bodies had been washed ashore by an early hour yesterday morning; amongst these were two genteelly dressed females, two black servants, and Mrs. Wright, the widow of the late Archibald Wright, druggist of this city. In the pockets of the body of a gentleman washed ashore, £70 was found. Amongst those who perished, and whose names we can state from good authority, is Mr. Graham, of Corpach, Mr. M'Allister, W. S. Edinburgh, and Captain Sutherland, of the 33rd regiment and his lady, who were only five weeks married. The bodies of Captain Sutherland and another passenger, were found in the yawl this morning. It is supposed she upset after they got into her. Mrs. Sutherland caught hold of Mr. Colin Alexander Anderson, from Appin (the only cabin passenger who is saved) and for some time clung round him, but in the struggle with the waves, she lost her hold and perished. While swimming, much exhausted, and not knowing well in which direction the shore lay, Mr. Anderson was seized closely by the engine-man, from whom he found it impossible to disengage himself, and just as they were upon the point of sinking, they came in contact with the boat's yawl, which they immediately caught hold of, and in doing so she fortunately righted, when they both clung to her, and reached the shore in safety, but much exhausted. It is reported that amongst the sufferers is the lady of a colonel of the army, with a family of seven children, from Inverness; a Mr. Campbell, of this city; with a young gentleman, the only son of Mr. M'Braine, also of this city. We forbear to state further the reports which we have heard of the names of the sufferers, lest we make mistakes, and wound, without reason, the feelings of friends at a distance.

Besides Mr. Anderson and the engine-man, already mentioned, there were saved, Captain M'Innes, the pilot, the carpenter, a man, a steerage passenger from Fort George, a young girl, and a woman who was floated ashore safely betwixt two tables, but who unfortunately lost her child by the way. The poor man from Fort George, and who has arrived in Glasgow, is in a state bordering on delirium. To him, Mr. Campbell, of Corpach, clung for a considerable time, when a wave threw the great coat of the latter over the head

of the former, which compelled him to throw Mr. Campbell off, just as both were upon the point of sinking.

At the moment the fatal accident took place, we are informed, upon the authority of Mr. Anderson, just arrived in Glasgow, that the passengers, who were below, were in high spirits, amusing themselves, telling, and listening to, diverting tales. The first stroke hit about the paddle of the Comet. The captain and passengers immediately ran upon deck to see what was wrong, when the next fatal stroke took place with such force, that the Comet filled, and in two minutes went down head foremost. Mr. Anderson, we regret to add, states, that at the moment this took place, the Ayr, instead of lending them any assistance, gave her paddles a back-stroke, turned round, and went off to Greenock, leaving them to their fate. If assistance had been rendered, he thinks many of the sufferers might have been saved; but in the state of alarm in which he was, he may have been mistaken.

(From the *Glasgow Chronicle*.)

It gives us great pain to record one of the most melancholy accidents that ever occurred in this part of the country. The Comet steam-boat, was on her way from Inverness to Glasgow, with between sixty and seventy passengers; of these it was stated that thirty-six passengers were in the cabin, and yesterday morning, about one o'clock, while passing the point of Kempeck, she was struck in the side, by the Ayr steam luggage boat. The hands on board the different vessels were prevented from seeing each other by the headland, till it was too late to prevent the shock; and as both were going at full speed, the crash was tremendous. The starboard bow of the Comet being stove in, she filled with water, and almost instantly sunk; and with the exception of the following persons, the whole of the passengers were lost:—

Saved.—Captain M'Innes, the pilot, an engine-man, a woman who lost her child, a young girl, the carpenter, Mr. Colin Alexander Anderson, Mr. Cameron, jun., Fort William, and three others.

Names of five of the persons lost.—Captain Sutherland and his wife, only five weeks married, Mr. Graham, of Corpach, Mr. M'Allister, W. S. Edinburgh, and Mrs. Wright.

We have seen a young gentleman who escaped, and have learned from him the following particulars. The vessel was about a quarter of a mile distant from the shore when the accident happened. About half an hour before, several of the passengers were engaged in dancing upon the deck, but they had almost all gone below. The first alarm was heard from a person hailing, but from which boat was uncertain. Almost immediately the shock was felt, every body ran on deck. The water rushed in so rapidly that the engine-man was up to his knees before he could reach the deck. They tried to keep the engine going, thinking she might drive them ashore; but the influx of water was so strong that the engine was almost immediately stopped; and in three minutes after the vessel was struck she went to the bottom.

During the short period which elapsed between the stroke and the sinking of the vessel, about thirty people crowded into the yawl before it was cut loose, and so hastily was this done, that the one end of the boat was some time under the water before the other end could be lowered, by which means the boat was upset and threw them all into the water. The steam-boat went down bow foremost. The screams of the drowning people were most appalling, and cannot be described. They shouted to them on board the other boat to return to their assistance, but without effect. Our informer remained in the vessel till she sank from beneath his feet, and then swam as he best could. An engineer held him by the neck, and nearly drowned him. Fortunately he reached the overturned boat, which lay keel uppermost, to which the pilot and another were holding on either side. He seized hold of one side of the boat, the engine-man still clinging to him, and by this additional weight the boat was righted. The whole four then got in. She was nearly filled with water, and being without oars, they were unable to make any exer-

tions to gain the shore. They remained in this situation for about twenty-five minutes, when a pilot-boat, whom the screams of the sufferers had alarmed, reached them; but in the struggle to get in they nearly upset the pilot-boat, and were brought ashore clinging to the outside, or held by the hands of the crew of the Gourcock pilot-boat. One old Highlander swam ashore; and a woman, whose child was drowned, came safe on shore on some articles of furniture; she had kept hold of her child till she perceived it was dead, and then reluctantly resigned it to the deep. Our informant considers, there were about seventy people on board; of these eleven were saved. When he left by the Greenock mail this afternoon, eleven bodies had been drifted ashore.

Besides many respectable people, on their way to Edinburgh and Glasgow, there were, we are led to believe, several traders proceeding to Fort William fair, and who may naturally be supposed to have had considerable property on their persons.

A passenger on board the Ayr relates, that he was one of four cabin passengers who were all below when the accident happened. He had lain down on a sofa undressed, heard a noise forward which alarmed him, and before he had time to disentangle himself from the clothes he had thrown over him, the vessels struck with a tremendous crash. On reaching the deck, he saw the Comet drifting from them, and wheeling round: there was light enough from the moon to enable him to distinguish the hills on either side, and the various objects around. On board the Ayr, the utmost confusion prevailed. The Comet was in sight for about three minutes, when a most appalling shriek arose from the passengers on board of her, evidently crowding to the side nearest the Ayr, and with outstretched arms imploring help; not a cry reached his ears after the vessel went down, and in a few moments the river was as unruffled as ever! All on board the Ayr were in the utmost consternation, and it is much to be feared, in downright stupefaction, with the exception of two seamen belonging to the Harmony, who, after endeavouring in vain to rally the men belonging to the vessel, lowered the boat at the stern, for the purpose of rendering whatever assistance was in their power; but at the moment when she reached the water with one of the men in her, and before the tackles were yet unloosed, the steam was unfortunately on, and boat and man dragged under the water; he saved himself by clinging to the ropes, and providentially for all on board, reached the deck, when he and his companions had enough to do to keep the vessel from going down. She was evidently in a sinking state. At the time of the accident, the Ayr had a light at the bow, as well as a man on the look-out.

(From the *Greenock Advertiser*.)

The Comet steam-boat, on her passage from Inverness to this port, had reached the point of Kempeck at nearly two o'clock, when she was met by the steam-boat Ayr, M'Clelland, of Ayr, which was on her way to that port from Greenock. The two boats going with considerable velocity, were very near each other before mutually observed. As soon as perceived, the person on the look-out on board the Comet, cried to the pilot to put the helm a-starboard, which order the pilot of the Ayr, understood to be instructions to him: both vessels were in consequence directed towards each other, and before the unfortunate mistake could be remedied, they came in contact with such violence, as to stove in the starboard bow of the Comet, which vessel in a few minutes went down, and, melancholy to relate, the whole of the passengers, with the exception of nine, and the master and pilot of the vessel, were drowned. Two of the latter, a lady and child, have since died. The total number of passengers on board are estimated to have been between sixty and seventy, but we are unable to obtain any certain account. The prompt and humane assistance was afforded to the few survivors, by Mr. Andrew Rankin, Mr. Glen, of Gourcock, and Mr. Robert Maitland, of this town, who are still actively engaged in securing the property, which, together with the bodies of the sufferers, is hourly coming ashore.

A gold watch with "Archibald Grahame," engraved on it, and several bills drawn in favour of Archibald Grahame, Corpach, being found on the person of a young gentleman washed

ashore, we have little doubt of his being the person of that name: also Mrs. Wright, of Glasgow, whose body has likewise been got. A Captain Sutherland and his lady, from Inverness, were on board, whose bodies are not yet found. There have also been washed ashore, besides the two above named, the bodies of four men, four women, and two children, whose names we have not hitherto been able to learn. Too much praise cannot be bestowed on the people of Gourock, generally, for the readiness with which they gave their assistance, and the honesty which has been shown in delivering up the property picked up along the beach, one instance of which deserves to be mentioned:—A young girl, daughter of James Mains, of Gourock, found a fifty pound Bank of England note, which was instantly, in the most praiseworthy manner, delivered to Mr. Rankin. Great blame is attached to the captain of the *Ayr*, for not attempting to afford assistance; he almost instantly, on the catastrophe occurring, put about and made for Greenock: had he, on the contrary, stopped to pick up those who were able to struggle for a short time on the surface of the water, the chance is, that many might have been saved who have now met a watery grave, and his vessel might have been run ashore at Gourock, had he found her so leaky as to be unfit to proceed back to our port. Those saved were chiefly rescued by wherries belonging to Gourock; which instantly put off when the alarm was given.

We could have wished that no cause had existed to suspect depredation of the property cast ashore, but from the circumstance of a trunk being carried up to an adjoining field by two men who have since absconded, leaving the trunk open, which was found by a person who brought it to Mr. Rankin, containing some wearing apparel, it is strongly suspected that money had been abstracted.

The information of the accident was speedily made known here by the arrival of the *Ayr*, and, both before and since morning dawned, the most active assistance has been supplied from hence, for the purpose of recovering the bodies, collecting the property cast ashore, &c. Of the latter a great quantity has been safely stored in the cellars of Mr. Rankin's house. The money found is likewise in safe custody. C. Marshall, Esq., sheriff-substitute of the Lower Ward, went down early this morning, as likewise several gentlemen in the commission of the peace, to render every assistance. Shells have been ordered to be prepared for the bodies, as also the customary appareling of the dead, and the hapless victims have been conveyed to Gourock church, to await being claimed by their relatives. In short, whatever sympathy, humanity, and the most honourable and judicious feelings could devise, has been resorted to, on all hands, to pay respect to the remains of those who have so suddenly been called from this scene of transitory existence.

This melancholy event will revive the recollection of the loss of the *Catherine*, of Iona, from being run down by the *Hercules* steam boat, on Saturday the 10th of August, 1822. A strong coincidence prevails in the two cases. In both the calamity was occasioned by steam vessels, in the very outset of their career; the time was nearly the same: the accidents occurred almost at the same place, and had similar causes assigned them. In the case of the *Catherine*, forty-two persons perished out of forty-six; in the present instance, it is to be feared, however, a much larger number has been lost.

On reaching Gourock yesterday forenoon, we however, found numerous boats engaged in dragging for the bodies around the place where the steam-boat had sunk, which was, as near as we can guess, about three hundred yards from the shore, in sixteen fathoms water. The sheriff-substitute, of Renfrewshire, Claude Marshall, Esq., assisted by Mr. Rankin, of Gourock, and Mr. Leitch, one of the magistrates of Greenock, had been employed without intermission since Friday morning, in the painful duty of examining the dead bodies as they were brought ashore, taking exact descriptions of their dresses and appearance, and inventories of the property found on their persons. On our arrival we found these gentlemen superintending the inspection and removal of the bodies of five persons which had just been dragged up, to the church of

Gourock, where the other corpses that had been found on Friday and Saturday were laid. The Lord Advocate, accompanied by Mr. Dunlop, principal sheriff of Renfrewshire, arrived about mid-day, and immediately proceeded to Mr. Rankin's, for the purpose of assisting in the investigation.

Nearly nine cart loads of luggage had been thrown ashore, and the duty also of examining it devolved on the sheriff-substitute. The greater part of it, however, seems to have belonged to Sir Joseph Radcliffe, the bodies of six of whose servants have been found. The whole has been lodged in a place of security in Greenock.

The following is a correct and authentic list of the bodies that have been found, with the names, so far as known, and the best description of those unknown, we could procure, up to yesterday at mid-day:—

Found on Friday:—Two women, servants of Sir Joseph Radcliffe, one named Hannah Mitchell, the other having the initials S. R., on her shift; Mrs. Wright, of Glasgow; two women, unknown, one with a blue, and the other with a brown stuff gown; two children, one of them belonging to the female passenger saved; the other a female child, unknown, well-dressed, with laced cap; Mr. John Bell, flesher, Dumbarton; Angus Cameron, of or near Fort William; Mr. Archibald Graham, of Corpach, near Fort William; James Grierson, steward of the *Comet*;—in all eleven bodies found on Friday.

Found on Saturday:—William Allan, servant to Mr. Denistoun, claimed and taken to Cambuskin; James Miller, of Edinburgh; John Reid, of Edinburgh; a girl, about seventeen, unknown, poorly dressed; Duncan Mackenzie, a Highland trader; an old man from Crinan, name unknown; a woman unknown, supposed the mother of four children who were on board; James Dingwall, his left hand injured by a mill; George Murray, a Highland trader; James Manderson, engineer of the *Comet*, taken away by his widow; a young woman named Rose, claimed by her brother and carried to Greenock; a sailor belonging to Limekilns or Kincardine, name unknown; Ronald Mackenzie, piper to Sir Joseph Radcliffe; a young gentleman, name unknown, green coat, silver watch, linen marked C. B. S.—surgical instruments found on him; Angus A. Kennedy, a young gentleman about fourteen or fifteen; a young man about fifteen, name unknown; an Irish pedler, name unknown; Euphan Niven, servant to Mrs. Wright;—in all eighteen bodies found on Saturday.

Found on Sunday:—A seaman, name unknown; John McLachlan, one of the *Comet's* crew; Mrs. Wincliffe, supposed to be the housekeeper of Sir Joseph Radcliffe; a young man, linen marked J. M. P.; the body of a woman, name unknown. Initials on linen I. M., red Morocco baby shoes found in her pocket, supposed to be the nursery-maid who had the charge of one of the children found on Friday;—in all five bodies found on Sunday.

From the foregoing melancholy list, it will be seen that thirty-four bodies have already been found, which, with the eleven persons saved, makes the number accounted for amount to forty-five. No traces had been found of the bodies of Captain Sutherland or his lady, or of Mr. M'Allister or his nephew. We lament to say, that there is too much reason to fear that Mr. Hugh Rollo, writer to the Signet, has also perished, though there are some circumstances that afford a feeble ray of hope, which a day or two, at the farthest, must confirm or destroy. It is certain that a part of his luggage (a portmanteau) has been found: but the under-steward of the vessel reports, as far as we can understand, that a boy brought to the boat at Lochgilphead. Mr. Rollo's luggage, consisting of a portmanteau and a travelling bag, for the latter of which he soon after returned and carried away. A gentleman, however, came on board at that place, though the man can give no description of his appearance.

Such of the bodies as have not been claimed and carried away by their relatives, have been laid out in the church of Gourock, and decent coffins provided. There were yesterday about thirty corpses in that sanctuary, and a most heart-rending and agonizing scene was there exhibited. Every hour, arrivals were taking place—the parent looking for his

child—the friend for his friend—the wife for her husband. The uncertainty as to who were passengers, rendered only the suspense of those who expected friends or relatives by the vessel more dreadful.

The picture given by the survivors of the scene it is impossible for us to describe. It appears, that up to the time of the accident the voyage had been most prosperous, and now within so short a distance from their destination, every heart was full of happiness—dancing, pleasant stories, and conversation, were wearing away the night, when the awful mandate went forth, and fifty human beings, in the very midst of innocence, gaiety, and fond anticipation, were in an instant hurried, unwarned and unprepared, into the presence of the Almighty.

We have said that a description of this scene, by us, was impossible; but our immortal bard has furnished us with one, which we hope our readers will not consider improperly introduced or misapplied:—

“Then rose from sea to sky the wild farewell,
Then shriek’d the timid, and stood still the brave,
Then some leap’d overboard with dreadful yell,
As eager to anticipate their grave:
And the sea yawn’d around her like a hell,
And down she suck’d with her the whirling wave,
Like one who grapples with his enemy,
And strives to strangle him before he die.”

With regard to the cause of this dreadful affair, though beyond all doubt the principal blame lies with the master of the Comet, he not only having no light out, but his jib-sail set—still the feeling is universal in Greenock, that the master of the Ayr is in the highest degree culpable in deserting as he did the scene where he had made such havoc. It is not true, as asserted in the authorised statement, published in a Glasgow paper of Saturday, that the Ayr did not leave the spot till all traces of the Comet and her ill-fated company were lost. The Ayr fled from the spot, while yet the shrieks of the drowning beings were thrilling in the ears of her crew. She fled—and all but lost the only brave and humane individuals she had on board, the sailors of the Harmony, who made an attempt to get out the Ayr’s boat, to the rescue, but which was pulled under water by her precipitate flight, and these generous seamen were only able to save themselves with difficulty. She fled, while one of the crew of the Comet was swimming to her, and whose cries for succour did reach her in her flight but in vain. The futile pretence that she was in a sinking state, is fully disproved by her having sailed in safety to Greenock, a distance of about three miles—while the master must have known that, had she been in that state, his greater chance of safety was, after rendering the assistance he was bound to render to the sufferers perishing under his eye, to run the vessel ashore, from which he was not three hundred yards distant, and which he could have done in comparative safety, and almost without damage. We can make allowances for the agitation and confusion such a scene would occasion; but we can find not a shadow of excuse for the selfish and dastardly conduct of the master of the Ayr.

(From the *Glasgow Free Press*.)

Saturday night, seven o’clock.

Since the first edition of our paper went to press, we have ascertained that the English gentlemen referred to in the express from our reporter of last night, are safe. They were landed at Rothesay. We have seen three of them—Messrs. A. Morrison and George Martineau, of London, and Mr. Henry Martineau, of Norwich. The other gentleman who went on shore at Rothesay, was Mr. Glover, the celebrated landscape painter. They mentioned that Mr. McAllister, W. S., had intended to land at Rothesay, but having met with some obstacles in getting on shore his luggage, he was unfortunately detained. They think there were about twenty cabin passengers, and they were mostly young men. There were only two ladies in the cabin—Mrs. Captain Sutherland, and Mrs. Wright, of this city. The gentlemen estimate the number

of people on board from fifty to sixty, exclusive of the crew. They think there were not more than seven female passengers in the steerage. Four of them were servants of Sir Joseph Radcliffe, of Milnsbridge-house, near Doncaster. Sir Joseph’s Highland piper was also on board, and we are afraid is one of the sufferers. The gentlemen speak highly of the conduct of Captain McInnes and his crew, while they were on board the Comet.

We have also seen one of the passengers who were saved, Mr. Ewen McDonald, of Fort Augustus, who gives the following account of what fell under his own observation:—He thinks there might be about sixty passengers in all. He was a steerage passenger, and shortly before the catastrophe, was upon deck. He saw a light a-head, and a fellow-passenger observed, that it was a light-house, but one of the crew, who was on the look-out forward, remarked, “It is a steam-boat,” and instantly called aft, “A steam-boat—helm a-starboard.” He supposes the helm was ported, as the vessels almost immediately struck. Captain Innes was on the cabin deck, and called on the passengers to come aft, thinking the packet might right. Great confusion ensued, the passengers forcing their way into the Comet’s yawl, which was hung astern. In the hurry, the tackling could not be unloosed; one of the ropes was cut shortly before the other. There were from twenty to thirty people in the small boat at the time, Mr. McDonald was one of them, and nearly the whole were precipitated into the water. The other rope was cut almost at the moment the Comet sunk. Mr. McDonald was thrown into the water, and upon getting to the surface, he found no trace of the Comet. He observed the small boat floating bottom upwards, and he and some others caught by it, and in consequence of their struggling it righted, but was full of water. He and two others got into the yawl, and in about fifteen minutes they were hailed, and towed to land by a boat which had pushed off from the shore. Mr. Graham was found in the Comet’s boat. McDonald, and the two who were saved with him, were so weak at the time they were taken in tow, that they could not move into the other boat.

The following statement has been handed to us in vindication of the captain and crew of the Ayr:—

“The Ayr left Greenock about one in the morning, carrying a light a head, which the regulations of the river demanded. All hands were on deck, two or three of whom were looking out at the bow. The master had been on the paddle-box, frequently calling to the men to look well out, until they concluded themselves abreast of Gourrock (for it was now dark,) when he went aft to adjust the binnacle light.

“On returning to resume his station on the paddle-box, and before he had reached the rail on the quarter-deck, a cry of ‘Boat a-head,’ and ‘Starboard your helm,’ was heard from the men stationed at the bow. The vessel immediately answered the helm (now starboard), but the Comet’s helm appeared to lie to port, and the two in consequence came in contact. When the Ayr got away from the Comet, the master of the former ordered the small boat to be lowered down, in order to render the Comet assistance. In the hurry, however, the boat filled with water, and about this time the Comet disappeared. Every exertion was made by the master to bring the Ayr round to the place where he presumed the Comet was, but it was some time before the vessel answered the helm, and when at length she did so, no trace could be found of the Comet.

“At this time, the passengers of the Ayr (who before the crash had been below), apprehensive of their own danger, for the vessel was then leaking much, grew clamorous that the master should run the vessel ashore, and implored him, to do so, and to save their lives. He, therefore, seeing all attempts to rescue any of the Comet’s people ineffectual, put about and returned to Greenock.

“The Comet had no light, nor did Captain McClelland hear any voice from her till the vessels met.”

(From the *Glasgow Chronicle*.)

Amongst those saved on board the Comet, there was a young lady, a Miss Jane Munro, about sixteen, from Tain, on a visit to her aunt in Glasgow. As her relation had never seen

her, it was judged needless to go down to claim her body, and all hope was given up, when on Saturday a letter was received from Gourrock with the gratifying and unexpected intelligence of her preservation. So far as she can recollect, it happened as follows:—the first shock struck the Comet upon the bow, and turned the vessel nearly round. The second struck upon the stern, when she immediately went down. It is believed that had she not been struck the second time, she would have been able to reach the shore. Our informant at the time this happened was standing on the deck, and when the vessel went down, was precipitated into the water. She sunk twice, but on coming up the second time caught hold of two spars, to which she clung for about twenty minutes to half an hour. During the whole of this dreadful period, she still had hope of being saved, nor lost her presence of mind during the whole time, as an instance of which, feeling the shawl she wore getting heavy with the water, she threw it off to lighten her. She saw several around her struggling in the water, particularly one gentleman near her, who from the gurgling noise he made, was evidently choking, and making his last struggle, and then going down by her side. A dog belonging to it is believed, to Mr. McAllister, swam alongside of her, and she thinks materially assisted her; the dog followed her to the house where she was taken, and after she was put in bed, the faithful animal leapt on and lay at her feet. When the young lady felt his weight, she not knowing what it was, cried out, when the mistress of the house, not knowing its history, unfortunately turned the dog out.

She felt very unwell after being brought ashore, but after being twice bled and getting a night's rest, she perfectly recovered. She was two or three times very near the shore, but was carried back by the reflux of the waves. A small trunk belonging to her was washed ashore, and given up to her. The pilot-boat, on going out a second time, picked her up, and the pilot (Mr. Martin), carried her up to his house, and left her in the care of his wife, who paid her every attention.

The body of Mr. Charles McAllister, W. S., has not yet been found; but there is no doubt of his fate, as we have seen in a letter from him to a friend in Glasgow, stating he was to leave Inverness by the Comet, and meant to spend a day with him before going to Edinburgh. One of his dogs with a collar, on which Mr. McAllister's name was engraven, swam on shore.

The engine-man of the Comet, who was saved, reports that the last time he saw Captain Sutherland and his wife, was at the moment of the vessel going down, when they were standing fast clasped in each other's arms, on the quarter-deck. He farther reports, that Mr. Graham of Corpach, sunk within little more than six yards of the shore. The engine-man's face is much lacerated by the death-grasp with which he was held by that unfortunate young gentleman. He is perfectly convinced that had the Ayr stopped to render them assistance, many lives would have been saved.

(From the *Glasgow Courier*.)

The bodies of Captain Sutherland and his young, amiable, but unfortunate wife, had not been found yesterday forenoon. In all, forty-one have been brought ashore, and every attention is paid to their lifeless remains. It will be seen from our list of names, that besides Mr. McAllister, there is another respectable gentleman belonging to Edinburgh, Mr. Rollo, W. S., found amongst the dead. He has, we regret to learn, left a widow, and a young and numerous family to deplore his untimely fate, and the greatest misfortune which can befall them.

Mrs. Grant, of Laggan, had a narrow escape. She was at Ballahulish, waiting for the boat to come round to Glasgow. She stood on the shore, having taken farewell of her friends; but as the Comet approached she hesitated, the weather appearing gloomy, and reflecting that the Stirling was to pass the next day, she resolved to proceed in her, and accordingly the Comet was allowed to pass, and the Stirling passing during the night, she missed her intended conveyance.

A buoy has been fixed over the wreck of the Comet. It is intended to raise her, if possible. Till this is done, the extent of the calamity and loss will not be ascertained, as it is probable a great number of persons were drowned in the cabin and

steerage, and who, in the confusion to get on deck, could not effect their purpose. No time ought to be lost in going about this business.

The following particulars we insert in the words of a gentleman, who was at the place on Saturday, and who has been kind enough to lay them before us. "We left the Broomislaw," says he, "at ten a.m. and reached Gourrock at one o'clock. During the passage one young man informed me of his errand being to ascertain the fate of a brother and sister, the former on his way to complete his studies at College. On arriving at Kempoch Point, the first object this person recognized was his sister's body. She had just been landed by one of the boats, and looked a fine young woman. I observed a Bible and some money, &c. taken from her pockets. By the time I reached the scene of misfortune, four bodies had been previously found, by as many boats. One or two other boats were preparing their tackle, and a steam-boat, called the Sovereign, commenced trawling with a net. During my stay, which did not exceed an hour, the several boats had been successful. I saw nearly a dozen bodies brought on shore, pairs of which had been fished up together. At one haul of the net, three bodies were raised. One was the body of a man who had seemingly stripped for the purpose of swimming. He hung conspicuous (at the distance of five hundred or six hundred yards) on the side of the vessel, sustained by the bottom of the net. He appeared from the shore to be naked, but I think some part of his dress was on. On being landed, the bodies were exposed for recognition. I saw the features of several. They in general appeared not much distorted. One young boy, about twelve or thirteen, looked as if he slept, so placid was his countenance. Some instances were, however, truly terrific. A young woman had been grappled by the throat or face, and when borne from the water's edge, her face downwards, with her long loose hair dripping with blood and trailing on the stones; the heart sickened at the spectacle. The pockets of the sufferers were examined, if possible, to ascertain names. No legal or responsible persons seemed, however, to conduct the duty, nor could I discover by what means the several articles turned out were preserved from spoliation. In some pockets were found trinkets of no mean value, and money to a considerable amount. The unfortunate cause of the catastrophe, the pilot of the Ayr, was in attendance. He appeared to take some interest in the search, but expressed much displeasure at the interference of the trawling boat, which he insisted would only hurry the bodies out to deeper water. This man also bitterly complained of the public judgment in attributing blame to his boat. He declared that the Comet had no light, and was not perceived till in actual contact with the Ayr. By Mr. R.'s watch, the hour of the morning was a few minutes from two. At that period the moon was set. It would be difficult to describe the feelings excited by the vicinity to the scene, and the recentness of the calamity. To know that the eye rested on a given spot of not many yards circumference, within the boundaries of which were extended the pale and shrivelled corpses of so many persons, unscathed by disease and unpolled by corruption, and farther to think of the uncalmed distraction of perhaps a thousand relatives, over whose threshold the rumour had passed, but who as yet remained unconformed in their uncertainty, was to experience a state of mind at once harrowing and deeply sympathetic. I left the scene with much unwillingness, as I have no doubt many interesting occurrences were afterwards witnessed by the spectators."

The master and those connected with the Ayr, have published an explanation or defence of their conduct on this melancholy occasion. We consider it a very lame one. With regard to the cause of the accident, it appears that both parties were greatly to blame; the Comet we must acknowledge the most. It is the subsequent proceedings of the Ayr, to which blame seems to attach. We are far from wishing to judge of any one in such a moment with harshness or severity; but the most ordinary presence of mind would have suggested to any one in the situation of the master of the Ayr, that if the Ayr was in a sinking state, the proper course to take, was to have got out her boats to save her own crew and passengers, and also all he could of those to whom he had left no succour, but

such as he could afford; and, moreover, to have run his vessel into Gourcock, or ashore at that place, instead of running off to Greenock, near three miles distant, without once endeavouring to raise the alarm, or let the inhabitants of Gourcock know what had taken place. This certainly was the proper course to pursue, and this certainly was the course one seaman would have adopted, and which, in fact, two seamen belonging to the Harmony, passengers on board the Ayr, attempted to do, by getting out the boat to relieve the crew and passengers of the Comet; and who, in doing this sensible and judicious act, had nearly lost their own lives, by the master of the Ayr putting the steam upon the vessel, and dragging the boat under water!

THE OLD COMMODORE.

OBSERVE attentively that stout, broad built old gentleman, with his back to the light; mark his high and bald forehead; the structure is ample and noble; but its pure and marble brightness is disfigured by a deep red seam, which, if you will trace it from the apex of his head to his left temple, you will find to terminate in a closely adhering black patch, that covers the socket where once had been the eye. But though the forehead, up to the crown, is bald, there is a profusion of wiry and iron grey curling hair about the temples and the back of the head, which terminates in an immensely thick but not long queue, rather clumsily tied together with black ribbon. The features had once undoubtedly been particularly handsome; but they are now a good deal wrinkled, and discoloured with many tints, some of which, I confess with shame and sorrow, are the signs of, at least, occasional intemperance. His remaining eye is clear, black, large, and fierce, and the dark and S like eyebrow, which has been crooked out of its natural curve by many years of habitual frowning, and constantly peeping through an eye-glass, gives that region of his face a look that we might almost call terrible. The mouth is large, with fine teeth; but the lower part of the face is decidedly sensual. At this moment the expression of his countenance is not dignified, it is peevish, almost old womanly, and shows indubitable signs of ill-health.

But to continue with our description of this, to us, all important personage. You perceive, now that he has moved rather restlessly on his chair, that he has lost his left hand, but that he has ingeniously supplied the deficiency by terminating his arm with a short and strong iron spike, which spike is furnished on one of its sides by a hook, also of iron, and on the other by a tobacco stopper, made either of bone or ivory, but it so much used, and so dirty, it is impossible to say which. You also find when this gentleman stands up, that he is rather short for his breadth, yet is still a tall man. In his dress, excepting that it is rather carelessly put on, and seems totally unacquainted with the brush, he has nothing remarkable, unless a very thin and small stock of black silk round his neck might be thought so, at a time when gentlemen usually wore abundant cravats of well starched white muslin.

He is an invalid; for see, notwithstanding the heat of the day, it being but a little past noon, he has one of his feet cushioned, and swaddled with flannel, whilst a padded crutch reclines against the table, within his reach. He is evidently in an ill-humour, though there is an untouched decanter of Madeira wine before him, and a nearly emptied tumbler of cold strong rum and water, under his very nose. He is smoking a common clay pipe furiously, and every now and then ramming home the tobacco ashes with the stopper on his spiked arm. This person is the Commodore; and, being nearly sixty, people are generally beginning to call him "The Old Commodore." He is also the eldest male branch and the representative of his family, and one of the richest men in the county, and had he chosen to have exerted those energies that he always displayed when afloat, he might have been the most influential.—*Capt. Marryatt.*

MAN OVERBOARD!

SOME years ago, when swimming exploits were much talked of, a correspondent of the *Montreal Herald*, related the story which here ensues:—

"During the time of my servitude on board the Dolphin man-of-war, which was bound for the West Indies, we were going one day at the rate of about three knots and a half, when Tom Starboard, belonging to the foretop (who, by-the-bye, was a bit of a wag), sleeping in the lee fore-chains, by a sudden lurch of the ship was thrown overboard. 'A man overboard!' was the general cry fore and aft—and every one ran to offer or give assistance to the drowning man. Tom, who was a tolerable good swimmer, as everybody thought, but nothing extraordinary, woke, on finding himself in deep water, and began to use his paddles, the ship passing a-head, as I was saying before, at the rate of three knots and a half. Tom was soon lost sight of under the counter (for although our ship was not on Sir Robert Seppings's plan, yet she was pretty full abaft), when he was lucky enough to catch hold of the rudder chains. The hands all ran off expecting to see Tom astern, and to lower the jolly boat down to pick him up; but no Tom was to be seen. 'He is gone,' said they, 'to Davy's locker,' and efforts ceased. Our ship was very deep, bound out to the West Indies, consequently our gun-room ports were low in the water. This Tom saw; and as it was getting dark, he thought he would wait till they had beat to quarters, and piped the hammocks down, before he got on board, which he did, and then popped down into the lady's hold where the gunner keeps his wads and spare monkeys' tails, and there remained till the middle of the first watch, when he sallied forth and made free with our bread bags, taking enough to serve him for three days. At the end of this time we were jogging along at an easy rate with scarcely any wind, about a knot an hour, when Master Tom unobserved slips out of the port he came in at, and, dropping astern, began to hail the ship—'The Dolphin a-hoy!' 'Halloo,' says the quarter-master, who was about getting a pull on the main brace. Says Tom, 'If you don't back the main top-sail and heave to, I shall sink, for no man can swim to the West Indies without provisions!' Every body ran aft in amazement, for it had been blowing fresh during the time we supposed he had been overboard; but there was no time to be lost, so the boat was lowered, and poor Tom picked up, to the great gratification and astonishment of every body on board.

On our arrival, as the captain was on shore dining with the governor, the talk turned upon swimming. The governor was extolling the powers of a black man he had, and our captain swore no man could swim with Tom Starboard, of the Dolphin's fore-top; however, to make a long story short, the captain and the governor made a heavy bet—the time was appointed—Tom asked one week to get ready. The carpenters were ordered to make what chests and conveniences Tom required. The purser was instructed, at his request, to supply a fortnight's provisions. The day came, and Tom went on shore at the wharf appointed, when he began to stow his grub. The black fellow looked at him with astonishment. 'What you do dere, massa?' says he. 'What am I doing here?' says Tom; 'why, I am taking in my provisions to be sure, and I advise you to do the same for not a bit of this do you get on the road.' 'Why, massa, says the negro, 'me no swim more nine or ten miles.' 'Nine or ten miles!' says Tom, as if in amazement at the short distance; 'why man, I'm going to Tobago, which I believe is over two hundred miles, and shan't be back for a fortnight.' The spectators were astounded. The black refused to swim. The governor lost his wager, and it was not until we were homeward bound that Tom told the secret."

DANGER MAKES FRIENDS.

"WHEN I was captain of the main-top in the *La Minerve*, forty-four gun frigate, we were the smartest ship up the Mediterranean; and many's the exercise we were the means of giving to other ship's companies, because they could not beat us—no,

not even hold a candle to us—in both fore and main-top we had eight-and-twenty as smart chaps as ever put their foot to a rattling, or slid down by an after backstay. Now the two captains of the fore-top were both prime young men, active as monkeys, and bold as lions. One was named Tom Herbert, from North Shields, a dark, good-looking chap, with teeth as white as a nigger's; and a merry chap he was, always a showing them. The other was a Cockney chap. Your Lunnuners ar'n't often good seamen; but when they are seamen there's no better; they never allows any one to show them the way, that's for sartain, being naturally spunky sort of chaps, and full of tricks and fun. This fellow's name was Bill Wiggins, and between him and Herbert there was always a jealousy who should be the smartest man. I've seen both of them run out on the yard, in fine weather, without holding on nothing, seize the lift and down to their station, haul up the earing, in no time; up by the lift again, and down on deck, by the backstay, before half the men had time to get clear of the top. In fact, they often risked their lives in bad weather, when there was no occasion for it, that one might outdo the other. Now this was all very well, and a good example to the other men; the captain and officers appeared to like these contests for superiority; but it ended in their hating each other, and not being even on speaking terms, which, as the two captains of the top, was bad. They quarrelled often, and fought five times, neither proving the better man; either both done up, or parted by the master-at-arms, and reported to the first lieutenant, so that at last they were not so much countenanced by the officers, and were out of favour with the captain, who threatened to disrate them both if ever they fought again.

"We were cruising off the Gulf of Lyons, where sometimes it blows hard enough to blow the devil's horns off, though the gales never last very long. We were under close reefed fore and maintop sail, storm staysail and trysail, when there was a fresh hand at the bellows, and the captain desired the officer of the watch, just before dinner, to take in the fore-top sail. Not to disturb the watch below, the main-top men were ordered up forward, to help the fore-top men of the watch; and I was of course aloft, ready to lie out on the lee yard-arm—when Wiggins, who had the watch below, came up in the top, not liking that Herbert should be at work in such weather, without he being there too.

"Tom," says Wiggins to me, "I'll take the yard-arm."

"Very well," says I, "with all my heart, then I'll look to the bunt."

"Just at that time there came on a squall with rain, which almost blinded us; the sail was taken in very neatly, clew-lines chock-a-block, bunt-lines and leech-lines well up, reef-tackles overhauled, rolling-tackles taut, and all as it should be. The men lied out on the yard, the squall wore worse and worse, but they were handing in the leech of the sail, when snap went one bunt-line, then the other, the sail flapped and flagged, till away went the leech-lines, and the men clung to the yards for their lives; for the sail mastered them, and they could do nothing. At last it split like thunder, buffetting the men on the yard-arms, till they were almost senseless, until to windward it wore away into long coach-whips, and the whole of the canvass left was at the lee yard-arm. The men laid in at last with great difficulty, quite worn out by fatigue, and clinging for their existence; all but Wiggins, who was barred by the sail to leeward from making his footing good on the horse; and there he was, poor fellow, completely in irons, and so beaten by the canvass that he could hardly be said to be sensible. It takes a long while to tell all this, but it wasn't the work of a minute. At last he made an attempt to get up by the rift, but was struck down, and would have been hurled overboard, if it hadn't been that his leg fell over the horse, and there he was, head downwards, hanging over a raging sea, ready to swallow him up as soon as he dropped into it. As every one expected he would be beaten off before any assistance could be given, you may guess that it was an awful moment to those below, who were looking up at him, watching for his fall and the roll of the ship, to see if he fell clear into the sea, or was dashed to pieces in the fore-chains.

"I couldn't bear to see a fellow-creature, and good seaman in

the bargain, in that state, and although the captain dared not order any one to help him, yet there were one or two midshipmen hastening up the fore-rigging, with the intent, I have no doubt, of trying to save him, (for midshipmen don't value their lives at a quid of tobacco,) so I seize the studding-sail halyards, and runs up the topmost rigging, intending to go down by the lift, and pass a bowling knot round him before he fell, when who should I meet at the cross-trees but Tom Herbert, who snatched the rope out of my hand, bawling to me through the gale, 'This is my business, Tom.'

"Down he goes by the lift, the remainder of the canvass flapped over him, and I seed no more until I heard a cry from all below, and away went Herbert and Wiggins, both together, flying to leeward just as the ship was taking her recovery to windward. Fortunately they both fell clear of the ship about two feet, not more, and as their fall was expected, they had prepared below. A master's mate, of the name of Simmonds, and the captain of the forecastle, both went overboard in bowling knots, with another in their hands, and in a minute or two they were all four on board again; but Herbert and Wiggins were both senseless, and a long while coming to again. Well, now, what do you think was the upshot of it?—Why, they were the best friends in the world ever afterwards, and would have died for one another; and if one had a glass of grog from the officers for any little job, instead of touching his fore-lock, and drinking it off to the officer's health, he always took it out of the gun-room, that he might give half of it to the other. So, d'y'e see, danger makes friends."

A SAILOR'S WEDDING.

A FEW years ago a ship came into harbour, at Chatham, to be paid off. One of the sailor's being ashore, soon prevailed on a young woman of Rochester to accept of him as a husband, and previous to returning to his ship, left money with a friend to pay for publishing the banns, and all other incidental matrimonial expenses. It was proposed that the marriage should take place on the fourth Sunday following; and on the preceding Saturday the honest tar asked leave of his captain to go on shore, which was peremptorily refused. Jack remonstrated—"Captain," exclaimed he, "I am going to be married to-morrow." The captain told Jack that the business of the ship in his department was most urgent, and positively forbade him going on shore. Unwilling to disappoint the girl, and lose his money, Jack wisely determined to marry her by proxy, and proposed to Will Treadaway, his messmate, to undertake that kind office: "And you, Will," said he, "stay with her on shore, and when the gang-way is cleared from stem to stern, I will come to you." Will goes on shore, and informing the girl of his friend's situation and proposal, she instantly consented, and was actually married to Will, as the proxy of Jack; nor did the minister discover the mistake, till Will wrote his name in the book, Treadaway, instead of Salmon. The clerk cried out, "why you are not the man asked in church with this woman?" To which the honest tar replied, first devoting his eyes and limbs to confirm the fact, "I came here to prevent my messmate being cheated, and I only marry the girl for Jack Salmon, my messmate, till he comes on shore."—Three days afterwards Jack came on shore, when he received his spouse from the hands of his proxy: and lived as much in peace and tranquillity as if he had originally tied the matrimonial knot in *propria persona*.

SHIP MISERIES.

GIVING a dandy a tarry rope to pull by, by which means he has the delectable pleasure of walking off with a good half-pound of tar, which takes him the rest of the passage to get off.

Soaping the cuddy-ladder about half-way up, by which some

annoying puppy has an opportunity of showing his skill in gymnastics, at the expense of his back and sides.

Taking the head of the table as the least crowded place, by a sudden roll of the vessel, find the whole of the dinner lodged in your lap, and the rear-guard brought up by a score of fat passengers, who are all driven towards the scene of distress. When the ship rolls on the contrary side, you have the pleasure of being uppermost in your turn, and riding some of them back again, disencumbering your clothing and person of your hot and greasy cargo, to the great advantage of those beneath you.

Finding from the stupidity of the servant, who has forgotten to lash your chair, that the first roll of the ship gives you an opportunity of cutting a somerset backwards. Endeavouring to save yourself, unfortunately seize the sea-pie, and get the contents in your palpitating bosom.

Being rather scanty of clean linen, resolve to have a general wash, for which purpose you tow over your little kit, when, from the injudicious manner in which you have tied the knot, you have the mortification of seeing the whole riding on the hoary billows—one satisfaction only remaining to you, that you know where they are.

Going up the rigging to look out for land, find yourself tied hands and feet by the sailors, and kept there till your liberality in the article called grog, is duly exhibited by an order on the steward for a gallon.

Sleeping to leeward late in the morning, find yourself swimming, the morning watch having commenced washing decks. Symptoms of anger would only increase the laugh at your expense.

In the ship in which I sailed to India, a young midshipman was sleeping on his morning watch, on the leeward side. The officer on watch ordered the sailors to bring half-a-dozen buckets of water, and at a preconcerted signal the poor snoring middy was to get the contents. The signal was given, and souse went a couple of buckets; then two more. The officer cried out, "Tom, you are overboard; strike away." The little frightened fellow's hands and legs went the same as if he had been actually swimming, and it was some time before he could make up his mind that he was safe on board; more especially when some of them cried out, "Throw him a rope—throw him a rope."

Showing your agility in ascending the ship's side, miss your footing, by which you have a most favourable opportunity of showing your swimming powers also.

Being monstrously beloved by the passengers from your urbanity and complacency of manners, find that, as a token of their unalterable affection, they bribe the sailors to play you all manner of tricks; such as tripping you up by a rope; tying your legs when asleep; dragging you from one side of the deck to the other; sousing you from the main top, whenever you venture in its vicinity; putting grease in your chair, when you are about to seat yourself; filling your tea with salt; your cigar with gun-powder; your grog with jalap; your boots with water; your bed with tar; and five hundred other tricks. Therefore, as the society of a vessel is necessarily small, make yourself agreeable; if not, the above will be your fate.

Under the raging sun, inhaling from your port-hole the little breeze that sometimes condescends to visit you, and in those pensive moments committing to paper the occurrences of the voyage, when, all of a sudden, a squall comes on, and your effusions, desk and all, find their way into the briny deep, and you have the mortification of seeing them descending rapidly to Neptune's treasury.

Sitting between two foreigners, of whose language you do not understand a syllable; but who, from their violent gestures, appear to be laying deep plans, for cutting your throat.

Considering yourself a connoisseur in the manufacture of spruce beer, make twelve dozen, and invite your friends on board the ship to pay you a visit, to regale themselves on this cooling beverage the following day. In the middle of the night, however, you find yourself awoken by a file-firing which alarm the whole ship, and which, on examination, you find to proceed from the bursting of your delicious spruce, occasioned by the rolling of the vessel, and the heat of the lockers in which it had been deposited.

Sitting opposite, or next to, a prodigious fat gentleman, or dame, who has a wheezing asthma

During a storm, find your cot loose, which rolls from side to side to the great terror of all the passengers, and to the great risk of your life: cannot—dare not, move; and, from the noise and bustle on deck, your shrill notes of fear pass unheeded, save by the frightened inmates below, who hug their beds in alarm. Thus you are doomed, at the mercy of the billows, to roll from side to side, and from head to stern, at the expense of your ribs and head.

Quarrelling with the officers of the ship; in consequence of which, wherever you show your nose, you are sure of being soused and played all manner of tricks with by the crew, to the great amusement of the other passengers.

Being obliged to sit next to a gentleman who is an intolerable taker of snuff, which is continually blowing into your eyes. To mend this annoyance your snuff-loving neighbour gets drunk before the cloth is removed from the table, and then becomes so importunate for conversation, that he thrusts his snuffy proboscis into your face; or, in his vehemence, upsets his snuff-box into your lap.

LOSS OF HIS MAJESTY'S SHIP, FLORA.

Upon the Schelling Reef, Monday, January 18th, 1808.

THE following, is extracted from a letter, written by an officer, dated Lewarden, in Friesland, January, 26, 1808, and is the only authenticated account that can be given, of this melancholy affair.

"I am sorry to inform you that the *Flora* struck upon the Schelling Reef, on Monday the 18th, and about nine o'clock that night we succeeded in getting her off, but lost our rudder in the attempt; and after getting her to sea, we could hardly keep her free with all the pumps, therefore was obliged the next day, to run her on shore again, about four o'clock that afternoon.

"After making rafts, fearing that if it came on to blow hard that night, she would go to pieces, the captain, Furber, Keith, Doneville, Watson, and myself, pushed off in the barge, that being the only boat we then had, with about one hundred and thirty of the crew on rafts, the rest choosing to stay by the ship; when after rowing eighteen hours, we did not know where, not being able to see land, and without sustenance, we landed on the island of Amoland, where they made us prisoners, and marched us here.

"After being four days and nights on board, the rest came on shore on some rafts, and I believe, all are saved. I have lost everything; as when I left the ship, though my bag was in my hand, I would not put it into the boat, as the captain would not his, nor indeed, was it a time to think of anything but one's own life. Those whom we left at the wreck, are at Harlingen."

TOPE OF THE HILL ON THE MOUNTAIN SIDE THE TOWN OF BOSTON TO THE RIGHT

LOSS OF THE BRITON AND RUNNYMEDE OFF THE ANDAMAN ISLANDS, NOVEMBER 11th, 1844.

THE Briton, of 600 tons, built in Australia in 1830, sailed from that place some time in October, 1844, for Calcutta, with about 400 strong of the 80th regiment on board, having also their wives and children. On the morning of the 7th November, a heavy gale came on, which continued with but little intermission till the 10th, when it raged with greater fury, so that human efforts, though energetically employed, were unable to control its power. Driven by the furious elements, with the hatches battened down over the troops, the sea sweeping every thing from the decks, and compelling the seamen to hold on, that they might not be washed away, the unfortunate ship was frequently nearly buried beneath the waves, and the sufferings of all on board were excessive; the soldiers, women, and children being almost suffocated by being deprived of ventilation besides the almost impracticability of obtaining food. In the early part of the day the foremast went by the board, and subsequently the main and mizen masts followed, and they were left, without the power of resistance, to the rage of the merciless ocean. Throughout the dreary and tempestuous night of the 10th, they continued to drive, every one unconscious of the situation of the ship, momentarily expecting that she would go down, and all hands perish. About two o'clock on the morning of the 11th, a heavy sea threw the Briton on shore, but whether it was on the land or on a sandbank, no one could tell, nor were they certain as to their position. The shock was heavy, and several succeeded, till she laid, comparatively speaking, tolerably quiet; and though despair at first took possession of their minds and the shrieks were dreadful, yet, when more tranquil, the alarm gradually subsided. The morning was pitchy dark, but during the short period of the vivid flashes of lightning, they could discern that the white foam of the breakers were rolling round the ship for the circumference of half a mile, and to their utter astonishment they perceived that she was surrounded by trees—in fact, that they had been carried over the beach, and right up into a thick jungle. Daylight revealed their situation more distinctly, as their dismasted vessel lay in the middle of a forest, and within 300 yards of them, on a reef of rocks, was another large ship, full of men, the sea beating violently over her. This they ascertained to be the Runnymede, a transport of 500 tons, the property of Messrs. Hall and Co., of London, that left the Downs in August for Calcutta, having shipped a great number of newly-raised recruits from Chatham, for the 50th regiment.

This singular occurrence of their thus meeting in distress and misery, caused universal sympathy. Neither ship had seen the other previous to daylight of the 11th, and now they found they were wrecked amidst a population of savages, who were rightly supposed to feast on human flesh. It continued to blow hard for several days, but the fierceness of the gale had abated, and the waters fell so as to leave the Briton on nearly dry ground. The troops were landed, and the jungle for some distance round wholly burned down; an encampment was formed, the huts being built of the materials got out of the ships. Finding that the only hope of escape would be by communicating with some friendly port, the boats were examined, but only one was in any way serviceable, and this required considerable repair, which was partially accomplished, and the parting was most affecting. The rest remained upwards of two months before they received any assistance, suffering the greatest privations from want of provisions, and the attack made on them by the natives of the islands, who frequently surrounded them, and but for the resolute defence of our men, who were set on watch, there is little doubt but every one of them would have been massacred. Several of the natives are reported to have been mortally wounded. Three of the 80th were shot while searching for shells on the beach. About a week after the wrecks a party, consisting of the master of the Briton, mate of the Runnymede, and several seamen, started in the boat that was repaired to obtain assistance, and they succeeded in reaching Mergni in about a month. Immediately on the authorities of Mergni being apprised of the sad

disasters, the Company's schooner George Swinton was despatched with provisions to the islands; and in the course of the week five other vessels were sent to the aid of the shipwrecked troops and seamen, two of them belonging to the royal navy, the steamer Ganges and Pilot war brig. The other vessels were the Ayrshire, Agnes Lee, and the Elizabeth Amelia. The instructions were, that upon their arrival they were to take the troops of both ships on board, and to proceed with them direct to Calcutta, and for the remainder to take the crew, and to save as much of the vessels as they possibly could. The spot where they lay is the Andaman Archipelago, lat. 12 deg. N., long. 93 deg. 13 min. E. There are several islands near it; the largest is called the Great Andaman, 140 miles long and 20 miles broad, indented by deep bays, and intersected by vast creeks, two of which pass through the island, and at high water are navigable for small vessels. The inhabitants are, as before mentioned, in a state of barbarism, and live chiefly on fish, fruit, and herbs. They perfectly resemble negroes, and their canoes are of the rudest description. Had those on board the Briton and Runnymede been defenceless emigrants, instead of troops, they would have been speedily butchered. The Runnymede is a total loss, but the Briton is very little damaged; but it will be impossible to get her off, consequently she must be either broken up or set fire to, in order to prevent the natives obtaining possession of her hull. Neither of the ships are said to be insured. The troops have arrived since at Calcutta.

THE TWO FISHERMEN.

"I WAS strolling on the beach one fine spring evening, amusing myself with picking up pebbles and casting them into the sea, while memory was busily employed in retracing past scenes and events, when my reveries were broken in upon by a slight tap on the shoulder. I turned round, and beheld a venerable old seaman, whom I often visited during the summer months, at his pretty cottage at C—.

"What, all, alone?" he said, with his usual benevolent smile. "Can you find no better employment, my pretty maiden than that of throwing stones into the water?"

"I attempted to make some excuse for the foolish manner in which I was wasting my time.

"Nay, make no apology, Jane, I know you of old; you will contrive to draw some grave reflection from your childish amusement—and tell me that the ocean reminds you of time, and that the pebbles you cast into it, resemble the fate of man, making a stir for a moment, agitating the bosom of the waters, then sinking for ever, and leaving no trace on the surface."

"It is even so," said I, unconsciously dropping the stones I had in my hand, one by one upon the beach. "Yet I, a weak girl, have the vanity to think I can leave a slight memorial of my existence on the surface, when so many gallant men sleep forgotten beneath, and are silently mouldering with the things that were."

"The old man sighed deeply, and an expression of sorrow, almost amounting to anguish, convulsed his features. It was but a passing cloud—his fine countenance was again illuminated by his usual placid smile, as seating himself on a piece of broken cliff, he motioned me to follow his example.

"Come, Jane," he said, "sing me that song I dearly love, and I in return will tell you a long story, which you may turn to what account you please, so that you conceal the names of the parties concerned."

"I loved his stories: they were always told with such simplicity, and warmth of feeling, that he ceased to be the mere narrator, and the hearer might fancy him one of the principal actors in the drama. The song he wished me to sing, and which he always called his favourite, was a sad ditty: "It was penned by an uncle of mine, after returning from a long voyage; and finding the lady he was engaged to, had died during his absence. My father being musical, set it to the flute, and it was known in the family by the name of 'The Mariner's Farewell.'"

"I will not sing you that," I said, "it is so very sad."
 "The better suited to my present feeling," returned the old man.

"Now, I wished to hear this tale—curiosity conquered my scruples and I did my best:

"The sails were set, the dashing oar,
 Already broke the foaming tide;
 But still I lingered on the shore,
 The bitterness of grief to hide.

The wind swept o'er my burning brow,
 The surge in hollow murmurs rung;
 I only felt the ardent vow,
 That trembled on my faltering tongue.

I only heard the heavy sighs;
 That burst from one fond woman's heart;
 I only saw the streaming eyes,
 That mutely said—'We part, we part!'

How oft the pressure of that hand,
 I've dreamt I felt at midnight's gloom:—
 Again I sought my native land,
 But she I loved was in the tomb!

"A long pause succeeded. At length the old man, passing his shaking hand over his eyes, pointing to a small white cottage that stood on the brow of the cliff. "Do you see that dwelling, with the roses over the porch?"

"'Tis an old-fashioned looking place," said I, "and would make a pretty picture."

"Forty years ago," he continued, "that house was built by two brothers, who gained a comfortable living by engaging in the fisheries, which were then carried on to a great extent in this village and the adjacent seaport town.—Robert and William Sowerby, were early left to struggle with the world. Their father died at sea, and their mother did not long survive her loss. The boys were brought up in the house of an uncle, who was the father of two sweet little girls. The children tenderly loved each other; time strengthened their mutual attachment; the uncle, before his death, consented to their union, and the brothers jointly erected that dwelling, to receive their promised brides."

"The rising sun smiled upon their labour of love, and the shades of evening could scarcely while them from their pleasing employment. Robert was grave and steady in his deportment and plain in his person. William was handsome, gay, passionate, and thoughtless. The difference in their dispositions and pursuits, often produced hot words between them, yet the brothers were fondly attached to each other.

"The marriage was a matter of rejoicing to the whole village; the bells rang forth a merry peal, and old and young came out to meet the bridal party, and welcome them to their new abode. The children strewed flowers in their path, and matron and maid wished that long years of happiness might attend their wedded life.

"For a while the youthful parties bade fair to realise the fond hopes of their friends. Cemented alike by brotherly love, and conjugal affection, the harmony that reigned in that little dwelling, became the topic of conversation to the inhabitants of the village.—Fanny, the wife of Robert Sowerby, possessed a heart too gay and joyous, to contend with the ills and sorrows of life. I see her now, the feelings of her innocent and guileless breast, lighting up the sunny expression of her smiling face, round which her dark curls wanted like the tendrils of the vine. How often have I paused beside yon rose-bound porch of a summer evening, to hear her gay laugh, ring in the clear air, while she tied up the flowers, or playfully wove them into wreaths for her flowing tresses. Dear girl! There was music in her step, gladness in her eye, and both combined in the witching tones of her voice. I have heard it exerted to its utmost pitch to meet the ear of her husband, as she stood upon the cliff, watching the return of his boat, by the clear beams of the moon. That voice has been mute many a long day, and the grass grown old upon her grave; but I shall never forget

its tones, and can repeat to you every word of that well known ditty:—

"Welcome! welcome! thou little bark!

Love greets thee from the shore!
 Through whitening foam, thy sails I mark,
 I hear thy dashing oar;
 Quickly glide over the pathless sea,
 For dear is thy freight to love and me!

She comes! she comes, through the dashing tide,
 And her keel grates on the strand,
 As the waves before her course divide,
 And her bold crew spring to land!
 Safe from the storm, and the howling main,
 I hold thee once more to my heart again!

Thy locks are wet with the ocean's foam,
 But our hearth burns bright and clear;
 The loved and the loving shall welcome thee home,
 And prepare thy rustic cheer.
 Yes! thou art safe, and I heed no more,
 The rising wind, and the tempests roar!

"Thus sang poor Fanny in days gone by; and, as her delighted husband caught her in his arms, he envied not the luxuries of the great, contented with the undivided, unbought love of his beautiful young wife.

"William and Lucy, after the first months of their marriage were over, did not possess that happiness and unity of mind, that were so conspicuously displayed in the domestic felicity enjoyed by their next-door neighbours. William was rash and obstinate, and often found fault with every scheme that his mild partner devised in the vain hope of pleasing him. All her endeavours to fulfil his wishes were frustrated by his unfortunate temper. He loved her, it is true; but he loved himself better, and viewed the happiness of Robert and Fanny with a jealous and discontented eye; not considering that it was his own fault that he did not enjoy the same.

"You never seem glad to see, me, Lucy," he would exclaim, as he hung down the nets he had been fishing with, in a corner of the cabin,—or sing such sweet songs to welcome my approach as Fanny does."

"I have no voice—I cannot sing," was the meek reply of poor Lucy, "but indeed, William, I am always happy to see you."

"Ay, that's the old phrase; but deeds show. Fanny is always gay and cheerful, that renders Robert so, and makes his home happy; while you greet my return with upbraidings, which drives me from mine."

"It's your own fault, William," said Lucy, bursting into tears, and leaving the room; "could you curb your temper, we too might be happy."

"Seldom a day passed without some dispute of this nature; and the kind-hearted Fanny, saw with grief, that the fend discord had thrown her apple into their once happy circle.

"One evening they had met at Robert's house to while away a few hours by his cheerful fireside. It was a rude wintry night, the rain fell in torrents—and the wind roared without, and shook the cottage to its foundation. William had been on the sea with the boat, which was their mutual property, in the earlier part of the day; and Robert, hearing the tempest rising to a pitch of fury, asked his brother if he had taken the precaution to draw her upon the beach, and secure her against the violence of the waters, which burst in tremendous shocks against the cliffs. William answered harshly in the negative. "Then, I must go and do it myself," returned Robert, the colour mounting to his cheek; "If you are careless with regard to your own property, you should have some respect for mine."

"Let me perish, if you leave the house such a night as this on any fool's errand," said William, rising, and placing his back against the door. She will take no harm, man! and is as much my property as yours."

"Stand back from the door!" returned Robert, giving way to sudden passion, "if I choose to go, no one shall dare to bar my passage in my own house."

"I tell you that you shall not go," said William, "and I will make good my words."

"You must do it in another place, then," returned Robert, with a threatening air.

"With all my heart," was the reply.

"The women now interposed; and, on each side, with tears and entreaties, endeavoured to win the brothers into a reconciliation. Fanny at length succeeded, for when did she ever plead to her husband's heart in vain? Kissing her pale cheek, and quieting her fears, he turned to his brother, and holding out his hand in token of amity, said—'William, we have both acted foolishly; I forgive you for your late intemperate speeches, and I expect you will extend to me the same favour. There is my hand upon it; and now let us mutually assist each other in securing the boat.'

"William, whose passion had not so soon subsided, consented with a sullen air, and they left the house together.

"During their absence, Fanny continued to pace the cottage with rapid steps, and often hurried to the door, and listened to the howling of the tempest with an expression of alarm and inward anxiety. 'The night is dark and stormy,' she said; 'the billows roll mountains high—oh, how I wish my husband would return.'

"Do not alarm yourself, my dear sister," returned Lucy rising, and approaching the open door: 'They will doubtless return in a few minutes. But see,' she continued, 'your clothes are wet through with the rain: consider your situation, and be more careful for your husband's sake.'

"I can see a dark figure advancing along the brow of the cliff," replied Fanny, disregarding her sister's caution. 'Tis he—it is my husband!' In despite of Lucy's efforts to detain her, she sprang from the cottage, and sank almost fainting into the arms of William Sowerby, who, without deceiving her, carried her gently back into the cottage. When Fanny perceived her mistake, her fears reached a climax of agony.

"Turning with a degree of fierceness quite foreign to her nature towards William, she demanded of him 'what he had done with her husband?'

"Is the woman mad?" he exclaimed in an angry tone. 'Am I accountable for her husband's actions?'

"You are! you are!" shrieked Fanny. 'He left the house with you, and should have returned with you. There's blood upon your hand—your garments are dyed with it—Almighty God, you have murdered him!'

"She sank senseless at his feet; and Lucy turning towards him with a face pale as death, said—'Speak, William! Tell me what is this that you have done. Whence are these fatal stains? Where! where, is your brother?'

"Let me be cursed to all eternity, if I know," said the fisherman, stamping furiously on the ground. 'These women, with their suspicions, are enough to drive a man out of his senses!' Seeing his wife trembling from head to foot, he added, in a calmer tone—'I left him with the boat; he will be here in a few minutes, to laugh with me at your ridiculous folly.'

"During this speech, Fanny had half risen from the floor, and she caught his arm wildly. 'It may be true. Forgive, William, a wife's agony! Come, and help me to look for him.'

"This idea appeared to inspire her with fresh hope; and, springing to her feet, she darted through the doorway, and fled with the rapidity of thought towards the cliff. The wind in vain impeded her course, or the drenching torrents that beat on her uncovered head: one dreadful supposition alone possessed her mind; the uproar of the warring elements was congenial with the feelings it produced in her distracted breast; and she never paused till she reached the spot where the boat was generally moored. The moon that had been obscured, now struggled through the haze, and cast a wan, uncertain light, on the surrounding objects. She stood alone on the sands; no sound of human voice met her ear, no living creature her eye. She called in frantic tones on the name of her husband—'Robert! Robert! where are you?' The hollow cliffs returned her voice, and the winds and waves alone answered her.

"William now arrived on the spot with a lantern, accompanied by several fishermen from the neighbouring houses.

They found the unhappy wife of Robert Sowerby in a state of almost unconsciousness: two of the men carried her back to the cottage, while the rest proceeded to search for her husband.

"On examining the boat, they discovered the pebbles all round it stained with blood, and the sand deeply indented by the pressure of contending feet. The men looked one upon another, and then at William.

"Whence are those stains on your face and garments, messmate?" said an old man, eyeing the young fisherman with a glance of peculiar meaning.

"It is blood," he returned, in a sullen voice; 'but it is my own. In drawing the boat up higher on the beach, I had the ill-luck to cut my hand with a sharp flint, and the blood is still oozing.'

"You will have to give a more satisfactory account of the accident, if your brother is not forthcoming," replied the old man; 'in the meantime I shall consider it my duty to retain you in custody until he is found, or you confess what has become of him.'

"Of what do you accuse me?" exclaimed the agitated young man.

"Of murder!"

"He uttered a scream of agony, and raising his hand towards Heaven, made the most solemn asseverations of his innocence, and called on God to attest their truth.

"The men pitied him, but no one in his sober reason could acquit him of the deed. He then implored them to let him take a last farewell of his wife before they hurried him off to prison; and this mercy was not denied to him.

"Unconscious of the horrors of her situation, or the trials that awaited her, Lucy was standing by Fanny's bed, watching in unspeakable anguish, the last flutterings of expiring life. Sorrow had pressed but once on that young gay heart, and the cord of life was severed in the contest. Her anxiety of mind, hurried the pains of a mother, and she died in giving birth to a male infant, who survived the loss of its unhappy parents.

"She had just performed the last melancholy task, and closed the fair lids that shrouded for ever the once joyous glance of her sister's radiant dark eyes, when her husband sprang into the room, and catching her arm, exclaimed in a wild and hurried tone—

"Look on me, Lucy! Tell me that you believe me innocent of the horrible crime they have laid to my charge?"

"The low wailing of an infant met his ear, and his blood-shot eye fell on the pale inanimate form of the once beautiful Fanny.

"Oh! she is dead, then—and they will say I have murdered her, too," he cried, as he dashed himself on the floor, and wept aloud in the paroxysm of his despair.

"Lucy knelt beside him, and raised his head on her knees. Her's was a misery too deep for tears; she kissed, with trembling lips, the swollen brow in which the veins seemed bursting, and said in a faltering voice—'Oh, my husband, I know not what to think—but I will not believe you guilty.'

"God bless you for the words, my poor girl; Heaven will prove my innocence; for I swear to you, Lucy, by Him who made me, I am as ignorant of my brother's destiny as you are. We parted friends—and never, in my wildest fits of passion, could I have raised my hand against his life.'

"I believe you!" exclaimed Lucy, flinging herself into his arms. The officers of justice entered, and tore them apart. 'We shall meet again, William,' she cried, as they bore him from the apartment, 'both here, and in another world.'

"As the village bell smote on her ear, she turned towards the pale crushed flower, over whom her tears flowed unceasingly.

"Poor Fanny," she said, stooping down and kissing the cold brow of her sister—'Thy sorrows are over; thy heart is at rest—that gay, glad voice is hushed for ever. I shall never again envy its tones of melody, or hear thy bounding step spring forth to meet him who has vanished from among us like a dream, and no one knoweth the cause of his departure. Oh, that I could lie down and sleep like thee, and bury in the dust the anguish of a broken heart.'

"Days, weeks, months rolled away; but Robert never returned. William was tried for the murder; the presumptive evidence was too strong to admit a doubt as to the perpetration of the crime; and he suffered, at the age of three-and-twenty, by the laws of his country.

"Lucy remained a lonely inhabitant of the cottage, pitied and respected by all her neighbours. She found a melancholy pleasure in bringing up the orphan her unfortunate sister had, dying, bequeathed to her care.

"She bore her dreary lot with a meek and lowly spirit, patiently submitting herself to the will of Heaven. The cottage, however, wore a different aspect. The roses that had been trained up by the hand of love were unbound, and floated on every breeze; the pretty garden, once the scene of Fanny's rural labours, was overgrown with weeds, here and there a solitary lily rearing its snowy crest to bring back to the mind of Lucy, the memory of departed hours. When the moon shone down in beauty on the spot, she would lean her head pensively on her hand, and fancy she heard the sweet voice of Fanny singing in the porch, as she playfully shook the dew out of the roses on to the dark locks and over the sun-burnt cheek of her husband. 'Ah, they were happy days'—would the solitary mourner say—'but they are gone for ever.'

"Six years had rolled on, and the little orphan had grown into a fine ruddy boy, with all his mother's lovely smiles and sparkling beauty. Lucy marked his growth with melancholy pleasure, and he became more dear to her from the resemblance he bore to her sister.

"One bright summer evening, as the rosy child was swinging on the garden gate, and watching the restless billows as they slowly broke against the cliff, a woe-worn and weather-beaten man approached the gate. The child, frightened at his haggard looks, would have fled, but the stranger caught him in his arms. 'Tell me,' he cried, in a hurried voice, "whose little boy are you?"

"Mother Lucy's," said the child, struggling in his grasp. 'I don't know you; pray let me go!'

"Do your father and mother live here?"

"My mother does; but I have no father," said the boy; 'he died before I was born.'

"Poor William! he is gone, then?" said the stranger, greatly agitated. 'Tell me, dear child, if your aunt, Fanny Sowerby is living?'

"Aunt!" said the child, looking earnestly in his face; 'I had once, they tell me, another mother, but she lies in the churchyard. I never saw her, but mother Lucy always makes me pray for her, and my father too.'

"Oh, my child! my child!" exclaimed the stranger, pressing the infant wildly to his heart, while his tears fell fast on the glittering ringlets of the cherub boy.

"At this moment, Lucy advanced from the cottage. At the sight of the stranger she uttered a terrific scream, and, catching his arm, cried out in a trembling voice, 'Speak to me, in God's name, Robert, tell me you are of this world?'

"Alas! to my own misery," groaned forth the unfortunate man.

"Lucy clasped her hands mournfully, and raised her streaming eyes towards Heaven.

"My wife! my brother!" he exclaimed, dashing his hand against his head. 'This is a horrible dream; it cannot be true that you both died for me!'

After the first burst of feeling had subsided, Lucy entreated him to reveal the cause of his long absence.

"William's tale was true," he said; 'we dragged the boat, which was nearly afloat in the surf, high up on the beach, in doing which he cut his hand severely with a large flint, and I begged him to leave me to fasten the boat, whilst he ran home and got the wound, which I considered dangerous, bound up. Thank God, Lucy, we parted friends! He had not left me many minutes, before, a band of smugglers emerged from a cave in the cliff, and observing me imprudently turn my head, and look earnestly at the place of their retreat, they surrounded and threatened me with instant death if I dared to reveal their hiding-place. I promised—nay, even bound myself to secrecy, by the most powerful oaths that language could suggest.

"Do not trust him," said one of the crew. 'Despatch him, and throw his body into the sea: we shall then ensure his silence.'

"My wife rushed across my mind—I implored their mercy—'If any of you are husbands and fathers,' I said, 'have compassion on me; I have left, in that cottage, a wife on the eve of her confinement with her first child—a wife whom I adore—do not commit a double crime by destroying both?'

"The leader of the band relented; 'I have thought of a better scheme,' he said, nodding to his companions; 'we will not take his life.'

"Just at this critical moment I heard approaching footsteps. I struggled desperately to gain my liberty, and was thrown with such violence to the ground, that the blood gushed copiously from my nostrils; a handkerchief was tied over my mouth, and I was forcibly dragged into the cavern. O, Lucy! imagine my feelings, when I heard in that dismal place the voice of Fanny calling on me in the tones of despair, while I, bound hand and foot, was denied even the powers of utterance. Were I to live for eternity, I should never forget the horrible presentiments of approaching ill which crowded on my mind during that dreadful night.

"Towards morning the smugglers got their vessel under weigh, and they put me on board, and in the course of twenty-four hours we were landed in Holland. Without a halfpenny in my pocket, or the least knowledge of the language. I was reduced to the necessity of soliciting the charity of the passers-by. But the anxiety of my mind brought on a violent fever. I was picked up in the streets, and conveyed to the hospital, where I languished for upwards of a twelvemonth under the inflictions of Heaven, and when restored at length to health and liberty, new miseries awaited me. Luckily I fell in with the master of a trading vessel, who, pitying my forlorn situation, agreed to take me with him to England. Just as my hopes were nearly realized, I was again plunged into despair; our vessel became the prize of a privateer, and I was carried a prisoner to France, where I remained until the exchange which took place a few weeks ago.

"We had a quick passage, and arrived safe in dear Old England. My transports were so great, on once more beholding my native land, that it was some time before I could moderate my feelings. I begged my way hither, anticipating the kind welcome I should receive from my wife and family after so long and painful an absence. And what have I found? My wife in her grave, and my brother executed as a felon for my supposed murder.

"Here the old seaman paused, and seemed so deeply affected, that it was some minutes before I could sum up resolution again to address him.

"And what became of poor Lucy?"

"As though she had lived only to deliver up that lovely boy into his father's care, she soon after sickened and died; and we buried these two sisters of misfortune in the same grave. The boy, Jane, you have often seen; he is the gay, high-spirited young officer who is frequently the companion of your evening rambles."

"How!" cried I, starting from my seat, 'Robert Brandon! He is then your son?'

"Yes, Jane, I was the once happy husband of the beautiful Fanny Sowerby.' He pressed my hand to his lips, and walked slowly towards the deserted cottage. I looked after him—my heart was full—tears blinded my eyes—I could not follow him."

AN EXAMPLE OF BRITISH SEAMANSHIP.

ON the 10th of January, 1800, a singular instance of seamanship, valour, and dexterity, occurred in the escape of a pilot-boat from a French privateer. The vessel was the *Amity*, belonging to Bembridge, on the look out for ships. About ten, in the morning, they discovered a lugger privateer, about two miles distance, which they could not perceive before, in consequence of the morning being hazy. There being little wind, the enemy was rowing with thirteen

oars on each side, and fast approaching: the master of the pilot boat thought it best to leave the vessel immediately, there being no other means of escape. He and another man, got into their small boat, and desired James Wallis, the boy, to come also; but he bravely answered, "he would remain by the vessel, whatever might be the consequence." Thus resolved, he gave them his watch, and all the money he had, which he requested, they would give to his father; they promised to perform his request, and immediately left him to his fate, and the privateer was only a quarter of a mile distant. In a few minutes she shot up under his lee quarter, with an intention to grapple the pilot boat; and having fresh way, lowered her main-top sails, and lug sail; the lad observing their design, just as they were in the act of heaving their grappling irons, put his helm down and went about, whilst the privateer fired small arms and swivels into her. This manoeuvre obliged them to make sail and tack; when they had made all the sail they could, the young man with great judgment tacked, and weathered them about the length of the lugger: the privateer having gained his wake, tacked also, The youth continued to tack, every time the privateer set her sails, which was repeated sixteen or seventeen times; they likewise constantly fired when near, and particularly when crossing at a distance, never more than thirty yards. After manoeuvring in this dexterous manner for above two hours, a fresh breeze happily sprung up, the pilot boat was then on the last tack, and had gained about a cable's length to windward, when she crossed the privateer, which after firing all their swivels and small arms, bore up and left him.

WHITFIELD'S ORATORY.

As an instance of Whitfield's pulpit thunder, give me leave to squeeze in here a bellowing exclamation of his, and a sailor's laconic reply, the authenticity of which may be relied on.

This wonderful doctor of souls, was preaching to a numerous congregation in his conventicle in Tottenham-Court Road, with his usual vehemence, with his eyes flaming in their sockets, and an expansion in his arms as though he were buffeting the billows.

"We will suppose this temple of worthies," says he, "my dear brethren, a ship in a dreadful tempest! your spiritual pilot not on board to guide you to the beacon in safety! he that has conducted you through the many storms of this perilous life, with celestial comfort! I need not tell you how watchful I have been for the comfort of your dear souls! in such a situation, 'when the winds howl o'er the darkly rolling sea,' as that profane writer Ossian expresses it! in such a situation what would you do to be saved?—I ask you, what would you do to be saved?—" "Why, d—n me (replied the tar) take to the long-boat to be sure? what would you have us do?"

THE CONVICT SHIP.

MORN on the waters—and purple and bright,
Bursts on the billows the flushings of light;
O'er the glad waves, like a child of the sun,
See the tall vessel goes gallantly on;
Full to the breeze she unbosoms her sail,
And her pennons stream onward, like hope in the gale;
The winds come around her in murmur and song,
And the surges rejoice as they bear her along,
See! she looks up to the golden-edged clouds,
And the sailor sings gaily aloft in the shrouds:
Onward she glides amid ripple and spray,
Over the waters—away and away!
Bright as the visions of youth, ere they part,
Passing away like a dream of the heart.
Who, as the beautiful pageant sweeps by—

Music around her, and sunshine on high—
Pauses to think, amid glitter and show,
Oh, there be hearts that are breaking below!

Night on the waves!—and the moon is on high,
Hung like a gem on the brow of the sky,
Treading in depths, in the power of her might,
And turning the clouds as they pass her to light.
Look to the waters! asleep on their breast—
Seems not the ship like an island of rest?
Bright and alone on the shadowy main,
Like a heart-cherish'd home on some desolate plain.
Who—as she smiles in the silvery light,
Spreading her wings on the "bosom" of night,
Alone on the deep, as the moon in the sky,
A phantom of beauty—could deem, with a sigh,
That so lovely a thing is the mansion of sin,
And souls that are smitten lie bursting within?
Who, as he watches her silently gliding,
Remembers that wave after wave is dividing,
Bosoms that sorrow and guilt could not sever—
Hearts which are parted and broken for ever!
Or deems that he watches, alone on the wave,
The death-bed of hope, or the young spirit's grave?

'Tis thus with our life—while it passes along,
Like a vessel at sea, amid sunshine and song,
Gaily we glide in the gaze of the world,
With streamers aloft, and with canvass unfur'd;
All gladness and glory to wandering eyes,
Yet charter'd by sorrow, and freighted with sighs:
Fading and false is the aspect it wears,
As the smiles we put on just to cover our tears;
And the withering thoughts which the world cannot know,
Like heart-broken exiles lie burning below;
While the vessel drives on to that desolate shore
Where the dreams of our childhood are vanish'd and o'er.

HERVEY.

NAVAL PATRONAGE.

A MIDSHIPMAN of my acquaintance, and who subsequently attained the rank of captain, had nearly completed his six years, and joined a ship in the Mediterranean, taking with him letters of introduction and recommendation to Lord Collingwood, then commander-in-chief. With these he waited on his lordship; who found, upon perusing them, that one was from Lord B——, lately first lord of the admiralty, containing the simple and very modest request, that the young gentleman, the bearer of the note, might be appointed as acting lieutenant, until his time should be completed. Lord Collingwood, who was much teased with similar applications, and was, besides, no bad judge of the cut and fashion of a sailor, generally addressed a few questions to such aspirants for lieutenantcies as the one who now stood before him: and according to their answers, he either took them at once into his own ship, that he might be a closer observer of their qualifications, and deserts, or left them, for an indefinite time, in the one, to to which they belonged. After the usual common places of "How long he had served?" "and with whom, and upon what station?"—in pursuance of this wholesome plan, he proceeded to put Mr.——'s nautical knowledge to the proof: upon which he was soon abundantly satisfied. His very first question was a puzzler—this candidate for untimely promotion, being unable to tell how or where the "bitter (better) ends of the bower cables are clenched." He was, therefore sent back to his ship, with an admonition "to make himself better acquainted with his profession, which," his lordship added, "he should be glad to hear was the case from the captain, whose duty it would be to examine him, when his six years' service as a midshipman would be completed."

DEFEAT OF THE SPANISH ARMADA.

IN the year 1588, during the reign of Queen Elizabeth, Philip the Second, King of Spain, formed a grand design of invading England, and made vast preparations for the entire conquest of the kingdom. Under the sway of this monarch, and that of his father, the Emperor Charles the Fifth, Spain had reached to the highest point of its prosperity, being, at that period, rich and populous: and the late conquest of Portugal, besides securing internal tranquillity, had annexed an opulent kingdom to Philip's dominions—had made him master of many settlements in the East Indies, and of the whole commerce of those regions; and had much increased his naval power, in which he was before chiefly deficient. Besides this, all the treasures of the West Indies were in his possession.

Philip's ambition was as great as his resentment was lasting. On the death of Queen Mary, of persecuting memory, whose husband he was, he made proposals of marriage to his sister-in-law, Queen Elizabeth, hoping still to obtain that dominion over England which he had failed to secure in espousing her sister, and he offered to procure from the Pope a dispensation for the purpose. But Elizabeth knew well the aversion borne by the nation to a Spanish alliance, and at once rejected the proposal. This refusal rankled in his heart, and the interference of Elizabeth in the affairs of the Netherlands, when the Dutch provinces revolted from him; the sending out of an armament against the Spanish settlements in the West Indies, and the destruction of the Spanish fleet, at Cadiz, in 1587, with other insults and injuries which the Spaniards were continually receiving from the English, all tended to encourage and inflame that desire for revenge, which Philip had long harboured against the Queen.

Added to all these causes of offence, Philip's bigotry led him to place himself at the head of the Catholic party on the Continent, and to devote all his energies to the extirpation of heresy both at home and abroad. Elizabeth, on the other hand, was recognised throughout Europe as the bulwark and support of Protestantism; and Philip hoped, if he could subdue that princess, to acquire the eternal renown of re-uniting the whole Christian world in the Catholic communion. Above all, his indignation against his revolted subjects in the Netherlands, instigated him to attack the English, who had encouraged that insurrection; and to subdue England seemed a necessary step towards the re-establishment of his authority in that portion of his extensive dominions.

The preparations for the Armada—by which Philip hoped to conquer the English both on sea and land—were for some time secretly carried on, with great celerity. As soon as the project was fully determined upon, every part of his vast empire resounded with "the busy note of preparation, and clank of hammers closing rivets up." All his ministers, generals,

and admirals, were employed in forwarding the design. In all the ports of Sicily, Naples, Spain, and Portugal, artisans were employed in building vessels of uncommon size and force; naval stores were collected at a great expense; provisions amassed; armies levied and quartered in the maritime towns of Spain; and such a fleet was fitted out as had never before seen its equal in Europe. The military preparations in Flanders were no less formidable. Troops from all quarters were every moment assembling, to reinforce the Duke of Parma, to whom had been committed the command of the army. In Italy, and Germany also, soldiers were enlisted; and an army of 34,000 men was assembled in the neighbourhood of Dunkirk, and kept in readiness to be transported into England. The Duke of Parma employed all the carpenters whom he could procure, either in Flanders or in Lower Germany, and the coasts of the Baltic; and he built at Dunkirk, and Newport, and at Antwerp, a great number of boats and flat-bottomed vessels, for the transporting of his forces. This great naval armament, when completed, consisted of 150 ships, most of which were of an unusual size, carrying 2,650 guns, and having on board 20,000 soldiers, and 8,000 seamen, besides 2,000 volunteers of the most distinguished families. This force was to be joined

by the 34,000 men before referred to, assembled in the Netherlands. This vast navy was vainly gloriously denominated by the Spaniards, even before leaving port, the "Invincible Armada!"

These extraordinary preparations could not long be concealed from the English government; but Philip was a consummate hypocrite, and he gave out that the armament, on which he had spent such enormous sums, and called into requisition all the resources of his kingdom to complete, was fitted out for the purpose of being employed in the Indies. This shallow pretext, however,

[THE ARMADA ATTACKED BY THE ENGLISH.]

did not avail him. Elizabeth had foreseen that an attempt would be made at invasion, and she made preparations for resistance. The English navy, at that period, was in a very inefficient state. It consisted only of twenty-eight sail, many of which were of small size. The Queen, in these circumstances, appealed to her people, and they nobly responded to the call of their sovereign. All the commercial towns of England were required to furnish ships for reinforcing the navy. The citizens of London, in order to show their zeal in the common cause, instead of fifteen vessels which they were commanded to equip, voluntarily fitted out double the number. The nobility and gentry hired, and armed, and manned, forty-three ships at their own charge. Lord Howard of Effingham, was appointed admiral of the English fleet. Drake, Hawkins, and Frobisher, the most renowned seamen in Europe, served under him. The principal fleet was stationed at Plymouth; while a smaller squadron, consisting of forty vessels, English and Flemish, commanded by Lord Seymour, lay off Dunkirk, ready to intercept the Duke of Parma.

The people of England felt that not only their liberties, but their religion was at stake. A blow was menaced to be struck

at the sovereignty of Elizabeth, not only as a Queen, but as the head and protectress of the Protestant interest in Europe; and they, therefore, came forward with alacrity, and prepared for the defence of their natural rights and independence.

The land forces of England were, according to Hume, more numerous than the enemy; but they were inferior in discipline, reputation, and experience. An army of 20,000 men was disposed, in different bodies, along the south coast; and orders were given them, if they could not prevent the landing of the Spaniards, to retire backwards; to waste the country around; and to wait for reinforcements from the neighbouring counties before they encountered the enemy. A body of 22,000 foot, and 1,000 horse, under the command of the Earl of Leicester, was stationed at Tilbury Fort, for the defence of the capital. The principal force, consisting of 34,000 foot and 2,000 horse, was commanded by Lord Hunsdon. These forces were reserved for guarding the Queen's person, and were appointed to march whithersoever the enemy should appear. The panic was almost general throughout the kingdom; the most dismal apprehensions being entertained by many, even among the Queen's counsellors, that the small and inexperienced military force which England could bring into the field, would not, for a moment, be able to cope with the formidable army of 50,000 veteran Spaniards, commanded by experienced officers, under the Duke of Parma, the most consummate general of the age.

The Queen, however, undismayed by the danger which threatened her crown and people, issued all her orders with tranquillity, animated her subjects to a steady resistance, and employed every resource which either her domestic situation, or her foreign alliances could afford her. She sent Sir Robert Sidney into Scotland, to exhort King James to remain in amity with her, and to consider the danger which at present menaced his sovereignty no less than her own, from the ambition of the tyrant of Spain. With her usual artfulness she made him some promises which, with her usual dissimulation, she never fulfilled. Such as, to give him a dukedom in England, with suitable lands and revenue; to settle 5,000*l*. a-year on him; and to pay him a guard, for the safety of his person.

The King of Scotland declared himself perfectly willing to remain in relationship with England, and he even kept himself in readiness to march with the whole force of his kingdom to the assistance of the English Queen. The King of Denmark was induced, on her application, to seize all the ships belonging to the Spanish monarch in the Danish harbours. The Hanse Towns too, though not at that time on good terms with the English Queen, were so far prevailed upon by the same motives which had weighed with his Danish majesty, namely, the interests of the Protestant religion, and the strong remonstrances of Elizabeth, as to retard so long the equipment of some vessels in their ports, that they became useless to the purpose of invading England.

The Queen's conduct at this perilous conjuncture of affairs, was such as to command even the admiration of her enemies. Her prudence, circumspection, and vigour, made up for all deficiencies in the land or sea forces. She animated the Protestant part of her subjects by an appeal to their loyalty, and attachment to their religion. She reminded them of their former danger from the wiles and the tyranny of the King of Spain. All the barbarities exercised by Mary against the Protestants—the burnings—the imprisonments—the proscriptions of the adherents of the reformed faith, were ascribed to the counsels of that bigotted and imperious monarch. Nay, we are told that the representation of the persecuting nature of Popery was even carried so far, that the bloody massacres in the Indies—the unrelenting executions in the low countries—the horrid cruelties and iniquities of the inquisition, were set before men's eyes; a list and description were published, and pictures dispersed, of the several instruments of torture with which, it is pretended, the Spanish Armada was loaded; and every artifice was employed to rouse the people to a vigorous defence of their religion, their laws, and their liberties.

The English Roman Catholics generally were not led away

from their allegiance, by the hope of seeing their religion re-established in England; although the pope had absolved them from their fealty. The liberty and independence of their native country were stronger motives to their fidelity, than any which Philip could offer; and as Elizabeth, on this occasion, wisely pursued moderate measures towards them, fair scope was given for their patriotism and right feeling. Several Roman Catholic gentlemen entered as volunteers in the fleet and army. Some equipped ships at their own charge, and gave the command of them to Protestants. Others were active in animating their tenants, and vassals, and neighbours, to the defence of their country; and every rank of them, burying, for the present, all party animosities, seemed to prepare themselves with order, as well as vigour, to resist the daring attempt of the invaders.

The queen, surrounded by her principal men, appeared on horseback in the camp at Tilbury; with a cheerful and animated countenance she rode through the lines; and exhorted the soldiers in the following stirring address:—

"My loving people, we have been persuaded by some that are careful of our safety, to take heed how we commit ourselves to armed multitudes, for fear of treachery; but, assure you, I do not desire to live to distrust my faithful and loving people. Let tyrants fear: I have always so behaved myself that, under God, I have placed my chiefest strength and safeguard in the loyal hearts and good will of my subjects; and therefore I am come amongst you at this time, not as for my recreation or sport, but being resolved, in the midst and heat of the battle, to live or die among you all; to lay down, for my God, and for my kingdom, and for my people, my honour and my blood even in the dust. I know I have but the body of a weak and feeble woman; but I have the heart of a king, and a king of England, too; and think foul scorn that Parma, or Spain, or any prince of Europe, should dare to invade the borders of my realms; to which, rather than any dishonour should grow by me, I myself will take up arms: I myself will be your general, judge and rewarder of every one of your virtues in the field. I know already, by your forwardness, that you have deserved rewards and crowns; and we do assure you, on the word of a prince, they shall be duly paid you. In the meantime, my lieutenant-general shall be in my stead, than whom never prince commanded a more noble or worthy subject; not doubting, by your obedience to my general, by your concord in the camp, and your valour in the field, we shall shortly have a famous victory over those enemies of my God, of my kingdom, and of my people."

By this spirited behaviour Elizabeth revived the attachment and increased the enthusiasm of the soldiery.

In the beginning of May, 1588, the Spanish Armada was ready for sea; but its sailing was retarded for some time by the deaths, successively, of the Admiral, the Marquis of Santa Croce, and the Vice-Admiral, the Duke of Paliano. The Duke of Medina Sidonia, a nobleman of great family, but inexperienced in action, and entirely ignorant of sea affairs, was appointed Admiral, and Alcaerde, Vice-Admiral.

At length, on the 29th of May, every preparation being complete, the Spanish fleet set sail from Lisbon. Forth went that mighty armament, charged with a nation's ruin, and a religion's overthrow. Consecrated by the Pope himself, and wafted by the blessings and the hopes of every adherent of popery throughout Europe, its course promised fair, and its result successful. Already, the most fearful denunciations hovered over England—the thunders of the vatican had been hurled against that doomed land—the anathema had been launched against it and its sovereign, and the awful curse pronounced which was to hurry them both into immediate and irremediable destruction. Elizabeth had been formally excommunicated and deposed by the Roman pontiff, who had published a crusade against England, and granted plenary indulgences to every one engaged in the invasion.

But the ways of Providence are inscrutable. On the very day after the Armada had sailed, it was overtaken by a tremendous storm, which dispersed the ships, sunk some of the smallest, and forced the rest to take shelter in the Groine, where they were refitted.

The intelligence of the disaster which had happened to the Spanish fleet created, as was natural, great joy in England; and the Queen concluded that the Spaniards would not this year attempt an invasion. In this belief, she caused orders to be sent to the admiral, directing him to lay up some of the larger ships and to discharge the seamen. Lord Effingham, however, who judged otherwise, and was convinced that the Spanish navy would again put to sea, had the courage to disobey these orders, and solicited permission to retain all the ships in service, though it should be at his own expense. Taking advantage of a north wind, he sailed towards the coast of Spain, with the intention of attacking the enemy in harbour; but the wind changing to the south, he became apprehensive lest they might have set sail, and passing him at sea, been able to reach England, now undefended by the fleet, in his absence. These considerations induced him to return with the utmost expedition to Plymouth, where he anchored.

The damage done to the vessels of the Armada by the storm, were soon repaired; and the Spaniards, determined on the invasion of England, and nothing daunted by the ominous commencement of their voyage, once more put to sea. Their fleet consisted, now, of 130 vessels, of which nearly 100 were galleons, and were much larger than any that had yet been used in Europe. It carried on board 19,295 soldiers, 8456 mariners, 2088 galley-slaves, and 2630 great pieces of brass ordnance. It was victualled for six months; and was attended by twenty smaller ships, called caravals, and ten salves with six oars each.

The Duke of Medina had received orders from Philip, to avoid, if possible, coming into contact with the English fleet; and for this purpose, in passing along the Channel, he was to sail as near the coast of France, as he could with safety, until being joined by the Duke of Parma, he should be able to make sail to the Thames; and, having landed the whole Spanish army, complete, at one blow, the entire conquest of England. The Duke ventured to disobey these orders. A fisherman, whom his vessels met on their passage to the English coast, gave him information of a nature which induced him to alter his plans, and instead of keeping out of the reach of the ships of his opponents, to proceed at once to attack them in their harbours. This man told them that the English admiral, hearing of the tempest which had scattered the Armada, had gone to sea in search of them; but that he had since returned back into Plymouth, where, no longer expecting an invasion this season, he had laid up his ships, and discharged most of his seamen. This intelligence, false as the latter (the most important part of it) was, had the effect of making him believe that he had nothing more to do than sail for Plymouth, destroy at once the English fleet, and secure immediate possession of the kingdom. This resolution of the Spanish admiral proved the salvation of England.

On the evening of the 19th July, the Armada arrived off the Lizard Point, in Cornwall; this, the most southern promontory of England, being the first land made by it. The Spaniards mistook it for the Ramhead, near Plymouth; they, therefore, stood out to sea with the design of returning next day, and attacking the English navy. One Fleming, a Scottish pirate, who was roving in those seas, desecrated them, and he immediately set sail to inform the English admiral of their approach. Effingham being thus apprised, issued instant orders to prepare for action. He had just time to get out of port, when he desecrated the Spanish Armada bearing down upon him.

It was a most imposing spectacle, and such as the sea, which has presented many beautiful sights, never before upheld on its treacherous bosom. The mighty armament of Spain was disposed in the form of a crescent, and stretched to the distance of seven miles from the extremity of one division to that of the other. Although, however, the ships were in full sail, yet, from their weight and unwieldy construction, they proceeded very slowly, and thus gave the English, who beheld, without dismay, this formidable force arrayed against them, full time to prepare for receiving him.

Orders were issued by the English admiral to avoid close

action with the Spanish ships, but to cannonade them at a distance, and to wait the opportunity which winds, currents, or various accidents must afford him of intercepting some of their scattered vessels. Two events occurred which at the beginning spread confusion through the enemy's fleet. A large ship of Biscay, on board of which was a considerable part of the Spanish money, accidentally took fire; and while all hands were employed in extinguishing the flames, she fell astern of the rest of the Armada. The great galleon of Andalusia was detained by the springing of her mast, and both these vessels were taken, after some resistance, by Sir Francis Drake.

As the Armada advanced up the Channel, the English hung upon its rear, and continued to attack it, gradually advancing nearer; found that, even in close action, the size of the Spanish ships was rather a disadvantage to them than otherwise. Their bulk exposed them the more to the fire of the enemy, while their cannon being placed too high, the shot passed over the heads of the English, and fell harmless in the water.

No sooner had the news of the appearance of the Armada reached land, than the nobility and gentry hastened out, with their vessels, to reinforce the admiral. The Earls of Oxford, Northumberland, and Cumberland, Sir Thomas Cecil, Sir Robert Cecil, Sir Walter Raleigh, Sir Thomas Vavasor, Sir Thomas Gerrard, Sir Charles Blount, and many other eminent men, distinguished themselves by this generous and disinterested proceeding. The English fleet, with this reinforcement, amounted to 140 sail.

The Armada proceeded to Calais, and cast anchor before that place, that the Duke of Parma might put to sea and join his forces to them, as was originally intended. Here the English admiral had recourse to stratagem, in order to scatter the Spanish vessels. He filled eight of his smaller ships with combustible materials, and sent them one after the other, into the midst of the enemy. The Spaniards took the alarm, cut their cables, and hastened to sea with the greatest disorder and precipitation. In this state, the English attacked them, and captured or destroyed about twelve of their best ships, besides doing great damage to many of the rest.

The Armada being thus, in a manner, disabled from proceeding any further in the enterprise, the Duke of Parma felt unwilling to expose his soldiers singly to the attacks of the English fleet, convinced as he was that the vessels provided by him were formed for transporting an army, not for fighting. When urged to leave the harbour, he positively refused, and thus ended all hopes on the part of the Spaniards, of the success of an expedition, for which so many and so extensive preparations had been made.

Several encounters took place between the Spanish and English fleets; but while the former lost many of their vessels, only one small ship of the latter had been destroyed. Perceiving that it was the intention of the English admiral to effect the complete destruction of the Armada, the Duke of Medina formed the resolution to return to Spain with the remainder of his fleet. But he found it impossible, from the prevalence of a contrary wind, to pass through the channel, and he determined to sail northwards, and, making the tour of the island of Great Britain, reach Spain by the ocean. Harassed, however, by the incessant attacks of the English fleet, which continued for some time to follow him, he would inevitably have been obliged to surrender at discretion, had not the ammunition of his opponents fallen short, from the negligence of the officer in supplying them; and the latter were compelled to bear away from their enemy, when almost within their power.

The Armada, however, was doomed to destruction. Soon after it had passed the Orkneys, it encountered a tremendous hurricane, which drove some of the ships on the western isles of Scotland, and others on the coast of Ireland, where they were miserably wrecked; and not a half of the proud navy which had left Spain with such magnificent expectations returned to tell the tale of their discomfiture and dishonour. Thus perished the hopes of the Pope and the Spaniard to

throw the fetters of superstition and tyranny over free and happy England.

Since that eventful period, this country has remained indisputable mistress of the sea, and the strongest bulwark of the Protestant faith; and the combined efforts of all the powers of Europe would now be ineffectual in depriving her of her supremacy in either.

THE MAIN-TRUCK; OR, A LEAP FOR LIFE.

THE last cruise I made in the Mediterranean was in the old Ironsides, as we used to call our gallant frigate. We had been backing and filling for several months on the western coast of Africa, from the Canaries down to Messurado, in search of slave traders; and during that time we had some pretty heavy weather. When we reached the Straits, there was a spanking wind blowing from about west south-west; so we squared away, and without coming-to at the Rock, made a straight wake for old Mahon, the general rendezvous and place of refitting for our squadrons, in the Mediterranean. Immediately on arriving there, we warped in alongside the Arsenal Quay, where we stripped ship to girtline, broke out the holds, tiers, and store-rooms, and gave her a regular-built overhauling from stem to stern. For a while everybody was busy, and all seemed bustle and confusion. Orders and replies, in loud and dissimilar voices—the shrill pipings of the different boatswains' mates, each attending to separate duties—and the mingled clatter and noise of various kinds of work, all going on at the same time, gave something of the stir and animation of a dock-yard to the usually quiet arsenal of Mahon. The boatswain and his crew were engaged in fitting a new gang of rigging; the gunner in repairing his breaching and gun-tackles; the forecattle men in caulking; the top-men in sending down the yards and upper spars; the holders and waiters in white-washing and holy-stoning; and even the poor marines were kept busy, like beasts of burden, in carrying buckets of water on their backs. On the quay, near the ship, the smoke of the armourer's forge, which had been hoisted out and sent on shore, ascended in a thin black column through the clear blue sky; from one of the neighbouring whistone warehouses, the sound of saw and hammer told that the carpenters were at work; near by, a lively rattling drew attention to the cooper, who in the open air was tightening the water-casks; and not far removed, under a temporary shed, formed of spare studding-sails and tarpaulins, sat the sailmaker and his assistants, repairing the sails which had been rent or injured by the many storms we had encountered.

Many hands, however, made light work, and in a very few days all was accomplished; the stays and shrouds were set up and new rattled down; the yards crossed, the running rigging rove, and sails bent; and the old craft, fresh painted and all a-taunt-o, looked as fine as a midshipman on liberty. In place of the storm stumps, which had been stowed away among the booms and other spare spars, amidships, we had sent up cap to gallant-masts and royal-poles, with a sheave for skysails, and hoist enough for skyscrapers above them: so you may judge the old frigate looked pretty taunt. There was a Dutch line-ship in the harbour; but, though we only carried forty-four to her eighty, her main-truck could hardly have reached to our royal-mast head. The side-boys, whose duty it was to lay aloft and furl the sky-sails, looked no bigger on the yard than a good-sized duff for a midshipman's mess; and the main-truck seemed not half as large as the Turk's-head knot on the main-ropes of the accommodation-ladder.

When we had got everything ship-shape and man-of-war fashion, we hauled out again, and took our berth about half-way between the Arsenal and Hospital Island; and a pleasant view it gave us of the town and harbour of old Mahon, one of the safest and most tranquil places of anchorage in the world.

Even on board our vessel, a degree of stillness unusual for a man-of-war prevailed among the crew. It was the hour of their evening meal, and the low hum that came from the gun-deck had an indistinct and buzzing sound, which, like the tiny

song of bees of a warm summer-noon, rather heightened than diminished the charm of the surrounding quiet. The spar-deck was almost deserted. The quarter-master of the watch, with his spyglass in his hand, and dressed in a frock and trousers of snowy whiteness, stood aft upon the taffrail, erect and motionless as a statue, keeping the usual look-out. A group of some half-dozen sailors had gathered together on the fo'castle, where they were supinely lying under the shade of the bulwarks; and here and there, upon the gun-slides along the gangway, sat three or four others—one, with his clothes-bag beside him, overhauling his simple wardrobe; another working a set of clues for some favourite officer's hammock; and a third engaged, perhaps, in carving his name in rude letters upon the handle of a jack-knife, or in knotting a laniard with which to suspend it round his neck.

On the top of the boom-cover, and in the full glare of the level sun, lay black Jake, the gigmaker of the ship, and a striking specimen of African peculiarities, in whose single person they were all strongly developed. His flat nose was dilated to unusual width, and his ebony cheeks fairly glistened with delight, as he looked up at the gambols of a large monkey, which, clinging to the mainstay, just above Jake's woolly head, was chattering and grinning back at the negro, as if there existed some means of mutual intelligence between them. It was my watch on deck, and I had been standing several minutes leaning on the main fire-rail, amusing myself by observing the antics of the black and his congenial playmate; but at length, tiring of the rude mirth, had turned towards the taffrail, to gaze on the more agreeable features of that scene which I have feebly attempted to describe. Just at that moment a shout and a merry laugh burst upon my ear, and looking quickly round, to ascertain the cause of the unusual sound on a frigate's deck, I saw little Bob Stay (as we called our commodore's son) standing halfway up the main-hatch ladder, clapping his hands, and looking aloft at some object that seemed to inspire him with a deal of glee. A single glance to the main-yard explained the occasion of his merriment. He had been coming up from the gun-deck, when Jacko, perceiving him on the ladder, dropped suddenly down from the main-stay, and running along the boom-cover, leaped upon Bob's shoulder, seized his cap from his head, and immediately darted up the main-top-sail-sheet, and thence to the bunt of the main-yard, where he now sat, picking threads from the tassels of his prize, and occasionally scratching his side, and chattering, as if with exultation at the success of his mischief. But Bob was a sprightly, active little fellow, and though he could not climb quite as nimbly as the monkey, yet he had no mind to lose his cap without an effort to regain it. Perhaps he was the more strongly incited to make chase after Jacko, from noticing me to smile at his plight, or by the loud laugh of Jake, who seemed inexpressibly delighted at the occurrence, and endeavoured to evince, by tumbling about the boom-cloth, shaking his huge, mishapen head, and sundry other grotesque actions, the pleasure for which he had no words.

"Ha, you black rascal, Jacko, hab you no more respec' for de young officer than to steal his cab? We bring you to de gangway, you black nigger, and gib you a dozen on de bare back for a tief."

The monkey looked down from his perch, as if he understood the threat of the negro, and chattered a sort of defiance in answer.

"Ha, ha, Massa Stay! he say mus' ketch him 'fore you flog him; and it's no so easy for a midshipman in boots to catch a monkey barefoot."

A red spot mounted to the cheek of little Bob, as he cast one glance of offended pride at Jake, and then sprang across the deck to the Jacob's ladder. In an instant he was half-way up the rigging, running over the ratlines as lightly as if they were an easy flight of stairs, while the shrouds scarcely quivered beneath his elastic motion. In a second more his hand was on the futtocks.

"Massa Stay!" cried Jake, who sometimes, from being a favourite, ventured to take liberties with the younger officers, "Massa Stay, you best crawl through de lubber's hole—it take a sailor to climb the futtock shroud."

But he had scarcely time to utter his pretended caution before Bob was in the top. The monkey in the meanwhile had awaited his approach, until he had got nearly up the rigging, when it suddenly put the cap on its own head, and running along the yard to the opposite side of the top, sprang up a rope, and thence to the topmast backstay, up which it ran to the topmast crossrees, where it again quietly seated itself and resumed its work of picking the tassel to pieces. For several minutes I stood watching my little messmate follow Jacko from one piece of rigging to another, the monkey, all the while, seeming to exert only so much agility as was necessary to elude the pursuer, and pausing whenever the latter appeared to be grown weary of the chase. At last by this kind of manœuvring, the mischievous animal succeeded in enticing Bob as high as the royal mast-head, when springing suddenly on the royal-stay, it ran nimbly down the fore-to gallant-mast head, thence down the rigging to the fore-top, when leaping on the fore-yard, it ran out to the yard-arm, and hung the cap on the end of the studding-sail boom, where taking its seat, it raised a loud and exulting chattering. Bob by this time was completely tired out, and perhaps unwilling to return to the deck to be laughed at for his fruitless chase, he sat down in the royal crossrees; while those who had been attracted by the sport returned to their usual avocations or amusements. The monkey no longer the object of pursuit or attention, remained but a little while on the yard-arm; but soon taking up the cap, returned towards the slings, and dropped it down upon the deck.

Some little piece of duty occurred at this moment to engage me, as soon as which was performed I walked aft, and leaning my elbow on the taffrail, was quickly lost in the recollection of scenes very different from the small pantomime I had just been witnessing. Soothed by the low hum of the crew, and by the quiet loveliness of everything around, my thoughts had travelled far away from the realities of my situation, when I was suddenly startled by a cry from black Jake, which brought me on the instant back to consciousness.

"My God! Massa Scrapper," cried he, "Massa Stay is on de main truck!"

A cold shudder ran through my veins as the word reached my ear. I cast my eyes up—it was too true. The adventurous boy, after resting on the royal crossrees, had been seized with a wish to go still higher; and impelled by one of those impulses by which men are sometimes instigated to place themselves in situations of imminent peril, without a possibility of good resulting from the exposure, he had climbed the skysail-pole, and, at the moment of my looking up, was actually standing on the main truck!—a small circular piece of wood on the very summit of the loftiest mast, and a height so great from the deck that my brain turned dizzy as I looked up at him. The reverse of Virgil's line was true in this instance. It was comparatively easy to ascend—but to descend—my head swam round, and my stomach felt sick, at the thought of the perils comprised in that one word. There was nothing above him or around him but the empty air; and beneath him nothing but a point, a mere point—a small, unstable wheel, that seemed no bigger from the deck than a button on the end of a foil, and the taper skysail-pole itself scarcely larger than the blade. Dreadful temerity! If he should attempt to stoop, what could he take hold of to steady his descent! His feet quite covered up the small and fearful platform that he stood upon; and beneath that, a long, smooth, naked spar, which seemed to bend with his weight, was all that upheld him from destruction. An attempt to get down from "that bad eminence" would be almost certain death; he would inevitably lose his equilibrium, and be precipitated to the deck a crushed and shapeless mass. Such was the nature of the thoughts that crowded through my mind as I first raised my eye, and saw the terrible truth of Jake's exclamation. What was to be done in the pressing and horrible exigency? To hail him, and inform him of his danger, would be but to insure his ruin. Indeed, I fancied that the rash boy already perceived the imminence of his peril; and I half thought that I could see his limbs begin to quiver, and his cheek turn deadly pale. Every moment I expected to see the dreadful catastrophe. I could not bear to look at him,

and yet could not withdraw my gaze. A film came over my eyes, and a faintness over my heart. The atmosphere seemed to grow thick, and to tremble and waver like the heated air around a furnace; the mast appeared to totter, and the ship to pass from under my feet. I myself had the sensation of one about to fall from a great height; and making a strong effort to recover myself, like that of a dreamer who fancies he is shoved from a precipice, I staggered up against the bulwarks.

When my eyes were once turned from the dreadful object to which they had been riveted, my sense and consciousness came back. I looked around me—the deck was already crowded with people. The intelligence of poor Bob's temerity had spread through the ship like wildfire—as such news always will—and the officers and crew were all crowding to the deck, to behold the appalling, the heart-rending spectacle. Every one, as he looked up, turned pale, and his eye became fastened in silence on the truck—like that of a spectator of an execution on the gallows—with a steadfast, unblinking, and intense, yet abhorrent gaze, as if momentarily expecting a fatal termination to the awful suspense. No one made a suggestion—no one spoke. Every feeling, every faculty, seemed to be absorbed and swallowed up in one deep, intense emotion of agony. Once the first lieutenant seized the trumpet, as if to hail poor Bob; but he had scarce raised it to his lips when his arm dropped again, and sunk listlessly down beside him, as if from a sad consciousness of the utter inutilty of what he had been going to say. Every soul in the ship was now on the spar-deck, and every eye was turned to the main-truck.

At this moment there was a stir among the crew about the gang-way, and directly after another face was added to those on the quarter-deck—it was that of the commodore, Bob's father. He had come alongside in a shore-boat, without having been noticed by a single eye, so intense and universal was the interest that had fastened every gaze upon the spot where poor Bob stood trembling on the awful verge of fate. The commodore asked not a question—uttered not a syllable. He was a dark-faced austere man, and it was thought by some of the midshipmen that he entertained but little affection for his son. However, that might have been, it was certain that he treated him with precisely the same strict discipline that he did the other young officers—or if there was any difference at all, it was not in favour of Bob. Some, who pretended to have studied his character closely, affirmed that he loved his boy too well to spoil him, and that, intending him for the arduous profession in which he had himself risen to fame and eminence, he thought it would be of service to him to experience some of its privations and hardships at the outset.

The arrival of the commodore changed the direction of several eyes, which now turned on him to trace what emotions the danger of his son would occasion. But their scrutiny was foiled; by no outward sign did he show what was passing within. His eye still retained its severe expression, his brow the slight frown which it usually wore, and his lip its haughty curl. Immediately on reaching the deck, he had ordered a marine to hand him a musket, and with this stepping aft, and getting on the look-out block, he raised it to his shoulder, and took a deliberate aim at his son, at the same time hailing him, without a trumpet, in his voice of thunder.

"Robert!" cried he, "jump, jump overboard, or I'll fire at you!" The boy seemed to hesitate, and it was plain that he was tottering, for his arms were thrown out, like those of one scarcely able to retain his balance. The commodore raised his voice again, and in a quicker and more energetic tone, cried, "Jump!—tis your only chance for life!"

The words were scarcely out of his mouth before the boy was seen to leave the truck, and spring out into the air. A sound between a shriek and a groan burst from many lips. The father spoke not—sighed not—indeed, he did not seem to breathe. For a moment of intense agony, a pin might have been heard to drop on deck. With a rush like that of a cannon-ball, the body descended to the water, and before the waves closed over it, twenty stout fellows, among them several officers, had dived from the bulwarks. Another short period of bitter suspense ensued. It rose—he was alive!—his arms were seen to move!—he struck out towards the ship!—and

despite the discipline of a man-of-war, three loud huzzas, an outburst of unfeigned and unrestrained joy from the hearts of our crew of five hundred men, pealed through the air, and made the welkin ring. Till this moment the old commodore had stood unmoved. The eyes that, glistening with pleasure, now sought his face, saw that it was ashy pale. He attempted to descend the horse-block, but his knees bent under him; he seemed to gasp for breath, and put up his hand, as if to tear open his vest; but before he accomplished his object, he staggered forward, and would have fallen on the deck, had he not been caught by old black Jake. He was borne into his cabin, where the surgeon attended him, whose utmost skill was required to restore his mind to its usual equability and self-command, in which he at last happily succeeded. As soon as he recovered from the dreadful shock, he sent for Bob, and had a long and confidential conference with him; and it was noticed, when the little fellow left the cabin, that he was in tears.

The next day we sent down our taunt and dashy poles, and replaced them with the stump to gallant-masts; and on the third we weighed anchor, and made sail for Gibraltar."

THE ATLANTIC GALES, 1846.

(From the *New York Tribune*.)

ABOUT the middle of January, 1846, commenced one of the most terrific and protracted tempests that ever swept the Atlantic—continuing with very little, or rather no intermission, for 45 days. Our fleet of over-due packets, which have been for a month beyond their usual time, beating and staggering about the ocean, now enveloped with ice, are looking like huge gems in progress of crystallisation, and anon reeling off through 10 or 20 degrees of latitude to the south, for the purpose of getting thawed out. Icebergs, snow storms, and fierce hurricanes have beset these vessels on every side, and the sea every now and then swept over their decks—dashed in their bulwarks—carried away their boats, and left the crew helpless and freezing. Masts, rigging, and sails were carried away daily and nightly, and the sailors, officers, and passengers have been exposed to indescribable hardships for a dreary period, which cannot be contemplated without shrinking. But these excellent vessels, with their gallant captains and crews, have, so far as they have yet been heard from, fully maintained the reputation which their successful contests with winds and waves have heretofore won for them.

Four of these admirable vessels, which have been long expected—the *Roscius*, *Sea*, *Europe*, and *Hendrik Hudson*, arrived in port, gladdening many an anxious heart, and brightening many an eye dim with watching. Below we publish the accounts of the passages of these four vessels, which will be perused with great interest. Such descriptions are like deep-sea lines, which reach the bottom of human sympathy.

THE PACKET SHIP ROSCIUS.

The ship *Roscius*, Capt. A. Eldridge, sailed from Liverpool on the 13th of January, 1846, experiencing continued gales from N.W. and W.S.W., with rain, snow, and hail, interspersed with thunder and lightning. January 26th and 27th, experienced a heavy gale from the N.W. and W.N.W., during which we shipped a heavy sea, stove bulwarks in the waist, and filled the decks with water. February 11th, in lat. 43 deg. 22 min., long. 49 deg. 20 min., was running in a gale from S.E., wind hauled suddenly to N.W., and blew a hurricane with great violence, accompanied with sleet and snow; stove in the cabin windows, filling the cabin floor with water; hauled up foresail and foretop-sail, and made every exertion to furl them but could not, owing to the excessive cold weather, and the sails and rigging being full of ice, and many of the crew having their hands frozen. February 12, experienced another violent gale blowing most furiously; weather extremely cold, and the sea running very high, during which we carried away all three topgallant-masts, stove in the starboard bulwarks in the gangway, letting in the sea constantly on deck. Everything below and aloft

being encumbered with ice, rendered it impossible for the men to work the ship. The three topgallant-masts thumping to and fro, cutting and chafing the spars and rigging, and all the sails blowing from the gaskets to atoms, making, upon the whole, a dismal scene. February 13th, shipped a heavy sea, stove bow-house, tore tarpaulins, and worked off main hatches, letting in large quantities of water. From January 20th to the 1st of March, we did not make one point of easting, and had to go south to thaw the ice on the rigging and sails. Saw some ice to the east of the banks.

THE SHIP SEA.

Have had heavy gales from W.N.W. to W.S.W. from the 26th of January to the 10th of February, when we were on the banks; fresh breezes from W.N.W. and cold weather; much ice about the ship forward. Towards noon the wind hauled S.W., and in the afternoon went round by N.W. to N.N.E., moderate breeze, and light showers of snow. In the evening the wind freshened, and at nine o'clock it came on a very severe snow storm, and blew hard from the north: ten of the crew laid up from the effects of the cold, one man suffering very severely; lost foreyard; split the foresail and maintop-sail; lost the mainsail and foretop-sail; the ship so much iced, and so many hands laid up, could not do anything with the sails, everything being in such a state with the ice; had to bear away on the morning of the 11th, and run to the southward to thaw off. During the whole of the day and night of the 11th it blew a violent gale from the north, snowing hard all the time. On the morning of the 12th we hove to, in lat. 41 deg. 20 min. N., long. 50 deg. 35 min. W.; when I bore away I was in lat. 45 deg. 30 min., long. 52 deg. 45 min. W. After repairing damages stood up to northward again, having drifted back to long. 49 deg. 25 min. W., in lat. 41 deg. 20 min. N. February 16th and 17th—Lat. of 42 N., long. 51 deg. 40 min., experienced a heavy gale from N. by W. and N.N.W. with a heavy sea running, which caused the ship to labour exceedingly heavy, and make a great deal of water. On the 18th strong head wind from N.W.; latitude at noon 40 deg. 55 min. N., long. 53 deg. 45 min. W.; in company with the *Roscius* all that day. Bore down to her, and showed signals. She had lost all her topgallant-masts. On the 19th it blew a heavy gale from N.W. to N.N.W., with violent squalls and a very high sea running. Finding the crew were getting pretty well fagged out, and having four hands still laid up, stood across the Gulf. Split the foretop-sail and mizen-top-sail. February 27th, off Bermuda, had strong gales from N.W. with a heavy long sea running from the N.N.W. Ship labouring heavy, and making so much as kept both pumps going, making nearly 3,000 strokes per hour. March 2nd, heavy gales from S.E. to S.W., with a tremendous heavy sea from N.E. In lat. 35 deg. 10 min. N., long. 71 deg. 30 min. W., passed close to a vessel in the morning, waterlogged and abandoned; the foremast, foretop-mast, and bowsprit were still standing; the main and mizen-mast were gone about six feet above the deck, the jibboom broke short off by the cap, some part off the foretop-sail had been put round outside the foretop-mast rigging, as if the crew had been living in the foretop, but there was no person there when I passed her; the anchors were on the fore-castle, the bowsprit and lower masts were bright varnished, yards black; she had painted ports, a full woman figure-head with a green dress; she appeared to be a vessel of about 500 tons, and I have no doubt of her being a British vessel; but whether a barque or a ship, I cannot say. During the afternoon and all the night of the 2nd, until half-past three o'clock, a.m. of the 3d, we lay becalmed, with a tremendous sea running from N.E., breaking at times the same as on a reef. I expected to have lost all our masts at one time, the ship laboured so very hard. When the wind came out, it came all of a sudden like the report of a cannon, and blew hard from N.N.E. Barometer stood at 29 deg. 10 min., until the gale reached the ship, when it immediately began to rise. It blew hard N.N.E. all day on the 3d, with a heavy sea, breaking a great deal. At nine o'clock, a.m., passed close to the barque *Cantero* of Portland, lying to, under bare poles. At this time we had nearly three feet of water in the hold;

but finding that we had gained on her since 6 deg. 30 min., kept on our course. After an hour and a half, got the pumps to suck, having been now several hours without being able to get the pumps to work. On the evening of the 4th, off Currituck, spoke a Baltimore pilot-boat. We were then making 3,840 strokes per hour, both pumps constantly going. On the 6th, at daylight, took a pilot off Egg Harbour.

The packet-ship *Europe* experienced, during the whole passage, constant gales and heavy seas—lost sails and spars. Was off Barnegat on Sunday last, and was compelled to stand off on account of the north-east gale. March 4th, lat. 37, long 72 deg. 46 min., fell in with the wreck of the schooner *Pembroke*, of Castine. She appeared to have been dismantled but a few hours previous, as the spars were still attached to her, and a large part of the deck floating within 100 yards of the hull, which appeared to have been ripped up by the falling of the masts. There was nothing above water but the bowsprit, and a little of the larboard side of the stern. Shortly after fell in with the wreck of the brig *Orione*, Captain Brown, laden with molasses, of and for Philadelphia, from Cardenas, which place she left on the 24th ult., and took from her the captain, mate, and six men. During the north-east gale, on the night of the 2nd instant, she lost both masts, and the deck was swept clean of everything thereon. Captain Brown, the mate, and one of the men, were much bruised and completely exhausted when taken on board of the *Europe*.

THE PARISIAN AT SEA.

[This story, from the French of Eugène Sue, is given as an illustration of French sea-life, as described by an author who may be termed the Smollett of France. The lower classes of Parisians, are considered to be as awkward at sea as a cockney of the olden time, to whom a voyage to Gravesend was a great undertaking, and one to Margate very perilous: the English reader, will therefore see the drift of the "Parisian at Sea."]]

MATHIEU GUICHARD was the son of Jean Guichard, locksmith, in the Rue Saint Benoît. Mathieu Guichard was about seventeen years of age; he was of middling stature, thin, nervous, and pale; his eyes were grey, his hair brown, bright, and silky; his countenance announced a singular combination of cunning and simplicity, of insolence and liveliness; his pale, livid complexion wore that dull, sickly, faded hue, peculiar to the children of the poor and working class in Paris. Such was the physical formation of Mathieu Guichard.

In his moral character—if Mathieu ever had a moral principle—Mathieu was insolent, jeering, covetous, lascivious, lazy, and gluttonous; sullen and spiteful, because deficient in physical strength; neither an unbeliever, nor a believer, nor a sceptic, but as indifferent as a fallen angel in matters of religion, and never invoking the name of God except in so detestable a manner, that it would have been better not to invoke it at all. But, in truth, this must not be laid to the charge of the poor child; the first words which his father, Jean Guichard, an old artilleryman, taught him to lisp, were oaths the most frightful that can be imagined. This was the relaxation, the delight of the veteran; in the evening, after his fatiguing day's work, he found a supreme pleasure in seating himself near his fireless forge, and there placing Mathieu in his rough leathern apron, he amused himself like a happy fellow, in listening to the blasphemies which came from that childish mouth; and to his wife, who sometimes ventured to speak of prayers, the blessed Virgin, and the infant Jesus, he replied—"I have neither been baptised, nor gone to confession, nor done anything of that sort; I only married you before the civic authorities; and I do not wish my son to be a calottin* or a jesuit."

Now, Mathieu did not deceive the wishes of his excellent father—he was not a jesuit, the worthy child! At ten years of age, he kicked his mother, insulted old men, stole nails in

order to go and sell them, did nothing in the shop, received famous threshings from his father, and passed his days abroad. At twelve, Mathieu had, as the saying is, "felt the tender passion," broken windows, fought with the guard, and became a supernumerary at some of the lower theatres. The course of these enormities only continued to increase, and the torrent of his excesses became such that it threatened to engulf the reputation, honour, and domestic arrangements of Jean Guichard, who, by way of a dike, had in vain opposed to the said torrent, a multitude of elm and ash sticks, which had been broken with a crash upon Mathieu's back, without changing in any way his scapegrace habits. But fortunately Jean Guichard recollected a silly popular tradition, common enough in France, but especially at Paris, which consists in considering the naval and merchant services as kinds of hulks, or sinks, into which all the dregs of society may be thrown.

Thus, let a boy of a family commit any of those charming pieces of folly which unfortunately are only committed in the dawn of life, the chief relations assemble, and gravely pronounce that the Don Juan must be shipped, and sent to sea to bite the bridle. If a young gentleman, fond of playing about the streets, becomes the terror of the neighbourhood, no longer places any limit to his profligacy, after having threatened him with the magistrate, prison, and the galleys, this dreadful *crescendo* is finished by saying—"The only thing is to make him a powder-monkey!" which is proof enough that he was, in general, master of that profession.

One morning, Guichard, senior, entered his son's garret, who, by I know not what chance or irregularity of conduct, happened to have slept under the paternal roof. On opening his eyes, Mathieu shuddered, for he saw that his father had not a stick.

"He is going to strangle me!" thought the wretched boy.

"Listen, Mathieu," said his father, coolly; "you are fifteen—you are the worst fellow that I know—blows are of no avail—you will finish by the guillotine. I have been a soldier—I am an honest man—so that things cannot go on in this way. You will just come along with me to Havre."

"When?"

"Immediately: dress yourself."

Mathieu said not a word; dressed himself, threw a glance towards the door, took two steps, and at one leap was on the first step of the staircase; but the author of his days had followed his movements, and Mathieu felt himself grasped by the large hands of the locksmith.

"Not so fast, my boy," said the latter: and he preceded his son into the shop—sent his wife, who was sobbing, to fetch a cabriolet—jumped into it with his son Mathieu, who felt a tear start in his eyes when he saw his mother on her knees near the forge, and weeping—but weeping fit to break her heart.

"Coachman, to the diligence," said Jean Guichard.

From the cabriolet Mathieu stepped into the diligence, accompanied by his father, who did not leave him for a second. The next day they were at Havre.

In all mercantile sea-ports, there are some publicans who board and lodge seamen out of employ. When they are shipped, they pay what they owe their landlord; and if they land again, they return to eat at his house what they have laid up during the cruise; then credit again succeeds ready money, and there is no end to this until a wave off Cape Horn, or a white squall between the tropics, puts an end to this alternation of good and bad luck. To this description of tavern it is, then, that officers of the merchant service resort to recruit their crews.

The conductor of the diligence, to whom Jean Guichard imparted his plan, recommended him, in consequence, to the landlord of the "Endless Cable," giving him also some information. In the first place, Mathieu was locked up in a little room, duly bolted, which was only opened the following morning, about nine o'clock.

"There is the fine fellow," said Jean Guichard, on entering; to a rather fat man, thickset, of dark and ruddy complexion, showing him his son.

"Is that all?" said the fat man. "Why, that chap would not be fit to light my cabin-boy's pipe, if he did smoke."

* The nickname for a priest; who is so called from the calotte or leather cap which he wears.

"You promised me, captain."

"I have promised, and will abide by it. The breeze is favourable; I sail at eleven—it is now nine. Come, march. Parisian! you are well named; but I shall rebaptise you, and in two days you will be called 'Broken-backed.'"

Mathieu Guichard clearly perceived what lay in store for him; he glanced with wonderful rapidity at the chances he had of escaping or opposing his father's wishes; but finding none, he resigned himself to his fate.

Jean Guichard said to him, "Come, Mathieu, amend—shake hands—become a good lad, and you will see us again."

"Never!" replied Mathieu, escaping from his father's last embrace; and walking at the heels of the captain, he began to hum, "Oh! no, no, I shall never see thee more!"

"But suppose he does not return?" thought the locksmith. "Bah!" he rejoined, "the stray pigeon always returns to its house." Nevertheless, Jean Guichard for a long time was very melancholy.

La Charmante Louise, a brig of 180 tons burden, bound for Pernambuco, had sailed from Havre five days, carrying the sole heir of the Guichard family; for Mathieu had been duly shipped as cabin-boy. This being the type and prototype of the population of Paris, which is said to be (I know not why) so silly and surprised at everything—was not astonished at anything, because he found analogies for everything. When a sailor showed him the mainmast of the brig, saying, "Parisian, you are not the one to climb up there," Mathieu replied scornfully.

"Wide awake! why, I have scores of times climbed up a greasy pole; and that is somewhat different from ascending those ropes."

As his agility seemed to be questioned, the Parisian ascended with the activity of a squirrel to the top of the mainmast, without passing through lubber's hole, and descended by the mainstay, as proud as a rope-dancer.

"What has his fool of a father been telling me?" asked the captain of himself, on seeing Mathieu's dexterity; "for, after all, his son is not so bad."

The breeze was fresh, and the waves were rolling tolerably high; the sailors expected to see the Parisian cast up his accounts. Not at all; the Parisian had not the slightest symptom of sea-sickness; he nibbled his bûche, tore his beef apart with his teeth of steel, drank two portions of wine, because he had stolen one from a sailor's mess, and was in the fore part of the vessel smoking his pipe.

"But does not the rolling of the vessel affect you, you savage?" said a sailor to him, considerably disappointed—for he reckoned not only on enjoying the sight of the Parisian's contortions, but, moreover, on drinking his wine whilst he was afflicted with sea-sickness.

"Wide awake!" coolly replied Mathieu, between two puffs of smoke; "I have played at see-saw and rode on a round-about too often in the Champs Elysees, for this to annoy me." And this answer was accompanied by enormous whirlwinds of smoke, which for an instant concealed the Parisian from all eyes.

When the smoke cleared off, the captain's face appeared smiling; he had heard all, and said to himself, "His father decidedly is an old fool, and his son is far better than he is." So addressing Mathieu, "From to-day, my boy, you are no longer cabin-boy, but novice."

"Just as you like," said Mathieu, with indifference.

The next day, the captain, who saw everything, perceiving only the five sailors on watch upon deck, descended to the orlop-deck, stopped his step on approaching the fore part, for he heard a great noise of voices—it was the Parisian again.

"The scoundrel has passed directly—it is unfair; he shall be keel-hauled—keel-haul him."

"I will, if you wish it," said the Parisian with frightful oaths; "but I will revenge myself. I am single-handed, but that is no matter. Stand off!"

"But, you beggar," said an orator, "what do you mean by not being sea-sick, and by climbing to the top of the mast as quick as we can—eh? It is a trick to curry favour with the officers."

"Yes," said the others in chorus; "he does it on purpose."

"Listen," said the Parisian; "if one of you, singly, wishes to have a set-to with me, let us take one of these iron-pointed things apiece," (he pointed to some marline-spikes;) "and settle it like good fellows."

"Done," said the spokesman.

"Decidedly, it is the father who deserves to be keel-hauled," thought the captain; "and the son is an excellent fellow."

And the captain interposing his authority, the discussion ceased; but that evening the combat did take place, and was in favour of the Parisian.

Having thus ably acquitted himself in his repeated trials, the Parisian was no longer teased on board, but enjoyed the esteem of his officers, and the friendship of his messmates.

If Mathieu Guichard's captain had been gifted with the faculty of analysis, he would certainly have found means of exercising it in studying the character of his sailor; but the excellent captain scarcely analysed—did not even analyse at all; he contented himself with degrading Mathieu, or loading him with favours, according as Mathieu deserved good or ill from him. Without amusing himself with mounting from the effects to the causes, after having valued the result, he made the reckoning, as he said, and found for total, a blow or a glass of grog. Now, since Mathieu had been on board La Charmante Louise, it would have been difficult to ascertain correctly whether the balance were in favour of the blows or the glasses of grog; and, in fact, this imp of a fellow had neither gained nor lost; for a soul plunged young into the withering atmosphere of Paris, is brazed therein, and retains for ever its stamp.

Thus Mathieu had brought and preserved that listless indolence, and that nervous transient activity, which characterise his race—that feverish excitement which would enable one to leap over an enormous ditch, but not that enduring, continued strength which would enable one to ascend a mountain. If, in fine weather, a laborious duty were to be performed, oh, the Parisian was lazy, sluggish, sulky; but if the wind whistled in the sails, if the thunder roared, one would have said that the storm, reacting on his irritable frame, had increased its strength and energies a hundred-fold;—then the Parisian was was at the yard-arm, at the futtocks; for there was neither a weight to lift, nor an oar laboriously to ply—there was merely a rope to be cut. It is true that he risked his life, but it was not fatiguing, and the Parisian was there as quiet and calm as an old sailor. The fine weather returned, the Parisian became what he was, what he is, what he ever will be—idle, insolent, jeering; for he had the picturesque and ready wit of the streets of Paris. Sly because he was weak, however, he had gained a strange ascendancy over the crew, and tickled the captain on his weak point.

The confounded Parisian had been put in irons, sent to the mainmast-head, flogged; but he never lost his joke, nor a mouthful, nor one hour's sleep. The scoundrel imitated every one. Do you wish to see the captain? There is the captain, with his hoarse voice, his eye half-shut, his favourite oath; lend the Parisian the captain's grey jacket and glazed hat, and you will have a striking likeness. Do you wish to see the cook? There is the cook—it is he; there is his crooked leg, his absurd stammering! And drinking-songs and ballads, and scraps of scenes from comedies, from melo-dramas, from comic operas, which the Parisian recited admirably, imitating the tone, the gestures, the voice of the actors. The sailors and the captain laughed until they cried, and had only power to say, "Parisian, you are well named!"

It was intolerable; the work was forgotten, the helmsman steered wrong; no one slept on board when the Parisian spun a yarn; the hammocks were deserted, and you should have seen the simple, dark countenances of the sailors, squatted in a circle, listening attentively, with imperturbable gravity, to the tales and falsehoods of the Parisian.

And then the Parisian continued not to be astonished at anything. The sailors had expected it at the colonies; they reckoned on the effect of the negroes, the palm-trees, the cocoa-trees, the sugar-cane, and I know not what besides. Not at all; his everlasting "Wide awake!" came, and overthrew such sage

foresight. The Parisian had seen negroes at Robinson's, palm-trees at the Jardin des Plantes, bought a pennyworth of sugarcane on the Pont Neuf, and scooped out a cocoa-nut, to make a cup for his sweetheart. How to act with a being so encyclopaedic? Be silent and admire—was what the crew did.

It was Sunday; La Charmante Louise, which in general was confined to the voyage to the Antilles, after a tolerable cruise had been freighted for Cadiz; she brought some Bordeaux wines, and was to carry back some sherry, or Xérès wines. The Parisian, tired in the colonies with negro and mulatto women, was not sorry "to change a little," as he himself said; and scarcely had the brig been moored alongside the wharf, near the Puer ta del Mare, than my confounded Mathieu, with thirty francs in his pocket, was ashore at a single leap; a little straw hat, with a very low crown and wide brim, on his head; and dressed in white trousers and blue jacket with anchor-buttons; his shirt-collar supported by a huge American cravat, the love-token of one of the ladies of Port Royal, Martinique.

It is impossible not to acknowledge that the Parisian was gifted with a prodigious philological faculty. His process was simple, and he used it in solving all difficulties, without exception, of language, or of idiom. This was his method; had he to inquire his way of an Englishman, the Parisian, imitating the ridiculous *patois* which is attributed to the islanders in all our farces, said boldly, "Jé voudrais savoir le chemin à moi." If he addressed himself to a German, the accent followed a slight modification; to an Italian, to an American, the same thing. It is true that this method was sometimes incomplete—that often even foreigners, who would perhaps have understood him had he spoken plain French, became deaf to this unintelligible jargon. Then the Parisian asserted that obstinacy, a bad education, or national rivalry, existed. It is certain that Mathieu had never experienced that embarrassment, that timidity, which a foreigner always feels when he finds himself in a country, the language of which he does not know. So the Parisian walked as firm, as erect, on passing under the Puerta del Mare at Cadiz, as if he had grown pale over the grammar of Rodriguez y Bernal during seven years at Badajoz or Toledo.

Mathieu found himself in the fish-market. The sight pleased him: the animated crowd—the picturesque costumes—the men with small hats and long brown cloaks—the women of the lower orders with shoes of satin or silk, their little feet, their short petticoats, their skirts fitting tight at the hips, the natural flowers thrown tastefully in their thick black tresses; in fact—what shall I say?—their gait, their walk, the *solero*, all this strongly attracted the attention of the Parisian, who was mentally comparing these Andalusian beauties with the young girls of colour of the Antilles, and did not hasten to conclude his parallels—proofs were wanting.

As he passed the bottom of a flight of steps leading to the ramparts, he raised his eyes, and saw, at the middle of this *escala*, a woman who was ascending very quickly the last steps. This rapid ascent allowed the Parisian to have a glimpse of a well-turned leg and Andalusian foot; he ascended the steps with equal rapidity, and as he possessed more assurance than timidity, he approached familiarly, and gazed at the young girl—for it was a young girl—stared in the pretty girl's face, and not knowing how to pervert his language to make it a Spanish *patois*, he satisfied himself with an infinitive, and said to her, "Espagnole, être belle femme." The girl blushed, began to smile, and redoubled her pace, at the same time lowering her veil. "Where the deuce did I learn Spanish?" inquired the Parisian of himself, certain of having been understood, and following with long strides his new conquest. Almost opposite the custom-house, his conquest descended, turned her head, looked at the Parisian, and crossed the small Plaza de la Torre, to enter the Calle de Tideo.

The Parisian, animated, excited, charmed, enraptured, followed. He was about crossing the street, when sacred music was heard, and a long file of white penitents issued from a neighbouring street. At the head of the procession were long lanterns, then banners, then relics, then shrines, then flowers, then the host then the governor. It was indeed a solemn procession, in order to beg of Heaven some little water; for the drought was frightful in the year of our Lord 1829. The

Parisian instead of joining the crowd, uttered a dreadful oath; for the procession barred his passage; and he trembled lest he should lose sight of his dark-eyed Andalusian.

The populace bared their heads at the first sound of the rattle of a white monk, who opened the procession. The Parisian kept his hat on, raised himself on the tips of his toes, stretched his neck forwards, shaded his eyes with his hand, and saw nothing—neither black veil, nor the blue-and-white flower placed at the side of a large tuft of ebony hair. Another monk came, but grey, carrying a lantern, on the glass of which were painted figures of men in the midst of flames. He showed it with one hand, and with the other he shook a money-box for the souls in purgatory. The assistants knelt; some gave, but many whispered, pointing towards the Parisian, who was leaning on the back of the man with the lantern, to endeavour to raise himself, and see if he could not perceive his Andalusian.

At this moment a magnificent shrine of gold, glittering with precious stones, and containing the arm of St. Serono, attracted the general attention and recollection. There was only the Parisian who remained standing; he interrupted the devout silence of this crowd; by one of those cries peculiar to the Parisian populace, and which one hears sometimes squeaked at the theatres on the Boulevards. It was because the Parisian had fancied he saw the veil and blue-and-white flower, and he called in his way. This savage, guttural, unusual, sacrilegious cry caused all heads to be raised simultaneously; then it was observed that the Parisian had remained standing, covered, before the arm of St. Serono, and there was an uproar of indignation—a buzz, at first dull, but which soon became terrific, when the people saw the Parisian assume an air of impudence and audacity.

The host was advancing; and the gold fringe was seen glittering in the sun, the plume of feathers waved, the incense perfumed the air, the music resounded in the distance, and the sonorous voices of the monks of La Merced chanted vigorously the beautiful poetry of the Bible. The time was pressing; the excited Parisian was resolute, slouched his hat on his head, placed his hands upon it, and swore, with the most dreadful oaths, that they had no right to make him kneel. The host was very near, when a struggle took place between the Parisian and an Andalusian of enormous stature; the Parisian makes a leap, backwards, falls at the feet of the archbishop, and strikes him violently. Then the people cry, "Sacrilege! Profaneness! Down with the Frenchman!" The tumult becomes fearful, and in spite of the interference of the priest, the scuffle assumes a degree of fury; knives glitter, and—it is all over with the Parisian.

THE GREAT CONDÉ.

The military life of this great commander was a succession of enterprise. He was always on the offensive, braving every danger, and yet always successful. He commanded at the battle of Rocroi, when he was not more than twenty-one years of age; and by his quickness in perceiving at once both the danger and the remedy, and by an activity which carried him to all places at the very instant when his presence was wanted, he in a manner gained the battle himself. It was Condé who, with the cavalry, attacked and broke the Spanish infantry, till then invincible. As strong and as closely united as the celebrated ancient phalanx, it opened itself with an agility which the phalanx had not, and thus suddenly made way for the discharge of eighteen pieces of cannon that were placed in the midst of it. The prince of Condé surrounded and attacked it three times; and at length victory decided in his favour.

In the attack on the camp of Merci, at Fribourg, the following year, which was renewed three successive days, the prince threw his staff of command into the enemy's trenches, and marched, sword in hand, to regain it, at the head of the regiment of Conti. This bold action inspired the troops with redoubled ardour, and the battle of Fribourg was gained.

THE ATTACK ON TANGIER.

THE VESSEL OF LONDON

THE ATTACK ON TANGIER.

GI BRALTAR, AUG. 11, 1844.—By the last communication you would have received the unexpected account of the attack on Tangier on Tuesday, the 6th; the "solution" of which step, as declared on the following day, by the prince to the French consul here in a letter, a copy of which was forwarded to admiral Owen, (who is still here with the Formidable and Caledonia), was, that the accounts from Marshal Bugeaud, received a day or two before, showed further aggressions on the part of Abd-el-Kader, who was acting on the Moorish territory in close combination with one of the emperor's sons (Mulai Mamou), or rather his cousin, as he is stated in these parts to be; while at the same time, notwithstanding all we had been given to understand as to matters having terminated according to the wishes of the French government, the last communication from the emperor, who is at Rabat, to the prince, was of a nature to preclude further hopes, as they went to requiring the dismissal of General Bugeaud. The prince will, no doubt, have ere this, given an official and satisfactory account of a step, which at first seemed so strange to all in these parts. He stated that he was very desirous of avoiding injury to the town, for which humane consideration, history will no doubt give him credit. All the consular houses, with the exception of the two (American and Sardinian) suffered damage, but not to any serious extent. The consular houses, being the only large buildings in the place, were naturally the most exposed to injury from casual shots. The house of our consul, being the very nearest, received five shots, two only of which, did damage of importance. The French consulate did not escape.

Some shells and rockets were in the first instance discharged from the steamers; but being found to fall short, or from some other cause, the attack was afterwards by cannonade from the large ships and the Belle Poule, and directed towards the batteries only, which were stated to have been quite destroyed. The Vesuvius, however, which has made two trips to Tangier since the day of attack, and had officers on shore on the last visit, brings more certain information, by which it appears that the damage is not so very great as had been supposed, and that but one gun in the main battery had been dismounted. The Suffren, on board of which the prince was, having been the closest in, received the most damage. A gentleman who had been at Cadiz, with the French squadron lately, has written to say that that vessel received twenty-one shot; forty had been previously stated. The Belle Poule was said to have been greatly injured, but the mischief to her has been but trifling as far as can be ascertained. From the distance at which the squadron was obliged by circumstances to take up their anchorage, or from some other cause, the six hours' firing was certainly followed by results very different from what might have been expected. The loss of lives on shore, including wretched Jews, has not exceeded seven or eight. We do not know with any certainty how far the French may have lost men or officers, these matters being always so vaguely stated. The prince has admitted that the Moorish garrison behaved very well. Honour be to the gallant general (Ben-Abou-Abd-el-Melach), who behaved so well, as formerly mentioned, in preventing the Kabyles from entering the town and causing total destruction. The Moors stood to their guns to the last moment. It does not seem to have been a question of making a breach, for the parapets are not seriously damaged at any point in particular, and the landing of the 2000 men "*de débarquement*," stated by the "*Debats*," as being on board, could naturally not have been ventured upon, in the face of the many thousand Kabyles close at hand.

The whole squadron left Tangier on Thursday, having remained quiet on Wednesday, and steered west. The Suffren, with the prince on board, not being able to weather Cape Spartel, returned in the evening to Tangier, and the Moors were about firing at her, but submitted to recommendations they received, and things remained quiet until she was towed out, and all were out of sight on Friday. According to accounts received at Tangier, they did some mischief at the small town of Arzill, some nine miles down the coast on the Atlan-

tic side. It is said that signal vengeance will be inflicted on the coast, but especially at Mogador; but from what has passed in our neighbourhood, humanity may hope that crippling forts will be considered enough. At Larache and Rabat, as well as at Mogador, everything is unfavourable to operations by large vessels; and the swells are so very great near Mogador, that even at this season, it is not considered safe to lie off the coast. A gentleman who has been lately at Mogador, says, that the fortifications are not so contemptible as imagined. They have some good brass guns, a present from Holland, some years ago.

The authorities at Tangier notified to the neutral consuls two days ago that they might land, as there was no longer any danger. The town was quite tranquil yesterday morning; the only excess committed was the pillaging of the Portuguese consul's house, the persons left in charge having abandoned it. The good Mrs. Hay, our consul's lady at Tangier, who, by her kindness towards the poor of that town for many years, has gained the affection of the population, returned to her house two days ago, though Mr. Hay was absent here on urgent business, so great was her confidence in the people.

The following particulars relative to Tangier will be read with very great interest at the present moment:—"The city of Tangier is very strong by its position and the number of its batteries, which are well armed. Its old wall crenellated, and flanked with round and square towers, are perhaps capable of a greater resistance than their appearance indicates. Several bastioned towers have been repaired, and put into a state of defence within the last few years. The city itself is of little importance; it is poor, and has little trade. Tangier has no interest but from its being the residence of the European consuls, for its population only amounts to from 8,000 to 9,000, and its commerce is inferior to that of some other ports, notwithstanding its proximity to the European coast. The houses of the consuls form the only ornament of the town. It is situated on the declivity of a calcareous mountain, part of which is not built upon, and presents a naked and unpleasant *coup d'œil*. The town, like all other places in Morocco, is surrounded by a wall flanked by round and square towers; this wall is enclosed by a ditch, 2,200 metres in extent, but which has no counter-scarp; it is protected by a Moorish kasbah (fortress) of imposing appearance, and by a fort of Portuguese construction, bastioned in the modern style, but half in ruins. The kasbah is surmounted by twelve pieces of cannon, which command the Straits of Gibraltar. The ditches round the city are filled with trees, and cultivated as kitchen gardens, the letting of which belongs to the governor, and who would take good care not to sacrifice the revenue he enjoys from them by putting the ditch in a proper state of defence. The rampart opposite the sea is remarkable for having two tiers of embankments with embrasures, mounted by guns. On the north side the city is defended by steep rocks which prevent the approach of a besieging force. The principal defences have been raised in front of the landing-place near the marine gate. They consist of two batteries, mounting sixty pieces of heavy calibre, and eight mortars, all bearing on the port. The platforms of the batteries are very narrow, the parapets are of masonry, but only three feet in thickness, and the embrasures are not far enough apart, which tends to diminish the strength of the battery. The landing-place is flanked on either side by two batteries. Besides these defences of the port, the bay of Tangier is defended by six batteries in masonry, one built on Cape Malabata, and the others on the ruins of Old Tangier (the Tingis of the Romans). They mount together forty guns. The two batteries which flank the roadstead at its two extremities are raised on small hills, about 150 feet above the level of the sea; the others are at the water's edge. To attack the place by sea, it would be necessary first to destroy those batteries, as well as those in front of the port; but in order to get into the town three enclosures must be forced, each having a very strong gate lined with iron. To do this, cannon must be landed, or else a mine or the petard be had recourse to; but during this operation the assailants would be exposed to a murderous fire of the garrison, if the inhabitants should be resolved to defend their city. By land the point of attack

would be on the sands, and the low hills to the south, between the Fez road and the sea, after effecting a landing on the beach of Old Tangier, out of the reach of the sea batteries. Once established on these points, the plateau on which the market is situate would be gained. On this plateau there is space enough to form an entrenched camp, to serve as a *point d'appui* for the troops acting against the town. The western rampart, being only of earth, might be readily demolished. The last attack against Tangier was in 1790, when it was bombarded by the Spaniards. The inhabitants abandoned the place with all their effects, and peace was soon after concluded. The English draw their supply of beef, mutton, fruit, and vegetables from Tangier and Tetuan. Tangier is distant 70 leagues from Fez and Mequinez, and 150 from Morocco, these being the three imperial cities at which the Sultan alternately resides. From eighteen to twenty days is required to send a despatch, and get an answer, from Tangier to Fez, and from Morocco requires from forty-five to fifty days."

Tangier has been bombarded, and his Highness of Joinville has established, conclusively enough, that French sailors, though they are well able able to write silly pamphlets, or—witness Tahiti—terrify sick women, and bully missionaries and consuls, are, at all events, not quite so capable in the discharge of duties more immediately pertinent to their calling. Tangier has been bombarded, the Mediterranean has again heard the booming of French cannon, and the tri-colour has once more been planted, in its insolence, on her southern shore. British sailors looked on, and with mingled feelings of contempt and indignation. They saw clearly enough that, despite all the boasting of the French journals, the French sailor was not quite the formidable person he pretends to be, and that, if it be our fate to meet him, as we have often met him, the meeting will end in the style such meetings have ended heretofore. Amidst the wreck of Tangier—that historical city—the Moors yet breathe vengeance against the French; and when the smoke floated away from the battered walls, still could be seen flying the Moorish flag. Such a race as this can hardly be conquered, and if the Prince de Joinville had essayed to crown his triumph by landing his men, the affair would have ended in a fashion that would scarcely have suited the tender susceptibilities of French journalists.

WRECK OF THE CLARENDON, WEST INDIAMAN.

At Black-Gang Chine, Isle of Wight, on Tuesday Morning, Oct. 16th, 1836, with the loss of twenty-five of her passengers and crew

THE details of this melancholy loss of human life and valuable property were obtained from three of the crew, the only beings who were saved from the wreck, with some additional particulars by individuals who witnessed it from the shore.

The good ship Clarendon, 345 tons, was built in the year 1824, and belonged to the West Indian portion of our great commercial navy. Her owners were Messrs. Tayler, Fry, and Channel; her consignees for the voyage, Messrs. Manning and Henderson, of Lothbury, London. We are not aware whether the vessel or cargo was insured, but her loss is most satisfactorily accounted for. Her captain, Thomas Whitron, an old and experienced navigator in the West India trade, died at Nevis on the 21st of June. The vessel, under the command of Samuel Walker, formerly chief mate, sailed from Basseterre Roads, St. Kitts, on Saturday, the 27th of August, laden with molasses, sugar, rum, and turtles, and had on board the following passengers:—Lieut. Thomas Shore, of the 14th regiment of foot, aged 42; Louisa Shore, his wife, 43; with their children, Caroline, Mary Anne, Constance, and Jesse, aged respectively 18, 14, 3 years, and nine months; the body of the babe was never found. George Higginbotham, corporal, servant to Lieut. Shore; Walter Pemberton, Esq., planter, St. Kitts; and Ann, his daughter, 11 years old, coming to England to be educated; Miss Jane Gourlay, 40, a daughter of Captain Gourlay, R.N., late of Southsea, Portsmouth, whose body was

never found; and — Shepherd, Esq., planter, whose relatives reside in or about Exeter, also not found.

The crew consisted of the following:—Samuel Walker, acting master; William Stuart, chief mate; James Harris second mate (saved); J. Paris, steward; W. Sherlock, E. Cousins, J. Penny, R. Smith, Edward Rush, — Hyde, Thomas Stratton (not found), Joseph Hall (not found), John Thomson (saved), and William Byrne (saved), seamen; Thomas Johnstone, Charles Stephenson, and John Graham boys.

The Clarendon made a fair passage, and everything went on comparatively well. The passengers were fond of each other's society, and the master had full control of the vessel; but it was insinuated that at the time of the disaster there was a mutiny on board. The survivors, however, deny that such an event took place during the voyage; although they admit that some of the crew got intoxicated, and there was a slight disturbance, but that the master did his duty, asserted his authority, and punished the guilty by putting two of the more riotous in irons for some hours, one of whom still lives to vouch for its accuracy. He and his surviving shipmates declare that the circumstance created no ill-will towards the captain; and that this was the only unpleasant event that occurred during the homeward passage of six weeks. The weather had been squally during the last two or three weeks, but not so as to give uneasiness to any one on board. On Sunday morning they first descried land, Scilly then being distinctly visible. The vessel kept her onward course, her object in getting to port being to sail round the Isle of Wight to the southward. To effect this they had to weather Rockenend Point, and it was while endeavouring to do this that the dreadful catastrophe occurred.

The weather had for some days been very rough and unsettled. On the night of Monday, October 10, it began to blow a dreadful gale, which increased in violence during that awful night and the following morning. On those parts of the coast of the island where danger is most to be expected, there are persons stationed on the look-out, night and day, for vessels in distress. Two or three individuals, who are termed shore-walkers, were on the beach at Black-gang Chine during this stormy night. A coast-guard sentinel was also on the watch; and he was the first who, through the dim light of the breaking morning, descried the ill-fated Clarendon. From the first moment of seeing her he knew she was doomed—that nothing could save her from the giant surge that was madly dashing against that rocky shore; but he thought that perhaps human efforts might be enabled to mitigate the bitterness of human suffering in the coming hour of perilous trial. His comrades, few in number, were soon summoned, and they were joined by some of those hardy natives whose dwellings are on the cliff, the shore, and by the sea. The vessel came rapidly on, the wind blowing with dreadful violence dead in shore. As she drew near, the sight was enough to rend the hardest heart. Wreckers, down whose iron cheeks the tears of human pity never stole before, stood there in horror, the big drops coursing after each other at the scene before them.

Half an hour before the disaster the passengers did not even dream of danger; and now they were to be seen clinging to anything on the vessel, their only covering being their night clothes, or any chance thing they could lay their hands on in rushing from their cabins. Some stood in speechless horror, while others uttered the most dreadful cries—for death, in his most terrific form, stared them in the face. The vessel was not twice her length from that shore on which they beheld people walking in safety, and to which their hopes and affections had for weeks been turned. Twice she touched the shingle, but not heavily; each time, however, above the loud howling of the pitiless storm, were heard the maddening shrieks of the miserable passengers and crew. Her time was now come; for in two or three minutes, borne inwards by a mountain wave, she was dashed midships on the shore, and, swinging round upon her broadside, heeled over. The upper tier of goods (hogsheads of sugar) rolled to the sunken side, which was instantly beat out, and the vessel went to pieces, the tremendous surf snapping her masts and timbers as if they had been reeds.

In the course of six or seven minutes from her first touching the shore, there were not two planks of the ill-fated Clarendon to be seen together—so sudden, so awful was the catastrophe.

—“A wreck complete, she roll’d

At the mercy of the waves, whose mercies are
Like human beings during civil war!”

To afford assistance from the shore was, as we have before stated, utterly impossible. The only hope indulged in by the spectators was that of saving some of the hapless beings that the foaming wave might throw upon the rocks. To attempt even this was to peril their own lives, so sudden and so tremendous was the reflux of the merciless billow. Death, too, had held his carnival the moment the ship struck midships on the shore; for then, the billows beating in, dashed the crew against the severed timbers, and soon ended their misery. It is a singular fact, that of the three persons who were saved, they either jumped overboard of their own accord to try for land—and that land, too, within a stone’s throw!—or were hurled from the vessel by the furious mountain waves. The second mate, Harris, was swept right off the deck, and the long-boat followed, at first covering him. He clung to it as long as he could, and was dashed on the shingle, which he clutched with that desperation which is only known to those who have felt the gripe of a drowning man. His state is so truly described by Lord Byron, in *Don Juan*, that we need no apology for quoting the lines. It is a vivid and faithful picture of his situation, as described by one of the spectators:—

“There, breathless, with his digging nails, he clung
Fast to the land, lest the returning wave,
From whose reluctant roar his life he wrung,
Should suck him back to her insatiate grave:
And there he lay, full length, where he was flung,
Before the entrance of a cliff-worn cave,
With just enough of life to feel its pain,
And deem’d that it was saved, perhaps, in vain.”

But it was not in vain! A noble, gallant fellow, named Wheeler, a resident on the coast, rushed in as the wave receded, and before another came roaring in, dragged him high enough upon the beach to rescue him from danger. How inscrutable are the ways of Providence! In the features of the reviving mariner his deliverer recognised an old shipmate, whose life he had saved four years before, when they both belonged to Lord Yarborough’s yacht, the *Falcon*. Thus has Wheeler twice saved from a watery and untimely grave the same individual. The two others, Thomson and Byrne, leapt overboard to swim for shore. They also were dashed on the shingle and saved, like their comrade, by the daring intrepidity of the bystanders; but they were all sorely bruised. These are the only survivors to tell by “winter’s fire” the horrors of that morning.

In the course of two or three hours after the wreck, numbers of people were seen descending the Chine to gaze on the scene of devastation, or to render assistance. Mr. Jacobs, of Chale Abbey Farm, arrived a few moments after the Clarendon struck. He had been sent for by one of the coast guard as soon as the danger of the vessel was perceived; and, as is this truly good man’s custom, he rose from his bed the moment he was called, and hurried down the cliffs as quickly as he could. Not more than half an hour had elapsed, and yet all was over! We have much pleasure in stating that Mr Jacobs received a letter of thanks from Lloyd’s for his kind exertions, besides several others from private gentlemen.

Lord Yarborough and his son, the Hon. Dudley Pelham, also quickly arrived on the spot, and assisted throughout the day in making arrangements for the safe custody of the trunks and other things which were then beginning to be washed ashore. Almost every one lent a hand to some good purpose. The old “wrecking” feeling was awed, and, we hope, banished for ever. It is said that not a crown’s worth of property was stolen that day. Relics undoubtedly were taken, but they were valuable merely as memorials of the wreck, or considered by the ignorant as emblems of superstition.

The appearance of the shore was of the most desolate character. Even at the best of times, and during the most favourable weather, with the gentlest winds and sunniest hours, it is a wild place—one that you would not prefer to tarry in alone—one that awakens a sickening sense of helplessness and terror; but now the native horrors of Black-gang Chine were doubly appalling. No language can describe the terrific grandeur of that scene. Standing on the shore, and looking on the wilderness of water, boiling, roaring, and breaking in furious anger on the rock-bound shore, with not a sail in sight, your mind suspiciously asked itself whether other gallant barks had not likewise been engulfed during that dreadful gale? To the right, in the distance, were the Needles, in whose hollow caves many a hapless sailor lies fathoms deep; to the left, the broken crags of Rockenend, rising to the height of some hundred feet, while at their base, you could, ever and anon, through the now subdued foam, perceive hidden rocks that “murder while they smile.” Behind was the Black-gang Chine, darkly vindicating its unenvied pre-eminence; and as the storm abated, the naked bodies of human beings, the hapless victims of the wreck, were now washed ashore almost at your feet; but as you rushed to save them from further violence,—for all that were picked up bore ample proof of violent death—the angry wave again returned with redoubled force, threatening to engulf the living with the dead. Oh! it was a sickening and humiliating sight to look for hours on those floating bodies. One by one the ocean gave them up, but so tardily and reluctantly, that she seemed as though she still wished to gorge herself upon the victims she had made. And then they were so bruised, so beaten, so disfigured, that “the mother had not known her child!” As the bodies were rescued, they were taken to the different boat-houses that here and there stud the cliffs, and covered with sails. To see the survivors after they had recovered (and in this office Mr. Jacobs was humanely attentive) going through these boat-houses, and lifting the canvass from the faces of the dead to identify them, was indeed a mournful scene.

One of them had recognized several of his shipmates, after some difficulty; and, on lifting the canvass from the next he said, hesitatingly, as if for the moment in doubt, “Yes,—that’s one of the girls—she was singing away so last night—that’s Mr. Shore’s daughter. I don’t know which though—I don’t know her name—I was near the cabin, and heard them as glad as they could be, they were so near home. Oh, dear sir, this time yesterday none of us thought of this. That’s one of Mr. Shore’s; I’m sure it’s not Miss Pemberton.” In this manner were the bodies identified. We shall spare our readers the pain of carrying this part of the scene any further.

By noon vast quantities of the wreck and some luggage had been recovered; and each succeeding hour increased the number of visitors, all of whom, to the credit of the island, did something towards the conservation of what the waves yielded up. The timber washed ashore was dashed into a thousand pieces. For miles it strewed the coast; and yet so extreme, and at the same time so minute had been the devastation, that while you could pick up screws and nails, you could not, along the whole coast, where for miles you walked past heaps of the wreck, find any continuous portions of the vessel. In the very centre of the bay you could see the mainmast, sails, cordage, &c., driven, as by one bound, deep into the sand—that sturdy mast, once doubtless some forest’s pride, shivered in twain like an infant’s toy. Turtles were lying about; and puncheons, boxes, masts, shrouds, sails, cocoa-nuts, wearing apparel, aye, even a night-cap in which one of these hapless girls had gone to rest the evening before, was picked up with part of its frilling torn off—so minutely precise in its destruction seemed the devastating deep!

Among many who live to mourn for years this dreadful catastrophe—for some of the unhappy crew have left widows and children—all, we believe, father, mother, sister, or friend—there is none to whom sympathy is more universally or warmly extended than to Captain Smith, an army officer who had lately taken up his residence at Newport. The ill-fated Mrs. Shore was his sister. From her he had recently heard of their speedy arrival, and in consequence had arranged for their domestic comfort. To her return he looked with more than common

anxiety. It had been his misfortune just previously to lose his wife; and he very naturally, in his hour of bereavement, looked to the return of his sister and her children as an epoch when, from their solicitude and attention, something like happiness might again smile upon him. The household memories of the past shadowed forth a placid if not a pleasurable future; but the cup was dashed from his lips before it touched them. While walking in the streets of Newport early on Tuesday morning, he met an acquaintance who, in the course of conversation, asked if he had heard the dreadful news from the back of the island? "No," said he. "What is it?" "An Indianman stranded." "An Indianman!" "Where from?—what name?" "I do not know her name; she is from the East Indies, with four or five hundred persons on board, most of them troops, it is said."

This was the first report. Captain Smith uttered some expressions of regret, and hastily left his friend, who, however, instantly perceived a fearful alteration in his countenance. The prophetic knell of death had already tolled in his ear. His fears hinted that it was a West and not an East Indianman, and he hurried to the spot. We were not far from him on his arrival at the Ching. His hasty inquiries were soon answered, and, alas! were too confirmatory of his own forebodings. In a short time his sister's body was washed ashore half a mile from where he stood, and his nieces soon followed. Poor fellow! his is a broken spirit that will require many years of long kindness to bind up and heal!

THE INQUEST.

An inquest on the bodies which were recovered (twenty in number) was held on the following Wednesday, at Chale Church, before William Hearn, Esq., coroner, and a most respectable jury. The bodies were placed side by side on the greensward, and cold indeed must have been that heart that could witness, unmoved, the afflicting spectacle.

Through the kindness of the coroner, we are enabled to give the chief points of the evidence adduced.

James Harris being sworn, said: "I was second mate of the Clarendon. There were some disturbances during the voyage; some of the crew were in irons for getting drunk, but harmony generally prevailed, and the ship was always under the command of the officers. We made Scilly on Sunday at noon; I was then ill below. It was very squally on Monday night. When I came on deck, about five in the morning, I saw land on the bow, about a mile and a half distant; I did not know the land, but I saw breakers ashore. The captain and all the crew were then on deck. The ship was under double main-top-sail, everything clewed. We set the fore-top-sail, fore-sail, and main-top-sail, trysail, and spanker, and stood on, dragging our bulwarks under water, but could not get her to weather the point. She struck forward twice lightly; in four minutes after she struck amidships: everything was washed away, and in six minutes nothing of her was left. I jumped overboard, was washed ashore, and J. Wheeler saved my life. I saw no living person on board when I left. I had about one minute before been knocked down, when all the passengers and crew were on deck; on getting up they were all gone. Mr. Pemberton and Mr. Shepherd were dressed."

"The captain had before asked us if we could set the main-sail; I told him it was all over."

This evidence was mainly corroborated by John Thomson, who added, "On Monday night we saw a light about twelve. I guessed it about ten leagues to leeward, wind W.S.W.; we were steering E.S.E. Sherlock said it was the Portland lights; I was steering; we kept it in sight till about five. I then saw land to leeward; the captain was on deck; we saw the breakers, and apprehended danger. I did not know the land; we struck shortly after."

Byrne examined.—"The captain was obeyed till the last moment: he told the men to save themselves. I have no reason to believe that it was through any neglect the ship was lost: if we had had an opportunity of taking a pilot we should have done so; but if we had had our decks full of men, we could not have saved the ship. She was consigned to Messrs. Manning and Henderton, 3, Lothbury, and the owners were

Messrs. Tayler, Fry, and Channel. The previous captain died at Nevis, on the 21st of June. I am well acquainted with the channel, and I am certain it was the Scilly we made on Sunday at noon. I know it by the St. Agnes lighthouse. We continued in sight of land all night. I saw the Lizard light; we had first two lights in one; I lost sight of them about 10 p.m.; saw no land to be certain after. About midnight I saw a light, which appeared to be a revolving one, but it might possibly have been the motion of the ship. I did not know whether it was the Portland or the Needles light; I kept it in sight two or three hours; it was near a-beam twenty miles, and very thick and squally. At two, I saw land, and knew it to be the South of the Isle of Wight. I saw the danger at four, and set all sail to weather the point (St. Catherine's Ledge), but could not, and was confident we should not. The master said the vessel would hold together, and each man was to save a woman; she struck heavily on her broadside and the sea swept her clean fore and aft: I jumped on the taffrail, and the mizen went over with me. I was saved by the people on shore. The Clarendon was not two lengths from the shore when she struck; we were most kindly treated by the people on shore, who clothed and fed us; Mr. Jacobs, of Chale, was most conspicuous in his attentions towards us; only three of us were saved out of seventeen of the crew and eleven passengers."

One of the last witnesses admitted that he had been in confinement for disobedience of orders some few days previous, but retained not the least feeling of animosity against the captain in consequence.

The jury returned a verdict of "Accidentally drowned." The greater part of the timber was sold by auction on the Thursday following, and the mortal remains of the crew were deposited in one grave in Chale churchyard the same day. A large vault, opened in the south-east corner of the churchyard attached to the parish of Newport, contains the remains of the unfortunate passengers, a brick wall only parting it from the then residence of the nearly heart-broken Captain Smith, the only brother of Mrs. Shore. The funeral took place on the succeeding Friday, and the silent tomb closed the voyage of the unfortunate passengers of the ship Clarendon.

Tombs were raised, and inscribed, on which were the following epitaphs, calculated to arrest the attention of the visitors, and instil into their minds, salutary thoughts of death, whose coming was so sudden and so terrible:—

Sacred
to the Memory of
Captain SAMUEL WALKER,
of the Ship
CLARENDON,
Youngest Son of Mr. John Walker, late of
Oxford-street, London;
Who, on his homeward voyage from the West
Indies, was wrecked in Chale Bay, during a
violent storm, on the morning of the
11th October, 1836,
in the 34th year of his Age;
When Twelve of the Crew, and all the Passen-
gers, 11 in number, unfortunately perished
together with him.

In recording the awful event, his afflicted Rela-
tives desire to bow, with humble submission, to
that Almighty Power, who hath dominion from
sea to sea, and from the rivers unto the ends of
the earth.

Sacred to the Memory of
Lieutenant and Adjutant THOMAS SHORE,
Of the 14th Regiment of Foot,
His Wife, and four Daughters, who, on their return
to England from the West Indies,
were wrecked in Chale Bay,
On board the Ship CLARENDON,
On the morning of the 11th of October, 1836;
when twelve of the crew, and all the pas-
sengers, (eleven in number,) unfortunately perished.

Lieut. SHORE,
joined the 74th Regiment, as an Ensign, in 1805,
and bore a part in the Peninsular war,
being present at the Battles of
Fuentes D'onore, Badajos, Salamanca,
Vittoria, and Orthes,
at the last of which he was severely wounded.

Under this Stone
Lie the Mortal Remains of
WALTER MAYNARD PEMBERTON, Esq.,
Of the Island of Nevis,
Aged 48 years,
Member of His Majesty's Council, in that Island.
And of his amiable Daughter ANNE,
Aged 11 years;

Who perished together in the wreck of the Ship

CLARENDON, in Chale Bay,

On the 11th of October, 1836.

He has left an afflicted Widow and numerous Family,
to deplore the irreparable loss of an affectionate Hus-
band, kind Parent, dutiful Son, attached Brother, and
Sincere Friend and Christian.

THE BEWITCHED TREASURE.

IN the time of the Thirty Years War, there was to be seen standing not far from the town of Soest in Westphalia, an old ruin, of which the tradition ran that there was an iron trunk there, full of money, kept by a black dog and a bewitched maiden. The grandfathers and grandmothers who are gone, used to tell that a strange nobleman shall one day arrive in the country, deliver the maiden, and open the chest with a fiery key. They said that divers itinerant scholars and exorcists had, within the memory of man, betaken themselves thither to dig, but been in so strange sort received and dismissed, that no one had since further listened to the adventure, especially after their publishing that the treasure might be lifted of none who had once taken woman's milk. It was not long since a little girl from their village had led her few goats to feed about the very spot; one of which straying amongst the ruins, she had followed it. Within, in the castle court, was a damsel, who questioned her what she did there: and when she was informed, pointing to a little basket of cherries, further said, "It is good; therefore take of that thou seest before thee, with thy goat, and all, and go, and come not again, neither look behind, that a harm befall thee not." Upon this the frightened child caught up seven cherries, and made her way out of the ruins. The cherries turned, in her hand, to money.—*Blackwood.*

AMERICAN HOSPITALITY.

It was some time in the autumn of that year in which the great Napoleon, bade a final adieu to the theatre of his glory, and of those extraordinary vicissitudes which attended his public career, that we arrived at Norfolk, in Virginia, in the ship *Ajax*, Captain Tyler; whither we went to procure a cargo of lumber for the estates of our owners, situated in the island of Jamaica. And it was while we remained at Norfolk, that we experienced the peculiar instance of American Hospitality of which we are about to speak. Having been repeatedly invited to spend an evening on shore, we availed ourselves of a little leisure that occurred, and accompanied by a young Scotchman, a resident of Norfolk, we went on shore, to spend an evening at one of the taverns—I think it was the Navy Tavern; be that as it may, the room was full of American naval officers, who appeared to vie with each other in speaking disrespectfully of the British, as they called us, but more especially of the British navy and its officers. Now, there was one of these *soi-disant* Yankees, who seemed determined to quarrel with us, if possible; he came in front of the table at which we were sitting, and flourishing his glass of grog in our faces, began to sing a song in commemoration of the capture of the *Guerrier* by the *Constitution*; however, he was soon called to order by some of his companions, who

said, that as America was the land of liberty, strangers should not be molested in their presence, and that every man had a right to enjoy his own opinion. But notwithstanding, that order was in some measure restored, they still influenced to undervalue the courage and capacity of our naval officers; and one of them went so far as to say, that of all the British naval officers who had served on the American station, Captain Broke, of the *Shannon*, was the only man who ought to be considered as a truly honourable man. "Then you do consider Captain Broke to be a truly honourable man?" said I. "Oh, yes!" was the unanimous reply. "Then," said I, "do you think a truly honourable man would be guilty of uttering a falsehood?" "Impossible!" exclaimed one and all. "Then," said I, "have the goodness to attend to an extract from Captain Broke's letter, which announced the capture of the *Chesapeake*;" and immediately taking an old newspaper from my pocket, I read as follows:—"I went forward to ascertain the position of the enemy, and I found they were *flinching* from their guns." This was quite enough for Jonathan, with whom it instantly settled the question as to Captain Broke's honour; and removed every doubt as to the sort of liberty of speech which prevails in America. For I had no sooner finished the lacerating sentence, than my head was assailed by a rummer of brandy-and-water, thrown at us by the hospitable Virginian, who was before inclined to amuse us with a song; but who now vociferated, "I guess you are like all the *old serpents*, a *varnation liar*!" And had it not been for the timely arrival of a couple of friends, Hibernian Yankees, we doubt whether we should have escaped alive to tell the tale.

THE FISHERMAN'S TALE.

THERE is a village in Scotland called Gourloch, situated on the shore of a fine bay, about three or four miles from the town of Delingburn, and inhabited mostly by fishermen, who let part of their houses in summer months, to people who resort thither for the purpose of bathing.

Perhaps no other part of Scotland, or of the British Islands, presents so much richness and variety of scenery. From the summit of a hill of very precipitous ascent, a little way to the east of the village, the view is particularly fine, embracing an extent of country unusual in such situations, where the intervention of mountains commonly shuts in the landscape too abruptly.

When descending one day, during my visit to the west country, from this commanding spot, I sat down, wearied with the exertion, on a huge isolated rock, near the narrow path, by which alone the hill is accessible. Presently, an elderly man, of grave aspect, and maritime appearance, winding slowly up the hill, came and sat down near me on the rock. I guessed him to be one of the better class of fishermen from the village, who had purchased with the toil of his youth and his manhood, a little breathing-time to look about him in the evening of his days, ere the coming of the night. After the usual salutations we fell into discourse together, and after a pause in the conversation, he remarked, as I thought, in somewhat a disjointed manner, "Is it not strange, sir, the thoughts that sometimes come into the brain of man, sleeping or waking,—like a breath of wind that blows across his bosom, coming he knows not whence, and going he knows not whither,—and yet, unlike the wind, that ruffles not the skin nor touches, they leave behind them an impression and a feeling; are as things real and authentic; and may become the springs of human action, and mingle in the thread of human destiny?—I was thinking at this moment of something which has sat, for many days past, like a millstone on my mind; and I will tell it to you with pleasure."

So I edged myself closer to him on the stone, that I might hear the better; and without more preamble the Scottish fisherman began his story, as nearly as I remember, in the following words:—

"About six months ago, a wedding took place in our village; and a more comely and better looked-on couple never came together. Mr. Douglas, though the son of a poor man, had been an officer in the army, an ensign I'm thinking; and when his regiment was disbanded, he came to live here on

his half-pay, and whatever little else he might have. Jeanie Stuart at the time was staying with an uncle, one of our folk, her parents having been taken away from her; and made up for her board as far as she could, by going in the summer season to sew in the families that came out then, like clocks, from the holes and corners of the great towns, to wash themselves in the caller sea. So gentle she was, and so calm in her deportment, and so fair to look on withal, that even these nobility of the loom and sugar-hogshead thought it no dishonour to have her among them; and unknowingly as it were, they treated her just as if she had been of the same human mould with themselves.

"Well, they soon got acquainted, our Jeanie, and Mr. Douglas, and the end of it was, they were married. They lived in a house there, just beyond the point that you may see forms the opposite angle of the bay, not far from a place called Kempuck-stane, and Mr Douglas just employed himself like any of the rest of us—in fishing, and daundering about, and mending his nets, and such like. Jeanie was now a happy woman, for she had aye a mind above the commonalty; and I am bold to say, thought her stay long enough among those would-be gentry, where she sat many a wearisome day, and would fain have retired from their foolishness into the strength and greenness of her own soul.

"But now she had a companion and an equal, and indeed a superior; for Mr. Douglas had seen the world, and could while away the time in discoursing of the ferlies he had seen and heard tell of in foreign lands, among strange people and unknown tongues. And Jeanie listened and listened, and thought her husband the first of mankind. She clung to him as the honey-suckle clings to the tree; his pleasure was her pleasure—his sorrow was her sorrow—and his bare word was her law. One day, about two weeks ago, she appeared dull and dispirited, and complained of the headache; on which Mr. Douglas advised her to go to bed, and rest herself awhile, which she said she would do; and having some business in the village, he went out. On coming back, however, in the forenoon, he found her just in the same spot, leaning her head on her hand, but she told him she was better, and that it was nothing at all. He then began to get his nets ready, saying he was going out with some lads of the village to the deep-sea fishing, and would be back the next day.

"She looked at him long and strangely, as if wondering at what he was doing, and understanding not anything that was going on. But finally, when he came to kiss her, and bid her good bye, she threw her arms round him, and when he would have gone, she held him fast, and her bosom heaved as if her heart would break—but still she said nothing.

"*"Stay with me to-day!"* she said at last, *"depart not this night—just this one night—it is not much to ask—and to-morrow I will not be your hinderance a moment."*

"But Mr. Douglas was vexed at such folly, and she could answer nothing better to his questions, than that a thought had come into her head, and she could not help it. So he was resolved to go, and he kissed her, and threw his nets on his shoulder and went away. For some minutes after, Jeanie stood just on the spot, looking at the door where he had gone out, and then began to tremble all over like the leaf of a tree; at length, coming to herself with a start, she knelt down on both knees, and throwing back her hair from over her forehead, turned her face up towards Heaven, and prayed with a loud voice to the Almighty, *"that she might still have her husband in her arms that night."* For some moments she remained motionless and silent, in the same attitude, till at length a sort of brightness, resembling a calm smile, passed over her countenance, like a gleam of sunshine on the smooth sea, and bending her head low and reverently, she rose up. She then went as usual about her household affairs, and appeared not anything discomposed, but as tranquil and happy as if nothing had happened.

"Now the weather was fine and calm in the morning, but towards the afternoon, it came on to blow—and indeed, the air had been so sultry all day, that the old sea-farers might easily tell there would be a racket of the elements before long. As the wind, however, had been rather contrary, it was supposed the boats could not have got far enough out, to be in the mis-

chief, but would put back when they saw the signs in the sky. But in the meantime the wind increased, till towards night it blew as hard a gale as we have seen in these parts for a long time; the ships out there at the tail of the bank, were driven from their moorings, and two of them stranded on their beam-ends, on the other side; every stick and stitch on the sea, made for any port they could find; and as the night came on, in darkness and thunder, it was a scene that might cow even the hearts that had been brought up on the water, as if it was their proper element, and been familiar with the voice of the tempest from their young days. There was a sad lamenting and murmuring then among the women folk—especially them that were kith or kin to the lads on the sea; and they went to one another's houses in the midst of the storm and rain, and put in their pale faces through the darkness, as if searching for hope and comfort, and drawing near to one another, like a flock of frightened sheep, in their fellowship of grief and fear. But there was one who stirred not from her home, and who felt no terror at the shrieking of the night-storm, and sought for no comfort in the countenance of man—and that was the wife of Mr. Douglas. She sometimes, indeed listened to the howling of the sea, that came by fits on her ear like the voice of the water-kelpie, and starting, would lay down her work for a moment; but then, she remembered the prayer she had prayed to Him, who holds the reins of the tempest in his hands, and who says to the roaring waters, *"Be still,"* and they are still—and of the glorious balm she had felt to sink into her heart, at that moment of high and holy communion, even like the dew of Heaven on a parched land. So her soul was comforted, and she said to herself, *"God is not a man that he can lie,"* and she rested on this assurance as on a rock, and laughed to scorn the trembling of her woman's bosom—for why—the anchor of her hope was in Heaven, and what earthly storm was so mighty as to remove it? Then she got up and put the room in order, and placed her husband's shoes to air at the fire-side; and stirred up the fuel, and drew in the arm-chair for her weary and storm-beaten mariner. Then would she listen at the door, and look out into the night for his coming, but could hear no sound, save the voice of the waters, and the foot-step of the tempest as he rushed along the deep. She then went in again, and walked to and fro in the room with a restless step, but an unblanched cheek. At last, the neighbours came to her house, knowing that her husband was one of them that had gone out that day, and told her they were going to walk down to the Clough, even in the mirk hour, to try if they could not hear some news of the boats. So she went with them, and we walked altogether along the road, it might be some twenty or thirty of us; but it was remarked that though she came not hurriedly, nor in fear, yet she had not even thrown her cloak on her shoulders to defend her from the night air, but came forth with her head uncovered, and in her usual raiment of white, like a bride to the altar. And as we passed along, it must have been a strange sight to see so many pale faces, by the red glare of the torches they carried, and to hear so many human wailings, filling up the pauses of the storm; but at the head of our melancholy procession, there was a calm heart and a firm step, and they were Jeanie's. Sometimes, indeed, she would look back, as some cry of womanish foreboding from behind, would smite on her ear, and strange thoughts would crowd into her mind; and once she was heard to mutter—if her prayer had but saved her husband, to bind some other innocent victim on the mysterious altar of wrath! and she stopped for a moment, as if in anguish at the wild imagination. But now as we drew nearer the rocks where the lighthouse is built, sounds were heard distinctly on the shore, and we waved the torches in the air, and gave a great shout, which was answered by known voices—for they were some of our own people, and our journey was at an end. A number of us then went on before, and groped our way among the rocks, as well as we could for the darkness; but a woeful tale met our ears; for one of the boats had been shattered to pieces, while endeavouring to land there,—and when we went down, they were just dragging the body of a comrade, stiff and stark, from the sea. When the women behind heard it, there was a terrible cry of dismay, for no one knew but it might have been her own

brother or son: and some who held torches dropped them for fear, trembling to have the terrors of their heart confirmed. There, was one, however, who stood calm, and unmoved by the side of the dead body. She spoke some words of holy comfort to the women, and they were silent at her voice. She then stepped lightly forward, and took a torch from the trembling hand that held it, and bent down with it beside the corpse. As the light fell one moment on her own fair face, it showed no signs of womanish feeling at the sight and touch of mortality; a bright and lovely bloom glowed on her cheek,

and a Heavenly lustre burned in her eye; and as she knelt there, her long dark hair floating far on the storm, there was that in her look which drew the gaze even of that terrified group from the object of their doubt and dread. The next moment, the light streamed on the face of the dead—the torch dropped from her hand—and she fell on the dead body of her husband.

"Her prayer was granted. She held her husband in her arms that night, and although no struggles of parting life were heard or seen, she died on his breast."

DUCKWORTH'S VICTORY OFF ST. DOMINGO.

NORWITHSTANDING the loss which Napoleon Buonaparte had sustained by the battle of Trafalgar, and the great probability that whenever his remaining ships ventured to sea, they would meet with a similar fate, yet the critical situation of his remaining West India colonies determined him to run all hazards for their support and relief; accordingly, on the 4th of December, 1805, notwithstanding the vigilance of our cruisers, a French fleet, consisting of eleven sail of the line and a number of frigates, made its escape from Brest. This fleet afterwards divided into two squadrons, and proceeded by different routes towards the West Indies.

One of these squadrons, consisting of six sail of the line and two frigates, soon afterwards fell in with two British transports, with troops, from Gibraltar, and took them. Having put the soldiers on board the *Volontaire* frigate of forty-six guns and 360 men, the French admiral sent her forward to the Cape of Good Hope, not being aware that that settlement had been captured by the British. On the 4th of March the *Volontaire* arrived off the Cape, and the *Diadem* of 64 guns, then lying in Table Bay, having observed her at a distance, and supposing her an enemy, immediately hoisted Dutch colours. The French frigate not suspecting the stratagem, went in and anchored alongside the *Diadem*; on which the latter hauled down the Dutch and hoisted English colours in their place. The frigate perceived her mistake too late to attempt to escape, and being unable to contend with such a superior force, surrendered without firing a gun. Sir Home Popham, on receiving intelligence that a French squadron was in those seas, immediately made every preparation to give the enemy a warm reception, in case they should think proper to attack the Cape. The English troops, to the number of 217, retaken in the *Volontaire*, were immediately landed, and sent to reinforce the garrison. The squadron at the Cape consisted of the *Diomedé*, of 50 guns, and two frigates, besides the *Volontaire*. The latter was manned from the other ships, and the whole were moored with springs on their cables, under a battery of 32 guns, from which it was intended to fire red-hot shot, if the French squadron should approach to attempt hostilities. This, it

afterwards appeared, was part of the fleet which got out of Brest, on the above-mentioned day, and separated into two squadrons. One of these, as we have seen, took a southern course, while the other proceeded to the West Indies, to which quarter we shall now follow them.

Accounts having been received that the Rochefort squadron, by which the Calcutta was taken, had, on their return from Teneriffe, in November, fallen in with and dispersed the convoy bound to the coast of Africa, Vice-Admiral Sir J. T. Duckworth, then off Cadiz, immediately proceeded in quest of them,

with his Majesty's ships of the line, *Superb*, *Spencer*, *Donegal*, *Canopus*, *Powerful*, and *Ajax*.

He continued to cruise off the Canaries for a given time; on his return to Cadiz, he fell in, on Christmas-day, with a French squadron of six sail of the line.

This was the squadron to which the *Volontaire* belonged, and one of the ships of which was commanded by Jerome Buonaparte, the brother of Napoleon. "It is impossible," says an officer of the *Superb*, "to describe the joy expressed by every one on board the British ships on this occasion; every individual thought himself a king, and

expected that day to be one of the happiest Christmases he had ever spent." But from the very bad sailing of several ships of the fleet, the enemy had the good fortune to escape after a chase of two days. Uncertain of their destination, Admiral Duckworth took the most effectual means to defeat their views, by immediately detaching the *Powerful*, of 74 guns, to the East Indies, with an account of the number and strength of the enemy's squadron, and proceeded himself direct to Barbadoes, following the example of the great and gallant Nelson, when in a similar dilemma. On his arrival in the West Indies, he took Admiral Cochrane, with the *Northumberland* and *Atlas*, under his command, and proceeded off Martinique, in hopes of intercepting them. But the enemy had pursued a wiser policy. They had kept well to the northward, and instead of spreading an alarm through the islands, had proceeded by the nearer passage to the Bay of St. Domingo, on the south side of the island of that name, and where the first Rochefort squadron had, the preceding year, succeeded in throwing in reinforcements, to the city of St. Domingo, then besieged by Dessalines. Accounts of their probable destination

[DECK OF THE SUPERB DURING THE ACTION.]

having been received by a neutral, Sir J. Duckworth, with great promptitude, proceeded to that quarter, and, in the afternoon of the 5th of February, was joined by the *Magicienne* frigate, with a farther corroboration from various vessels spoken, of an enemy's force being in those seas. Admiral Duckworth continued under easy sail all night, in his approach to the town of St. Domingo, having given orders to Captain Dunn of the *Acasta*, and Captain M'Kenzie of the *Magicienne*, to make sail two hours before daylight to reconnoitre. At six in the morning of the 6th, the *Acasta* made the signal for two of the enemy's frigates, and, before seven, for nine sail at anchor. Half an hour afterwards, they were getting under weigh. The British squadron approached them fast, in close order, and before eight o'clock, discovered that the enemy were in a compact line, under all sail, going before the wind for Cape Nissas, to windward of Ocoa Bay, and that they consisted of five sail of the line, two frigates, and a corvette. The English force consisted of seven sail of the line and four frigates.

Had the enemy remained at anchor, the British fleet would have found it difficult to get at them; but as they bore away, Admiral Duckworth concluded, from the information he had received, that they were endeavouring to form a junction with their remaining force. He therefore shaped his course in the *Superb*, which led the squadron, so as to frustrate any such intention, which was completely effected by a little after nine, and an action became inevitable. He now made a telegraphic signal to his fleet—*This is glorious*—alluding to the enemy's squadron in a situation to be engaged, which was equivalent to victory. The signal of their gallant leader was hailed with transport by all the British ships, to which he communicated by telegraph, that the principal object of attack would be the French admiral and his seconds. At three-quarters past nine, he directed the ships to take stations for their mutual support, and engage the enemy as they got up; and a few minutes afterwards, he made the signal for them to engage as closely as possible.

"Just before the action began," says an officer of the *Superb*, "Captain Keates suspended to the mizen-stay a portrait of our beloved hero, Nelson. There it remained unhurt, but was completely covered, as was Captain Keates himself, with the blood and brains of poor Brookbank, one of our boatswain's mates. Two or three minutes before the work of death began, officers hats off on the quarter-deck, our band played '*God save the King*,' then came, '*Off she goes*,' and next '*Nelson of the Nile*.' Never was enthusiasm greater than ours, and to it we went with heart and hand."

Soon after ten o'clock, the *Superb*, of 74 guns, closed on the bow of the leading ship *l'Alexandre*, of 84 guns, and commenced the action. The enemy had brought that ship and *l'Imperiale*, of 120 guns, together, seemingly with a view to quiet the fire of the English admiral, in the *Superb*, before any of the other ships could come up; but in this they were disappointed, for the second broadside from the *Superb* did such execution on board *l'Alexandre*, that she became quite unmanageable, and lost her station. *l'Imperiale* was by this time within pistol-shot of the *Superb*, and apparently reserving her fire for the latter; but, in this critical moment, Admiral Cochrane, in the *Northumberland*, came up, and notwithstanding the small distance between the *Superb* and *l'Imperiale*, he gallantly placed her between them, and received the whole broadside of the largest, and what was esteemed the finest ship in the French navy. Several of the shot passed quite through the *Northumberland* into the *Superb*. In the meantime, the *Superb*, having given a very severe dressing to *l'Alexandre*, compelled her to sheer off, and went to the assistance of the *Northumberland*, which had at one time the fire of three French ships upon her for nearly forty minutes. The movements of *l'Alexandre* having thrown her among the lee division, Rear-Admiral Louis, in the *Canopus*, of 84 guns, availed himself of that circumstance, and the rest of the British ships coming up, the action became general. Nothing could exceed the coolness and high state of discipline of our brave seamen and marines; for though the enemy kept up an incessant fire upon them, while coming into action, yet not a gun was returned till close aboard, when they opened in a style truly grand and terrific. The enemy fought with great obstinacy for an

hour and a half, when the French admiral, much shattered, and completely beaten, hauled direct for the land, and not being a mile off, at twenty minutes before noon, ran on shore, having nothing but the foremast standing, and that too fell immediately she struck the ground. The *Superb*, being only in seventeen fathoms water, was obliged to haul off to avoid the same misfortune; but not long afterwards, the *Diomedé* pushed on shore, near the admiral, and all her masts went by the board. About noon, the firing ceased, and when the smoke cleared away, *Le Brave*, bearing a commodore's pendant, *l'Alexandre*, and *Le Jupiter*, were in the possession of the English. The *Atlas* now approached *l'Imperiale*, tried to anchor, but the water was too deep, and she was preparing to give the enemy a double-shotted broadside, when the colours were lowered in token of submission. As that ship and the *Diomedé* could not be got off, they were burned two days after the action, by the command of Admiral Duckworth.

The loss of the conquerors amounted to 74 killed, and 254 wounded; and among the former there was not a single officer. The three French ships which fell into the hands of the English, had 760 killed and wounded. The loss of the other two could not be correctly ascertained, but certainly was not less than as many more.

"When I contemplate," says the brave Duckworth, in his official account of this victory, "on the result of this action, when five sail of the line had surrendered, or were apparently destroyed, in less than two hours, I cannot, though bound to pay every tribute to the noble and gallant efforts of the Hon. Rear-Admiral Cochrane, Rear-Admiral Louis, the captains, officers, seamen, and royal marines, under my command, be vain enough to suppose, that without the aiding hand of Providence, such result could have been effected, and with a loss so comparatively small; and though I shall ever sympathise with the connexions of those that fell, the reflection on the cause will, I hope, afford much consolation. To speak individually on the conduct of any one, would be injurious to all for all were equally animated with the same zealous ardour in support of their king and country. Yet, possessed of these feelings, I cannot be silent without injustice to the firm and manly support for which I was indebted to Captain Keates, and the effect that the system of discipline and good order in which I found the *Superb* must ever produce; and the pre-eminence of British seamen could never be more conspicuous than in this contest."

The subjoined curious anecdote of the behaviour of a true English game-cock, during this engagement, is related on the authority of an officer, who belonged to the *Superb*. "On the poop-deck of that ship was a large wooden fabric, forming an oblong hollow square, and so constructed, that the upper apartments served for marine arms, and the lower for poultry; now it happened, in the very hottest of the action, whilst we were closely engaged with the three-decker (*l'Imperiale*), that a 42-pounder double-headed shot broke through this useful compound structure, destroying no less than 27 stand of arms, as it afterwards appeared, and making terrible havoc among the feathered race; splinters, bayonets, broken muskets, &c. prevailed in all directions. When, lo! from the midst of this confusion worse confounded, up sprang this gallant cock, till then 'unknown to Fame,' and perched on the spanker-boom, crowing exultingly. Another shot cutting the boom in two, close at his feet, now drove him from his post. Indignantly retreating a few paces aft on the broken poop, again he fixed his stand; and thence, ever and anon was heard his clarion voice to sound amid the 'din of war.' This appears strange, you will say, and yet it is not altogether singular—a circumstance, nearly similar, I have heard, took place in the *Marlborough*, on the memorable first of June, 1794: I say nearly similar, because in that instance the bold bird was *sounded* though not *safe*; whereas our little hero was found, on examination, to have received many severe contusions, and to have lost an eye, ere he extricated himself from the melancholy ruins of his house, and the sad wreck of his mangled messmates. Hardly had the battle ceased, when some of the brave men whose dangers he had thus shared, introduced him to our notice, with an earnest request to save him from the dire hand of our poulterer. Soon

we saw him caressed by all, and decorated with rings and ribbons. Never is he to die the death so common to his kind—and this he seems to know; for so perfectly tame is he become, that he will perch and crow on one's arm, feed from the hand, and even admit, without fear, of being fondled like the gentlest lap-dog."

After the action, the water being too deep to anchor in the bay of St. Domingo, it was requisite to bring to, with the prizes, to repair damages, put the ships in a manageable state, and shift the prisoners, which took till the afternoon of the 7th; when the admiral detached the Hon. Captain Stopford, in the Spencer, with the Donagel and Atlas, which latter had lost her bowsprit, with the prizes, to Jamaica.

The Northumberland, having been fitted with a jury mainmast, Admiral Cochrane returned to his command on the windward Island station, accompanied by the Agamemnon; and Admiral Duckworth himself proceeded to Jamaica, with the Canopus, Acosta, and Magicienne. The prizes, after being repaired, were sent to England, but *Le Brave* had suffered so severely in the engagement, that she foundered on her passage. The crew, who had been three days and three nights at the pumps, were all saved except three. In commemoration of this ship, however, her name was given to the *Formidable*, captured in November, 1805, by Sir Richard John Strachan.

The thanks of both houses of parliament were voted to the officers and men engaged in this glorious scene. A pension of £2000 per annum was voted to Vice-Admiral Sir J. T. Duckworth, and the order of the Bath was conferred on Rear-Admirals Louis and Cochrane. The committee of the Patriotic Fund resolved to present a vase of the value of four hundred pounds, ornamented with emblematical devices and an appropriate inscription, to the former; vases of the value of three hundred pounds each, with appropriate inscriptions, to the two latter. A sword of the value of one hundred pounds, or a vase of the same value, to each of the captains and commanders; the sum of one hundred pounds to each of the lieutenants of his Majesty's navy, captains of Royal Marines, and other officers, in the second class of his Majesty's proclamation for the distribution of prize-money, who were severely wounded; and the sum of fifty pounds to each officer of the same rank slightly wounded; the sum of fifty pounds to each of the officers in the third class, severely wounded; and the sum of forty pounds to each of the officers in the fourth class, severely wounded; and the sum of twenty-five pounds to each officer of the same rank, slightly wounded; the sum of forty pounds to every seaman or marine, whose wounds may be attended with disability or loss of a limb; the sum of twenty pounds to each seaman or marine severely wounded; and the sum of ten pounds to each seaman or marine slightly wounded; and that relief should be afforded to the widows, orphans, parents, and relatives depending for support on the officers, petty-officers, seamen, and marines, who fell in the engagement, as soon as their respective situations should be made known to the committee.

RESCUE OF THE GALLEY SLAVES.

ONCE more the *Aurora* sailed away from the high-crowned rocks of Vallette, and with a fine breeze dashed through the deep blue waves.

But towards the evening the breeze increased, and they were under double reefed top-sails. On the second day they made the coast of Sicily, not far from where Easy and Gascoigne had been driven on shore; the weather was then more moderate, and the sea had, to a great degree, subsided. They therefore stood in close to the coast, as they had not a leading wind to Palermo. As they stood in, the glasses, as usual, were directed to the land; observing the villas with which the hills and valleys were studded, with their white fronts embowered in orange groves.

"What is that, Gascoigne," said Easy, "under that precipice?—it looks like a vessel."

Gascoigne turned his glass in the direction—"Yes, it is a vessel on the rocks: by her prow she looks like a galley."

"It is a galley, sir—one of the row galleys—I can make out her bank of oars," observed the signal man.

This was reported to Captain Wilson, who also examined her.

"She is on the rocks, certainly," observed he; "and I think I see people on board. Keep her away a point, quarter-master."

The *Aurora* was now steered right for the vessel, and in the course of an hour was not more than a mile from her. Their suppositions were correct; it was one of the Sicilian government galleys bilged on the rocks, and they now perceived that there were people on board of her, making signals with their shirts and pieces of linen.

"They must be the galley-slaves; for I perceive that they do not one of them change their positions; the galley must have been abandoned by the officers and seamen, and the slaves left to perish."

"That's very hard," observed Jack to Gascoigne; "they were condemned to the galleys, but not to death."

"They will not have much mercy from the waves," replied Gascoigne; "they will all be in kingdom come to-morrow morning, if the breeze comes more on the land. We have already come up two points this afternoon."

Although Captain Wilson did not join in this conversation, which he overheard as he stood on the forecaste gun, with his glass over the hammocks, it appears he was of the same opinion; but he demurred: he had to choose between allowing so many of his fellow-creatures to perish miserably, or to let loose upon society a set of miscreants who would again enter a course of crime until they were re-captured. The *Aurora* was hove-to in stays, and the two cutters ordered to be lowered down, and the boat's crew to be well armed.

"Mr. Easy, do you take one cutter, and the armourers; pull on board of the galley, release those people, and land them in small divisions. Mr. Gascoigne, you will take the other to assist Mr. Easy, and when he lands them in his boat, you will pull by his side ready to act, in case of any hostile attempt on the part of the scoundrels; for we must not expect gratitude: of course, land them at the nearest safe spot for debarkation."

In pursuance of these orders, our two midshipmen pulled away to the vessel. They found her fixed hard upon the rocks, which had pierced her slight timbers, and, as they had supposed, the respectable part of the crew, with the commander, had taken to the boats, leaving the galley-slaves to their fate. She pulled fifty oars, but had only thirty-six manned. These oars were forty feet long, and ran in from the thole-pin with a loom six feet long, each manned by four slaves, who were chained to their seat before it by a running chain made fast by a padlock in amidships. A plank, of two feet wide, ran fore and aft the vessel between the two banks of oars, for the boatswain to apply the lash to those who did not sufficiently exert themselves.

"Viva los Inglesos," cried the galley-slaves, as Easy climbed up over the quarter of the vessel.

"I say, Ned, did you ever see such a precious set of villains?" observed Easy, as he surveyed the faces of the men who were chained.

"Well, I suppose we must obey orders; but it goes against my conscience to save such villainous looking rascals. Armourer, hammer away."

The armourer, who, with the seamen, appeared very much of Jack's opinion, and had not commenced his work, now struck off the padlocks, one by one, with his sledge-hammer. As soon as they were released the slaves were ordered into the cutter, and when it was sufficiently loaded Jack shoved off, followed by Gascoigne as guard, and landed them at the point about a cable's length distant. It required six trips before they were all landed: the last cargo were on shore, and Easy was desiring the men to shove off, when one of the galleriens turned round, and cried out to Jack in a mocking tone, "Adio, signor, a reverer la." Jack started, stared, and, in the squallid, naked wretch who addressed him, he recognised Don Silvio, who had been sentenced to the galleys for attacking Jack's friend Don Rebiera.

"I will acquaint Don Rebiera of your arrival, signor," said the miscreant, at the same time springing up the rocks and mix-

ing with the rest, who now commenced hooting and laughing at their preservers.

"Ned," observed Easy to Gascoigne, "we have let that rascal loose."

"More's the pity," replied Gascoigne; "but we have only obeyed orders."

Jack returned on board, and reported what he had done; also that Don Silvio was among those liberated; and he ventured to mention his fears of what might take place from their contiguity to the house of Don Reberia. Captain Wilson bit his lips; he felt that his philanthropy had induced him to act without his usual prudence.

The wind had veered round, and the Aurora was now able to lay up clear of the island of Maritimo. The next morning she anchored in Palermo Roads—gave immediate notice to the authorities, who, wishing Captain Wilson's philanthropy at the devil, immediately despatched a large body of troops in quest of the liberated malefactors. Captain Wilson, feeling for Jack's anxiety about his friends, gave him and Gascoigne permission to go on shore.

"Will you allow me to take Mesty with me, sir, if you please?" said Jack.

"Yes, Mr. Easy, but recollect that even with your favourite, Mesty, you are no match for one hundred and fifty men, so be prudent. I send you to relieve your anxiety, not to run into danger."

In half-an-hour our two midshipmen, with Mesty, had landed and proceeded to the inn where they had put up before: they were armed up to the teeth. Their first inquiries were for Don Philip and his brother.

"Both on leave of absence," replied the landlord, "and staying with Don Reberia."

"That's some comfort," thought Jack. "Now we must get horses as fast as we can. Mesty, can you ride?"

"By all de power, can I ride, Massa Easy: suppose you ride Kentucky horse, you ride any ting."

In half-an-hour four horses and a guide were procured, and at eight o'clock in the morning, the party set off in the direction of Don Reberia's country seat.

They had not ridden more than six miles when they came up with one of the detachments sent out in pursuit of the liberated criminals. Our hero recognised the commanding officer as an old acquaintance, and imparting to him the release of Don Silvio, and his fears upon Don Reberia's account begged him to direct his attention that way.

"Corpo de Bacco—you are right, Signor Mid," replied the officer. "But Don Philip is there, and his brother too, I believe. I will be there by ten o'clock to-morrow morning; we will march almost the whole night."

"They have no arms," observed Easy.

"No, but they will soon get them: they will go to some small town in a body, plunder it, and then seek the protection of the mountains. Your captain has given us a pretty job."

Jack exchanged a few more words, and then excusing himself on account of his haste, put the spurs to his horse and regained his own party, who now proceeded at a rapid pace.

"O Signor!" said the guide, "we shall kill the horses."

"I'll pay for them," said Jack.

"Yes, but we shall kill them before we get there, Jack," replied Gascoigne, "and have to walk the rest of the way."

"Very true, Ned; let's pull up and give them their wind."

"By de holy poker, Massa Easy, but my shirt stick to my ribs," cried Mesty, whose black face was hung with dew-drops from their rapid course.

"Never mind, Mesty."

It was about five o'clock in the afternoon when they arrived at the seat of Don Reberia. Jack threw himself off his jaded steed and hastened into the house, followed by Gascoigne. They found the whole family collected in the large sitting-room, quite ignorant of any danger threatening them, and equally astonished and pleased at the arrival of their old friends. After a few minutes dedicated to mutual inquiries, our hero stated the cause of their expeditious arrival.

"Don Silvio with one hundred and fifty Gallereans, let loose on the coast yesterday afternoon!" exclaimed Don Reberia;

"you are right, I only wonder that they were not here last night. But I expect Pedro from the town; he has gone down with a load of wine: he will bring us intelligence."

"At all events, we must be prepared," said Don Philip, "the troops, you say, will be here to-morrow morning."

"Holy Virgin!" exclaimed the ladies in a breath.

"How many can we muster?" said Gascoigne.

"We have five men here, or we shall have by the evening," replied Don Philip; "all, I think, good men, my father, my brother, and myself." "We are three, four with the guide, whom I know nothing about."

"Twelve in all, not one too many; but I think now we are prepared, if they attack, we can hold out till the morning."

"Had we not better send the ladies away?" said Jack.

"Who is to escort them?" replied Don Philip; "we shall only weaken our force: besides, they may fall into the miscreants' hands."

"Shall we all leave the house together? they can but plunder it," observed Don Reberia.

"Still we may be intercepted by them, and our whole force will be nothing against so many," observed Don Philip, "if we are without defence: whereas in the house we shall have an advantage."

"E' vero," replied Don Reberia thoughtfully; "then let us prepare; for depend upon it Don Silvio will not lose such an opportunity to wreak his vengeance. He will be here to-night: I only wonder he has not been here with his companions before. However, Pedro will arrive in two hours."

At this moment the conversation was interrupted by the sudden entrance of Pedro, who had been despatched to the town with the load of wine. He rushed in flurried and heated, with his red cap in his hand.

"How now, Pedro, back so early?"

"O signor!" exclaimed the man—"they have taken the cart and the wine, and have drawn it away up to the mountains."

"Who?" inquired Don Reberia.

"The galley-slaves who have been let loose; and by the body of our blessed saint, they have done pretty mischief—they have broken into the houses, robbed everything—murdered many—clothed themselves with the best—collected all the arms, provisions, and wine they could lay their hands on, and have marched away into the mountains. This took place last night. As I was coming down within a mile of the town, they met me with my loaded cart, and they turned the bullocks round, and drove them away along with the rest. By the blessed Virgin! but they are stained with blood, but not altogether of men, for they have cut up some of the oxen. I heard this from one of the herdsmen, but he too fled, and could not tell me more. But, signor, I heard them mention your name."

"I have no doubt of it," replied Don Reberia. "As for the wine, I only hope they will drink too much of it to-night. But, Pedro, they will be here, and we must defend ourselves—so call the men together, I must speak to them."

"We shall never see the bullocks again," observed Pedro, mournfully.

"No: but we shall never see one another again, if we do not take care. I have information they come here to-night."

"Holy Saint Francis! and they say there are a thousand of them."

"Not quite so many, to my knowledge," observed Jack.

"They told me, that a great many were killed in their attack upon the town, before they mastered it."

"So much the better. Go now, Pedro, drink a cup of wine, and then call the other men."

The house was barricaded as well as circumstances would permit; the first story was also made a fortress by loading the landing-place with armoires and chests of drawers. The upper story, or attic, if it might be so called, was defended in the same way, that they might retreat from one to the other, if the doors were forced.

It was eight o'clock in the evening before all was ready, and they were still occupied with the last defence, under the superintendence of Mesty, who showed himself an able engineer, when they heard the sound of an approaching multitude. They

looked out of one of the windows, and perceived the house surrounded by the galley-slaves, in number, apparently about a hundred. They were all dressed in a most fantastic manner, with whatever they could pick up: some had fire-arms, but the most of them were supplied only with swords or knives. With them came also their cortège of plunder: carts of various descriptions, loaded with provisions of all sorts, and wine; women lashed down with ropes, sails from the vessels and boats to supply them with covering in the mountains, hay, and straw, and mattresses. Their plunder appeared to be well chosen for their exigencies. To the carts were tied a variety of cattle, intended to accompany them to their retreat. They all appeared to be under a leader who was issuing directions—that leader was soon recognised by those in the house to be Don Silvio.

"Massa Easy, you show me dat man?" said Mesty, when he heard the conversation between Easy and Rebiera; "only let me know him."

"Do you see him there, Mesty, walking down in front of those men; he has a musket in his hand, a jacket with silver buttons, and white trousers."

"Yes, Massa Easy, me see him well—let me look little more—dat enough."

The galley-slaves appeared to be very anxious to surround the house, that no one should escape, and Don Silvio was arranging the men.

"Ned," said Jack, "Let us show him that we are here. He said that he would acquaint Don Rebiera with our arrival; let us prove to him that he is too late."

"It would not be a bad plan," replied Gascoigne; "if it were possible that these fellows had any gratitude among them, some of them might relent at the idea of attacking those who saved them."

"Not a bit; but it prove to them, that there are more in the house than they think for, and we can frighten some of them by telling them that the soldiers are near at hand."

Jack immediately threw up the casement, and called out in a loud voice, "Don Silvio! Galley-slave! Don Silvio!"

The party hailed, turned round, and beheld Jack, Gascoigne, and Mesty, standing at the window, of the upper floor.

"We have saved you the trouble of announcing us; we are here to receive you," called out Gascoigne.

"And in three hours, the troops will be here, so you must be quick, Don Silvio," continued Jack.

The window was then immediately closed. The appearance of our heroes, and the communication of a speedy arrival of the troops, was not without its effect. The criminals trembled at the idea; Don Silvio was mad with rage—he pointed out to the men the necessity of immediate attack, the improbability of the troops arriving so soon, and the wealth which he expected was locked up by Don Rebiera in his mansion. This rallied them, and they advanced to the doors, which they attempted to force without success, losing several men by the fire from those within the house. Finding their efforts, after repeated attempts, to be useless, they retreated, and then bringing up a long piece of timber, which required sixty men to carry it, they ran with it against the door, when the weight of the timber drove it off its hinges, and an entrance was obtained; by this time it was dark, the lower story had been abandoned, but the barricade at the head of the stairs opposed their progress. Convenient loop-holes had been prepared by the defendants, who now opened a smart fire upon the assailants, the latter having no means of returning it effectually had they had ammunition for their muskets, which fortunately they had not been able to procure. The combat now became fierce, and the galley-slaves were several times repulsed with great loss during a contest of two hours; but encouraged by Don Silvio, and refreshed by repeated draughts of wine, they continued by degrees removing the barriers opposed to them.

"We shall have to retreat!" exclaimed Don Ribiera; "very soon they will have torn down all. What do you think, Signor Easy?"

"Hold this as long as we can. How are we off for ammunition?"

"Plenty as yet; plenty to last for six hours, I think."

"What do you say, Mesty?"

"By holy St. Patrig, I say hold out here; they got no fire-arms and we ab um at arm-length."

This decision was the occasion of the first defence being held for two hours more. At last, it was evident that the barricade was no longer tenable, for the heavy pieces of furniture they had heaped up to oppose entrance were completely hammered to fragments. The retreat was sounded; they all hastened to the other story where the ladies were already placed, and the galley-slaves were soon in possession of the first-floor; exasperated by the defence, mad with wine and victory, but finding nothing.

Again was the attack made upon the second landing, but, as the stairs were now narrower, and their defences stronger in proportion, they for a long while, gained no advantage. On the contrary, many of their men were wounded and taken down below.

The darkness of the night prevented both parties from seeing distinctly, which was rather in favour of the assailants. Many climbed over the fortress of piled-up furniture, and were killed as soon as they appeared on the other side, and at last, the only ammunition used was against those who made this rash attempt. For four long hours did this assault continue, until daylight came, and then the plan of assault was altered: they again brought up the poles, hammered the pieces of furniture into fragments, and gained ground. The defendants were worn out with fatigue, but flinched not; they knew that their lives, and the lives of those dearest to them, were at stake, and they never relaxed their exertions; still the criminals, with Silvio at their head, progressed; the distance between the parties gradually decreased, and there was but one massive chest of drawers now defending the landing-place, and over which there was a constant succession of blows from long poles and cutlasses, returned with bullets from their pistols.

"We must now fight for our lives," exclaimed Gascoigne to Easy, "for what else can we do?"

"Do—get on the roof and fight there," replied Jack.

"By-the-bye that's well thought of, Jack. Mesty, up and see if there is any place we can retreat to in case of need," said Gascoigne.

Mesty hastened to obey, and soon returned with a report that there was a trap-door leading into the loft under the roof, and that they could draw the ladder up after them.

"Then we may laugh at them," cried Jack. "Mesty, stay here, while I and Gascoigne assist the ladies up," explaining to the Rebieras and to their domestics why they went.

"We must retreat, Jack," said Gascoigne, "the stones can do no harm, where we are going to. What think you, Don Philip?"

"I agree with you; let those who are wounded be first carried up, and then we will follow."

This was effected, and as soon as the wounded men were carried up the ladder, and the arms taken up to prevent their falling into the hands of the assailants, for they were now of little use to them, the ammunition being exhausted, the whole body went into the large room which contained the trap-door of the loft, and, as soon as they were up, they drew the ladder after them. They had hardly effected this, when they were followed with the yells and shouting of the galley-slaves who had passed the last barriers, and thought themselves sure of their prey: but they were disappointed, they found them more secure than ever.

Nothing could exceed the rage of Don Silvio at the protracted resistance of the party, and the security of their retreat. To get at them was impossible, so he determined to set fire to the room, and suffocate them, if he could do no otherwise. He gave his directions to his men, who rushed down for straw, but in so doing, he carelessly passed under the trap-door, and Mesty, who had carried up with him two or three of the stones, dashed one down on the head of Don Silvio, who fell immediately: He was carried away, but his orders were put in execution; the room was filled with straw and fodder, and lighted. The effects were soon felt; the trap-door had been shut, but the heat and smoke burst through; after a time, the planks and

rafters took fire, and their situation was terrible. A small trap-window in the roof, on the side of the house was knocked open, and gave them a temporary relief; but now the rafters burned and cracked, and the smoke burst on them in thick columns. They could not see, and with difficulty could breathe. Fortunately the room below that which had been fired was but one out of four on the attics, and, as the loft they were in spread over the whole of the roof, they were able to remove far from it.

Summoned by Mesty, Jack and Gascoigne put their shoulders to one of the lower slates; it yielded, was disengaged, and slid down with a loud rattling below. In a few minutes they were all with their head in the open air, but still the house was on fire below, and they had no chance of escape. They now beheld the detachment of troops making up; a loud cheer was given, and attracted the notice of the soldiers, and in five minutes the troops had possession of the house.

"You quite sure, Massa Easy, that all galley-rascals below gone?" asked Mesty.

"Yes," replied Easy, "you may see that; look at them bound there."

"Den, sar, I tink it high time we go too," said an old sailor.

"So do I, Mesty; but how?"

"Come help me, Massa Easy; dis board is loose, come help all of you."

They all went and pulled up the board. In a few minutes they had beaten an opening into one of the rooms below not on fire, and Mesty having fetched the ladder, they all descended in safety, and to the astonishment of the commander of the troops, walked out at the door of the house.—*Midshipman Easy.*

FIRE AND WATER.

"Come, spin us a good yarn, fathery; we've nothing to do, and Jacob will like to hear you."

"Well, then, so I will," answered he; "what shall it be about?"

"Fire and water, of course," replied Tom.

"Well, then, I'll tell you something about both, since you wish it; how I came into his majesty's service through fire, and how the officer who pressed me went out of it through water. I was still 'prentice, and wanted about three months to serve my time, when, of course, I should no longer be protected from serving the king, when the ship I was in sailed up the Baltic with a cargo of bullocks. We had at least two hundred on board, tied up on platforms on every deck, with their heads close to the sides, and all their sterns looking in board. They were fat enough when they were shipped, but soon dwindled away; the weather was very bad, and the poor creatures rolled against each other and slipped about in a way that it pited you to see them. However, they were stowed so thick, that they held one another up, which proved of service to them in the heavy gales which tossed the ship about like a pea in a rattle. We had joined a large convoy, and were entering the Sound, when, as usual, it fell calm, and out came the Danish gun-boats to attack us. The men-of-war who had the charge of the convoy behaved nobly; but still they were becalmed, and many of us were a long way astern. Our ship was pretty well up, but she was too far in shore; and the Danes made a dash at us with the hope of making a capture. The men-of-war seeing what the enemy were about, sent boats to beat them off; but it was too late to prevent them boarding, which they did. Not wishing to peep through the bars of the gaol at Copenhagen, we left the ship in our boats on one side, just as the Danes boarded on the other, and pulled towards the men-of-war's armed boats coming to our assistance. The men-of-war's boats pulled right for the ship to retake her, which they did certainly, but not before the enemy had set fire to the vessel, and had then pulled off towards another. Seeing this, the men-of-war's boats again gave chase to the Danes, leaving us to extinguish the flames, which were now bursting out fore and aft, and climbing like fiery serpents up to the main catheads. We soon found that

it was impossible: we remained as long as the heat and smoke would permit us, and then we were obliged to be off; but I shall never forget the roaring and moaning of the poor animals who were then roasting alive. It was a cruel thing of the Danes to fire a vessel full of these poor creatures. Some had broken loose, and were darting up and down the decks goring others, and tumbling down the hatchways: others remained trembling, or trying to snuff up a mouthful of fresh air amongst the smoke; but the struggling and bellowing, as the fire caught the vessel fore and aft, and was grilling two hundred poor creatures at once, was at last shocking, and might have been heard for a mile. We did all we could. I cut the throats of a dozen, but they kicked and struggled so much, falling down upon, and treading you under their feet; and once one laid upon me, and I expected to be burnt with them, for it was not until I was helped that I got clear of the poor animal. So we stayed as long as we could, and then left them to their fate; and the smell of burnt meat, as we shoved off, was as horrible as the cries and wailings of the poor beasts themselves. The men-of-war's boats returned, having chased away the Danes, and very kindly offered us all a ship, as we had lost our own, so that you see that by fire I was forced into his Majesty's service.

"Now, the boat which took us, belonged to one of the frigates who had charge of the convoy, and the lieutenant who commanded the boat was a swearing, tearing sort of a chap, who lived as if his life was to last for ever. After I was taken on board, the captain asked me if I would enter, and I thought that I might as well serve the king handsomely, so I volunteered. It's always the best thing to do, when you're taken, and can't help yourself, for you are more trusted than a pressed man, who is obstinate. I liked the service from the first—the captain was not a particular man; according to some people's idea of the service, she wasn't quite in man-of-war fashion; but she was a happy ship, and the men would have followed and fought for the captain to the last drop of their blood. That's the sort of ship for me. I've seen cleaner decks, but I never saw merrier hearts. The only one of the officers disliked by the men was the lieutenant who pressed me: he had a foul mouth, and no discretion; and as for swearing, it was really terrible to hear the words which came out of his mouth. I don't mind an oath rapped out in the heat of the moment, but he invented his oaths when he was cool, and let them out in his rage. We were returning home, after having seen the convoy safe, when we met with a gale of wind in our teeth, one of the very worst I ever fell in with. It had been blowing hard from the S.W., and then shifted to the N.W., and made a cross sea, which was tremendous. Now, the frigate was a very old vessel; and although they had her into dock and repaired her below, they had taken no notice of her upper works, which were as rotten as a medlar. I think it was about three bells in the middle watch, when the wind was howling through the rigging, for we had no canvass on her except a staysail and trysail, when the staysail-sheet went, and she broached-to afore they could prevent her. The lieutenant I spoke of had the watch, and his voice was heard through the roaring of the wind, swearing at the men to haul down the staysail, that we might bend on the sheet, and set it right again; when, she having, as I said, broached-to, a wave, ay, a wave as high as the maintop almost; took the frigate right on her broadside, and the bulwarks of the quarter-deck being, as I said, quite rotten, cut them off clean level with the main-chains, sweeping them, and guns, and men, all overboard together. The mizen-mast went, but the main-mast held on, and I was under its lee at the time, and was saved by clinging on like a nigger, while for minute I was under the water, which carried almost all away with it to leeward. As soon as the water passed over me, I looked up and around me—it was quite awful; the quarter-deck was cut off as with a knife, not a soul left there, that I could see; no man at the wheel—mizenmasts gone—skylights washed away—waves making a clear breach, and no defence; boats washed away from the quarters—all silent on deck, but plenty of noise below and on the main-deck, for the ship was nearly full of water, and all below were hurrying up in their shirts, thinking that we were going down. At last the captain crawled up, and clung by the stanchions, followed by the first lieutenant and the

officers, and by degrees all was quiet, the ship was cleared, and the hands were turned up to muster, under the half-deck. There were forty-seven men who did not answer to their names—they had been summoned to answer for their lives, poor fellows! and there was also the swearing lieutenant not to be found. Well, at last we got the hands on deck, and put her before the wind, scudding under bare poles. As we went aft to the taffrail, the bulwark of which still remained, with about six feet of the quarter-deck bulwark on each side, we observed something clinging to the stern ladder, dipping every now and then into the sea, as it rose under her counter, and assisted the wind in driving her before the gale. We soon made it out to be a man, and I went down, slipped a bowline knot over the poor fellow, and with some difficulty we were both hauled up again. It proved to be the lieutenant, who had been washed under the counter, and clung to the stern ladder, and had thus miraculously been preserved. It was a long while before he came to, and he never did any duty the whole week we were out, till we got into Yarmouth Roads; indeed, he hardly ever spoke a word to any one, but seemed to be always in serious thought. When we arrived, he gave his commission to the captain, and went on shore; went to school again, they say, and bore up for a parson, and for all I know, he'll preach somewhere next Sunday. So you see, water drove him out of the service, and fire forced me in. There's a yarn for you, Jacob."

"I like it very much," replied I.

JACOB FAITHFUL.

CONGREVE ROCKETS.

ONE of the most formidable engines of destruction which any vessel, particularly a steamer, can make use of, is the congreve rocket, a most terrible weapon when judiciously applied, especially, where there are combustible materials to act upon. The very first rocket fired from the *Nemesis* was seen to enter the large junk against which it was directed, near that of the admiral, and almost the instant afterwards it blew up with a terrific explosion, launching into eternity every soul on board, and pouring forth its blaze like the mighty rush of fire from a volcano. The instantaneous destruction of the huge body seemed appalling to both sides engaged. The smoke, and flame, and thunder of the explosion, with the broken fragments falling round, and even portions of dismembered bodies scattered as they fell, were enough to strike with awe, if not with fear, the stoutest heart that looked upon it.

AN ADVENTURE AT SEA.

A FRAGMENT.

THE mate had been looking out with a spyglass, and observed a sail to windward.

"Jump aloft, one of you who has good eyes, and tell me what you make out of that craft with the suspicious rake in her masts, on our weather bow!"

"Ay, ay, sir!" they again sung out, in full chorus; and away several scampered up the shrouds, pell-mell. Among the rest, was perceived the slight figure of the lad, who ascended with remarkable agility, and left the others far behind. The mate could scarcely credit what he saw, and gazed aloft in amazement.

"Maintop-gallant, there!" hailed the mate.

"Ay, ay, sir!" replied Isaac, in as gruff a voice as he could muster for the occasion.

"What sort of craft is that to windward,—and how is she standing?"

"It is a small black schooner, all legs and arms," replied Mr. Maintopgallant! "and she is bearing down for us under a press of sail! Now she runs up a flag, which you can make out from the deck with the glass; and by the flash and the smoke she makes, she has just fired a gun!"

Presently, a dull, heavy report came booming on the breeze, and a thundering sound echoed against the side of the ship. The glass was bent upon the approaching schooner, whose hull had not yet entirely risen out of the water. Her flag was found to be French.

"Steward—call the captain!" cried the mate, in alarm: "forward, there;—call all hands on deck—stand by to put the ship about."

"Ay, ay, sir," echoed along the deck, and every sailor stood ready at his post for prompt action.

Seth and Jethro, now appeared on deck, wondering not a little at the uncommon stir on board, and surprised to find every man ready, whenever the word should be given to put the ship on a new direction.

"What does all this mean, mate?" demanded the captain; "why wouldst thou change the course of the ship?"

"I did not intend to do so without your concurrence," replied the mate; "but I thought it best to have everything ready for prompt manœuvring. We have a suspicious looking sail on our weather bow, and she shows French colours. By the rake of her masts, I should not be surprised to find her a clipper, with a long-tom amidships; for she has given us a gun already."

"Rather a dangerous neighbour, for us, surely," said the captain, "especially if she should prove one of those piratical rascals that sometimes cut up our commerce. Keep her away, and see if she follows us," continued he, lowering the point of his glass.

Away went the *Grampus* with a free wind, snorting, as it were like a race horse, and ploughing handsomely through the seas on her altered way.

The Frenchman steered for, and gained gradually and steadily upon the *Grampus*; and the event was most anxiously looked for by all on board. The ship, deeply laden as she was with oil, was of great value, and, as Seth thought, eminently worth preserving. But the Frenchmen were determined she should change owners,—for they managed their little craft with great skill, and altered their course in chase, whenever Macy changed his. The breeze was brisk, and suited the schooner to a crack; while the laden ship, though the fleetest of her class could not show her heels to advantage, without a stronger wind. Macy tried his vessel upon every tack—but escape was impossible—the wedge-like schooner gained upon him at every turn.

"Now would I give the half of our cargo," said Macy "for a few guns to speak to that saucy little scamp in his own language!" And then turning to Jethro, he said, rather bitterly, "dost thou remember, friend Coffin, what I told thee about the six-pounders, before we left port? I fear thou wilt pay dearly enough for not taking my advice. There comes salute number two!"

A gun at that moment was fired from the Frenchman, across the bow of the *Grampus*; but the shot went wide, and was most probably intended merely as a warning to heave to. Seth paced the deck in great agony of spirit, muttering, as he went, words that sounded very much like "*damnation*," and the like. The sound may have been equivocal to the ear of Jethro, for he forbore to put in his usual caution of "*Swear not at all*," as he was wont to do, whenever Captain Seth used obnoxious words.

The *Grampus* was now kept off two or three points, and a foretopmast-studdingsail was about being set; but, in the hurry of the moment, by some mishap, the tack got unrove. A couple of hands were ordered aloft to rig in the boom, and reeve the tack anew. In an instant, little Isaac, who had heard the order, put the end of the rope between his teeth, ran up the fore-shrouds, crept out on the top of the fore-yard like a monkey, and then out upon the bare boom. But, before he had accomplished his task, the Frenchmen brought their long-tom, charged with small shot, to bear upon the yard, and let drive at Isaac; thinking, probably that his labour might be the means of enabling the *Grampus* to escape. The little fellow was not disconcerted by this terrible salute, although the balls whistled like hail around him. He fearlessly and deliberately went on with his work.

"They are again charging the gun!" shouted English Bill.

"Come down, my boy!—Creep in! Creep in! Seize one of the halliards, and let yourself down with a run!"

"Ay, ay," cried Isaac, as he finished reeving the tack. He then quickly gathered a few fathoms in his hand, threw the coil down upon the forecabin, and the sail was immediately hoisted. The long-tom was again elevated, and the gunner was in the act of applying the match; but Isaac stopped not for the additional peppering:—

"The cords ran swiftly through his glowing hands,
And quick as lightning on the deck he stands!"

"Ha!—my little younker!—my eyes, but you are a brave 'un—You'll be an admiral yet—d'ye see!" exclaimed English Bill, as he joyfully hugged the stripling in his brawny arms.

The prediction of Bill rang in the ears of Isaac for many a year afterwards. It was like the prophetic sound of the bells to the hearing of Whittington:—

"Turn again, Whittington—
Lord Mayor of great London."

The hasty strides of Seth were again arrested by another shot which passed through the sail over his head. He folded his arms—looked up at the rent sail—and drew up his form, as if some new purpose had taken possession of his despairing mind.

"By Heaven!" said he, "I will not part with so fine a ship and cargo, without a deadly struggle!"

"Swear not!" said Jethro; "it will not help us in our strait. We had better yield quietly to the necessity. Put down thy helm, Seth, and bring the ship to."

"Yield quietly!—didst thou say?—and did I understand thee aright, when thou bid me to bring the ship to?" The eyes of Seth glared wildly upon Jethro, and his nostrils distended like those of an infuriated wild bull at bay. "Put down the helm, indeed! Pray, neighbour Jethro, who is the commander of the Grampus—thou or I?" demanded Seth, in high dudgeon. But he evidently availed himself of the first pretext to let off his anger, for he was waxing exceedingly wroth.

Jethro answered calmly,—"Thou, surely, art her captain—and I yield all to thy discretion. Save the ship, if thou canst; but *thou canst not*. We have no means of defence, and, if we had, it would not be justifiable to oppose with arms."

"Jethro! My resolution is taken:—I will save this ship, or sink in her. What! yield to that little gadfly—that gallinipper—that is scarcely larger than our long-boat!"

Another shot, better directed than the other, splintered a piece from the mainmast, and wounded one of the crew.

"There, Jethro! there are some of the tender mercies of the French pirate, and an earnest of what we may all expect, if taken!"

"Yield thee, Seth, yield thee! The longer thou dost delay, so much the more hazard to the lives of the people."

"Thou hadst better go below, Jethro—I must command here. Yield, indeed! the ship shall sink first!" muttered Seth, as Jethro began to descend.

"Stand by there, men!" shouted the captain, in a voice that made every sailor start. It was evident to all that Seth had put off the Quaker, and that prompt obedience was necessary.

"Get the longboat ready to be launched at a moment's warning—clear away the quarter boats—and see all clear to lower them in an instant. Mate, take in all the small sails quickly!"

The manner of Seth was somewhat wild, but resolute and determined; and the men and officers having done his behest, stood wondering what command would next be issued, and whereunto those would tend that had already been executed. The Frenchman was also at fault; for mistaking the manœuvring of Seth for an intention to give up his ship, the schooner was hove to, and seemed to await the lowering of the boat from the quarter of the Grampus—even as the conqueror awaits the approach of an enemy subdued, who comes to yield up his sword. In rounding to, the schooner had given the advantage of the wind to the ship; and while the French crew stood

agape at the management of the larger vessel, which they already looked upon as a prize, Seth seized upon the helm with his brawny hand. The men, scarcely needing the cautioning word, anticipated his intention as he put the helm hard up, and gave his impressive shout in a suppressed and peculiar tone, which was heard distinctly from stem to stern:—

"Let go all the braces and bowlines, slack off sheets and tacks, and square the yards quickly!" This was all done in the twinkling of an eye, and Seth shaped his course as though he would bring his ship under the lee-quarter of the privateer.

After making this demonstration, which was intended to deceive the enemy, her direction was suddenly changed, and her head was brought to bear directly upon the hull of the Frenchman! The crew of the schooner now discovered, but too late, the design of the Grampus; and confusion and dire amazement agitated the people upon her crowded deck. In their haste to remedy their oversight, the Frenchmen failed altogether to avert the threatened disaster.

"If thou dost intend to run her down," said Jethro to Seth, hurriedly, projecting his head for a moment from the cabin gangway, "if—nay, hear me, Seth, for the sake of humanity—if thou art determined to run her down, ease thy helm a little, and give them a chance for their lives."

"Stand by to lower the boats," vociferated Seth, stamping furiously upon the deck. A suppressed groan of horror escaped the crew, as if they now more plainly conceived the design of their captain.

"The boldest held his breath for a time."

The little schooner still lay to, in a trough of a deep sea, her people running backwards and forwards in frightened confusion, while the huge bulk of the Grampus mounted the last high wave that separated the two vessels.

"*Misericorde!*" exclaimed a hundred voices.

A wild scream of despair—heard far above the noise of the element, and the dashing of the ship—burst from the poor doomed Frenchmen.

Down came the Grampus, thundering upon the privateer, and striking her with her plunging bow directly amidships. The frail schooner was cut directly in two by the shock; and her heavy armament, together with the irresistible force of the severing blow, bore both parts of her hull, with all her ill-fated crew of a hundred souls, beneath the wave.

"Down with the boats from the quarter—launch the long-boat," shouted Seth. But the command, though it could not have been uttered nor executed sooner with safety, came too late. The aim of Seth had been too fatally sure. The boats reached the spot, and narrowly escaped being sucked into the vortex where the schooner had gone down. The French crew were all sent to their long account; and the next wave left not a trace of the wreck, nor a solitary human being to be saved from a watery death.

Thy ship and cargo were dearly ransomed, Jethro Coffin: and, 'Seth, thou didst sacrifice a hecatomb of human beings for thy preservation.

EXPERT DIVERS.

MANY nations, and particularly the savages in the South Sea and other islands, are remarkable for the expertness they acquire by habit in diving and moving about in the water. Being accustomed to it from their infancy, the element becomes so natural to them that they seem to have the use of all their faculties in the water the same as on dry land. According to the accounts of voyagers, they are such expert divers, that when a nail or other piece of iron was thrown overboard, they would instantly jump into the sea after it, and never fail to recover it. On one occasion a smith's anvil is said to have fallen overboard: not being able to bring this up, the islanders, notwithstanding, contrived to bring it ashore, by descending, a great many times to the bottom, and rolling it over and over till it reached the land.

WRECK OF THE STIRLING CASTLE.

RESCUE OF MRS. FRAZER.

THE following account, by the family of Lieutenant Otter, officially employed at Moreton Bay, and transmitted by the Lieutenant's cousin to the Lord Mayor, will be read with much interest by all who have perused the extraordinary adventures of the crew of the Stirling Castle amongst the savages:—

“Moreton Bay, Sept. 1836.

“I got a week's leave of absence to go down to the bay for the purpose of amusing myself with catching turtle. The wind proved favourable for the sport when we had got to the pilot's station, and, after remaining a few days there, I

thought I would take a day's shooting at a place called Brisby's Island, which is situated on the north side of the bay. I accordingly proceeded to that place, and whilst out with my gun, fell in with two men, whom I took to be natives. When they came up, however, they addressed me, to my astonishment, in English, and told me that they were part of the crew of a vessel called the Stirling Castle, which had sailed from Sydney to Singapore, about three month's previously, and had been wrecked on one of the Bornean reefs, near the entrance of Torres Straits. The whole of the crew, with the captain (Frazer), his wife, and two mates, had got away from the wreck after a fortnight's dreadful suffering. One of the boats, in which were the above mentioned persons and some sailors, eleven in all, they had been forced to the beach a little below Sandy Cape, about 200 miles to the northward of this; the other boat had parted from them a

[WRECK OF THE STIRLING CASTLE.]

few days before, and they saw no more of it. They went on to say, that soon after their landing, the natives came down and took everything from them that they had saved, stripped them all perfectly naked, forced them to fetch wood and water, and treated them with the most savage cruelty. They themselves, with another, who had been obliged from weakness to stop about twenty-five miles behind, had managed to get across to the main land, for they had run the boat ashore on an island. After travelling for six weeks along the coast, in which journey they suffered uncommon hardships from the cruelty of the different tribes they fell in with, they most providentially had arrived at Brisby's Island just in time to meet with me. They had crossed the narrow chan-

No. 56,

nel which separates this island from the main land, the day before I arrived, and as I was to leave the next morning, it would have been long before they would have been seen or heard of, as the island is hardly ever visited, and they did not know themselves where they were, or how far from the settlement.

“I immediately despatched two men after the unfortunate fellow who had been left behind, and he was brought to me naked, and black as the two others. After that I started for the settlement (Moreton Bay). On reporting to the commandant, Captain Fyars, two whale-boats were got ready, and being provisioned for three weeks, the command of the squadron was given to me for the purpose of endeavouring to

rescue the remainder of the crew, particularly the unfortunate lady, who was treated with as much cruelty as any of the rest, the savages having no regard for the fair sex. We now proceeded with soups, wines, clothes, &c., for the men, and I was furnished by two ladies of the settlement with female attire for Mrs. Frazer. A person accompanied me as interpreter, and proved of the greatest service, as he had formerly been a runaway, and had resided nearly six years among the natives, with whose language he was well acquainted.

"We lost no time in getting out to sea, and in two days after leaving the pilot station we put into a river about 70 miles to the northward, as we expected intelligence from some of the natives. After some trouble, Graham, our interpreter, heard of two white men being in the native camp, and, by promising hatchets to the savages he induced them

to bring the white men in. The poor fellows were wild with joy at seeing us, and could hardly believe their senses, as they never expected to be liberated. They told us that the captain and first mate had sunk under their sufferings; that Mrs. Frazer was alive when they last saw her, at a place about 40 miles off, but undergoing every hardship, and that two of the crew were drowned in endeavouring to swim the channel. I now sent one boat round the next point, about 40 or 50 miles distant, whilst I started off on foot with three others, armed only with pistols, for fear of alarming the blacks, who are much afraid of a gun. When we had proceeded about six miles, the treacherous wretches attacked us with clubs, and forced us back to the boats, as we were hardly able to keep them off with our pistols, which they had but little fear of. We were obliged to fire at them several times in our own defence, although much against my wish, as I

was afraid of their retaliating upon the unhappy people in their power. We now embarked, and followed the former boat round the aforesaid point into a wide bay, which we reached before night.

"About two days afterwards we got the second mate, and such a miserable skeleton I never beheld, quite black and naked. The account of his sufferings was horrible, as he had been tortured in a variety of ways, because he was too weak to drag the heavy logs of firewood in obedience to the wishes of the savages. We learned, to our mortification, that Mrs. Frazer, who had been some time alone among the savages, had only a few days before passed the very spot where we were, but that she had been carried off by a large party of blacks, who were going to

fight another tribe some 40 miles distant, and Graham told me he knew the very spot where she was. I sent him off directly to the place, he having previously stripped himself—the only way of escaping ill-usage from these brutes, and I followed the next morning along the beach, to support him, if it should be requisite, accompanied by three men, well armed with muskets this time.

"After we had gone about 30 miles we came to a mark in the sand—the signal agreed upon for us to stop and wait for him. We had not been here half an hour, when he appeared with four natives on the top of the cliff above us. When he came down the hill the blacks, on seeing us armed, attempted to move away, but he persuaded them, by promises of hatchets, to turn

back. I went up to meet him, and you may conceive my joy and satisfaction when he told me that Mrs. Frazer was waiting on the top of the hill until I sent her a cloak. I immediately gave him a cloak and petticoat, and shortly afterwards she appeared. You never saw such an object. Although only 38 years of age she looked like an old woman of 70; perfectly black, and dreadfully crippled from the sufferings she had undergone. I went to meet her, and she caught my hand, burst into tears, and sank down quite exhausted. She was a mere skeleton, the skin literally hanging upon her bones, whilst her legs were a mass of sores, where the savages had tortured her with firebrands.

"Notwithstanding her miserable plight, it was absolutely necessary for us to start homewards, though she had already come nine or ten miles, as there were about three hundred natives in the camp, who, Graham said, would most likely attack us in the night, for many of them had been unwilling to give her up. He had fortunately met with one of his former friends, a kind of chief, through whose influence he had succeeded. So treacherous are the natives that it is impossible to trust one of them for a moment.

"After having given the poor woman some port wine, which I had brought with me in a flask, and some tea which she thought was nectar from Heaven, she insisted upon immediately setting out, though we had nearly thirty miles to walk. On the road she gave me a dismal account of her hardships and privations, interrupting herself with bursts of gratitude which it was painful to listen to. Her husband had been speared before her face about a month back, and had gradually pined until his death, totally neglected. Any attempt of hers to approach him was followed by blows on the head. When he died, they dragged the body away by the heels and buried it in the sand. The unfortunate first mate suffered still more; they burnt his legs with firebrands to such a degree that on his crawling into the water the flesh all dropped from the bones, which were laid bare up to the knees, and in this state he lay helpless, and was starved to death.

"On one occasion, when she attempted to take him a few cockles, they knocked her down with a club, and dragged her through a pond by the arms and legs. When we met her she had been two days without food, and had subsisted the most part of the time on a fern-root which is found in the swamps. Now and then she would get the tail or fin of the fish, when the savages had a superabundance. This she was obliged to earn by dragging heavy logs of wood, and fetching water, and she was not allowed to enter their huts; but, destitute of all covering as she was, she was obliged to lie out the whole night, even in the heaviest rains. This is but a slight sketch of what she went through; a detailed account would fill a quire of paper.

"When we had got about half way to our boats, we were obliged to carry her in turns. We did not arrive until the next morning, when, after taking some rest, she begged I would send her some hot water to her tent, as she was anxious to restore her face and person to their natural colour. I suspect she found it no easy task, as, besides her exposure to the sun and wind, the natives, in order to bring her as near as possible to their own complexion, had rubbed her every day with charcoal and fat. Our only anxiety was now to get away, as we had accomplished our errand, and the blacks were keeping us constantly on the watch. We were detained by contrary winds for four days, during which one of our men got a spear sent through his thigh. At length we had a fair breeze, and reached the settlements in two days and a night.

MRS. FRAZER'S OWN ACCOUNT.

On Friday, August 18th, 1837, Mrs. Eliza Ann Frazer, the widow of Captain Frazer, of the ship *Stirling Castle*, which was wrecked on a coral reef on their passage from Sydney to Singapore, in May 1835, came to the Mansion-house, accompanied by the captain of the vessel in which she arrived in this country, and a female at whose house she was received upon coming to London, for the purpose of mentioning the particulars of her dreadful adventures among the inhabitants of the shores to which the crew resorted as a refuge from the

not more appalling dangers of the ocean. The following is her account which has been confirmed by the testimony of one of the chief officers.

On the 16th of May, 1835, the *Stirling Castle* left Sydney for the purpose of going to Singapore. On the 22nd, when they were approaching Torres Straits, it blew very fresh, and there being a current near the Eliza Coral Reefs, which the vessel was unable to resist, she struck on the reefs, at about nine o'clock at night, where the captain was incapable, on account of the hazy weather, of making observations.

There were about eighteen men on board, two boys, and Mrs. Frazer, the captain's wife, who was far advanced in pregnancy.

Two of the men who were at the wheel were killed when the ship struck, and the cabins were dashed into the hold, together with all the bread, beef, pork, and other provisions. The crew, when the tempest ceased, contrived to cut away the masts, in expectation that the ship would right herself, and she did, in some degree, change her position, but not to any serviceable extent; they therefore determined to get away as well as they could in the long-boat and the pinnace, which they had contrived to keep secure, the two other boats which were attached to the ship having been swept away by the fury of the elements. The ship's carpenter, the cook, the cook's mate, John Frazer, the captain's nephew, the boatswain, Edward Sone, and Bill Lorton, a seaman, took to the pinnace; while the captain, his wife, the chief mate, the second mate, and the two boys, and the rest of the crew, took to the long-boat.

Four days after they committed themselves to the care of Providence, Mrs. Frazer was delivered of a child, while up to her waist in water, in the long-boat. The infant was born alive, but after a few gasps was drowned, and the chief mate wrapped up the body in a part of his shirt, which he tore from his back for the purpose, and let it go along with the tide. The poor mother could not account for the extraordinary vigour with which she was able to bear up against this calamity, added to the other calamities to which she was doomed to be exposed. Fortunately she was for some time in a state of insensibility, and was not, until a considerable time after the child was consigned to the deep, aware that it was brought into a world from which it was so rapidly hurried away. For a great many days they endeavoured in vain to reach Moreton Bay, being all the time without any food except a small quantity of the lees of hops, which they had found in a cask. They suffered dreadfully from thirst as well as hunger while in this awful situation. At last they reached a large rock, to which they fastened their boats, and they went in quest of oysters and water; but their disappointments were multiplied upon them, and they stretched themselves along in expectation of a speedy release from their sufferings by the interposition of another tempest. In the morning those who belonged to the long-boat were astonished to find that the pinnace and the men who had occupied her had altogether disappeared. These unfortunate fellows who were never heard of more, and their comrades in calamity could not conjecture what their motive could be for making an experiment by themselves, without the aid of the experience of the captain and mates, whom they left behind.

The captain's aim was all along, after they had been obliged to quit the ship, to reach Moreton Bay, but finding that wind and current were dead against this object, and his companions being reduced to the extremity of lying on their backs in the boat with their tongues out to catch the damp of the dews that fell, he resolved to make for the nearest land. It was a choice of awful evils, for he knew that the shore, which it was probable they would reach was visited by tribes of savages. They bore away before the wind, prepared to meet death in whatever shape it might present itself, and so exhausted with suffering as to be careless whether they were to die by the hands of the natives, or to be overwhelmed in the waves. At last they came within sight of land, and soon afterwards their boat ran into, and landed, in a place called White Bay. They were now about 100 miles north of Moreton Bay, which is the principal of the penal settlements to which the incorrigible convicts are sent to pass the remainder

of their days in uninterrupted labour; and just as they touched the land they caught a sight of vast crowds of naked savages, who soon approached the beach, evidently delighted with the prize that presented itself.

The savages surrounded the boat, and raising it up, carried it from the beach, to the bush with its crew, just as they were. The moment they laid the boat on the ground, they began to strip the men of their clothes, commencing with the captain and chief officers. John Baxter, the second mate, endeavoured to hide a shirt ornament in which his aunt's hair was contained, having willingly yielded up everything else; but the savages became infuriated at the attempt at concealment, and beat him dreadfully. It is unnecessary to say that the trinket was torn from him. They broke in pieces the watches and chronometers, and each took a portion of the machinery to stick in their noses and ears, and after they had divided among themselves the various portions of apparel of which they had stripped their captives, they threw to them, to appease their hunger, the heads and entrails of the fish upon which they had been lately making their meal. The savages, after having detained them two days, took them farther up into the bush, and drove them onward, that they might, as they soon ascertained, fall into the hands of other tribes, by whom an ingenious variety was to be given to their sufferings.

The captain had endeavoured to prevail upon them to accept the services of the crew for a longer time, being apprehensive that any change amongst the natives would be for the worse; but they beat all the now naked whites on before them, until fresh tribes came up and took each of them a prisoner, and set him to work in carrying pieces of trees and toiling in other exhausting ways. Mrs. Frazer, being the only woman, was not selected by any of the tribes, but was left by herself, while they all went onward: but her husband got an opportunity to mention to her not to stir from the place in which she was at that moment, and that he would contrive to see her in a few hours. During that night, she lay in the clefts of a rock, and in the morning, after looking about without seeing a creature, she determined to follow some foot-marks, and, after having proceeded to some distance, she saw a crowd of black women approach. These, however, belonged to the tribe of savages by whom her husband had been taken up in the bush on the preceding day; and they set her to work in cutting wood and lighting fires. Being quite naked, and presenting a contrast in her skin which the women did not like, she was compelled by them to rub herself all over with gum and herbs, which had the effect of making her nearly as dark as themselves. They likewise tattooed her all over, and having pulled her hair out, covered her head with a sort of gum, and stuck the feathers of parrots and other birds all over it. One of the women having two children, obliged her to nurse one of them, notwithstanding the severe labour she had to perform, and, if the child was out of temper, the nurse was kicked, and scratched, and thumped for its peevishness.

At the expiration of four days, Mrs. Frazer saw her husband for the first time since their separation. He was dragging along a tree, and was greatly fatigued. She had just began to inquire how it happened that he did not manage to let her know where he was, to which he was replying that he dared not look for her, when his tribe suddenly appeared; one of them having seen them together, made a push at the captain with a spear, and pierced him right through the body, and he fell dead in an instant. Mrs. Frazer ran to her husband, and cried out—"Jesus of Nazareth, I can endure this no longer," and pulled the spear out of the body, but the breath was gone for ever. She then fell senseless, and remained so for a considerable time, and when she recovered her senses, she found herself along with the tribe which she was obliged to serve, but what became of the body of Captain Frazer, she never could learn, and of course, the barbarous region in which she was enslaved, was no place for sympathy. Shortly after this catastrophe, the first officer of the ship, having been informed the captain had been murdered by one of the tribes, formed, in a fit of desperation, a plan of revenge, fettered and exhausted with labour as he was. This intention was, however discovered,

and horrible was his punishment. Mrs. Frazer had just lighted a fire by order of her tribe, and the unfortunate man's legs were thrust into it and consumed, while he, by the violence of of his contortions, actually worked for the rest of his body a grave in the sand in which it was imbedded.

Two days after this horrible event, a fine looking young man, named James Major, was disposed of. Captain Frazer, who knew a good deal of the character and habits of the savages on this coast, had mentioned to Major that the savages would take off his head for a figure bust for one of their canoes. It seemed too, that it was usual for the savages who contemplated that sort of execution, to smile in the face of his victim immediately before he struck him to the earth. While Major was at work, the chief of his tribe approached him smiling, and tapped him on the shoulder. At that instant, the poor fellow received a blow on the back of the neck from a waddle, or crooked stick, which stunned him. He fell to the ground, and a couple of savages set to work, and by means of sharpened shells, severed the head from the body with frightful exclamations. They then ate parts of the body, and preserved the head with certain gums of extraordinary efficacy, and affixed it as a figure bust to one of the canoes. The rest of the crew, of course, expected nothing less than death. Their apprehension appeared to relate rather to the mode of inflicting the extreme penalty, than to the fact that they must prematurely die. Two of the seamen, named Doyle, and Big Ben contrived to steal a canoe, and endeavoured to cross an island, but were drowned in the attempt to escape from, perhaps, a more fearful death.

There was a black man, named Joseph, who had been steward on board the *Stirling Castle*. When the savages seized the long-boat in which the crew had entered White Bay, they stripped this Joseph as well as the rest, but as he was of their own colour they inflicted no punishment upon him, and he had the privilege of going about, which was denied to any others of the wretched strangers. This man, who was continually watching for an opportunity to escape had assured Mrs. Frazer that if he could get away, the first life he should think of saving would be that of his mistress. He succeeded in stealing a canoe, in which he rowed off, and in six weeks he reached Moreton Bay, where he informed the commandant of the penal settlement of the horrible circumstances which had taken place. All the survivors were, to the best of Mrs. Frazer's belief, rescued from the savages. At the camp the commandant and the commissary, and in fact all the individuals who were in the service of the Government, treated Mrs. Frazer and her companions in misfortune with a degree of kindness which it is evident the former has a very warm recollection of. She was placed under medical care immediately, and everything that was considered likely to abate the sense of what she had undergone in witnessing the murder of her husband and the other horrors with which she was surrounded, was done.

The Lord Mayor asked what were the circumstances of Mrs. Frazer? He was convinced that if she were in necessity, the ladies in London, who were constantly looking for such objects, would speedily relieve her. The captain said that the unfortunate lady was not mistress of a farthing; the clothes on her back had been given to her by the commandant's wife; and Captain Frazer had been the sole support of her and three children, who were in the Orkney Islands, to which she was anxious to go as soon as possible. She was lame, had almost lost the use of one arm and the sight of one eye, by the severity of the inflictions to which she had been subjected. The Lord Mayor—"I shall most willingly receive contributions for her benefit, and I am sure that the call will be soon answered. I never heard of anything so truly dreadful in all my experience."

DREADFUL MASSACRE OF CAPTAIN OLIVER PORTER,

And the crew of the Atahualpa, by the Indians, in the year 1805.

THE *Atahualpa*, of Boston, left that port in August, 1803, bound to the north-west coast of America, for the purpose of trading with the natives. She arrived safe on the coast in the

month of January, 1804; and, after visiting the several islands, and purchasing the skins, on the 5th June, 1805, weighed anchor from Chockcoe on the N.W. coast, and made sail. On the 8th, arrived at Millbank Sound, and came to an anchor within musket-shot of the village. Soon after her arrival, the chief of the Indians, by the name of Kiete, came off to the ship, with some more of his tribe, and informed the captain, that the Caroline, Captain Sturgess, had sailed from thence ten days before.

On the 11th, the chief came off again, with his tribe, and another tribe that was there, and traded very briskly till towards night, when, becoming very insolent, they were all turned out of the ship.

On the 13th, Kiete and his tribe came on board in the morning, and seemed much more desirous to trade than before, which Captain Porter was very glad to see. The chief mate, and two of the ship's company, were then engaged in ripping the main-sail in pieces, on the quarter-deck: the second mate, with two hands, repairing the main-top-sail; two on the starboard side of the main-deck, spinning spun yarn; two more on the fore-castle, making sinnet; two more on the larboard side of the main-deck, running shot in the armourer's forge; the cooper was making tubs; the cook, the captain's steward in the galley, at their duty; and all hands as usual employed in the ship's duty; the armourer was in the steerage, and the boat-swain in the cabin; Captain Porter, M. Ratstraw, his clerk, and Mr. Lyman Plummer (nephew of Theodore Lyman, Esq., of Boston, ship owner), were standing on the larboard side of the quarter-deck, abreast of the cabin hatchway. The chief Kiete, stood leaning on the rail, and called Captain Porter to look at the skins that were in a canoe, alongside the ship: the captain accordingly went to look over the side, when the chief, with some more Indians, laid hold of him, and gave a shout; immediately all the Indians alongside of the canoes and those on board, armed with daggers, pistols, pikes, and other weapons, seized every man on deck, who were totally unprepared for so sudden an attack. A most dreadful and sanguinary contest immediately took place; when, after a short but bloody engagement of about five minutes, the deck was completely cleared of them.

There were about two hundred Indians, it is supposed, on board at this time; the first daggered Captain Porter several times in the back, put him in a canoe, alongside, and carried him on shore; and, as we were afterwards informed by Captain Smith, of the ship *Mary*, of Boston, who was informed by the New Hecta tribe, was by them tied to a tree, in which unhappy and miserable situation he languished fifteen days, refusing every species of nourishment offered him by these savages, occasioned by his grief at this unhappy accident.

Previous to this fatal business, there were twenty-three hands on board; ten of whom were barbarously killed and wounded. Among the killed were Captain Oliver Porter; Mr. John Hill, chief mate; Daniel Gooding, second mate; John G. Ratstraw, captain's clerk; Mr. Lyman Plummer, Peter Shooner, Luther Lapham, Samuel Lapham, seamen; Isaac Lammes, cooper; and John Williams, cook. Mr. Lyman Plummer survived about two hours after he was wounded. The cook, who was most shockingly cut and mangled, languished till about six o'clock the next morning.

Among the wounded were, Ebenezer Baker, seaman, most dangerously, with daggers, he having two stabs in his left thigh, one in his privates, one in his back, one in his breast, and one in his neck; Henry Thompson, seaman, very dangerously with daggers, having one wound on his right side, one on the left shoulder, another on the left arm, and two or three smaller ones on the same arm, one on the right temple, and another on the left cheek; Ebenezer Williams, seaman, had three wounds in his thigh, with daggers,—two on his back, and one on the right shoulder with a boarding-pike; Luke Bates, seaman, wounded on his right shoulder with a boarding-pike; Joseph Robinson, carpenter, wounded on the left breast; Thomas Edwards, steward, stabbed on the left shoulder; W. Walker, had two stabs, with daggers, in his back.

After the deck was cleared of these sanguinary savages, several guns, were fired at the village, the sails were loosed,

stream-cable cut, and the ship put to sea. The same night they got under weigh, seven large war canoes hove in sight, with about thirty Indians in each. In this deplorable condition, with only four or five hands on board capable of duty, the Atahualpa shaped her course for New Heita; but the wind chopping round, put about, and stood to the westward.

On the 17th, it was thought time to bury the dead, when, after having sewed them up, and got them ready for interment, prayers were read. They were then buried in Queen Charlotte's Sound.

It cannot be ascertained, with any degree of accuracy, how many of the Indians were killed in this dreadful contest. It is supposed, however, that the number must have exceeded forty; for a large canoe being under the ship's bow, with about twenty Indians in her, who were cutting a cable, a swivel and several muskets were fired into her, and but one Indian reached the shore.

During the conflict with the savages, there were two barrels of powder unheeded, and a loaded pistol prepared and given to a person who stood ready, should they get into the cabin, and to secure to themselves the ship, to fire into it, and blow the whole up, preferring to die in that manner, rather than fall into the hands of such merciless wretches.

PETER AMONG THE LADIES.

I MUST now relate what occurred to me a few days before the ship sailed, which will prove that it is not necessary to encounter the winds and waves, or the cannon of the enemy, to be in danger, when you have entered his majesty's service: on the contrary, I have been in action since, and I declare without hesitation, that I did not feel so much alarm on that occasion, as I did on the one of which I am about to give the history.

We were reported ready for sea, and the Admiralty was anxious that we should proceed. The only obstacle to our sailing was, that we had not yet completed our complement of men. The captain applied to the port admiral, and obtained permission to send parties on shore to impress seamen. The second and third lieutenants, and the oldest midshipmen, were despatched on shore every night, with some of the most trustworthy men, and generally brought on board in the morning about half-a-dozen men, whom they had picked up in the different ale-houses or grog-shops, as the sailors call them.

Some of them were retained, but most of them sent on shore as unserviceable; for it is the custom, when a man either enters, or is impressed, to send him down to the surgeon in the cockpit, where he is stripped and examined all over, to see if he be sound and fit for his majesty's service; and if not, he is sent on shore again. Impressing appeared to be rather serious work, as far as I could judge from the accounts which I heard, and from the way in which our sailors, who were employed on the service, were occasionally beaten and wounded; the seamen who were impressed appearing to fight as hard not to be forced into the service, as they did for the honour of the country, after they were fairly embarked in it.

I had a great wish to be one of the party before the ship sailed, and asked O'Brien, who was very kind to me in general, and allowed nobody to thrash me but himself, if he would take me with him, which he did on the night after I had made the request. I put on my dirk, that they might know I was an officer, as well as for my protection. About dusk we rowed on shore, and landed on the Gosport side: the men were all armed with cutlasses, and wore pea-jackets, which are very short great coats made of what they call Flushing. We did not stop to look at any of the grog-shops in the town, as it was too early, but walked out about three miles in the suburbs, and went to a house, the door of which was locked; but we forced it open in a minute and hastened to enter the passage, where we found the landlady standing to defend the entrance. The passage was long and narrow, and she was a very tall corpulent woman, so that her body nearly filled it up, and in her hands she held a long spit pointed at us, with which she kept us as bay. The officers, who were the foremost, did not like to attack a woman, and she made such drives at them with her spit, that had they

not retreated, some of them would soon have been ready for roasting.

The sailors laughed and stood outside, leaving the officers to settle the business how they could.

At last, the landlady called out to her husband, "Be they all out, Jem?"

"Yes," replied the husband, "they be all safe gone."

"Well, then," replied she, "I'll soon have all these gone too;" and with these words she made such a rush forward upon us with her spit, that had we not fallen back and tumbled one over another, she certainly would have run it through the second lieutenant, who commanded the party. The passage was cleared in an instant, and as soon as we were all in the street she bolted us out; so there we were, three officers and fifteen armed men, fairly beat off by a fat old woman; the sailors who had been drinking in the house having made their escape to some other place. But I do not well see how it could be otherwise; either we must have killed or wounded the woman, or she would have run us through, she was so resolute. Had her husband been in the passage, he would have been settled in a very short time; but what can you do with a woman who fights like a devil, and yet claims all the rights and immunities of the softer sex!

We all walked away, looking very foolish, and O'Brien observed that the next time he called at that house he would weather the old cat, for he would take her ladyship in the rear.

We then called at other houses, where we picked up one or two men, but most of them escaped by cutting out at the windows or the back doors, as we entered the front. Now there was a grog-shop which was a very favourite rendezvous of the seamen belonging to the merchant vessels, and to which they were accustomed to retreat when they heard that the press-gangs were out.

Our officers were aware of this, and were therefore indifferent as to the escape of the men, as they knew that they would all go to that place, and confide in their numbers for beating us off. As it was then one o'clock, they thought it time to go there; we proceeded without any noise, but they had people on the look out, and as soon as we turned the corner of the lane the alarm was given. I was afraid that they would all run away, and we should lose them; but, on the contrary, they mustered very strong on that night, and had resolved to "give fight." The men remained in the house, but an advanced guard of about thirty of their wives saluted us with a shower of stones and mud. Some of our sailors were hurt, but they did not appear to mind what the women did. They rushed on, and then they were attacked by the women with their fists and nails.

Notwithstanding this, the sailors only laughed, pushing the women on one side, and saying, "Be quiet, Poll;"—"Don't be foolish, Molly;"—"Out of the way, Sukey: we ain't come to take away your fancy man;" with expressions of that sort, although the blood trickled down many of their faces, from the way in which they had been clawed. Thus we attempted to force our way through them, but I had a very narrow escape even in this instance.

A woman seized me by the arm, and pulled me towards her; had it not been for one of the quarter-masters I should have been separated from my party, but just as they dragged me away, he caught hold of me by the leg, and stopped them.

"Clap on here, Peg," cried the woman to another, "and let's have this little midshipmite; I wants a baby to dry nurse."

Two more women came to her assistance, catching hold of my other arm, and they would have dragged me out of the grasp of the quarter-master had he not called out for more help on his side, upon which two of the seamen laid hold of my other leg, and there was such a tussle, (all at my expense) such pulling and hauling; sometimes the women gained an inch or two of me, then the sailors got it back again. At one moment I thought it was all over with me, and in the next I was with my own men.

"Pull devil; pull baker!" cried the women, and then they laughed, although I did not, I can assure you, for I really think that I was pulled out an inch taller, and my knees and shoulders pained me very much indeed. At last the women laughed so much, that they could not hold on, and I was dragged into

the middle of our own sailors, where I took care to remain; and after a little more squeezing and fighting, was carried by the crowd into the house.

The seamen of the merchant ships had armed themselves with bludgeons and other weapons, and had taken a position on the tables. They were more than two to one against us, and there was a dreadful fight, as there resistance was very desperate. Our sailors were obliged to use their cutlasses, and for a few minutes I was quite bewildered with the shouting and swearing, pushing and scuffling, collaring and fighting, together with the dust raised up, which not only blinded, but nearly choked me. By the time that my breath was nearly squeezed out of my body, our sailors got the best of it, which the landlady and women in the house perceiving, they put out all the lights, so that I could not tell where I was: but our sailors had every one seized his man, and contrived to haul him out of the street door, where they were collected together and secured.

Now again I was in great difficulty; I had been knocked down and trod upon, and when I did contrive to get up again, I did not know the direction in which the door lay. I felt about by the wall, and at last came to a door, for the room was at that time nearly empty, the women having followed the men out of the house; I opened it, and found that it was not the right one, but led into a little parlour, where there was a fire, but no lights. I had just discovered my mistake, and was about to retreat, when I was shoved in from behind, and the key turned upon me; there I was all alone, and I must acknowledge, very much frightened, as I thought that the vengeance of the women would be wreaked upon me. I considered that my death was certain, and that, like the man Orpheus I had read of in my books, I should be torn to pieces by these Bacchanals. However, I reflected that I was an officer in his majesty's service, and that it was my duty, if necessary, to sacrifice my life for my king and country. I thought of my poor mother; but as it made me unhappy, I tried to forget her, and call to my memory all I had read of the fortitude and courage of various brave men, when death stared them in the face. I peeped through the key-hole, and perceived that the candles were relighted, and there were only women in the room, who were talking all at once, and not thinking about me. But in a minute or two, a woman came in from the street, with her long black hair hanging about her shoulders, and her cap in her hand.

"Well," cried she, "they've nabbed my husband; but I'll be dished if I haven't boxed up the midshipmite in that parlour, and he shall take his place."

I thought I should have died when I looked at the woman, and perceived her coming up to the door, followed by some others, to unlock it. As the door opened I drew my dirk, resolving to die like an officer, and as they advanced I retreated to a corner, brandishing my dirk, without saying a word.

"Vell," cried the woman who had made me a prisoner, "I do declare I likes to see a puddle in a storm—only look at the little biscuit nibbler showing fight. Come, my lovely, you belongs to me."

"Never!" exclaimed I, with indignation. "Keep off, or I shall do you some mischief;" and I raised my dirk in advance; "I am an officer and a gentleman."

"Sall" cried the odious woman, "fetch a mop and a pail of dirty water, and I'll trundle that dirk out of his fist."

"No, no," replied another rather good looking young woman, "leave him to me—don't hurt him—he really is a very nice little man. What's your name, my dear?"

"Peter Simple is my name," replied I, "and I am a king's officer: so be careful what you are about."

"Don't be afraid, Peter, nobody shall hurt you; but you must not draw your dirk before ladies, that's not like an officer and a gentleman—so put up your dirk, that's a good boy."

"I will not," replied I, "unless you promise me that I shall go away unmolested."

"I do promise you that you shall, upon my word, Peter—upon my honour—will that content you?"

"Yes," replied I, "if every one else will promise the same."

"Upon our honours," they all cried together; upon which I was satisfied, and putting my dirk into its sheath, was about to quit the room.

"Stop, Peter," said the young woman, who had taken my part; "I must have a kiss before you go." "And so must I; and so must we all," cried the other women.

"I was very much shocked, and attempted to draw my dirk again, but they had closed in with me, and prevented me. 'Recollect your honour,' cried I to the young woman, as I struggled.

"My honour!—Lord bless you, Peter, the less we say about that the better."

"But you promised that I should go away quietly," said I, appealing to them.

"Well, and so you shall; but, recollect, Peter, that you are an officer and a gentleman—you surely would not be so shabby as to go away without treating us. What money have you got in your pocket?" and, without giving me time to answer, she felt in my pocket, and pulled out my purse, which she opened. "Why, Peter, you are as rich as a Jew," said she, as they counted thirty shillings on the table. "Now, what shall we have?"

"Anything you please," said I, "provided that you will let me go."

"Well, then, it shall be a gallon of gin. Sall, call Mrs. Flanagan. Mrs. Flanagan, we want a gallon of gin, and clean glasses."

Mrs. Flanagan received the major part of my money, and in a minute returned with the gin and wine-glasses.

"Now, Peter, my cove, let's all draw round the table, and make ourselves cozy."

"Oh, no," replied I, "take my money, drink the gin, but pray let me go;" but they wouldn't listen to me. Then I was obliged to sit down with them, the gin was poured out, and they made me drink a glass, which nearly choked me. It had, however, one good effect; it gave me courage, and in a minute or two, I felt as if I could fight them all. The door of the room was on the same side as the fire-place, and I perceived that the poker was between the bars, and red-hot. I complained that I was cold, although I was in a burning fever; and they allowed me to get up to warm my hands. As soon as I reached the fire-place, I snatched out the red-hot poker, and brandishing it over my head, made for the door. They all jumped up to detain me, but I made a poke at the foremost, which made her run back with a shriek. (I do believe that I burnt my nose.) I seized my opportunity, and escaped into the street, whirling the poker round my head: while all the women followed, hooting and shouting after me. I never stopped running and whirling my poker until I was reeking with perspiration, and the poker was quite cold. Then I looked back, and found that I was alone. It was very dark; every house was shut up, and not a light to be seen anywhere. I stopped at a corner, not knowing where I was, or what I was to do.

I felt very miserable, indeed, and was reflecting on my wisest plan, when who should turn the corner, but one of the quarter-masters who had been left on shore by accident. I knew him by his pea jacket and straw hat to be one of our men, and I was delighted to see him. I told him what had happened, and he replied that he was going to a house where the people knew him, and would let him in. When we arrived there, the people of the house were very civil; the landlady made us some purl, which the quarter-master ordered, and which I thought very good indeed. After we had finished the jug, we both fell asleep in our chairs. I did not awake until I was roused by the quarter-master, at past seven o'clock, when we took a wherry, and went off to the ship.—*Peter Simple.*

MICHAEL MALONE,

"THERE WAS Mrs. R——, the captain's wife of the L—— frigate; though for the matter o' that she was captain, although only rated as mate. Ah, that was an Irish ship; captain Irish,—officers Irish—men Irish: the ship's name ought to have been Pat. She dearly loved her lads,—her boys, as she called them,—particularly Mr. O'Shaughnessy, the first-lieutenant, though the midshipmen knew pretty well how to get the weather-gage of her, especially when their case was in a pitiable condition,

'showing a beggarly account of empty bottles.' She was a lady, every inch of her, and used to come round the mess-deck morning, noon, and night, to see that all hands were comfortable and happy. If any body wanted liberty, it was only spinning a yarn to the petticoat captain, and they had it directly. Well, d'ye see, we had orders to sail; and so, to the great grief of all hands, Mrs. R——, was obliged to leave us, with a heavy heart and sorrowful countenance. 'But never mind, boys,' says she; 'may be you'll come back some day; and then, oh!—good-bye to you, my boys, and stand by your captain to the last, like Erin's own sons. Remember, Irishmen must never lose their laurel!' And so we gave her three cheers as she went over the side.

"Well, after several months' absence on a long cruise, we once more reached Spithead, and in a day or two a pretty little yacht came working in from St. Helen's to the anchorage. The officers got their glasses, and word was soon passed that our friend Mrs. R. was on board of her. All hands crowded on deck—not an officer or man remained below. The captain took his station on the quarter-deck abaft, the officers, especially the midshipmen, were more in advance, while at the gangway stood the old master-at-arms, Michael Malone.

Mich was a perfect original—neither sailor nor soldier—but a strict disciplinarian, as all the boys in the ship could testify. He was, in fact, the very quint-essence of an Irishman. On nine hairs of his head was stuck a little trencher-like hat with a roof not much bigger than half-a-crown. Behind projected a tail-piece that would have puzzled Hogarth. It was about nine inches long, and stretched out from the neck in an horizontal direction, like a tiller shipped the wrong way. His jacket was of a sandy-grey-russet, embellished with ornamental designs of all colours and shapes. Huge pockets, well filled with rolls of paper, were prominent features, his trousers (barring the breaches) were well patched with corderoy, and his legs were sometimes cased in leather, that had formerly been a pair of military boots; but now, by continual cobbling, had lost their primitive shape, and looked like a couple of fire buckets. His countenance was open; for he had a marvellous mouth, that stretched as wide as a turnpike-gate; and his nose hung dangling down, as if to see that nothing passed through without paying toll. But for his eyes, he had a pair of odd ones, that gave you the most agreeable squint in the world, and made him see two ways at once. Many a poor boy has got thrashed for quizzing him, thinking he was looking another way.

"Well, there old Mich stood, adjusting his cravat with the utmost gravity, when Mrs. R—— came over the side. Of course everybody expected she would have walked aft to the captain; but her delight was so great, that she no sooner got upon the deck, than she caught old Mich (being nearest) round the neck, and began kissing him like fury. Mich, equally pleased, returned her embrace with interest, to the great amusement of every soul, fore-and-aft. 'Oh, my boys—my boys,' says she, as soon as Mich let her get breath, 'joy to the hour that I see you again! Arrah! R—— dear, sure, and I'm so happy!' So catching the captain in her arms, she gave full evidence of the fact.

"The officers wiped their mouths and smacked their lips, expecting it would go round, and were anticipating the salute of her sweet kiss, for she was really a beautiful woman, but they were disappointed; for the first moment of exquisite feeling having subsided, she became sensible of what had passed. Howsoever, the captain laughed heartily, and old Mich looked as if he was ready for a second edition. Mrs. R—— called him, and apologised for her conduct, blushing all the time most glowingly. 'Och!' says she, 'my joy was so great that I couldn't help it!'

"Be aisey, my lady, be aisey," says Mich: 'I'd do the same for your ladyship any day, and every day. Sure, didn't I have the best of it, then? Faith, and I did, any how; for I gave you two for one. Oh, don't mention it, my lady.'

"Well, all hands had an extra allowance of grog, and Mich declared that 'twas the happiest day of his life; for her ladyship's two-tips were like full-blown roses, moistened with dew; and, but for his ugly nose, that came in the way, he would have had half-a-dozen more."

HAWKE'S ENGAGEMENT OFF CAPE FINISTERRE.

A NUMEROUS fleet of French merchant ships being ready at the Isle of Aix to sail under the convoy of a strong squadron to the West Indies, Admiral Hawke was despatched to cruise off Cape Finisterre, in the hope of intercepting them. He accordingly sailed from Plymouth on the 9th of August, 1747.

Admiral Hawke continued cruising according to his instructions, till, on the 14th of October, at seven in the morning, he discovered the French fleet. A general chase immediately commenced, and in an hour the English saw a great number of ships, but so crowded that they could not count them. At ten, Admiral Hawke made the signal for the line of battle a head, and soon afterwards the *Louisa*, being the headmost and weathermost ship, made a signal for discovering eleven sail of the enemy's line of battle ships. In half an hour he was hailed by Captain Fox of the *Kent*, who informed him that they counted twelve very large ships. The French commodore at first mistook the British fleet for part of his own convoy which had separated in the night, but discovering his error, on a nearer approach, he directed the *Content*, of 64 guns, and all the frigates, to make the best of their way with the merchantmen, and drew out the ships in order of battle.

Admiral Hawke observing that this manoeuvre was designed for the escape of the convoy, and finding that he himself lost time in forming his line, while the enemy was standing away from him, made the signal at eleven o'clock for a general chase. When his headmost ships were at a proper distance he made signal for engaging, which was immediately obeyed. About noon the *Lion* and the *Princess Louisa*, which were the headmost ships of the British squadron, came up with the enemy's rear, and began to engage very warmly, passing along their line of fire, to the van. The French squadron was inferior in point of force; but had the advantage of the weatherage. The English admiral, in the *Devonshire*, in passing on to the first ship he could get near, received the distant fire of several vessels, till he came close to the *Severn* of 50 guns, which being soon silenced, he left her to be taken by the frigates astern. He then hauled his wind, to assist the *Eagle* and *Edinburgh*, which were both closely engaged with the *Tonnant*, and the latter of which had lost her fore-top-mast. This attempt was, however, frustrated. The *Eagle* having had her wheel shot to pieces, all the men at it killed, and her braces and bowlines destroyed, fell twice on board the *Devonshire*, which drove that ship to leeward, and prevented her from attacking *Le Monarque* and *Le Tonnant* within such a distance as to do execution. The admiral at length succeeded in his endeavours to close with those two ships; but while engaged with the latter, the

breaching of all his lower deck guns broke, and the guns flew fore and aft, which obliged him to shoot a-head, as those on the upper and quarter-deck could not reach his antagonist. Captain Harland of the *Tilbury*, observing that the *Tonnant* fired single guns at the *Devonshire*, in order to dismast her, stood on the other tack, between that ship and the enemy, and gave her a very smart fire.

The new breechings of the *Devonshire* were speedily seized, so that she was again soon in a condition to renew the action, by which time the admiral had got almost alongside the *Trident*, of 64 guns, which ship he immediately began to engage. He kept up such a brisk fire upon her that she soon struck. The activity and intrepidity of Admiral Hawke were displayed in a most distinguished manner in this engagement. The *Devonshire* had now taken two of the enemy's ships, but not satisfied with the glory he had already acquired, the British commander bore down with musket-shot of the *Terrible* of 74 guns. Having got alongside of her, he attacked her with such fury, that about seven in the evening the enemy called for quarter.

While the gallant admiral was thus employed, Captain Saunders, of the *Yarmouth*, with unparalled bravery, engaged the *Neptune* of 70 guns; and though the *Monarch*, of the same

force, lay for some time on his bow, and another of the enemy's ships on his stern, he fought with such spirit, that after a close action of two hours and a half the two former struck. The *Neptune*, which had 100 killed and 140 wounded in this desperate encounter, was so near the *Yarmouth* when she surrendered, that the crew of the latter jumped on board to take possession of the prize.

It was now growing dark; six of the enemy's ships had struck, and the *Tonnant* and *Intrepide*, to escape the fate of their companions, crowded all the sail they could, and endeavoured to get away

under favour of the night. Notwithstanding the damage the *Yarmouth* had sustained in the obstinate conflict in which she had been engaged, Captain Saunders could not with patience observe the flight of the enemy, while none of the English ships were in pursuit of them. He therefore, proposed to Captain Saumarez, in the *Nottingham*, and Captain Rodney, in the *Eagle*, who were within hail, to stand after them. Those three ships accordingly gave chase; about eight they came up with the enemy and engaged them. Unfortunately Captain Saumarez was killed by the first fire from the *Tonnant*, which occasioned the *Nottingham* to haul her wind. The *Eagle* being unable to get near enough to come into action, the *Yarmouth* had to deal with both the enemy's ships for some time, till they, at length, got out of the reach of her guns, and escaped.

The French behaved in this engagement with uncommon spirit, and evinced great judgment in their manoeuvres. All the ships taken, excepting two, were dismasted; they had upwards of 800 men killed and wounded, and among the former the captain of the *Neptune*. The loss on the part of the English amounted to 154 killed, and 558 wounded. Among the

[CAPTAIN SAUMAREZ PURSUING THE ENEMY.]

former, as we have already mentioned, was Captain Saumarez. This brave and excellent officer was one of the lieutenants of the Centurion, in the celebrated expedition of Commodore Anson. At the time of his death he was only 37 years old. A plain monument is erected to his memory in Westminster Abbey. Sir James Saumarez, whose distinguished services, during the late war, have placed him in the first rank of our naval heroes, was, we believe, his grandson.

Admiral Hawke brought to for the night, in order to collect his ships, and the next morning called a council of war, in which it was decided, that it would be imprudent to pursue the enemy's convoy. He however, despatched the Weasel sloop to Commodore Legge at the Leeward islands, to apprise him of their approach, that he might take the necessary measures for intercepting them. In consequence of this precaution many of the ships were taken by the English cruisers on that station, the admiral then steered for England, and on the 31st of October arrived at Portsmouth with his prizes, all of which, excepting the Neptune, were purchased by government, and added to the navy. In the following month, his majesty, as a reward for his services, honoured him with the Order of the Bath.

RAPIN OF THE ROCK; OR, THE OUTLAW OF THE OHIO.

*A Tale of the "Cave-in-the-Rock."**

BY J. H. INGRAHAM.

ONE autumn night, early in the present century, there lay concealed in a dark inlet of the Ohio river, a low black barge filled with motionless and silent men. The moon had been up half an hour, and, overtopping the trees on the opposite bank, shone in a broad flood of light across the placid water; but the mouth of the inlet was so densely covered by overhanging and low-drooping branches of water-oaks and sycamores, and a network of tangled wild vines, that not one ray had yet penetrated the covert in which the barge was lying in wait. The inlet ran but a little way into the land, and from its glen-like depth, silence, and gloom, it seemed a fit lair for the prey to dart forth from upon his prey. The boat was broad and flat in the beam, of great length, and very sharp forward, with a square stern, on which was raised a sort of deck. She had no mast, and was manned by twenty oarsmen in loose blue shirts and deerskin caps and leggings, with broad belts garnished with pistols. In the stern sat a middle-aged man in a fox-skin cap, with the tail hanging down his back, and a leathern hunting-shirt, confined to his broad thick waist by a cord of deer's hide. He wore crimson leggings and moccasins, and in the hollow of his left arm carelessly rested a long, heavy rifle. He was a man of large stature, and vigorous form, with sinews inured to every hardship of the wilderness. His features were bold, and of an elevated character, and his skin was embrowned, by exposure, to the swarthy hue of the Indian. He was silent, and, like the rest in the boat, in the attitude of expectation. Beside him sat a resolute-looking youth, habited like the oarsmen, save that he wore in addition to their costume a crimson sash as a badge of superiority. His hand rested on the short helm, and he evidently was the steersman of the barge. There was no conversation, and scarcely was their breathing audible. Suddenly a low, prolonged whistle was heard from some point above the banks of the inlet, and the moment afterwards a tall young man in a rich hunting dress, and wearing a bonnet ornamented with the war-eagle's crest, descended the bank, and leaped on board.

"They come!" he said, in a low guarded tone. "Dip your oar-blades just beneath the surface, men, and be ready to send the barge into the deep stream at a single effort!"

* A romantic cave on the river's bank, twenty leagues above the mouth of the Ohio, famous as having been, in former years, the haunt of a band of river pirates, headed by a young man of a singularly bold and adventurous character.

Twenty oars fell lightly into the water: the men sat in the attitude to obey his order. In a few minutes afterwards, the silence that followed his words was broken by the distant fall of heavy sweeps from the river, as if a freighted barge was laboriously making its slow way up against the stream. Nearer and nearer the sounds came, and soon after there appeared in sight one of those keel-boats, that in that day navigated the western rivers. Slowly it ascended against the current, keeping far out in the middle of the stream, as if purposely avoiding the shore, along which, with a line passed from tree to tree, it was usually towed. It was deeply laden with merchandise from New Orleans, and seemed also to contain passengers, for occasional notes of a guitar, accompanied by a rich manly tone, with a sweet female voice intermingling, came pleasantly across the wave to the ears of those in the concealed barge. Slowly and heavily it ascended, until it had crossed the wake of the moon, and got some distance higher up the stream than the inlet, when the young man who had leaped into the barge, cried in a thrilling tone—

"Now! Let her slip!"

Like an arrow loosed from the bow-string, the barge shot out from the dark inlet into the bright river, and still impelled forward by a score of flashing oars, cast the spray high from her prow as she swiftly approached the ascending boat. In a few seconds she was under her stern, and the young captain sprang from the little deck upon which he had been standing on board of her.

"Make no resistance, and your lives are safe," he cried coolly.

So unexpected was the appearance of the barge, and so bold and daring the act, that the few men on board had neither time nor disposition for defending themselves. Without a word they submitted, and at the command of their captor began to pull in towards the inlet. On the bows of the captured barge was constructed a small cabin for such passengers as occasionally chose this mode of conveyance to reach the Canadas and Atlantic States from New Orleans. Towards this apartment the young man, who had suffered none to come on board save himself and the hunter, now made his way. Before its entrance was dropped a curtain, and he heard from within the low voices of prayer. He hesitated, for he was just about to enter, and paused to listen. He could not hear the words distinctly, but the sweet tone of voice in which they were uttered, and the fearful eloquence of the pleader, spoke to his heart. He gently put aside the curtain. With her back towards him, he beheld, kneeling before a crucifix, a graceful girl, with light flowing hair covering her shoulders, and half concealing a figure of exquisite symmetry. Beside her, with his left arm about her waist, knelt a youth scarce twenty years of age. In his right hand he grasped a richly chased pistol, with the muzzle directed to her heart, while his calm eye was set resolutely upon the entrance to the cabin, as if expecting momentarily to see it violently crossed. He was a strikingly handsome and manly youth, with hair like the plumage of the raven, a high, pale forehead, with a Grecian profile of the highest finish. His person was tall, and strikingly elegant, and grace rather than strength, had given the last touches in filling up the outline.

The young captain saw at a glance his sacrificial intention, and was for a moment uncertain what course to take to prevent it; for he felt convinced from his determined eye, as well as from the waiting submission of the maiden, that he would offer her up a victim to virgin purity if he should make the first step to advance. His bold spirit, however, soon came to a decision. At a single bound he was beside the youth, and in an instant he possessed himself of the weapon. In the struggle it went off, and the ball passing through the cabin door, slightly wounded one of the oarsmen in the barge. Instantly the deck of the captured boat was crowded with his companions, who rushed towards the cabin with cocked pistols, and cries of vengeance.

"Ho! what is this folly?" demanded the chief, confronting them. "Back to the barge, and he who dares leave it without orders, shall be shot in earnest! To your boat!"

"We thought violence had been done you, captain, and came to your assistance," said one of the men, apologetically.

"Not a word more—clear the deck, every man of you!" He

was obeyed with the readiness of men accustomed to obey without question; and then turning to the youth, he said in a courteous tone—"Pardon my wildness, sir, in wresting your pistol from you—but I divined your fatal purpose, and was desirous of averting it. Be under no apprehension, sir, on this maiden's account." As he spoke he looked towards the young girl, who still knelt as before—but now with her face laid upon her arms and buried in her cloud of hair. "She is doubtless your sister?"

The youth impatiently paced the little cabin several times without replying to this interrogatory, and then abruptly stopped and looked the young captain for a moment full in the face—"Yes, she is my sister!" he said, with peculiar emphasis upon the last word.

The other scrutinized in turn his features, as if doubting, and then said—"Be she thy sister, thy betrothed, or thy wedded bride, she is safe."

"I thank thee, Heaven! for his words sound like truth and sincerity," said the kneeling maiden, lifting her face from her hands and looking upward. Then rising, she turned for the first time towards him her face, and fixed upon him, with eloquent yet silent gratitude, a pair of lovely blue eyes in which tears were yet glittering. The young captain thought he had never beheld such celestial loveliness. She was scarcely seventeen, but every motion was grace, and every movement but a new-born charm. Her eyes were so serenely blue, one could not but think of summer skies in looking on them. Her features were beautiful, and her smile enchanted and bewildered. Her complexion was like alabaster, but with the glow of life warm beneath the surface, while her cheek was just tinted, as if light had passed through a moss rose leaf upon it.

"Well, sir captain," said a stern voice behind him.

He turned quickly from the contemplation of her beauty, and beheld the hunter leaning upon his rifle at the door of the cabin.

"Ah, my brave Boone! I had forgotten my courtesy to thee. The captured boat shall proceed, as I promised you, unmolested, when I have taken from it," he added smiling, "my customary river-tithe. These rogues may thank you that they get off so well. We are near the shore and I will soon send the craft on her way again. To lighten her a few tons will be a charity to the rowers."

"Come aside with me, fair sir," said the sturdy hunter, touching his arm.

The young man retired with him a little way from the cabin door, which they had no sooner left than, more like two lovers than brother and sister, the captives flew into each others embrace.

"My betrothed, my life, my dear Adèle!" "Henride, my beloved Henride!" were their mutual explanations as they remained folded in each other's arms. At this instant an inner door of the cabin opened, and a priest of venerable appearance entered the cabin, from a state-room within. They both fell at his feet and each clasped one of his hands.

"My children, Heaven will protect you in this hour of danger and trial."

"Father, unite us in marriage as we kneel before thee, that we may die together, if need be, that our souls may be united in one in the world of spirits," said the youth.

"Nay, Don Henride, it may not be. If your love be pure it will exist beyond the grave. My brother's child has been consigned to me as a sacred trust, and time must determine whether she shares a throne, or becomes the bride of the church. Nay, ask me not again! A few short days will bring us to the patriot chief's island-abode, and his word will decide your destinies. You have my blessings, my son. Henceforth let this subject rest until thy claim be decided."

"My brave young captain," said the hunter, on taking him aside, "you have done me a kindness I shall never forget. From the day you found me lying near your hold, wounded from the attack of two enraged panthers, and bore me to your rendezvous, and sheltered and tended me until I recovered up to this night, my regard for you has hourly grown upon me. I love you as a son. You have many good qualities and many very dangerous ones. Your spirit is quite too hasty, and you are apt to use your power a little too unfeelingly."

The young man evidently became impatient. The hunter observed it, and added,—"Let this drop—only be merciful where you can be. I wished to say to you, have nothing to do with this conspiracy that is on foot. You will ere long doubtless be sought out, and its arch intriguing leader will try to entice you into it. Mexico will have rulers enough without your aid. Now if you wish to be more active, and honest at the same time, disband your men, and with your rifle at your shoulder, unite your fortunes with mine in the wilderness. It is the only life for a man who loves to breathe God's fresh air! I like you for shunning towns and houses—they are fit only for women and children; but it's a pity you couldn't be satisfied with killing Indians, without way-laying, robbing, and murdering white men!"

"Have you done?" demanded the captain.

The hunter made no reply, but taking his hand and grasping it warmly, turned from him in silence, and walked to the stern of the boat.

The barges had now reached the shore, and were run into the inlet, which so effectually concealed their position from the river, that no passing boat could have suspected their neighbourhood. The captain was not a little surprised on re-entering the cabin, to find the priest added to the party he had left.

"A good night to thee, holy father," he said, with mingled respect and freedom of manner. "I regret I should have interrupted your voyage, but our stores here have got somewhat of the lowest just now, and hearing some hours since, from my men, of the approach of a boat, I prepared to levy my usual toll upon all passers-by."

"You are then the Chevalier Rapin Carra?" responded the priest.

"At your service, holy father."

"I know your character and will trust you."

"Your proffered confidence does me no more than justice, father. It will be some three hours yet before your boat will proceed, as she is freighted with weighty as well as costly merchandize. Your own private goods shall remain untouched. By the good mass! your presence is timely! One of my band is near his death and needeth ghostly comfort. I pray you follow me to my abode. It is a rude one, but none so rude that Death will not pay it a visit. Fair Sennora, and you, noble sir, will you accompany us?"

The priest did not hesitate to comply when a dying man needed the last offices of religion; and, accompanied by the lovers, stepped on shore, and by a rude path followed their conductor to the top of the glen and across a natural lawn, sloping to the river. Before them, through the trees, they saw a bright fire, towards which they directed their steps. As they approached, they discovered that it was blazing on the floor of a vast cavern which yawned in the base of a rocky cliff that towered amid the forest. Around the fire and dispersed through the cavern, were several groups of river freebooters, habited mostly like those in the barge. The steps of the maiden faltered here.

"It is terrific! I dare not go, Henride. Uncle stay! Go not forward among those savage men!" She shuddered as she spoke, and clung to the arm of Don Henride.

"Fear not, my child! Heaven watches over the innocent and pure. Let us go forward."

Reassured in some degree, the beautiful girl suffered herself to be led into the midst of the cavern. It was a vast arched vault in the rock, forty or fifty feet in depth, from the front to the rear, with a low entrance: when a few feet on the inside, it expanded till it spread into a rude dome. It looked upon the moonlit river, and boldly commanded its winding for many a mile. In the mouth of the cave was stationed a heavy iron gun, directed towards the river; and, arranged in various fanciful forms, like weapons in an armoury, around the walls of the cavern, were suspended guns, sabres, pistols, and pikes. Strewn upon the bottom of the cave, were skins of wild beasts, forming couches for at least sixty men, many of whom were sleeping or couching upon them. The group about the fire was engaged in the rude culinary pastime of roasting a deer in its hide. In the rear of the cavern the

visitors noticed boxes, casks, kegs, barrels and bales of merchandize, piled to the roof, the fruits of the piratical adventures of the river marauders. Many of the men in the cave were Spaniards, Portuguese, and Frenchmen, but the majority were young men from the Atlantic States, of desperate fortunes and character, whom the fame of the river-chevalier Rapin, had drawn to him. Hanging from the vaulted roof of the cavern, they discovered a rope-ladder, which, on closer scrutiny, assisted by the fitful glare of the fire, they beheld was attached to an opening twenty feet above them.

"That is my sleeping chamber and strong-hold," said the chevalier, with a smile, on observing the direction of their gaze. "Nature, in forming this cave, kindly constructed a second story to it, there being, as you see, a cavern above this, and only accessible from below by this rope-ladder. When I retire for sleep I ascend this ladder and draw it up after me; and I need no guards to protect me from the assassin's steel. But I have also here another apartment which I will show you."

As he spoke he led them to the rear of the cavern, and lifting a curtain, ushered them into an artificial apartment constructed within it. It was hung on every side with the richest tapestry, and furnished with ottomans and luxurious sofas. The floor was overlaid with soft panthers' skins, and highly finished weapons of war and of the chase were hung, as ornaments, about the entrance. From the centre was suspended by silver chains a lamp of the same material, which shed a clear and brilliant light throughout this gorgeous apartment. They looked about them with surprise. Ere they could realise what they saw, two slaves entered bearing costly wines and refreshments upon chased salvers, and with the hospitality of a princely host, yet not without characteristic irony, their entertainer desired them to partake of the wines and viands.

"This Sicilian is scarce inferior to nectar, holy father. It will suit your palate, being a favourite wine of the Church. But for the delicacy of my taste it would now have been in the vaults of the Monastery at Saint Louis, whither it was on its way when I intercepted it. You will like those figs. They were sent as a present from the Convent of St. Ursuline's at Orleans, to his Reverence of Montreal, but missed their way. The salvers, I see, attract your eye. They once did service in the Bishop's palace at Havanna—you perceive they still bear his armorial bearings."

"Young man, it ill becomes you to add mockery to sacrilege," said the venerable priest, sternly. "I can partake in no spoils from God's heritage. Lead me to the dying man. Thy guilt and levity have pained me."

"Pierre, how is Louis Erneste?" the captain demanded of his slave.

"He die jus' aft' sun down [mas' capt.," answered the African.

"Heaven then hath shrived him, holy father," said the chief, carelessly.

"Heaven have mercy on his soul," muttered the father, crossing himself devoutly.

"Amen!" responded Don Henride and Adèle.

The chevalier looked upon the devout expression of the lovely girl's face as she repeated the prayer, and some emotion seemed to possess him, evidently excited by her beauty. He glanced at her again, and a third time, under its impulse, until his manner attracted the lover's eye, when he turned carelessly on his heel, as if to leave the apartment. At this instant, a bugle was sounded sharply in the distance.

"Ha! what means this signal from that quarter?" he cried, starting with undisguised surprise. "L'Eveque," he said, turning to an inferior officer, who then entered hastily, as if to communicate some intelligence—"L'Eveque, I know it! My ears are as sharp as thine. On your life, answer for the safety of these prisoners on my return."

"Prisoners!" repeated Don Henride.

But the chevalier was gone. At the outer entrance of the cavern he met his lieutenant.

"What means this, Albert? Ha! there it sounds again."

"I have just descended from the look-out and from its

summit could discern a barge at anchor, a mile up the river, from which it came. As I came down, a small boat put off from it, and is now making towards our port." A third time the bugle was heard.

"That bugle rung with a military key. It may be a detachment of soldiers sent against us—yet they would hardly herald their approach. It seems a note of parley, too! Get the men under arms, and be ready to resist any hostile attack. I will go and see what visitors we are likely to expect."

With these words, Rapin hastily descended to the river, and sprang into a small boat which lay beneath the branches of an overhanging larch, and in which reclined four oarsmen. The voice of their chief roused them from their indolent repose, and in an instant the light boat was swiftly following the line of the shore, yet keeping so close in with the black shadows of the trees, as to be scarcely visible. The oars were muffled, and so lightly were they dipped in the water, that they glided along noiselessly. In a short time, the sound of oars was heard approaching from up the river. He then bade his men cease rowing, and keep still, by holding to the limb of a tree, beneath which they were passing. The strange boat soon appeared in sight, descending the current a few yards from the shore. It came opposite to them, and the chief saw that it was rowed by six men, and that two gentlemen, one wrapped in a military cloak, and the other in a citizen's dress, sat conversing in the stern. Above their heads a small white flag floated in the moonlight. The robber chief let them pass, saying to himself—

"This looks like the opening of the conspiracy worthy Boone warned me against. Let them go to the cavern. I will be with them as soon as I ascertain the complexion of the craft anchored above."

The boat of the strangers kept on its way without interruption, and the chevalier continued to pursue the winding shore of the river as before. Half a mile further above, he came in sight of a large river lugger, such as were, in that day, built to descend the rivers of the west. It had two short masts, and one half of its length was covered with a roof, on which a sentinel was pacing to and fro. On the forward part of her was plainly visible a couple of mounted carronades, and a large number of men were on board of her.

"I must guard against treachery, I see," said the young river-chief, after surveying the vessel for a few minutes. "Ha! what have we here?" he suddenly exclaimed, starting up. "By Heaven! another craft, the very fellow of this!"

The object that attracted his attention was a second barge, with sails hoisted, that slowly swept in sight around a point above, and came majestically down the stream. When within a short distance of the other, it lowered its sails, rounded to, and dropped anchor. Before he recovered from his surprise, a third vessel, of a smaller size, and different construction, made its appearance, and then directly after, came a fourth, and a fifth, till eleven barges, keel-boats, peroques, and luggers, with a vast square flotilla, burdened with camp equipage, had hove in sight round the point, floated down, and dropped anchor opposite to his position.

"This arrangement looks warlike, and were it not so imposing, I should fear it was an expedition against me," said the young captain, who had silently observed their movements. "It is the scheme against Mexico come to a head, and yonder boat I passed, doubtless bears some proposition for Rapin of the Rock to join it. I will return and give these gentlemen a hearing. They little suspect what interest the outlaw, Rapin Carra, has in this matter. Bend to your oars, men! I would be at the rendezvous."

The strangers, on arriving opposite the strong-hold, had pulled in near the shore, and hailing, asked permission to land and be conducted to the Chevalier Rapin. His lieutenant received them, and led them to the cavern, in front of which the whole band was drawn up in hostile attitude. Here, under a guard, they were detained until the captain's arrival. He was soon seen advancing across the mountain space between the river and the cave.

"Is this the Chevalier Rapin I address?" asked, with courteous ease, the gentleman in the military cloak, meeting them a step or two ere he reached them. On being answered

in the affirmative, he added, in a lower tone of voice, as if inviting confidence—"It would give me pleasure to hold a few moments' conversation with you apart from your people."

The chevalier preceded them into the cave, and signified his readiness to listen. They stood beneath a lamp which cast its broad light upon the countenance and person of the gentleman who had addressed him, and revealed a face full of intellect, an eye piercing as the eagle's, features noble and well defined, and a forehead proud and commanding. His bearing was characterised by native ease and dignity of manner, and there was a certain military elegance in his mien, that distinguished him both as a soldier and a gentleman. On the countenance of the other, who was taller and stouter than his companion, was stamped resolution, singularly blended with benevolence. He was a dark, handsome man, and looked like, as he was, a high-born Milesian cavalier. A moment was passed in mutual scrutiny of each other's persons, during which the young captain was not less struck with the commanding port of one, and the chivalrous bearing of the other, than they were impressed with the fine manly person and courteous manners of one whose profession was so lawless, and with whom crime was daily pastime.

"Sir Chevalier," said the military man, at once unreservedly opening the conference, "you see before you the leaders of an expedition, which has been three years maturing, for establishing an eastern Mexican empire, the capital of which shall be——"

"Now, colonel," said the Milesian, interrupting him, "I fear you unfold your plans too freely."

"Nay, Blennerhasset, the chevalier must have all our confidence or none. New Orleans, sir chevalier, we design shall be the capital of our new Empire. Once in possession of this city, and I can count upon twenty thousand Mexican troops, and a large Spanish fleet, in thirty days thereafter. The possession of this key to the great valley of the West, will give us the empire of it, and from the lakes to the Mexican gulf, from the Alleghanies to the Rocky Mountains, there will be established one individual empire that shall own no rival. We are here to invite you to join us."

He paused, and fixed his penetrating glance upon the young captain's face. For a few moments, he seemed to reflect upon the startling disclosure he had listened to, and then said——

"Meanwhile, gentlemen, this scheme were feasible, could you possess yourselves of New Orleans, and afterwards receive the promised strength from Mexico."

"New Orleans is weakly garrisoned, and we have hopes also of getting one high there in command to favour us. Should he not do so, we have forces with us sufficient, with your aid, to ensure success, if a bold stroke be made. With regard to Mexico, you should first know its peculiar politics, and the basis of our hopes from that quarter. The empire of Mexico is divided into two great political parties, the heads of which are two rival aspirants to the throne. One of them is he who is already in possession of it through usurpation; the other is a young girl, the daughter and heir to the late emperor, whose sceptre is now unjustly wielded by his brother—her uncle. The princess's faction, finding it in vain to overthrow him, have determined to divide the empire, and establish a new one, and place the princess at the head of it. A proposition has been made to his government for aid in this project, but it was declined. Miranda, their ambassador, then made private overtures to myself and others, to which I have acceded. Thus far our plans ripened. Within a mile of you lies our fleet of eleven boats, with seven hundred men. Add to our forces your own, and receive in our army, for yourself, the rank of a colonel."

"This were selling prudence for servitude—my liberty for a badge of slavery. No, gentlemen, I am content as I am."

"Where now you command but a handful of outlaws you will then command an army," continued the other.

"Yet I had rather be the chief of a band of outlaws than be second in an empire."

"You will gain inexhaustible wealth."

"My resources, gentlemen, are sufficiently ample. Not an argosy goes freighted by but does homage to my power. No,

gentlemen—the hand of the princess would scarcely tempt me from my rock."

"The hand of the princess!" repeated the chief conspirator, with a glance of mistrust. "Can he suspect?" he said aside to his companion.

"It may be," answered the other, with a smile; "you had best not urge him further, lest he rival you. I faith! he is a proper looking free-companion!"

The other bit his lip and slightly smiled. The quick ear of Rapin had caught every word.

"Pray, gentlemen, where is this princess during the pending of the expedition?"

"Awaiting the issue in a convent at New Orleans, under the protection of an uncle high in rank in the Romish church, and one of the spiritual leaders of our confederacy. He was to have been with us at our island rendezvous some weeks since, to confer with us, but impatient at his delay, we have already launched forth upon the enterprise."

"Was he a tall, venerable man, with white locks?" asked the chevalier, with some interest.

"Yes!" answered the conspirator, with surprise.

"And is the princess very fair, with soft blue eyes, and hair like a cloud in the sunlight?"

"You have described her with equal poetry and truth," said the Milesian, smiling.

"Gentlemen, I will join you in this expedition!" he said, with a readiness that surprised them.

Again the chief of the conspiracy bit his lip, and seemed to search with his dark piercing eyes the inmost heart of the young man. But the quiet expression of his face baffled even his keen scrutiny.

"Do you mean what you say, sir chevalier?" he asked with doubt.

"I do! To-morrow I will follow your fleet, and on its arrival at New Orleans place myself and men at your disposal."

Again the searching glance of the conspirator scanned his face, and then, as if throwing aside an unworthy suspicion, he frankly grasped his hand.

"Be it so—we gladly accept your services. It is time we should return to our flotilla, and get under weigh, for the dawn must find us many leagues below this."

"In the morning, I will follow you with my boats. Adieu, gentlemen!" he said, as he took leave of them at their boat.

The young river-chief followed with his eyes the ascending barge, until it was lost by a bend in the shore.

"There goes a dark and dangerous man," he then said.

"But with all the subtlety of his active spirit, with all his towering ambition and arch diplomacy, I will defeat his hopes, if what I begin to suspect with reference to my fair prisoner prove true—I will snatch the prize from his very grasp, for I like not the man. There is a cunning, serpent-like look in his eyes, that my nature rises against. It were strange, indeed, if what I believe prove true! I will at once confirm or destroy my suspicions. How the past rushes back at the thought!" He turned and walked towards the cavern, as he spoke.

"Your lieutenant reports the keel-boat ready to proceed captain," said one near him.

He turned and beheld the huntsman.

"Then proceed on your way in peace, brave hunter. Farewell!" and the chevalier prepared to go forward.

"But the passengers?" he ventured to inquire.

"They will remain," was the decided reply.

"Young man, surely you will do no wrong in this matter."

"Who made you my judge, sir?" cried the chevalier, angrily. "Leave me while you can do so in safety."

The old hunter gazed after him a moment as he strode towards the rock, and then, with a sigh, turned his footsteps towards the barge. Shortly afterwards he was proceeding on his way up the river.

The chevalier was soon in the presence of his prisoners. "Holy father, I would a word of private conference with you," he said, as he entered.

The priest followed him into the large apartment of the cavern and seated himself near him in a recess.

"Reverend father, I would ask thee first who the noble youth is with thee?"

"Nay, son, it can matter little to thee?"

"It matters much. Be frank and open. I know more than you suspect my knowledge of. Is he the maiden's brother?"

"No, save as a Christian."

"Humph! I thought as much. Is he not her lover?"

"Nay—they are both but children."

"And yet, holy sir, you are ready to wed her to an arch and hoary conspirator, as the price of assisting to restore to her half of her empire."

"How know you this?"

"Answer me, father—is the maiden not the Princess Adèle, whose right to the Mexican sceptre is now contested?"

"I may not conceal it from thee," answered the priest, surprised and alarmed.

"Wherefore is she with thee? Is it because, impatient in thy ambition to place her upon thy brother's throne, thou wouldst hasten to sacrifice the victim? Old man, thou art hoary in guilt, to do this thing even in thy mind! Dost thou not see she loves the youth as her life, and even the cloister will tell thee that to make over a maiden's plighted heart to another is to break it. And to whom wert thou about to give the lovely girl? A man twice her age, familiar with all duplicity, and whose thirsty ambition would even make her a stepping stone to still higher powers than her hand could confer. A dark and corrupt man—a traitor to his country and honour. And in such a guilty bosom you would lay this spotless dove! Think you it would rest there long uncontaminated? No, no, holy father! Who is this youth?" he demanded abruptly.

"A Mexican grandee's son, and her cousin german. They were betrothed in infancy and grew up together until three years ago, when it became politic to separate them, and to dispose of her hand to the saviour of her country."

"And do you *thus* term this arch conspirator? Ambition—not love for your country, priest—ambition, such as wrecked Lucifer—alone inspires him to establish the empire you propose. No, holy father! Her empire must be won by other means and by other hands. How happens this youth, then, with the princess?"

"He followed her to her convent, and lived near it three years in disguise, it seems, with frequent opportunities of communication with her. Hearing of this, I removed her, to bring about, by her presence and my influence, a more speedy issue to the long pending expedition. The third day after leaving the city, one of the crew cast aside his outer dress and Don Henride stood before me."

"A gallant youth and worthy of her. So he has been wooing his way all along the voyage! Truly, I like that. But to be sure it would not have harmonised with thy sacred office to throw him overboard. Father, this matter must be managed differently. I have done much mischief in my life, I will now do a good act to atone for it. These two must be made one this hour."

"Never!" said the priest, firmly.

"Is thy hope in the success of this conspirator thy only objection?"

"The only one."

"Come with me."

He then led him from the cave, and ascended by a winding path to the highest summit of the rock.

"Now tell me what thou seest, father, to the East, where the moon shines bright on the river."

"Surely, a fleet of many vessels sweeping past with the current," he said, with surprise.

"Thy eyes do not deceive thee. On the deck of the foremost stands the conspirator chief and his friends. They are on their way to the siege of Orleans. Is it not a brave sight, father? How stately they move past!"

"How know you this to be his fleet?" asked the priest eagerly.

"Within the hour its chief—the husband thou wouldst pur-

chase for thy niece, was here, on land, in conference with me. He made me a proposition to join him."

"And you—"

"Consented!"

"And, if I rightly interpret that smile," said the priest "*consented but to betray him!*"

"Thou hast rightly interpreted, holy father. Thou seest now, that without my aid you have no interest in yonder expedition. That aid you will never obtain. Give your consent to the union of Adèle with Don Henride, and she shall not only recover the half of the kingdom, but the two shall sit together on the very throne of Montezuma."

"There is a strange power in your words. How wilt thou assure me of their fulfilment?"

"Had the late emperor no other child than this daughter?" asked the chevalier, abruptly.

"He had a son, who, if he had lived, would be now twice her years."

"What became of him?"

"In early manhood he became dissolute, drew his sword upon his imperial father, and then fled into the mountains, where he gathered around him a numerous band of the refuse of society, and by his depredations, filled the land with terror. Finally, he was outlawed and afterwards taken and beheaded."

"It was a faithful friend who died in his stead. Don Ferdinand Calatreva stands before you, reverend father!"

The priest started back with alarm, as if he had seen a spirit, and then, with dilated vision, stared upon him with horror, as he stood before him bareheaded in the moonlight. At length he gasped—

"I do recognise thee, fearful man! It is my brother's very voice and bearing. Oh, my heart would yearn to clasp thee to it. But away, away! Thou art accursed!"

"Nay, father!" he said, kneeling, "I am penitent and beg forgiveness of thee and Heaven, for my crimes against my royal sire. To prove my sincerity, unite Don Henride and my sweet sister, Adèle, and I will place them upon the throne which is mine by right, and which my uncle has usurped."

"First prove thy sincerity by doing what thou hast promised, and thy sister shall then become Don Henride's bride!" at length answered the priest.

"Nay—I have only to set foot on the soil of Mexico, and lift my standard, to become in ten days the leader of an army that shall take the very gates of the imperial capital. This army shall be at thy bidding if thou wilt secure my sister's happiness as I wish. She was a bright cherub when I last saw her, twelve years ago—I have often thought of her with tears and affection. I had purposed never to see my native land again. But I will sacrifice myself for her, if need be, and by my duty to his child, atone in some degree for my filial disobedience and guilt towards my father."

The priest made no reply, but his manner was troubled, and there was a settled purpose of good or evil in his eye, that the young chief did not altogether like. They returned to the tapestried apartment, where they had left the lovers.

"Father, wilt thou do my bidding?" again asked the chevalier.

"They shall be united," answered the priest, gloomily and evasively.

"Nay, holy father, I like not this reluctance. *It must be done* to defeat for ever the hopes of this conspirator."

"It shall be done," he solemnly answered. "Kneel down, my children. I will grant your wish, so often expressed."

They knelt, and he performed the ceremony in a deep, sepulchral, and ominous tone, that chilled their hearts.

"Now, those that God hath joined together let no man put asunder!"

With these solemn words, and as the bridegroom bent over to kiss his bride, he suddenly drew from his bosom a glittering knife and plunged it first into her bosom and then into his.

"Better to die thus than be indebted to the hands of guilt and crime for thy throne," he cried, lifting the reeking blade into the air as they fell dead in each other's arms at his feet. The next instant the weapon was sheathed in his own bosom, and he fell a corpse beside their dead bodies.

The issue of the conspiracy and the fate of the chief actors in it, are known to the world. Its signal defeat and the arrest of the leader, were effected, it is said, by the treachery of a captain of a band of river rovers, who had pretended to link his fortunes with him. The subsequent career of Rapin of the Rock—the bold and terrible Chevalier Carra—can only be conjectured from the fact, that not long afterwards, a young man suddenly appeared in Mexico at the head of a powerful army and demanded the throne as his right, declaring himself to be the legal heir; and that, in a pitched battle, he was afterwards defeated and slain by the emperor's own hand. Whether this was Don Ferdinand Calatрева or not, history nor story make mention.

LORD BYRON IN A STORM.

SAILORS say, that a calm always precedes a storm; and we had reason to give in to such presentiments, for the next morning the wind, which had blown from the south-west, with a light gale, suddenly changed to the opposite point of the compass, and came down with sweeping vengeance.

We close reefed our sails, and made all snug; the captain and Captain F——n declaring we should have to encounter a strong "Levanter," all our efforts were strained to double the headland, and get into the gulf of St. Fiorenzo, but in vain; so that a whole day was spent in tacking and veering, to close in with the land, to no purpose.

Sea-sickness now laid all our ladies and gentlemen "on their beam ends;" Count P——, Mr. Denzell, and the amiable orphan, St. F——, were also overcome, and the whole were bed-ridden. The sun set angrily, and the wind, veering more to the westward, brought us upon a lee-shore to our utter dismay. The elegant Falconer says, in his unrivalled poem—

"Ah! were it mine with tuneful Maro's art,
To wake to sympathy the feeling heart,
Then too severely taught by cruel fate
To share in all the perils I relate,
How might I with unequal'd strains deplore
The impervious horrors of a leeward shore."

These horrors we were doomed to experience; we reduced our sails to a few yards of canvass, and lowered the yards on deck. The sky appeared as an extensive sheet of lightning, and peals of thunder overhead appeared as if ready to dispart the vessel, and bury us in the waves which rolled over the vessel with irresistible force. His lordship, with Capt. F——, Doctor Peto, and Percy S——, kept the deck, and the hatches were battened down over the rest of our company; a tremendous sea carried away the boat which was hoisted up at the stern, and broke in all the bulk-heads of the quarters. For our own safety, all hands, after being revived with a dram, began to throw overboard the guns, Lord Byron himself assisting in this painful duty; the long-boat was then released from her lashings, and, as we wished, the waves soon swept her from the deck; our two cows and goats shared the same fate, as well as one of the horses; the others were in the hold, and to that they owed their preservation. The two large anchors were cut from the bows, and the vessel thus eased of a heavy top-load, danced more lightly over the tremendous billows, and inspired us with fresh hopes. The crew were all ordered to the after part of the deck, and again refreshed with liquor. A light was seen apparently in the clouds, which shone from some mountaineer's cottage; it gleamed with a sickly hue through the storm, and the sailors, with true Italian superstition, pronounced it "St. Peter's watch-light" to show us to the grave: indeed, we were all inclined to think it foreboded no good, as the captain (Benson) informed us that there was no light-house on that part of the coast, and we must be very near the land to see a light so plainly. We soon saw the high mountains, and would have been

"Happy to bribe with India's richest ore,
A safe accession to that barren shore."

The captain, who had been anxiously looking out, acquainted us, so as not to be heard by the crew, that he saw breakers nearly ahead, and had no hopes of being able to weather them. Captain F——n coincided in this opinion, to which his lordship said, "Well, we are all born to die—I shall go with regret, but certainly not with fear." Dr. Peto counted his rosary, and kissed his crucifix with fervent devotion on his knees.

Percy S——, who heretofore made no secret of his infidelity, and whose spirits we thought no danger could ever appal, appeared to have lost all energy, and the horrors of approaching death made him weep like a child. Those names which he never before pronounced but in ridicule, he now called upon in moving accents of serious prayer, and implored the protection of that Being, whose existence he affected to disbelieve. Thus

"Conscience does make cowards of us all."

The horrors surrounding us were too appalling for human nature to contemplate without shuddering, for

"In vain, alas! the sacred shades of yore
Would arm the mind with philosophic lore;
In vain they'd teach us with our latest breath;
To smile serene amid the pangs of death.
Even Zeno's self, and Epictetus old,
This fell abyss had shuddered to behold."

The breakers were now visible to all the crew, to whom his lordship gave his advice to lash themselves to the yards, which they did. Captain F——n and Captain Benson took the helm: his lordship descended to the cabin, where all were too much afraid to be sensible of their danger, nor could they be roused by any exertion of his; he came up with a scent-box in his hand, which he placed by his side, and sat down; he had not sat long when he asked, "Is there any chance?" to which he was answered, "None whatever." "Then," said he, rising, "it is every man's duty to endeavour to preserve the life God has given him; so I advise you all to strip; swimming, indeed, can be of little use in these billows—but as children, when tired with crying, sink placidly to repose—we, when exhausted with struggling, shall die the easier; and with God's blessing, we shall soon be at rest."

His lordship then threw off everything but his trousers, and binding his silk neckcloth about his loins, he sat down and folded his arms across his chest, waited, in tranquil resignation, his fate. Percy S—— lay at his feet in a state of insensibility. His lordship looked down upon him, and ejaculated "Poor fellow." Doctor Peto had covered his head with his cloak, and was stretched at full length groaning in bitter anguish.

Captain F——n was removing some dollars from his coat into the pocket of his small clothes, which his lordship observing, smiled and said, "F——n, do you mean that as a ballast to sink you sooner, or as a bribe to Neptune to give you a berth in his watery palace." The sun was now nearly an hour high, but all was like the twilight of the grave. The sea was long and heavy, and as it broke upon the rocks the crash struck the ear, as though a forest of lofty oaks were falling by a whirlwind. The countenance of his lordship never changed whilst the person who writes this had power to view it; but

The heart that bleeds with sorrow, all its own,
Forgets the pangs of friendship to bemoan.

The breakers now were not a quarter of a mile distant on the leebow when Captain Benson remarked to his lordship, "Our only chance is to put away, a point before the wind, or we are sure to go broadside into the surf and perish at once." "As you like," said his lordship, raising his head and looking upon the danger; he then resumed his former position.

A heavy surge now swept the vessel fore and aft, and carried overboard the doctor, who instantly sunk to rise no more.

His lordship exclaimed, "Good God," and at the moment the vessel rose upon a mountain billow to a tremendous height, from whose summit she descended with the velocity of lightning, as if she was going to bury herself in the remorseless deep. By this rapid movement she was precipitated forward beyond the reach of the breakers, that rolled behind her stern, and burst in impotence, as if incensed at the loss of their destined prey. "We are safe," exclaimed Captains F——n and Benson; "jump men from the yards, and make sail;" this they did with tumultuous joy, which his lordship checked and told them, "Whilst you are working, silently thank God for your miraculous preservation." He then went below, and bringing up a bottle, bade every one drink, himself pledging them. Percy S—— was removed in a state of stupor from his bed; his lordship comforted those below with assurances of safety, and the vessel was laid to, under "snug canvass," in the mouth of the Gulf of Saint Fiorenzo, with every part of which the captain was well acquainted. The sea upon which the vessel rose was the means of her preservation; probably there was not, if the sea had been calm, a depth of two feet water on the rocks over which she passed; but the sea carried her safe over at a moment when every hope, but that of immortality, was gone.

The vessel now rose smoothly, and the hour of eight being arrived, all the party were enabled to sit up and take coffee. The doctor was missed, and his loss occasioned sincere regret; not that he had left a memory behind him either to be beloved or lamented.

He was a selfish, cold, and unfriendly Venetian, and his only recommendation to his lordship was the reputation of his skill, which was much overrated.

Percy S—— had recovered from his fits of fear, and came from his cabin like a spectre from the tomb. His lordship repeated, as he shook him by the hand,

"Cowards die many times before their death,
The valiant never taste of death but once."

"Ah," exclaimed the reclaimed infidel, "I have tasted so much of the bitterness of death, that I shall in future entertain doubts of my own creed." A glass of rum-and-water, warm, raised his drooping spirits, and in twenty-four hours he was the same free-thinking, thankless dog as ever; thus verifying the old distich,

"When the devil was sick—the devil a monk would be—
When the devil got well—the devil a monk was he."

As there was thick fog in the air, Mr. Benson resolved to lay to until it cleared away, and we all began to prepare for a good dinner; our cabin guests during the storm had each of them a fine echo in the stomach, and we who had been rocked upon deck had acquired an appetite for anything but a gale of wind.

All our fresh stock had been washed overboard; hen and turkey coops, dove cages, and even the filtering stones for the water, which his lordship highly valued, were carried away in the flood. There were, however, preserved luxuries of other kinds; portable meats, preserves, &c., and we had an excellent cook; whilst he provided dinner we all bathed (for in the rear of the cabin were two convenient marble baths), and then dressed ourselves.

Our dinner was a happy one; the glass went briskly round: his lordship was in good spirits; he threatened to compose an elegy on the death and resurrection of Percy S——, and the countess said she would set his "dying speech," to music and dedicate it to the spirit of the storm. During these happy moments, so quietly did things move upon deck, that we imagined ourselves under sail, when Captain Benson came down and informed his Lordship the vessel was safe at anchor in Martello Bay, five miles from the town of St. Fiorenzo.

PAY DAY ON BOARD.

OUR ship having been in dock, she was prepared and got ready for sea again. A day or two previous to our sailing, the

ship's crew was paid, agreeably to an admiralty order, and, to picture the scenes which at this time occurred, is a task almost impossible. In the early part of the day the commissioners came on board, bringing the money which is paid the ship's crew, with the exception of six months pay, which it is the rule of government to hold back from each man. The mode of paying is, as the names are, by rotation on the books: every man when called, is asked for his hat, which is returned to him with his wages in it, and the amount chalked on the rim. There is not perhaps, one in twenty, who actually knows what he is going to receive, nor does the particular amount seem to be a matter of much concern: for, when paid, they hurry down to their respective berths, redeem their honour with their several ladies and bomb-boat men, and then they turn their thoughts to the Jew pedlars, who are ranged round the decks, and on the hatchway gratings: in fact, the ship is crowded with them. They are furnished with every article that will rig out a sailor, never omitting in their *parkains*, a fine large watch and appendages, all warranted, and with which many an honest tar has been taken in: they can supply them likewise with fashionable rings and trinkets for their ladies, of *pure gold*, oh! nothing can be purer! Yet with all Mordecai's asseverations its purity may be doubted.

One of our men, after having been paid, in taking a ramble round the deck, thinking how he should lay out more of his money; went down to his berth, and told his mess-mate that there was one of the Jews on board, of whom he had formerly bought a silver watch, and so had several of his ship-mates, for five guineas each, but none of them would go long unless carried; his mess-mate advised him to go and bargain for a jacket, and waistcoat, and when he had got them on, and looking to see how they should fit, the other was to act the part of the boatswain's mate, by coming behind with a rope's end, and begin to start him with it, at the same time calling him a skulking rascal: the plan succeeded; the man, on being cut at with the rope's-end, snatched up his old garments, and ran down the after-hatchway, with the pretended boatswain's mate after him; the Jew confidently expecting the man would return and pay him for the suit of clothes; for, being at the time busily employed in selling his goods, he did not make inquiry until the evening, when the Jews were all ordered out of the ship; he then made it known to the captain, who caused inquiry to be made: the boatswain's mates were called aft, but none of them knew of a man having been started at the time the Jew mentioned; the captain then told Moses, that he could do no more for him, unless the men who had played off the trick were brought to him, and then he would take care they should be punished. On this promise, the Jew went below; he looked with piercing eyes between the guns fore and aft, where the men mess, but could not find the skulker who had so ingeniously taken his revenge, and possessed himself of a suit of clothes. Mortified to think he should be so done, he swore by Moses and the Prophets, he would find the villain; became exasperated, and left the ship, amidst the grins and jeers of the whole crew, who were much diverted and pleased to think that any of their shipmates had tact enough to retaliate so nicely on a Jew.

The word was now passed for the women to stand by, and be ready to go on shore the next day. It is not the happiest moment of a sailor's life when he has to part with his Nancy, but grieving's a folly, and, upon these occasions they generally throw grief and a temporary affection over the taffrail, as commodities they do not take to sea with them. The boats being read alongside, some of our men being full of frolic and fun, had bought bunches of onions and turnips, and would very politely offer a few of the onions to those ladies who could not contrive to get up a cry at parting, without their aid; and, in their cruelty would add a turnip or two, signifying that they were turned adrift; this creates a little merriment with a great portion of the ship's company, and is generally taken in good part by the ladies, who are accustomed to such gambols, and whose hearts are not very sensible of the tender passions; however, the next day at parting, there were a few who felt the separation with concern; here and there one man would appear chap-fallen; another one heave a sigh; and some were waving their hands; while others might

be seen to drop a tear, as a dozen or two had plunged themselves into matrimony during the time we were in harbour, and of course felt as proper on the occasion, when parting from their wives, and not being able to calculate when they might meet again.

OLD JOHNSON.

"But poor as a beggar, and often in tatters

He went, though his fortune was kind without end:

For money, cried Bill, and them there sort of matters

What's the good on't, d'y'e see, but to succour a friend?"

--- Fol-de-rol-de-rol-lol, fol-de-rol-ray. Ha! how are you, gemmen? how are you?—Here I am again, as stanch an old blade as ever knock'd a cock-maggot out of a king's biscuit, or shook a musquito by the ears. Ay, ay, you may talk of your penny-rammers and your Mar-maids in Chancery, your Mix-ican scenes and Cracker-acts of the Ganges; but what are they to the sights I've seed in my life? This is a comical out-o'-the-way world I must needs own, for a man no sooner dowses his coat than somebody else is ready to put it on, and swear point-blank that they have had it ever since it was a jacket. Howsomever that says nothing;—here I am again, and if you want a few more tough yarns from the same winch, I'm your boy. What! did you think I was going to desert? Lord love you, old Jack never was the lad to flinch from his gun or forsake his colours. Let but Humanity beat to quarters and Benevolence take command, I'm on deck in a minute, and clear for action. So you see here I am again—none of your Tom-Coxes-traverse gentry, up one hatchway, down t'other—in every body's mess and nobody's watch. No, no, all fair and square by the lifts and braces, that's poor Jack's plan. None of your tea-for-two and toast-for-six without a friend to share it. Give me the feeling heart and the help in hand adorned with the richest of all earthly gems, the sparkling tear of gratitude; and this puts me in mind of a circumstance that happened the other day.

There, don't be in a hurry; you gemmen of the press are so impatient. "Let me gang ma ain gait," as old Hameish says: that is, hobble along as well as I can. You forget I've got one leg in the grave, and the other is longing to be with his mate; but wait a wee, Mr. What's-your-name, and you shall have it as clear as ink can make it.

Why, d'y'e see, an old messmate of mine got married some years ago; and what then?—why, he'd a whole troop of children before he could look round him, and that's poor work upon three-farthings a year, and receive it quarterly—it made him calculate his vulgar fractions. Howsomever he struggled with his difficulties, kiss'd his wife, nursed the bairns, and turned a penny when he could get it.

Well, d'y'e see, about six weeks ago he was sitting on the bench a-top of One-tree-hill in the Park, in a lack-a-day-sigh-cal manner, swinging one leg for pastime, and beating a tattoo upon the other, occasionally picking his teeth, to clear them of the remains of a chestnut dinner. His last shilling was confounded restless, and had been driven from pocket to pocket, undergoing fifty examinations to ascertain whether it was a good-un. He was giving it another twirl in the air, when a poor ragged tar ranged up alongside, and, dowsing his truck, supplicated charity.

He had not been accustomed to beg, for his head hung down with shame, without raising his eyes to the person he implored; and he was actually wearing round to sheer off without having his petition answered, when my messmate sprang up, grasp'd his hand—What, Johnson, my worthy old soul, come to this?—"Ay, ay, Mr. T—, (said the veteran,) needs must when the old-un drives; and I'm sure, of all the foul fiends, hunger's the worst. But what's the use of distressing you with my complaints? I know you've a generous heart and t'will only make you more unhappy, 'cause you can't relieve them. Heaven knows half-pay's little enough for a wife and family, for I hears you're married."

"Why ay, Johnson, I have a family, and they are so dear to my heart that I wouldn't part with one of them to be made lord high admiral, though I confess I'm often obliged to sail close-

haul'd to get 'em a meal. However, they will dine hearty to-day, God bless 'em! and so, my old boy, you shall share all I have in the world; and for to-morrow—why aye—to-morrow—no matter, Providence will never see that man wreck'd on a lee shore that takes in tow an old shipmate in distress: so come along, Johnson—remember

"There's a sweet little cherub that sits up aloft."

Come along, my old worthy,—a crust of bread and cheese, and a glass of grog to the king, will bowse all taut, and get us in good sailing trim.' And away they started for the town.

For several weeks after this poor T— got lower and lower, and his half-pay was spent. Reduced to the greatest straits, in hourly expectation of being ejected from his lodgings for rent, his heart was filled with bitterness.

A few days ago, having failed in an attempt to procure a supply, he returned home half distracted. His wife sat, in calm dejection, with an infant cradled in her arms that vainly sought for nourishment; but not a tear, not a sigh, nor a look, escaped to wound the susceptible mind of her husband; the arrow rankled within, whilst the little innocents around were crying for food. Oh what a scene was this for a parent! 'Almighty Ruler! (exclaimed T—,) what have I done to merit thy wrath? why pour out the phials of indignation on my helpless offspring? But a look from his partner calm'd the intemperance of the moment, and, folding his hands upon his breast, he bowed his head with pious resignation—'Father, forgive!—not my will, but thine be done!'

'Sir, you're wanted, (said the landlady of the house, tapping at the door,) there's the postman with a letter for you.'

'I have no money, my love, to pay for it (said T— to his wife); what's to be done?'

'The postage is paid (said the listening landlady); I suppose they knew you was down in the mouth.'

His heart wrung too bitterly to heed this sore hit, and, hastening to the door, 'Be you Mister Squire T—, of the Royal Navy? (titter'd the man)—be you the gemmen?'

'I suppose that letter is designed for me (taking it); yes, 'tis right.' He returned to his room.

'Who is it from?' inquired his wife.

'I know not (said he); 'tis very carefully seal'd at both ends; but the writing and direction leads me to imagine 'tis from some poor fellow that needs assistance like myself. Oh that the time should ever arrive that I am debarr'd the satisfaction of succouring a friend in distress! (He passed his hand across his face)—However, I will open it and see.' He unfolded the sheet, when the first thing that was presented to his sight was a five pound note. Only those who have felt the pinching fangs of poverty, and witness'd the wants of those so dear to their hearts, without a shot in the locker, grasping at the least gleam of expiring hope—only those can tell what the sensations are when unexpected, unlook'd for, succour comes. He fell upon his knees—his wife clung round his neck—the children gather'd round, while he pour'd forth his heart in gratitude to Heaven. The letter ran thus:—

DR SUR UR ONNER—This kums hopping to find u well, nd to let u sea the gud tun you did old Johnson will niver skip from his art—fust i kud get—bowned to Ingee—dont hundestan letter righting—God bless u

'OLD JOHNSON.'

Need I tell you what follow'd? Oh, no, you can picture it yourself. Worthy soul! may he never want a friend in this world, and have his name enter'd on the Book of Life in another and a better!

JACK'S PARISH.

"As you do not belong to our parish," said a gentleman to a begging sailor, with a wooden leg, "I cannot think of relieving you."

"Sir," replied the tar, with an air of heroism, "I lost my leg fighting for all parishes."

GREENWICH PENSIONERS READING THE GAZETTE.

GREENWICH PENSIONERS READING THE GAZETTE.

"HURRAH, Jem—that's it, my boys!" exclaimed a worthy old petty officer, who had seen some hard service in his younger days; "I knew they could douse the glim and hustle the corporal—else why? arn't they our own condescendants, and arn't we their—"

"There—there, belay all that, owld Jack," exclaimed another; "don't you see that you gabble so loud that we can't hear ourselves think; and what need I ax you of all this gammon to tell us that you were father to one half of the ship's company?"

"Ay, ay!" said the old man, shaking his head; "everybody knows the scandal of your tongue."

"Silence there, both on you," shouted a third, "and let Bill Ferguson overhaul the yarn all ship-shape and proper; just clap on a muzzle—lashing the pair on you."

Bill Ferguson continued; it was the letter of Lord Collingwood after the battle of Trafalgar, and some private accounts of the engagement. The most intense anxiety prevailed as the reader proceeded; and when the death of the brave hero, Nelson, was announced, eyes were glistening through tears; and whilst thoughtless youth cheered for the victory that was won, old age mourned for the life that had been lost. It was a glorious day for England; and had it not have been for the gale that succeeded the conquest, what noble trophies might have graced the triumph.

Ferguson paused repeatedly during his task of reading; he could not get on; his sight was dimmed by the drops of human love and sorrow that trickled from his eyes; and yet there was a proud feeling in his heart. He was a British seaman that had served under his lordship in many hard-fought actions, and looked up to Nelson as his leader and his friend, for he was indeed a friend to all who wore a blue jacket. "Ah, well, he's gone," said Bill, "a noble death his lordship had of it; but yet I could have wished him to have lived a little longer to be made a lord high admiral."

"A lord high admiral! why, he's a lord high admiral now, as sure as he's gone to Heaven," uttered Jem. "Do you go for to think that what our clergy calls the fountain of justice would stop his promotion? Devil a bit of it; and he's hoisted his flag aloft long afore this."

"Ah! how well I can remember him!" said a veteran, with a black patch over his eye. "Lord love his heart, he always took care we had full allowance, whether it was grub, grog, or fighting; and here's another cheer to his memory, for all the snivelling in the world will never bring him back again. Warn't I with him in the owld Minarvy in the Gut of Gibraltar, when we fell in with the Spanish fleet, and was chased by two of their line-of-battle ships, that hoped to snap us up in a moment; but they'd have found themselves mistaken, for the commodore (he was a commodore then) determined to fight 'em both; ay, and he'd have done it, too. Well, away we carried on, and they hard a pelt after us, when a shout was heard abaft—'A man overboard! a man overboard!' and you know, messmates, what a bobbery that cry makes aboard the best-disciplined ship, 'cause every soul wants to save him, and one was hailing this way and another that, and the man at the wheel swings her up, till the sails lifted, and order was sent to the devil. The commodore was down below at dinner, but he ran on deck; and the instant his head appeared above the comings of the companion-hatch, he bellowed out 'Silence, fore and aft!' and my eyes, but the next instant you might have heard the whisper of an oyster, everything was so still, and his voice called all hands to a quiet sense of duty. Down went the jolly-boat from the davits, and the brave Hardy was in her pulling away to pick the poor fellow up, but they never caught sight of him again. You know what the currents in the Straits are, messmates; well, I'm blowed if they didn't carry the boat right slap towards the Spaniards, who were just within gun-shot. The lads in the jolly stretched out with right good will to get back to the frigate; but it was as plain to be seen as Jem's nose there, that it couldn't be done, and us standing on under a press of sail, Nelson paced to and fro the quarter deck every now and then,

looking over the taffrail, till at last, finding our distance from the boat was increasing, he hallooed out 'After guard, back the mizen topsell! By — I'll not lose Hardy either.' It was braced aback, messmates, and the frigate was rounded to; a tap or two of the drum sent us to our quarters, for in course we all expected to have a brush with the Dons. Yet, I'm blessed, messmates, but when he saw our manoeuvre, he not only shortened sail—he actually hove to, and the Terrible, 80, for it was she, wouldn't come down to our gallant little Minarvy. They knew we had hammered 'em only a little while before, and took one of their frigates, and there the great lubber laid, looming like Beachy Head in a fog, whilst we got the hands out of our boat, cut her adrift, and then the lads alow and aloft turned to with a will making sail, the wind favoured us, and away we went happy-go-lucky, and soon ran him out of sight. That's what you may call doing on it."

BARNY O'RIERDON, THE NAVIGATOR.

BARNY O'RIERDON was a fisherman of Kinsale, and a heartier fellow never hauled a net nor cast a line into deep water: indeed, Barny, independently of being a merry boy among his companions, a lover of good fun and good whiskey, was looked up to, rather by his brother fishermen, as an intelligent fellow, and few boats brought more fish to market than Barny O'Rierdon's; his opinion on certain points in the craft was considered law; and in short, in his own little community, Barny was what is commonly called a leading man.

Seated one night at a public-house, the common resort of Barny and other marine curiosities, our hero got entangled in debate with what he called a strange sail—that is to say, a man he had never met before, and whom he was inclined to treat rather magisterially upon nautical subjects, at the same time that the stranger was equally inclined to assume the high hand over him, till at last the new comer made a regular outbreak, by exclaiming, "Ah, lave aff your balderdash, and may be I don't know you and yours, as well as the mother that bore you, ay, in thro; and shure I know the very thoughts o' you, as well as if I was inside o' you, Barny O'Rierdon."

"Thin you know better thoughts than your own, Mr. Whipper-snapper, if that's the name you go by."

"No, it's not the name I go by; I've as good a name as your own, Mr. O'Rierdon, for want of a better, and that's O'Sullivan."

"Thro there's more than there's good o' them," said Barny.

"Good or bad, I'm a cousin o' your own, twice removed by the mother's side."

"And is it the Widda O'Sullivan's boy you'd be, that's left this come Candlemas four years?"

"The same."

"Thro thin you might know better manners to your elders, though I'm glad to see you, anyhow, agin; but a little thravellin' puts us beyant ourselves sometimes," said Barny, rather contemptuously.

"Thro I niver bragged out o' myself yit, and it's what I say, that a man that's only a fishin' aff the land all his life, has no business to compare wid a man that has sailed to Fingal."

This silenced any further argument on Barny's part. Where Fingal lay was all Greek to him; but unwilling to admit his ignorance, he covered his retreat with the usual address of his countrymen, and turned the bitterness of debate into the cordial flow of congratulation at seeing his cousin again.

The liquor was freely circulated, and the conversation began to take a different turn, in order to lead from that which had nearly ended in a quarrel between O'Rierdon and his relation.

After the introduction of the liquor, it would not be an easy matter to pursue the conversation that followed. Let us, therefore, transfer our story to the succeeding morning, when Barny O'Rierdon strolled forth from his cottage, rather later than usual, with his eyes bearing eye-witness to the carouse of the preceding night. He sauntered about in the sun, at which he often looked up, under the shelter of compressed bushy

brows, and long-lashed eyelids, and a shadowing hand across his forehead, to see "what time o' day" it was, and from the frequency of this action, it was evident the day was hanging heavily with Barney. He retired at last to a sunny nook in a neighbouring field; and stretching himself at full length, he basked in the sun, and began to "chew the cud of sweet and bitter thought." He first reflected on his own undoubted weight in his little community, but still he could not get over the annoyance of the preceding night, arising from his being silenced by O'Sullivan, "a chap," as he said himself, "that lift the place four years ago a brat iv a boy, and to think iv his comin' back and outdoin' his eldthers, that saw him runnin' about the place, a gassoon, that one could tache a few months before;" 'twas too bad. Barney saw his reputation was in a ticklish position, and began to consider how his disgrace could be retrieved. The very name of Fingal was hateful to him; it was a plague-spot on his peace that festered there incurably. He first thought of leaving Kinsale altogether; but flight implied so much of defeat, that he did not long indulge in that notion. No; he would stay, "In spite of all the O'Sullivans, kith, and kin, breed, seed, and generation." But, at the same time, he knew he should never hear the end of that place Fingal; and if Barney had had the power, he would have enacted a penal statute, making it death to name the accursed spot, wherever it was; but not being gifted with such legislative authority, he felt Kinsale was no place for him, if he would not submit to be flouted every hour out of the four-and-twenty, by man, woman, and child, that wished to annoy him. What was to be done? He was in the perplexing situation, to use his own words, "of the cat in the thripe shop;" he didn't know which way to choose. At last, after turning himself over in the sun several times, a new idea struck him. Couldn't he go to Fingal himself? and then he'd be equal to that upstart, O'Sullivan. No sooner was the thought engendered, than Barney sprang to his feet a new man; his eyes brightened, his step became once more elastic, he walked erect, and felt himself to be all over Barney O'Riordan once more. "Richard was himself again."

But where was Fingal?—there was the rub. That was a profound mystery to Barney, which, until discovered, must hold him in the vile bondage of inferiority. The plain-dealing reader will say, "couldn't he ask?" No, no; that would never do for Barney—that would be an open admission of ignorance his soul was above, and, consequently, Barney set his brains to work, to devise measures of coming at the hidden knowledge by some circuitous route, that would not betray the end he was working for. To this purpose, fifty stratagems were raised and demolished in half as many minutes, in the fertile brain of Barney, as he strided along the shore, and as he was working hard at the fifty-first, it was knocked all to pieces by his jostling against some one whom he never perceived approaching him, so immersed was he in his speculations, and, on looking up, who should it prove to be but his friend, "the long sailor from the Aysthern Ingees." This was quite a God-send to Barney, and much beyond what he could have hoped for. Of all the men under the sun, the long sailor was the man in a million for Barney's net at that minute, and, accordingly, he made a haul of him, and thought it the greatest catch he ever made in his life.

Barney and the long sailor were in close companionship for the remainder of the day, which was closed, as the preceding one, in a carouse; but on this occasion there was only a duet performance in honour of the jolly God, and the treat was at Barney's expense. What the nature of their conversation during the period was, we will not dilate on—we will keep it as profound a secret, as Barney himself did, and content ourselves with saying, that Barney looked a much happier man the next day. It was in this agreeable spirit, that Barney bent his course to the house of Peter Kelly, in order to put in practice a plan he had formed for the fulfilment of his determination of rivalling O'Sullivan.

As the Irish saying is, "to make a long story short," Barney prevailed on Peter Kelly to make an export, but in the nature of the venture they did not agree. Barney had proposed potatoes; Peter said there were enough of them already where

he was going, and Barney rejoined that, "praties were so good in themselves, there never could be too much o' thim any where." But Peter being a "knowledgeable man, and up to all the saycrets o' the airth, and understanding the the-o-ry and the chemisthery," overruled Barney's propositions, and determined upon a cargo of *scalpeens*, (which name they give to pickled mackarel), as a preferable merchandise, quite forgetting that Dublin bay herring, were a much better and as cheap a commodity, at the command of the Fingalians. But by many similar mistakes, the ingenious Mr. Kelly has been paralleled by other speculators. But that is neither here nor there, and it was all one to Barney, whether his boat was freighted with potatoes or *scalpeens*, so long as he had the honour and glory of becoming a navigator, and being as good as O'Sullivan.

Accordingly, the boat was laden, and all got in readiness for putting to sea, and nothing was now wanting but Barney's orders to haul up the gaff, and shake out the jib of his hooker.

The next day passed without the hooker sailing, and Barney gave a most sufficient reason for the delay, by declaring that he had a warnin' given him in a dhrame (glory be to God), and that it was given him to understand, under Heaven that it wouldn't be looky that day.

Well, the next day was Friday, and Barney, of course, would not sail any more than any other sailor who could help it on this unpropitious day. On Saturday, however, he came running in a great hurry down to the shore, and, jumping on board, gave orders to make all sail, and taking the helm of the hooker, he turned her head to the sea, and soon the boat was cleaving the blue waters with a velocity seldom witnessed in so small a craft, and scarcely conceivable to those who have not seen the speed of a Kinsale hooker.

"Well," said one of Barney's companions, for there were but two with him in the boat, "I was thinkin' myself, as well as Jimmy, that we lost two fine days for nothin', and we'd be there a'most, may be, now, if we sail'd three days ago. What course are you going to steer?"

"You'll find out soon enough when we get there, and so I bid you agin' lay me alone; just keep your toe in your pump. Sure I'm here at the helm, and awoight an my mind, and its fitter for you, Jim, to mind your own business, and lay me to mind mine; away wid you there, and be handy; haul taut that fore-sheet there; we must run close an the wind; be handy, boys; make everything dhraw."

These orders were obeyed, and the hooker soon passed to windward of a ship that left the harbour before her, but could not hold on a wind with the same tenacity as the hooker, whose qualities in this peculiarity render them particularly suitable for the purposes to which they are applied, namely, pilot and fishing boats.

We have said a ship left the harbour before the hooker had set sail, and it is now fitting to inform the reader that Barney contrived, in the course of his last meeting with the "long sailor," to ascertain that this ship, then lying in the harbour, was going to the very place Barney wanted to reach. Barney's plan of action was decided upon in a moment: he had now nothing to do but to watch the sailing of the ship and follow in her course. Here was, at once, a new mode of navigation discovered.

For this purpose he went to windward of the ship, and then fell off again, allowing her to pass him, as he did not wish even those on board the ship to suppose he was following in her wake; for Barney, like all people that are quite full of one scheme, and fancy everybody is watching them, dreaded lest any one should fathom his motives. All that day, Barney held on the same course as his leader, keeping at a respectful distance, however, "for fear 'twould look like dodging her," as he said to himself; but as night closed in, so closed in Barney with the ship, and kept a sharp look-out that she should not give him the slip in the dark. The next morning dawned, and found the hooker and ship companions still; and thus matters proceeded for four days, during the entire of which time they had not seen any land since their first losing sight of it, although the weather was clear.

"The channel," thought Barney, "must be mighty wide in these parts, and, for the last day or so, we've been goin' purty free with a flowin' sheet, and I wondher we aren't

closin' wid the shore by this time; or maybe its farther aff than I thought it was." His companions, too, began to question Barny on the subject, but to their queries he presented an impenetrable front of composure, and said, "it was always the best plan to keep a good bowld offin'." In two days more, however, the weather began to be sensibly warmer, and Barny and his companions remarked, that it was "goin' to be the finest sayson—God bless it—that ever kem out o' the skies for many a long year, and maybe it's the whate wouldn't be beautiful, and a great plenty of it." It was at the end of a week, that the ship, which Barny had hitherto kept a-head of him, showed symptoms of bearing down upon him, as he thought, and, sure enough, she did, and Barny began to conjecture what the deuce the ship could want with him, and commenced inventing answers to the questions he thought it possible might be put to him in case the ship spoke him. He was soon put out of suspense by being hailed and ordered to run under her lee, and the captain looking over the quarter, asked Barny where he was going?

"Faith, then, I'm goin' an my business," said Barny.

"But where?" said the captain.

"Why, sure an it's no matter where a poor man like me id be goin'," said Barny.

"Only I'm curious to know what the deuce you've been following my ship for, for the last week?"

"Follyin' your ship!—Why, thin, do you think it's follyin' yiz I am?"

"It's very like it," said the captain.

"Why, did two people niver thravel the same road before?"

"I don't say they didn't; but there's a great difference between a ship of 700 tons, and a hooker."

"Oh, as for that matter," said Barny, "the same high road serves a coach and four, and a low-back car; the travelin' tinker, an' a lord a' horseback. Don't you know that sometimes vessels is bound to sail undher saycret ordhers?" said Barny, endeavouring to foil the question by badinage.

There was a universal laugh from the deck of the ship, at the idea of a fishing-boat sailing under secret orders; for by this time the whole broadside of the vessel was crowded with grinning mouths and wondering eyes at Barny and his boat.

"Oh, it's a thrifle makes fools laugh," said Barny.

"Take care, my fine fellow, that you don't be laughing at the wrong side of your mouth before long, for I've a notion that you're cursedly in the wrong box, as cunning a fellow as you think yourself. Confound your stupid head, can't you tell what brings you here?"—and so the ship proceeded in its course.

In four days more, however, the provisions in the hooker began to fail, and they were obliged to have recourse to the *scalpeens* for sustenance, and Barny then got seriously uneasy at the length of the voyage, and the still likely greater length, for anything he could see to the contrary, and urged, at last by his own alarms and those of his companions, he was enabled as the wind was light to gain on the ship; and when he found himself alongside, he demanded a parley with the captain.

The captain, on hearing that the "hardy hooker," as she got christened, was under his lee, came on deck: and as soon as he appeared, Barny cried out—

"Why, thin, captain dear, do you expect to be there soon?"

"Where?" said the captain.

"Oh, you know yourself," said Barny.

"It's well for me I do," said the captain.

"Thruce for you indeed, your honour," said Barny in his most insinuating tone; "but whin will you be at the ind o' your voyage, captain jewel?"

"I dare say in about three months," said the captain.

"Oh, Holy Mother!" ejaculated Barny; "three months? arrah it's jokin' you are, captain dear, and only want to freken me."

"How should I frighten you?" asked the captain.

"Why, thin, your honour, to tell God's truth, I heerd you wor goin' there; an' as I wanted to go there too, I thought I couldn't do better nor to follow a knowledgeable gentleman like yourself, and save myself the throuble iv findin' it out."

"And where do you think I am going?" said the captain.

"Why, thin," said Barny, "isn't it to Fingal?"

"No," said the captain; "'tis to Bengal."

"Oh!" said Barny, "what'll I do now at all, at all?"

The captain ordered Barny on deck, as he wished to have some conversation with him on what he, very naturally, considered a most extraordinary adventure. Heaven help the captain! he knew little of Irishmen, or he would not have been so astonished. Barny made his appearance. Puzzling question, and more puzzling answer, followed in quick succession between the commander and Barny, who, in the midst of his dilemma, stamped about, thumped his head, squeezed his caubeen into all manner of shapes, and vented his despair anathematically:—

"Oh! my heavy hathred to you, you tarnal theif iv a long sailor—it's a purty scrape yiv led me into. I thought it was *Fingal* he said, and now I hear it is *Bingal*. Oh! the devil sweep you for navigation, why did I meddle or make wid you at all at all! and my curse light on you, Terry O'Sullivan, why did I iver come across you, you onlooky vagabond, to put sitch thoughts in my head? and so it's *Bingal*, and not *Fingal*, you're goin' to, captain?"

"Yes indeed, Paddy."

"An might I be so bowld to ax, captain, is *Bingal* much farther nor *Fingal*?"

"A trifle or so, Paddy."

"Och, thin, millia murther, weirasthru, how'll I ever get there at all, at all?" roared out poor Barny.

"By turning about, and getting back the road you've come as fast as you can."

"Is it back? Oh! Queen iv Heaven! an how will I iver get back?" said the bewildered Barny.

"Then you don't know your course, it appears?"

"Oh, faix, I knew it iligant as long as your honour was before me."

"But you don't know your course back?"

"Why, indeed, not to say rightly all out, your honour."

"Can't you steer?" said the captain.

"The devil a better hand at the tiller in Kinsale," said Barny, with his usual brag.

"Well, so far so good," said the captain; "and you know the points of the compass? you have a compass, I suppose?"

"A compass! by my sowl an it's not let alone a compass, but a *pair* o' compasses, I have, that my brother, the carpinthir, left me for a keepsake whin he wint abroad; but, indeed, as for the points o' thim, I can't say much, for the childher spylt thim intirely, rootin' holes in the flure."

"Confound your thick head!" said the captain. "Why, what an ignoramus you must be, not to know what a compass is, and you at sea all your life? Do you even know the cardinal points?"

"The cardinals! faix an it's a great respect I have for them, your honour. Sure, arn't they belongin' to the Pope?"

"Confound you, you blockhead!" roared the captain in a rage; "'twould take the patience of the Pope and the cardinals, and the cardinal virtues into the bargain, to keep one's temper with you. Do you know the four points of the wind?"

"I do, and more."

"Well, never mind more, but let us stick to four. You're sure you know the four points of the wind?"

"By dad, it would be a quare thing if a sayfarin' man didn't know somethin' about the wind, any how."

"Well, Paddy," said the captain, after trying to persuade him to come along with the ship, "as you are determined to go back, in spite of all I can say, you must attend to me while I give you as simple instructions as I can. You say you know the four points of the wind, North, South, East, and West."

"Yis, sir."

"How do you know them, for I must see that you are not likely to make a mistake—How do you know the points?"

"Why you see, sir, the sun, God bless it, rises in the aist, and sets in the west, which stands to raison; and whin you stand bechux the aist and the west, the north is forninst you."

"And when the north is forninst you, as you say, is the east on your right, or your left hand?"

"On the right hand, your honour."

"Well, I see you know that much, however. Now," said the captain, "the moment you leave the ship, you must steer a nor'-east course, and you will make some land, near home, in about a week, if the wind holds as it is now, and it is likely to do so; but, mind me, if you turn out of your course in the smallest degree, you are a lost man!"

"Many thanks to your honour!"

"And how are you off for provisions?"

"Why, thin, indeed, in the regard o' that same, we are in the height o' disthress, for, exceptin' the scalpeens, sorra taste passed our lips for these four days."

"Oh! you poor devils!" said the commander, in a tone of sincere commiseration. "I'll order you some provisions before you start."

"Long life to your honour! and I'd like to drink the health of so noble a jintleman."

"I understand you, Paddy; you shall have grog too."

"Musha, the heavens shower, blessin's an you, I pray the Virgin Mary and the twelve Aposhtles, Matthew, Mark, Luke, and John, not forgettin' St. Pathrick."

"Thank you, Paddy; but keep all your prayers for yourself; for you need them all to help you home again."

"Oh! never fear, whin the thing is to be done, I'll do it, by dad, wid a heart and a half."

"Now, then, Barny, the sooner you turn your face towards home, the better," said the captain; "since you will go, there is no need in losing more time. Are you sure you remember my directions?"

"Throth an I'll niver forget them to day o' my death, and is bound to pray, more betoken, for you and yours."

"Don't mind praying for me till you get home, Barny; but answer me, how are you to steer when you shall leave me?"

"The nor'-aist coorse, your honour; that's the coorse agin the world."

"Remember that! never alter that coorse till you see land, let nothing make you turn out of a nor'-east coorse."

"Throth an' that id be the dirty turn, seein' that it was yourself that ordered it. Oh, no, I'll depend my life an the nor'-aist coorse, and God help any one that comes betune me and it, I'd run him down if he was my father."

"Well, good bye, Barny."

"Good bye, and God bless you, your honour, and send you safe."

"That's a wish you want more for yourself, Barny—never fear for me, but mind yourself well."

"Oh sure I am as good as at home wanst I know the way, barrin' the wind is conthrary; sure the nor'-aist coorse 'ill do the business complete." And so saying, Barny descended the ship's side, and once more assumed the helm of the "hardy hooker."

The two vessels now separated on their opposite courses. What a contrast their relative situations afforded! Proudly the ship bore away under her lofty and spreading canvass, cleaving the billows before her, manned by an able crew, and under the guidance of experienced officers—the finger of science to point the course of her progress, the faithful chart to warn her of the hidden rock and the shoal, the log-line and the quadrant to measure her march and prove her position. The poor little hooker cleft not the billows, each wave lifted her on its crest like a sea-bird; but three inexperienced fishermen to manage her; no certain means to guide them over the vast ocean they had to traverse, and the holding of the "fickle wind" the only chance of their escape from perishing in the wilderness of waters. By the one, the feeling excited is supremely that of man's power. By the other, of his utter helplessness. To the one, the expanse of ocean could scarcely be considered "trackless." To the other, it was a waste indeed.

Yet the cheer that burst from the ship at parting was answered as gaily from the hooker as though the odds had not been so fearfully against her, and no blither heart beat on board the ship than that of Barny O'Rierson.

Happy light-heartedness of my poor countrymen! they have often need of all their buoyant spirits! How kindly have they

been fortified by nature against the assaults of adversity; and if they blindly rush into danger, they cannot be denied the possession of gallant hearts to fight their way out of it if they can.

But each hurra became less audible. By degrees the cheers dwindled into faintness, and, finally, were lost in the eddies of the breeze.

The sense of utter loneliness and desolation had not come upon Barny until now; but he put his trust in the goodness of Providence, and in a fervent inward out-pouring of prayer, resigned himself to the care of his Creator.

The night fell, and Barny stuck to the helm as long as nature could sustain want of rest, and then left it in charge of one of his companions, with particular directions how to steer, and ordered if any change in wind occurred, that they should instantly awake him. He could not sleep long, however; the fever of anxiety was upon him, and the morning had not long dawned when he awoke. He had not well rubbed his eyes, and looked about him, when he thought he saw a ship in the distance approaching them. As the haze cleared away, she showed distinctly bearing down towards the hooker. On board the ship, the hooker, in such a sea, caused surprise as before, and in about an hour she was so close as to hail and order the hooker to run under her lee.

"The devil a taste," said Barny, "I'll not quit my nor'-aist coorse for the king of England, nor Bonyparty into the bargain. Bad cess to you, do you think I've nothin' to do but to plaze you?"

Again he was hailed, and fired at: but he preserved his course, and got clear off.

The third day Barny's fear for the continuity of his nor'-aist coorse were excited, as a larger brig hove in sight, and the nearer she approached, the more directly she came athwart Barny's coorse.

"May the devil sweep you," said Barny, "and will nothin else sarve you than conin' forninst me that-a-way. Brig-a-hoy there!" shouted Barny, giving the tiller to one of his mess-mates, and standing at the bow of his boat. "Brig-a-hoy there! bad luck to you; go 'long out o' my nor'-aist coorse."

The brig, instead of obeying his mandate, hove to, and lay right a-head of the hooker.

"Oh look at this," shouted Barny, and he stamped on the deck with rage; "look at the blackguards where they're stayin', just a-purpose to ruin an unfortunate man like me. My heavy hatched to you, quit this minit, or I'll run down an yes; and if we go to the bottom, we'll hant you for ever-more, go 'long out o' that, I tell you. The curse o' Crummil an you, you stupid vagabones, that won't go out iv a man's nor'-aist coorse!"

From cursing Barny went to praying as he came closer—"For the tender mercy o' I caven, and leave my way. May the Lord reward you, and get out o' my nor'-aist coorse! May angels make your bed in heav'n, and don't ruinat me this-a-way." The brig was immovable, and Barny gave up in despair, having cursed and prayed himself hoarse, and finished with a duet volley of prayers and curses together, apostrophising the hard case of a man being "done out of his nor'-aist coorse."

"A-hoy there!" shouted a voice from the brig: "You're a small craft to be so far at sea. I suppose you have provision on board?"

"To be sure we have; throth if we hadn't, this id be a bad place to go a beggin'."

"What have you eatable?"

"The finest o' scalpeens."

"What are scalpeens?"

"Why you're mighty ignorant intirely," said Barny; "why, scalpeens is pickled mackarel."

"Then you must give us some, for we have been out of every eatable these three days; and even pickled fish is better than nothing."

It chanced that the brig was a West India trader; that unfavourable winds had delayed much beyond the expected period of time on her voyage, and though her water had not failed, everything eatable had been consumed, and the crew reduced

almost to helplessness. In such a strait, the arrival of Barny O'Rierdon and his scalpeens was a most providential succour to them, and a lucky chance for Barny, for he got in exchange for his pickled fish a handsome return of rum and sugar, much more than equivalent to their value. Barny lamented much, however, that the brig was not bound for Ireland, that he might practice his own peculiar system of navigation; but as staying with the brig could do no good, he got himself put into his nor'-aist coorse once more, and ploughed away towards home.

The disposal of his cargo was great good luck to Barny in more ways than one. In the first place, he found the most profitable market he could have had; and, secondly, it enabled him to cover his retreat from the difficulty which still was before him, of not getting to Fingal after all his dangers, and, consequently, being open to discovery and disgrace. All these beneficial results were not thrown away upon one of Barny's readiness to avail himself of every point in his favour; and, accordingly, when they left the brig, Barny said to his companions, "why thin boys, 'pon my conscience but I'm as proud as a horse wid a wooden leg this minit, that we met them poor unfortunat craythers this blessed day and was enabled to extend our charity to them. Sure an' it's lost they'd be only for our comin' across them; and we, through the blessin' o' God, enabled to do an act of marcy, that is, feedin' the hungry; and sure every good work we do here is before uz in heaven—and that's a comfort any how. To be sure, now that the scalpeens is sowld, there's no use in goin' to Fingal, and we may as well jist go home. To the divil now wid Terry O'Sullivan, what does he know what's an iligant place? What knowledge has he of iligance? I'll go bail he never was half as far a navigatin' as we; he went the short cut I go bail, and never dar'd for to venture the round as I did."

Nothing particular occurred for two succeeding days, during which time Barny most religiously pursued his nor'-aist coorse but the third day produced a new and more important event. A sail was discovered on the horizon, and in the direction Barny was steering, and a couple of hours made him tolerably certain that the vessel in sight was an American; for though it is needless to say he was not very conversant in such matters, yet from the frequency of his seeing Americans trading to Ireland, his eye had become sufficiently accustomed to their lofty and tapering spars, and peculiar smartness of rig, to satisfy him that the ship before him was of transatlantic build: nor was he wrong in his conjecture.

Barny now determined on a manœuvre, classing him amongst the first tacticians at securing a good retreat. He calculated the American was bound for Ireland, and as she lay almost as directly in the way of his "nor'-aist coorse," as the West Indian brig, he bore up to and spoke her.

He was answered by a shrewd Yankee captain.

"Faix an it's glad I am to see your honour agin," said Barny.

The Yankee had never been to Ireland and told Barny so, and that a pilot was wanted for Cove.

"You know Cove?" said the American,

"Is it the Cove o' Cork, why?"

"Yes."

"I was bred an' born there, and pilots as many ships into Cove as any other two min out of it."

Barny thus sheltered his falsehood under the idiom of his language.

"But what brought you so far out to sea?" asked the captain.

"We wor lyin' out lookin' for ships that wanted pilots, and there kem an the terriblest gale o' wind aff the land, an' blew us to say out intirely, an' that's the way iv it, your honour."

"I calculate we got a share of the same gale; 'twas from the nor'-aist."

"Oh, directly!" said Barny, "faith you're right enough, 'twas the nor'-aist coorse we wor an sure enough; but no matter now that we've met wid you—sure we'll have a job home any how."

"Well, get aboard then," said the American.

"I will in a minit, your honour, whin I jist spake a word to my comrades here."

"Why sure it's not goin' to turn pilot you are?" said Jemmy, in his simplicity of heart.

"Whisht, you omadhaun!" said Barny, "or I'll cut the tongue out o' you. Now, mind me, Pether; you don't understan' navigashin' and the various branches o' knowledge, an' so all you have to do is to follow the ship when I get into her, an' I'll show you the way home."

Barny then got aboard the American vessel, and begged of the captain, that as he had been out at sea so long, and had gone through "a power o' hardship intirely," that he would be permitted to go below and turn in to take a sleep, "for in troth, it's myself and sleep that is sthrayngers for some time," said Barny, "an' if your honour 'll be plazed, I'll be thankful if you won't let them disturb me until I'm wanted, for sure, till you see the land, there's no use for me in life, an' throth I want a sleep sorely."

Barny's request was granted, and it will not be wondered at, that after so much fatigue of mind and body, he slept profoundly for four-and-twenty hours. He then was called, for land was in sight; and when he came on deck, the captain rallied him upon the potency of his somniferous qualities, "and calculated" he had never met any one who could sleep "four-and-twenty hours on a stretch before."

"Oh, sir," said Barny, rubbing his eyes, which were still a little hazy, "whinever I go to sleep, I pay attention to it."

The land was soon neared, and Barny put in charge of the ship, when he ascertained the first land mark he was acquainted with; but as soon as the Head of Kinsale hove in sight, Barny gave a "whoop," and cut a caper that astonished the Yankees, and was quite inexplicable to them, though, we flatter ourselves, it is not to those who do Barny the favour of reading his adventures.

"Oh! there you are my darlint ould head! an' where's the head like you! throth it's little I thought I'd ever set eyes an your good-looking faytures agin."

In such half-muttered exclamations did Barny apostrophise each well-known point of his native shore, and, when opposite the harbour of Kinsale, he spoke the hooker, that was somewhat astern, and ordered Jemmy and Peter to put in there, and tell Molly immediately that he was come back, and would be with her as soon as he could after piloting the ship into Cove.

The hooker put into Kinsale, and Barny sailed the ship into Cove. It was the first ship he ever had acted the pilot for, and his old luck attended him; no accident befel his charge, and, what was still more extraordinary, he made the American believe he was absolutely the most skilful pilot on the station. So Barny pocketed his pilot's fee, swore the Yankee was a gentleman, for which the republican did not thank him, wished him good bye, and then pushed his way home, with what Barny swore was the easiest made money he ever had in his life. So Barny got himself paid for piloting the ship that showed him the way home.

THE SAILOR'S RETURN.

Oh! why dost thou weep, my pretty maid?

And why are thy cheeks so pale?

It becometh not, but o'er the dead,

To thus weep and grievous wail—

My lover is far on the ocean's wave—

He's ploughing the raging main;

Mayhap he may find a watery grave,

And never return again.

Oh! weep not, weep not, my pretty maid,

Chase quickly each care away;

Let smiles once more on thy lips be laid,

And thine eyes beam pleasure's ray.

Come,—dry the tears from those beauteous eyes!

And from such sorrow be free,

Thy sailor's returned—banish your sighs—

Behold thy true love in me!

HAWKINS A. DALTON.

CAPTAIN HOTHAM'S VICTORY.

THE gallant action which we are about to record, was performed off the coast of France, by Captain Hotham, of the Northumberland. Having discovered two French frigates and a brig, steering under a press of sail for Port L'Orient, he endeavoured to cut them off. After several skilful manœuvres, he succeeded in getting near them, just as they were about to enter the harbour, steering parallel to them. At the distance of about two cables' length, he opened his fire, which was returned, not only by the fire of the enemy's ships, but also from three batteries, and for twenty-one minutes was very destructive to the sails and rigging of the Northumberland. His next object was to prevent the enemy from passing on the outside of a dry rock, and compelling them to pass between the Northumberland and it; this they were afraid to do, and in endeavouring to pass on the inside of the rocks they all grounded. The Northumberland was now anchored in six fathoms and a half water, with her broadside on the enemy, at point blank range; they had all fallen on their broadsides, and the mainmast of one frigate and the brig was gone. In this situation, Captain Hotham kept up a constant fire upon them, by which they were dreadfully shattered, and one of them completely in flames. A few minutes before eight, this frigate blew up with a dreadful explosion; and at ten o'clock, the other frigate also was discovered to be on fire; and as the brig was in such a state as to be completely unfit for service, even if she could be got off, Captain Hotham weighed anchor and got to sea.

The gallant captain gives the following circumstantial and interesting account of this action, in a letter addressed to Rear Admiral Sir H. Neale, dated Northumberland, off the Penmarks, May 24, 1812:—

"On Friday, the 22nd inst., at a quarter after ten a.m. the N.W. point of the Isle Groa (Grouais) bearing from the Northumberland N. by compass, ten miles distant, and the wind very light from the W. by N. they were discovered in the N.W. crowding all possible sail before it for L'Orient. My first endeavour was to cut them off to windward of the island, and a signal was made to the Growler (seven miles off in the S.W.) to chase; but finding I could not effect it, the Northumberland was pushed, by every exertion, round the S.E. end of Groa, and by hauling to the wind as close as I could to leeward of it, I had the satisfaction of fetching to windward of the harbour's mouth before the enemy's ships reached it. Their commander, seeing himself thus cut off, made a signal to his consorts, and hauled to the wind on the larboard tack, to windward of Point Taleet, and they appeared to speak to each other. I continued beating to windward, between Groa and the Continent, to close with them, exposed to the batteries on both sides, when I stood within their reach, which was unavoidable. The wind had by this time freshened considerably, and was about W.N.W. At forty-nine minutes after two p.m. the enemy (in force as above

described) bore up in close line ahead, and under every sail that could be set, favoured by the fresh wind, made a bold and determined attempt to run between me and the shore, under cover of the numerous batteries with which it is lined in that part. I placed the Northumberland, to meet them, as close as as I could to the Point de Pierre Laye, with her head to the shore, and the main-top-sail shivering, and made dispositions for laying one of them alongside; but they hauled so very close round the point, following the direction of the coast to the eastward of it, that in my ignorance of the depth of water so near the shore, I did not think it practicable, consistent with the safety of his Majesty's ship (drawing near twenty-five feet), to prosecute that plan. I therefore bore up, and steered parallel to them, at the distance of about two cables' length, and opened the broadside on them, which was returned by a very animated and well-directed fire of round, grape, and other descriptions of shot, supported by three batteries, for the space of twenty-one minutes, and was very destructive to our sails and rigging. My object, during that time, was to prevent their hauling outside the dry rock named Le Graul; but in steering sufficiently close to it to leave them no room to pass between me and it, and at the same time to avoid running on it myself,

the utmost difficulty and anxiety were produced by the cloud of smoke which drifted ahead of the ship, and totally obscured it: however, by the care and attention of Mr. Hugh Stewart, the master, the ship was carried within the distance of her own length, on the south-west side, in quarter-less seven fathoms, and the enemy were in consequence obliged, as their only alternative, to attempt passing within it, where there was not water enough, and they all grounded, under every sail, on the rocks between it and the shore.

"The sails and rigging of the Northumberland were so

[DESTRUCTION OF THE FRENCH SHIPS.]

much damaged, that I was obliged to leave the enemy to the effects of the falling tide, it being only one quarter ebb, while I repaired the rigging and shifted the fore-top-sail, which was rendered entirely useless, working to windward during that time under what sail I could set, to prevent falling to leeward; in which interval, at five o'clock, the Growler joined, and fired on the enemy occasionally. At twenty-eight minutes after five, I anchored the Northumberland in six and a-half fathoms' water, Point de Pierre Laye bearing N.W. half N. the citadel of Port Louis E. three quarters N. and the rock named Le Graul N. half E. two cables' length distant, with her broadside bearing on the enemy's two frigates and brig, at point-blank range, all of them having fallen over on their sides next the shore as the tide left them, and exposed their copper to us, and the main-masts of one frigate and the brig was gone; and from thirty-four minutes after five till forty-nine minutes past six (which was near the time of low water), a deliberate and careful fire was kept up on them, at which time, believing that I had fully effected the object of my endeavours, the crews having quitted their vessels, all their bottoms being pierced by very many of our shot, so low down as to

insure their filling on the rising tide, and the leading frigate being completely in flames, communicated to the hull from a fire which broke out in her fore-top, I got under sail. Three batteries fired at the ship during the whole time she was at anchor, although the position was so far well chosen that she was out of the range of two of them; the other (to which the enemy's vessels were nearest) reached her, and did as much execution in the hull as all the fire she had been exposed to before.

"I directed the commander of the Growler to stand in and fire, to prevent the enemy from returning to their vessels after I had ceased.

"At five minutes before eight, the frigate on fire blew up with an awful explosion, leaving no remains of her visible. At the close of day, I anchored for the night, out of the reach of the batteries on both sides, Point Talet bearing N.N.W. half W. the point of Groa S.S.W. half W. the enemy's vessels N. by E. At ten the other frigate appeared to be on fire also (some smoke having been seen on board her from the time the firing ceased), and at half-past eleven the flames burst forth from her ports and every part with unextinguishable fury; which unlooked-for event leaving me nothing more to attempt in the morning, the brig being quite on her beam-ends, and very much damaged by our shot in every part of her bottom, even very near her keel, I weighed anchor at midnight, with a very light air from the northward, with the Growler in company, profiting by the brightness of the moon to get to sea; but it was so calm that I made very little progress, and therefore saw the frigate burning from head to stern all night, and explode at thirty-five minutes after two in the morning of yesterday, leaving a portion of her after-part still burning, till it was entirely consumed; and in the course of the day I had the satisfaction to see from off the N.W. point of Groa, a third fire and explosion in the same spot, which could have been no other than the brig.

"During the time of firing on the enemy's vessels, a seaman, who stated himself to be a native of Portugal, captured in the ship *Harmony*, of Lisbon, by the frigates, on the 22nd of February, swam from one of them to the Northumberland, by whom I am informed, that their names were *L'Arianne* and *L'Andromache*, of 44 guns and 450 men each, and the *Mameluke* brig, of 18 guns and 150 men: that they sailed from the Loire in the month of January; had been cruising in various parts of the Atlantic, and had destroyed thirty-six vessels of different nations (Americans, Spaniards, Portuguese, and English), taking the most valuable parts of their cargoes on board the frigates (and they appeared very deep for ships so long at sea), and one vessel they sent as a cartel to England, with about 200 prisoners.

"I am happy to have now the gratifying duty to discharge, of bearing testimony to the creditable conduct of every officer and man I had the honour to command on the occasion above related, whose zealous exertions in supporting the honour of his Majesty's naval power, and in humbling that of the enemy, were conspicuously displayed, without regard to the peculiar intricacy of the situation, or the risks and difficulties which appeared to interpose; and I hope the circumstances of his station may permit me to make particular report of the services of the senior lieutenant, John Banks, without prejudice to, or neglect of, the other meritorious and deserving officers, who were all equally inspired with intrepidity, and possessed with confidence and coolness, which rendered that qualification the more valuable. But as the safety of his Majesty's ship, and the success of the operations which resulted in a navigation so narrow and difficult, with almost every description of danger to avoid, is attributable, next to Providence, to the ability with which she was steered and conducted under the direction of Mr. Stewart (the master) and the pilot, I should be wanting in my duty if I were to omit to represent to you, that nothing could exceed the firmness, good judgment, and skill of those officers, whose experience on the coast was extremely beneficial to the service, and Mr. Stewart's counsels were of the greatest assistance to me.

"Lieutenant J. Weeks, commanding the *Growler* gun-brig, made every effort that vessel was capable of to render assistance, and shewed a perfect readiness to execute the few directions I had occasion to give him.

"I should rejoice, sir, if I were able to close this narrative without adding a report of loss and injury sustained; but neither you, nor any other authority to whom you may communicate it, will expect that a ship should have been so long at different periods under the fire of the enemy's various batteries and vessels without some loss; but I am thankful it is not greater than is expressed in the report I have the honour to enclose; and I am glad to say, that the officer wounded (namely, Lieutenant William Fletcher) will soon be recovered. The damage the ship has sustained is little in the hull, but more in the masts, yards, and rigging.

"A line-of-battle ship, with sails bent and top-gallant-yards across, lay in the harbour of L'Orient, a spectator of the operations of the day, at the entrance of it, but the wind did not serve till night for her coming to the support of her friends: every assistance, however, was afforded them of boats, men, &c., from the port, directed, as I apprehend, by the admiral in person."

The report above referred to, enumerates five killed, and twenty-eight wounded; which, considering the nature and extent of the service performed, is trifling, and no doubt mainly attributable to the admirable skill and bravery displayed in this important action.

MISFORTUNES OF CAPTAIN NORWOOD, 1649.

CAPTAIN NORWOOD was one of the royalist party in the time of Charles I. He engaged, with other royalist officers to embark for America, seeing the affairs of the Crown were not likely to amend, and that the monarchy existed no longer. He agreed, in the year 1649, to meet two other officers, who were royalists, and to arrange their immediate departure from England. A great many had already embarked for the colonies in different parts of the western world, and the captain, with his two friends, fixed upon Virginia for their residence. Captain Norwood was nearly related to Sir William Berkeley, the governor of that colony for the king, of whom it is handed down, that, reporting on the state of things in Virginia, he wrote, "I thank God there is no free schools or printing here, and I hope we shall not have either these hundred years."

It was in the month of September that Captain Norwood and others took their passage in a vessel called the *Virginia Merchant*, of three hundred tons and thirty guns. He and his friends agreed, for six pounds sterling each, to be transported to James River, in the colony already mentioned. On the fifteenth of the month they met the ship at Gravesend, and having gone through the necessary forms previous to their embarkation as passengers, and paid their money, they posted to the Downs. On the twenty-third, upon the vessel's coming round, they embarked at Deal, and in three days had cleared the channel. They had a prosperous voyage for twenty days towards the Western Islands, where they designed to touch. The cooper first began to complain that they were short of water, there not being enough to last out the month for the number of three hundred and fifty souls, which were on board. This occasioned great alarm in the ship, and the master thought it necessary to consult his officers on so fearful a situation. They were now, according to their calculation, off, or very near, the Western Islands, and expected to make Fayal, where they might replenish. The passengers were all rejoiced at the thought of seeing the land.

At day-break, on the fourteenth of October, they saw the peak of Fayal, the most conspicuous in the Atlantic, except that of Teneriffe, with which seamen are acquainted. They soon made the harbour, and, on anchoring, were speedily invited to dine on shore by the English merchants resident there. They refreshed themselves with the fruits of that delightful island; but they lost their long-boat, owing to the neglect of the sailors, who got drunk, and lay up and down in all quarters, in a very bad condition. The loss of the long-boat was a most serious inconvenience to them. In their revels, they drank the two kings of Portugal and England, although the latter was an exile, and cannon were fired in honour of the occasion. The sailors who

were on shore continued their carousings, and water was got into the ship very slowly. The consumption of liquors on board made great havoc with the stock. On the twenty-second of October they sailed from Fayal, with a store of pigs and fruit to supply them at sea. The wind was easterly—a topsail breeze, which carried them into the trade wind, and they swept along at the rate of fifty or sixty leagues a day, until they made the Bermudas. In this latitude the seas were often stormy. The officer on the watch pointed out a water-spout to Norwood, which he seems to have viewed with thankfulness to God's providence that it did not "hoist the ship out of her own proper element."

The passengers and crew were equally pleased at the sight of land. The latter knew it by the true bearing from Cape Hatteras, and they all hoped to put their feet soon again upon dry land. The weather was fair until the eighteenth. The water was then observed to change colour. They hove the lead, and found thirty-five fathoms, at which they were glad, having consumed almost all the stock on board. It was about break of day that Captain Norwood visited the watch in charge of the mate, whose name was Putts. The captain offered him some brandy, which he refused, unless he could have tobacco with it: he observed it was break of day, and that he would see what change there was in the water. No sooner had he looked than he called out to the sailors, "All hands aloft! breakers, breakers on both quarters!" The seamen sprang to the deck in a moment, but, when they saw how the ship lay, they desponded and fell on their knees. The captain, who came on deck on the first alarm, was as much dismayed as his men. The mate was a stout-hearted sailor, and, instead of remaining still, called out, "Is there no good fellow who will stand to the helm and let go a sail?" Yet, of all the crew, only two foremast-men dared from fear to obey the command; one was named Thomas Raisin, the other John Smith, sailors of undaunted courage. One went aloft and loosened the foretopsail, the other went to the helm and shifted it at the critical moment, for the ship was in the very act of dashing among the breakers to the starboard. This was the more remarkable, as the vessel was generally noted for not feeling the helm. She now fell off from the danger manfully. On the larboard bow was another rock ready to receive her. By this time the crew were ashamed of their dastardly behaviour, and, taking heart from the examples of Raisin and Smith, went to work, when the ship fell off again and escaped this new peril. Daylight showed them the full hazard of their situation. Breakers surrounded them, and the sea was white with the foam of the raging water. There did not seem to be any channel among the rocks by which the vessel could be worked out of the labyrinth in which she was involved. There was no time for deliberation, and in these miserable circumstances the ship struck, though fortunately only on a sand-bank. The water and sand rose together in foam, and fell into the vessel; yet though there seemed but little hope, the sailors were now all under command, and omitted nothing which could contribute to their preservation. The ship still floated, and appeared to go ahead—a most cheering circumstance. Raisin, the man who before displayed so much activity, seized the helm, and afterwards hove the lead. After a little further progress, beyond their most sanguine hopes, there was still more water than the ship drew, and it began to deepen, the lead showing twenty feet. They kept the vessel in this channel, until the light was strong enough to enable the quarter-master to con her. At last they got clear of the formidable breakers of Cape Hatteras, and stood out to sea. No sooner was the ship clear of the rocks and in the offing, than the seamen surveyed each other for a moment, like so many ghosts, in silence and wonder. They seemed to doubt whether they were really in safety. They shook hands with each other as if they were strangers, or had just arisen from the grave, and met they knew not how. They could scarcely believe that they were still in existence of flesh and blood. When they recovered themselves, they made from the land with all the sail they could carry.

But they had only escaped one danger to get into another. A storm from the north-west now came on to blow with great violence. They left the land behind them, at the rate of eight miles an hour, with the fore-courses only set. It was soon

thought necessary to slacken their way. The ship was ordered to be put about, the sails to be furled, and to try with the mizen. The sea ran so high that the sailors were puzzled how to put about the vessel; yet they were running at such a rate off the land, that it was absolutely necessary to control the rapidity of their course. They lowered the main-yard to ease the mast, but found it difficult to handle the foresail, as all hands were not strong enough to haul home the sheet to bring the vessel round. They shipped several heavy seas, and one broke with such violence aft, that a ton of water at least entered the round-house. The noise was like the report of a cannon, as it struck the deck, and put the passengers in terrible fear. The ship was at length got about, and they lay trying under their mizen.

Porpoises in immense numbers now appeared around the vessel, so that the oldest seaman on board declared they had never seen so many. They are generally supposed to be the forerunners of a storm, though, in the present instance, Captain Norwood observes the tempest was raging at the time they were first noticed. The ocean was covered with hissing foam. The wind appeared to rise still higher, so that the officers began to think they could not be long without some disaster in the rigging. Between ten and eleven o'clock, a crash was heard aloft, and the cry that the fore-topmast had gone by the board. It had indeed been carried away, and with it had broken off the foremast-head, just under the cap. The crew were now in great straits. Putts, the mate, had the watch at the time, and apprehended that worse damage must soon follow. Between twelve and one the following morning, a tremendous sea broke into the ship forward, and so deluged the deck, where the mate happened to be walking, that he retired aft, with prayers on his tongue. He imagined that the ship was on the point of foundering. The blow seemed to be a stroke of death to the vessel, which remained stock still, with her head in the wave, and then seemed to bore her way through it, and free herself. The passengers, men, women, and children, took leave of each other. A melancholy cry was heard throughout the ship, from the apprehension of immediate death. The mate, however, seeing that the water cleared away from the deck, called all hands to the pumps. Upon examining the mischief which had been done by the sea, it was found that the fore-castle, six guns, all the anchors but one, which was bent to the cable, together with the two cooks, of which latter, one was miraculously saved, were carried overboard. The breach made forward for the sea to enter, opened a passage to the hold for the water. All on board, who were able, set to work to construct a platform of wood that would keep off an ordinary sea, to render the vessel as secure as it was possible to do in such distressing circumstances. In fact, the storm cut out sufficient labour, for all who were able to work, every hour in the twenty-four. The bowsprit got loose, having lost the stays and rigging, so that they were obliged to cut it away. The stays of all the masts were gone, and the shrouds loose and useless. The main-topmast, it was next seen, would not stand long; and Raisin, still the most active fellow on board, ran aloft with an axe to cut it away, hoping to save the mainmast by that means. The danger of the operation seemed so clear to those below on deck, that he was called down urgently. He was scarcely on the deck, when the mainmast and topmast came down at once, and fell into the sea to windward. Fortunately, no one was hurt by their fall. The mast was still attached to the ship by the shrouds, and struck her like a battering-ram at every motion of the waves. The rigging, therefore, was with difficulty cut away, and the mast set free. In this state several of the seamen fell overboard. Their loss was the less regarded by those who were safe, as they expected the same fate. The mizen-mast was now left, by which alone they could hope to bring about the ship, whenever it became needful. Two days were passed in this distressing state, the tenth and eleventh of November. On the twelfth, they saw an English merchant vessel, which showed his flag, avoided speaking, fearing he might be compelled to lend assistance, as his force in guns was the weakest. He fired a shot to leeward, and stood away.

It was now absolutely necessary to bring about the ship. The sailors were exhausted from toil and want of rest, and for some days had been unable to get their meals. The passengers had no appetite, but all were likely to fall short, for the bread was wetted by the sea; the cook-room was carried away, so that nothing could be dressed as usual, and they were compelled at length to saw a cask asunder, fill the half of it with ballast, and thus make a hearth to parch peas and boil their salt beef between decks. This was executed with difficulty, for the whole apparatus was often upset, to the great grievance of those who were in expectation of satisfying their hunger.

On the seventeenth of the month the sea grew calmer, and they saw several English vessels, none of which, save one, which was in as bad a condition from the storm as themselves, and felt a community in misfortune, would speak with them. The vessel which accosted Norwood's ship lay-to, for the boat which paid him a visit. The master of the stranger proposed that he should be spared hands, to aid him at his pumps, in lieu of other things he might give in return. He promised to keep in company, and, if possible, to take the Virginia merchant in tow to weather the cape; but he disappeared in the night, forgetting his promises, although he was bound to the same port.

On the thirteenth of November, the weather being fine, they thought it a good opportunity to get the ship about with the mizen. This they succeeded in effecting, but the next consideration was how they should make sail. The foremast, as high as to where it had lost its cap, still remained, and it was necessary that a yard should be fixed to it. The difficulty was to climb the bare and greasy stump, for there was nothing of which to take hold for support in ascending. The ship's crew were at a loss, until Tom Raisin, who was apparently a genius born with great resources, undertook to make the attempt. The passengers, to encourage him, promised to present him with a stock of Virginian tobacco upon their arrival in port, should they be so fortunate as to reach it in safety. They set down on paper the proportions each would bestow on the gallant fellow, and many of them were not nice as to the quantity, for they never expected to reach the place of payment. Raisin selected from the ship's stores, half-a-dozen spike nails. He drove one of them into the mast as high as he could reach. He next took a ten-foot rope, and threaded a block with it, which divided it equally. He then made both ends of the rope meet in a knot over the spike. The block hanging on the opposite side of the mast served for a stirrup to stand in for driving the next spike, and so on until he was as high as he wanted. He was careful to strike with his hammer, at the time of the smoothest sea. He soon managed to receive help from others of the crew, and they got up a yard and tackle in a few hours, so as to be able to carry sail towards their destination. The main-yard, which they had lowered at the commencement of the gale, was now made to serve the purpose of a main-mast, being lashed to the stump, which still remained eight or ten feet above the deck. They, not without difficulty, contrived to rig their masts with spare topsails. The sea grew still calmer, and all seemed to promise well. The crew indulged a hope of seeing the capes, and making their destined port in safety. They now lay in with another ship bound to Virginia, which promised to remain near them. They endeavoured to get to the weather side of Cape Henry, thinking they were to the southward of Cape Hatteras; but they, found by an observation that they were carried by a current to windward, far beyond all their reckoning or allowances for sailing; in fact, so far, that when they thought they were to the southward of the cape, they were in reality to the north of Achomack, according to their mate, whose opinion no one was capable of disputing. He averred, that if the wind remained as it was, there was no doubt they would all dine the next day within the capes. This expectation was the more agreeable, as their water was again nearly gone, their meat spoiled and useless, and only a biscuit a day per head, and of that not enough to last much longer. The mate fancied he saw the usual landmarks, being hummocks of trees, of which his twenty-third voyage had given him, as might be supposed, the capacity of judging rightly. The

error was afterwards discovered, and was a sad disappointment. Had their sails and rigging been in a sound state, the mischief might have been of less importance. Both capes were in sight, but the ship would not lie within eleven or twelve points of the wind, and they were compelled to run from the land which they were so eager to make, and a short time previously, so certain among themselves of making in a few hours. There was only an allowance now of half a biscuit to each person on board, five of which made a pound. Of drink, there was none, except Malaga wine, which inflamed their thirst. Towards night, the wind grew fresher, and they were carried away at a swift rate of sailing; the mate Putts, being much cast down at the consequence of his error.

For days and nights together the wind sent them out to sea so rapidly, that they were at least a hundred leagues from the capes before they could settle what should be done. They tried every method, by the help of top-gallant sails, and little masts wherever they could be fixed, to keep her to windward; but, for want of bowlines and tackle to force the sails stiff, the wind would at times take them and rend them in pieces. The ship would then be tumbling about on the ocean until they were repaired. For not less than forty days they were tossed about after they had lost the land. On the nineteenth of November the wind shifted to the eastward, but came back again in a short time to the north-west. The sea began to run high. They feared the guns would break loose when the ship rolled, while they mended the sails, the lashings being rotten. They at last were enabled to get rid of this fear by moving them into the hold. By placing them, too, thus lower in the vessel, she had a tendency to lie steady in the water. They got a little rain-water for drink, but for provisions they were in a famishing condition.

In a week they had run two hundred leagues to the east. There were differences of opinion among the crew upon the subject. Some thought they had gone a good deal to the south, and recommended the making Bermuda. In the midst of a contrariety of opinion, it was at length resolved to make any part of the American coast they were able to fetch, even if it were as far to leeward as New England. In the meantime, hunger began to press heavier than ever upon the crew and passengers. The women and children made the ship resound with their cries and complaints. The rats which were caught were all eaten, and the price of one on board was sixteen shillings. One woman, far gone with child, offered a man twenty shillings for a rat, which was refused, and the poor creature died. Miserable days were thus passed until Christmas came, which, according to the custom of the times, must needs be kept with merriment, amidst the most depressing calamity. They scraped and ransacked their meal-tubs to compose a pudding. Malaga, sack, sea-water, fruit, and spices, well fried in oil, were the luxuries with which the officers and passengers regaled themselves, and upon which the crew looked with longing and greedy eyes.

Captain Norwood says, that the greatest suffering he experienced was from thirst. At night, in his slumbers, he dreamed of nothing but overflowing cellars and their contents, in which he imagined he was refreshing himself, and the effect of which, in his waking moments, he found very prejudicial, by tantalizing his fancy. The captain had a small store of claret in secret, of which he made Norwood a partaker, but it wanted the qualification of water to quench the thirst; notwithstanding which, it was a very great refreshment. One day the captain took Norwood into the hold, to seek a draught of fresh water in the bottoms of the casks. They found just enough to satisfy their longing, though it was so thick as hardly to be palatable. They then got astride upon a butt of Malmsey, and swallowing some of it found it preferable to the water, and the effect on Capt. Norwood was cordial and beneficial. The captain became more gloomy, trembling for his position, and then confessing how much he felt for having been the means of bringing so many into trouble by a false confidence in the goodness of his ship, he burst into tears. Capt. Norwood comforted him as well as he could, and recommended that they should rely upon Providence, and hope for the best.

They were now making for the nearest land, and suffering

much from hunger, fatigue, and thirst. In eight days they got once more into soundings, and on the fourth of January saw the land, but in what latitude none could tell. The persons who should have kept the reckoning had neglected the duty for some days. The sun had not been seen a good while. The desperate situation in which the vessel had been, and the little hope they had of reaching the shore, together with the idea that they must very quickly render up an account in a different state of being, made them neglect both log and journal. One day, about three in the afternoon, they were fairly set in for the shore; the weather was calm and the sea smooth, the land was seen about six miles distant, and they had twenty-five fathoms of water. They had only one anchor on board, which was not let go, because if it were lost there was no chance of saving the ship, in case an absolute necessity for its use should arise, and, moreover, the cable was too short for such a depth of water. The necessity of the crew and passengers was so great, that it was at length agreed the ship should lie to, and a boat be sent off to examine if there was a harbour for anchoring. Twelve or thirteen of the more sickly on board, one of whom was a Major Morrisson, embarked in it, determined to risk any chance on shore, rather than remain longer in the vessel. In a short time the boat returned with the tidings of there being a creek where the ship might anchor, and also fresh water, whereof a bottle was brought to the vessel. There were also plenty of fowls observed, which would serve for food. The captain was eager to save the lives of the remaining passengers; and not relying wholly on his mate's report, he set off for the shore himself, with Captain Norwood and a few others, to examine the spot. As night came on, they saw the fires of those on shore, which guided them to the place. The weather was very cold. As soon as they landed, they rushed to the water, as if it were the most delicious beverage they had ever tasted. They then shot a duck, which was cooked and eaten on the spot. They found a bed of oysters hard by, some of which made an agreeable addition to their repast. The duck was soon devoured, the head, legs, and entrails being given to the cook as his share.

The captain now examined the water on the bar of the creek, and seemed satisfied of its depth. When day broke, though he appeared determined to come in and anchor, he still wanted Captain Norwood to go back with him to the ship. The latter replied that he did not see any necessity, as the ship would soon be in herself. Borrowing a coarse cloak of one of the party, Norwood remained behind, and the captain reembarked. No sooner had the boat pushed off, than the ship was seen under sail, with all canvass spread. This it is probable the captain had noticed when he asked Norwood to go with him. The vessel had set sail without orders from the captain, who had difficulty in getting on board; and but for the mate, who saw the boat from the tops, and got the seamen to lay by until it came alongside, the captain would have been abandoned, as those on land were, and probably to a worse fate.

Words cannot paint the anguish and horror of the party left on shore in this unforeseen manner. They were without food or necessaries of any kind, and they had not the slightest shelter. They consulted together on their miserable condition, without being able to determine on any thing. They prayed Heaven to have mercy upon them, and finally requested Captain Norwood to be their leader, and to advise them in what was most likely to contribute to their preservation. It fortunately happened that Captain Norwood's Dutch servant had saved from his own wants a hoard of thirty biscuits, which he had starved himself more than he need have done, to preserve for an hour of yet more pressing want. They were in a bundle he had put into the boat when his master came on shore. Captain Norwood divided them into nineteen portions, being one for each individual on shore. It was now the fifth of January, and the weather was severely cold. The whole party considered that nothing but death, after protracted misery, was before them. Each man was mustered with a fowling-piece who had never been accustomed to its use; and powder and shot, which had fortunately been brought on shore, were delivered to each, by which means some geese were killed that day for their supper. In the meantime, Mr. Francis Cary, the

cousin of Captain Norwood, was sent to explore the creek, and see if he could discover any Indians, or other inhabitants, from whom it was likely the wants of the party might be relieved. Cary returned in no longer a time than an hour's absence, with the unfortunate intelligence that they were upon a small island. He had seen no traces of natives, and the water between the island and the main was deeper than his head, as far as he could observe. The fowls of the air were the only living things he had seen. This melancholy intelligence filled them with dismay, as it well might, and they with difficulty kept themselves from utter despair. The likelihood of perishing by a lingering death was considerably increased; they were wholly without food. Cary now disappeared from among them, and no one knew where he was gone. In a little time he came back with a quantity of oysters in his hands, which he found by accident in the bed of a current, contiguous to a large bank of the same species of shell-fish. These oysters were the main subsistence of the party; though, while the cold weather remained, great quantities of wild fowl frequented the island, many of which they killed and roasted upon sticks, devouring every part of them but the feathers. As the weather grew warmer, the number of these fowls diminished, and then they were compelled to subsist upon oysters alone. They also met with a sort of weed, about five inches long, and thick like a house-leek; that they boiled with a little pepper, of which they happened to have brought on shore about a pound, and then, with five or six oysters, it became occasionally a kind of feast to them. They erected huts to shield themselves from the weather, and made one for every six. There were three weak women among their number.

The endeavours of the party to procure food were unremitting. One morning, Captain Norwood killed a great number of small birds, called "oxeyes" in the country, which afforded the party a banquet, but these birds soon afterwards disappeared, and hunger again pressed upon them. A spring-tide and heavy rains for a time made the oyster bank less accessible, and they began at last to grow so weak that they could hardly tear away the oysters from the bank, when they were able to reach them. All the birds they could see began to get shy. Their guns were soon out of order, and their powder damp. One of the women died, and the other two were constrained to feed upon her remains. Four of the men died about the same time; and their bodies, horrible to relate, became the chief subsistence of those who survived. The deceased had perished of hunger, but death was hastened by a severe storm of cold, attended with snow. Those who were still alive suffered greatly from its effects.

They now considered what could be done to give any of them a chance of ultimate safety. Some of them, though they still retained more vigour than others, were not adequate in strength to struggle with the difficulties of their situation much longer. The being cooped in a small island seemed to deprive them entirely of hope. Major Morrisson, who was one of the main props of the party, could no longer stand on his legs. Captain Norwood was still in the enjoyment of tolerable strength, and he could think of no other plan than attempting to swim the creek between the island and the main land. The water was not more than a hundred yards across; and having passed it, he thought, by coasting the woods to the south-west, he might meet with Indians who would either relieve or destroy him. It was now the thirteenth of January, and they had been nine days on the island, in the open air, for their huts excluded neither wind nor rain; they had been landed from a vessel where they had endured hunger, thirst, and fatigue, for several months, and a last effort it was therefore necessary to make. They gathered as many oysters as would fill two quart bottles, to be boiled in their own liquor, and given to Captain Norwood for his travelling stock. Everything was ready for setting out on this forlorn adventure, and the cooking of the oysters was nearly effected, when Cary, who had been out rambling, declared that he saw Indians on the main land. Captain Norwood set out, but could not get a glimpse of any, and treated the matter as some deception of Cary's sight, thinking that what he wished he had fancied, or persuaded himself he actually saw.

Captain Norwood now returned again to the task of completing his cookery, and had filled one bottle, when he was tempted to go out with his gun, hearing the noise of geese. He had the good fortune to shoot one without a witness, and determined to eat it alone, hoping to be so much the stronger for swimming the creek in consequence. He therefore hung the goose on a tree, while he went to call the cook to dress it secretly; from him the head, bones, and entrails would have secured secrecy. When the captain came back, he found all the bird but the head was carried off. This, as he learned afterwards from the Indians, was done by foxes or wolves, which abounded in the island. The loss was looked upon by the captain with a sad heart, and, with a hungry stomach, he was obliged to return to the cooking of his oysters. On the 10th day of his being on the island, all was ready to begin the journey, when a canoe was found on the south of the island, and it was soon found that the Indians had discovered the women's hut in the night, and had given them shell-fish to eat. The men had, as already observed, removed to some distance from the spot where they had been quartered at first, in order to be less exposed to the cold; the poor women, it would seem, had remained. They said that the Indians pointed to the south-east, but they did not understand their signs, and only thought that they intended to intimate they would come again the next day.

This intelligence respecting the Indians gave the suffering party new life. Many had lain down in despair, determined they would rise no more. They now began to think of the best mode of receiving the Indians on their arrival; and it was agreed that each man should have his gun by his side, loaded, and rendered fit for use, so that if the Indians showed themselves inimical, which was not very probable, their lives might be disposed of as dearly as possible. In this way did every eye look out keenly for the strangers. When the sun was in the south-east, each man looked through the avenues of the woods in hopes to see them approach. The sun came to the south, but they were not seen, and then the sufferers were tortured with doubt and uncertainty, in a manner impossible to describe. All the forenoon they watched; those who were able going out as scouts to try and discover them in vain.

It was between two and three o'clock in the day when the Indians appeared from behind a tree, without arms, and with kind countenances. There were men, women, and children, who all appeared to pity the wretched situation of the English, shaking hands with them heartily. They repeated frequently the word *Nytop*, which was thought to have a friendly signification, and, in fact, to mean "My friend." Beyond this they could not understand each other, and their interview was a mere jargon of unintelligible sounds. They then gave the English ears of Indian corn to satisfy their hunger for the moment. The Indian women, in particular, seemed to feel deeply for the sufferings of the emaciated beings before them, and one of them presented Captain Norwood with the leg of a swan, which he remarked he thought the best, because it was the largest, he had ever seen. The Indians remained two hours, and parted with the promise as well as signs could be understood, that they would come again on the following day. They pointed to the sun, to indicate the hour of two in the afternoon. Some ribbon, and a few similar articles, which Captain Norwood happened to possess, were presented to the chief. They then pointed again at the sun and took their leave, having left a sufficiency of Indian corn and bread to supply the calls of appetite among the party, which did not see them go away without regret.

The next day these charitable Indians came again, men, women and children, bringing bread and corn enough for all: many of them asked for beads, and a few similar things, of those who had brought them ashore, and they were given to them freely. Those who had none to give in exchange, received food from these kind Indians without any return. One of them, an old man, applied to Captain Norwood by gestures, as if he wished to be informed of what country Norwood and his friends were. Signs in reply were given, but both parties were equally unintelligible to each other. At last the captain recollected having read that *werowance*, which the old man had

frequently pronounced, meant *king*, in English. Speaking the word to the old man emphatically seemed to please him, and he led Norwood to the sea-side, when he embarked in a canoe for a place where a much larger one was laid up. This was set afloat, and the party got into it, being six short of the number which had come ashore from the ship. Four men and one woman were known to be dead, and one other woman was absent, but the Indians hinted they knew it, and would take care of her. They were now carried to the home of an Indian, and welcomed with great hospitality, after the manner of that people. Their arms and powder were placed in security, food supplied to them, and a large fire. Furs and deer-skins were placed over them for warmth. In short, no kindnesses which their unaffected hosts could show or obtain were omitted towards them. In a hut of mat, bark, and reeds, fixed on poles, the party were thus entertained, and treated with a boiled swan for their supper.

Refreshed by a sound sleep upon a stomach no longer craving, Norwood and his companions in misfortune awoke, as it seemed to them, in an earthly paradise. A good breakfast was provided for them, their fire-arms restored, and they set off to where the king or chief resided, leaving the two women to the care of the Indians, who were so weak that they could not accompany them, until means could be adopted of getting them to Virginia, where they ultimately arrived in safety, and were afterwards married. The travellers had not gone far upon their journey, when they were stopped by orders from the chief, and sent back to their old quarters, he having heard of their weak and emaciated condition. The chief would not suffer them to walk, but had sent canoes to the creek for them to come to him by another route. They went back accordingly, and embarked, passing about three miles through another branch of the creek they had formerly entered, and they landed near the residence of the chief's wife, who treated them with food of various kinds. They then set out for the chief's own residence. On arriving, they were conducted to a fire by themselves, to which no Indians came, but those who were bent upon some friendly office. The chief sent his daughter, about twelve years old, with a bowl of refreshments, which were delivered out of a mussel-shaped shell.

After the visitors had eaten, the chief sent to Captain Norwood, requesting he would come to him. He was made to take his place by the chief, who called him his brother. A consultation was then held among the Indians present, which seemed to relate to the situation of the shipwrecked people. Captain Norwood presented the chief with a sword and belt, which he put on, and with which he was much delighted. After mutual civilities, and having received much kindness, Captain Norwood parted, without making any progress in getting their Indian friends to understand they wished to set out for Virginia.

Thus kindly treated, they gained strength daily, and became more and more anxious to get away. They thought Virginia could not be at any very great distance, and that it bore from them, south by west, to south-west. They therefore began to save some provisions for their journey; but the chief penetrated their design, and endeavoured, by every means he possessed in the way of gesture and sign, to dissuade them from attempting it. He showed them that the cold, rain, darkness, and swamps, would prove fatal, unless they were directed by persons acquainted with the route. He pointed to his corn and his fires, and signified that the party was welcome to them. In fact, the goodness of the chief towards them was unbounded. In a little time he made Captain Norwood understand better what he wished to say. He seemed to desire to know whether they wished to go to the south or north. Upon being informed that the south was the direction, the chief was much pleased, and one of his suite made a sort of map on the ground with a stick, and drew the country to the south. The most southerly point he called Achomack, which Captain Norwood believed to be Virginia, and made them understand that it was there he wished to go, at which the chief appeared much gratified. They began at last to be impatient to go away, which seemed to displease the chief, who again showed them his corn, and, in fact, forced them to lay aside the thought of departing until he gave the word. On the mention of Achomack, he indicated

that it was not yet time, and he despatched a messenger to that place, which after all might not be Virginia. Still everything in the way of attention and kindness, which these Indians could lavish upon the party, was freely yielded. Captain Norwood had been on a visit to the wife of the chief, conducted by his daughter, and had just returned, when he found that the messenger whom the chief had sent was come back, with others, one of whom wore the English dress. He informed Captain Norwood of the ship's arrival, and of the difficulties she encountered before she entered James River, where she ran on shore. This person brought an Indian with him, who served as interpreter. From these it was ascertained that the party were about fifty miles from Virginia. Captain Norwood and three or four more, who were hale and stout enough for the journey, set out immediately, under the guidance of the messengers. Major Morrisson, the two women, and some others, were left to wait until the boats, which the governor had ordered to go round to receive them, should arrive. They took a regretful leave of the chief, and set off, passing swamps and creeks without number, and being entertained hospitably on their way by the Indians and their chiefs, when they chanced to fall in with them. The toll was considerable, and Captain Norwood was nearly overcome by the fatigue, which from wearing the boots of that age, was very much increased; his shoes he had worn out. At length he became desperate and ready to sink down. When they came within view of a resting place, on the last day but one, he willingly consented to a motion for sleeping out of doors, rather than go a hundred yards farther to a shelter. The next day they ended their toils at Achomack, more properly the county of Northampton, in Virginia. At the house of Mr. Yardly, who had been governor of Virginia, and had married a Dutch lady, named Custis, from Rotterdam, whom Captain Norwood had known in Europe from a child: he was treated like a relation, and sojourned ten days, waiting for a passage across the bay to his ultimate destination. Captain Norwood was well received by the governor, Sir William Berkeley, a devoted royalist. He appears to have corresponded with Charles II. during his exile, and to have made all appointments in the colony only upon the king's authority. Captain Norwood was his relation, and was sent by him to Holland, to solicit of Charles the place of treasurer of Virginia, void by the delinquency of one Claybourne. This place Norwood subsequently obtained, and there, it is probable, he ended his days.

SAM SPRITSAIL.

"Sam Spritsail's the lad you'd delight in,
For friendship he's ever agog;
Loves his king, loves his country, loves fighting,
And loves—to be sure he does—grog."

MAYHAP you didn't know Sam—one of the worthiest tars that ever handled a marlin-spike, or took his trick at the helm. Many's the time we have spun our yarns together, shared each other's 'bacca, or fought at the same gun; and tell me what can bind the ties of kindred stronger?

One day (shortly after the mutiny at Spithead) we were cruising off Brest, and it came on to blow a stiff breeze from the north-west; so the hands we turned up to reef topsails. Now we had always been considered the smartest ship in the fleet, and the topmen prided themselves on beating every one else, so they were at all times eager to get to their stations. Sam, in hurrying up the hatchway, happened to come in con-tack with a young midshipman that had scarce ever dipped his hands in salt water or bit the mark out of a king's biscuit, and nearly capized him. It wasn't down intentionally; but the small officer, without hesitation, struck him a blow; and, though it didn't hurt him much, yet his feelings were wounded, and that to Sam was worse than a broken limb. Howsomever, no time could be spared for parleying, for the gale was freshening; so he turned to the young gentleman, gave him a look of stern reproach, and shined away aloft

like a rocket. Well, d'ye see, after shortening sail, and the watch called, Sam was ordered aft on the quarter-deck; for the midshipman, not content with striking him, had also complained to the first lieutenant (who had only joined us a few days before), charging him with mutinous conduct and insolence.

"Indeed, sir," said Sam, "I couldn't help it—I didn't mean to offend Mr. —: it was all accidental, and I'm sorry for it."

"What do you say to that, Mr. —?" said the lieutenant.

"It was not an accident, sir," replied the midshipman, "but designedly done, for I saw him afterwards turn round and grin at me."

"Grin! no, sir, I didn't grin. I certainly looked round, when Mr. —," here he paused, too proud to mention the blow—"but let it rest, let it rest."

"No, my man," rejoined the lieutenant, "I shall not let it rest: the dregs of a mutinous spirit are still operating among you. Here, boatswain's mate, get a rope's-end, and give this fellow a starting."

"That's hard, sir," said Sam: "I've always done my duty, and every officer in the ship would answer for me."

"Silence, sir! not a word. Boatswain's mate, do your duty," but the poor fellow, who was a messmate of Sam's, fumbled so long, that the lieutenant gave him a rap on the head to freshen his way. By this time the men gathered round the gangways and along the lee side of the deck, all wondering what was the matter; for they knew their shipmate to be the most peaceable obliging man on board, and the best seaman to boot; so whippers ran along, and doubtful looks, as if every one tried to read the other's thoughts.

"Do your duty, boatswain's mate!" bellowed the lieutenant.

Jack Hawser raised his arm, looked at his messmate (who stood firm as a rock, without betraying a single emotion of fear), and then dropped it again with an expressive shake of the head. The lieutenant now got into a violent passion, and, seizing the end of the top-gallant clewline, laid it across Jack's shoulders. Again the rope's-end was raised; and Sam, seeing how matters stood, mildly told his messmate "to obey orders, and do his duty."

"Lay it on!" roared the officer, observing Jack hesitate; "lay it on the scoundrel; you're a set of mutinous dogs all together."

Jack was about to give the blow, impelled by the pain from the lieutenant's stripes, when, observing the calm, composed, yet pitying look of his messmate, he dashed the rope's-end on the deck, and turning to the officer, exclaimed, "If I do, I'll be hanged."

At this moment loud murmurs were heard amongst the men, who came pressing farther aft; but fortunately the next minute the captain walked out of his cabin, and finding the first lieutenant belabouring the boatswain's mate, while the determined countenances of the crew, threatened tumult. "Avast, avast, sir," he cried out, "what is all this? I'm sorry to see you in so degrading an office, sir. Pray, what has caused all this violence?"

The ship's company were eagerly crowding on the quarter-deck; but their clamour immediately subsided when they heard the captain's voice.

"Sir," replied the officer rather haughtily, "these men are mutinous;" loud murmurings rose among the people.

"Silence, my men," thundered out the captain, erecting himself in the attitude of one determined to be obeyed: "the first I hear utter a word, shall be instantly put in irons; if you are injured, I am here to do you service." Then turning to the officer, "be more guarded in your expressions, sir, and let me know as briefly as possible what has occasioned this commotion."

"This young gentleman, sir, brought me a complaint against one of the men, for wilfully running upon him so as nearly to knock him down, and for using insolent language."

"Where is the man?"

"Here, sir," pointing to Sam.

"Who, this—the man? why—but I must hear farther."

So he questioned him about it, and Sam explained what had taken place, which was proved by the evidence of all who had witnessed the transaction.

"But why, sir," addressing the lieutenant, "were you starting the boatswain's mate?"

"Because, sir, he would not execute my orders, in punishing the man."

"There he was wrong, for obedience in a seaman is the first test of duty. I honour him for his humanity and noble feeling, but he has my censure for disobedience of orders: however, as he has already suffered chastisement, I shall say no more. As for this man, sir," pointing to Sam, "I only wish that you, sir—yes you—possessed a heart equally brave and honourable. This man, whom you have stigmatised, and would have punished unjustly, preserved this ship and the lives of her officers during the late insurrection at Spithead. 'Tis true, for the time being, the captain was deprived of his command, and this man elected by the delegates instead; but such was his excellent conduct in restraining the seamen from acts of violence, or even trivial insult, that the duty was carried on by the officers with the same attention as before; only, in one thing they were all determined not to lift an anchor till their grievances were redressed; and perhaps—but that has been settled. Now, attend, sir, to what I am going to say: while the pendant is waving over our heads, bear in remembrance that I am captain of my own ship, nor will I suffer a hand to be raised against any of the people, unless through my directions." Some of the men began to cheer. "Silence, fore and aft, men: these cheers are disgusting to me, and I am highly displeased with your conduct. Have you ever found me regardless of your comforts or privileges, that you should thus assemble tumultuously together? But there are some among you on whom I shall have a bright eye, and therefore recommend them to keep a sharp look-out. Call the watch, boatswain's mate, and send the rest below."

As the calm frequently follows the tempest while the long-rolling waves are yet violently agitated, though the howling of the gale has ceased, so did the turbulence of the seamen subside, and, slowly quitting the deck, they scarcely raised their heads to look their commander in the face. Sam still stood by the 'Jacob's ladder'; and after the captain had taken a few turns he stopped before him.

"As for you, my man," said he, "your attachment to your king and country in the hour of peril has not been forgotten; continue in the conscientious discharge of your duty, and no one here shall harm you; nay, more, when we return into port, I shall use my interest in getting you promoted."

"God bless your honour," replied Sam; "I hope your honour don't want to get rid of me: I'd rather sail with you, sir, than be made a lord."

"Well, well," returned the captain, "go to your duty now; we'll speak about it another time."

A few weeks after this the fleet put in to Torbay for water, and all the boats were busily engaged in going to and from the shore, while many of the officers made short excursions up the country. During this period the first lieutenant did not forget Sam, for, being left in command, he harassed him incessantly; but the poor fellow scorned to shrink, or even complain. He was a married man, too, and his wife (who resided with her parents between Torbay and Plymouth), not having seen him since the mutiny, came alongside in a shore-boat, expecting to have an interview; but the commanding officer would not suffer her to come on board, alleging an order to that effect, which excluded women from the ship; so that poor Sam had only the cheerless satisfaction of passing a few minutes with her in the boat, vainly endeavouring to soften her anguish and sooth her disappointment. All hands exclaimed loudly against this tyranny, and would most probably have proceeded to open resistance; but they remembered the late rebuke of their captain and the remonstrances of Sam himself restrained them from open violence.

Well, d'ye see, we sailed again, and cruised to the westward in the chops of the Channel. One evening, just about dusk, blowing very hard, we sprung our bowsprit, and the first lieutenant came out upon it to see the extent of the injury. At this moment a cry was heard from the fore-castle, "A man overboard, a man overboard!" but the gale was so strong, that it could not be heard aft. Sam, however, who was standing on

the lee gangway, caught the sound; and, repeating it as loud as possible, sprung upon the hammock-nettings. The ship had very little way through the water; and every soul on deck crowded to the same spot, with the ends of ropes and other things to throw to the unfortunate swimmer; but he was nowhere to be seen.

"Where is he?" exclaimed the captain, jumping by the side of Sam: "lower the quarter-boat down. Can you discern any thing of him?" Sam was silent; but his keen eye seemed resting on a particular eddy in the sea. "Where is the first lieutenant?" continued the captain; "why is he not aft here!"

"'Tis Mr. L—— that's overboard, sir," cried a dozen voices at once.

"I see him, sir," said Sam, starting from that fixed attitude he had maintained; "I see him, sir!" and instantly dashed into the wave. The dark body of the lieutenant was now plainly visible, as it emerged from the deep, and lay for a moment inanimate upon the white foam of the billows, while Sam, with his sinewy arms, was cleaving the liquid element and throwing aside the spray. Before, however, he could reach the officer, the body began gradually to settle down again, and, when he reached the spot, was no longer to be seen. Breathless expectation sat on every countenance (for though all hands disliked him, yet sailors forgot animosities in a time of trouble); but what was their surprise—what was their horror—when the brave fellow, who had so gallantly risked his life to rescue his bitterest foe, disappeared in an instant! The ship had now forged considerably a-head, and, owing to the confusion occasioned by the accident, the boat was some time in lowering down; but at last they shoved off, while every eye was anxiously strained in the direction where Sam and the lieutenant had last appeared. The heavy wave rolled on unburdened, displaying its lofty top, as if in triumph, crested with sparkling foam.

"There he is!" exclaimed the captain, as the struggling seaman rose upon the hollow of the swell: "pull to starboard in the boat, and stretch out, my lads; stretch out."

This latter was delivered through the speaking-trumpet;—the officer heard it—waved his hat, and, catching sight of Sam himself, steered directly for the spot. Hope glowed in every breast at the prospect of his deliverance: but transient was its ray. A mountain wave came curling its monstrous head, threatening destruction to the gallant little crew: it caught the boat, nearly filling her with water, and drove them past their object. Darkness now obscured them from our view; though now and then we could just discern amidst the gloom a black speck, as it rode on the top of the billow. Another boat was immediately manned; lights were hoisted, and false fires burned; but nearly an hour elapsed, and no cutters returned. The captain paced the poop in violent agitation, frequently stopping to make inquiries and to look himself.

At last, "Here's a boat upon the weather quarter," exclaimed a little midshipman; and immediately added "There's two, sir—there's two—only look, there they both are! Hurrah, my lads: thank God! they're safe."

In a few minutes more they rowed alongside.

"Hand over a rope's end," cried the officer in the headmost boat, which was the first that had been sent away.

The rope's end was handed over.

"Some one must be hurt," said the humane surgeon, who stood ready to render his assistance.

"I imagine so," returned the captain, "for I fear the poor fellow is lost. As for Mr. L——, there cannot be the faintest hope: he has perished without doubt."

While this conversation was passing, the men were occupied in carefully raising some one up the side; and, just as the captain had finished his sentence, an apparently lifeless body was lifted over the gangway.

"'Tis Mr. L——," shouted the surgeon; "'tis my poor messmate!" and instantly sprung forward to assist in carrying him below.

"Have you saved the man?" inquired the captain; but, before his question could be answered, Sam appeared upon the deck. He staggered through exhaustion towards the captain, and fell senseless at his feet.

"Carry this brave fellow into my cabin directly," cried the captain, raising him in his arms, "and send the surgeon's assistant here immediately."

"I am here, sir," replied the young man; and, following them into the cabin, poor Sam was after some time recovered.

The first lieutenant had been conveyed to the ward-room, and every exertion used for two hours, without showing the least symptoms of returning animation: at the expiration of that time his pulse returned; and in another hour he uttered some incoherent words, and sunk into a deep sleep.

Sam told his tale. When he first disappeared, finding he had missed his object, and trusting to his skill, he dived after the sinking officer. Catching him by the hair, he brought him to the surface; but the lieutenant was senseless, and Sam was compelled to let him go. Again he dived, and again brought him up, when the boat missed them, till, almost exhausted, his strength began to fail, and both were settling fast. Once more Sam quitted his hold, but he determined, as help seemed to be at hand, to make one desperate struggle. He again dived, and writhed his hand in the officer's hair. The effort was too much; and despair even of his own life darted upon Sam's mind—when, at this moment—at this very moment—before he had raised his head above the water, he felt his arm firmly grasped, and the next was hauled up to the bows of the boat, one of the men having thrown himself over for this purpose, while another held fast by his foot.

What need of saying more? Sam was made a boatswain, and now lays up in ordinary in Chatham river while Mr. L— (at present an old post-captain); learned to temper "mercy with judgment," and became one of the best and most humane officers in the British navy.

A STRONG RESOLUTION.

WHEN the Earl of Rochester went to sea, in the year 1665, there happened to be in the same ship with him, Mr. Montague, and another gentleman of quality. These two, the former especially, seemed persuaded that they should never return to England; Mr. Montague said he was sure of it; the other was not so positive. When the day came that they thought to have taken the Dutch fleet in the port of Bergen, Mr. Montague, though he had such a presage of his approaching death, yet he gallantly stayed all the while in a place of the greatest danger. The other gentleman signalized his courage in the most undaunted manner, till the end of the action, when he fell on a sudden into such a trembling that he could scarcely stand; and Mr. Montague going to hold him up, as they were in each other's arms, a cannon-ball killed him outright, and carried away Mr. Montague's belly, so that he died within an hour after. The Earl, however, escaped all the dangers of war and sea: and related this anecdote to Bishop Burnet, his biographer.

ENO'S DAUGHTER.

An Anecdote of the late War in Caffreland, Cape of Good Hope.

THE most frightful scourge that ever visited the Cape colony, happened in the latter end of 1834 and the beginning of 1835, by the invasion of the Caffre tribes, who entered the territory at all points, in the month of December of the former year, carrying in their course, before an army could be got together strong enough to oppose their progress, the most fearful devastation. It being found necessary to retaliate upon the savages, by having recourse to their own system of warfare, and to induce them to withdraw from the colony, for the protection of their homes,

an expedition was set on foot, under the command of Majors Gregory and Burney, for the purpose of destroying their kraals (towns or cities) in Caffreland. The expedition set out on the 28th of January, and in four days arrived before the chief Eno's kraal. The majors sent orders that all women and children should quit the town; and shortly afterwards a retinue, chiefly females, was observed departing from the place westward, escorting a female on horseback, apparently of rank. At the same time was seen issuing from the town, a stately warrior, mounted, who, from his plumed and beaded head-dress, and studded kaross, was concluded to be "the chief of chiefs," Eno. Immediately followed him, from every outlet of the town a multitude of armed warriors, evidently resolved to oppose the intention of the British force. Major Gregory ordered them to surrender, but was answered by a loud yell, and a shower of assagais. He ordered his men to open their fire, which was requested to be more particularly directed against the right of the enemy, where the bold chief was seen coolly issuing his orders, to a group of chieftains in his immediate neighbourhood. After the second discharge from the British infantry, a particular movement was observed amongst the sable warriors, and the next moment the whole of the leaders rushed forward, prostrating themselves at the point of the British bayonets, while an interpreter cried aloud, "Amagleci—you fight against a woman." A parley was sounded, and Tshetima, Eno's youthful daughter, was carried bleeding before the English commander. Eno himself escaped, disguised in the dress of his daughter, in the retinue already mentioned, while she appeared, in order to favour her father's escape, in his warlike habiliments, at the head of his warriors. Major Gregory received her most kindly—ordered a surgeon to attend to her wounds—she received two, one in her shoulder and another in her left breast—which were soon healed, and her kaross, perforated by four musket-balls, being retained as a trophy, she was, after a short detention, restored to her desolated home.

A JOLLY TAR.

A JOLLY tar once hired a horse for a day's excursion, and on alighting at an inn to get some refreshment, Jack ordered the ostler to *calabash* the horse, and ordered a beef steak smothered with onions, and a glass of brandy and water.

The ostler, in the meanwhile, stood pondering upon the strange order which he had received, and which he could not execute, because he did not comprehend it. He was, however, soon extricated from this dilemma by the arrival of a naval captain and his spouse in a phaeton and pair.

On the captain's inquiring the reason of the ostler's standing motionless, and in a sort of reverie, the latter replied that a sailor gentleman had ordered him to *calabash* the horse, and that he did not understand what *calabashing* meant.

"No," said the captain, "why you must cut off its ears and its tail."

These instructions the ostler complied with, as soon as he had disposed of the captain's equipage.

The jolly tar who was sitting at a window above, and had overheard all that passed between the captain and the ostler, resolved upon being a match for the facetious captain. Accordingly, Jack had no sooner finished his repast, than he descended into the stable, and taking a knife out of his pocket, ripped up the mouths of the captain's horses, even to their ears; he then ordered his docked, or rather *calabashed*, horse to be brought in front of the window where the captain and his spouse were sitting, enjoying the fresh air.

As soon as Jack mounted his horse, the captain exclaimed, "So Jack, they have *calabashed* your horse."

"Yes, sir," rejoined he; "and I am happy to say, that yours have split their jaws with laughing at him."

THE WRECK OF THE JOSHUA EMBLEM, AMERICAN BARQUE

THE WRECK OF THE JOSHUA EMBLEM, AMERICAN BARQUE.

By accounts from Gibraltar, dated January 6th, 1845, we find that on the previous night the rock was visited by a tremendous easterly gale, accompanied by a deluge of rain, that poured down in torrents. The long scope of the wind lashed the Mediterranean into fury, and the waves beat fearfully high on the craggy coast. About eleven o'clock the look-out sentinels observed a large vessel near the shore, evidently in great distress, and making signals for assistance: soon afterwards she grounded on the eastern beach, the sea making a clear breach over her, and considerable apprehensions were entertained that she would go to pieces. As she washed in upon the breakers, it was ascertained that not a living soul could be seen fore and aft, and the thrilling conjecture arose that all hands had perished in the ruthless storm. The information relative to the wreck was promptly forwarded to the main guard, and from thence conveyed to his excellency the governor, who immediately set out for the scene of desolation, accompanied by Capt. the Hon. J. R. Drummond, R.N., of H.M.S. Scout, Col. Sir John Campbell, field officer of the night, and Mr. L. Cowell, agent to Lloyd's, to afford such assistance to the survivors, if any, as the circumstances of the case might render necessary. On their arrival upon the beach they were told that several human beings were still on board, and it was probable that the whole of the crew had sheltered themselves below. This happily proved to be the case, though they were for some length of time in the most imminent peril.

With mournful look the seamen ey'd the strand
Where death's inexorable jaws expand;
Swift from their minds elaps'd all dangers past,
As dumb with terror they beheld this last.
Uplifted on the surge to Heaven she flies,
Her shatter'd top half buried in the skies,
Then headlong plunging thunders on the ground,
Earth groans—air trembles—and the deeps resound!
Her giant-bulk the dread concussion feels,
And quivering with the wound, in torment reels.

By dint of strenuous exertion, however, the crew were safely landed. The vessel proved to be the American barque Joshua Emblem, D. L. Wilcox, master, from Palermo, with sulphur, wine, &c., bound to the United States. Her main-mast went by the board soon after she struck; and it is feared that though some of the cargo may be saved, there is but little hopes for the ship.

GALLANT DEFENCE OF THE LEANDER.

"Was't you at the Nile, Tim?" asked the president, Peters, for seated in a large arm-chair, he did the honours as well as give the feast.

"Yes, to be sure I was," replied he, bridling up, "and had a double whack of fighting, but not of prize-money. I was in the Old Leander. Ah!" replied the old fellow with much feeling, brought out by the magician 'grog';—"and never while this old hulk keeps afloat shall I forget that noble ship."

"Not so noble either," returned Peters; "she was only one of the old fifties."

"That's true," replied Tim; "but didn't we all but take one of the biggest seventy-fours in the French navy?"

"What the Genereux, you mean, I suppose, that took you instead," replied Peters.

"You may call her Jinnyroo, if you like, but I can read, and her right name is the Genereux, if I knows anything about it."

"To be sure it is," says Fat Jack. "'Sides, I don't care to speak like a Frenchman, if I can speak my own mother tongue, it's enough for me."

"Well, Genereux, if you like it, by all means; but how did you manage to get taken?"

"Taken," said Old Tim, starting up, and holding his pipe in the air—"Why, she was three to one against us. Why, we began the action eighty men short of complement, and there wasn't less than eight or nine hundred men on board the Frenchman to fight our three hundred; and then look'ee, we had only eighteens and nines, to his thirty-sixes and eighteen pounders. Ah! if all our chaps had been aboard, she wouldn't have had the Old Leander to tow after her. You see, we got out of the Nile action better off than any ship there, for our captain was a brave and good officer, and looked out a snug berth for us, just under the bows of a eighty-gun ship, so that they could only give us their bow guns in exchange for our broadside, and we played Old Scratch with 'em. Rest his soul he was a taut hand; but give me that before one of your grog-stopping, leave-stopping, black-list fellows. Well, I often go and peep in through the railings at his monument in the Melancholy (the hospital cemetery), and thinks to myself sometimes, he might have had worse anchoring ground, than along with his old shipmates."

"But go on with the battle: because I don't see there's any disgrace in being beaten, when the enemy is so very much stronger," said Peters.

"Disgrace! I've fought in two general actions, and was at the cutting-out of the Desiree, from Dunkirk, when I belonged to the Dart, that wasn't amiss either, and in plenty of other work; but, I can tell you, I'm not so proud of my Trafalgar medal as of that fight in the Old Leander. Disgrace!" rejoined the old man, who didn't like the word at all—"I considers it's the greatest honour as ever happened to me, although we did get taken."

"Well, I meant no harm," replied Peters, a little disconcerted. "No, no, I know you didn't; give us your flipper, my old boy; I know you for a noble heart, and you ought to have been a post-captain, instead of an old collegeman, if right had come to right," said Old Tim.

"Come, old boy, sit down and tell us all about that business. I know it's a credit to you for holding out as you did; I only said that to draw you along," replied Peters.

Tim accordingly resumed his seat, and after re-lighting his pipe, and puffing a cloud, that rose curling to the ceiling, was going to commence his yarn, when a fresh visitor arrived, and a very welcome one, named Jim Roberts, and surnamed Long-togs, from his often dressing himself in plain clothes. I will not enter upon this new comer, but go on with the story. Roberts made himself doubly welcome by another bottle of rum; he seated himself, and old Tim commenced his story thus:—

"After the Nile action, you know, our ship being in the best condition, she was ordered to carry the account of the action to the admiral of the station, and Captain Berry, Lord Nelson's flag-captain, was sent on board with the despatches, for a passage. Just eighteen days after the action, at day-break, our ship was becalmed under the Island of Candia, when a large ship we made out standing towards us with a light breeze. We soon made her out to be one of the Nile ships, 'cause of the white patches over the shot holes about her bows, and accordingly cleared for action. You see we couldn't get away if we had tried, 'cause the ship was land-locked, so the captain ordered the ship to be kept as she was going. We didn't take long to clear for action. There was no fine looking glasses, and safes, and large libraries, in our captain's cabins in those days, as one of our chaps, as was captain's-steward in a ship a little while ago, says there is now. Why he wants to make me believe there is as many books in some captains' cabins as in our library over the way—but it won't do. Hows'ever we had no books but the purser's in the old Leander, and I was never very deep in them."

"They piped to breakfast at one bell in the morning watch. I suppose our captain thought the Frenchmen wouldn't give us a bellyfull; be that as it may, we went to breakfast upon cold water and biscuit, and many a poor fellow never had another."

"We had about fifteen hands wounded lying in their hammocks, when we commenced the action, who got hurt at the Nile. Poor fellows! we lost nearly a hundred men, killed and wounded before we struck."

"Well, as soon as we'd done breakfast—not long first, you may be sure, when our enemy was in sight—the drum beat to quarters. Some of our crew said as how Captain Thomson wanted to run the ship ashore, to save the men's lives, only Captain Berry—a regular fire-eater—advised him not; but I don't believe it: he valued his name too much for that—though, for that matter, we might have got off better if he had done so. But there was no knowing till we tried, but what we might take him, and if we had not been short so many men, it's my belief she would have been our prize.

"I was doing quarter-master's duty at that time, though rather a young hand, and 'twas my watch on deck when we first made her out. When they beat to quarters after breakfast, I gave up the wheel to the captain's coxen, and went to my quarters on the main-deck. About one bell in the forenoon watch, up came the Frenchmen, blazing away, right and left, long before she was in gun-shot, and wasting the powder and shot, which we wanted. When she came pretty close the word was then passed to lie down at our quarters, as usual, to receive a broadside; and she began to hit us, but hurt no one. At last (all as quiet below as housebreakers) we had the command given us—"fire." The Frenchman was close alongside, and we gave him as smart a broadside as our little guns, double-shot, could throw. He then ran us aboard by the fore-chains, and tried to board, but they got off with the worst of it. Our division of boarders was called up from below, to lend a hand to keep them off, and one fellow stuck the point of a boarding-pike in my cheek, you can only just see the mark.

"Poll said it spoil'd my face when she first saw me afterwards; but when she heard I was a stager, with plenty of money, she told me it made me look quite beautiful.

"Ay," continued the old man, with a grin, "they'd tell Old Blueskin so if he had plenty of prize-money."

"Well, our mizen-mast was shot away, and a breeze coming off the land, the French ship shot a-head of us, and we managed to get a chance of raking her. We poured every shot of our broadside into her cabin windows, and sent many a Johnny Crappo to the bar of the other world. But it soon came to their turn, and they fired their whole broadside into us, within pistol-shot. It shook us from stem to stern, and many a bold fellow lost the number of his mess.

"We fought six hours; just think of that. Why, if she had handled her guns in a seaman-like manner, she ought to have sunk us in a little more than six minutes. We had to cut through the main-topsail, laying over our larboard side, to make room for the muzzles of the guns, for our ship was quite a wreck—not a stick standing—but still the brave hearts wouldn't give in.

"Fore and aft there was no murmur heard, every man was ready to stick by the craft till she sunk; and once, when she sheered off to repair some damages, we gave him three cheers, and turned to, making cartridges and refitting all we could to give him chase. We fired everything at him we could get hold of—crowbars, nails, and all sorts, I saw one of the crowbars sticking through her deck afterwards; and they never had a harder day's work in their lives than when they took the little Leander; we killed nearly three hundred of them, before we surrendered.

"But we lost two lieutenants, the master, the boatswain, and a third part of the crew; and the great lubberly hulk had taken up his berth under our stern, to give us another broadside, when our brave captain, thinking we had fought long enough for it was now past five-bells in the afternoon watch, ordered our colours to be hauled down; and the old English ensign, all in strips, was struck; at the same time the despatches in three large bags, were thrown out of the cabin windows, with shot in them.

"As soon as the Frenchmen saw we had struck, one of their midshipmen, and two or three men, swam on board of us (for neither had a boat that could swim); they were stark naked, and they dived down below at once, and rigged themselves in any clothes they could get hold of: not one of us offered the least resistance. At last the Frenchmen managed to mend one of their boats with tarpauling, so as to get us aboard their ship.

"We had not many traps left us to take away, for lots of the Frenchmen soon swam aboard, and took care of our bags for us.

"Some of us thought it better to wear two shirts, but as soon as we got to the French ship, one of them was taken away.

"Captain Jolly was a great scoundrel, and used our captain like a brute—his men in the Leander stole the Doctor's instruments when he was going to dress the men's wounds, for the wounded men were all left aboard, and he (Captain Lejoille) kept him (the Doctor) from coming aboard the French ship to our captain, who was badly wounded.

"We had nothing but oil and rice to eat, and they made us work and refit the ship. We fished his foremast, (another shot would have knocked it down), and knotted all his shrouds, for which Captain Jolly promised us our liberty as soon as we got to Corfu; but as soon as we had done all the work he started us down below, and kept us close till we got there. But, you see, we can't wonder at their being a little matter spiteful—see what a thrashing they got at the Nile, and you know we shouldn't have liked such a beating as that ourselves. Captain Jolly was one of your Brittoon men, and could speak English as well as any of us: he wanted to get some of our chaps to enter for his ship, but not a man of us would have done so to have saved their lives. He didn't know much of our hearts, if he did our language, if he thought to make any of us fight against our country.

"One of our main-topmen said to him, when he asked him to enter for the ship.

"No, d—n your ship, and service too; why, a French prisoner in England gets a better dinner every day, than you do, although you're Captain of this lubberly craft."

"He got in a terrible passion, and swore he'd shoot him; but Ben Thompson cared little for his threat—he wasn't the man to flinch.

"Well, when we got to Corfu, they sent us ashore to a dirty prison, where they used us as bad as they did in the ship; and it was two or three months before they sent some of us, and I among them, aboard a merchantman, bound to Trieste; but as soon as we got out, we rose upon the crew, and made them take us to Naples, where we at last arrived, with hardly a rag to cover us, and half starved."

A NAVAL SKETCH.

(BY JONATHAN-OLDJUNK, ESQ., R. N.) *

"Order is Heaven's first law."

AND, by the flag of Saint George! so it is in the navy; for as obedience is considered the great test of duty, so does order in a ship keep the whole machinery ready for any operation at a moment's warning. But notwithstanding the most exact order—though every man may be at his station, and the cook by the fore-sheet, though every rope may be snugly coiled down, and the craft as fine as a fiddle—she would remain a mere piece of wonderful mechanism; but destitute of regularity, guidance, and frequently motion, but for that which forms the mainspring of the whole—"ORDERS."

The initiated reader requires no explanation of the term; but to the uninitiated, I must be permitted to render myself fully understood. Orders may be classed under three distinct heads:—"Verbal"—such as the word of command in action, or in working ship, &c. By "signal"—communications made known through the medium of flags, telegraphs, &c.; and "written" which conveys its own meaning.

Every ship in the service, from a first-rate to a four-gun cutter, with a commissioned officer, carries a general order-book; besides which, most captains are in the practice of keeping a written order-book for the officers commanding

* From the "United Service Magazine."

watches during the night ; and this system is generally preferred by the officers themselves, as it gives them specific instructions, which may at all times be produced as evidence.

An admiral in command, either on board the flag-ship or at his office on shore, has a general order-book ; in which all orders are entered for the management and discipline of the fleet ; and on every occasion of a fresh order, the signal is made for a lieutenant or midshipman from each ship, who brings the vessel's own particular order-book, and takes a copy of the original. Now, as only two or three can copy at a time, and as there are frequently twenty or more waiting, these meetings are sometimes productive of much amusement ; and it often happens, that acquaintances are formed, which afterwards are cemented by the closest friendship.

Having thus explained the meaning of my title, it now remains for me to follow it up by giving a few practical illustrations, copying the orders themselves for my text, and showing their consequent results.

"The Royal William has hoisted the signal for all midshipmen, sir," said an old quarter-master, touching his tarpaulin hat to the first lieutenant of the *Indefatigable* frigate, as she was lying at Spithead.

"Answer it," replied the officer, "and messenger ! messenger !"

"Sir !" exclaimed a shrill squeaking voice, as a little, diminutive lad ran up to the lieutenant, hat in hand.

"Tell Mr. Oldjerk he's wanted to go away on duty immediately," said the officer. The boy disappeared. "Boatswain's mate," continued the lieutenant, "pipe away the jolly-boat."

In a few minutes afterwards I was on deck, dressed in long uniform coat, cocked hat, and side-arms, and received my orders to go on board the admiral. The weather was very squally, with rain, and threatening to blow a downright gale ; but as the Royal William lay to leeward of us, and the tide was running to windward, it was easy to hoist the sail, and we were very soon alongside ; whilst I naturally expected to be detained only a few minutes in copying the order, and then saving the weather current back.

But in this I was disappointed, for the signal had been flying a considerable time before the old quarter-master had seen it ; and as there were between twenty and thirty sail at Spithead, most of the midshipmen claimed precedence, from having gone on board before me ; and, consequently, I was compelled to wait for my turn.

"What is the order about ?" I inquired of a handsome little youngster, who claimed intimacy with me from having met together on shore.

"I hardly like to tell you," he replied, "for I'm half afraid they're tricking me."

"What is it ?" said I, "and who was it gave you the information ?"

"It was the midshipman of the *Donegal*," he answered, "who told me ; and he says it is an order that no captain is to allow of pigs being taken to sea, without first cutting off their tails."

"Nonsense," said I, laughing, "he only meant to quiz you. But I imagine it must be something important, or the signal would not have been made in such weather as this."

"I don't know what to think," responded the youngster, "but certain it is, that every one I have asked, has given me the same answer ; and one offered to show me his order-book, but I had only time to glance at it ; and, sure enough, I caught sight of the word *pig-tails*."

"D——n their tails," exclaimed a midshipman, as he passed us with his order-book under his arm, and hastened to the gangway to descend to his boat. "To think that one of his majesty's officers is to be called out of a snug berth, when it's raining marlinspikes and scuppersnails, to copy an order about pig-tails !—it's what I call ungentlemanly, and proves the service is going to the devil. Why couldn't they make the signal for all pursers or marine officers ?"

"Or all butchers," chimed in another : "they'll be sending for all captains next, to know which man drinks the strongest cocoa !"

"Is it true, sir," slyly asked the marine who stood sentry at

the gangway, "is it true, sir, that the tails are to be disrated ; and will they have to return them into store, sir ?"

"Aye, Jolly, and they may pickle them if they like," returned the midshipman. "D——n their tails !—to think that one of his majesty's officers, &c."—and he went grumbling down the side, rendering the word *pig-tails* the most audible that was uttered.

"What can all this mean ?" thought I ; "surely there must be some mistake : for though Sir Isaac Coffin is about as mad a genius as ever lived, yet he would hardly have recommended such a freak to Admiral Montagu ; and even if he had, the old admiral certainly would never have complied with it."

"May the king live for ever !" exclaimed another midshipman, who, having copied the order, was also hastening away to his boat ; "but if ever I come athwart a pig-tail, and a sharp knife in my hand—you may guess the rest, boys ; but if I don't—there's no snakes in Virginny. Take care of yourselves, reefers, I've given you your cue,—look out after the tails yourselves when you get to your berths."

"I say, Jolly," said an old tar, taking a severe turn with his quid, "this 'll be a great saving of blacking and heel-ball. If they arn't returned into store, will you gi'e me yours to keep my marlinspike in, eh ?"

"We shall none of us be the worse," said another ; "and they were but ammunition consarns arter all. It looks unnatural like, to see a tiller shipped the wrong way ; it's like running the bowsprit out of the cabin-windows."

"Young gentlemen ! young gentlemen !" exclaimed the first-lieutenant of the *Billy*, who saw us congregated together near the seamen, "this is no time for long tales,—the gale is freshening ; get your order copied and bear a hand to your respective ships."

The "aye, aye, sir," responded simultaneously from all the midshipmen, most of whom took his expression of "long tales" according to the thoughts that were then uppermost in their minds. I own I was greatly puzzled, and began to muster up all my stock of knowledge, both mathematical and scientific, to try and discover what could be the reason of the order,—what benefit pigs were to derive from having their tails cut off,—and how his Majesty's service was to be advantaged by the excision.

At length my turn arrived. I hastened, nay almost ran (a rank heresy on the quarter-deck) into the clerk's office ; and both under the break of the poop where the *Billy's* supernumerary mids were sheltering themselves from the rain, as well as in the cabin, scarcely anything could be heard but the word "tails." I hastily glanced my eye over the order, and there, sure enough, was the same term in bold and legible handwriting. I seized the pen in an agony of impatience, and copied as follows :—

"The Lords of the Admiralty having issued directions that the Marine Forces now serving on board of his Majesty's fleets should, from the date hereof, cease to use or wear the usual leather queue or pig-tail now worn, I hereby give orders that the captains and commanders of his Majesty's ships and vessels of war under my command, do see the same strictly carried into effect ; and for the future the leather queue or pig-tail now worn shall be discontinued."

"Given on board his Majesty's ship the Royal William, at Spithead, this — day of —, 1808."

"By the order of the Admiral,

"WILLIAM HENRY SCRIVEN, Secretary."

The murder was out,—it was not the tails of the poor pigs that were to be put out of commission, but the false tails or queues worn by the marines. The joke, however, had been well preserved, and I enjoyed a hearty laugh at the *denouement*.

My order was written, but so much time had elapsed, that it was now slack water, and the gale blew with increased violence, whilst a nasty short sea rendered it almost impossible to pull a-head. Nevertheless, I made the attempt, and the

men laboured hard at the oars, so that we got about a cable's length towards the frigate; but the tide came strong against us, and I was on the point of returning to the Royal Billy, when my attention was attracted to a small sailing yacht that was carrying on a heavy press of sail, and evidently managed by unskilful hands. She was going dead before it, her boom eased off nearly to the shrouds; and as she yawed about with bad steering, the mainsail frequently lifted by the lee and threatened to gibe. That there were females on board, I could see by the white drapery; and I could not but be painfully apprehensive of the danger the whole party were exposed to.

My determination was instantly fixed. The carrying so much canvass was evidence that they had not sufficient strength to take it in; and if the sail giped, it would either carry away the masts, or, what was worse, upset the vessel.

"Lay in your oars, men, and toss the mast up in an instant," I exclaimed. The men stared,—hesitated for a moment,—but on my adding, "Bear a hand my boys, or that craft will be a wreck," the mast was immediately stepped, the foresail was hoisted, and I edged down towards the yacht, so as to try and cut her off; but the rate she was going at totally precluded all possibility of accomplishing it, and I dropped astern. The person at the helm seemed to be aware of my intention to board him, and, unfortunately, gave the yacht a broad yaw to port: the sails giped, and the next moment the yacht lay upon her beam ends.

My boat had good way upon her, and in a few minutes my sail was lowered, the mast down, and the men upon their oars pulling towards the yacht that was lying keel out, lifting with the sea, and rapidly filling with water. I sprang on to her bottom, and the next instant a wave completely engulfed me; but, holding on by a rope, I was soon lifted again, and with two of my men got into the rigging, to the great risk of our lives. At first I could see but one man, who was in an almost exhausted state, clinging to the upper portion of the taffrail; but as the vessel again rose, the arm of a female was seen struggling out of the water. It was instantly grasped by myself and men, and we raised an elderly and apparently elegantly dressed woman from the gear with which she was trammelled. The strength of the three combined, however, was barely effective enough to get her clear, and I was wondering at the amazing weight of so slim a figure, (for she was very slight made) when I discovered that another female was clinging, with all the energy of a death-struggle, to her dress. The two were hauled up, the waves occasionally beating over us with horrible fury, as if desperate at the prospect of losing their prey. We had dragged two ladies on to the yacht's bottom, and my brave fellows were trying to disengage the clothes of the second from something which held them fast to the opposite gunwale, when one of the men exclaimed, "I'm blessed if here arn't another woman! I say, sir, there seems to be a whole cable's length of 'em!"

It was, indeed, true: a third female was holding on to the dress of the second, but before we could rescue her from the perilous situation she was in, her hold relaxed, and she disappeared.

"She's gone, sir," said one of the seamen. "Poor thing!—and she looked but young to die so unnatural a death for her."

"She must not die, Peters!" exclaimed I; "but get these ladies into the boat as quick as possible: bear a hand, my good lads, we must save that girl."

"It's of no use, Mr. Oldjunk," answered the man, as he carefully got one of the ladies into the jolly-boat, where the person who had been clinging to the taffrail had already seated herself, apparently in a state of stupefaction. "I say it's of no arthely use to try to save her, sir,—rather save yourself, for she must have perished."

"She shall not perish, Peters, by —," I cried out in agony; and lowering myself down by a rope, I plunged under the water and groped about the rigging, but without avail; and I began to fear Peters was correct. Being a good swimmer, I struck off (still keeping the rope slack in my hand) and got into the mainsail, where I soon entangled my

feet in something of light texture, which was rent with my efforts to disengage myself; and I caught hold of some shreds of muslin. "It must be she," thought I; and diving down, I had the satisfaction of bringing to the surface the body of a young girl: but the sea was so rough, that it was with the utmost difficulty I could keep her up; and as she was in a state of insensibility, (I feared death) she was totally unable to aid my endeavours.

At length I was able to pass the rope securely round her waist, and she was dragged on to the yacht's bottom, and from thence placed in the stern-sheets of the jolly-boat, in which I now perceived another stranger, who, it afterwards appeared, had been under the mainsail, but had contrived to clear himself and swim round to the boat.

"Bear a hand, Mr. Oldjunk," said Peters, "the craft's getting into her flowing, sir; don't you hear her sough?"

"Are there any more human beings on board the vessel?" I shouted to the strangers; and the last man picked up replied, "There were yet two missing."

"For God's sake, Mr. Oldjunk, let us shove off," said Peters, "for if she goes down, we stand a chance of going with her. She'll right a little before she sinks, sir, and it will be better to lay on our oars to pick 'em up when they clear the rigging."

The man was right,—it would have been madness to have remained longer,—and I lost no time in getting into the boat and shoving off a short distance from the sinking wreck. The wind howled over us—the rain came down in anger—the waters roared beneath us—and the little yacht, after two or three surges, and that peculiar kind of moaning occasioned by the confined air, suddenly threw her mast partly erect, and went down in about seven fathoms. But our expectations of saving any other life were gone, the vessel disappeared as though the seas had never borne her weight, and the waves rolled on with scarcely a trace that the gilded toy had ever cleft their hilly tops: yet no human being appeared, and it seemed certain that whoever the two individuals were, both had perished.

Several boats had put off from the nearest ships on witnessing the catastrophe; but when they saw my little shell floating alone on the waters, they returned back. My mast was again stepped, the sail hoisted, and away we flew like a sea-bird on the wind seeking shelter from the "pelting of the pitiless storm."

The two females first saved had partially recovered consciousness; but the youngest lay extended, in all the paleness and livid hue of death.

"Take the helm, Peters," said I, "and keep her head a little broad of Ryde pier." The man obeyed—"And now, lads, hats and caps to work, and bale her out."

I raised the inanimate body of the young female in my arms, (for the water in the boat was washing over her,) and carefully wrapped my cloak around her cold form. My hand was pressed upon her heart, but there was no tremor—no throb—no pulsation. Yet, when I looked upon her face it displayed no signs of convulsive struggling; the features were placid—even smiling; and though no roseate tint mantled on the lily whiteness of her cheek, there was sufficient to show she had been a lovely flower, and as I pressed her (almost unconsciously) to my heart, the tears came gushing from my eyes, and I breathed a fervent prayer to the throne of Omnipotence, that the God of Mercy would stretch forth his arm and save.

The boat rushed on her way, the seas at times toppling over her stern and raging in upon her gunwale, so as to keep the men constantly baling. The individuals whom I had rescued held no converse with each other—indeed fear seemed to have paralysed their faculties; but Ryde pier was now close at hand, and I could see the hardy pilots and boatmen down upon the beach; they had no doubt witnessed the occurrence, and were preparing to render us assistance in landing, as the sea was breaking with no small degree of violence over the long flat of sand that stretches out from the shore.

Once more resumed the helm, and the men discontinued baling to attend to the sails; the boat behaved well, and

danced over the raging swell with great velocity; the outer breakers were passed in safety, and we were rapidly gaining the shore, when a heavy surge nearly filled the boat, which struck with considerable force upon the ground, and trembled in every joint; another succeeded; the two females shrieked, and their voices sounded fearfully wild as they mingled with the howling of the gale; a third shook came, and the boat rolled completely over, carrying away the mast, and sending us once more struggling amongst the waters. But we could feel the bottom with our feet, and as the breakers receded the bold pilots came hurrying down to our rescue.

A powerful feeling, which I never could account for, made me reckless of my own safety whilst the young female was near me. It is true, I thought she was a corpse, but I could not leave her; indeed my strength seemed renovated as I again took her in my arms and ran up the beach as fast as circumstances would allow. Several persons offered to relieve me from my burthen, but I would not resign her, and hurrying to a light single-horse carriage, I laid her gently down in it, sprang in myself—looked round and saw my men were all on shore—applied the whip to the horse's flank, and dashed off at a tremendous pace for the hotel, leaving the boy who had charge of the vehicle standing gazing after us, and mute with astonishment.

"A surgeon! a surgeon! send instantly for a surgeon!" I vociferated as loud as I could, the moment the horse was pulled up at the door. "For the love of God lose not a moment! and here, my good lasses, carry this young lady into the house." My directions were implicitly obeyed; several respectable families, who were sojourning at the hotel, rendered their assistance; a surgeon promptly arrived, and the process for the purpose of procuring resuscitation was instantly commenced. In the meantime a large carriage was sent down to bring up the others; beds were prepared, and everything necessary to counteract the effects of terror and distress; and I had soon the satisfaction of seeing the surviving party safe in a comfortable apartment, and attended by gentlemen of the medical profession, which, shortly afterwards, was heightened almost to extacy by the information that the young female began to manifest symptoms of returning animation.

"Well, Peters," said I, as the gallant fellow came up to me outside the hotel, "is everything saved? But stop, first of all get a glass of rum and wash the saltwater out of your throat, and give a glass each to the rest;" for they had accompanied him, though hanging a short distance astern, lest I should find fault with the whole of them having left the boat.

"Why yes, sir," replied Peters, after swallowing his dram, "everything is secure but your cocked hat and coat, and them has made sail for the Needles. But I'm blessed, Mr. Oldjunk, if this arn't a rum consarn—who'd ha' thought that them here marines' tails would have been the saving of five lives?"

"That reminds me of it," said I, "pray where's the order-book?"

(To be continued.)

THE BOAT RACE.—A TRUE TALE.

"'Twas a gallant bark, with a crew as brave,
As ever launched on the heaving wave;
And shone in the light of declining day,
And each sail was set, and each heart was gay."

It was a fine, clear afternoon, and everything was bustle and commotion, about the harbour of Perth. Next day there was to be a match betwixt a few boats, which a number of gentlemen kept for their amusement. Eight o'clock in the morning was appointed for the time of starting, so as to meet the tide as they returned in the afternoon. The morning came, and by seven o'clock a great number of spectators had assembled to witness the scene. Every boat was at its post, with streamers flying at their mast-heads; and as a favourable breeze had sprung up, every heart was light, and in the expectation of a

good day's sport. At length the loud boom of a cannon, announced that the wished-for hour had arrived. In an instant the anchors were hoisted, and the gallant little flotilla set off amid the huzzas of the assembled multitude.

In the afternoon came the tide, and with it came the boats each in order, according to their sailing properties. After all had arrived, the owners adjourned to one of the inns of the "fair city," where was awaiting them a sumptuous dinner, over which, a dispute arose as to the properties of two of the winners, and at length a wager was struck, and a day appointed for another match.

The day came: but it was gloomy and threatening, and a heavy west wind was blowing; but still they resolved to go. They started; but as they rounded a point of the river, it was so boisterous, that one of them gave up all hopes of being able to live out to the end of their journey, and returned. But still the other held on her way, ploughing the waves, and dashing the spray from her bows, as if in defiance of their fury.

Onward and onward she sped, and the town of Newburgh soon came in sight. They passed it, flying "on the wings of the wind," as if their frail bark had been a feather. Soon it was left far behind, and it appeared only as a speck upon the waters; and the town of Dundee appeared to their view, and in less than half an hour they arrived, and landed—safe.

Next day, being Sunday, they spent it in strolling about the town, and viewing the principal buildings. Monday morning came, and they began to make preparations for their homeward voyage; but the wind was unabated, and they determined to stay till the afternoon, to see if it would calm a little. By the afternoon no abatement was visible, and they resolved to go at the risk of finding a watery grave.

All being ready, they went down to the quay. They were just stepping over the gunwale, when they were accosted by a person attired in the garb of a sailor.

"Lads, ye surely dinna intend gaun up the water in a day like this?"

"Ay, we intend to try it at any rate; are ye gaun to 'tak' a sail up wi' us?"

"Nae, nae; i' faith, I should nae like to trust mysel' in a sma' boat, wi' a sea like that running; but I was just gaun to gie ye a bit o' advice, by telling you to anchor her again, and wait till it be a wee calmer; when ye can gae up wi' safety. But she's a bonny boat, and has every chance o' livin' oot till ye get to smooth water."

"Ay, that she is, and there's little fear but she'll stand it oot, as weel as she did coming doon. But however, 'a faint heart never won fair lady,' sae we'll try."

Alas! fatal determination! they little knew that they were hastening onward to their doom!—little knew they were leaving the land for ever—that they should never see again the beloved place of their nativity, or again be welcomed to a happy home, and cheerful fireside!

As they were journeying on in their mad career, a vessel, which was lying at anchor, hailed them—

"Hollo, lads, I'd advise ye to 'tak' in a reef, or ye'll be apt to pay a visit to Davie's locker, ere ye get home."

"There's little fear o' that," cried one; but he had no time to add more. She swept by with the speed of an arrow.

All went on well, and they had nearly reached Newburgh, when a huge wave drove the boat on a bank, where she stuck firm; another and another followed, which nearly filled her to the gunwale. Then came the fatal wave: onward and onward it rolled, yawning and roaring like a hungry wolf for its prey. Another moment, and it swept the frail bark from beneath its hapless crew, and engulfed them in the roaring surf. One only was saved.

Of the other two not a vestige could be seen, until about a week after, when they were found, floating on the surface, about seven miles below where the sad catastrophe happened, by some fishermen, who took them to the South Ferry, where they were decently interred. But no stone is there to mark the place where lie their mortal remains—no weeping willow is there to mourn over the remains of those hapless beings, who fell victims to the raging element!

THE CAPTURE OF THE MANILLAS.

We will direct the reader's attention to the expedition against the Philippine islands, which was one of the best conducted, most splendid, and most important of all the successes which adorn the annals of British warfare. The motives to the execution of this enterprise were many and powerful. The Philippines or Manillas form a principal division of that immense Indian archipelago, which consists of above twelve hundred islands, extending from the nineteenth degree of north latitude, almost in a continued chain, to the shores of New Guinea, and the great southern continent. The Philippines, which form the northernmost cluster of these islands, are, some of them, among the largest, and all of them, naturally, among the richest islands in the world. They were added to the Spanish monarchy, in its meridian glory, under Philip II., and, being happily situated for commerce, they were used as the centre of communication for the Asiatic and American trade.

The grandeur of this design was sufficient to rouse the most vigorous efforts of administration. But the additional weight of Spain, in the scale of the enemies of Great Britain, required all the exertions of her strength nearer home. It was impossible, therefore, to spare ships or troops for undertaking a conquest so distant and precarious, however advantageous and splendid. But, fortunately, the preceding events of this glorious war naturally paved the way for those which were to follow. The success of one expedition not only suggested the idea, but facilitated the execution of another. By the fortune of our arms in the east, we were become arbiters of the great peninsula of India; the French were expelled; the Dutch humbled; and there was nothing in those parts to resist the British force, or even to afford employment to all the troops that were kept on foot. Nothing, therefore, was demanded from Great Britain but a light frigate to carry Colonel Draper to Madras, where alone suitable preparations might be made for this important enterprise. He arrived there the latter end of June, 1762, and was appointed brigadier-general and commander-in-chief of the land forces to be employed in the expedition. The squadron, commanded by Vice-Admiral Cornish, a brave and able officer, consisted of several ships of the line, besides frigates. The troops allotted for this expedition, consisted of one regiment, with a company of the royal artillery, reinforced with six hundred sepoys, one company of Caffres, one of Topazes, one of pioneers, with several hundreds of unarmed Lascars, for the use of the engineers and the park of artillery. The admiral supplied a fine battalion of five hundred and fifty seamen, and two hundred and seventy marines. The whole force amounted to no more than two thousand three hundred

effective men; an inconsiderable number, but of tried valour; inured to toil and hardship, and rendered equal, by their disciplined bravery, to the strength of a great army. The seventy-ninth regiment, which was the only regular body of troops employed on this service, had been the first who checked the progress of the French in India; their valour had given the happy turn to the war under Colonel Coote; they were inured to the climate, and accustomed to victory; and their arms were worthy to extend the glory of Great Britain to the remotest verge of Asia.

The Argo frigate arrived at Madras, from England, in the month of June. Captain Richard King, her commander, brought out intelligence of hostilities having commenced against Spain, and orders for Vice-Admiral Cornish to proceed with the utmost despatch to the attack of Manilla. Colonel Draper was sent out to command the land forces. The admiral immediately despatched the Seahorse, Captain Grant, to cruise off the Philippine islands, in order to intercept all vessels that might be bound to Manilla. In the course of three weeks the troops were all embarked, and everything ready for this important enterprise. On the 29th of July, Commodore Teddiman sailed with the first division of the fleet; and on the first of August, the admiral followed

with the remainder, except the Falmouth, which was left at the request of the presidency of Madras, to convoy the Essex Indiaman, she having on board the treasure for the China ships.

The fleet anchored at Malacca on the 19th, where it took on board water and refreshments. On the 27th it sailed, and on the 23rd of September it arrived in Manilla Bay, to the great surprise of the Spaniards, who had not yet heard of the war, and were consequently ill prepared for so sudden an attack.

The town having been, next morning, ineffectually summoned, it was determined to

[THE ATTACK UPON MANILLA.]

make an immediate descent. The Argo, Seahorse, and Seaford frigates were ordered to anchor close in shore, to cover the landing of the troops, which, in the course of the evening, was effected with some difficulty, under the direction of the Captains Parker, Kempenfelt, and Brereton, through a most violent surf, by which many of the boats were dashed to pieces, a quantity of arms and ammunition damaged, but fortunately no lives were lost. The enemy had collected in force to oppose the landing, but the well-directed and brisk cannonade from the frigate soon compelled them to retire. The troops, reinforced by 274 marines, landed and formed on the beach without molestation.

On the 28th, a battalion, composed of 632 seamen, was landed to co-operate with the army under the command of the Captains Collins, Pitchford, and Ourry. On the 29th, in order to divide the enemy's attention, and second the operations of the army, the admiral ordered the Elizabeth and Falmouth to anchor as close to the town as the depth of water would permit, and to enfilade the part proposed to be at-

tacked.

tacked. Although the water was too shoal for the ships to approach near enough, their shot had the desired effect, throwing the inhabitants into the greatest terror and confusion.

On the 1st and 2nd of October, it blew a most violent storm, attended by torrents of rain, which endangered the whole squadron. The South Sea Castle store-ship was driven ashore, fortunately without being materially injured; and in such a situation as proved extremely useful; her broadside enfiladed the beach, which enabled her to land the intrenching tools, stores, and provisions, with which she had lately arrived, without molestation. By the united efforts of the sea and land forces, the siege was carried on with the greatest spirit and activity. The enemy made several desperate attempts to storm our batteries and intrenchments; but were repulsed with a dreadful carnage; as the forces they employed on this service were chiefly composed of Indians, armed only with bows and arrows, who, with a savage ferocity, rushed on the very muzzles of our pieces, and died like wild beasts, gnawing the bayonets.

On the 5th, a practical breach was made in the enemy's works; and the next morning, at day-break, the fort was carried by storm. The governor and principal officers had retired to the citadel, which being in a defenceless state, they were soon obliged to surrender. To save the city from being pillaged, the inhabitants entered into an agreement to ransom it for four millions of dollars. One million sterling was to be assigned to the East India company, for the aid they afforded in the expedition. The following sums were all the captors received:—

	£.	s.	d.
To the admiral, general, and commodore	14,120	12	9
To the captains of the navy, and field officers of the army, each	1,539	0	8
To the lieutenants and masters of the navy, and captains of the army, each	165	5	4
To the warrant officers of the navy and subalterns of the army, each	80	6	5
To the petty officers of the navy and non-commissioned officers of the army, each	30	1	0
To the seamen and soldiers, each	6	0	0

In the harbour several large ships were taken, and a considerable quantity of naval and military stores were found in the royal magazines, which enabled the admiral to refit the fleet, now become in a most reduced and crippled condition.

The loss sustained during the siege was very inconsiderable, when compared with the hardships and fatigue to which the troops and seamen were constantly exposed. Four officers were killed, 5 wounded, and 2 drowned; 28 seamen and soldiers killed, 106 wounded, and 11 drowned. Commodore Teddeman, in attempting to enter the river in his barge, the morning after the reduction of Manilla, was unfortunately drowned, with five of his people.

Captain Richard Kempenfelt was appointed to act as governor of the citadel of Cavite, and was afterwards intrusted with the admiral's despatches to England.

On the 7th of November, during the siege, Admiral Cornish received intelligence, that the galleon, St. Philippina, was on her passage from Acapulca to Manilla. The Panther and Argo were instantly sent in quest of her. On the 30th of October, Captain Parker discovered a large sail off the island of Capul, and gave chase. A rapid and adverse current obliged the Panther to anchor; but the Argo got alongside of her, and after a smart action of two hours, Captain King was compelled to sheer off to repair his damages. At nine the next morning, the Panther came up with the chase, and engaged her within musket-shot until eleven, when she struck, and proved to be the Santissima Trinidad, which had sailed from Manilla on the first of August, bound to Acapulca; but having encountered a heavy storm, was dismasted, and on her return to refit. She was pierced for sixty guns, but had only thirteen mounted, and eight hundred men. The money and merchandise found on board, were estimated at three millions of dollars. In the meantime, the Philippina had arrived at Palapa, a port on the island of Samar. The governor, and principal merchants of Manilla,

entered into an agreement with Admiral Cornish and General Draper, that the galleon should be given up to the English with all her treasure and plate on board, provided they might be allowed to take out of her as much money as would pay off the remainder of the four millions of dollars, which was due for the ransom of the city. The admiral and general having acceded to this proposal, the Argo and Seaford frigates were despatched to Palapa, with a deputation from the governor of Manilla, ordering the general of the galleon to deliver her up to the English. The captains of the frigates used every effort, for three months, to beat through the Straits of Embocadero, against a strong N.E. monsoon, during which time they encountered very tempestuous weather; and were frequently in imminent danger of being lost. They were at length obliged to bear away for Manilla, without effecting their purpose, in a most shattered condition, and in great want of provisions.

Soon after, Admiral Cornish sailed for the coast of Coromandel, leaving the Falmouth and Seaford for the protection of Manilla; and with orders for Captain Brereton to sail for Palapa, to take possession of the galleon as soon as the season would permit. This commission never appears to have been executed, as nothing more was ever heard of the cargo of the Philippina; and the Spanish government refused to pay the two millions of dollars due for their ransom.

LOSS OF A JAMAICA SLOOP,

Commanded by Captain Nathaniel Uring, in 1711.

CAPTAIN NATHANIEL URING having been appointed to the command of a sloop to trade to the Leeward Islands, in the beginning of November, 1711, the events which attended the prosecution of his voyage are so various and interesting, that we shall lay them before our readers in the captain's own words.

"We set sail from Jamaica in company with another sloop belonging to the same owner, in order to load logwood and sarsaparilla on the coast of New Spain, and had agreed to rendezvous at Truxillo, if we lost company; we touched at Blewfields, where we watered, and proceeded on our voyage. Being then unacquainted in those seas, I had a pilot sent on board by the owner, and I was directed to keep company with the other sloop, commanded by Captain Gill, who was reckoned a good pilot in that part of the world.

"After we had sailed about a week from Jamaica, having little wind, we saw the coast of Muschetos; and at the same time the wind began to freshen, with a small drizzly rain. The wind soon after shifting from the N.E. to the N. and N. by W. and blowing hard, we tacked and stood to the eastward; the wind increasing to a storm, obliged us to haul down our main-sail and jib, and lay by under our fore-sail. Night coming on, we lost sight of our consort, and made several false fires, but was not answered, so that I gave over the hopes of seeing her any more.

"About nine or ten o'clock at night, there being a very great sea raised by the wind, our bowsprit gave way, and fell under the lee bow; we endeavoured to save it, but the sea running so high we could not; and being afraid it would stave a hole in the bow of the vessel, were obliged to cut it away; and while some were cutting away the bowsprit, others were carrying the horse forward for a stay in order to secure the mast, and then reefed the fore-sail and set it; but the storm continuing, we were soon obliged to haul it down again. About eleven o'clock at night, we suddenly saw the water look very white, which made us afraid that we were upon some shoal, and immediately hove the lead, and found fourteen fathom water; we kept heaving it, expecting every moment to be ashore. We set the fore-sail again. I inquired of my pilot, in relation to the depth of water, but found he knew nothing of the matter. We hove the lead several times in the space of a quarter of an hour, and had almost the same water, it shoaling very little, which gave me hopes that we were not in so much danger as I before feared. The wind ceasing a little, we double-reefed our main-sail and set it, and hauled

down the fore-sail, which kept the sloop's head more to the wind. In about an hour the water shoaled to thirteen fathoms, and so to twelve, and then to eleven; and about three o'clock we had but ten, and shortly after nine fathoms, which made me afraid we should be drove on shore before day-light. I looked on the draught of those seas, which laid down several ledges of rocks and shoals, and expected nothing less than to be thrown on some of them every moment, when we could expect nothing but immediate death. This, I must confess, was a melancholy prospect; the tedious hours went heavily away, wishing and longing for the day, in hopes to see some island or harbour where we might save the vessel and our lives. We had less water every cast of the lead, and were come in to eight fathoms when the day appeared; the sight of which revived our sinking spirits, and gave us hopes of deliverance; but alas! when it was light, that we could see about us, we found ourselves near the shore! The storm continuing, and the wind blowing right upon it, by this time had drove us into less than seven fathom water; we then set the fore-sail to try if the vessel would bear it, or must soon have been drove ashore. We made hard shift to carry it, and gathered again off the land into eight fathoms.

"The land was very remarkable in several places; and seeing an opening which looked like a harbour or large river, I took notice of it to my pilot, and inquired of him if he knew it; he confessed that he did not; and having no one on board acquainted in those seas, except himself, we were entirely at a loss. I called all the seamen together, and asked their opinions, whether they were willing to run the risk of their lives, and venture for the place which we saw look so like a harbour, and perhaps might find water enough to go in. They all answered, they were willing to submit to anything I thought proper. I had thought of venturing, but considered it was a shoal coast, and that it was most probable there was not water enough for the vessel, and if there was not, and she should touch the ground, she would quickly be in pieces; and the strength of the current running out of the river, as it appeared to be, would force us into the sea again, and then we must all inevitably perish. Upon these considerations, I chose rather to run the risk of the wind ceasing or changing, or that probably we might discover a small island as we stood along shore, where we might anchor and be preserved.

"Having set our fore-sail as above mentioned, we gathered a little off the shore, and withal deepened our water till about ten o'clock, and were again got into nine fathom; but the land being more to the eastward, we soon began to shoal our water again to eight fathom and so to seven. My pilot seeing a remarkable tuft of trees, said he knew the land; and as he went further to the eastward, he grew more and more confirmed in it; but consulting my chart, it laid down a great many rocks and shoals thereabouts, which gave me little hopes: but standing to the eastward, we still raised the land, and the pilot said positively he knew that it was Cape Gracia de Dios: to the eastward of which, round that cape, he said was very good and safe anchoring, as the wind then was, where he had been several times: and further said, that we should weather the cape in five fathom water. I was glad to hear he was so positive he knew the land; and in weathering the cape we had no more than five fathom water, which confirmed me that he was right in his judgment; as soon as we deepened the water, the pilot said it was time to bear away; we did so, but soon shoaled the water again, and the pilot was afraid he was mistaken, and then said he was right again; but we soon found the pilot had deceived us, for we struck upon a shoal of rocks, and gave but few thumps before the main-mast jumped out of the step; and for fear the foot of the mast should force out the sloop's bow and sink her immediately, we made haste to cut it away; but having but one axe, had hard work to do it, as we had also in cutting away the vessel's gunwale, in order to launch the canoe overboard.

"The mast being gone, we could have no assistance of tackles, and found it very difficult to launch her into the sea, she being very heavy; but being apprehensive of the sloop's beating to pieces on the shoal, every one out-did themselves, and at last, with much ado, got her into the water, by which time

it was near night; and being at least two leagues from the shore, we made haste to leave the sloop, that we might reach it before it was dark, and only took with us one piece of beef, our small-arms, a little gunpowder, some small shot, an axe, and an iron pot, and then put for the shore, which we did not reach till near eight o'clock at night; when we came near it, we saw the break of the sea so high, and at such a distance from it, we were very much afraid of the canoe upsetting, before we should be able to get thither; but there being no way to save our lives but through that danger, we were obliged to put for it, let the consequence be what it would. It being moon-light, we watched a favourable opportunity of a smooth sea, and immediately rowed for the shore, the sea breaking over us several times before we came to it, and by the providence of God we happily landed,

"As soon as we were all out of the canoe, we hauled her up upon the beach, and then endeavoured to go back from the water side into the woods, which we saw at some distance, in order to get fire, and shelter ourselves, being both cold and wet, and sadly fatigued; but when we attempted to go towards the woods, we came quickly into a morass, and went up to the mid-leg, and sometimes up to the knees, in mud and water; and what made it the more troublesome, it was full of long cutting grass intermixed with briars, which very much incommoded us, and tore our legs in several places. After we had gone near a mile in this miserable way, we came to the dry land, and went into the edge of the woods, where by the help of a pistol and some gunpowder, we made a fire and dried our clothes; and then we cut down some small trees, with which, and the branches of others, we set up a little hut to shelter us from the rain, in which we designed to rest and refresh ourselves, after two days and a night's fatigue. We laid down in our hut, but found it was impossible to sleep, there being millions of mosquitoes, and other biting flies about us; so that neither mouth, nose, eyes, nor any part of us, was free from them; and wherever they could come at our skin, they bit and stung us most intolerably.

"As soon as it was day, we went to the water side to look for the sloop, but not seeing her, concluded she was beat in pieces upon the ledge of rocks where we left her. Having but one piece of beef, about six pounds, which we brought from on board the sloop, and no bread, for our whole company, being sixteen in number, we began to think of looking out to see what we could get to subsist on: and therefore I sent the people different ways to hunt, and see whether they could discover any inhabitants. In about four hours some of them returned with a bunch of green plantains, which they had found growing in an old deserted plantation, where they saw sweet cassave; this discovery came very seasonably to our relief; as soon as we found a kind of bread, we boiled our beef, and refreshed ourselves.

"The following day I distributed amongst the people some small arms, powder and shot, which indeed I had directed to be put under the canoe when we left the sloop, in order to kill such creatures as probably we might find in that country, to prevent our being starved, if we found no inhabitants. The men being thus provided, I ordered them to go different ways to hunt, and observe if they saw any paths in the woods by which we might find some of the natives, concluding we were not far distant from the people, by reason of the little deserted plantation, where were the remains of a little hut or cabin. I also took my gun and went a different way; and espying a tiger-cat upon a tree, I fired, but missed her, which if I had had the good fortune to have killed, would have been sufficient to have made us all a plentiful meal. Having hunted several hours in the woods, and meeting with nothing worth shooting, I returned; and some of our people came back soon after with several large fishing hawks, which they had killed: and notwithstanding they were very tough and fishy, we ate them very heartily.

"The next day, being the third after our being cast away, the people went out again to see what they could kill, and some of them soon returned with more hawks, which we were dressing, when others brought with them a large piece of a cow. When I saw the beef, I inquired how they came by it; they told me

they found it single in the woods, and shot it, believing it to be wild; but soon after seeing three more which appeared to be tame, they found their mistake. I was very sorry the people were so rash, being apprehensive of the ill consequences which might attend it.

"By the time we had dined upon the beef, a native of the country came to us, who spoke broken English, by whom we understood, that about sixteen or eighteen miles farther to the southward, there were inhabitants, and that a vessel lay sunk near the shore a few miles from us, without any mast or people in her, which we judged to be our sloop. He also told me that some of our people had killed a cow belonging to Captain Hobby, one of the chief men on that side of the country; and said, he would be much displeased when he heard of it. I told him I was very sorry for it, but that the seamen had killed it by mistake, believing it to be wild. I was glad to hear that we were near inhabitants, and that the sloop was drove so near the shore, from whence we hoped to get some provisions.

"The weather proving more moderate and the sea pretty well down, we launched the canoe; and while some of the men rowed her along shore, others walked by land, and so continued till it grew night, and then hauled the canoe ashore, and turned her bottom up. Part of us took up our lodgings under her, and part upon the sandy beach; but those under the canoe soon quitted their lodging, by reason the flies would not suffer them to sleep, choosing to lie in the open air, where the wind blew most of them away. In the night two of our men left us, and carried with them my fowling-piece, and a musket, with a good part of our powder and shot.

"In the morning we launched our canoe, and pursued our journey as before. About noon we saw our vessel sunk near the shore: we went on board, but found everything gone out of her. I ordered the canoe to Black River, where she was conducted by an Indian; and went myself to the Indian habitations, where I found most of them very happy; some of them were so drunk that they could not speak. We had the good luck to find one or two sober, who showed us where they had laid some of our provisions, which our people went immediately to dress, being all very hungry. Black River running up near the Indian habitations within the land, our people brought up the canoe; the sober Indians were very courteous, and gave us some of our own rum and sugar, with which we made some punch, and cheered our spirits; they also let us know where they had hid some of our rum, from whence we took a small cask and put it into our canoe.

"The next day Captain Hobby came to us, and behaved very civilly, though he made a heavy complaint for the loss of his cow. I assured him, that our people would not have killed it, if they had not believed it had been wild, at which he seemed better satisfied, and was very friendly, seeming sorry for our misfortune.

"This country being flat and morassy, we were grievously pestered with flies, so that it was almost impossible to sleep. As to the Indians, I did not perceive they found any inconvenience, or took any notice of them.

"In four or five days we fitted our canoe as well as we could, in which we fixed a small fire hearth to dress our provisions, having put into her as much provisions and water as we could go safely to sea with. Taking with me eight of my people, we put to sea, intending for Truxillo, which was the place appointed for our rendezvous, and where we expected to find our consort.—Captain Hobby lending us another canoe to carry the rest of our men, we rowed round the cape where we were cast away, which we then knew went by the name of the False Cape; which makes me believe some other people had been deceived in it as well as my pilot, who had given it that name. When we had passed the cape, we stood down along the shore with our sails; and at night we let go our grappling, and lay till morning for fear of passing our consort, which we hoped to see upon the coast. As soon as it was day-light, we weighed, and pursued our voyage, keeping as near the shore as we could with safety, by reason we designed to call at Plantain River, to inquire whether they had seen her pass by. At night we anchored again. We boiled the pot every day; our food was flour and water boiled like hasty-pudding, with some little bits of beef to give it a relish, instead of butter and salt.

"In the prosecution of this voyage in the canoe, I found it very troublesome and fatiguing; for having no rudder, it was very hard work to steer her with a paddle, for which I had occasion to use my whole strength. Being at that work most part of the day, I was heartily tired before night; and scorching in the sun all day, in the latitude sixteen degrees, added to our pain. But the fatigue of the night was still worse than the day; for the canoe being very leaky, it was impossible for me to sleep in her bottom, where the water washed continually from side to side; I therefore laid one of the paddles across the canoe's gunwale, to keep my legs out of the water, and one of the seats or shouts, I placed under the lower part of my back, with my shoulders on the stern sheets; in this manner I slumbered, and got now and then a short sleep.

"Three or four days and nights passed in this manner, till we discovered the huts on the point of Plantain River, where we saw the English flag hoisted. As soon as we opened the river, we put in for it; but found the water so shallow, and a great sea beating on the shore, it was with great difficulty we got in without being overset or filled with water. As soon as we arrived in the river, we were welcomed ashore, by the white men who resided at that place; we told them our story and inquired if they had seen any vessel lately on that coast; they said they had not, but commiserated our condition, and gave us such provisions as they had.

"After we had refreshed ourselves, and cheered our spirits, we set about fixing a rudder to our canoe, which we completed that night. When it was bed-time, I asked one of the inhabitants to show me where I should lodge; which being conducted to, I went to sleep; and though I found it hard enough for my sore bones, I slept very heartily, being the first tolerable night's rest I had got since being cast away.

"Having lost good part of our powder and shot, by our two deserters, when we were going to Black River, I let the white men know our necessity, who supplied us with more; and having stayed only one night at this place, in the morning we took our leave, and pursued our voyage to Truxillo. We left Plantain River and steered along shore for Cape Camerone; passed by it; and after several days and nights being at sea without our usual fare we came in sight of the port of Truxillo, but found no vessel there, which gave me additional trouble and anxiety. We put our canoe's head to the eastward, in order to return to Plantain River; but had not rowed above five or six miles (being obliged to row against the wind) before the sky began to lower, grow cloudy, and thicken apace to the northward, which threatened an approaching storm. It being about four or five o'clock in the afternoon, I thought it high time to provide for our safety before night, by putting the canoe ashore, or into some river; but there being a very great sea, either was very dangerous; and to keep at sea in a storm was still worse; and so of the two evils I chose the lesser. Seeing the opening of a river we endeavoured to get in; but the sea ran so high at the mouth of it, it filled our canoe, and threw us ashore on the west side. With a good deal of labour we freed her, and put her into the river. It being now night, we anchored in the middle of the stream, in hopes of being free from flies. The night proving very stormy, we thought ourselves very happy, we had got into so comfortable a harbour. In the morning we rowed about two miles up the river, and observed a little ridge of land standing above the rest, we landed there, and soon after pitched our tent with our canoe's sails; we cut down branches of the cohoe trees, to lay at the bottom of it to sleep upon, and keep us from the wet ground. The weather continued very stormy, and in the night there fell such a prodigious deal of rain, that it occasioned a continual rivulet to run through our tent; and we lay in water though it was placed on the highest ground; being also very much pestered with mosquitoes, and other stinging flies, which would not suffer us to sleep.

"In the morning the rain ceased, and it grew fair weather though the wind continued to blow hard. We began to look about us to see what we could meet with for the mouth, and went on the other side of the river in order to hunt. We saw a large guano on the bough of a tree, which one of our people endeavoured to take with his hand, but it escaped into the river, and so we lost a creature which would have given us all a good

meal. We had not gone far into the woods, before we saw a company of large black monkeys, of which we killed several, and then returned to our tent. Our people thought these monkeys excellent victuals, and ate them very greedily: though for my own part, I was several days before I could prevail upon myself to taste them, they looked so like young children broiled. But it was not long before I got over the prejudice, and ate them as heartily as any of our men. The flesh of a monkey has something of the taste of ill-fed pork, and they are about the bigness of a full grown hare.

"After two or three days being in the river, we rowed several miles, to see if we could discover the signs of any inhabitants, or a more convenient place to pitch our tent; but found the whole country flat and morassy, and not the least sign of any people. The weather continued bad for eight or ten days, it often raining very hard, and being still plagued with flies, we were obliged to quit the woods, and go to the sea-side, into the breeze, to get rid of them; but found we had not changed much for the better, for the sand flies there were almost as troublesome as the mosquitoes in the woods.

"In a day or two after we changed our quarters, one of our people took a hickatee asleep upon a log of wood in the river, as it was sunning itself, on which we feasted plentifully. It is an amphibious creature, and like what is called a tortoise or land turtle. In two or three days after we removed to the sea side. I was seized with a violent pain in my right thigh; it swelled extremely, and looked very red, insomuch that I could neither stand nor go; what with the excessive pain of my thigh, and the biting and stinging of mosquitoes and sand flies, I had no rest either night or day, my hands being always employed in beating off the flies from my face. Our powder and shot being all spent, except a little reserved to make a fire, we lived chiefly upon cabbage, which grew there in great numbers, some of the trees to fifty or sixty feet high, their circumference being about four or five feet. The cabbage is close, very white, short, and well tasted, and I thought, sweeter and better than our English cabbage. In this river we frequently saw numbers of large alligators, and it was usual for eight or ten of them together to come ashore upon a point of sand near the river's mouth, in the middle of the day, to sun themselves. Our provisions growing short, before I was lame, I endeavoured to shoot some of them for food, but had not the good fortune to kill any.

"When we had been here ten or twelve days, the weather was grown pretty tolerable, but there was still a great sea beating upon the shore, when the seamen took it in their heads to go to sea in the canoe, in order to get to Plantain River; and notwithstanding my lameness and earnest entreaties to the contrary, I could not prevail upon them to stay a day or two till I was better, in which time the sea might have fallen, and we should not then run half the risk in going out of the river, as at this time. I made shift to crawl to the canoe, and placed myself in the stern sheets, and with the help of my boatswain undertook to steer her. It is commonly observed, that the sea breaks upon the shore in three or five seas, quickly succeeding each other, and then a short intermission, when it is most proper to put from the shore. Being come to the river's mouth, as soon as the great seas were over, we rowed out; but our canoe being heavy, we were not able to get without the breakers before the great seas approached us, which time we were a good distance from the shore between the breakers; and seeing our danger, I encouraged the people to row briskly over them; but the sea rose so high, and broke so terribly, they were all alarmed and confounded; the sea broke in upon us, and the canoe being half filled, canted her broadside to it for want of their pulling with their oars as they ought to have done. On perceiving our danger, and another sea ready to break in upon us, with the help of my boatswain I turned the canoe's head to the shore; and the very moment we had done so, the sea broke over us from end to end, filled the canoe, and forced her very swiftly towards the shore; the seamen sitting still, prevented her over-setting; one sea following close upon the back of another, quickly drove us on shore on the west side of the river; happy it was for us that the canoe's stern was to the sea when it reached us, or otherwise she must have been turned bottom up; and being in the current, which ran strong out of the river,

would have drove us to sea, where we had no chance of saving our lives. We hauled up the canoe, and freed her, and with a good deal of labour and pains put her again into the river. When the seamen were got into safety, they swore the most bitter oaths, that they would not go to sea in the canoe any more, but would travel by land to Plantain River.

"They communicated to me their intention, and desired what provisions were left might be equally shared. I then represented to them the lame condition I was in, and that it was impossible for me to travel by land, since they saw I could hardly stand; and conjured them not to leave me in such sad distress, where I must inevitably perish, being incapable of helping myself. I desired they would stay but two or three days, in which time my leg would possibly grow better, or the sea would be smoother, so that we might be able to proceed without much danger; and also represented to them the very great hazards and difficulties which must attend their going by land, the many large rivers that were between us and Plantain River, besides the fatigue of travelling, and the risk they ran of the wild beasts devouring them, in which that country abounded: but all I said could not divert them from their present purpose.

"The pilot, who was a poor helpless old fellow, and a boy, were the only persons left with me; they had divided the provisions, and left me such a share as they thought fit, which was the hardly equal to their's, and prepared for their journey, by packing up every man his little bundle. I began seriously to reflect, and consider with myself what course to take, having, since our attempt to get out of the river, found a very sensible alteration in my leg for the better, which I made no show of, but limped as before, in hopes my lameness would have induced them not to have left me in that helpless condition: but when I saw they kept to their resolution, and even took the axe with them, which was all we had to trust to, to keep us from starving, I hobbled after the man who had the axe, and desired he would let me have it, but found him inflexible. I then endeavoured to force it from him; but he calling others to his assistance, prevented my taking it.

"I knew that about eight miles distant, was the great river of Romain, which they must pass to go to Plantain River; and I considered when they saw it, if I went with them, by my pointing out the hazard and difficulty to get over it, I might perhaps persuade them to return; and therefore took up my bundle and followed them. When we came in sight of the river, I found it very broad, and a rapid stream; the people began immediately to cut down some dry trees, in order to make a float to pass over it, and in the meanwhile I sat down on the bank with one of them, who had been lately sick, and had no great relish for the journey. As we were viewing the breadth of the river, and the swiftness of the stream, I took the opportunity to represent the great difficulty and danger which attended the passing it; and that we should be drove out of the river's mouth, before it was possible for us to reach the opposite shore; that we had not only that river to pass, but several more such, before we came to Plantain River, and many other difficulties to encounter, therefore I thought we had better return to the canoe, and wait a few days for a favourable opportunity to put to sea, in which we could not possibly run a quarter part of the risk and danger, we were throwing ourselves into. This man being feeble and tired with his walk, lent an open ear to all I said, and communicated it to the rest of the people. They having already tired themselves by cutting down trees, the axe being dull, and having not yet provided a quarter part of what was wanted for making the float, began to listen to the man, and to think there was some reason in what he said, upon which they grew more serious, and retired into the woods, out of my hearing, to consult what was most proper to be done, and came to a resolution to return to our former quarters; accordingly we all went back.

"I began to flatter myself, that I had obtained my purpose to go into the canoe, which I was desirous to do for two reasons; one was, because it would prevent the great hazard and labour we must expect in going over the several rivers which we must pass, besides the fatigue of travelling about

sixty miles upon the sand, in a very hot country, and the danger of being devoured by tigers, alligators, or other ravenous animals; and the other reason was, if we travelled by land, I must leave the canoe, with the greatest part of my clothes, besides the small arms and the iron pot, which was so useful to us.

"When we returned to our old quarters, we fed chiefly upon cabbage, saving the little provisions we had left to the last steak. Here we remained three or four days, it being tolerable fair weather; and the sea being much smoother, I proposed to put to sea; but the seamen refused, and swore they would not go in her any more. I talked pretty smartly to them, and told them what they deserved, and that if one man would but go with me, I would leave them. My boy and two men consented to go; and we set out accordingly about eight o'clock in the morning, and in about three hours we reached the mouth of the river of Great Romain; to which place several of the people (growing into better temper) went with us, and assisted us to make our bark logs. We found scattered upon the banks of the river several bamboo trees, which we got together, and cut them into proper lengths, and fastened them to each other to make bark logs, in order to get over the river. We had a fishing line, which was divided between us; myself and boy one half, and the two men the other half, each bark log carrying two persons. We left the axe with the rest of the people, who returned to the canoe, and set forward with our two bark logs; we paddled up close by the side of the river, keeping as much out of the current as possible, intending to go a good way up it, before we endeavoured to cross, that we might be in no danger of driving out of the river's mouth. We kept paddling till half an hour past six o'clock at night, and seeing a fine green spot, clear of bushes, close to the river's side, we landed there, and took up our abode that night; but just as we were stepping ashore several very large alligators flounced from thence into the water close by us, at which we were very much startled. Finding this place convenient for us, we made fast our bark logs, and then made a fire, to prevent the tigers or alligators from disturbing us. Being tired, we soon fell asleep round the fire, for the fatigue of the day made us forget the danger of the night. We had provided a pistol, and a little gunpowder in a calabash, which was closely waxed up to prevent its being damaged with water, with which we made a fire when we found it necessary.

"In the morning as soon as it was light, we mounted our bark logs, and continued paddling up the river, but the stream was so rapid that we went up but slowly, and sometimes were not able to bear up against it. We endeavoured to haul up by the branches of the trees which hung over the river, but they being tender twigs, afforded but very little assistance. When I came within my depth, I waded, and pushed the bark log before me, but was soon out of foot-hold, and then mounted the bark log again, and worked with our paddles, and yet made but little progress, finding it very hard to strive against the stream. We often saw large alligators leap from among the bushes into the water just by us; notwithstanding which I was obliged to run the risk of being seized by them, there being often a necessity to wade, or we could not force the bark log against the stream. At last, with great toil and danger, in six or seven hours, we got three or four miles up the river, till we came the length of an island, which lay near a quarter part over it; but was hard put to it to get thither, the island dividing the stream of the river, and redoubling its force, so that it was with great difficulty we reached it. When we had surmounted the difficulty, we rested awhile, and then paddled about half a mile farther up the side of the island, and believing ourselves so far up that we might safely venture to cross it, we put over and happily reached the other side about a mile above the river's mouth, then drove down the current till we came to a convenient place near its entrance, where we landed about three o'clock in the afternoon.

"The weather being extremely hot, and having no wind, and only my shirt on, and that leaving my thighs very often bare, the heat of the sun scorching them, made me frequently throw water on them to keep them cool, not thinking of the

consequence; but soon after we landed, I found them extremely sore, very red, and blistered in several places, which grew very painful. We unlashed our bark logs for the sake of our line, ate a little morsel of bread, with about an ounce of raw salt beef, and filled up with the limpid stream. Being thus refreshed, we set forward and travelled eight or ten miles that night; before it grew dark, we made a fire near the sea side, in order to take up our lodging, but having had no water since we parted from the river of Romain, we were almost famished, and ready to die with thirst; having found some cocoa plum trees, where we took up our quarters, we searched them very narrowly for fruit, and found two or three plums, which moistened our mouth, and gave us great relief. In a little time after, by digging in the sand, we found fresh water, and satisfied our thirst.

"As soon as it was day, we pursued our journey, and about ten o'clock in the morning, we came to a river, with a very deep and rapid stream, but not above a quarter so broad as that we had already passed. Finding bamboos scattered over the point of the river, we gathered them together, and began to make our bark logs. In about three hours we completed them, and put over the river, which we found less trouble in passing than we expected, by reason half the breadth of it on the farthest side proved to be shoal water, and not above mid leg deep, which we found little inconvenience in wading through. When we were over, and had taken our line from the bark logs, it being about two o'clock in the afternoon, we sat down by the river side to dinner. When we had eaten as much as we could afford, and washed it down with large draughts of water, we proceeded on our journey, but found it very troublesome travelling on dry and loose sand, besides the inconvenience of bad shoes. We attempted several times to travel through the woods, but found the underwood so thick, and the ground so morassy, there was no passing that way, and we were obliged to keep by the sea side. We waded over several rivers, some up to our knees, others to our middle, and others up to our chin. One of the men could swim, and he used to try first whether the rivers were fordable, which, if he found, we forded over; and if not, we made our bark logs, and went over upon them.

"We travelled about eight or ten miles after we went over Limehouse River (for so that river was called where we dined), and it being near night, we made a fire, according to our custom, and rested till morning; we then went forward, fording over many rivers in our way. About noon we came to a head-land that jutted into the sea, which put a stop to our going by the sea side; the rocks being very high and steep, and the sea beating violently against them; we chose therefore to go back into the woods, where we found it less troublesome, with an intent to go through the country till we should get on the other side of the head-land; and accordingly marched up the hills for that purpose, having with great difficulty travelled up and down several, where we were obliged to haul ourselves up from tree to tree, and slide down again on the other side, easing ourselves down the branches to prevent our falling.

"Having wandered several hours in this manner, and being in hopes that we had passed the head-land, withal beginning to be apprehensive we should not be able to get out of the woods before night, there being more danger of wild beasts, and much more unwholesome sleeping than at the sea side; we therefore thought it absolutely necessary to recover it before it was dark; and having descended between two hills into a deep narrow valley, we found a fine rivulet, which was very reasonable to quench our thirst. I concluded this rivulet led to the sea, and therefore followed the stream; but it having many turnings and windings, we went several miles before we came to it, and to our great mortification, found ourselves still on the same side, and not far from the place where we entered the woods. The sun being set, we gathered wood and made a fire where we continued till morning, and then made an attempt to get over the hills, but found it impossible to force a way through penguins, briars, and other prickly plants which grew there. We retired, after tearing our clothes, and losing some of our flesh; and then took a very

desperate resolution to climb over the craggy parts of the rocks, which were very steep and high, and extremely dangerous to pass, which we went over by stepping from one hole in the sides of the rock to another, and from crag to crag, holding by the ragged parts with one hand, and our spare clothes with the other, and by the assistance of Providence we all got well over. We now went on cheerfully, believing the worst of our journey was over; and in about an hour after, by the sea side, I found a cocoa-nut; I soon opened it, and saw it full of milk, which I drank with great pleasure, and divided the nut among the other people. After we had travelled about ten miles, we came to another point of rocks, but this we got over without much difficulty. When we had gone about six long miles farther, it growing night, we made our fire according to custom, and in the morning we proceeded on our journey, fording over many rivers; it was showery weather, and being but thin clothed, I was often wet to the skin, but soon dried by the wind and sun.

"Having got over this troublesome place, we went in expectation every moment of shortly coming to some habitations. We went on several miles further, but found no sign of inhabitants; and having made an end of our small stock of provisions the day before, we began to be quite out of heart, and apprehensive of starving, having nothing with us that could by any means provide for our subsistence. We came to a large lake or lagoon of water, which had a communication with the sea, the stream of which I observed ran out of the sea into the lagoon. One of our men forded it, and went on the other side to see what he could discover; and in about two hours returned with the joyful news of having discovered the print of a man's foot, which gave us hopes we were not far from the inhabitants. With much ado we forded over the mouth of the lagoon, and continued on our journey till we came to another deep and rapid river, where there was no passing without bark logs; we fell to our old work of gathering bamboos, and such dry wood as we could get to make the logs of; but being very scarce, we could not gather so many together that night as we wanted. We made a fire upon the point of the river, where we took up our lodging; several showers of rain incommoded us very much, and had almost put out our fire, and we grew faint and weak for want of sustenance: however, about nine o'clock the next morning we finished our bark logs, and put over the river. When we landed, we dried our clothes, that we might travel the lighter, which had been our custom in our whole journey, they being wet in passing the rivers; and we were continually pestered with mosquitoes and sand flies, and more so whenever we sat or laid down. We proceeded along the shore, and had not gone above half a mile, before we discovered a path which led into the woods, the sight of which gave us all inexpressible joy; we followed it, and in about half a mile further we saw a hut, and soon after, to our great comfort a white man appeared. He asked us who we were, and from whence we came; we related to him our misfortunes; he pitied our condition, and asked where the captain was; he was told that I was the person, and my name: he said he knew me when I commanded a packet-boat to Jamaica, and what his cottage afforded I should be very welcome to. He soon provided us something to eat, which we had great need of.

(To be continued.)

THE SMUGGLER.

The golden days of the smuggler are gone by; his hiding places are empty; and, like Othello, he finds his "occupation gone." Our neighbours on the other side of the herring-pond now bring us *dry bones*, according to the law, instead of *spirits*, contrary to the law. Cutters, preventive boats, and Border rangers, have destroyed the *trade*—it is becoming as a tale that was told. From Spittal to Blyth—yea, from the Frith of Forth to the Tyne—brandy is no longer to be purchased for a trifle; the *Kilderkin* of Holland gin is no longer placed at the door in the dead of night; nor is a yard of to-

bacco to be purchased for a penny. The smuggler's phrase, that the "*cow has calved*,"* is becoming obsolete. Now, smuggling is almost confined to crossing "the river" here, and there the "ideal line by fancy drawn;" to Scotland saying unto England—"Will you taste?" and to England replying, "Cheerfully, sister." There was a time, however, when the clincher-built lugger plied her trade as boldly, and almost as regularly, as the regular coaster, and that period is within the memory of those who are yet young. It was an evil and dangerous trade; and it gave a character to the villagers on the sea coasts, which, even unto this day, is not wholly effaced. But, in the character of the smuggler, there was much that was interesting—there were many bold and redeeming points. I have known many; but I prefer at present giving a few passages from the history of one who lived before my time, and who was noted in his day as an extraordinary character.

Harry Teasdale was a native of Embleton, near Bamborough. He was the sole owner of a herring-boat and a fishing-coble; he was also the proprietor of a house in which he lived, and was reputed to be worth money—nor was it any secret that he had obtained his property by other means than those of the haddock hand-line and the herring-net. Harry, at the period we take up his history, was between forty and fifty years of age. He was a tall, thin man, with long sandy hair falling over his shoulders, and the colour of his countenance was nearly as rosy as the brandy in which he dealt. But, if there was the secrecy of midnight in his calling, his heart and his hand was as open as mid-day. It is too true that money always begets the outward show of respect for him who possesses it, though in conduct he may be a tyrant, and in capacity a fool; but Harry Teasdale was respected, not because he was reputed to be rich, but because of the boldness and warmth of his heart, the readiness of his hand, and the clearness of his head. He was the king of fishermen, and the prince of smugglers, from Holy Island to Hartle pool. Nevertheless, there was nothing unusual in his appearance. Harry looked like his occupation. His dress (save where disguise was necessary) consisted in a rudely glazed sou'-wester, the flap of which came over his shoulders, half covering his long sandy hair. Around him was a coarse and open *monkey* or *pee* jacket, with a Guernsey frock beneath, and a sort of canvass kilt descending below the knee; and his feet were cased in a pair of sea boots. When not dressing his hand-lines, or sorting his nets, he might generally be seen upon the beach, with a long telescope under his arm. As Harry was possessed of more of this world's substance than his brother fishermen, so also was there a character of greater comfort and neatness about his house. It consisted of three rooms; but it also bore the distinguishing marks of a smuggler's habitation. At the door hung the hand-line, the hooks, and the creel; and, in a corner of Harry's sleeping room, a "*heg*" was occasionally visible; while over the chimney-piece hung a cutlass and four horse-pistols, and in a cupboard there were more packages of powder and pistol bullets than it became a man of peace to have in his possession. But the third room, which he called his daughter's, contained emblems of peace and happiness. Around the walls were specimens of curious needle-work, the basket of fruit and of flowers, and the landscape—the "*sampler*," setting forth the genealogy of the family for three generations, and the age of her whose fair hands wrought it. Around the window, also, carefully trained, were varieties of the geranium and the rose, the *bigonia* and *cressula*, the *aloe* and the *ice-plant*, with others of strange leaf and lovely colouring. This Harry called his daughter's room—and he was proud of her. She was his sole thought, his only boast. His weather-beaten countenance always glowed, and there was something like a tear in his eyes, when he spoke of "my Fanny." She had little in common with the daughter of a fisherman; for his neighbours said that her mother had made her unfit for anything, and that Harry was worse than her mother had been. But that mother was no more, and she had left their only child to her widowed husband's care; and, rough as he appeared, never was there a more tender or a more anxi-

* A phrase, signifying that a smuggling vessel had delivered her cargo.

ous parent, never had there been a more affectionate husband. But I may here briefly notice the wife of Harry Teasdale, and his first acquaintance with her.

When Harry was a youth of one-and-twenty, and as he and others of his comrades were one day preparing their nets upon the sea-banks, for the north herring-fishing, a bitter hurricane came suddenly away, and they observed that the mast of a Scotch smack, which was then near the Fern Isles, was carried overboard. The sea was breaking over her, and the vessel was unmanageable; but the wind being from the north-east, she was driving towards the shore. Harry and his friends ran to get their boat in readiness, to render assistance if possible. The smack struck the ground between Embleton and North Sunderland, and being driven side-on by the force of the billows, which were dashing over her, formed a sort of break-water, which rendered it less dangerous for a boat to put off to the assistance of the passengers and crew, who were seen clinging in despair to the flapping ropes and sides of the vessel. Harry's coble was launched along the beach to where the vessel was stranded, and he and six others attempted to reach her. After many ineffectual efforts, and much danger, they gained her side, and a rope was thrown on board. Amongst the smack's passengers, was a Scottish gentleman, with his family, and their governess. She was a beautiful creature, apparently not exceeding nineteen; and as she stood upon the deck, with one hand clinging to a rope, and in the other clasping a child to her side, her countenance alone, of all on board did not betoken terror. In the midst of the storm, and through the raging of the sea, Harry was struck with her appearance. She was one of the last to leave the vessel; and when she had handed the child into the arms of a fisherman, and was herself, in the act of stepping into the boat, it lurched, the vessel rocked, a sea broke over it, she missed her footing, and was carried away upon the wave. Assistance appeared impossible. The spectators on shore, and the people in the boat, uttered a scream. Harry dropped the helm, he sprang from the boat, he buffeted the boiling surge, and, after a hopeless struggle, he clutched the hand of the sinking girl. He bore her to the boat—they were lifted into it.

"Keep the helm, Ned," said he, addressing one of his comrades who had taken his place; "I must look after this poor girl—one of the seamen will take your oar." And she lay insensible, with her head upon his bosom, and his arm around her waist.

Consciousness returned before they reached the shore, and Harry had her conveyed to his mother's house. It is difficult for a sensitive girl of nineteen, to look with indifference upon a man who has saved her life, and who risked his in doing so; and Eleanor Macdonald (for such was the name of the young governess) did not look with indifference upon Harry Teasdale. I might tell you how the shipwrecked party remained for five days at Embleton, and how, during that period, love rose in the heart of the young fisherman, and gratitude warmed into affection in the breast of Eleanor—how he discovered that she was an orphan, with no friend, save the education which her parents had conferred on her, and how he loved her the more, when he heard that she was friendless and alone in the world—how the tear was on his hardy cheek when they parted—how more than once he went many miles to visit her—and how Eleanor Macdonald, forsaking the refinements of the society on which she was a dependent, became the wife of the Northumbrian fisherman. But it is not of Harry's younger days that I am now about to write. Throughout sixteen happy years they lived together; and though, when the tempests blew, and the storms raged, while his skiff was on the waves, she often shed tears for his sake, yet, though her education was superior to his, his conduct and conversation never raised a blush to her cheeks. Harry was also proud of his wife, and he showed his pride by spending every moment he could command at her side, by listening to her words, and gazing on her face with delight. But she died, leaving him an only daughter as the remembrancer of their loves; and to that daughter she had imparted all that she herself knew.

Besides his calling as a fisherman, and his adventures as a smuggler on sea, Harry also made frequent inland excursions.

These were generally performed by night, across the wild moor, and by the most unfrequented paths. A strong black horse, remarkable for its swiftness of foot, was the constant companion of his midnight journeys. A canvass bag, fastened at both ends, and resembling a wallet, was invariably placed across the back of the animal, and at each end of the bag was a keg of brandy or Hollands, while the rider sat over these; and behind him was a large and rude portmanteau, containing packages of tea and tobacco. In his hand he carried a strong riding-whip, and in the breast pocket of his greatcoat two horse-pistols, always loaded and ready for extremities. These journeys frequently required several days, or rather nights, for their performance; for he carried his contraband goods to towns fifty miles distant, and on both sides of the border. The darker the night was, and the more tempestuous, the more welcome it was to Harry. He saw none of the beauties in the moon, on which poets dwell with admiration. Its light may have charms for the lover, but it has none for the smuggler. For twenty years he had carried on this mode of traffic with uninterrupted success. He had been frequently pursued; but his good steed, aided by his knowledge of the localities, had ever carried him beyond the reach of danger; and his *stow-holes* had been so secretly and so cunningly designed, that no one but himself was able to discover them, and informations against him always fell to the ground.

Emboldened by long success, he had ceased to be a mere purchaser of contraband goods upon the sea, and the story became current that he had bought a share of a lugger, in conjunction with an Englishman then resident at Cuxhaven. His brother fishermen were not all men of honour; for you will find black sheep in every society, and amongst all ranks of life. Some of them had looked with an envious eye upon Harry's run of good fortune, and they bore it with impatience; but now, when he fairly, boldly, and proudly stepped out of their walk, and seemed to rise head and shoulders above them, it was more than they could stand. It was the lugger's first trip; and they, having managed to obtain intelligence of the day on which she was to sail with a rich cargo, gave information of the fact to the commander of a revenue cutter then cruising upon the coast.

I have mentioned that Harry was in the habit of wandering along the coast with a telescope under his arm. From the period of his wife's death, he had not gone regularly to sea, but let others have a share of his boats for a stipulated portion of the fish they caught. Now, it was about day-break, on a morning in the middle of September, that he was on the beach as I have described him, and perceiving the figure of the cutter on the water, he raised his glass to his eye, to examine it more minutely. He expected the lugger on the following night, and the cutter was an object of interest to Harry. As day began to brighten, he knelt down behind a sand bank, in order that he might take his observations, without the chance of being discovered; and while he yet knelt, he perceived a boat pulled from the side of the cutter towards the shore. At the first glance, he descried it to be an Embleton coble, and before it proceeded far, he discovered to whom it belonged. He knew that the owner was his enemy, though he had not the courage openly to acknowledge it, and in a moment the nature of his errand to the cutter flashed through Harry's brain.

"I see it!—I see it all!" said the smuggler, dashing the telescope back into its case; "the low, the skulking coward, to go blab upon a neighbour! But I've have the weathergage o' both o' them, or my name's not Harry Teasdale."

So saying, he hastened home to his house—he examined his cutlass, his pistols, the bullets, and the powder. "All's right," said the smuggler, and he entered the room where his daughter slept. He laid his rough hand gently upon hers.

"Fanny, love," said he, "thou knowest that I expect the lugger to-night, and I don't think I shall be at home, and I mayn't be all to-morrow; but you won't fret—like a good girl, I know you won't. Keep all right, love, till I be back; and say nothing."

"Dear father," returned Fanny, who was now a lovely girl of eighteen, "I tremble for this life which we lead—(as my poor mother said)—it adds the punishment of the law to the dangers of the sea."

"Oh, don't mention thy mother, dearest!" said the smuggler, "or thou wilt make a child of thy father, when he should be thinking of other things. Ah, Fanny! when I lost thy mother, I lost everything that gave delight to my heart. Since then, the fairest fields are to me no better than a bare moor, and I have only thee, my love—only my Fanny, to comfort me. So, thou wilt not cry now—thou wilt not distress thy father, wilt thou? No, no! I know thou wilt not. I shall be back to thee to-morrow, love."

More passed between the smuggler and his daughter—words of remonstrance, of tenderness, and assurance; and, when he had left her, he again went to the beach, to where his boat had just landed from the night's fishing. None of the other boats had yet arrived. As he approached, the crew said, they "saw by his face there was something unpleasant in the wind," and others added—

"Something's vexed skipper Harry this morning, and that's a shame, for a better soul never lived."

"Well, mates," said he, as he approached them, "have you seen a shark cruising off the coast this morning?"

"No," was the reply.

"But I have," said Harry, "though she is making off to keep out of sight now; and, more than that, I have seen a cut-throat lubber that I would not set my foot upon—I mean the old Beelzebub imp, with the white and yellow stripe on his yawl, pull from her side. And what was he doing there? Was it not telling them to look out for the lugger?"

Some of the boat's crew uttered sudden and bitter imprecations. "Let us go and sink the old rascal before he reach the shore," said one.

"With all my heart," cried another—for they were all interested in the landing of the lugger, and, in the excitement of the moment, they wist not what they said.

"Softly, softly, my lads," returned Harry; "we must think now what we can do for the cargo and ourselves, and not of him."

"Right, master," replied another; "that is what I am thinking."

"Now, look ye," continued Harry, "I believe we shall have a squall before night, and a pretty sharp one too; but we mustn't mind that when our fortune's at stake. Hang all black-hearted knaves that would 'peach on a neighbour, say I; but it is done in our case, and we must only do our best to make the rascal's story stick in his throat, or be the same as if it had; and I think it may be done yet. I know, but the 'preachers can't, that the lugger is to deliver a few score kegs at Blyth before she run down here. We must off and meet her, and give warning."

"Ay, ay, Master Teasdale, thou'rt right; but, now that the thing has got wind, the sharks will keep a hawk's eye on us, and how we are to do it, I can't see."

"Why, because thou'rt blind," said Harry.

"No, hang it, and if I be master," replied the other; "I can see as far as most o' folks, as ye can testify; and I dows plain enough, that if we put to sea now, we shall ha'e the cutter after us, and that would be what I call only leading the shark to where the salmon lay."

"Man, I wonder to hear thee," said Harry, "folk wad say thou hast nae mair gumption than a born fool. Do ye think I wad be such an ass as to send out spies in the face o' the enemy? Hae I had a run o' good luck for twenty years, and yet ye think me nae better general than that comes to? I said, nae doubt, that we should gang to sea to meet the lugger, though there will be a squall, and a heavy one too, before night, as sure as I'm telling ye; but I didna say that we should dow sae under the bows o' the cutter, in our awn boat, or out o' Embleton."

"Right, right, master," said another, "no more you did—Ned isn't half awake." The name of the fisherman alluded to was Ned Thomson.

"Well, Ned, my lad," continued Harry, "I tell thee what must be done; I shall go saddle my old nag—get thou a horse from thy wife's father—he has two, and can spare one—and let us jog on as fast as we can for Blyth; but we mustn't keep by the coast, lest the king's folk get their eyes upon us. So away,

get ready, lad—set out as quick as thee can—few are astir yet. I won't wait on thee, and thou won't wait on me; but whoever comes first to Felton Brig, shall just place two bits o' stones about the middle, on the parapet I think they ca' it; but it is the dyke on each side o' the brig I mean, ye know. Put them on the left hand side in gaun along, down the water; or if they're there when ye come up, ye'll ken that I'm afore ye. So get ready, lad—quick as ever ye can. Tell the awd man naething about what ye want wi' the horse—the fewer that know anything about thir things the better. And ye, lads, will be upon the look-out; and, if we can get the lugger run in here, have a' thing in readiness."

"No fear o' that, master," said they.

"Well, sir," said Ned, "I'll be ready in a trap-stick, but I know the awd chap will kick up a sang about lendin' his horse."

"Tell him I'll pay for it if ye break its legs," said Harry.

The crew of the boat laughed, and some of them said—"Nobody will doubt that, master—you are able enough to do it."

It must be observed, that, since Harry had ceased to go regularly to sea, and when he was really considered to be a rich man, the crew of his boat began to call him *master*, notwithstanding his sou'-wester and canvass kilt. And now that it was known to them, and currently rumoured in Embleton, that he was part proprietor of a lugger, many of the villagers began to call Fanny, Miss Teasdale; and it must be said, that, in her dress and conversation, she much nearer approximated to one that might be styled *Miss*, than to be a fisherman's daughter. But when the character and education of her mother are taken into account, this will not be wondered at.

It would be uninteresting to the reader to describe the journey of Harry and Ned Thomson to Blyth; before they arrived at Felton, Harry had overtaken Ned, and they rode on together.

On arriving at Blyth, they stopped at the door of an individual who was to receive forty kilderkins of Hollands from the lugger, and a quantity of tobacco. It is well known to be the first duty of an equestrian traveller to look after his horse, and to see that it is fed; but, in this instance, Harry forgot the established rule—the horses were given in charge of a girl to take them to a stable, to see them fed, or otherwise, and Harry hastened into the house, and breathlessly inquired of its owner—"I hope to heaven, sir, ye have heard nothing of the Swallow?"

[The lugger was called the "Swallow," from the carpenter in Cuxhaven, who built her, having warranted that she "would fly through the water."]

"Why, nothing," replied Harry's brother smuggler; "but we shall be on the look-out for her to-night."

"So far well," said Harry; "but I hope you have no fear of any king's lobsters being upon the coast, or rats ashore?"

"I don't think we have anything to fear from the cutters," said the other; "but I won't answer for the spies on shore; there are folk wi' us here, as well as wi' ye, that canna see their neighbours thrive, and haud their tongue; and I think some o' them ha'e been gaun ower often about wi' the spy-glass this day or tow."

"Then," said Harry, "the lugger doesna break bulk here, nor at Embleton ither—that's flat. Get ye a boat ready neighbour, and we maun off and meet her, or ye may drink sma' yill to your venture and mine."

"It is growing tow stormy for a boat to venture out," answered the other.

"Smash, man!" rejoined Harry; "wad you sit here on your hunkers, while your capital is in danger o' being robbed frae ye, as simply as ye would snuff out a candle, and a' to escape a night's doukin! Get up, man—get a boat—we maun to sea—we maun meet the lugger, or you and I are done men—clean ruined a'thegither. I hae risked the better part o' my bit o' Fanny's fortune upon this venture, and, Heaven! I'll suffer death ten thousandfold afore I see her brought to poverty; sae get a boat—get it—and if ye daurna gang out, and if nane o' your folk daur gang, Ned and me here will gang our tow sel's."

(To be continued.)

WRECK OFF YARMOUTH, FEBRUARY, 1845.

WRECKS OFF YARMOUTH, &c.

February, 1845.

ONE of the severest storms for many years was experienced in February, 1845, by the inhabitants of Yarmouth, and the loss of human life and property occasioned by its ravages was truly dreadful. The gale commenced shortly before four o'clock in the morning, and as the day advanced it increased furiously, eventually blowing a complete hurricane, to the terror of every ship's crew lying at anchor in the roadstead; rain and snow fell heavily at intervals accompanied by a severe frost. In the early part of the morning, at the commencement of the gale, a brig called the *Jane*, from Middlesborough, for London, was making for the Cockle under double-reefed topsails, &c. By some unaccountable means she missed stays. The crew, perceiving that the ship was driving on to the Scroby Sands, let go the anchor for the purpose of bringing her up, but in an instant the chain broke by the force she was driving, and directly afterwards she struck, where she soon sank, the crew barely having time to get their clothes into the boat before the vessel went down. Another brig, named the *Ann Porter*, laden with coals, of and from Sunderland to the metropolis, met with a similar fate; she drove on to the Scroby Sands, and became a total loss. Another, but, alas! a more dreadful wreck, succeeded the above during the height of the storm. At about half-past eight o'clock a large brig was observed in a state of distress, all her sails blown away, apparently having lost her rudder, and driving in the direction of the same sands. Immediately the alarm was given, a party of thirteen brave fellows pushed off in a large yawl, about fifty tons, named the *Phoenix*, from the beach, to the rescue of the crew of the hapless vessel, for it was evident that she must strike the sands long before they could come up with her, and such proved to be the case. As the yawl neared the sands, the vessel could be seen beating violently, while the sea was making a clear sweep over her masts. The crew had taken to the rigging, where they had lashed themselves. A ray of delight beamed on the countenances of both crews as the yawl approached, steadily steered by a veteran fisherman, and the chances of saving their lives seemed certain. The yawl, however, was just being brought alongside, when a terrible sea caught the boat and dashed it to pieces against the bulwarks of the brig. Ten of its crew contrived to grasp hold of the brig, as their frail craft sank beneath the waves with three of their companions, who were never seen more, and consequently perished. The brig's crew having, as before said, taken to the rigging, this was the only place of safety for those of the yawl. The latter having been seen to go down by those assembled on the beach, the lifeboat belonging to Yarmouth was instantly launched to render assistance to the unhappy creatures. Those in the lifeboat used all the energy they could to reach the vessel in time, but ere they had reached half the distance the foremast, with its living freight lashed to it, fell overboard, and every soul with it perished. The feelings of the remainder, lashed to the mainmast, at witnessing the melancholy fate of their companions were, as may be imagined, of the most heart-piercing description. This mast also gave way, and fell over the ship's side, and several of the party, it is stated, have likewise perished. The lifeboat was then near at the time, and, after very great exertion, seven were saved. These all belong to the yawl; but the remainder of the crew, six in number, as well as the whole of the brig's crew, were drowned. The brig's name is as yet unknown, or were she belonged to. The wreck has entirely gone to pieces. It is expected, however, from her size—upwards of 200 tons burden—that she was one of the Newcastle traders.

From the *Bury Chronicle*.

One of the mariners of the yawl's crew describes the scene at this time as peculiarly affecting and awful; he saw from his elevated position, seven of his comrades, and eight of the crew baffling with the waves, and at length sinking to rise no more until the morning when the sea shall give up her dead. The chance of life to him and his companions was at this time very

precarious, and no sounds were heard but the howling of the wind, the crashing of the timbers and rigging, the occasional cry of "some strong swimmer in his agony," mixed with the suppressed moanings and prayers of those whose lives were hardly more secure. The Rev. Mr. Clowes, of Caister, came riding very fast to the life-boat station here, about half-past three, having either seen or heard of the accident. The life-boat was manned, and arrived in about twenty minutes at the wreck, where they found six men out of thirteen, clinging to the rigging, some of them so tenacious of their hold, that it was with difficulty they could be persuaded to leave go, and trust themselves to the ropes which were thrown to their assistance. The jetty and beach were lined with thousands of spectators, attracted to witness the return of the life-boat, with feelings of curiosity, sympathy, and intense interest. Amongst the spectators we observed the wives, brothers, sisters, and parents of those who had left in the yawl, and heard the opposite exclamations of each party as their loved one was proclaimed to be saved or lost. The following are the names of the beachmen who were saved by the life-boat:—Samuel Coltwas, James Gurney, Samuel Shields, Joseph Duffel, Thomas Motts, and Benjamin Gurling. Three of them were carried to their houses—three walked; Gurney and Shields were very much, but, we rejoice to say, not dangerously injured. The following are the names of the men, and the number of the families of those who were lost:—Jas. Boulton (two boys and one girl, all married); William Warner (single); James Shreeve (two boys and one girl); James George (single); George Barney (single); Abraham Wetherell (seven girls and two boys); and Gannam Hilling (two girls and a wife near her confinement). Thus perished seven fine and practical men belonging to this port, in the attempt to save their fellow-creatures' lives. We hope that public sympathy will be excited by this affecting catastrophe, and that a fund for the relief of the families may be raised promptly and efficiently. The yawl was nearly a new one, and cost in building, we hear, about 230*l*. The crew of the yawl saw her floating, and therefore she may yet be picked up, and partially saved.

A melancholy shipwreck happened on the Cornish coast, all hands on board, excepting one seaman, meeting with a watery grave. The unfortunate vessel was a brig called the *William Pitt*, belonging to Sunderland, Captain Thomas Bowser, master, laden with 3190 ardebs of beans, bound to Gloucester from Alexandria. On Sunday morning last the ship made Scilly and Long Ships Light. She then passed up the Channel, when she encountered the storm, and sustaining considerable injury, the master was determined to run into the first harbour. That of Padstow being the first, the ship was brought before the wind in order to run her in, when unhappily, owing to the pilots not being at their posts, and the captain being unacquainted with the locality, she struck on the rocks on the Miners' side, and afterwards on the Dunbar, where she almost immediately went to pieces. One of the crew, named James Hewson, was saved by lashing himself to a spar, which was carried by the waves ashore. The rest of his companions, however, including the captain, met with a watery grave.

The extent of human life lost at the late distressing shipwreck of the *William Turner*, in Carnarvon Bay, was greater, we regret to say, than first reported. It has been ascertained correctly that no fewer than 30 persons perished. Out of the 30 only 3 bodies have been washed ashore. The ship was nearly 500 tons burden, and her cargo consisted of guano.

THE SMUGGLER.

(Concluded.)

"Surely ye wad be mad, Harry, to attempt such a thing in an open boat to-night," said the Blyth merchant.

"Mad, or no mad," answered Harry, "I hae said it, and I am determined. There is nae danger yet wi' a man that knaws how to manage a boat. If ye gang pullin' through thick and thin, through main strength, and for bare life, as many o' the folk upon our coast dee, then there is danger—but there is nae

use for the like o' that. It is na enough to manage an oar; you must know how to humour the sea, and to manage a wave. Dinna think I've been at sae mair than thirty years without knawin' something about the matter. But I tell you what it is, friend—ye knaw what the Bible says—'The race is not to the swift, nor the battle to the strong;' now, the way to face breakers, or a storm at sea, is not to pull through desperation, as if your life depended on the pulling; but when ye see a wave coming, ye must back-water, and back-water, and not pull again until ye see an opportunity of gainin' forward. It is the trusting to mere pulling, sir, that makes our life-boats useless. The rowers in a life-boat should study the sea as well as their oars. They should consider that they save life by watching the wave that breaks over the vessel, as well as by straining every nerve to reach her. Now, this is a stormy night, nae doubt, but we maun just consider ourselves gaun off to the lugger in the situation o' folk gaun off in a life-boat. We maun work canny and warily, and I'll take the management o' the boat myself."

"If ye dow that, master," said Ned Thomson, "then I gang wi' ye to a dead certainty."

"Well, Harry," replied the merchant, "if it maun be sae, it just maun be sae; but I think it a rash and a dangerous undertaking. I wad sooner risk a' that I have on board."

"Why, man, I really wonder to hear ye," said Harry; "folk wad say that ye had been swaddled in lambs' wool a' your life, and nursed on your mother's knee—get a boat, and let us off to the lugger, and nae mair about it."

His orders were obeyed—and, about an hour after sunset, himself, with Ned Thomson, the merchant, and four others, put off to sea. They had, indeed, embarked upon a perilous voyage—before they were a mile from the shore, the wind blew a perfect hurricane, and the waves chased each other in circles like monsters at play. Still Harry guided the boat with unerring skill. He ordered them to draw back from the bursting wave—they rose over it—he rendered it subservient to his purpose. Within two hours he descried the lights of the lugger. He knew them, for he had given directions for their use, and similar lights were hoisted from the coble which he steered.

"All's well!" said Harry; and, in his momentary joy, he forgot the tempestuous sea in which they laboured. They reached the lugger—they gained the deck.

"Put back, friend—put back," was the first salutation of Harry to the skipper; "the camp is blown, and there are sharks along shore."

"The devil!" replied the captain, who was an Englishman; "and what shall we do?"

"Back, back," answered Harry, "that is all in the meantime."

But the storm now raged with more fierceness—it was impossible for the boat to return to the shore, and Harry and his comrades were compelled to put to sea with the lugger. Even she became in danger, and it required the exertions of all hands to manage her.

The storm continued until near daybreak, and the vessel had plied many miles from the shore; but as day began to dawn, and the storm abated, an enemy that they feared more appeared within a quarter of a mile from them, in the shape of a cutter-brig. A gun was fired from the latter as a signal for the lugger to lie too. Consternation seized the crew, and they hurried to and fro upon the deck in confusion.

"Clear the decks!" cried the skipper; "they shan't get all without paying for it. Look to the guns, my hearties."

"Avast! Master Skipper," said Harry; "though my property be in danger, I see no cause why I should put my neck in danger too. It will be time enough to fight when we canna better dow; and if we can keep them in play a' day, there will be sma' danger in wur g'en them the slip at night."

"As you like, Mr. Teasdale," said the skipper; "all's one to me. Helm about, my lad," added he, addressing the steersman, and away went the lugger as an arrow, scudding before the wind.

The cutter made all sail, and gave chase, firing shot after shot. She was considered one of the fastest vessels in the service; and though, on the part of Harry and his friends, every nerve

was strained, every sail hoisted, and every manœuvre used, they could not keep the lugger out of harm's way. Every half-hour he looked at his watch, and wished for night, and his friend, the skipper, followed his example. There was a hot chase for several hours; and though tubs of brandy were thrown overboard by the dozen, still the whizzing bullets from the cutter passed over the heads of the smugglers. It ought to be mentioned, also, that the rigging of the lugger had early sustained damage, and her speed was checked. About sunset a shot injured her rudder, and she became, for a time, as Harry described her, "as helpless as a child." The cutter instantly bore down upon her.

"Now for it, my lads," cried the skipper—"there is nothing for it but fighting now—I suppose that is what you mean, Master Teasdale?"

Harry nodded his head, and quietly drew his pistols from the breast-pocket of his greatcoat; and then added—

"Now, lads, this is a bad job, but we must try to make the best o't, and, as we hae gone thus far," (and he discharged a pistol at the cutter as he spoke,) "ye knaw it is o' nae use to think o' yielding—it is better to be shot than hanged." In a few minutes the firing of the cutter was returned by the lugger, from two large guns and a number of small arms. Harry, in the midst of the smoke and flame of the action, and the havoc of the bullets, was as cool and collected as if smoking his pipe upon the beach at Embleton.

"See to get the helm repaired, lad, as fast as ye can," said he to the carpenter, while in the act of reloading his pistols; "let us fight away, but mind ye yur awn wark."

Harry's was the philosophy of courage, mingled with the calculations of worldly wisdom.

The firing had been kept up on both sides for the space of half-an-hour, and the decks of both were stained with the blood of the wounded, when a party from the brig, headed by her first mate, succeeded in boarding the lugger. Harry seized a cutlass, which lay unheathed by the side of the companion, and was the first who rushed forward to repel them.

"Out o' my ship, ye thieves!" cried he, while, with his long arm, he brandished the deadly weapon, and, for a moment, forgot his habitual discretion. Others of the crew instantly sprang to the assistance of Harry, and, after a short, but desperate encounter, the invaders were driven from the deck, leaving their chief mate, insensible from wounds, behind them.

The rudder being repaired, so as to render her manageable, the lugger kept up a sort of retreating fight until night set in, when, as Harry said, "she gave the cutter the slip like a knotless thread."

But now a disagreeable question arose amongst them, and that was, what they should do with the wounded officer, who had been left as a prize in their hands—though a prize that they would much rather have been without. Some wished that he might die of his wounds, and so they would get rid of him, for they were puzzled how to dispose of him in such a way as not to lead to their detection, and place their lives in jeopardy. Harry was on his knees by the side of the officer, washing his wounds with Riga balsam, of which they had a store on board, and binding them up, when one desperate fellow cut short the perplexity and discussion of the crew, by proposing to fling their prize overboard.

On hearing the brutal proposal, Harry sprang to his feet, and hurling out his long bony arm, he exclaimed—"Ye savage!" and, dashing his fist in the face of the ruffian, felled him to the deck.

The man (if we may call one who could entertain so inhuman an idea by the name of man) rose, bleeding, growling, and muttering threats of revenge.

"Ye'll blab, will ye?" said Harry, eyeing him fiercely—"threaten to dow it again, and there's the portion that's waiting for yur neck!"—and, as he spoke, he pointed with his finger to the cross-tree of the lugger, and added, "and ye knaw that the same reward awaits ye if ye set yur weel-faur'd face ashore. Out o' my sight, ye 'scape-the-gallows."

For three days and nights, after her encounter with the brig, the lugger kept out to sea; and, on the fourth night, which was thick, dark, and starless, Harry resolved to risk all; and,

desiring the skipper to stand for the shore, all but run her aground on Embleton beach. No light was hoisted, no signal given. Harry held up his finger, and every soul in the lugger was mute as death. A boat was lowered in silence, and four of the crew being placed under the command of Ned Thomson, pulled ashore. The boat flew quickly, but the oars seemed only to kiss the water, and no sound, audible at the distance of five yards, proceeded from their stroke.

"Now, pull back quietly, mates," said Ned, "and I'll be aboard wi' some o' wur awn folks in a twinkling."

It was between one and two in the morning, and there was no outward sign amongst the fishermen of Embleton that they were on the alert for the arrival of a smuggler. The party who gave information to the cutter having missed Harry for a few days, justly imagined that he had obtained notice of what they had done; and also believed that he had ordered the cargo to be delivered on some other part of the coast, and they, therefore, were off their guard. Ned, therefore, proceeded to the village; and, at the houses of certain friends, merely gave three distinct and peculiar taps with his finger upon their shutterless windows, from none of which, if I may use the expression, proceeded even the *shadow* of light; but no sooner was the last tap given upon each, than it was responded to by a low cough from within. No words passed; and at one window only was Ned detained for a space exceeding ten seconds, and that was at the house of his master, Harry Teasdale. Fanny had slept but little since her father left; when she sought rest for an hour, it was during the day, and she now sat anxiously watching every sound. On hearing the understood signal, she sprang to the door. "Edward," she whispered eagerly, "is it you?—where is my father?—what has detained him?"

"Don't be asking questions now, Miss Fanny—sure it is very foolish," replied Ned, in the same tone; "Master will be here by-and-bye; but ye know we have bonny wark to dow afore daylight yet. Gud night, hinny."

So saying, Ned stole softly along the village; and, within half an hour, half a dozen boats were alongside the lugger; and, an hour before daybreak, every tub and every bale on board was safely landed and stowed away.

Yet, after she was a clean ship, there was one awkward business that still remained to be settled, and that was how they were to dispose of the wounded officer of the cutter-brig. A consultation was held—many opinions were given.

"At any rate we must act like-Christians," said Harry.

Some proposed that he should be taken over to Holland and landed there; but this the skipper positively refused to do, swearing, that the sooner he could get rid of such a customer the better.

"Why, I canna tell," said Ned Thomson; "but what dow ye say, if we just take him ashore, and lay him at the door o' the awd rascal that gied information on us?"

"Capital!" cried two or three of the conclave; "that's just the ticket, Ned!"

"Nonsense!" interrupted Harry, "it's nae such thing, man. Ned, I wonder that sic a clever chap as ye aye talks like a fool. Why ye might as weel go and ask them to take you and me off to Morpeth before dinner-time, as to lay him at their door this morning."

"Well, Master Teasdale," said the skipper, who was becoming impatient, "what would you have us to do with him?"

"Why, I see there's naething for it," answered Harry, "but I maun take the burden o' him upon my awn shouthers. Get the boat ready." So saying, and while it was yet dark, he entered the cabin where the wounded officer lay, but who was now conscious of his situation.

"I say, my canny lad," said Harry, approaching his bedside, and addressing him, "ye maun allow me to tie a bit handkercher ower yur een for a quarter of an hour or sae.—Ye needna be feared, for there's naething shall happen ye—but only, in looking after yur gud, I maunna lose sight o' my awn. You shall be ta'en ashore as gently as we can."

The wounded man was too feeble to offer any resistance; and Harry, binding up his eyes, wrapt the clothes on the bed around him, and carried him in his arms upon deck. In the same manner, he placed him in the boat, supporting him with his arm,

and, on reaching the shore, he bore him on his shoulders to his house.

"Now, sir," said he, as he set him down from his shoulders on an arm-chair, "ye needna be under the smallest apprehension, for every attention shall be paid ye here; and as soon as ye are better, ye shall be at liberty to return, safe and sound, to your friends, your ship, or wherever ye like." Harry then turned to his daughter, and continued—"Now, my bird, come awn in by wi' me, and I will let ye know what ye have to dow."

Fanny wondered at the unusual burden which her father had brought upon his shoulders into the house; and, at his request, she anxiously accompanied him into her own apartment. When they had entered, and he had shut the door behind them, he took her hand affectionately, and, addressing her in a sort of whisper, said—

"Now, Fanny, love, ye maun be very cautious—as I know ye will be—and mind what I am telling ye to dow." He then made her acquainted with the rank of their inmate, and the manner in which he had fallen into their hands, and added—

"Now, darling, ye see we maun be very circumspect, and keep his being here a secret frae everybody; he maun remain ignorant o' his awn situation, nowther knowing where he is, nor in whose hands he is; for, if it were found out, it wad be as much as your father's life is worth. Now, he maun stop in this room, as it looks into the garden, and he can see naething frae it, nor will onybody be able to see him. Ye maun sleep wi' the lass in the kitchen, and yur 'sampler,' and every book, or onything that has a name on't, maun be taken out o' the room. It winna dow for onybody but you and me ever to see him, or to wait on him; and, when we do, he maunna be allowed to see either yur face or mine; but I will put my awd mask on, that I used to wear at night sometimes when there was onything particular to dow, and I thought there wad be danger in the way; and," continued he, as the doting parent rose in his bosom, "it wadna be *chancy* for him to see my Fanny's face at ony rate; and when ye dow see him, ye maun have your features so concealed, that, if he met you again, he wadna know ye. Now, hinny, ye'll attend to a' that I've said—for ye remember your father's life depends on't—and we maun be as kind to the lad as we can, and try to bring him about as soon as possible, to get clear on him."

Fanny promised to obey her father's injunctions; but fears for his safety, and the danger in which he was placed, banished every other thought. The books, the "sampler," everything that could lead the stranger to a knowledge of the name of his keepers, or of the place where he was, was taken out of the room.

Harry, muffling up his face, returned to the apartment where the wounded man was, and supporting him on his arm, he led him to that which he was to occupy. He then took the bandage from his eyes, and, placing him on the bed, again desired him to keep himself easy, and wished him "good morning," for day was now beginning to dawn.

The name of our smuggler's wounded prisoner was Augustus Hartly. He was about twenty-four years of age, and the son of a gentleman of considerable property in Devonshire; and, at the period we speak of, he was in expectation of being removed from his situation as second officer of the brig, and promoted to the command of a revenue cutter. The wounds which he had received on the deck of the lugger were severe, and had reduced him to a state of extreme feebleness; but they were not dangerous. He knew not where he was, and he marvelled at the treatment he experienced; for it was kind, yea, even roughly courteous, and unlike what he might have expected from the hands of such men as those into whose power he had fallen. Anxiety banished sleep; and when the risen sun lighted up the chamber where he lay, he stretched forth his hand and drew aside the curtains, to ascertain whether the appearance of the apartment would in any way reveal the mystery which surrounded his situation. But it rather increased it. In the window were the flowers—around the walls the curious needle-work; the furniture was neatly arranged—there was an elegance over all; and, to increase his wonder, in a corner by the window, was a small harp, and a few pages of music lay upon a table near him.

"Surely," thought Augustus, "this cannot be the habitation of a half uncivilized smuggler; and yet the man who brought me here seemed such."

He drew back his head upon his pillow, to seek the explanation in conjectures which he could not otherwise obtain; and while he lay conjuring up strange fancies, Harry, with the mask upon his face, his hair tied up and concealed, and his body wrapt in a great coat entered the room.

"Well, how art thou now, lad?" said the smuggler, approaching the bed; "dost think ye could take breakfast yet?"

Augustus thanked him; but the appearance of Harry in his strange disguise increased his curiosity and anxiety.

Harry withdrew, and again returned with the breakfast; and though an awkward waiter, he was an attentive one. Few words passed between them, for the questions which Augustus felt desirous to ask, were checked by the smuggler, saying—"Now, my canny lad, while ye are here I maun lay an embargo on your asking any questions, either of me or onybody else. Ye shall be taken gud care on—if ye want anything, just tak that bit stick at your bed-side, and gie a rap on the floor, and I'll come to ye. Ye shall want for naething; and, as soon as ye are better, ye shall be at liberty to gang where ye like. But I maun caution ye again, that ye are to ask nae questions."

Augustus again thanked him, and was silent.

At the end of eight days, he was able to rise from his bed, and to sit up for a few hours. Harry now said to him—

"As thou wilt be dull, belike thou wilt have nae objections to a little music to cheer thee."

Thus saying, he left the room, and, in a few minutes, returned with Fanny. He was disguised as before, and her features were concealed by several folds of black crape, which covered her head and face, after the fashion of a nun. She curtsied with a modest grace to the stranger as she entered.

"That cannot be the daughter of a rude and ignorant smuggler," thought Augustus; "and how should such a creature be connected with them?" He noted the elegance of her form, and his imagination again began to dream. The mystery of his situation deepened around him, and he gazed anxiously on the thick and folded veil that concealed her features.

"Wilt thou amuse the poor gentleman with a song, love," said Harry, "for I fear he has but a dull time on't."

Fanny took the harp which stood in the corner—she touched the trembling chords—she commenced a Scottish melody; and as Augustus listened to the music of her clear and silvery voice, blending with the tones of the instrument, it

"Came o'er the ear like the sweet south
Breathing upon a bank of violets,
Stealing and giving odour."

It seemed the sweetest strain to which he had ever listened; and romance and mystery lent it their magic. His eyes kindled at the sounds; and when Harry saw the change that was produced on him, he was well pleased to observe it, and he was proud also of his daughter's performance, and, in the simplicity and fullness of his heart, he said—

"Thou mayest amuse the gentleman with thy music every day, child, or thou mayest read to him, to make him as comfortable as we can; only he must ask thee no questions, and thou must answer him none. But I can trust to thee."

From that moment, Augustus no longer wearied for the days of his captivity to pass away; and he retired to rest, or rather to dream of the veiled songstress, and to conjure up a thousand faces of youth and beauty which might be like her face—for he doubted not but her countenance was lovely as her form was handsome; and he pictured dark eyes where the soul beamed, and the raven hair waved on the snowy temples, with the soft blue eyes where affection smiled, and the flaxen tresses were parted on the brow; but he knew not which might be like hers on whom his imagination dwelt.

Many days passed; and, during a part of each, Fanny sat beside him to beguile his solitude. She read to him; they conversed together; and the words which fell from her lips surprised and delighted him. She also taught him the use of the

harp, and he was enabled to play a few tunes. He regarded her as a veiled angel, and his desire to look upon her features each day became more difficult to control. He argued, that it was impossible to love one whose face he had never seen—yet, when she was absent from his side, he was unhappy until her return; she had become the one idea of his thoughts—the spirit of his fancies; he watched her fair fingers as they glided on the harp—his hand shook when he touched them, and more than once he half raised it to untie the thick veil which hid her features from him.

But, while such feelings passed through his mind, others of a kindred character had crept into the bosom of Fanny, and she sighed when she thought that, in a few weeks, she would see him no more, that even her face he might not see, and that her name he must never know; and fears for her father's safety mingled with the feelings which the stranger had awakened in her bosom. She had beheld the anxiety that glowed in his dark eyes—she had listened to his impassioned words—she felt their influence; but duty forbade her to acknowledge that she felt it.

Eight weeks had passed; the wounds of Augustus were nearly healed; his health was restored, and his strength returned, and Harry said that, in another week, he might depart; but the announcement gave no joy to him to whom it was addressed. His confinement had been robbed of its solitariness, it had become as a dream in which he delighted, and he could have asked but permission to gaze upon the face of his companion to endure it for ever. About an hour after he received this intelligence, Fanny entered the apartment. He rose to meet her—he took her hand, and they sat down together. But her harp lay untouched—she spoke little—he thought she sighed, and he, too, was silent.

"Lady," said he, anxiously, still holding her hand in his, "I know not where I am, nor by whom I am surrounded—in this only I know, that you, with an angel's care, have watched over me, that you have restored me to health, and rendered confinement more grateful than liberty; but, in a few days, we must part—part, perhaps, for ever; then, before I go, grant me but one request—let me look upon the face of her whose remembrance will dwell in my heart as its dearest thought, while the pulse of life throbs within it."

"I must not—I dare not," said Fanny, and she paused and sighed—"tis not worth looking on," she added.

"Nay, dearest," continued he, "deny me not—it is a small request. Fear nothing—never shall danger fall upon any connected with you through me. I will swear to you—"

"Swear not!" interrupted Fanny—"I dare not!—no!—no!" and she again sighed.

He pressed her hand more closely within his. A breathless silence followed, and a tear glistened in his eyes. Her bosom heaved—her countenance bespoke the struggle that warred in her breast.

"Do I look as one who would betray your friends—if they be your friends?" said he, with emotion.

"No," she faltered, and her head fell on her bosom.

He placed his hand across her shoulders—it touched the ribbon by which the deep folds of the veil were fastened over her head—it was the impulse of a moment—he unloosed it, the veil fell upon the floor, and the flaxen locks and the lovely features of Fanny Teasdale were revealed. Augustus started in admiration; for weeks he had conjured up phantoms of ideal beauty, but the fair face before him exceeded them all. She blushed—her countenance bespoke anxiety rather than anger—tears fell down her cheeks, and he kissed them away. He sat, silently gazing on her features, drawing happiness from her eyes.

Again ten days had passed, and, during each of them, Fanny, in the absence of her father, sat unveiled by his side. Still he knew not her name, and when he entreated her to pronounce it, she wept, and replied, "I dare not."

He had told her his. "Call me *your* Augustus," said he, "and tell me by what name I shall call *you*, my own. Come, dearest—do you doubt me still? Do you still think me capable of the part of an informer?"

But she wept the more, for she knew that to tell her name

was to make known her father's also—to betray him, and to place his life in jeopardy. He urged her yet more earnestly, and he had sunk upon his knee, and was pressing her hand to his lips, when Harry, in the disguise in which he had always seen him, entered the room. The smuggler started back.

"What!" cried he, sternly, "what hast thou done, girl?—shown thy face and betrayed me?—and told thy name, and mine too, I suppose!"

"O, no! no! dear father!" she exclaimed, flinging her arms around him; "I have not—indeed I have not. Do not be angry with your Fanny."

"Fanny!" hastily exclaimed Augustus—"Fanny!—bless thee for that word!"

"That thou mayest make it a clew to destroy her father!" returned the smuggler.

"No, sir," answered Augustus proudly, "but that I may treasure it up in my heart, as the name of one who is dearer to me than the life which thou hast preserved."

"Ay! ay!" replied Harry, "thou talkest like every hot-headed youth; but it was an ungrateful return in thee for preserving thy life, to destroy my peace. Get thee into the other room, for thou'st been a silly girl."

She rose weeping, and withdrew.

"Now, sir," continued Harry, "thou must remain nae langer under this roof. This very hour I will get a horse ready, and conduct thee to where ye can go to your friends, or wherever ye like; and as ye were brought blindfolded here, you maun consent to be taken blindfolded away."

"Nay, trust to my honour, sir," said Augustus—I am incapable of betraying you."

"I'm no sae sure about that," returned the smuggler, "and it's best to be sure. I trusted to your honour that ye wad ask no questions while here—and how have you kept your honour? Na, lad, na!—what ye dinna see ye winna be able to swear to. So make ready." Thus saying, Harry left the apartment, locking the door behind him.

It was about an hour after nightfall, and within ten minutes the smuggler again entered the room. He carried a pistol in one hand, and a silk handkerchief in the other. He placed the pistol upon the table, and said—"I have no time to argue—allow me to tie thy eyes up, lest worst follow."

Augustus requested that he might see Fanny but for a few minutes, and he would comply without a murmur.

"No!" said Harry, sternly; "wouldst tamper with my child's heart, when her trusting in thee would place my life in thy power? Say no more—I won't hear thee," he continued, again raising the pistol in his hand.

Augustus, finding expostulation vain, submitted to have his eyes bound up; and as the smuggler was leading him from the house, the bitter sobs of Fanny reached his ear: he was almost tempted to burst from the grasp of his conductor and rush towards her; but, endeavouring to suppress the tumult of his feelings, he exclaimed aloud—

"Forget me not, dear Fanny!—we shall meet again."

"Never!" whispered Harry in his ear.

The smuggler's horse stood ready at the door. In a moment he sprang upon the saddle—(if saddle it could be called)—and, taking Augustus by the hand, placed him behind him; and, at a word spoken, the well-trained animal started off, as though spurs had been dashed into its side. For several hours, they galloped on, but in what direction Augustus knew not, nor wist he from whence he had been brought. At length the smuggler suddenly drew up his horse, and exclaimed—"Dis-mount!"

Augustus obeyed; but scarce had his feet touched the ground, when Harry, crying "farewell!" dashed away as an arrow shot from a bow; and before the other could unfasten the handkerchief with which his eyes were bound up, the horse and its rider were invisible.

It was drawing towards grey dawn, and he knew neither where he was nor in what direction to proceed. He remembered also that he was without money—but there was something heavy tied in a corner of the handkerchief, which he yet held in his hand. He examined it, and found ten guineas, wrapt in a scrap of paper, on which some words seemed to be

written. He longed for day, that he might be enabled to read them, and, as the light increased, he deciphered, written with a trembling hand—

"You may need money.—Think sometimes of me!"

"Heaven bless thee, my unknown Fanny!" cried he, "whoever thou art—never will I think of any but thee."

I need not tell about his discovering in what part of the country the smuggler had left him, of his journey to his father's house in Devonshire, or his relation of what had befallen him; nor how he dwelt upon the remembrance of Fanny, and vainly endeavoured to trace where her residence was, or to discover what was her name beyond Fanny.

He was appointed to the command of a cutter, and four years passed from the period of the scenes that had been described, when following in pursuit of a smuggling vessel, he again arrived upon the coast of Northumberland. Some of his crew, who had been on shore, brought him information that the vessel was delivering her cargo near Embleton, and, ordering two boats to be manned, he instantly proceeded to the land. They came upon the smugglers—a scuffle ensued, and one of Captain Hartly's men was stabbed by his side with a clasp-knife, and fell dead at his feet; and he wrenched the knife from the hand of the murderer, who, with his companions, effected his escape without being discovered.

But day had not yet broken when two constables knocked at the door of Harry Teasdale, and demanded admission. The servant-girl opened the door—they rushed into the house, and to the side of the bed where he slept. They grasped him by the shoulder, and exclaimed—

"You are our prisoner!"

"Your prisoner!" replied Harry; "for what, neighbours?"

"Weel dowie know for what," was the answer.

Harry sprang upon the floor, and, in the excitement of the moment, he raised his hand to strike the officers of the law.

"Ye are only making things worse," said one of them; and he submitted to have handcuffs placed upon his wrists.

Fanny sprang into the room, exclaiming—

"My father!—my father!" and flinging her arms around his neck—"Oh! what is it?—what is it?" she continued, breathless, and her voice choked with sobbing—"what do they say that you have done?"

"Nothing, love, nothing," said he, endeavouring to be calm—"it is some mistake: but some one shall answer for it."

His daughter's arms were forcibly torn from around his neck; and he was taken before a neighbouring magistrate, by whom the deposition of Captain Hartly had been received. Harry was that morning committed to the county prison on a charge of murder. I shall neither attempt to describe his feelings, nor will I dwell upon the agony which was worse than death to his poor daughter. She knew her father was innocent; but she knew not his accusers, nor the nature of the evidence which they would bring forward to prove him guilty of the crime which they imputed to him.

But the fearful day of trial came. Henry Teasdale was placed at the bar. The principal witness against him was Captain Hartly. The colour came and went upon the prisoner's cheeks as his eye fell upon the face of his accuser. He seemed struggling with sudden emotion; and many who observed it, took it as a testimony of guilt. In his evidence, Captain Hartly deposed, that he and a part of his crew came upon the smugglers on the beach, while in the act of concealing their goods; that he and the seaman, who was murdered by his side, having attacked three of the smugglers, the tallest of the three, whom he believed to be the prisoner, with a knife, gave the mortal stab to the deceased—that he raised the weapon also against him, and that he only escaped the fate of his companion by striking down the arm of the smuggler, and wrenching the knife from his hand, who then escaped. He also stated, that, on examining the knife, which was of great length, he read the words, "HARRY TEASDALE," which were deeply, burned into its bone handle, and which led to the apprehension of the prisoner. The knife was then produced in Court, and a murmur of horror ran through the multitude.

Other witnesses were examined, who proved, that, on the day of the murder, they had seen the knife in the hands of the

prisoner; and the counsel for the prosecution, in remarking on the evidence, pronounced it to be

"Confirmation strong as holy writ!"

The judge inquired of the prisoner if he had anything to say, or aught to bring forward in his defence.

"I have only this to say, my lord," said Harry, firmly, "that I am as innocent o' the crime laid to my charge as the child unborn. My poor daughter and my servant can prove, that on the night when the deed was committed, I never was across my own door. And," added he, firmly, and in a louder tone, and pointing to Captain Hartly as he spoke, "I can only say, that he whose life I saved at the peril o' my own, has, through some mistake, endeavoured to take away mine; and his conscience will carry its punishment when he discovers his error."

Captain Hartly started to his feet—his cheeks became pale—he inquired in an eager tone—"Have you seen me before?" The prisoner returned no answer; and, at that moment, the officer of the court called the name of

"*Fanny Teasdale!*"

"Ha!" exclaimed the captain, convulsively, and suddenly striking his hand upon his breast—"Is it so?"

The prisoner bowed his head and wept. The Court were stricken with astonishment.

Fanny was led towards the witness-box—there was a buzz of admiration and of pity as she passed along. Captain Hartly beheld her—he clasped his hands together—"Gracious Heavens! my own Fanny!" he exclaimed aloud.

He sprang forward—he stood by her side—her head fell on his bosom. "My lord!—O, my lord!" he cried, wildly addressing the judge, "I doubt—I disbelieve my own evidence! There must be some mistake. I cannot be the murderer of the man who saved me—of my Fanny's father!"

The most anxious excitement prevailed through the court—every individual was moved; and, on the bench, faces were turned aside to conceal a tear.

The judge endeavoured to restore order.

The shock of meeting with Augustus, in such a place and in such an hour, though she knew not that he was her father's accuser, added to her agony, was too much for Fanny; and, in a state of insensibility, she was carried out of the court.

Harry's servant girl was examined; and, although she swore, that, on the night on which the murder was committed, he had not been out of his own house, yet in her cross-examination, she admitted, that he frequently was out during the night without her knowledge, and that he *might* have been so on the night in question. Other witnesses were called, who spoke to the excellent character of the prisoner, and to his often-proved courage and humanity; but they could not prove that he had not been engaged in the affray in which the murder had been committed.

Captain Hartly strove anxiously to undo the impression which his evidence had already produced; but it was too late.

The judge addressed the jury, and began to sum up the evidence. He remarked upon the knife with which the deed was perpetrated, being proved and acknowledged to be the property of the prisoner—of its being seen in his hand on the same day, and of his admitting the fact—on the resemblance of his figure to that of the individual who was seen to strike the blow, and on his inability to prove that he was not that individual. He was proceeding to notice the singular scene that had occurred, with regard to the principal witness and the prisoner, when a shout was heard from the court door, and a gentleman, dressed as a clergyman, pressed through the crowd, and, reaching the side of the prisoner, he exclaimed—"My lord, and gentleman of the jury, *the prisoner, Harry Teasdale, is innocent!*"

"Thank Heaven!" exclaimed Captain Hartly.

The spectators burst into a shout, which the judge instantly suppressed, and desired the clergyman to be sworn, and to produce his evidence. "We are here to give it," said two others who had followed behind him.

The clergyman briefly stated, that he had been sent for on

the previous evening to attend the deathbed of an individual whom he named, and who had been wounded in the affray with Captain Hartly's crew; and that, in his presence, and in the presence of the other witnesses, who then stood by his side, a deposition had been taken down from his lips an hour before his death. The deposition, or confession, was handed into court; and it set forth, "That his hand struck the fatal blow, and with Harry Teasdale's knife, which he had found lying upon the stern of his boat on the afternoon of the day on which the deed was committed—and, farther, that Harry was not upon the beach that night."

The jury looked for a moment at each other—they instantly rose, and their foreman pronounced the prisoner "*Not Guilty!*" A loud and spontaneous shout burst from the multitude. Captain Hartly sprang forward—he grasped his hand.

"I forgive thee, lad," said Harry.

Hartly led him from the dock—he conducted him to Fanny, whom he had taken to an adjoining inn.

"Here is your father!—he is safe!—he is safe, my love!" cried Augustus, as he entered the room where she was.

Fanny wept on her father's bosom, and he kissed her brow and said, "Bless thee."

"And canst thou bless me, too," said Augustus, "after all that I have done?"

"Well, well, I see how it is to be," said Harry; and he took their hands and placed them in each other. I need only add, that Fanny Teasdale became the happy wife of Augustus Hartly; and Harry, having acquired a competency, gave up the trade of a smuggler.

CAPTURE OF CHARLESTOWN, NORTH AMERICA.

THE arrival on the coast of Georgia, of the French fleet under the Count d'Estaing, in September, 1779, had excited great alarm for the safety of New York. Apprehensive of an attack on that city, the troops, amounting to nearly 6,000 men that had been stationed on Rhode Island ever since its capture by the British, a period of two years and eight months, were ordered to evacuate the island, and repair to New York, in order to strengthen the garrison in that city. The evacuation of Rhode Island did not improve the American affairs, for the island was wholly in the power of the king without an occupying force, as it was when occupied, while the British fleet retained possession of the adjoining sea.

In another view the evacuation was disadvantageous to the Americans, as it increased greatly the means of attack possessed by their enemies; an egregious blunder had been committed in placing a strong body of troops in an insular position, where they were entirely lost to any public service, while the object for which they were there stationed would have been as completely obtained by the cruising of a couple of frigates in the vicinity.

The preparations for defending New York were stayed, as the governor had received intelligence of the successful defence of Savannah, and of the departure of the French. Sir H. Clinton being now relieved from all apprehensions of attack, and having undertaken no important enterprise in the last two campaigns, saw that the time was proper for the re-commencement of the attempt to recover the colonies. The weakness of the southern states, and the facilities they presented for penetrating into the interior, with other inducements, appearing to render a conquest easy, pointed them out as the proper quarter to which an expedition should be sent.

After the report of the French fleet had been confirmed, Sir H. Clinton nominated Lieutenant-general Knyphausen, commander of the royal troops in New York, and then assumed the command of the expedition he had planned. The troops were chosen from all the various descriptions of force composing the royal army; and were deemed capable to overcome any opposition made to their progress that could be offered by the southern states.

The expedition sailed from New York on the 26th of Decem-

ber, 1779, and conveyed by the naval force under Vice-admiral Arbuthnot. The fleet arrived at Tybec, in Georgia, on the 21st of January, 1780, having had its passage impeded by much danger and loss. Shortly after this the transports sailed for North Edisto, in South Carolina, where they landed the troops.

They were now about thirty miles from Charlestown, the destined object of attack; after taking possession of several places in the vicinity, a portion of the royal army took up a position on the Ashley, opposite to Charlestown. Governor Rutledge, to whom, and such of his council as should be near, on the landing of the British every power had been then again given, excepting that of taking away life without a legal trial, in order to meet the necessities of the times, appointed a station for the military, ordering them to assemble there immediately.

Though all saw and felt the danger, yet the number was small, who in obeying the summons, expressed their resolves to hazard their lives in defence of their country and their liberties. Here again property was destroying patriotism; for too many of the South Carolinian planters were prepared to make every sacrifice, short of life, to preserve their estates from spoliation or confiscation. Rare, indeed, disgracefully rare, it is that men who possess a goodly share of the world's wealth, and whose riches may in some measure insure protection from the oppressions to which their less fortunate, because poor, countrymen are subject, come forward to assist them in an endeavour to liberate them from the galling chains of slavery. Yet it would be wrong to charge wealthy persons with habitual forgetfulness of the unassisted, for Hampden & Washington are striking evidences to the contrary. It is devoutly to be wished that such persons should appear on the stage of life more frequently.

The intervening period between the departure of the British from New York until their arrival in the south, was improved by the Americans in strengthening the fortifications of Charlestown. Though Governor Rutledge had exerted all the powers with which he was invested to arouse those whose duty it was to arm, to a proper sense of the obligation, threatening such as possessed property in Charlestown with confiscation, if they did not immediately turn out to oppose the enemy; yet this had little or no effect, so that at the commencement of the siege, the garrison did not exceed 3000 men. Small as was the garrison, and undisciplined, this, combined with the additional fortifications, induced Sir H. Clinton to delay operations until he obtained reinforcements from New York. He likewise ordered a draft of 1200 men from [the garrison of Savannah to join him before Charlestown.

When these troops arrived, he began operations with the utmost activity; batteries were formed opposite the southern and western extremities of the town; on James' island, and on the main-land, while an advanced party crossed the Ashley, and broke ground at the distance of 1100 yards from the Ame-

rican works; five batteries were erected on Charlestown-neck during the siege.

While the royal army was thus actively employed, the garrison was not inactive, as under the direction of General Lincoln, who commanded in the town, the fortifications were much extended; lines were formed from the Cooper to the Ashley, with an abatis, and a ditch in front, and every exertion was used for an effective defence.

Notwithstanding their efforts, the American works were not sufficiently strong to resist the superior force of the royal army; but weak as they were, Sir H. Clinton treated them with due respect, recollecting the memorable defence of the unfinished intrenchments on Bunker's Hill; the mere field works of the Americans were opposed by three parallels.

The batteries were opened on the 12th of April, the town having been summoned to surrender, which they refused to do. Previous to this, the royal naval force had commenced operations; an American squadron under Commodore Whipple was intended to oppose the passage of the British over the bar in front of Rebellion Road; but this design was relinquished, the American force being found to be inadequate.

Then Commodore Whipple retired to Fort Moultrie, and afterwards to Charlestown, when the crews and guns of all the ships but one, were landed to reinforce the garrison. The passage over the bar was consequently easy to the British squadron, which then cast anchor in Five Fathom Hole. On the 9th of April, a strong southerly wind arose, and the tide flowing, Admiral Arbuthnot ordered the anchor to be weighed, and sailed past Fort Moultrie, that which in 1776, had nearly destroyed the British naval force, and defeated the attempt on Charlestown. Colonel Pinckney, the commander of the

THE BRITISH FLEET PASSING THE FORT MOULTRIE AND RECEIVING ITS FIRE

fort, kept up an incessant cannonade on the ships as they passed, but this was disregarded, as it was not the object of the British admiral to engage the fort. The squadron proceeded till it reached the ruins of Fort Johnson, where it cast anchor.

Several vessels had been sunk by the Americans at the entrance of the river Cooper, to prevent the British ships from taking up a position there. The efficiency of the royal artillery and engineers was here proved by the decided superiority of their fire, which was effectually operating on the town and its defences. Governor Rutledge then, at the desire of General Lincoln, left Charlestown, as his presence was deemed of more consequence in the interior than in the town.

Notwithstanding the superiority of the British fire, the resistance of the garrison was continued long after the rational hope had fled of making a successful resistance; yet were there some who vainly hoped that the garrison, now much reduced, might be able to defend the extensive lines and batteries around the town, against any attack of the besiegers. The royal force consisted of 9,000 men, chosen from the various descriptions of the British troops in America, while the number of the garrison did not now exceed 2,500 men.

It now became evident that further resistance would prove unavailing, and on the 11th of May, a body of the townspeople earnestly requested of General Lincoln to accept the terms offered by Sir H. Clinton, before the opening of the batteries. The general viewing the desperate condition of the town, and not wishing to add to the sufferings of the inhabitants, sent to the royal commander, stating his desire to accept the terms previously offered. To this a favourable reply was soon returned; a capitulation was signed, according to which, the garrison and every male adult male inhabitant, amounting in the whole between 5,000 and 6,000 men, were made prisoners of war. The request of General Lincoln, that the garrison should be allowed to march out with the honours of war, being sternly refused. Perhaps by this unusual severity, Sir H. Clinton intended to counterbalance the mortification of Burgoyne's defeat; yet the Americans when they proved the victors, generously granted the honours of war. This General Lincoln served under General Gates when opposed to General Burgoyne.

By the fall of Charlestown, the Americans perceived the prudence of Washington's plan of permitting the towns to be occupied by the enemy, rather than risk in their defence a more severe loss. Possession being thus obtained of the capital of South Carolina, Sir H. Clinton exerted himself much to obtain all the fruits of this victory that might be of advantage to the cause of his sovereign, by endeavouring to get the royal authority acknowledged throughout the state. One of his earliest exertions for this purpose was the formation of a royal militia, by which those who had refused to take up arms in defence of their country's freedom, were compelled to arm in behalf of the king. Sir H. Clinton at the same time, threatened severe punishment to those who would dare to attempt to oppose the royal authority; and a few days after, South Carolina was proclaimed as having returned to its condition as a colony, and the inhabitants, a few excepted, to be in full possession of all the rights and immunities they had previously enjoyed under a free British government.

Having so far secured the obedience of the town and the country around, the royal commander next directed his attention to the population of the interior, and in order to extend the royal authority, he placed garrisons in several districts.

Having learnt that several small parties of Americans had come from the other states, and entered Carolina for the purpose of relieving Charlestown, the British general next directed his force against them, but on hearing of the advance of the royal troops, these American bodies thought prudent to retire. However, one body of three hundred continentals was overtaken by a British detachment.

The Americans made but little resistance, notwithstanding they received no quarter, and for sometime after all appearance of resistance ceased, the work of death continued; so inveterate was the hostility of the contending parties in this unnatural warfare. In this affair the royal troops had only twelve men killed, while the yielding Americans lost a great proportion of their number.

A NAVAL SKETCH.

(Concluded.)

"Oh, here it is, sir," replied the seaman, pulling it out from between his shirt and skin, but well saturated with water; "here it is, Mr. Oldjunk; but about them marines' tails, sir, I'm blessed if I don't get one for a plug for the jolly-boat."

At this moment a stout, hardy, good-looking, elderly man approached me, and seemed to be taking my altitude, for he eyed me from head to foot, and then turning round to a youth of about my own age and dimensions, he sang out, "Tom! come here, sir—get from under the lee of that umbrella for a minute, and mind what I say. Take this young gentleman home with you, and clap a full suit of your own rigging over his mast-head; but let him have a taste of the warm-bath first—about blood-heat, sir,—d'ye hear me?" The young man bowed—"And now Mr.—Mr.—I don't know your name—"

"Oldjunk, sir," I replied, bending my head respectfully (I had no hat to touch), for I was well aware from his manners that he was a naval officer, though he wore no uniform by which I could judge of his rank.

"Well, Mr. Oldjunk, follow my son Tom," said he; "take a bath for about five minutes, wash yourself well, sir, and your face will require a little soap; then rig yourself in some of his gear, and take care, Tom, it is none of the worst."

"But my men, sir," said I, "shouldn't I see to them first?—with your permission I would rather—"

"Right, Mr. What-d'ye-call-em—Mr. Holdfast," he replied, interrupting me, "your consideration is proper; but the men, sir, are more accustomed to rough it out—though I honour your care, sir.—Here, ostler! ostler!"

"Yes, Sir Henry," replied the individual addressed, and running up hat in hand.

"Take these lads into your cleanest stable," said he, "give them four or five clean coarse horse-cloths, or get some coarse towels from the house, let them scrub one another for half an hour; and whilst they are hard at it, tell the cook to get them a good mess of soup and plenty of grub ready."

"I will, Sir Henry," replied the ostler.

"And here, my men," continued the kind-hearted officer, for such I was convinced he was, "go with this good fellow; every one of you strip ship and wring out your duds, and then send them to be dried at the galley—I mean the kitchen fire." He turned to me—"Now, Mr. What's-your-name—Mr. Oldyams—I hope you're satisfied?"

"Most gratefully so, sir," I replied; "and I trust the men will do no discredit to your generosity—Peters," said I, approaching him, and speaking in an under tone, "Peters, beware of grog, and keep the lads sober."

"I will, Mr. Oldjunk—indeed I will," replied Peters; "but I'm blessed if I arn't sorry they're going to decapitate the marines' tails, if they bring a fellow such luck as this here—why we shall live like fighting cocks! I hope it'll blow for a week anyhow."

After making another inquiry respecting the young lady, and hearing that she was reviving, I followed my conductor to a handsome house, where I was soon completely equipped in a suit of nearly new clothes, and, according to my own opinion, made no very despicable appearance. My *chaperone*, Tom, a most excellent young man, informed me I was indebted to Sir Henry H—for the kindness which had been shown to me; and truly my heart expanded with the most holy gratitude. I narrated to him the circumstances connected with the loss of the yacht, as far as my own actual knowledge went (and indeed I knew nothing beyond it); but I could give him no information relative to the rank or quality of the individuals I had saved, nor who it was that had perished.

During the time I was dressing, Mr. H—had related the events to his mother and sisters, and my modesty* was sadly overwhelmed when, on being introduced to three elegant females (Lady H— and her daughters) they bestowed upon me almost unqualified praise for what they termed my gallant conduct, and never did approbation flow from more lovely lips, or breath pass between teeth of more pearly whiteness.

At this moment the admiral himself entered—"Mr. Spun-yarn—no, no, I mean Mr. Holden—"

"Oldjunk, Sir Henry," said I, "the son of the late Captain Oldjunk, who—"

"Commanded the Warrior in the Channel fleet?" continued the Admiral, interrupting me. "I knew him well, sir, and hope his son will be as brave and good a man as his father. Well, Mr. Oldjunk, I am happy to inform you that your friends—for friends they must be after what you have done for them—I say, Mr. Oldrope—Oldjunk, I mean—your friends are all recovering; the ladies have turned in, contrary to my wishes though; for by sitting up they might have recovered their self-possession, but now with terror on their minds they'll lay tossing about like Dutch schuyls on the Dogger Bank. However, the doctors sent them to bed, and the youngest is past all danger."

* Query "modesty?"—a midshipman's modesty!—no such rope in the top.—Printer's Devil.

My heart fairly leaped with joy, at least I felt it bump against my breast. "And she is a beautiful girl too—like one you will well remember, Lady H—," and the admiral sighed. "Ah now, Tom," addressing his son, "that would be a prize indeed! But I beg pardon, Mr. Oldstores—Oldjunk, I mean—who can tell what gratitude and all that sort of thing may do for you." Again my heart began thumping.

"But, according to Mr. Oldjunk, papa," said one of the young ladies, "she is but a mere girl, just out of her childhood."

"Humph!" ejaculated the admiral, "a young woman's envy;" and patting his daughter playfully on the cheek, he added, "Celia, Celia, my love, take care of the quarantine flag."

The young lady blushed.—"But what is her age, papa?" inquired the other.

"Why, let me see—I should take her to be near seventeen. But Mr. Oldjack has a step or two to ascend before the earl—" (my heart sank down like a handlead)—"before the earl would deign to listen—But a truce to this nonsense. Have you served your time, young gentleman?"

I answered that "I had, about eighteen months since, and had also passed my examination; but my father's death had deprived me of my only friend, for I had no patronage, and consequently no interest with the first lord of the admiralty."

"Then, you shall want neither from this hour, sir," exclaimed the admiral: the earl—for it is a peer of the realm, sir, that you have saved—the earl will dine with me to-day, and, Lady H—, you must take the carriage and the girls, and do your gentilities to this noble family. Mr. Oldscratch—Mr. Oldjunk, I mean—you must join our dinner party; the gale will not abate till midnight; your men are all snugly berthed in clean straw, and blankets; your boat is above high-water-mark, and a youngster looking after her, so make yourself happy, my boy! I loved your father—and more, I honoured him!"

Never since my birth had I felt such a palpitation at the heart, as when waiting in the drawing-room before the dinner hour for the arrival of the earl. Lady H—and her lovely daughters said everything kind and encouraging; and the bantering of the admiral and Mr. H—, though meant to arouse me, was for some time without effect. At length the earl was announced; he entered the room, bowed gracefully to the ladies, and as the admiral presented me to him, he grasped my hand with fervour, and burst into tears. For several minutes not a word was uttered, but the lawn handkerchiefs were raised stealthily to the eyes of every one to absorb the moisture produced by generous emotions.

The entrance of a servant, to inform us that dinner was upon table, broke the embarrassment. The earl offered his arm to Lady H—, the admiral conducted his eldest daughter, and Tom slunk behind, so that I was obliged to squire his youngest sister; not that I was grieved, but rather delighted at the thought of being near one so lovely; but I was bashful and timid*; besides the high honour of having the fair soft hand of an admiral's daughter resting on my arm—the arm of a poor reefer, was enough to turn any moderate brain.

During dinner the conversation was upon general topics, and rather constrained; but when the servants had withdrawn, restraint was at an end, and never did I pass a more delightful hour. The earl had quitted Dover harbour in his yacht with six men the day before, the weather at that time being very fine. In the evening, he stood in for Brighton, and sent the boat, with the captain and four men, to fetch off a friend who was waiting there to join him. The boat did not return, the night was squally and tempestuous, and at day-light finding the vessel was considerably to leeward, the man who remained with him, strenuously advised his bearing up for Portsmouth. He complied with the request, and the result is already known. The persons drowned were a male and female servant, both favourites in the family.

I shall pass over the observations that were made upon my conduct; a new existence seemed opening before me, intoxicating delight revelled in my heart, and nothing could be more

cordial, nothing could be more cheeringly kind than the manners and language of the earl.

That night sleep departed from me:—the soft down-bed, so different to my confined hammock—the prospects before me—the brightening of hope when hope had almost fled—the continual agitation of thought—kept me awake, though now and then a gentle slumber would seize upon my frame, but it was like a cat's-paw upon the water, gone almost as soon as it appeared.

The morning was beautiful: the sun shone in the clear blue arch of Heaven, and his beams glistened on the rippling stream scarce ruffled by the breeze. All nature looked refreshed and cheerful; the birds answered each other as they sportively played amidst the green foliage of the shrubbery; the flowers breathed forth their incense as a sweet offering to the Deity; and all around seemed redolent with joy. I sighed when I looked at the frigate as she lay slumbering on the surface of the waters, and thought how soon my present enjoyment must pass away. I heard the admiral's voice at the door—"Come, youngster, it is time to turn out: the Indefatigable has hoisted a whelf, which must be for you, and it is but right that the anxiety of your excellent first lieutenant should be relieved."

I immediately dressed myself and joined the worthy and brave old gentleman in the parlour, where breakfast was provided for me previous to my departure.

"Do not think, young gentleman," said the admiral, "that we are not to meet again, but it must be a few days hence; I have my reasons. You will now return on board; and as you will require a new uniform coat, hat, and a few other things, take this; indeed I have some distant recollection of being a balance in arrears to about the same amount with your late gallant father. I have put it in this pocket-book; look at it when you get on board. It may, however, be just as well to wait a short time before you order new clothes—there may be a change in the uniform, or a hundred things may happen. Be a good lad wherever or whatever you are. Here is a note for your first-lieutenant, which present to him with my best regards." He walked to the window. "Your men I see are waiting; they have been well attended to; and now, Mr. Oldjunk, as you have finished your breakfast, I must bid you farewell."

The admiral extended his hand, and I looked at his son's clothes which adorned my person; he understood me and said, "You may do as you please—you may either keep them, as they fit you well, or, if you object to wearing a dress that has been upon Tom's hide, you can send them back." We parted.

"God bless you, Mr. Oldjunk," exclaimed Peters, as we were pulling off to the ship, "arn't this a consarn? I remember when I was at school—though for the matter o' that I never took education kindly, because I squinted a little; but I recollect something in a story book about fairies, that a young prince cut off a white cat's tail, and she immediately changed to a beautiful woman, but I'm blessed if we arn't done better than that, for the docking of the marines' tails has turned up an earl that's as generous as a lord. I say, Bill, you're the first of your family as ever shook the fin of a nobleman, and got such a glorious tuck out."

The man addressed immediately began humming in a subdued tone—

"A guinea will sink, but a pound will float,

Yet I'd rather have a guinea than a one-pound note"—and thrusting his hand into his jacket pocket he fished out not less than ten of the golden coin, the earl having given ten guineas to each.

On my getting aboard, the first-lieutenant was rather angry at my not returning with the boat the moment the gale subsided, but the Admiral's note set all square again, and he warmly congratulated me on my good fortune. My messmates received me with hearty cheers, and the jolly-boat's crew were enthusiastically greeted by their shipmates.

As soon as I could get by myself, the pocket-book presented by the admiral was opened, and in it I found a bank-note for 50*l.*, and a recommendation to employ Meredith, the tailor.

Two days passed away without my hearing anything further from Sir Henry or the Earl, and the sickening sensations arising from "hope deferred" cast a heavy tinge of melancholy

* Query "bashful and timid?"—Printer's Devil.

over my mind. On the morning of the third day the Indefatigable's distinguishing pennants were hoisted at the telegraph on shore, and the signal was made for the senior midshipman to attend at the admiral's office.

"Take the captain's gig, Mr. Oldjunk," said the first-lieutenant; "leave her at the Sally-port, with orders to wait for the captain coming down. I suppose, Oldjunk, we shall have to part, for I trust I shall never see you a midshipman again."

I need hardly say, my wish heartily responded to this latter expression; and yet when I went over the side of the gallant old hooker, in which I had passed so many happy and glorious hours, and thought of leaving Mr. Handsail, the worthy, kind, and gentlemanly first-lieutenant, as well as the messmates with whom I had been for three years, I could not help a strong feeling of melancholy creeping upon my spirit. "But," thought I, "my expectations are probably too highly excited, and will make the disappointment more severe and bitter."

I landed, and hastened to the admiral's office, where I had not long to wait. Admiral Montagu, with his own hands, presented me my commission (what he said I shall not repeat), and invited me to dinner. My head swam—my heart swelled almost to bursting, and I hastened away from the admiral's presence. I had gone in a reefer, I had come out a lieutenant.

Just as I was hurrying out at the door, a well-known voice exclaimed, "Oldjunk, how is it—have you sprung your luff, my boy?"

"I have, Captain Handsail," I replied to the first-lieutenant; "and though a little giddy at this moment, perhaps you will do me the favour to take a glass of wine with me when you come out."

"Well, Oldjunk, I shall be sorry to part with you," said Handsail, "though rejoiced on your account. We've been together now—let me see—in the Monarch and the Indefatigable, about five years; and I don't think you are the worse for my instruction."

"I am indeed greatly indebted to you, sir," I rejoined, "and hope never in my future service to forget the obligations I am under to Captain Handsail."

A deep flush of crimson flew over his face,—his hand trembled for a moment. "Nonsense, nonsense, boy," said he, and then added, with strong emotion,— "Mr. Oldjunk, it is wrong—it is cruel to trifle with the feelings of any man."

"I do not trifle, my dear sir," replied I, smiling; "perhaps I have in some measure broke confidence, but I really could not help it, my gratification is so great; but pray don't betray me,—the admiral has not only received your commission as commander, but also an appointment to a new sloop of war, and, Captain Handsail, we are not to part."

Never shall I forget his look; he had risen to the rank of lieutenant solely by merit; he had borne that commission for sixteen years,—he had scarce a hope of ever rising higher, for friends or patronage he had none; but Sir Henry H.—had so interested the Earl in his favour, that both commissions, and for the same vessel, had been obtained at once. He pressed my hand with fervour.—"Will you wait for me?" inquired he.

"I was going to Meredith's," said I, "but I will wait till you come out."

"No, no," he replied, "go to Meredith's, and I will come to you."

I walked to the tailor's, and was met by the polite master of the house, in his best manner.—"Shall be happy to serve you, sir. A change of uniform, I hope—or"—he hesitated—"I beg pardon, perhaps your order is already executed? pray, sir, have I the pleasure of addressing—God bless me, how is it that I should forget?—I now remember, it is Mr. Oldjunk! Pray, walk this way, sir."

I followed him into a back apartment, and as we proceeded, he continued. "The notice was very short, Mr. Oldjunk, but nevertheless I have executed it to the very letter." We entered the room. "There they are, sir, the very best that could be made or procured; and here, sir," handing me a written paper—"here, sir, is the inventory."

"What can all this mean," thought I, as I took the paper and read—

"Two complete suits of full uniform—lieutenant.

"One ditto, undress uniform.

"One gold-lace, one plain, cocked hats.

"Full dress regulation sword and belt.

"One dirk and belt.

"Four dozen fine white shirts."

In short, there was a complete stock of clothes, boots, shoes, hats,—indeed, everything that could possibly be mentioned, even bedding for my cot, and a handsome sextant. "I fear, Mr. Meredith," said I, "that some"—I was going to say somebody had been hoaxing him, for certainly the full extent of my fifty pounds would not have discharged one half of the bill; but Meredith, who misunderstood my intention, interrupted me with—"I hope not, sir; every attention has been paid, and the charges are moderate. I have likewise to thank you, sir, for your promptitude in payment; the check was instantly honoured, sir, and more than covered the demand; but as there is the cabin furniture yet to come—I beg pardon, sir, perhaps you would like to change your uniform, sir, or will you have the plain clothes?"

He pointed to a coat which I instantly recognised as the one which was worn by Mr. H.—the day I dined with Sir Henry, and the whole truth instantly flashed upon my mind. "Have you any letters for me, Mr. Meredith?" I inquired.

"God bless me, yes, sir; I had quite forgot it, though,"—and going into the counting-house, he returned with a letter, which, on opening, explained the whole. It was from the Earl, stating the orders he had given to Meredith, and requesting my acceptance of a first outfit as lieutenant. "I thought, sir," continued Meredith, as soon as I had done reading, "that you would like to select your own cabin furniture, and therefore I have left it for the present. Pray, sir, is my worthy friend, Mr. Handsail well?"

"Give me joy—give me joy, Meredith," exclaimed Handsail, as he hurriedly entered; "give me joy, you old son of a sleeve-board, first-cousin to a goose, and uncle to a pair of shears! I want an epaulette for my left shoulder, and a commander's full dress coat;—there's my commission!"

I had never seen Handsail so much elevated before: for though he was a clever seaman and a smart, active officer, yet he was generally of a grave and precise turn; but from my own feelings I could readily make allowances for his.

"I do most heartily congratulate you, Captain Handsail," said Meredith, "and sincerely trust that the time is not far distant when I shall see you—as the soldiers say—'right shoulder forward!'"

"Posted, eh, Meredith?" answered the new-made commander; "well, well, we shall see: certainly our present promotion, Mr. Oldjunk, has had a curious origin—marines' tails to wit."

As soon as Captain Handsail had given his orders we walked out together, and our first visit was to the dock-yard, to look at the little craft in which we were hereafter to "brave the battle and the breeze." I told the captain of the handsome present I had received; and as I knew his finances must be low, (as he had nothing but his pay and an occasional sprinkling of prize-money,) I offered to share with him the gift of Sir Henry H.—, but he would not listen to any such proposal; and, indeed, considering our relative situations, he could not do it, though he borrowed sufficient of me for present exigencies.

That day I shipped my white-lapelled coat, and in full lieutenant's uniform, with Captain Handsail in a commander's undress, we took our way to the admiral's residence, where we "bowed, dined, and bowed again."

The following morning we crossed over to the Isle of Wight, and waited upon Sir Henry H.—, who received us most kindly and cordially, and then accompanied us to the hotel. It would be impossible to describe my sensations whilst waiting for an interview with the Earl, and I also hoped to see the ladies, particularly one, whom I and my boat's crew had been the instruments to save. At length I was introduced; but for the first few minutes I could neither hear, see, nor speak distinctly. His lordship's frank and easy manner, however, soon dispelled embarrassment; and that lovely girl, more lovely than I had ever yet seen female, pressed my rugged hand between her own

white small delicate fingers, as she hailed me the preserver of all their lives.

Oh, how sweetly musical was that harmonious voice! Oh, how did my very soul thrill with delight every time I heard it! Not an opportunity did I let escape of stealthily gazing at that sylph-like form, and those beautiful features—indeed I drank deep of the delicious draught of intoxicating pleasure before I was aware of the unceasing passion it had spread through every channel of my heart. I loved—but that love was madness, for I was but a poor lieutenant, and Lady Caroline was an earl's daughter.

We passed the remainder of the day with this noble family, and walked out upon the beach before dinner. Lady Caroline selected me as her companion, and her engaging manners dispelled my reserve. We laughed, we chatted together—nay, more—we drew pictures of the future, and I was supremely happy.

At parting, our warmest gratitude was expressed to his lordship, and I pressed the fair hand—that hand which I had grasped all wet, and cold, and clammy, in seeming death, but now glowing with the warm blood of life in beautiful veins that shone through the bright clear skin—that hand I pressed to my lips, and saw a tear stealing down her cheek.

We quitted the island and repaired on board the *Indefatigable*, where our old friends welcomed us with honest warmth; and the seamen seeing their first-lieutenant in commander's uniform, gave him three cheers. Poor Peters came shuffling about the gangway and fore-part of the quarter-deck, and as I was aware he wished to speak to me, I walked forward. "God bless you, Mr. Oldjunk," said he; "but them marines' tails—well I shall always love a monkey for the sake of his outrigger. May I be blessed, Mr. Oldjunk, if the earl hasn't sent us all four a complete fit-out a piece, and none o' your pursers' cut either, but reg'lar superfine. Well, God bless you, Mr. Oldjunk, I'm glad you're promoted: and you and Mr. Handsail are to join the new sloop, I'm told. The earl has offered to get our discharges, but I've been in a man o' war all my life, and now I shouldn't feel safe out o' one—it is true, Mr. Oldjunk, I am but a poor jolly-boat boy," (he was nearly fifty,) "and, therefore, mayhap the first-lieutenant—I mean Capt. Handsail, mayn't think me worth having; but if you could make interest with him, Mr. Oldjunk, to get me with you, I wants no discharge but Greenidge."

"Do you seriously wish this, Peters?" said I; "think it well over, for I cannot believe you are serious."

"I'm blessed if I arn't though," replied the man; "it is as true and as sure as that the jolly at the gangway has got never a tail to his head. But, I say, Mr. Oldjunk, will you do it for me?"

"I'll do my best, Peters," said I; "but you must not be impatient, as the vessel is still upon the stocks."

We went on shore, and I am happy to say that my application for Peters was satisfactory. The *Indefatigable* was just on the point of sailing: her very topsails were sheeted home, when Captain Handsail got an order from the admiral to draft him to the guard-ship.

"It was a near touch, Peters," said I, when next we met; "the cable was up and down, and it was almost a toss you didn't go to sea in the frigate."

"Almost a toss!" said Peters, "it was quite a toss, Mr. Oldjunk, but I cried TAILS, and won."

LOSS OF THE MARY ROSE,

Which was Overset and Sunk at Spithead, in July, 1545.

The following is an exact copy from an account given by an eye-witness, Sir Peter Carewe, of Mohum Ottery, County Devon, whose narrative has been preserved by his biographer, John Vowell, *alias* Hooker, of the city of Exeter, and published in the 28th volume of the *Archæologia*, from a MS., in the possession of Sir Thomas Phillipp, Bart. After the account of the engagement between the English and French fleets he proceeds thus:—

"Not long after, the seas being waxed calm, and the wea-

ther very fair, the French galleys, having wind and weather at will, they would also needs range and scour the seas; and finding them clear, and the English navy to be laid up in harbour, they came along all the south coast of England, even unto the Isle of Wight, where some of them landed, and did much harm; and some of them came unto the haven of Portsmouth, and then rowed up and down; there being never a ship at that instant in that readiness, nor any such wind to serve, if they had been in readiness, to impeach them. The king, who, upon the news hereof, was come to Portsmouth, he fretted, and his teeth stood on an edge, to see the bravery of his enemies, to come so near his nose, and he not able to encounter with them; wherefore immediately the beacons were set on fire throughout the whole coast, and forthwith such was the resort of the people, as were sufficient to guard the land from the entering of the Frenchmen; likewise commandments were sent out for all the king's ships, and all other ships of war, which were at London and Queenborow, or elsewhere, that they should with all speed possible make haste and come to Portsmouth; which things were accordingly performed. The Frenchmen perceiving that they could do no good by tarrying there, departed again to the seas. The king, as soon as his whole fleet was come together, willett them to set all things in order, and to go to the seas; which things being done, and every ship cross-sailed, and every captain knowing his charge, it was the king's pleasure to appoint Sir George Carewe to be Vice-Admiral of that journey; and had appointed unto him a ship named the *Marye Rose*, which was as fine a ship, as strong, and as well appointed, as none better in the realm. And at their departure the king dined aboard with the Lord Admiral Viscount Lisle, in his ship, named the *Greate Henry*, and was there served by the Lord Admiral, Sir George Carewe, this gentleman, Peter Carewe, and their uncle, Sir Gawen Carewe; and with such others only as were appointed to that voyage and service. The king, being at dinner, willed some one to go up to the top, and see whether he could see anything at the seas. The word was no sooner spoken, but that Peter Carewe was as forward; and forthwith climbeth up to the top of the ship, and there sitting, the king asked of him, what news? Who told him, that he had sight of three or four ships, but, as he thought, they were merchants; but it was not long, but he had ascrayed a great number, and then he cried out to the king, that there was, as he thought, a fleet of men-of-war. The king supposing them to be French men-of-war, as they were indeed, willed the board to be taken up, and every man to go to his ship, as also a long boat to come, and carry him on land. And first he hath secret talks with the Lord Admiral, and then he hath the like with Sir George Carewe, and at his departure from him, took his chain from his neck, with a great wistle of gold pendant to the same, and did put it about the neck of the said Sir George Carewe, giving him also therewith many good and comfortable words. The king then took his boat, and rowed to the land, and every other captain went to his ship appointed unto him. Sir George Carewe being entered into his ship, commanded every man to take his place, and the sails to be hoisted; but the same was no sooner done, but that the *Marye Rose* began to heel, that is, to lean on the one side. Sir Gawen Carewe being then in his own ship, and seeing the same called for the master of his ship, and told him thereof, and asked him what it meant? who answered, that if she did heel, she was like to be cast away. Then the said Sir Gawen, passing by the *Marye Rose*, called out to Sir George Carewe, asking him how he did? who answered, that he had a sort of knaves, whom he could not rule. And it was not long after, but that the said *Marye Rose*, thus heeling more and more, was drowned, with 700 men which were in her; whereof very few escaped. It chanced unto this gentleman, as the common proverb is "the more cooks, the worst potage." He had in this ship a hundred mariners, the worst of them being able to be a master in the best ship within the realm, and these so malignant and disdained one the other, that refusing to do that which they should do, were careless to do that that they ought to do; and so contending in envy, perished in frowardness. The king this meanwhile stood on the land, and saw this tragedy, as

also the lady the wife to Sir George Carewe, who with that sight fell into a swooning. The king being oppressed with sorrow on every side, comforted her, and thanked God for the other, hoping that of a hard beginning there would follow a better ending. And notwithstanding this loss, the service appointed went forward, as soon as wind and weather would serve; and the residue of the fleet, being about the number of one hundred and five sails took the seas. The Frenchmen perceiving the same, like as a sort of sheep running into the fold, they shifted away, and got them into their harbours; thinking it better to lie there in a safe skin, than to encounter with them of whom they should little win."

It must be remarked, that the above account is confirmed in every respect by a letter from Lord Russell to Sir William Paget, dated 23rd July, 1545, printed in the "State Papers," vol. 1, page 793, in which he speaks of "the unhappy and unfortunate chance of the *Mary Rose*, which through such recklessness (recklessness) and great negligence should be in such wise cast away." It is confirmed also by the contemporary painting formerly existing at Cowdray House, in Sussex, (of which an engraving may be seen in the Session room of the Corporation of Portsmouth), where the *Mary Rose* is represented as sinking before the engagement had commenced. M—.

The following Letters from the State Papers will further illustrate the attempts to recover the Mary Rose in 1545.

About the 18th or 19th of June, and the night following, there came down so unfavourable press of winds at the South and South-south East, so long continuing, such storms and streynable tempests, that it was as much as many of the English ships could do to break the seas, by reason whereof they were constrained again to hold up with the narrow seas, or else to put themselves in with the Wight. The fleet accordingly made for the Downs, where they arrived in safety in the afternoon of the next day, finding there the *Henry Grace de Dieu* and the *Mary Rose*, and none of the ships coming out of the Thames, neither small nor great, saving only a small shallop, which had conveyed the Duke of Suffolk to Quinborough, which rejoined the fleet on the following Saturday, and remained with it. The remainder of the fleet remained at Gravesend, upon payment. In this foul night, the admiral lost all the hulks detained for special service, except seven. After a few days the fleet came to Spithead, and Russell writing to Secretary Paget, on July the 23rd says, of the Frenchmen—

"There are besides Saint Helen's point to the number of eight score sail, and the king hath determined, that my Lord Admiral (Viscount Lisle) shall give them battle if they abide; and even, at the writing of your letters seventeen of the gallies came in the order of battle to the fight, of the which, one was sunk, and the ships began to retire, which I believe will not come again."

The Secretary of State was however deceived—the ships of France did return, and the sea fight of St. Helen's was fought in the presence of the king, who also witnessed the sinking of the *Mary Rose*."

RUSSELL TO PAGET.

"July 23, 1545.

"I am very sorry of the unhappy and the unfortunate chance of the *Mary Rose*, which through such recklessness and great negligence, should be in such wise cast away with those that were within her, which is a great loss of the men and the ship also; notwithstanding you give me good hope by your letters that the ship shall be recovered again which I pray God may be so."

CHARLES, DUKE OF SUFFOLK TO PAGET.

"Portsmouth, August 1st, 1545.

"Concerning the *Mary Rose*, we have consulted and spoken together with them that have taken upon them to recover her,

who desireth to have, for the saving of her, such necessities as is mentioned in a schedule herein enclosed, not doubting, God willing, but they shall have all things ready accordingly, so that shortly she shall be saved.

"A remembrance of things necessary for the recovery, with the help of God, of the *Mary Rose*. Items.

"First—Two of the greatest hulks that may be gotten; besides the hulks that ride within the haven, four of the greatest hoys within the haven, five of the greatest cables that may be had, ten great hawsers, ten new capstans with twenty pulleys, fifty pulleys bound with iron, five dozen ballast baskets, forty pounds of tallow, thirty Venetian mariners, and one Venetian carpenter,—sixty English mariners to attend upon them, a great quantity of cordage of all sorts. Symond-patron and Master in the *Foyst*, doth agree that all things must be had for the purpose aforesaid.

"I trust by Monday or Tuesday at the farthest, the *Mary Rose* shall be weighed up and saved—there are two hulks, cables, pulleys, and other things made ready for the weighing of her."

JOHN VISCOUNT LISLE, TO SIR WILLIAM PAGET, KNIGHT.

"August 2nd, 1545.

"We have much ado to frame every thing for the *Mary Rose*, but all that may possibly be done is done for the same. The worst is, we must forbear three of the greatest hulks of the fleet, till the thing be done, which must be emptied of all their victuals, ordnance, and ballast, during the business, which will be a great weakening to the Navy, if anything in the meantime shall happen. The two hulks the *Jesus of Lubich*, (Captain Seintclear), of six hundred tons and three hundred men, and the *Sampson*, (Captain Bell), of six hundred tons and three hundred men, are brought unto the *Mary Rose*, because they must weigh her up."

LISLE TO PAGET.

"August 5th.

"The *Mary Rose*, which I trust with the leave of God, shall be brought up right again to-morrow, hath so charged all the King's Majesties Shipwryghts with making engines for the same, that they have had no leisure to attend to any other thing since his Majesties departure from hence, which I beseech you to signify unto his highness."

THE DUKE OF SUFFOLK AND OTHERS TO PAGET.

"August the fifth.

"As touching the *Mary Rose*, her sails and sail-yards be laid on land; and to her masts there are tied three cables with other engines to weigh her up, and on every side of her a hulk to set her upright, which is thought by the doers hereof, God willing, to be done to-morrow one time of the day; and that done, they purpose to discharge her of water, ordnance, and all other things, with as much diligence as is possible, and by little and little, to bring her nearer to the shore, and as we shall from time to time, work well for to save her, his Majesty shall be advertysed accordingly."

THE DUKE OF SUFFOLK TO PAGET.

"Portsmouth, the Seventh of August.

"My Lord Admiral, being this present Friday, at dinner with me, told me that he had a good hope of the weighing up-right of the *Mary Rose*, this afternoon or to-morrow."

It seems, however, that all their schemes failed in raising her, for—

"There she lay, e'en till this day,
In the deep Bay of St. Helen's O."

H. S.

LOSS OF A JAMAICA SLOOP.

(Continued.)

This person's name was Luke Haughton, whose family consisted of two women, and an Indian boy of about fifteen years of age; the boy was his slave, as was one of the women, who used to sleep with him and dress his provisions, whom he kept as his wife; the other woman was slave to a white man who was absent. A little distance from Luke Haughton's there lived another white man, who had also two slaves, an Indian man and woman. I told Haughton where we had left the rest of our company, and would have hired him and the other white man, to have fetched them up in their canoe, and for their trouble I promised them our canoe, iron pot, and small arms; but they would not undertake so dangerous a voyage on any account; and these people had like to have paid dear enough for their indiscretion, for if it had not been for a Jamaica sloop, which by great accident passed by that coast, and seeing a smoke on the shore, and knowing there were no inhabitants near that place, supposed they were people in distress; it being fair weather and smooth water at the time, they sent their canoe thither and took them on board, when they were almost starved, the pilot having had his reward for undertaking what he was incapable of, he being starved to death. The seamen would have shot him long before I left them, if I had not prevented them.

My padron's habitation was near Cape Camerone, which is the western part of the Musquito coast that is inhabited. He lived in the same manner as the natives: when he wanted provisions, he went a hunting, and brought home always something to eat, sometimes warree or deer, and at other times corrisos, quams, or monkeys, though he would seldom kill corrisos or quams (not thinking them worth shot), if he could either kill warree, deer, or monkeys. When he returned, we had as much boiled as would serve the family, and the rest was barbecued to keep it from stinking, not being provided with sufficient salt for that purpose; nor would salt preserve it so well. The warree is shaped like a hog, with this difference, they are of a less size, their ears, legs, and tail are shorter in proportion than those of a hog, and have what they call a navel upon its back, which is placed about two-thirds towards the tail, and are two lumps about the bigness and shape of their kidneys, which lie just within the skin on each side of the backbone, between which issues out a matter which casts forth a strong scent, not much unlike that of a fox: they keep in droves, and their flesh is very sweet and good, I think much better than European pork. When they find themselves hard chased, they will turn upon dogs or men, and often wound the dogs with their tusks; and sometimes the men are in great danger of being hurt by them. They are easily discovered by this scent. It is an ordinary thing when they are to windward of you, to smell a drove of them more than a mile. The piccary is much such another creature; these are reckoned the best food the country affords. The deer are small and seldom fat. Monkeys are the same as those already described, which are generally fat. The corriso is nearly as big as a turkey, the colour inclined to black; it has a yellow bill, and the cock has a fine tuft or plume of feathers on his head, of several colours, which makes it a beautiful bird; but their flesh is not quite so good as that of a turkey. The quam is not so big as the corriso, but the flesh is better tasted, and is generally fatter. I am informed these fowls lay but two eggs before they sit. The inhabitants always take care to bury their bones to prevent the dogs eating them; for they say if the dogs eat them, it will make them run mad. Their bread rind is sweet cassava and green plantain roasted, which we had mostly from some old Indian plantation up the river. This shows the country has been full of inhabitants, though there are so few now: besides the old Indian plantations, each white man has a small plantation of plantain and banana trees; and when they had a mind to increase their number, after gathering the fruit, they dug up the roots, and divided each of them into three or four parts, and planted them again; and from each part there sprung a tree.

On Christmas-eve my padron went out a hunting in order to provide against the festival, and had the good luck to bring home both warree and corrisos. He invited his neighbour to dine with us on Christmas-day when we had both boiled and roast, on which we feasted very plentifully, and to regale us after dinner, instead of punch or wine, we had pumpkin mish-law; which is thus made; the pumpkins are cut in small pieces and boiled; the inside of which is mashed to a pulp in the liquor it is boiled in, and being served out in calabashes when it is hot, we drank it with a good zest, and passed the day very cheerfully. In two or three days after my padron took it into his head to visit the white men in Plantain River, he leaving about three days' provision for the family, saying he would return again by the time it was expended, in order to provide us more. Having made an end of our provisions the third day, and no padron appearing, the next morning I took a gun, our fishing tackle, and the Indian boy with me: we went up the river with our canoe to the plantation, designing to kill a corriso or quam, which were often there devouring the fruit; and if that failed we intended to fish in the river. As soon as I landed I heard the chattering of a corriso, which I endeavoured to shoot; but it fluttering from tree to tree, I could not get within reach of it; and in the pursuit, lost the bird and my way both. When I left the chase, I endeavoured to find the canoe; but instead of going towards it, wandered farther into the woods, and found myself merooned, for so they call those people that have lost themselves in a wood. I walked, endeavouring to find my way, and halloosed several times, in hopes of being answered by the Indian, which might have directed me; but hearing no answer, concluded I had got a good way into the woods; and being entirely at a loss which way to go to recover the canoe, I began in earnest to consider of the best means to find it, and determined to mount the first tree I could climb. Having found one fit for my purpose, I got up it, and from thence saw the river; and being acquainted with the manner of its course, I judged whereabouts the plantation was. Having finished my views, and the sun keeping in a certain position, I bent my course towards that part of the river where I judged the canoe was. And in passing through the woods, I came to a large cotton tree, which could not be less than twenty-five feet in circumference; having passed it, going forward, I found the underwood so close that I could not force my way through for a long time, and was at last obliged to creep through the thicket, which gave me much trouble, besides the loss of my clothes, which was mortification enough, in a country where I could not get more; but my chief concern being now for my life, that did not much affect me. When I was through it, I found the woods more open, and continued my course till I came to a place where the water had been newly dried-up, and left a moist clay behind it, of such hardness, fit to take any impression, and saw there the fresh print of the footing of a large beast, which I took to be a tiger's. This sight startled me, and I immediately examined my gun to see if I was in a condition to shoot if I met it; and soon perceived the priming was lost out of the pan, and having no more powder with me, I would have avoided going that way, but saw the underwood so close everywhere else, that there was no getting through it; and considering I might as well meet the tiger in the thicket as anywhere, I kept my course. Having gone about half a mile farther, I saw the opening of the woods; and soon after, to my great satisfaction, I came to the plantation, and found the canoe and resolved within myself not to run into the same danger any more, but went fishing, and by night had caught nine small fishes, three of which would make a middling herring; we returned to our habitation and had them dressed. I took three of them for my own share, and left the rest for the family. I am ready to think most people will believe I did not want sauce to them, having eat nothing all the day. The next day we went fishing again, having the day before had enough of hunting; we caught fourteen or fifteen small fishes, which made a good meal for the family; we ate them boiled, and the sauce to them was the water they were boiled in; our bread was either roasted plantains or cassava roots, and little enough of them.

Within a mile and half of us there lived two or three families of Indians; one of them coming to our habitation, inquired after my padron, and when we expected him to return: and asked me what we did for provisions; I told him we fared hard enough. He said if they had known we had been in want of food, they would have supplied us, and desired me to lend him a gun, which I did; he went over the river, and in about an hour returned with a large fawn, which was soon dressed; we had a side of it boiled, and made a comfortable meal. The Indians were so kind as to bring us something to eat every day, so that we did not want for food any more. In ten days my padron returned from Plantain River, whom I was very glad to see. He excused himself for staying so long, telling me the people of Plantain River would not let him come away sooner. I recounted to him my adventure in the woods, which he only laughed at. The next day he went a hunting, and furnished us with more provisions. In his leisure hours he used to entertain me with stories of his travels, and the hardships he met with, in being several times made a prisoner by the Spaniards, in both Mexico and Peru; he had been prisoner a long time at St. Juan d'Uloa, which is a large and strong fort, with more than 120 pieces of brass cannon. It is built upon an island which makes the fort of Levera Cruz, where there is a large fair town; it is situated at the bottom of the bay of Mexico, and is the barricade for that kingdom. The city of Mexico is eighty leagues from thence, within the land: which city I have been credibly informed by a Spanish merchant who lived there, that it is one-third part as large as London, and that there are six thousand coaches in it. My padron had also been prisoner at Havannah, on the island of Cuba, and often told me how that place and Levera Cruz might be surprised by the English; and recounted to me how a number of buccaneers, surprised, took, and plundered the latter. The buccaneers having mustered all their strength, resolved upon sacking that town; and being arrived within sixteen or eighteen miles of it, they anchored with their ships, and landed their men undiscovered; they marched that night about ten or twelve miles, and in the morning retired between the high sand-hills which lie all along that coast. The men lay hid all the day, and marched again in the night, in order to surprise the town in the morning, at the opening of the gates, which they effected thus: The buccaneers were about six hundred men; when they came near the town they halted, and sent a small party that could speak Spanish, habited like the country people, in order to seize on one of the gates, as soon as they were opened, which was executed thus: At the opening of the gates, one of the party mounted a ladder, which led up to the bastion, or tower that commanded the gate, and, under pretence to beg fire of the sentinel to light his pipe, with his pistol he killed him which was the signal for seizing the gate; it being immediately put in execution, they gave notice to their main body, who instantly marched into the town, and at the same time attacked and took another small work, both of which they guarded, and then marched into the parade.

Most of the Spaniards being in bed, could not immediately get together, but soon took the alarm, and formed a body of horse and foot; they marched in good order through one of their broad streets, to attack the enemy in form; the buccaneers being drawn up upon the parade, and seeing the Spaniards marching towards them, prepared to receive them; and part of them drew up at the end of the street in which the Spaniards were marching, and when they came near enough to engage, they fired upon them; the buccaneers having disposed themselves in such order, that as soon as their first rank had fired, they marched beyond the street, and the second took place, and so the third; so that they kept a continual fire upon the Spaniards, and having killed many of them, and their horses not being able to stand the fire, they were soon put into disorder, and fled: the buccaneers pursued them, but the Spaniards flying out of one of the gates into the country, they left the chase: the castle of St. Juan taking the alarm, fired briskly into the town, in order to beat out the enemy, but they being resolved to plunder it before they left it, called a consultation, to consider what was proper to be done, and resolved to seize on the fathers which have had most authority and respect among

them; and having beheaded some of them, obliged others to carry them in a little boat to the castle, and present them to the governor, and tell him, if he did not leave off firing immediately, they would use all the fathers in the town in the same manner. The governor being exasperated at so inhuman and barbarous an action, redoubled the fire, which the buccaneers finding, they shut all the gates of the town, and would not allow any more of the inhabitants to leave it, but drove them all in a body to that part of the town which lay next the fort, and most exposed to the fire from thence; so that if they would not forbear firing, they should kill their own men. When the governor saw it, he was moved with compassion for the inhabitants, and ceased firing. The buccaneers plundered the town, and when they had done so, marched out, carrying away with them some of the chief inhabitants as hostages for a sum of money, which they demanded for not burning it; and so retired to their ships with very little loss.

The Spaniards have since that time built watch-towers, and keep sentinels all along the coast, in order to prevent the like surprise.

When my padron had finished this story, he told me that one of his acquaintance had been taken prisoner by the Spaniards, either in cutting wood, or in some expedition against them, which I do not remember; but he having been kept a prisoner a long time, was at last put on board one of their galleons to be sent to Old Spain, of which he had terrible apprehensions, in being kept close prisoner there; and as the vessel passed the island of Cozumel, which is a desert, and near the coast of Honduras, the ship was to the windward of it; and it being very fine weather, he took this opportunity, just at the dusk of the evening, and slipped out at one of the ports and swam for the shore, though they were near three leagues from it. He got safe to the island; but when he found himself there, he was in a bad condition; for his fire-works, which he had fastened with his frock to the nape of his neck, were either lost or rendered useless, so that he could get no fire.

At his first landing, he lived upon cockles and other shell-fish, till seeing great numbers of large snakes, which they call oulers, that are not venomous, he killed several of them; and having flayed, he split them in pieces, dipped them in salt water, and dried them upon the rocks in the sun, and found this food much more agreeable to him than his shell-fish, there being no fresh water on the island but what lodged in the holes of the rocks when it rained, which was little enough to satisfy his thirst. In this manner he lived without fire for near six months, till a sloop happened to touch there to cut some firewood, who took him on board, and found him very hearty and in good plight. These and such other like stories, my padron used to entertain me with, and hearing him describe all the islands and coasts in the bay of Honduras, and those about us, where he had often travelled to and fro for many years, and I knowing the draughts of those parts where I had been to be very false, which was the cause of the loss of our vessel, for though our pilot was ignorant, if I had had a good chart of the coast, I could have preserved the sloop.

These considerations put me upon drawing a chart of those coasts, which will be very useful to masters of ships that may, by accident, be drove into those seas, or trade thither, and are unacquainted therewith. Having advised with my padron about it, he encouraged me by saying, that he would give me an exact account of that part which I had not seen, and supplied me with paper for that purpose. In order to draw the said chart, I made a wooden pair of compasses, and a scale, my ink was made with gunpowder, and my pens with the feathers of wild fowl; with these utensils I drew the chart of the bay of Honduras, describing all the islands therein, and the coast of the Musquetos, which, with some alterations I have made since, is a pretty accurate one.

In a day or two after I had finished my chart, our neighbouring Indians came to pay us a visit, and invited my padron and myself to an entertainment which was to be the next day at their habitations.

(To be continued.)

made a law, for inviting several hundreds of them to that island, in order to take or destroy the runaway negroes, who did much mischief to the out plantations; accordingly sloops were sent to invite them, when there came over about two hundred of them who were formed into companies, under officers of their own nation, and were paid forty shillings per month, and every man had shoes provided him. They stayed at that island several months, and performed the service they were employed in very well, and were sent home again very well pleased. Being then at Jamaica, I had the following story from them:—When they were out in search of the runaway negroes, and having some white men for their guides who knew the country, one of them seeing a wild hog, shot it; at which the Musquito Indians were much displeased, telling them, that was not the way to surprise the negroes, for if there were any within hearing of that gun, they would immediately fly, and they should not be able to take any of them; and told them, that if they wanted any provisions, they would kill some with their lances, or bows and arrows, which made no noise.

They are very excellent hunters and fishers, and no people so expert and dextrous at striking fish as they are: so they look upon it as the greatest ill-luck, if they miss a fish when they have a fair stroke at it; and when any one has observed another to miss his aim, he will tell him by way of derision, "brother, your hand is crooked, somebody has lain with your wife." Few of the Jamaica sloops go to sea without one of these Musquito men, to whom they give good wages, and are treated in the friendliest manner, by the commanders, being always their companions, and called brother. The governor has a particular article in his instructions from the king of Great Britain, to show kindness and afford them his protection.

As often as a new governor arrives at Jamaica, the king, or some of their chiefs, go up to compliment him on his accession to the government, who are very kindly treated by the governor and sent away with presents.

The chief of their fruits which are the most useful, are plantains and bananas: they have pine apples in plenty, Indian corn, potatoes, yams, and other roots; and have also sugar canes, which they plant.

All along the coast are several kinds of ravenous beasts, as tigers, leopards, tiger-cats, snakes, and baboons. The tigers and leopards were so bold at Plain River, that they frequently seized the poultry among the habitations and were twice among the houses whilst I was there. The baboons at Cape Camerone sometimes made so much noise in the night, that we could not sleep. All the rivers swarm with alligators, and there are plenty of guanoes. The shape of the alligator is so well known that I need not describe it. A guano is something like a lizard; I have often killed them five foot long, which we reckon pretty good eating, but their eggs exceed all others in taste, and eat like marrow. Manatee and turtle are also found on this coast.

When I had been at Plain River about ten days we saw a sloop stand in for the shore, and came to an anchor off the river's mouth: she hoisted English colours, and sent their canoe for the shore, but was overset in the breakers, and all the people had to swim for their lives; however, they all got safe on shore. We gathered up the oars, and hauled up the canoe; and I soon learned from the people that their sloop was laden with log-wood, came from the bay of Honduras, and was bound to Jamaica; but that they had been looking for that island so long, that all their provisions were spent, and they could not find it; and in standing to the southward they saw the land, and made it out to be Plain River which some of them had been at before, and had come thither in hopes of being supplied with provisions. I was exceedingly glad to hear they were bound for Jamaica, having now great hopes of getting thither again; for though I fared tolerably well for provisions, I had little pleasure in my company, who were a rude unpolished crew, and I was heartily tired with this Indian manner of living. A white man, that sometimes used to reside at this place, was part owner of the sloop, but was then gone to Sand Bay, in order to go on an expedition against the wild Indians before mentioned; and the person who had the care of

his affairs, having some provisions of his, concluded to put on board the sloop a barrel of beef and one of flour, and send them forward for Jamaica. I was very willing to make use of this opportunity of a passage; but considering the master of the sloop was incapable of navigating her, I consulted with the person who supplied the provisions, in relation to the conducting the vessel; observing to him, that they in the sloop had lost themselves, and by accident were come thither, or must all have perished by the ignorance of the master; and told him, if the master of the sloop would leave the direction to me, I would venture to go in her, but if not, I had rather wait till another opportunity, for I was apprehensive of being put in the same condition they had so lately been in. He thought this a very reasonable request, it being for the safety of the vessel, as well as myself, and thereupon sent an order to the master to leave the navigating the ship to me.

Matters being thus concerted, the provisions, water, and wood, were put into the canoe, and I went on board with them. The master made some scruple to obey the order (so loath people are to part with power, though they are never so incapable of governing). I told him he need not be under any concern, for I had no intention of depriving him of his command; but what I did, was for my own preservation as well as theirs; since, by experience, they had so lately been in such danger for want of knowledge. At which the master seemed content, and I took the direction of the vessel upon me. We weighed anchor, and set sail for Jamaica. But before we left Plain River, we had provided some ozinbrigs and a sufficient quantity of silk grass which grows in that country, which we made twine of; and when it proved little winds or calm, we lowered the sails and mended them, they being old, and torn in several places, which was our constant custom, as often as we had an opportunity of being so fortunate as to have fair weather.

In about ten or twelve days, we made the Grand Caymanos, so called from the great number of crocodiles found there, when first discovered by the Spaniards, cayman being the Spanish word for crocodile. When we saw the island, the master, and a pretended pilot, said it was not that island, but the South Keys. He said, that he had lived upon the Grand Caymanos, and had seen it often, and knew the make of the island very well; and that which we saw was not it, but the South Keys, and would have shaped their course accordingly for Jamaica, I now found the precaution I had taken at my going on board the sloop, to be of great service, finding the people so very ignorant; and if I had not been with them, they would never have reached Jamaica. I knew the island by my latitude and distance, though I had never before seen it, and shaped my course accordingly thither. The wind being then northerly, in two days after we saw that island, which none of the sloop's crew knew, nor would any of them believe it to be Jamaica till we came close into the land, and then they were convinced, and acknowledged their ignorance. I took no more upon me as to the direction of the vessel, but left it to the master, and in three or four days more we arrived in Port Royal Harbour, and so ended a most troublesome, fatiguing, and painful voyage. On my arrival at Jamaica, my friends and acquaintances rejoiced to see me, having heard that I was dead. The owner of the sloop at Jamaica offered me the command of her, but I excused myself, choosing to wait for a better command.

THE CHRISTENING.

"You do right, my friend," said the clergyman, "to have the child named. Pray, are the sponsors ready?"

"Oh, yes, yer reverence," replied the coxswain, lugging out a canvass bag of guineas, "the 'sponsibles are all ready."

"No, no, my man, I did not mean that," returned the clergyman, smiling; "I mean the godfathers and godmother."

The infant looked about him with great delight, and seemed to notice things in a manner that excited astonishment in the minds of the unsophisticated tars; and Will argued that "he should some day or other see him a great man."

In a short time the clerk announced everything prepared:

and the minister's wife carrying the child, entered the church and proceeded to the font.

The ceremony commenced; the clergyman from being apprised of the nature of the case, omitting the opening question. But there was no difficulty in making the godfathers comprehend the subsequent inquiries. They readily promised "to renounce the devil and all his works;" but when the question was put, "Wilt thou be baptised in this faith?" Will hesitated.

"You must say, 'This is my desire,'" whispered the clerk, somewhat scandalized at the want of promptitude in the reply.

"Avast, ould gentleman!" responded Will, respectfully: "it arn't me, but the babby, as is going to be thingumied."

"The infant cannot answer for itself," said Mr. Hector with patient meekness, "and therefore you, as its godfathers, become sureties."

"It is all a matter of form," chimed in the clerk with self-complacency; "you must make the response."

"Now, yer reverence, I can understand being bound for the babby," uttered Will; "but I can't disactly make out the argufication of this ould gentleman, here. If so be as Harry and I undertakes the solemn engagement, we consider it as double-bitted round our consciences to hold on by it; but if it's no more than a mere matter of form, why, then I'm thinking——"

"It is not a mere matter of form, my friends," answered the clergyman, "but such as you take it to be—a solemn engagement,"—and his voice assumed a deep pathos—"entered into with the Majesty of Heaven—the King of kings. As godfathers to the infant, wilt thou that it should be baptized in this faith?"

"Yes, yer reverence," answered the coxswain firmly; "and may God A'mighty spare our lives—that Harry's and me—to do our duties by the child!"

The following prayers fervently offered up by the divine were listened to with the most earnest attention by the seamen; but when he came to the part "Name this child," the tar again hesitated.

"Why, in the regard o' that, yer reverence," said Will in a tone of mingled perplexity and determination,—"Why, I must own that it has rather puzzled my education a bit, because d'ye see——"

"You mustn't talk to the minister," said the clerk, interrupting him.

"So I wool, ould gentleman," returned the seaman, rather offended with the interference of the official: "but his reverence, I take it, arn't the person to throw a poor tar slap aback because, mayhap, he hasn't paid out the slack of 'Amen' so often as you have."

"But the name of the infant—the name?" said the clerk impatiently; "you mustn't keep the minister waiting."

"Avast, again, ould gentleman," uttered Will, rather peevishly; "I'm thinking you're shoving your oar in where it arn't wanted."

"My good man" said the lady, kindly, "if you have not already fixed upon a name, may I be permitted to suggest one? Yours is William, and your shipmate's is Henry; why, then, not have it William Henry, after our gallant young prince, who, like yourselves, is in the naval service of his country?"

The coxswain pondered a few minutes, whispered to his brother godfather, who shook his head, and then exclaimed, "Why, no, yer ladyship; though it would pleasure us both—that's Harry and me, yer ladyship—to have him named arter a son of our good ould king—God bless him! yet, as names are summat like junk, generally cut up into short lengths when they're wanted, why, if he was to be christened William Henry, it ud soon get shortened into Will or Harry, and he'd float along without its ever being noticed; so if yer reverence pleases, you may just christen him Ten-thousand Topsail-sheet Blocks;" and the tar gave a knowing hitch to his trowsers, and a circumferential twist to his tarpaulin hat.

"Ten thousand what?" inquired Mr. Hector, his gravity temporarily yielding to the excitement.

"Ten-thousand Topsail-sheet Blocks," repeated Will, clearly and deliberately: "arn't that it, Harry?" The seaman assented by a nod.

"Are you really serious, my good fellow?" asked the minister, scarcely able to keep his countenance at the apparent sincerity of the tars.

"Why, that's just it, yer reverence," said the clerk.

The clergyman, taking the laughing infant in his arms, he sprinkled its face with water, and to the great surprise of the clerk, (who seemed almost scandalized by the transaction), but to the unbounded delight of the seamen, he was named accordingly, "Ten-thousand Topsail-sheet Blocks!"

THE END.
